HISTORY OF THE COUNTY OF DURHAM.

DARLINGTON WARD.

THE SOUTH-WEST DIVISION.

The south-west division of Darlington Ward consists, as has been seen, of the parishes of Middleton-in-Teesdale, Winston, Gainford, Staindrop, and Cockfield, the parochial chapelries of Barnard Castle and Whorlton, and part of the chapelry district of Ingleton. The parish of Cockfield participates in the coal trade of the Auckland district; and that of Middleton-in-Teesdale has been long celebrated, like the dale of the Wear, for the productiveness of its lead-mines. The aspect of the country, in this part of the division, is bleak and hilly, consisting, for the most part, of lofty fells, similar to those by which Weardale is hemmed in. The river Tees, however, presents a striking contrast to the placid course of its neighbour stream, hurling itself over precipices and through chasms which might fitly acquire for it the character of an alpine torrent. Even as it approaches the more sylvan and cultivated parts of the division, it continues, in times of flood, which

are frequent and sudden, to rush over its rocky channel with considerable turbulence and force. The scenery of the country, however, after leaving the imposing but sterile heights of Middleton Fells, becomes rapidly more beautiful; and no part of the county is more fertile and highly cultivated than the remainder of this division. Barnard Castle (with its ruined fortress), Middleton-in-Teesdale, and Staindrop are the market towns; the eastern portion of the division enjoying the advantage of proximity to the markets of Darlington and Bishop Auckland. The introduction of railway traffic may be expected shortly to facilitate more extensive intercourse, and provide an easier outlet for the products of the south-west division. Several elegant and pleasant mansions adorn the face of the country; whilst the princely castle of Raby, and that of Streatham, are associated with historical recollections, not only of the county, but of the kingdom itself.

PAROCHIAL CHAPELRY OF BARNARD CASTLE.

THE chapelry of Barnard Castle is bounded on the south and south-west by the river Tees, which separates it from the parishes of Rokeby, Startforth, and Romaldkirk, in the North Riding of Yorkshire; on the west and north-west by the parish of Middleton-in-Teesdale; on the north by the parish of Staindrop; and on the east by the chapelry of Whorlton. The townships into which it is divided are, 1, Barnard Castle; 2, Marwood, including Woolhouse, High and Low Shipley, Hullerbush, and other ancient estates; 3, Streatlam and Stainton; and, 4, Westwick, with East and West Shaws.

BARNARD CASTLE.

THIS township occupies an area of 4,007 acres. In 1831, it contained 513 inhabited houses, and 20 uninhabited; in 1841, 679 inhabited, 61 uninhabited, and 2 building; and in 1851, 688 inhabited, 8 uninhabited, and 11 building. The value of the property assessed to the county-rate in 1853 was £11,942. The population of the township was, in 1801, 2,966; in 1811, 2,986; in 1821, 3,581; in 1831, in consequence of the increase of manufactories, 4,430; in 1841, 4,452; and in 1851, 4,608. Of the latter number, 2,216 were males and 2,392 females. The return includes 101 persons in 1841, and 60 in 1851, in the union workhouse.

HISTORY.

THE tract of country extending along the north bank of the Tees, between Middleton-in-Teesdale on the west, to Coniscliffe on the east, was, with the exception of the little parish of Winston, anciently known as the parish of Gainford. Amongst the places which the Earls of Northumberland obtained from Bishop Aldhune, between 998 and 1018, Whorlton, Sledwish, Stainton, Streatlam, and Marwood, portions of Gainford, are enumerated. This part of the country suffered severely from the devastations of the Conqueror (see vol. i., page 196); and, after his departure, Malcolm king of Scotland, led his army down Teesdale towards Cleveland, in his progress burning churches, murdering the nobles, and seizing the women and young men as captives for slavery.

THE BALIOLS.—Whilst suffering from the above accumulated disasters, the forests of Teesdale and Marwood, the lordships of Middleton-in-Teesdale and Gainford, with all their royalties, franchises, and im-

munities, were given by William Rufus, about the year 1093, with the barony of Bywell in Northumberland, to Guy Baliol, who had come into England with the Conqueror. The principal circumstances known relative to Baliol, after taking possession of his new domain, are, his grant of the churches of Gainford, Stokesley, and Stainton-in-the-Street, to the abbey of St. Mary's, York; and the prohibition from King Henry I., after the year 1109, that he should not hunt in the forests of Bishop Flambar. He left issue Barnard, Joceline, and Hawise; the latter married to William Bartram, Baron of Mitford, and founder of Newminster Abbey.

Barnard Baliol, son and successor of Guy, was a man of bold, active, and enterprising spirit. Dissatisfied with the lowly position of the ancient manor place of Gainford, he commenced the erection of that fortress which bore his name, and the extensive ruins of which still remain in attestation of his power. This mighty structure was built between the years 1112 and 1132; and the security afforded by its vicinity having attracted the surrounding population, the town of Barnard Castle rose into existence. A burgage tenure was granted to its inhabitants by the founder of the castle; their privileges and immunities to be similar to those which Alan of Britany had granted to the burgesses of Richmond; and the burgesses, in return, paid a certain rent to their lord. Baliol frequently visited the court of David I., king of Scotland; and from him he obtained lands which were the means of introducing his posterity into that kingdom. In 1138, however, he was one of the northern barons who met in council at Thirsk, and was sent with Robert Brus to dissuade David, who lay with his army near the Tees, from advancing into England. The Scottish king persisted; and Baliol shared in the victory over him on Cowton Moor, called "The Battle of the Standard." Though at first favourable to the claims made on the see by Comyn, Baliol's possessions

at Barnard Castle were, in 1140, ravaged by the army of the usurper: they succeeded in obtaining a large booty, and took several prisoners, who were, like others, put to torture. In 1142, Baliol was made prisoner with King Stephen at the battle of Lincoln.

Barnard Baliol, son of the above, succeeded his father before 1167, and in that year was fined for neglecting to certify the number of his knights' fees. Two years afterwards, he paid £100 to have restitution of his lands, which had been seized by the crown. He granted a confirmation of privileges to the burgesses of Castle Barnard and their heirs, in chief, in fee, and inheritance. This document, which is still preserved in a small oaken box, within the town-chest, in the Town Hall, is written on vellum, in a bold, legible hand, with a seal of yellow wax appendant, bearing the remains of an equestrian figure, with a shield and extended sword; but the circumscription is broken off.*

In 1174, the Scots, under William the Lion, having laid siege to Alnwick Castle, Barnard Baliol, Robert Stuteville, and other barons, marched to its relief. Before daybreak, a thick fog obscured their passage, and a halt was recommended; but Baliol exclaimed, "Let them stay that will; I am resolved to go on, though none follow me, rather than dishonour myself by staying here." Stimulated by his example, they pursued their march; the sun suddenly broke forth; and they perceived the Scottish king in the open field, surrounded by only 60 followers. After a short, but gallant resistance, the monarch was made a prisoner, and sent to Richmond Castle.

Barnard Baliol married Agnes de Pichenii or Pinckney, and left issue three sons, Eustace, Guy, and Ingelram. He was a benefactor to several ecclesiastical foundations, and confirmed the grant of the churches of Gainford, Barnard Castle, and Middleton, to St. Mary's Abbey, York. To the monks of Ricvaux he gave lands in Teesdale, with pasturage for 60 mares and three colts of two years old, and for six score young cattle, 12 kine, and two bulls.

Eustace Baliol, who succeeded before 1193, had paid 100 marks for license to marry the widow of Robert Fitz-Piers in 1190; and in 1199, he paid 200 marks fine for neglecting the king's precept to go to the wars of France. He granted several charters, and confirmed

those conceded by his predecessors. He left issue Hugh, Barnard, and Ingelram.

Hugh Baliol succeeded his father about the year 1212. He granted to the inhabitants of Barnard Castle "all that common pasture, and all common lands in the east and north parts, from a certain rivulet which flows from Watercale, or Watershaw, and runs into Beckdam; and from the road which leads from Castle Barnard, and goes towards Stanhope," (*Stanhope*, or *Stonehill*, now called Stainton,) with moor, marsh, turf, and peat; excepting that they and their heirs "should not take from the wood of Wythners, Hankeslave, or Berlainicker, without the consent of him and his heirs." Under another charter granted by him, the burghers and their resident tenants held common of pasture in Marwood for all their cattle, free of agistment or pannage. They might make a drift on Hermyre at their pleasure; each burgher might build his own oven without any payment, and might take ground for building, and *gather dung* (or scrapings) *before his door to the middle way*. If the lord should build a common oven, the burgesses were not compelled to use it. They were to grind their corn at the lord's mill, paying a sixteenth for multure; and the baker at the common oven was to charge a halfpenny for baking their meal, and to find fuel. Many of these concessions, trivial in modern times, were of vast importance in the feudal ages.

Hugh Baliol adhered firmly to King John in all his wars with his barons and the Scots, and was rewarded both with wealth and power. It is no wonder, therefore, that he and his brother Barnard were denounced by those barons amongst other "fautors and evil counsellors." Alexander, king of Scotland, having invaded England as an ally of Louis of France, burned Holme Cultram Abbey and took Carlisle; "and as he passed by Castle Barnard, with his companie (which castle then stood in the precinct of Halywerkfolk in the custody of Hugh Baliol) he surveid it about, to espie whether it were assailable of any side; and while he was thus occupied, one within discharged a cross bowe, and strake Eustace Vesey (which had marryed his syster) on the forehead with such might, that he fell dead to the ground, whercof the kinge and all his nobles conceaved great sorrow, but wear not able to amend it;" and the Scots drew off their forces. Of Hugh Baliol, Dugdale says, "Certain it is that he benefitted himself not a little in those troublesome times of King John's reign (being then for the king); for when all was quiet at the entrance of King Henry the Third, he could not forbear his wonted course of

* In the same box are deposited charters of Hugh, John, and Alexander Baliol, three documents referring to a chantry in the chapel, a letter from Prince Charles's council in 1618, and the silver seal of the burgesses.

plundering." He died in or before the year 1228, leaving issue three sons, John, Eustace, and Hugh, and a daughter, Ada, by marriage Baroness of Warkworth.

John Baliol, on his succession, paid £150 relief for his possessions. In exchange for lands which he had inclosed in his park, and others which the burgagers had released to him and his heirs, he granted to the freeholders (now first mentioned) and burgagers a certain common pasture in Marwood, the boundaries of which were, "from Roger Cross westward by the park wall to the *saltury*, or deer leap,* under Stanley on the west, and from thence to Egleston Way, adjoining to Beaconsgate on the north, and so by Egleston Way to the west foot of East Moss Mire bridge, and so in Blackdean towards the north." This tract adjoins that granted by Hugh Baliol; and the two contained 9,700 acres of land. The hospital of St. John the Baptist (see CHARITIES) is reputed to have been founded by John Baliol in 1230.

This powerful baron was as faithful in his adherence to Henry III. as his father had been to John. He married Devorguill, or Devorgald, eldest daughter and heiress of Allan, Lord of Galloway,† by Margaret, daughter and co-heiress of David, Earl of Huntingdon, younger brother of William the Lion, king of Scotland; and by this union he acquired a great accession of wealth and influence. He was sheriff of Cumberland 33 and 34 Henry III., and governor of Carlisle Castle; sheriff of Derby and Notts., 45, 46, and 48 of the same reign; and summoned to a council or parliament in the 45th. On the marriage of Margaret, the king's daugh-

* A place so arranged that the deer, when driven from the forest, might leap into the enclosure, from which they could not escape.

† Isabel, second daughter of Alan, was the wife of Robert Bruce.

‡ "There is in the Chronicle of Lanercost," says Mr. Raine, "a record of a proceeding, in which this prelate (Kirkham) was concerned, which, if I am not mistaken, led to a very important result, the foundation of a college in Oxford, which has been the seat of learning for nearly six centuries. After recording the death of the bishop, the chronicler proceeds to describe the deceased prelate as a man of such authority that, whilst the powerful held him in honour and fear, he restrained the rebellious with a tight rein. It happened, however, sometimes he, that a baron of his diocese, one of the highest in name of the whole of England, forgot the honour of his rank and insulted the church. Admonition was treated with contempt, till at last the offender was, by rigorous measures, brought back to a sense of his duty, and was compelled, all the people looking on, to receive at the door of the cathedral a personal castigation from the hands of the bishop himself, and was bound to settle a sum of money to maintain for ever certain scholars in the university of Oxford.

"Now a question arises, who was this unnamed and penitent baron, upon whom the bishop inflicted such signal chastisement? Was it

ter, to Alexander, the young king of Scotland, their tuition was committed to John Baliol and Robert Ros of Wark; but, within two years, they were both accused to King Henry, at Nottingham, of having abused their authority. Richard, Earl of Gloucester, and John Mansell, one of the king's counsellors, were despatched to Edinburgh, with a choice body of men; and learning that the young king and queen were shut up in the castle, they procured entrance, with a few followers, by pretending to be the inferior servants of Ros. The queen "presently came to them, and made a grievous complaint of her hard usage; expressing that she was kept there like a prisoner, in a solitary place, near the sea, and destitute of any wholesome air; being neither permitted to go abroad, nor to have attendance of waiting-maids fit for her; no, nor to enjoy her husband's bed. All which the earl and Mansell remedied." Baliol made his peace with King Henry partly by the payment of a large fine, and partly by reminding him of the services of his father to King John. A fine of 100 marks was levied upon Ros. Baliol was shortly afterwards sent as an ambassador to France; and he was present at the victory of Northampton in 1264, and shared the defeat and imprisonment of King Henry and Prince Edward at the battle of Lewes. Having regained his liberty, he devoted himself, with all his characteristic energy, to the service of his royal master.

The memory of John Baliol is rendered famous by the foundation of Baliol College, Oxford. For some time previous to his death, he gave annual exhibitions to certain poor scholars at that university,‡ and had

not John de Baliol, lord of Barnard Castle, who, as we know from another record, had, in the year 1255, personally assaulted the bishop, and had carried off to prison four of his attendants? The cause of this outrage was as follows:—Some of Baliol's men having sacrilegiously broken into the church of Long-Newton, the bishop had excommunicated and imprisoned them for the offence, and Baliol's object was to seize and keep the bishop's men in durance till his own should be absolved and set at liberty. The bishop appealed to the crown; and, after a hearing, it was determined that he had acted according to law, with this exception, that the excommunicated men ought to have been held to bail.

"The question then stands thus. We have a nameless baron of the bishopric of the highest rank entering into a solemn engagement, as a condition of his absolution for an offence against the bishop, to make provision for ever for certain scholars in Oxford. We have John Baliol, a baron of the diocese, and, be it remembered, in rank without compare, committing an outrage against the bishop in 1255. After that we have law-proceedings, which, then as now, might not be terminated in a day; and next, in 1263, or thereabouts, for the precise year is not known, we have this same John Baliol founding certain scholarships in Oxford, and soon afterwards Divorguilla his widow established the college which bears his name. Is it not more than probable

intended the settlement of lands for their permanent endowment; but as he did not live to complete his beneficent design, it was carried out, with commendable liberality, by his widow. He died in 1268, and was buried in the abbey of *Sweetheart* in Galloway.* He left issue four sons, Hugh, Alan, Alexander, and John; and four daughters, viz., Margaret, wife of Thomas Lord Multon, of Gilsland; Ada, wife of William de Lindsay; Cicely, wife of John de Burgh; and Mary, wife of John Comyn of Badenoch, a competitor for the crown of Scotland in 1292, though he inclined to Baliol, and would do nothing to prejudice his cause.

Hugh Baliol succeeded to the barony of Gainford and Barnard Castle. Little is known of him except that he never paid his father's executors £10 he owed them for two horses. He married Agnes de Valence, daughter of the Earl of Pembroke, and died without issue in 1271.

Alan, second son of John Baliol, having died before Hugh, the latter was succeeded by Alexander, third son of John, who gave the inhabitants of Barnard Castle a charter confirmatory of their right of common in Marwood. He left no issue by his wife, Alianor de Genouve, or Geneve, and was succeeded in the immense inheritance of the family by his only surviving brother, John Baliol, then 28 years of age, and who, it appears,

had received his education at Durham school. The powers of the lords of Barnard Castle continued to be considerable. An itinerant judge was sent to dispense justice in their territory; there was also a chief bailiff of the liberty, a constable and a porter of the castle, and a forester. A coroner was appointed by the lords of the liberty, who also had "divers knights' fees, wardships, marriages, and reliefs there; and had the goods of the *nief* or native, which they frequently took into their own hands." They had free-warren and chase over a large extent of moor and waste; with the soil, mines, quarries, and other perquisites, from whence the munificent grants above noticed were derived. They had the return of writs and warrants awarded thither, so that no officer could enter the liberty, but by writ *de non omittas*. The appointment of markets and fairs was vested in them; the goods and chattels of felons condemned within their courts were their perquisites; and they received a yearly rent, called the *Brew-farm*, from all the alehouse keepers, who were obliged to be licensed by the steward in open court.†

In England, besides his lordship of Barnard Castle, John Baliol possessed estates in several of the southern counties, as well as the barony of Bywell in Northumberland; in Scotland, he inherited from his mother the lordship of Galloway, the castle of Botel in Kenmore,

† The territory was held, at this time, at five knights' fees and a quarter. Agnes de Valencia, widow of Hugh Baliol, had her dower in Gainford, where she held the court and other baronial privileges, as well as in Piercebridge and Headlam, altogether worth £100, with the reservation to the lord of the rents of the free tenants of Headlam; she also held half of the mills of Gainford and Piercebridge, and a third part of the forest of Teesdale. Alianor, widow of Alan Baliol, had a third part of each of the following possessions, viz., the mills of the borough and the demesne lands of Castle Barnard; of two parts of the park and wood there, and of the forest of Teesdale; of the vill of Westwick; of two parts of Whorlton, with the mansion; and of the mills of Gainford and Piercebridge, all worth £40 13s. 4½d. per annum. William de Faiderly held for his life two carucates of the demesne in Langton, of the annual value of £9, of the gift of Lady Devorguill; and an annuity of £10 was granted by her son John out of Long-Newton to Alan de Tesedale. The interest that remained to John Baliol himself has been thus described:—Two parts of the borough rents, and a like proportion of the profits of the markets, fairs, and mills, £34 13s. 4d.; castle-guard rents, £3 12s., besides the service of four pounds of pepper, seven of cumin, and two capons. He also had 120 acres of the castle demesne, valued at 1s. an acre; and two parts of the extensive park and woods, at £20 per annum. The agistment of Teesdale forest produced 60s. He held sole possession of the manor of Middleton, and derived from it, with its hamlets, £16 13s. 7½d. Two parts of Westwick produced, in rents from bondholders and cottagers, £14 0s. 6d.; two parts of Whorlton, with the mills, £16; the rents and services of half the vill of Langton, £10; and the rents of the free tenants of Headlam, with the license to brew, £3 12s. The patronage of the hospital of St. John at Barnard Castle, and of the chapel at Newsham, belonged to him.

that Baliol College owes its origin to an act of sacrilege in the church of Long-Newton? and ought not the name of Walter Kirkham, Bishop of Durham, to be had in grateful remembrance by its men?"

* The origin of this title is attributed to the conjugal piety of the Lady Devorguill. Wintoun's Chronicle relates that, on the death of Baliol, his affectionate widow caused his heart to be embalmed, and enclosed

"In a coffin of ebone,
That she gart be mayed therefore,
Enamelyt and perfectly dight;
Lockit and bounden with silver bright.
She founded intil Galoway,
Of Cisterians order, an Abbay,
Dolce Cor she gart them all,
That is *Sweet Hart* that Abbay call;
But now the men of Galloway
Call that Abbay *New Abbay*."

With affectionate remembrance, "quhil livand in this world," she caused the cabinet containing the heart of her husband to be set before her at meat, to which, as in his presence, "she did reverens;" and after "all the coursys" of the meal had been as decorously served as during his life, she rose from the table, and the dinner was distributed to the poor. That she might not be separated from that beloved heart even after death, she ordered in her will

"That hart thai suld then ta,
And lay it betwene hir pappys twa;
As dight they war than with honoure,
To lay her with that in sepoulture."

and Kirk Andrews; and in France he retained the hereditary possessions of his Norman ancestors. He married Isabel, daughter of John Plantagenet, Earl of Warren and Surrey, by whom he had issue two sons, Edward and Henry. On the failure of the direct issue of William the Lion, king of Scotland, in the person of Margaret, "the maid of Norway," who died at the Orkney Isles, on her passage to her realm of Scotland, in September, 1291, Baliol became one of the chief competitors for the vacant throne. The dispute was submitted to the king of England, as lord paramount, by the seven Scottish earls claiming the right of constituting their king, and by Baliol and Bruce themselves; and Edward very properly, and agreeably to the recognized laws of primogeniture, decided in favour of the claims of John Baliol, who swore fealty to the English monarch at Norham on the 29th November, 1292, was crowned at Scone on the following day, and did homage for his crown at Newcastle on the 26th December following.

The important events which followed are rather matter for general than for local history (see vol. i., page 47). It is sufficient to state here that the galling humiliations imposed upon the new king by Edward I. had at length the effect, probably intended, of exciting indignant feelings. The alliance of the Scottish king with Philip of France, then at war with England, and the open renunciation of fealty to the latter kingdom by Baliol, served as a welcome pretext to Edward, who invaded and overran Scotland; and so complete was his success, that, according to Fordun, "John Comyn, Lord of Strabolgy, who had just made his own peace with Edward, persuaded Baliol and his son to accompany him from Aberdeen to Montrose Castle, where he awaited the approach of King Edward, on whose arrival, the same King John, stripped of his royal ornaments, and bearing in his hand a white wand, did, for very fear of his life, confess his several offences against his liege lord—by forming alliance with France, by contracting his son to the French king's niece, by renouncing his allegiance, by invading England, and resisting his lord Edward; and did then, by delivery of his wand and staff, make full resignation of all his right to the crown and realm of Scotland into the hands of the king of England." Thus ended the "troublesome

* It is unnecessary, in this place, to follow the career of the brave but unfortunate Edward Baliol, son of John, and sometime king of Scotland, whose fortunes rose and fell as rapidly as did those of his sire. He is said to have died in 1363 at Doncaster; and in him the chief line of Baliol terminated. His brother Henry was slain at Annan in 1332, whilst fighting on his behalf; and though some of the junior

reign of King John (having endured three years and seven months), whose very name was accounted so unfortunate, that no king of Scotland was ever after allowed to bear it." After a brief imprisonment in the Tower of London, he was allowed to retire to his estate in Galloway; and subsequently he went to reside in his *Castle Galliard*, in Normandy, where, worn out with age, afflicted with blindness, and despairing of that crown which was the hereditary right of himself and his posterity, this "dim discrowned king" died in 1314.*

THE SEE OF DURHAM.—The forfeiture of John Baliol's English estates was adjudged to have occurred on the 25th of December, 1293, "on which day he receded from his homage." At that era, the barony of Gainford, not having been attached to the see of Durham, was generally considered to belong to Northumberland;† and it was consequently the duty of the sheriff of that county to enter the forfeited territory. As he neglected to do so, however, Bishop Beck, after having, as an experiment, entered on Long Newton and Newsom, seized the whole barony, on the feast of St. Martin, 1294, in virtue of his presumed prerogative of *jura regalia*.

The palatinate was seized by the crown on the 17th July, 1301; but the bishop obtained restitution of the temporalities in the following year. In 1305, they were again seized by the king, who, at this time, had determined to abridge the overgrown power of the prelate, and particularly to detach from the see the large possessions which it had acquired on the attainders of Baliol and Bruce. Robert de Clifford, who had already obtained Hart and Hartness from the king, was appointed custos of the bishopric; and a royal writ, addressed to him, directed that a jury, summoned from the bishopric, should make a return to certain questions annexed, relative to Baliol's forfeited possessions. Accordingly, a jury of twelve residents of the barony met at Barnard Castle; and, by virtue of their return, Clifford immediately seized for the crown "the Castle of Barnard, with all the lands and tenements which the bishop held of the barony of Gainford, and all other the lands and tenements which, by virtue of the said inquisition, ought to appertain to the king, and

branches of the family were of note both in England and Scotland, every trace of the name was extinguished before the close of the 14th century.

† About 240 years afterwards, namely in 1535, a bill passed the House of Lords, declaring Hartlepool and Barney Cassell to be in the county of York.

none else." The fealty of the freeholders present was then taken; and all the goods and chattels found in the castle, lands, and tenements were attached. The total annual value of the possessions thus obtained was £183 5s. 9 $\frac{3}{4}$ d., besides the dowers charged on them, amounting to £150 13s. 4d.

It may be added here, that, though Beck obtained restitution of the see in the first year of the following reign, yet neither he nor his successor, Kellaw, made any effort to regain the barony; and even when, on the petition of Bishop Beaumont, the parliament recognized the right of the see to the disputed territory, and issued writs commanding restitution, yet these orders, repeatedly made, were never attended to.

THE BEAUCHAMPS, NEVILLES, AND PLANTAGENETS.—On the 2nd of February, 1307, King Edward I., then on a sick bed at Lanercost, conveyed to Guy Beauchamp, second Earl of Warwick, "the castle and vill of Barnard Castle, and manor of Middleton, with its chases and other appurtenances, in the bishopric of Durham, which belonged to John Baliol, an enemy and rebel to the crown, and which, by his forfeiture, had come as escheats to the king's hands." This act was dictated at once by gratitude for the past services of Warwick, and by policy, as a more proper person to be entrusted with the possession of an important northern fortress could not have been found than this stern and redoubted warrior. He was one of the nobles whom Edward I., when dying at Burgh on Sands, enjoined not to let Gaveston return to England "to set his sone on ryot." On the ascendancy of that favourite, therefore, in the following reign, the Earl of Warwick joined Thomas Earl of Lancaster and others, and took Gaveston prisoner at Scarborough; but, on the intercession of the king, the Earl of Pembroke undertook, upon forfeiture of all he had, that their victim should not escape, provided he himself were allowed to conduct him to a conference with the king. The rest seemed to consent; but, during the journey of Pembroke with Gaveston, Warwick came in the night with a number of armed men, and took the latter back to Warwick Castle, on a hill near which, after a short consultation, he was beheaded. The particular enmity which Warwick bore to Gaveston is said to have originated in the latter having called him "*The black Dog of Arden*," in allusion to his swarthy complexion;*

* "Pers Gaveston rayled on the nobles, calling Gilbert de Clare, Counte of Glocestre, *Cocold's Byrde*; Lacy Erle of Lincolne, *Boele Crenee*; and Syr Gui Counte of Warwicke, *Noir Chien d'Arderne*."

in confirmation of which, it is added that, when the axe was raised over the neck of the unfortunate man, Warwick approached him, and, with characteristic ferocity, exclaimed, "*This is the bite of the black hound of Arden!*" None of the parties in this transaction were ever punished. The Earl of Warwick married Alice, daughter of Ralph de Tong, and widow of Thomas de Leybourne, by whom he had issue Thomas, his successor; John, captain of Calais, and admiral of the fleet, 23 Edward III.; and five daughters. He died August 12, 1315, aged 44.

Thomas Earl of Warwick succeeded his father at the age of two years. During his minority, Roger Mortimer, Earl of March, was governor of Barnard Castle, when an ineffectual attempt was made by Bishop Beaumont to regain possession of it. On the earl coming of age, "he was scarce ever out of some great and memorable employment," being present at the battles of Cressy and Poitiers, and at the siege of Calais. He afterwards accompanied Prince Edward in his wars against the infidels. In 41 Edward III., he was joined in commission with Bishop Hatfield and others, to supervise the Marches of Scotland; and he was one of the founders of the Order of the Garter. On landing at Calais in 1369, whither he had been sent to assist the Duke of Lancaster and the Earl of Hereford, who were threatened by the French army, and whose troops were wasted by famine and plague, he reprehended their delaying to fight, and exclaimed, "I will go and fight before the English bread which I have eaten be digested." He accordingly drove the French before him, but, on his return to Calais, fell a victim to the pestilence which was raging, and died on the 13th November. His wife was Catherine, daughter of the Earl of March, by whom he had issue Guy, who died without issue at Vendome, April 28, 1351; Thomas, his successor; Reynburne; William Lord Bergavenny; and nine daughters.

Thomas, the second earl of the name, was 24 years of age when he succeeded his father in 1369. He was chosen one of the governors of King Richard II. during his minority; but the control which they exercised over the early extravagance of the monarch was not forgiven when he assumed the reins of government. Warwick was suddenly arrested, and banished to the Isle of Man; and his castle, town, and lordship of Barnard Castle, together with his manors of Middleton and Gainford,

It is easy to conceive the exasperation that would be excited amongst the proud barons of England by the application of these offensive epithets.

were, in 1398, granted by the crown to William Scroop, Earl of Wiltshire. In the next year, however, they were restored by Henry IV. to the Earl of Warwick. By Margaret his wife, daughter of William Lord Ferrers, the earl had issue Richard, his successor, and four daughters, two of whom died in infancy, and the other two became nuns at Shouldham. He died on the 8th of April, 1401.

Richard Beauchamp, Earl of Warwick, was an impersonation of all the most brilliant and graceful attributes of chivalry. Henry IV., whom he assisted against Owen Glendower and Henry Hotspur, made him a Knight of the Bath. His travels extended to Russia, Poland, Italy, Venice, and the Holy Land. At Verona, he fought a single combat, according to the custom of the age, with Sir Pandulph Malacot, or Malet, who had challenged him, and whom he nearly slew. On his arrival at Jerusalem, he set up his arms on the north side of the temple.* After his return to England, he was appointed by Henry IV., with Bishop Langley and others, to treat concerning a peace with Scotland; and in the second year of Henry V., he armed himself to assist in putting down the Lollards. During the succeeding wars in France, he was actively engaged; and being appointed captain of the town of Calais, he sent three challenges to the French court, from whence three knights were deputed to the tournament. These Warwick himself successively encountered and vanquished, appearing on each occasion in a different suit of armour. At Constance, shortly afterwards, Dugdale says he received a challenge from "a great duke" for his lady's sake, and, in jousting, slew him. Henry VI., to whom, in his youth, the earl had been guardian, appointed him regent of France; an office which he held about four years, when he died at Rouen, April 1, 1439. He married, first, Elizabeth, daughter and heiress of Thomas Lord Berkeley, by whom he had three daughters; and, secondly, Isabel, daughter of Thomas, and heiress of her brother, Richard Lord Le Despenser, by whom he had issue Henry and Anne.

* Dugdale relates that "a noble person called Baltredam (the Soldan's Lieutenant) hearing that he was descended from the famous Sir Guy of Warwick, whose story they had in books of their own language, invited him," &c. "Afterwards Baltredam said he would wear the earl's livery, and be marshal of his hall; and he gave Sir Baltredam a gown of black peak, furred. Moreover, Baltredam told the earl that he believed as he did, and rehearsed the articles of the Creed; and he was skilful in sundry languages."

† "On each side of the faded melancholy portrait of this unfortunate lady," says Miss Strickland, "in the pictorial history of her maternal ancestry called the Rous Roll, [still preserved in the Herald's College,]

Henry Beauchamp, born in 1424, was created Duke of Warwick at the age of 19, and in 1445 was crowned king of Wight, but died on the 11th of June in the same year. By his wife, Cecily, daughter of Richard Neville, Earl of Salisbury, he had a daughter, Anne, who died in 1449, at the age of 10 years.

The widely-extended possessions of the Duke of Warwick devolved, on his death, on his only sister, Anne, who married Richard Neville, Earl of Salisbury, son of the earl just mentioned, and who, by this union, acquired the title and estates of the Beauchamps. The eventful career of this illustrious nobleman, styled, from the influence he exercised during the Wars of the Roses, "The King-maker," is too well known to require repetition in this place. After his death on Barnet Field, on Easter-day, 1471, Bishop Booth made great efforts to procure a confirmation of the decision made in favour of the see in the parliament of Edward III., issued many instruments, and had repetition of the adjudication in his favour; yet the family of Warwick continued to hold Barnard Castle.

The Earl of Warwick left two daughters; Isabel, who married George, Duke of Clarence, brother of King Edward IV.; and Anne, who married, first, Edward, Prince of Wales, murdered at Tewksbury, and, secondly, Richard, Duke of Gloucester, another brother of the king, and who himself ascended the throne in 1483 as Richard III.† To these daughters, by an act of parliament passed in 1474, the possessions of the earl were assigned. On the attainder of the Duke of Clarence in 1477, the Duke of Gloucester, by some means, obtained the undivided possession of Barnard Castle. He had frequent employment in the affairs of the north and the wars in Scotland; and it is probable that he sometimes used this castle as a temporary place of residence. That he effected considerable repairs and restorations may be inferred from his cognizance, the boar, sculptured on its walls; and, indeed, its capabilities as a military post could scarcely have escaped the eye of so consummate a warrior. By patent from

two mysterious hands are introduced, offering to her the rival crowns of York and Lancaster."

"O, would to God, that the inclusive verge
Of golden metal, that must round my brow,
Were red-hot steel, to sear me to the brain!
Anointed let me be with deadly venom;
And die, ere men can say—God save the queen!"

She pined away and died within a year after the death of her only child, Edward, Earl of Salisbury and Prince of Wales, the son of King Richard.

Bishop Dudley, the duke held the rangership of Wear-dale Forest. On the death of Edward IV., Richard was attended to London by a troop of northern men, "marvellously ill-favor'd."

But it was not merely for his bravery and military skill that this prince acquired his popularity in the north. In 1477, he obtained a license from Edward IV. to found a college within Barnard Castle, for a dean and twelve secular priests, ten clerks, and six choristers, to the honour of Jesus Christ, the Virgin Mary, St. Margaret, and St. Ninian, and to purchase lands, &c., not exceeding the yearly value of 400 marks. The members of this college were to be "a body corporate, with all rights, powers, and privileges as such; and the said duke and his heirs to be perpetual patrons of the said college, to be called the college of Richard Duke of Gloucester, at Barnard Castle, in the diocese of Durham." It is probable that the stirring events in which he was subsequently engaged, delayed the completion of his design; and his death on Bosworth Field, on the 22nd of August, 1485, put an end to all his plans. That some progress was made in the proposed buildings, has been inferred from the existence of several sculptured stones, bearing the name and crest of Richard, and built up in the walls of tenements. A sculpture in bold relief, apparently designed to be placed above a gateway, recently stood at the corner of Newgate Street, and represented an ecclesiastic beneath a canopied niche, with a pastoral staff in his right hand, a book in his left, and a rampant boar on each side. The conjecture of Surtees, that this group is a representation of St. Anthony and his usual attendant swine, is not borne out by the dedication of any building or chantry to that saint in Barnard Castle.

On the death of Richard, this lordship was immediately seized by his conqueror, Henry VII., who restored it to Anne, widow of the "proud setter-up and puller-down of kings," and mother of Isabel and Anne, wives of Clarence and Gloucester. This, however, appears to have been merely a method taken to secure the possessions to himself; for, on December 13, 1488, by a special feoffment and fine, she conveyed them wholly to the king, entailing them on the issue male of his body, with remainder to herself and her heirs.

Barnard Castle and its dependencies continued vested

* Sir George extols the loyalty of the townsmen of Barnard Castle, who had "not one recusant amongst them since the first yeare of her Maties reign;" and adds, "Ao 30 of her Maties most happie reigne, it was publicly given out that the Spanyards were arryved at Hart-

in the crown for at least 20 years after this event. How it came into the possession of the Nevilles of Raby does not appear; but it is certain that they held it for a considerable time before the rebellion of the last earl in 1569. On that memorable occasion, it was seized and garrisoned for the queen by Sir George Bowes, of Streatlam, who defended it against the main body of the insurgents for eleven days, and then, as is commonly recorded, surrendered it, for want of provisions, upon honourable terms, being allowed to depart with arms, ammunition, and baggage. The account which he afterwards gave of the affair is as follows:—"In the last rebellion in the Northe, the townsmen at their owne cost watched the passages, bridges, and foards of the river Tease, to putt backe their enemyes and their provision about 30 daies together before the seige of the castle there. The enemys forces approaching, six score townsmen, well appointed of their own charge, entered the castle, and contynued there in defence of the same cleaven dayes, at which tyme the siege was raised."* But, in whatever manner the siege concluded, it had the desired effect of delaying the march of the insurgents until the Earls of Warwick and Surrey had time to advance, and thus contributed much towards the speedy suppression of the rebellion. The attainder of the Earl of Westmoreland threw the lordship once more into the possession of the crown, notwithstanding the interference of Bishop Pilkington. (See vol. i., page 67.)

CONCLUDING DETAILS.—As a reward for the courage and fidelity of Sir George Bowes, he obtained from Queen Elizabeth a lease of Barnard Castle, and of some royal mines, for 21 years, which was renewed at his death. The fee of the castle and manor were afterwards granted by James I. to his favourite, Robert Carr, Viscount Rochester, Baron of Brancepeth, and Earl of Somerset; but on his attainder, they again reverted to the crown. Soon after, they were, with Brancepeth and other estates, settled for the maintenance of the household of Charles, Prince of Wales, by demise, for 99 years, to Sir Francis Bacon, attorney-general, and others, with power to grant leases for 27 years, or three lives; and the survivors of the grantees assigned to Sir Henry Vane, Knt., for the unexpired remainder of the term. On March 14, 1626, in consi-

lepoolle, 20 myles distant from this towne, whereupon instantly about 400 townsmen, well armed and appointed, marched forward out of the same, to have resisted the invasion, if any had been attempted." This letter was written in 1591.

deration of a fine of £1,500, Charles I. granted to Samuel Cordwell and Henry Dingley, in trust for Sir Henry, the reversion of the assigned premises, together with all deer and wild cattle in the parks, and free chase and warren, to be held of the crown by knights' service, under the yearly rent of £100 19s. 4d. In 1640, Sir Henry Vane obtained a grant from the crown of sundry privileges annexed to his manor of Raby and honour of Castle Barnard, which latter was created a barony by William III. This title was first conferred upon Sir Christopher Vane, on July 8, 1699; and the Hon. Henry Vane assumed the title of Viscount Barnard in 1754. The castle and manor of Barnard Castle are still vested in his descendant, the Duke of Cleveland.

When the people of the county and city of Durham commenced their efforts to obtain parliamentary representation in 1614, the borough or town of Barnard's Castell was named as a place entitled to return members. In the bill brought into the House of Commons, March 6, 1620, fourteen members were claimed for Durham. "The bill was committed; reported with amendments, March 14. Knights for the county; citizens for Durham. Barnard Castle to have burgesses, because the prince his town, and he desireth it; and Hartinpoole because a port. The rest refused *for pestering the house.*" In the debate, Sir Thomas Wentworth argued, "Rather to leave out Barnard Castle, which is a *dry* town, than Hartinpoole." Sir Talbot Bowes—"In Hartepoole not a sufficient man to serve; in Barnard Castle many. This the prince his town; that a subject's." On question—Durham to have knights; Durham city to have two burgesses; Barnard Castle two burgesses. The subject was again agitated in 1621, 1623, and 1624.

In 1614, there was a great snow, the deepest ever known, and did not yield until February 26; nine people of this place and neighbourhood were lost; it was past travelling but in danger of life for man and beast; by report was six yards deep in the country.

* The diary of Mr. Sanderson, of Egleston, in which the above circumstance is recorded, contains, amongst family matters, several notices of passing events, as, "1662—Rye, 10s. a bushel; wheat, 12s.; peas, 7s., 8s. 1672—A wet harvest; oats out till Lukesmas. 1673—Little hay cut till 1st Sept.; corn unsound; multitudes of sheep died. 18th January, 39 ships cast away on the Northumberland coast, 16 belonged to Newcastle and Sheels; their very best vessels. Oats, 6s. a bushel; bigg, 6s. 6d.; rye, 6s. 4d.; malt, 18s. to 20s. a load, new measure. 1674—A famine if corn had not come in at Newcastle; oats not got in at Luke's day: at Rood-day, 1673, there was above 400 red deer in Teesdale forest, but were destroyed in the snow. 20th Dec., 1675, much thunder and lightning; 29th Jan., black-birds sang; 19th Feb.,

In 1634, the severe winter obliged the people of Richmond and the bishopric to take their cattle over Stainmore to seek fodder after Fastness Eve.

The plague broke out at Osmondercote and Winston in 1636; and so great were its ravages in the neighbourhood, that Barnard Castle Magdalen fair was cried down. In April, 1645, that dreadful visitation again made great havoc in the town and vicinity.

After the rout at Newburn, in April, 1642, 500 Scots, of whom 200 were cavalry, were billeted upon the inhabitants of Barnard Castle, where they left a debt of £80.

On January 3, 1644, Francis Walker, of Barnard Castle, Gent., was tried at the sessions at Durham, for saying, "The parliament are rogues, rebels, and traitors—God confound them and the devil confound them; and he wished the parliament house were blown up with gunpowder as it should have been once, and he hoped to see them all hanged one against another within a short time—that the parliament ought to be kings themselves, and that they would have him (the king) to be worse than either you or I, and that he (the king) could not say the horse he rode on was his own."

The exuberant loyalty of Francis Walker does not appear to have been participated in by his townsmen, when Lieut. Gen. Oliver Cromwell entered Barnard Castle on Tuesday, October 24, 1648. Anthony Martindale, Matthew Stoddart, Cuthbert Raine, Robert Hutton, Francis Hutchinson, William Hutton, Morgan Rowlandson, Thomas Heslop, Samuel Martindale, George Dayle, John Lively, and William Wharton, went out to meet him, and rode before him into the town, where, having conducted him to his lodgings, they presented him with burnt wine and short cakes. He departed for Richmond on the following day.*

Tradesmen's tokens were issued in Barnard Castle, in 1665 and 1666, by George Sanderson, Christopher Pinkney, William Hutchinson, Christopher Burfey, Matthias Sowerby, Anthony Markindail, Thomas Bull, and Michael Alderson.

the cuckow heard; 28th Feb., his servant fishing, went dry shod over Tees at Winkham. 1676—A remarkable fine harvest; all corn got in before Sept.; wheat 3s. 6d. a bushel; rye, bigg, and barley, 2s. a bushel; oats, 4s. and 5s. a load, old measure. 28th October, 1672, the sun shining bright at noon, the stars were seen. In the beginning of Dec., 1680, was observed a long meteor, west and by north; it appeared just at close of day, began at the top of the firmament, and reached the horizon. 1681—A great drought, no grass, cattle on baron lee, obliged to be carried up to the high fells; oats, in June 10s. a load; rye loaves, 1d. a pound; rye, 7s. a bushel Winchester; hay sold for six times its usual price, much remained to be mowed in the middle of September."

On the 18th of February, 1684-5, King James II. was proclaimed at Barnard Castle. The justices present were Sir William Bowes, Mr. William Robinson, and Mr. Sanderson. Several gentlemen dined "at Blagrave's." Their music consisted of two trumpeters with silver trumpets, and four drums.

During a very violent storm of thunder and lightning, September 19, 1729, a barn, with the corn in it, was set fire to and consumed. A house in the adjacent village of Startforth was also struck, the walls and furniture of which were much damaged. Two children were playing on the floor in one of the rooms; but though one of them was thrown on a bed at some distance, it received no further injury than the fright.

A fire broke out in the house of Robert Newby, barber, on July 11, 1748, destroying two other houses before it was extinguished. The Hon. Henry Vane sent his engine and apparatus to assist the inhabitants, and afterwards made a present of them to the town.

In March, 1784, as some men were ploughing in the lands of Swaites Hall, near Barnard Castle, they turned up several pieces of silver, which, upon examination, were found to be coins of Henry I., and had probably lain in the ground near 600 years. A tradition of treasure being hid there had been handed down in the family for ages.

During the night of October 13, 1829, there was a strong gale of wind, accompanied by heavy and continued rain. The river Tees was swollen to much beyond its usual height during floods, and inundated many of the houses in the lower part of the town, particularly in Bridgegate, where it swept away furniture, clothes, &c.

On August 25, 1832, Barnard Castle and its neighbourhood were visited by a violent thunder-storm, accompanied by a whirlwind, which completely unroofed a thatched cottage, and laid the inmates senseless on the floor. A large stack of hay was thrown down; and a man, employed in breaking stones on the road, was lifted off his feet, and thrown to the ground, but without being much hurt. The whirlwind crossed the Tees, tore up some large trees near Lartington Hall, and killed a calf in a field at Cotherstone. The Tees rose to a great height, and the road between Barnard Castle and Bowes was rendered almost impassable.

The district between Barnard Castle and Brough was, on the 9th of March, 1835, visited by a severe storm of snow and wind, which stopped the stage coaches and mails for more than a day.

Her majesty Queen Victoria was proclaimed at Bar-

nard Castle, on the 3rd of July, 1837, by the steward, jury, and officers of the manor court, assisted by several of the respectable inhabitants of the town. The proclamation was first made in front of the King's Head inn, and afterwards at the usual places. Flags were hoisted on the steeple of the church and the Raby battery, and the bells were rung on the occasion.

The events connected with the various town improvements, the passing of the Darlington and Barnard Castle Railway Act, &c., will be noticed under their respective heads.

THE CASTLE.

THE ruins of this ancient fortress, once amongst the most important and extensive in the north of England, crown a lofty series of precipitous rocks on the north bank of the Tees, and originally commanded one of the principal passages between Durham and Yorkshire. The choice of its site is a proof of the military tact of its founder; and now, long after its warlike uses have ceased, and its strongest and loftiest walls are crumbling to decay, it is still majestic in ruin, and may be considered as an appropriate monument to the kings, warriors, and statesmen to whose power it once formed so mighty an adjunct.

The earliest description extant respecting this castle is that of Leland:—"The Castelle of Barnard stondith stately upon Tesc. The first area hath no very notable thing yn it, but the fair chapelle, wher be 2 cantuaries. In the middle of the body of this chapel is a fair marble tumb, with an image, and inscription about it in French. Ther is another in the south waul of the body of the chapelle of fre stone, with an image of the same. Sum say that they were of the Bailliolles. The inner area is very large, and partly motid, and well furnished with towres of great logging. Ther belong 2 parkes to this castelle; the one is caullid Marwood; and thereby is a chace that berith also the name of Marwood, and that goith on Tesc ripe up into Tesedale. There is but a hil betwixt the chases of Langeley and Marwood."

The siege of this castle during the Northern Rebellion has been already alluded to.* At that time, it must have retained much of its original strength. In a ballad preserved in Percy's Relics, it is related that

* A common bishopric rhyme has been supposed, upon somewhat vague grounds, to refer to this siege, as having been a taunt used by the insurgents to the defenders of the castle:—

"A coward, a coward o' Barney Cassel,
Darena come out to fight a battle."

"the uttermost walles were lime and bricke," which the earls readily won; but that the innermost walls "were cut in rocks of stone," and presented a more formidable resistance.

In a survey and inventory, taken in 1592, the apartments described as in the "round tower" are "the highest romth of the tower," "my ladies chamber," "the closett," "the bathing howse," "the third romthe," "the wyne seller," and "the lowest rome in the tower." In other parts of the castle were "the dyninge chamber," "the great chamber," "the little hall," "the buttrie," "the studye," "the gallerie," "Mr. Rob. Bowes' chamber," "the romthe wthout Mr. Robert's chamber," "Mr. David's chamber," "the romthe next the old nurserie," "the old nurserie," "the romthe under ye evidence," "the old hall by the wardrobbe," "the great wardrobbe," "the romthe wthin the wardrobbe," "the great hall," "the kitchen, larder, and paisterie," "the brew house," "the chamber over gatemans hole," "the entrie of the dungeon gat," "the many gate ward," "the great barne," "the garner," "two chambers over the many gates," "Mrs Wickliff's lodgings," "the hall," "Mr. George's chamber," and "the milk house." It is added that "the leades over all the Towers and lodgings conteyned in this Inventorie are in reasonable good repaire, saving that the rayne water entreth in at some small crisses wch is needful to be repaired. The doors of the said lodgings for the most p'te have no locks, being taken of and carried to Rabie, wth a great kascnett out of the studie by my ladies appointment. Some paynes of glas were taken downe out of the gallerie by Mr. Henry Bowes's direction, and employed in the Many Gates. The state of all implem^{ts} and other things conteynid in this said Inventorie stand in effect according to ye former vewe, saving that the glas in the windowes are for the most p'te more ruynous by vehement wynds; and will dalye decaie if further order be not taken for the same."

The unroofing and dismantling of the castle is thus alluded to by an anonymous writer (in 1634):—"I have thought (upon view of the late impregnable fort of Barnard Castle, which resisted the force of the Earles in their rebellion by the space of 11 dayes, and then yielded only upon composition) since it was pulled downe in the yeare of our Lord 1630, that it had beene a happy thing for us, and the whole kingdome, if the founder thereof had covered it with slate or straw. Oh! misery! can £1,000 worth of leade, iron, wood, and stone, be more worth than a castle, which might have been a receptacle for a king and his whole traine?"

The dread of the author is, "that the iron and leade may peradventure be sold to the utter enemies of our kingdom."

The gradual and progressive decay of more than two centuries has effected the demolition of nearly all but the outward shell of this once magnificent fortress. The gateway of the outer area is approached from the west side of the main street of the town; and the castle walls on this side are covered by the backs of houses. All traces of the chapel have long been obliterated; the space consists of an open field, in which a few small gardens are placed beneath the ruined walls. There is no appearance of towers or bastions in this part of the walls, which are carried along the very verge of the cliffs, about 70 feet high, overhanging the street called Bridgegate, and surrounding the area on the east, south, and west. On the north and east, a deep fosse and strong wall separate this portion of the ruins from the site of the principal fortifications, which site is now occupied by an orchard, intersected by numerous traces of foundations. A quantity of lead, run amongst stones, was found about two feet below the surface a few years ago. It was here, probably, that the keep was placed; and the circumvallations have been more lofty than those towards the south. A pond, near the middle of the orchard, is never dry, though on a much higher level than the moat, in which there is no water. Near the north-eastern angle are the remains of "Brackenbury's Tower," a name suggestive of imprisonment. Its appearance is that of a gloomy dungeon, being an arched vault, now open towards the interior area. A passage through the wall on the south is filled up with earth and rubbish. There was a hearth and chimney on one side, and two niches on the other. A small square hole through the arched roof may have been used for letting down provisions. The top of this vault is covered with earth and bushes.

In the centre of the northern wall of the castle there is a gateway leading to the *Flatts*. It is beneath a circular arch, partly built up; and there are vestiges of flanking buttresses, the whole having been defended by a semicircular tower. To the west of this there is an angular projection, near which the top of the arch that connected the outer and inner moat is still visible. The north-western angle of the castle is formed by what has been called "Baliol's Tower," a circular erection of considerable height, and of excellent ashlar masonry. It contains a stone dome or vaulting, 30 feet in diameter, without ribs or central pillar, and not more than 18 inches in height above the springing line. In the survey

above mentioned, it is stated that "the leades over the said tower is in reasonable repaire, saving the gutters." The furniture of "my ladies chamber" consisted of "a portall of wainescot, a cupboard over y^e chymney, the bay window syled on both sides wth waynescott, and the window wth glass, and iron in all p^{ts} whole; the glass is now something decaid." In the bathing house, "A great lead and a little one, a broken casnett, a spowt of lead, lying in y^e wall, wth a cocke, a leafe of a wyndow, and an old truncke w^{thout} a lock. It'm, in my ladies chamb'r more, three barres of iron sett fast in y^e chymney, a table of walnutt tree, a frame in the bay-window, the oute doore w^{thout} a locke, and a portal doore at the goinge uppe the staires." Certainly, a more romantic situation for a lady's bower can scarcely be conceived. This tower has been kept in better condition than any other part of the castle, having been repaired and fitted up some years ago as a shot factory, for which purpose the walls above the ancient well were bored through. It is now occupied by a person who cultivates the orchard in the interior, and who also officiates as a guide to visitors. He has acquired the appellation of "the monk of Barnard Castle," and his single chimney-pot, smoking above the walls, contrasts somewhat oddly with the surrounding ruins.

The western walls of the castle overlook the bed of the Tees, and command a splendid view of the more distant country. One of the most conspicuous features in this part of the building is a beautiful mullioned window, hung on projecting corbels. There can be little doubt that this was the work of Richard, Duke of Gloucester, as within it, on the soffit of its arch, there is a bold sculpture of the boar, surrounded by fanciful tracery. "And," says Mr. Surtees, "if this were Gloucester's state-chamber when he lay at Barnard, the selection does no discredit to his taste; from no point is the wild and beautiful vale of Tees seen to more advantage. Perhaps the military advantage, of a complete sweep of eye over the bridge and the approaches from the south and west, had its weight." This apartment, called in the survey, the great chamber, contained, at that time, "the great baie-windowe wth yron, two kas-

netts, and y^e glas broken, one iron chymne, w^{thout} a backe, two great dores w^{thout} locks, one dore goinge uppe y^e staires, w^{thout} a locke, a paire of trussells, and three walnut-tree planks in Mr. Fulthorpp's keeping."

To the south of the large window, the wall is supported by four lofty buttresses, and contains two pointed windows. On this side of the fortress there was a sallyport, leading to the bridge. The wall near this place seems as if about to topple down the precipice immediately below. Indeed, between 60 and 70 years ago, a large portion of it, as high as that which remains, slid from its base and fell over the cliff; the chasm was afterwards filled up by a low wall. In the spring of 1810, a part of the south wall fell: it battered in the roof of a house, and a man at work in a saw-pit below was providentially preserved by a tree falling across it.* The entire circuit of the walls incloses an area of 6½ acres. Several coins of Edward I. and Edward III. have been found within the enclosure.

The garrison of the castle, as well as the cattle which were sometimes collected within its walls in times of danger, were supplied with water conveyed in pipes from a large reservoir, called the Ever, in the Flatts, on the north side of the fortress. A Roman road, branching from the High Street from Catterick to Bowes, led over the Tees at this place by a ford called Street Ford, from which the little village of Startforth derives its name. In July, 1839, whilst the workmen were digging the foundation of a gasometer on ground presented for the purpose, they discovered a portion of this road at the depth of about 6 feet from the surface, 12 feet wide, and quite perfect. It was formed of limestone rock placed edgeways, and compacted with fragments of sandstone, probably obtained from the river side. The road proceeded from hence, by way of Streatlam and Staindrop, till it joined the great road from Piercebridge to Binchester. The Flatts are now enclosed and cultivated, and present some of the most delightful scenery of a district which abounds in natural beauties, the attractions of which are not surpassed by those of any other part of the Tees.†

* Early in the morning of March 12, 1827, a rock of some tons weight was separated from its long abode, and came down with a tremendous thundering noise, from a height of 20 yards, against a house in Bridgegate, occupied by persons named Green and Dickinson. Instantly the side of the house gave way; and two children, who were sleeping in a lower room were for some time buried in its ruins, but were taken out unhurt. Dickinson, who occupied an upper room, was asleep in bed; but though the floor gave way, and one side of the house disappeared, his bed was kept up by a holdfast to

the remaining wall, and he remained suspended like a tenant of the air. Through assistance, however, all the inmates of the house were rescued from their perilous situation.

† The author of "A Tour in Teasdale" says, "When you reach the tangled dell at the end of the terrace (the Flatts), wind down a small track to the rivulet, and take the road through a fine hanging wood by the Tees side to a small inclosure, part of an ancient park in the true character of Shakspeare's forest scenes, where his outlaws

THE TOWN.

THE town of Barnard Castle is 25 miles, by road, south-west from Durham, 39 from Gateshead, 45 from South Shields, 38 from Sunderland, 38 from Hartlepool, 28 from Stockton, 16 from Darlington, 14 from Bishop Auckland, and 224 north-north-west from London. In 1851, the population was 4,357, of whom 2,088 were males and 2,269 females; and there were 644 inhabited houses, 8 uninhabited, and 11 building. For the population of the township, see page 4.

The town is about a mile in length, and is situated on the southern slope of a hill, which descends steeply to the river Tees. It is approached from the north-east by the Bowes and Sunderland Bridge turnpike, which connects it with Staindrop, Bishop Auckland, and the great north road to Durham. *Gallgate*, or *Gallowgate*, is a broad street or suburb running from east to west. According to some authorities, the ancient town of Marwood stood here, before Barnard Castle was built. The street is supposed to derive its name from having been the place of execution belonging to the lordship. Spearman, who wrote in 1729, says, "The place of execution of felons is at this day apparent; and the trials of matters of right were there (at the castle) till 26th King Henry VIII. that it was enacted that all felons should be tried by the king's commission; since which time the felons have been tried at Durham, to save the king's charges of justices coming to Barnard Castle." On an eminence, at the head of this street, where the roads to Staindrop and Middleton diverge, several stone steps and a broad pavement were dug up some years ago: these were supposed by some to have been the remains of the market cross of Marwood, but were more probably the site of the engine once used for the decapitation of criminals. A close in the vicinity was called, in ancient records, *Hankeslave*, or *Hang Slave*. Near the same place is an old chapel, called *Bedekirk*, now occupied as a farm-house. Some of the ancient lancet lights may still be seen in the east wall, and the piscina also remains. There are no re-

revel and his fairies sport; keep the river, and you will gain a most truly solemn and sequestered spot completely closed in by wood, and undisturbed by any sound save the remotely dashing water. The wild forms of the venerable oaks that skirt the old moss-covered wall of the inclosure; the noble height of the opposite hill, covered to the summit with lofty trees; the glassy smoothness of the river at your feet, and the scattered masses of rock in its channel, impress you with delicious awe. Ascend the hill, and go through a ploughed field, along a carriage road, to a thatched helm or shed in a little wild coppice (in themselves a pleasing picture), and you will enjoy a most enchanting scene; but seek for a small oak beyond, near a serpentine

cords relative to Bedekirk; but it is conjectured to be a chantry, mentioned in the Valor of 1536, of the total annual value of £4 9s. It is the property of the representatives of the late Miss Lee, of Staindrop.

King Street and *Queen Street*, formed within the last 30 years, adjoin Gallgate on the south.

The *Cattle Market* joins the western extremity of Gallgate, and is continued by the *Horse Market* and the *Market Place*, which, together, form the main street of the town, running nearly north and south: it is upwards of 40 yards wide, and contains several good houses, inns, and shops. At the southern extremity of the Market Place, the *Town Hall* stands nearly in the middle of the street. It is an octangular building, around the basement story of which there is a circular piazza, inclosed with an iron railing, and occupied by the sellers of eggs, butter, &c., on market days; the inner portion of the building being used as a dungeon. A room in the upper story is appropriated to the transaction of the town's business and the meetings of the magistrates. An inscription records that the building was "erected by Thomas Breaks, a native of Barnard Castle, in 1747." On the top there is a cupola, containing a bell, and surmounted by a vane. Two circular perforations in the latter attest the dexterity of one of the Barnard Castle Volunteers, named Taylor, and Cruddas, one of the gamekeepers to the Earl of Strathmore, who, in 1804, fired at it from the door of the Turk's Head inn, at about 100 yards distance. The old tolbooth and the shambles, which formerly stood in this street, were removed by the Earl of Darlington in 1806, at the request of the inhabitants, by whom they were considered as a nuisance.

Opposite to the Town Hall, the street called *Newgate* stretches to the east, and joins the road to Westwick, Whorlton, &c. The remarkable sculpture mentioned in page 11, which for many years stood on the ground at the north corner of the entrance to this street, has been removed to a place of greater security. A sculpture, with a *boar passant*, is built up in the wall of one of the houses in Newgate.*

path, rather below the summit of the hill, on the brow of the river, and you command at once a view each way. I shall not pretend to describe it; the pen and the pencil must alike fail."

* An ancient oaken chair, conjectured to have been a part of the castle furniture in the time of Richard III., was long preserved in a house in this street, but was sold and removed a few years ago. The seat was plain; but a wreath of flowers ran up each of the back rails. In the centre of the cross-rail was the crown of England, supported by a figure on each side; and the foot-rail was also ornamented by a crown.

Thorngate is a continuation of the main street to the south from the Town Hall. The upper part, from its steepness, is called *The Bank*, and its footpaths formerly consisted of flights of steps. The lower part is terminated by the Tees. Thorngate appears to be the most ancient part of the town. Several of the houses are of stone, and roofed with flags. In the wall of one of these, a low dwelling, with mullioned windows, on the west side of the street, is a stone inscribed "*Ricardus*," in bold Old English characters. On the front of an arched passage in this house, there are two shields, the bearings on one of which are obliterated; but the other bears the arms of Brunskill, an ancient Barnard Castle family. In the interior of the archway, three fragments have been inserted, which, if united, would read, "*Broun. Abbat—cuj. a'v'e p'picie—tur Deus*." Several old wainscot closets, in the interior of the house, are curiously decorated with carvings of birds, foliage, animals, and human figures. An old building formerly stood on the opposite side of the street, conjectured by Hutchinson to have been a house of friars Eremites, of the order of St. Austin, who obtained leave of Archbishop Neville, in the vacancy of the bishopric of Durham, to build a priory and chapel, upon ground given by Thomas Beauchamp, Earl of Warwick. On a mullioned bow window in the front was inscribed, "*Soli Deo honor et gloria*." The back buildings formed a square, in the style usual in religious establishments. Some years ago, the front of the house was used as a chapel by Dissenters. It is now nearly all rebuilt, a small pointed arch only remaining of the original structure; and the inscription has been built up in the interior wall.

Bridgegate, or *Brigigate*, is a long narrow street

which diverges from the foot of The Bank towards the west and north-west, and skirts the foot of the rocks which bear the ruins of the castle till it reaches the bridge. This street forms the only road into the town from the south, except a winding path around the west and north sides of the castle.

THE BRIDGE, consisting of two strong groined arches, connects Barnard Castle with the village of Startforth, on the Yorkshire side of the Tees. The arch on the Durham side is somewhat higher than the other. In Leland's time, "the right fair bridge on Tese" had three arches. There is an inscription now nearly obliterated, on the battlement of the north arch, "E. R. 1569," which, if it be the date of its erection, suggests a conjecture that the two previous arches may have been so injured, or perhaps entirely destroyed during the siege of the castle in that year, as to render their removal necessary, when the present more elevated arch might be substituted. During the great flood of 1771, the Tees was so high that the lower arch, on the Yorkshire side of the river, was not sufficiently capacious for the great quantity of water. The battlement was consequently forced down, and the water took its course along the street of Startforth, drove away the causeway, washed off the soil down to the rock, and demolished eight dwelling houses, so that not one stone was left upon another. The road at the end of the bridge was washed away to the depth of four yards, so that persons passing into Yorkshire were obliged to go down a ladder. Successive repairs and additions have been made on the bridge since that time; and it is now a strong, substantial building, well adapted to resist the floods to which it is frequently exposed.*

* "*The Barnard Castle Tragedy*," preserved in Ritson's "*Durham Garland*," shows "how one John Atkinson, of Murton near Appleby, servant to Thos. Howson, miller, at Barnard Castle Bridge-end, courted the said Howson's sister; and after he had gained her entire affection by his wheedling solicitations, left her disconsolate, and made courtship to another, whom he married by the treacherous advice of one Thomas Skelton, who, to save the priest's fees, &c., performed the ceremony himself; and, upon hearing the news, the deserted maiden broke her heart, and bled to death upon the spot. This being both true and tragical, 'tis hop'd 'twill be a warning to all lovers."

The vicinity of the bridge has, of late years, acquired a sort of notoriety, in consequence of murders and other outrages having been committed there. The last recorded instance is that of Charles White, hawker, whose body was found in the Tees on the 7th of May, 1851, with four wounds, seemingly from a sharp instrument, on the head, and having apparently been in the water about three weeks. Several persons deposed to having seen him in a state of intoxication at various times, a few weeks before the body was found; and his hat, which he had purchased for 2½d., was found at a place called "The

Gentleman's Hole," about a mile from where the body was discovered. The verdict of the coroner's jury was, "That the deceased had come to his death by being cast into the river Tees, and thereby drowned, by some person or persons unknown;" thus involving a charge of wilful murder. The mystery of the case excited considerable interest, as the deceased was a poor harmless fellow, and without money to form a temptation for robbery. It was probably this event, with others of a similar nature, which drew from Mr. Justice Cresswell certain animadversions on the character of the people of Barnard Castle, which will be noticed in their proper place.

But other scenes have been enacted on Barnard Castle bridge. According to Sir Cuthbert Sharp, the Rev. Alexander Hilton, curate of Denton in 1681, and a member of the family of Hilton, of Hilton, left a son, named Cuthbert, of great notoriety, who having taken orders in no church, but having been trained as a Bible clerk under his father, went to Barnard Castle, and celebrated illicit marriages upon the centre of the bridge. The old rhyme said to have been made use of by him on these occasions, after having made the parties leap over a broom-stick, is as follows:—

Though the principal streets of Barnard Castle are wide and airy, a great part of the population reside in the narrow and confined courts, alleys, and yards, which branch off from the main thoroughfares. Of these there are upwards of 70, many of which are approached by covered passages from the front, without any other outlet. The houses, which are of stone, are generally three stories high. The second floor, in many cases, is reached by stone steps built on the outside of the front wall. Each house is subdivided into separate tenements of one room, small in size, and low pitch. In numerous instances, the windows are not even made to open. The lower parts of the walls are generally damp for want of subsoil drainage and eaves guttering.

Many of the houses occupied by the working classes are the property of farmers, who, by virtue of the ownership, obtain certain privileges in the shape of exemption from tolls. For their benefit, also, immense masses of manure are allowed to accumulate in the premises, which contribute materially to vitiate the atmosphere, and, by soaking into the subsoil, tend to deteriorate the quality of the water in the adjoining wells.

The strata forming the earth's crust in the town varies. At the head and east side of Gallgate, the Horse Market, Hall Street, and Queen Street, the upper stratum is of a wet, moving, sandy nature; from Queen Street to the Town Hall, it is clay and gravel; to the south of this, the limestone crops out; and at a short distance further, gritstone makes its appearance. The west side of the town is, to a considerable extent, made ground.

The town and district around are, generally speaking, very healthy; but particular localities, from defective drainage and local impurities, are not so. In many of

the courts and yards, the wind can never by possibility sweep the surface; and even in the main streets, erections have been so placed as to impede adequate ventilation; there are no *through* streets, and although the Market-place is comparatively wide, yet the position of the Town Hall, at the junction of Newgate Street and the Bank, seriously impedes a free current of air.

The roads and foot-paths in the township are under the control of an unpaid board of surveyors, four in number, elected annually in vestry, irrespective of the proper qualification for the business of road-making, who make and collect their own rates. The length of roads in the township is about 17 miles, and excellent materials for their formation and repair abound in the district. There are no public foot-paths except in the town; the proprietors, where flagging is laid, pay the first cost, and it is afterwards kept in repair by the surveyors. The kennels are pitched with pebbles. The Duke of Cleveland, as lord of the manor, keeps the pavement of the Market in repair.

THE CHURCH.

THE church stands near the angle formed by the junction of Newgate Street with the Bank, and is a spacious building, capable of accommodating 900 persons. It consists of a nave and narrow side-aisles, a transept, a chancel, and a square detached tower at the north-west corner.* The whole of the exterior walls are embattled. The tower was formerly surmounted by a leaden spire; but it was taken down in 1774, being then unsafe, and the tower was raised to the height of 60 feet. The original peal of bells were four in number, the oldest of which was of excellent tone, and inscribed around its rim, "*Campana Sancte Trinitatis et omnium*

"My blessing on your pates, and your groats in my purse,
You are never the better, and I am never the worse."

It is but justice to say, however, that the authenticity of this couplet has been controverted; and it is said to have been, like the ballad on the feud between "Ridley and Featherstonechaugh," an effusion of the sportive muse of Mr. Surtees. Sir Cuthbert Sharp adds, "*Psutifer Maximus* left six sons, on whom he quaintly bestowed the names of Abraham, Job, Solomon, David, Cuthbert, and Alexander, and who seem to have derived no stain from their father's illegal practices. They were remarkable only for their industry and ingenuity, and were the first artisans in Barnard Castle who practised the art of dyeing cloth of various colours."

* The following sentence of excommunication, issued by Bishop Hatfield, affords a striking instance of the lawlessness and outrage prevalent in the district in his time, from the effects of which even churchmen were not exempted:—

"Whereas certain sons of Belial wantonly laid sacrilegious hands on Sir John de Upsal, priest, thereby incurring the penalty of the

canon (*Si quis Diavolo suodenti*) 'Whoever by the instigation of the devil;' and afterwards they followed close after the said Sir John to the church of Barnard's Castle, whither he fled through fear of death, and beset him in the said chapel: having tried in vain to drag him out, and having then forced him to retire, so that he sought, for a last refuge, the belfry of the said chapel, and got up into it, they then endeavoured to suffocate him with stupifying fumes and poisonous odours, and thus maleiciously inflicting, by their very many detestable devices and cruelties, no little injury and distress on the said priest, and an open affront of the whole clerical body. Wherefore, in respect of the aforesaid evil doers, declare publicly and with all due ceremony in the churches, when the largest number of the people shall be assembled, that these men have incurred the sentence of the greater excommunication stated in the canon, and that they are and have been altogether excommunicated. The absolution of all these men, except on their death-bed, we particularly reserve to ourselves and our successors, Farewell. Given at Auckland, the 23rd day of January, 1378.'

Sanctorum." The whole were removed in 1823; and a new peal of bells, cast by Mears of London, were purchased, towards which Bishop Barrington, the Earl of Darlington, Sir John Hullock, Miss Lee of Staindrop, and several other gentry, liberally subscribed. The weight of the bells is 73 cwt. 2 qrs. 8lbs.

The entrance to the church from the west was restored in 1813, when the whole of the interior, which Hutchinson says was "wretchedly stalled and the pavement broken," was repaired and neatly pewed. The north aisle is formed by an octagonal and two cylindrical pillars, supporting circular arches of unequal span; and that on the south by three octagonal pillars supporting pointed arches. The windows of the aisles are square, with mullioned compartments. The south porch of the transept, in which was anciently a chantry of the Virgin, has long been used as the burial-place of the Boweses of Strcatlam, several of whose escutcheons, with a helmet, a gauntlet, and a banner, decorate its walls. The south window of this porch consists of five lights under a square head; and another window to the east is double under a pointed arch. The north transept has two low blank arches in the east wall, and is lighted by a modern sash. The arch above the entrance to the chancel is pointed, decorated with sculptures of foliage and human heads, rising from pilasters with embattled capitals. The east window, which was rebuilt in 1816, consists of five lights under a pointed arch; and instead of the two windows on the south, a pointed one was inserted at the same period. There are two galleries, one in the north transept, and the other at the west end of the nave. The font is a large octagonal bason, of the black marble found in the Tees, sculptured on four of its alternate faces with a raised shield; the intermediate compartments containing a triangular device, supposed to be the marks of tradesmen or burgeses who presented the font to the church.

On the 24th of October, 1839, the church was, for the first time, lighted up with gas, the funds for which were provided by public subscription.

On the death of the late incumbent, the Rev. John Davidson, in 1847, a subscription was commenced for the erection of a stained glass window to his memory, towards which the Duke of Cleveland gave £10; Lady Hullock, £2 2s.; Mr. Joseph Hollis, 10s. 6d.; a friend, by Mr. Brownless, churchwarden, £1. The entire expense was estimated at from £30 to £40. The ancient window on the east side of the south transept has been filled with stained glass, containing a suitable design and inscription.

Robert de Mortham, vicar of Gainford, in 1280, founded a chantry to the Virgin in Barnard Castle church, where there were five other chantries, the founders of which are unknown, viz.:—those of St. Catherine, St. Helen, and St. Margaret, (the two latter within the castle,) with an endowment of £6 a year; that of the Twelve Apostles; and the guild or fraternity of the Holy Trinity, with a yearly income of £5 18s. 8d.

A recumbent effigy of Robert de Mortham, in his ecclesiastical robes, with the cup in his hands, remains on an altar-tomb, in the south transept, where are also some other architectural remains of his chantry. A stone coffin lid, sculptured with a highly decorated cross, chalice, books, &c., is built up in the north-east angle of the exterior chancel wall; and part of a sculptured cross, found in taking down the south wall of the chancel in 1819, was afterwards placed at the outside of the south-east corner. On one side of a curious table-monument, near the west end of the south aisle, is a coloured effigy of George, son of Humphrey Hopper, of Black Hedley, Northumberland, who died March 30, 1725, aged 23. He is dressed in a cocked hat, blue coat, and yellow breeches, of the fashion of the time, holding a red rose in one hand, and in the other a scroll inscribed—

"Here stands my Statue carved in Stone
To mind ye Liveing I am gone.
He cometh forth like a flower and is cut down."

In contrast to this blooming figure, the other side of the monument contains a representation of a skeleton, with the initials of the deceased, and—

"Death cuts down all both Great and Small."

The following inscriptions are on the ends of this tomb:—

"Blessed are the Dead who die in ye Lord.—I know that my Redeemer liveth."

"When the shrill trump of God shall pierce
The Secret chambers of the Dead,
And rowze the Sleeping Universe
From out their owze, or dusty bed,
Such bright rewards will Vertue have
When waft by angels, She may Sing
Boast triumph now, insulting grave;
Relentless Death! where's now thy Sting!

In the south wall of the transept is a brass, enclosed in a frame of wood, and bearing the following inscription:—

"Bernard Castle.—Jonathan Rogers filius primogenitus Joh'is Rogersii A. M. et Gratiae vxoris eius Obiit An^o x^o 1650 Nov. 8.
Hec peep'd into the world, where hee could see,
Nought but confusion, Sinne and misery

Thence scap'd into his Sau'ors armes thus hee
Gott Heaucn, for fourteen dayes mortality.

John Rogers filivs 24rs I. R. et G. R. Obiit An^o x^{to} 1652, Avg. 30.

Bles'd Soule, Thy name did mind of God's grace
Thou wast his gift, whose loue shew'd vs thy face
Put hee that gauc, did take in 7^{ed} moneths space
Thou found'st in Fathers armes a resting place."

A splendid monument of Malta stone was erected in the chancel, in 1835, to the memory of Baron Hullock :* it forms a niche in the wall, containing a statue of the Goddess of Justice, underneath which is the following inscription, upon marble, supported by a carved corbel bearing the arms and crest of the deceased baron :—

"To the memory of the HON. SIR JOHN HULLOCK, Knt., and Baron of the Exchequer. He was born at Barnard Castle, April 3. 1767, called to the bar by the Society of Gray's Inn in 1793, married in 1794, raised to the bench of the Exchequer in 1823, and died at Abington, in Berks, on his judicial circuit, 31st July, 1829. By a clear and vigorous mind, he rose to eminence as a sound lawyer, and, promoted solely by his learning, industry, and integrity, he discharged the duties of a judge to the general satisfaction of his country. This monument is erected by his afflicted widow."

The church-yard is situated on the brow of the hill which overlooks the Mains, and is surrounded by dwelling-houses and other buildings; its surface being, in parts, several feet above the level of the adjacent streets and houses. The chief part of the ground is held by immemorial occupation; the entire area is about 7,725 yards. The average number of inter-

* SIR JOHN HULLOCK.—This eminent lawyer and able judge, the son of Timothy Hullock, Esq., of Barnard Castle, and descended from a family traced back to the reign of Henry VIII., was born in 1764, and in early life was entered at Gray's Inn. He practised at the bar upwards of 20 years; and in 1792, he published "The Law of Costs," a work which brought him favourably into notice. "The Law of Costs in Civil Actions and Proceedings," another production of his pen, appeared in 1796; and a second edition, in two volumes, was published in 1810. In that year, he resigned the office of recorder of Berwick, which he had held for some time, and was succeeded by Christopher Cookson, Esq. Amongst the counsel on the northern circuit, he was only surpassed by Mr. Scarlet, afterwards Lord Abinger. The following anecdote has been adduced as a proof of the manliness of his character :—

"In a cause which he led, he was particularly instructed not to produce a certain deed unless it should be absolutely necessary. Notwithstanding this injunction, he produced it before it was necessary, with the view of deciding the business at once. On examination, it proved to have been forged by his client's attorney, who was seated behind him at the time, and who had warmly remonstrated against the course which he had pursued. Mr. Justice Bayley, who was trying the cause, ordered the deed to be impounded, that it might be made the subject of a prosecution. Before this could be done, however, Mr. Hullock requested leave to inspect it; and on its being handed to him, immediately returned it to his bag. The judge remonstrated; but in vain. No power on earth, Mr. Hullock replied, should induce him to surrender it: he had incautiously put the life of a fellow-creature in

ments, during the seven years ending 1848, was 114.29 per annum. Besides the escape of morbid matter on the opening of graves, it is probable that some portion is carried off with the drainage, and pollutes the water in the wells to the south, between the church-yard and the Tees.

In the month of June, 1824, a Roman coin, nearly the size of a sovereign, was found in the church-yard by the sexton. It was in a state of good preservation, and round a head decorated with a wreath of laurel, was the following inscription :—"IMP. CAES. NERVA TRAJANVS GERM." (The Emperor Caesar Nerva Trajanus Germanus). On the reverse side is a crowned figure seated, and holding an olive branch in the right hand, round which is inscribed—"P. M. TR. P. COS. III. P. P." (a high priest, a tribune of the people, thrice a consul, and styled the father of his country). Nerva Trajan reigned in the 98th year of the Christian era; consequently the coin is above 1750 years old.

REGISTERS.—Book No. 1 contains baptisms from 1609 to 1687, burials from 1617 to 1687, and marriages from 1619 to 1687 (defective); Nos. 2 to 6, baptisms and burials from 1688 to 1812, and marriages from 1688 to 1753; and Nos. 7 and 8, marriages from 1754 to 1812.

Barnard Castle chapelry, in the deanery of Darlington, is not in charge; the vicar of Gainford, patron. Dedication to St. Mary.

peril; and though he had acted to the best of his discretion, he should never be happy again were a fatal result to ensue. Mr Justice Bayley, not sorry, perhaps, to have an excuse for assisting the design, continued to insist on the delivery of the deed, but declined taking decisive measures until he had consulted with the associate judge. The consultation came too late; for the deed was destroyed without delay, and the attorney escaped."

In 1816, Mr. Hullock was promoted to the rank of serjeant-at-law; and during the few years he occupied that position, he was engaged in several important causes. On the resignation of Mr. Baron Wood in 1823, Mr. Serjeant Hullock was promoted to the office of one of the Barons of the Court of Exchequer, a situation which he held till the time of his death, and the duties of which he discharged with integrity and sagacity. On Saturday, the 25th of July, 1829, he arrived at Abington as one of the Judges of Assize of the Oxford circuit, and, on the following day, he attended divine service, apparently in good health; but in the course of the night, he experienced a violent attack of cholera morbus, of which he died on the following Friday. On the 21st of August, his remains reached Barnard Castle, and were deposited in the family vault. A numerous concourse assembled to witness the procession; and his empty carriage was followed by a number of aged women, who had been maintained chiefly by his charity, and who testified their grief by tears and lamentations. A funeral sermon was preached in the church on the Sunday following, by the Rev. John Davidson, incumbent of Barnard Castle, from 2 Sam. iii. 38, "Know ye not that a prince and a great man is fallen this day in Israel?"

CURATES—John Messenger, 1436; Sir John Slake, prest., 1483; Peter Carter, cap., 1533; Ralph Bailles, cl., 1565; Thomas Clerke, 1566; Ralph Heightley, 1570; Matthew Copperthwaite, 1576; Cuthbert Bradley, 1577; John Shering, 1622; Giles Forster, A.M., 1634; John Rogers, A.M., an intruder, 1644; William Bickerton, A.M., 1672; John Brockell, 1673; John Chapman, A.M., 1682; Alexander Swinton, a Scot, 1694; Arthur Wilton, 1736, p. m. Swinton; Thomas Marshall, 1739, p. m. Wilton; Taylor Thirkeld, 1740; Thomas Forster, A.M., 1740; John Charlton, A.B., 1743, p. m. Forster; William Dunn, A.B., 1747, p. m. Charlton; Joshua White, A.M., 1760; James Stubbs Hale, 1785, p. m. White; John Davidson, 1816, p. m. Hale; George Dugard, A.M., 1847, p. m. Davidson.

The income of the curacy is derived from a stipend of £6 10s. paid by the vicar of Gainford; £10 per annum from the trustees of Lord Crewe's charity; £63, the rent of 108 acres of land at Holdsworth, in Marwood, left by Mr. Butler;* £9, the rent of 12 A. 1 R. 3 P. at Northfield, in the parish of Startforth, purchased with Queen Anne's Bounty; with 30 acres at Bowes, Cow Close, and an allotment on Bowes Moor; the church-yard, and the surplice fees. The living was augmented with £200 from Queen Anne's Bounty in 1723, to meet a benefaction of £200 from John Lodge, Esq.; in 1812, with £200 by lot from the same fund; and in 1815 with three sums of £300 to meet three sums of £200 from Bishop Barrington, Trinity College, Cambridge, and Lord Crewe's trustees. In 1817, a house and garden for the incumbent, situated at the extremity of Newgate Street, were purchased for £830 derived from these benefactions. The gross income of the living is £228 per annum, subject to permanent payments amounting to £5.

The discrepancy between the population of Barnard Castle and that of the mother parish of Gainford, as contrasted with the respective endowments of the livings, has long been regarded as a grievance. A meeting of lay members of the Church of England, for the purpose of discussing this anomalous subject, was held in the Witham Testimonial early in January, 1850, William Watson, Esq., of Spring Lodge, in the chair, at which it was stated that a petition on the subject had been presented to parliament by Lord H. Vane. Copies of the petition had been forwarded to the Bishop of Durham, the Master and Fellows of Trinity College, Cambridge

* Mr Thomas Butler, brother-in-law to Mr Alderman Barnes, in his will, dated August 19, 1678, styles himself a farmer at Cletlam, and bequeaths two farms in Marwood, "for the maintainence of a preaching minister of Barnard Castle," charging his executor, Mr. Barnes, to fulfil his will, "as he will answer it at God's judgement seate." He desires his body to be opened, that it may be known what was the cause of the pain in his side. He leaves "Fox's Book of Martyrs" to the use of the minister of Barnard Castle; to the vicar of Gainford "Williams true Church, or Sollomans Viniard;" and to

(patrons of the living of Gainford), and the vicar of that parish. A committee of 25 laymen was appointed, to further the object of obtaining a more equitable division of the revenues of the parish.

In reference to the income of the curacy, Surtees quotes the following extracts from a terrier of "the High Parish of Gainford" (Barnard Castle), given in by John Lively, vicar, March 20, 1635:—

"Mr. John Lively heldeth the church-yard, containing about an acre.

"Item. All tithes of what kind soever in the whole chapelry, *excepting the corn tithe* of the whole chapelry; and also the tithe hay of Westwick, and except as hereafter is excepted.

"The owners of the corn mylnes pay, as we are informed, by ancient prescription for the tithe of the same, viz., the maynes mill, 13s. 4d., for Thorngate mill, 13s. 4d. on the feast of St. Mark the Bishop, in winter.

"Excepting that the Honble Sir Henry Vane and owner of the parks of Marwood doth pay, according to ancient prescription, for the tithe hay, and all other tithes renewing in the said parks (except the ancient tenants within the said park, viz., Metcalfe's, Raine's, and Mitchel's farm), 13s. 4d. on the 22d July, which ancient tenants of the farms aforesaid, and of other farms and tenements, do pay at Easter, viz. Metcalfe's farm, 12d.; Garfoot's farm, 19d.; Barne's farm, 12d.; Mitchell's farm, 12d.; John Mitchell for Parroek Houses, 3d.; John Raine, for his farm in Shipley, 12d.; Ralph Simpson, for ditto, 12d.; John Raine, for Holdersworth-field, 6d.; George Hodgson, for Robert Knott, 4d.; ditto, for West Roger Moor, 4d.; ditto, for half of Marwood House, 2d.; Gabriel Wharton, for the other half, 2d.; ditto, for East Roger Moor, 5d.; Henry Raine, for Hollerbush, 4d.; John Hodgson, for Low Hollerbush, 4d.

"Mr. Cudbert Thoresby doth pay, according to ancient prescription, for the tithe-hay of Woolhouse, at Easter, only 4s. 8d.

"Mr. Middleton, for the tithe-hay of the Broad Close, Alkenhead Close, Hill Close, and Dyke Nook Close, 3s. 4d.

"As we are credibly informed, the land called *Beedekirk*, now in the occupation of Widow Arrowsmith, payeth no tithe at all.

"William Lively, Gent., at Easter, for the tithe-hay of Gibb Garths in Barnard Castle, 2s. 6d."

[The two preceding paragraphs have been crossed out.]

"Gabriel Wharton, now tenant of the Flatts, for tithe-hay and all other tithes, 10s. 22d July.

"The farmers of Streatlam pay for tithe-hay of the farms thereof, 26s. 8d. 22d July.

"The farmers of Stainton and Bremylaw, for their tithe-hay on St. Mark's Day, only 5s."

In this document an account is rendered of the surplice fees and oblations, and of the mode of drawing

all the children whom he "gave Christendome to," half a crown apiece. In remarking on the disinterestedness and impartiality of Mr. Barnes's conduct in the conveyance of this estate, Sir R. Shafto, the counsel, gave his opinion that the "disposition of the said estate in Marwood for maintenance of a preaching minister, was a good appointment within the statute of 43 Eliz. However, he thought the land well devised to Mr. Barnes, who might convey as the will directed; and that none of the devises in the will would make mortman, there being no devise of the land to the parson or vicar and his successors."

tithe of calf, fleeces, lambs, foals, &c. "For every woman giving thanks after childbirth, a *cade*, viz. half a yard of cloth worth 5d. and a penny in money." For every marriage, 6d. For every corpse *man-born* upon the bier, now 9d.; and for every corpse *brought upon the head*, now 5d., but in memory of man 5d. and 3d. [but twenty years ago, when Mr. Dickon (Archdeacon) Cradock was vicar of Gainford, and one Mr. Sinclair (? Shering), curate of Barnard Castle, he did *raise and execute* y^e said fees, &c.]; and for every corpse brought from Whorlton, one penny. For every freeholder in the town, a penny for *smoke*; and for all other persons in the chapelry, a halfpenny. Within the town, a penny a plough; without, a halfpenny. For the milk of 20 ewes, 4d. For a tithe goose, 1d. "For a hen within the chapelry without the town, *whether they have any or none*, 2d."

The payment of church-rates, as in many other places, has frequently been objected to. During a contest in 1848, the church clock was stopped by the churchwardens, and the bells were not allowed to be rung on the Sunday. The result of the poll being adverse to the rate, a subscription, in the form of a voluntary rate, at 1d. in the pound, amounting to £50, was agreed to be raised, for defraying the usual expenses; but the sums received by the churchwardens only amounted to £26; this they applied in paying some of the demands upon them, leaving others unpaid, and, amongst the rest, the sexton. That official, it appears, had held the office for 27 years, previous to which his ancestors had filled the office of parish clerk for upwards of 160 years. He was allowed, at a vestry meeting, held in 1845, a salary of £14, which was confirmed in 1846; and for this sum he brought an action, in the Barnard Castle county court, against the churchwardens, on the 17th June, 1847. The vestry minute, fixing the salary, was produced; and he also proved the performance of his official duties. For the churchwardens, it was submitted that the rate-payers being a fluctuating body, the resolution of 1845 was not binding upon their successors in 1846, who, by refusing a rate, had decided that there should be no salary; and that the churchwardens were not liable, as they had not personally made any contract with the plaintiff. The case was adjourned, and eventually decided in favour of the defendants. The sexton was afterwards empowered to collect for himself the arrears of the voluntary rate; but so small were the sums received, that on February 16, 1848, there was still a deficiency of £11 2s. 1½d., which he afterwards attempted to make up by an appeal to the inhabitants of the chapelry generally.

The subject of Easter dues has also been long agitated in Barnard Castle; and on March 4, 1854, a cause was tried at the spring assizes at Durham, *Stephenson v. Snaith*, in which the plaintiff, parish clerk of the chapelry, sought to recover the sum of 1s. 8d., being five years' arrears of Easter dues, from the defendant, a householder within the chapelry. In the course of the trial, it was stated that the plaintiff had been met in the county court by a prohibition from the Queen's Bench, and was therefore compelled to bring his action in the present form. He had been appointed to his office of parish clerk in 1817, by the Rev. James Blackburn, vicar of Gainford; and a terrier, dated 1792, was read, by which 4d. from each householder was ordered to be paid to that official as Easter dues. This, he stated, produced him about £7 10s. a year; but, if all paid, it would amount to £17 or £18. In 1844, there was £270 due to him as arrears of fourpences; and, at the time of the trial, there was much more, though he could not say how much. He was paid 1s. 6d. for each marriage by banns, and 5s. for a marriage by license; 9d. for the burial of a poor person; 1s. 6d. for a morning funeral; and 3d. for a churching. Mr. Richard Frater, clerk to Mr. Davison, produced three terriers from the Consistory Court, which showed the appointment of the plaintiff, and the amount he was to receive as Easter dues. This witness also stated that he had produced the earliest terrier he could find. (See, however, that of 1635, quoted above.) The witnesses on behalf of the plaintiff deposed to having paid this 4d. regularly during the time he had held the office. For the defendant, several persons deposed that they had never paid it; and his counsel argued that there was no evidence proving Barnard Castle to be a parochial chapelry, or to have been so since 1189, and that it was therefore to be considered a perpetual curacy. He also argued that the scale of charges just quoted was different from that of the terrier of 1792, viz. "The clerk's wages are by custom as follows—from each householder throughout the parish an Easter due of 4d.; for every marriage by license, 2s. 6d., and by banns, 1s.; for a funeral, 6d.; and for a christening, 3d.;" and hence the payments could not be by custom, besides the total difference in the value of money since the early period necessary to constitute Barnard Castle a parochial chapelry. The judge, in directing the jury, said there were three questions for them to consider: 1st, Whether Barnard Castle was a parochial chapelry; 2nd, Whether it was so from time immemorial; and, 3rd, Whether the 4d. had been unanimously payable to the clerk of the

chapelry. There was sufficient *prima facie* evidence of its being a parochial chapelry. If the contrary had been the fact, and it had been of modern creation, that must have been by act of parliament, which could have been produced. A verdict was returned for the plaintiff.

Election of Churchwardens.—Prior to 1849, several disputes had arisen in Barnard Castle respecting the number, right to appoint, and mode of election of the churchwardens or chapelwardens. The management of the affairs of the chapelry (consisting of Barnard Castle and other three townships) had formerly been entrusted to a customary select vestry, a fixed proportion of whom had been chosen by each township. Amongst other acts, the vestry used to select churchwardens; but the vestry itself having lost all legal existence, disputes were engendered as to who should now appoint those officials, who acted for the whole chapelry. After many angry public meetings, the inhabitants of the chapelry agreed to submit the facts to Mr. Frederick Robinson, an eminent barrister, and to act upon his decision. His written opinion, dated 24th May, 1849, upon the state of facts, and various queries submitted to him, is now deposited in the parochial chest, and, in substance, is embodied in the three following paragraphs:—

1. That there is no valid subsisting custom for the election of a *definite* number of churchwardens by and for *each* separate township of the chapelry, nor for the election of those officials by a select vestry—that the inhabitants of the whole chapelry must unite with the incumbent in one appointment of two churchwardens; and if they cannot agree, the inhabitants must appoint one, and the incumbent the other.

2. That at the meetings to elect churchwardens, there can be no plurality of votes; the vestry act (58 Geo. III., c. 69) only applying to meetings of inhabitants of a place all jointly maintaining their own poor. Here, the townships into which the chapelry is divided maintain their poor separately, and have separate overseers. The vestry act (Mr. Robinson stated) does not apply to meetings of a *chapelry*, where such chapelry is divided into townships, each maintaining its own poor; consequently, every inhabitant at a chapelry meeting, paying scot and lot, had a vote, and no inhabitant more than one vote.

3. If a church-rate were duly granted, he (Mr. Robinson) was of opinion that the cost of warming and lighting the church, of ringing bells for divine service, and of taking a poll, if duly demanded, on a question affecting the election of chapelwardens, or the laying on of a

church-rate, or the repair of the church, were legal items of payment out of a church-rate.

Appointment of Sexton.—In 1849, the Rev. G. Dugard dismissed the sexton, Mr. G. Cansfield, from his office. This act was sanctioned by the churchwardens; but the inhabitants claimed the right of appointing and dismissing the sexton. Writers on parochial and ecclesiastical law were obscure or contradictory on the subject; some alleging that the power was in the inhabitants, and others in the incumbent. Mr. Cansfield disputed the right of his successor to take the fees, and the inhabitants supported him in an action at law. The case was tried at Durham assizes in the spring of 1849, and afterwards argued before the Barons of the Exchequer, at Westminster, who decided that the right to appoint and dismiss a sexton was not vested in the inhabitants at common law, unless there was an immemorial usage, which in this case there was not; but that the right to appoint and dismiss belonged to the incumbent and churchwardens, where the sexton held his office distinct from the parish clerk, and performed the office of gravedigger as well as took care of the church utensils and its cleansing, &c. In other cases, where the offices of parish clerk and sexton were combined in one individual, the right to appoint and dismiss was in the incumbent. The case therefore settles this question. It is reported in 4 Exchequer Reports, 234, and in the 18 Law Journal Reports, N. S. Exchequer, 361.

CHAPELS.

ROMAN CATHOLIC CHAPEL.—About eight years ago, the Roman Catholics purchased a large building called the Union Hall, and converted it into a chapel. It is neatly fitted up in the interior, and capable of seating 500 hearers. Above the altar is a beautiful fresco of the crucifixion, copied by Mr. Harvey, a talented young artist of Barnard Castle, from the highly celebrated fresco in the Catholic chapel, Lartington Hall. The Rev. W. Allen is the officiating priest. There is a Sunday school held in a room adjoining, which is also used as a day school.

INDEPENDENT CHAPEL.—The religious part of the community in Barnard Castle would seem to have been early imbued with the principles of the Reformation, and prepared for the succeeding struggles of Nonconformity, by the preaching of the celebrated John Knox, whose first wife, Margery, was daughter of Sir Robert, and sister of Sir George Bowes, of Streatlam, Knight

Marshal. The Lady Isabella, second wife of Sir William Bowes, and daughter of Judge Wray, introduced the cause of Nonconformity into this town. She was a liberal patroness of the Puritan ministers, and frequently exerted her influence to obtain the liberty of such of them as had been silenced, whom she afterwards placed in such situations as she deemed most in need of their efforts. In the maintenance of ministers under her patronage, she bestowed no less than £100 per annum. On the death of her husband at Walton, near Chesterfield, Oct. 30, 1611, his body was sent for interment among his ancestors in the church of Barnard Castle.* Her domestic chaplain, Mr. Dike, attended the funeral, and, on his return, represented to her the very ignorant and irreligious state of the town, then, as he represented, destitute of a resident preaching minister. She was

* In Surtees's pedigree of the Bowes family, it is stated that Sir William was buried at Chesterfield; and this account has been followed by Sir Cuthbert Sharp, in his "Memorials of the Rebellion."

† ALDERMAN BARNES.—Mr Ambrose Barnes was born at Startforth in the latter end of the year 1637. He was the son of Thomas Barnes, Gent., whose progenitors for several descents had resided at that place as lords of the soil and manor. The early part of his youth was passed under the guardianship of Mr. George Stothart, of Parnard Castle, who was one of those then known by the name of Puritans, keeping many days of fasting, humiliation, and prayer; and to the private meetings at his house resort was made by the then young Sir Henry Vane and others who afterwards figured in public affairs. The chief recreation of the young Ambrose, however, is stated to have been cock-fighting! After due care had been taken in his education, he was apprenticed to a merchant in Newcastle, whose confidence he enjoyed to so great an extent as to be allowed to make ventures on his own account. During the prevalence of the plague in the town, his master was so terrified, by the contagion having reached his female domestics, that, rising from dinner, and leaving his shop, books, keys, and business in the charge of Barnes, he repaired to Shields, and took a ship for Hamburg. Barnes himself shortly after took the infection, and was shut up alone several days and nights, in a large empty house near the Exchange, and where his food was brought to the door for him to take in. A tumour on the back of his neck was supposed to have been the cause of his recovery. Having completed his apprenticeship, he went to Hamburg, where he joined the "Eastland Company," but did not remain long. On the 12th of June, 1655, he married Mary, third daughter of Thomas Bntler, merchant adventurer, of Newcastle, by his wife, Elizabeth Clavering, of Callaley, Northumberland. By this marriage, Mr. Barnes had issue two sons and three daughters. He had not long been the governor of his own family, before he was thought worthy of a more public trust, and was elected alderman of Newcastle without his knowledge. On hearing of this, he repaired to the Spital, the place of election, and resigned the office, but was again elected on the following morning. Previous to the Restoration, he was the means of bringing to Newcastle several of the most eminent Puritanical ministers of the day, and professed great attachment to their preaching and doctrines. Though attached to the principles of the Commonwealth, he took the oaths of supremacy and allegiance on the 25th of October, 1660; but many of his favourite preachers were compelled to quit or resign their livings. At Raby Castle, he had a dispute on religion with William Penn, who, growing

consequently anxious that he should take up his residence in that capacity; but he declared he durst not venture among so surly a people, and recommended the courageous Richard Rothwell. The labours of that zealous individual were so successful that he obtained, amongst persons of his own denomination, the appellation of "the Apostle of the North." In 1644, the parliament sent the Rev. John Rogers to be minister of this parish (see CURATES), who held the living sixteen years, but was ejected on the Restoration of Charles II. Lord Wharton then presented him to the rectory of Croglin, in Cumberland, from whence he was ejected under the Act of Uniformity. He returned to the village of Startforth, and preached in the manor-house there, which belonged to his brother-in-law, Mr. Alderman Barnes of Newcastle;† also in Darlington, Stockton,

weariness of the discussion, ended it by saying, "Thou knowest, Ambrose, now that Paul is dead, he can neither tell thee nor me what his meaning was." The part he had taken in public affairs brought him into the notice of government as a person whose good will it might be desirable to cultivate; and King Charles II. was desirous of having him returned to parliament. His opinion of the king, however, was given on his return home, after a visit to the council, that, "as Charles II. is said very much in his person to resemble Tiberius Casar, so did he presage, his reign would no less resemble that of Tiberius, wherein our Lord was crucified." A rumour having occurred of a great armament being fitted out in Holland, Col. Widdrington, "in a huff," desired Barnes to order some guns down to Tynemouth Castle. "That is not my business," was the reply; "the king never made me governor of that castle." This, and some other circumstances rendered him unpopular with the loyal party; and Harry Willis, a drunken shipwright, carried his abuse to such a length in public, that Barnes was provoked to commit him to the tower on Tyne Bridge, then used as a prison. Here lay a quantity of malt, which the tipsy man shoveled out of the window into the river, singing—

"O base mault,
Thou didst the fault,
And into Tyne thou shalt."

When the infamous Judge Jeffreys, in the course of the northern circuit, came to Newcastle, "he would," according to the author of a MS. Life of Barnes, "drink to filthy excess till 2 or 3 o'clock in the morning, going to bed as drunk as a beast, and rising again with the symptoms of one who had drunk a cup too much. When the court was sat, instead of the gravity of a tribunal, the judge, with his raileries and his jests, there acted the part of a harlequin. In his hand he held out a paper, telling the court, in a menacing manner, he had there got a black list of damn'd fannatiks, and was resolved to scour them. A fine was levied on Barnes' house, but Mr. Barnes escaped. Jeffreys was huge witty upon all the prisoners, but it fretted him sadly he could not catch this Barnes.

"In the many occasions our author had to be abroad, if wee look't into his family at home, we might have found his house that had suffered military execution. The furniture of the kitchen and other moveables were many months hid in the hay which he kept for his horses. Not a soul durst be seen, his family fled, and when the sergeants or others knockt at the door to enquire for him, the servants, when at home, ran down the back stairs and hid themselves, for fear

Teesdale, Weardale, &c. After a life of labour, persecution, and privation, he died in 1688, aged 78.* He was intimate with Sir Henry Vane, who sometimes rode from Raby Castle to attend his preaching.

An Independent congregation has existed in Barnard Castle for many years. The Rev. — Lisle (who preached at Startforth, Cotherstone, Langley Dale, Wolsingham, and Hedley Hope), the Revds. Warden,

of being hauld before the magistrates to come in evidence against their master; and his little son, a boy of eleven or twelve years of age, when all the rest were skulking, was obliged to go to the gate, and be satisfied who it was that knockt and what they wanted before he durst open it.

“King Charles II. having trifled between Atheist, Papist, and Protestant, was suddenly arrested by death. King James II. changeing his measures, Mr. Barnes obtained a *noli prosequi* for himself and three or four more of his friends, which, with the act of indemnity that followed afterwards, saved him from the utter ruin brought upon him by fines, and forfeitures of recognizances. But public persecution is not the onely time wherein good men must look for trouble and affliction. He buried his invaluable consort. He sustained a great loss in a ship which foundered at sea in her voyage to Virginia, and met with a much greater loss in a colliery, left in his hand by his son in law for near two thousand pound, which it was far from reimbursing. He buried a good estate in many lead mines. The case also of his daughters, who married away from him, affected him sensibly, to find them met with any baseness or unkind behaviour from any belonging to the families they were matcht into. An heavier blow than all this fell upon him in his old age, by the breaking of one of his sons in law, who left him involved in debts and bonds for him to answer as swept away almost all he had in the world. But the most trying distraction of all his afflictions, was the distraction of his youngest daughter. But his faith was unconquerable: so God was but glorifyed, he was satisfy'd, bearing all the Lord's burdens with invincible patience and entire resignation.

“When wet harvests, for several summers together, had occasioned great damage to corn, and what was found was bought up and shipt off to other parts by the merchants, there grew such a scarcity, that the poor of Newcastle went about in their necessity, begging sheeps blood of the butchers, to mingle it with oatmeal and bake it, which served them for bread, instead of wholesome food, and this brought a bloody flux and mortality amongst them. Then was this gentleman's liberality like Scaligers, who, when winter came, would buy cloth to make coats for the naked, charging his family to serve the beggars, putting them in mind how those wretched people were their brethren by nature, and being skilful in chirurgery and physie, he saved the lives of many who were ready to perish.”

On the accession of King William, Mr Barnes was represented to him as a person obnoxious to the government. Walking one day in Kensington gardens, the king said to a person with him, “You know the north country; can you tell me any thing of one Barnes who lives there?” “I know him very well,” replied the gentleman, “and it please your majesty as honest a man as is in your three kingdoms.” “Say you so?” cried the king, “I have his name given up to me as a very ill man!” and immediately drew out his pocket book and expunged the name.

“Mr. Barnes, after paying a visit to the young Earl of Derwentwater (afterwards beheaded), in returning home he felt his cloak grow very heavy and cumbersome to him, and was sorely faint and weary before he reached his own house. But the Lord's supper being to be admi-

Orel, Shield, and William Luke Prattman, were ministers in succession. The present chapel was commenced in 1812, and finished in May, 1813, by Mr. Prattman, who, with an assistant, the Rev. J. Harrison, officiated as its minister till nearly the time of his death, since which the pastoral duties have been discharged by the Rev. James Hardman.

The chapel is a neat and commodious structure, situ-

nistered in the congregation the day following, he would not be hindered from going to it.” During the ceremony, he endeavoured to conceal his illness, which, however, rapidly increased; and he died on the 23rd of March, 1710.

Joseph Barnes, Esq., eldest son of the alderman, baptized April 2, 1658, was a barrister-at-law, recorder of Newcastle, and afterwards of Berwick. He died in March, 1711-2. Thomas, another son, was a minister of religion.

* THE REV. JOHN ROGERS AND MRS. TOOLEY.—The following interesting incident in the life of the Rev. John Rogers appears in the *Christian Penny Magazine* :—

Sir Richard Craddock, a justice of peace, who was a violent hater and persecutor of the Dissenters, and who exerted himself to enforce all the severe laws then in existence against them, happened to live near Mr. Rogers, to whom he bore particular enmity, and whom he wanted above all things to have in his power. Hearing that he was to preach at a place some miles distant, he thought it a fair opportunity for accomplishing his base design; and in order thereto, hired two men to go as spies, and to take down the names of all the hearers whom they knew, that they might appear as witnesses against both them and Mr. Rogers. The plan seemed to succeed to his wishes. These men brought him the names of several persons who were present at the meeting, and he warned such of them as he had a particular spite against, together with Mr. Rogers, to appear before him. Knowing the violence of the man, they came with trembling hearts, expecting to be treated with the utmost severity. While they were waiting in the great hall, expecting to be called upon, a little girl, about six or seven years of age, who was Sir Richard's grand-daughter, happened to come into the hall. She looked at Mr. Rogers, and was much taken with his venerable appearance. He, being naturally fond of children, took her upon his knee and caressed her, which occasioned her to conceive a great fondness for him. At length, Sir Richard sent a servant to inform them, that one of the witnesses, being taken ill, was unable to attend, and that, therefore, they must come again another day. They accordingly came at the time appointed; and being convicted, the justice ordered their mittimus to be written to send them all to prison.

Mr. Rogers, expecting to see the little girl again, brought some sweetmeats with him to give her. As soon as she saw him, she came running to him, and appeared fonder of him than before. This child, being a particular favourite of her grandfather, had got such an ascendancy over him that he could deny her nothing; and she possessed such a violent spirit that she could bear no contradiction, so that she was indulged in every thing she wanted. At one time, when she had been contradicted, she ran a penknife into her arm, to the great danger of her life. This bad spirit, in the present instance, was over-ruled for good. While she was sitting on Mr. Rogers's knee, eating the sweetmeats, she looked earnestly at him, and asked, “What are you here for, sir?” He answered, “I believe your grandfather is going to send me and my friends to jail.” “To jail!” says she, “why, what have you done?” “Why, I did nothing but preach, and they

ated in Hall Street, containing a gallery, and will accommodate above 500 hearers. It is duly licensed for solemnization of marriages. The register-book of births and baptisms extends from 1806 to 1837, and is kept by the minister. There is a Sunday school adjoining the chapel, attended by about 140 boys and girls. It was commenced in 1803, and is one of the earliest voluntary Sunday schools established in Barnard Castle.

WESLEYAN METHODIST CHAPEL.—The first chapel belonging to the Methodist body in Barnard Castle, was built in 1765; and a second one having been found too small for the increased number of hearers, the present spacious edifice, with dwellings attached for the residence of the ministers, was erected in 1822. It is situated on the east side of the Bank, and will contain a congregation of above 1,000 hearers. The chapel is licensed for the solemnization of marriages. The register book, which contains births and baptisms from 1803 to 1837, is in charge of the superintendent. Above 200 children attend the Sunday school.*

THE PRIMITIVE METHODIST CHAPEL, which is also licensed for marriages, was built in 1829. It stands on the Bank, and will accommodate nearly 500 persons. The Sunday school is attended by about 150 children.

UNITARIAN CHAPEL.—It was not until about the year 1845 that the Unitarians of Barnard Castle formed themselves into a body. As a place of worship, they

did nothing but hear me." "He shall not send you to jail," replied she, "Aye, but, my dear," said he, "I believe he is now making out our mittimus to send us all there." Upon this, she ran up to the chamber where Sir Richard was, and knocked with her head and heels till she got in, and said to him, "What are you going to do with my good old gentleman in the hall?" "That's nothing to you," said he, "get about your business." "But I won't," says she; "he tells me that you are going to send him and his friends to jail; and if you send them, I'll drown myself in the pond as soon as they are gone; I will indeed." When he saw the child thus peremptory, it shook his resolution, and induced him to abandon his malicious design. Taking the mittimus in his hand, he went down into the hall, and thus addressed these good men:—"I had here made out your mittimus to send you all to jail, as you deserve; but at my grandchild's request, I drop the prosecution, and set you all at liberty." They all bowed, and thanked his worship. But Mr. Rogers, going to the child, laid his hand upon her head, and, lifting up his eyes to heaven, said, "God bless you, my dear child! May the blessing of that God, whose cause you did now plead, though as yet you know him not, be upon you in life, at death, and to all eternity." He and his friends then went away.

The above remarkable story was told by Mr. T. Rogers, the son of the ejected minister, who had frequently heard his father relate it

purchased the chapel formerly belonging to the Wesleyan Methodists, built, as is stated above, in the year 1765. They have no stipendiary minister, but maintain their religious services and preachings by lay lecturers: they have also issued various able defences of their doctrines, many of which have attained an extensive circulation in the Unitarian community. A Sunday school is held in the chapel, attended by between 40 and 50 children.

CHARITIES.

St. John's Hospital.—This is said to be the hospital founded by John Baliol in 1229; but there is no authentic document relative to its foundation. In 1355, Bishop Hatfield fulminated a sentence of excommunication against certain persons unknown, who, to the peril of their souls, detained and concealed the revenues belonging to it. It is included in the "Valor Ecclesiasticus," made 26 Hen. VIII. (1536), and therein stated to be in the gift of the crown, and of the yearly value of £5 15s. 8d., subject to an annual payment to three poor women, to pray for the soul of the founder, of 3s. in money, and 3s. 4d. in coals. The first lease discovered is one dated 1689, granted by John Chapman, custos, for three lives. The next lease is dated 1705, granted by Peter Ferron, for three lives, at an increased rental, which is therein stated to be an improved rent for the better accommodation of the beads-women. In 1756, Dr. Browell demised the property

with great pleasure; and the celebrated Mr. Thomas Bradbury once heard it from him, when he was dining at the house of Mrs. Tooley, an eminent Christian lady in London, who was distinguished for her religion. She had listened with uncommon attention to Mr. Rogers's story; and when he had ended it, she asked him, "And are you that Mr. Rogers's son?" He told her he was; upon which she said, "Well, as long as I have been acquainted with you, I never knew that before. And now I will tell you something that you do not know. *I am the very girl* your dear father blessed in the manner you have related, and it made an impression upon me which I could never forget."

* Mr. Layton, in the notes to his "Castle Barnard," says, "When that zealous Christian (the Rev. John Wesley) visited Barnard Castle, on his tour through the British Isles, the enlightened townsmen, staunch resisters of innovations in religion, literally *threw cold water* upon all his efforts to convert them; for, bringing out the water-engine, they *showered* down their blessings upon his head, till this persecuted friend of mankind deemed it advisable to commence a retreat (or, according to the idiom Napoleon, to make a *lateral movement*), in which he was pursued by the implacable enemy with their flying artillery: and not till he had fairly cleared the place, was he enabled to *wash his hands of them.*"

for three lives, but exacted a fine of £240, the rental remaining the same as in 1705.

In 1790, the Rev. William Lipscombe, custos, leased the property for three lives at the same rental, but exacted a fine of £340. On the 18th June, 1796, probably in consequence of some defect in the last-mentioned lease, a new one was granted by Mr. Lipscombe, in which the property is described as follows:—

“The mansion houses and capital messuages belonging to the hospital, with the barns, stables, out-houses, buildings and garth, garden and yard on the back side thereof, situate on the south side of a certain street in Barnard Castle, called Newgate Street, with another parcel of ground used as a garden, before the same, called the Tenter Garth; and the several closes therein-after mentioned, the boundaries whereof are therein respectively described, viz. The Bank Close, the Crook Close, another close called the Crook Close, theretofore divided into three, the Little Garth, the Gallgate Garth, a close called Westwick Town End Close, a close adjoining the Lowfield Inclosures and the Lowfield Lane, the Pinfold Close, the low end of the Broom Close; and also the several allotments set out to Robert Lodge and Anthony Pearson, Martha Bass and William Hutchinson, on the division of the intercommon fields belonging to Barnard Castle, called the Crook, the Newfield, the Ings, the Lowfield, the Middlefield, and the Northfield, in lieu of certain days' work ridges and parcels of land lying in the several intercommon fields [containing in all 57 A. 1 R. 19 P.]; and also the several allotments set out to Robert Lodge and Anthony Pearson [containing 29 A. 2 R. 39 P.], on the division of the Town Pasture, in lieu of sixteen cattle-gates; and all other houses, lands, tenements, commons, &c., to the said hospital belonging.”

The master or custos is appointed by the Lord Chancellor. He has no duties to perform; and his emoluments arise from the same source as that of preceding masters for many years, namely, from fines received on the granting of leases for lives. By the lease just quoted, the then master, the Rev. W. Lipscombe, appointed by Lord Chancellor Thurlow in 1783, demised to Dorothy Lodge, spinster, Thomas Bass, and Benjamin Bass, and their heirs, in consideration of the surrender of a former lease and of £141, the several estates and premises belonging to the hospital for three lives, being of the respective ages of 29, 18, and 22, subject to the yearly payment of £9 16s. 8d. annually, viz., 3s. 4d. to each of the beadswomen in the hospital on the first day of every month, and the further sum of

£1 5s. at Christmas every alternate year to buy them coats or gowns, and the residue to the master, £4 10s. thereof being an improved rent for the better accommodation of the beadswomen. An acknowledgment of 20 horse-loads of coals, or 10s. in money, having been paid beyond the memory of man out of lands at Low Huller-bush, was guaranteed by the master. At the time of the Charity Commissioners' Inquiry, the parties in possession were the late Rev. W. L. Prattman, who, in right of his wife, formerly Dorothy Lodge, was entitled to about three-quarters of the property, consisting of about 60 acres of the annual value of £117; and the Misses Bass, representatives of Thomas and Benjamin Bass, who held about 27½ acres, of the annual value of about £50. There were also about 2 acres, held by Charles Watson, valued at £6 or £7 per annum. On the inclosure of Barnard Castle Moor, in 1799, 62 A. 1 R. 28 P. were set out to Mrs. Prattman, and 25 A. 3 R. 19 P. to Messrs. T. and B. Bass.

The hospital, or bedehouse, is a low thatched building, containing one room, in which two old women reside rent-free, and receive 10s. monthly between them. The appointment of a third beadswoman has been withheld for many years, to increase the stipend of the other two. The sum of £1 5s. for coats or gowns is paid to them every other Christmas; and they also receive their annual supply of 20 horse-loads of coals from the estate of Low Huller-bush.

On the death of the Rev. W. Lipscombe in 1842, a meeting of the inhabitants was held, at which a committee was chosen, who, with the assistance of the Duke of Cleveland, procured the appointment of the Rev. John Davidson, incumbent of Barnard Castle, to the office of master of the hospital. Mr. Davidson died in 1847; and on the 4th of November in that year, a meeting was held in the National School, for the purpose of petitioning the Lord Chancellor to appoint a fit and proper person as his successor. The Rev. George Dugard, incumbent, and Thomas Emerson Headlam, Esq., were nominated; and a majority voted in favour of the latter gentleman. Mr. Headlam, however, declined to allow himself to be recommended; and subsequently, at the instance of the Bishop of Durham, the Chancellor appointed the Rev. George Dugard to be custos.

A Chancery suit was some time ago instituted, for the regulation of this long-perverted charity; and, in consequence, the past system of long leases has been forbidden by decree of the court. Upon the demise of the surviving life, Mr. Pearson, of Newcastle, on

DARLINGTON WARD—SOUTH-WEST DIVISION.

which the leases are now held, a scheme is to be settled for the future management of the charity. In the course of the inquiries directed during this suit, the following were ascertained to be the lands and tenements belonging to this charity:—

DESCRIPTION OF PROPERTY.	QUANTITY.			ANN. VALUE.		
	A.	R.	P.	£	s.	d.
No. 1A The Bede House and gardens on the south side of Newgate Street—an old worn-out building.....				2	0	0
1 B A dwelling-house and office and garden, called Tenter Garth, adjoining on the south side of Newgate Street—an old building with excellent garden.....	1	1	0	20	0	0
1 C A dwelling-house, warehouse, and premises adjoining, on the south side of Newgate Street—good substantial newly-built premises				15	0	0
1 B The raff-yard and garden adjoining, on the south side of Newgate Street..				2	10	0
3 Crook Close, in the Crook	0	3	36			
4 a Crook Close, in the Crook	2	1	0			
4 b Crook Close, in the Crook	3	0	0			
5 Galgate Garth, in the Crook	0	3	0			
7 Close adjoining Lowfield inclosures. This plot of ground now forms part of the pleasure grounds to the house of Mr. William Watson, solicitor, who, I am informed, has broken down the east fence, and taken possession of it as his own property.....	1	0	13			
8 Pinfold Close, Newgate End	1	0	0			
9 Close adjoining Lowfield Lane	0	3	0			
11 Allotment at Middlefield	6	3	13			
15 Ditto ditto	2	2	14			
16 Ditto ditto	1	0	31			
17 Ditto at the Crook	1	2	10			
18 Ditto ditto	0	3	34			
20 Ditto at Lowfield	2	1	20			
	26	1	11	92	0	0
All the land above described is accommodation land of first-rate quality, in small parcels, situate close upon the town, and therefore of great value.						
2 Bank Close, East Lowfield	3	0	12			
6 Westwick Town-end Close, Lowfield	2	3	35			
11 Allotment at Lowfield	7	2	24			
13 Ditto ditto	0	1	0			
19 Ditto ditto	5	1	6			
22 Ditto at the Ings	1	1	15			
„ Ditto at Newfield	13	1	13			
„ Ditto at Town Pasture	8	1	10			
	42	1	5	81	11	0
The land above described is of equal quality with the foregoing, and near the town, but not close enough to be considered accommodation land.						
Carried forward....				£216	1	0

31 Ditto ditto	12	3	5			
	88	1	7	61	15	6
Poor boggy land, some distance from the town.						
Total value of the annual rent				£331	8	0

The quantity and value of the property thus described, were taken by a competent person appointed by the court.

Glenton's Dole and other Charities.—John Glenton, December 3, 1578, charged his lands in Startforth with the payment of certain sums amounting to 40s. per annum, for the poor of Barnard Castle. This payment was released in 1793 for 20 years' purchase. By will, December 26, 1668, Ambrose Brunskill, Esq., gave the house in Barnard Castle, where he was born, value £5 per annum. This house having become ruinous, its site in Thorngate was let for £3 10s. a year, which rent was released for £70 in 1793. Mary Finlay, of Darlington, widow, June 26, 1688, gave a third part of Broadgates, then producing £1 8s. yearly; and Thomas Barker gave £5, producing 6s. per annum. The amount of these two sums was released in 1793 for 20 years' purchase. The properties enumerated in the purchase-deed were—

1. To William Benning, for £34, a rent-charge of £1 14s. out of his burgages and tenements in Broadgate.
2. To Anthony Bazin, for £11 6s. 8d., 11s. 4d. out of Westwood House, Westwood Close, and Foxholes, in Startforth.
3. To Henry Ewbank, for £13 6s. 8d., his tenements in Thorngate discharged of 13s. 4d. issuing thereout.
4. To James Lonsdale, his tenements in Thorngate, discharged of 6s. 8d. thereout.

5. To Benjamin Bass, 6s. 8d. rent-charge out of his tenements in Thorngate.

The whole of the above purchase money, and the proceeds from the release of Brunskill's property, amounting to £142, was laid out, with £140 raised on mortgage, in the purchase of the workhouse, on which an annual payment of £7 2s. was consequently charged. The Commissioners for inquiring concerning Charities, however, state that, from some unexplained cause, only £3 12s. a year had been paid, which was apparently exclusive of the £3 10s. from Brunskill's property. The sum paid is given away at Christmas and Easter, with the charities of Percival and others, in sums varying from 6d. to 2s.

In the year 1840, the workhouse was sold to Mr. Bayles, subject to the above charge of £7 2s. yearly, payable on the 2nd day of February. The remaining purchase money arising from the sale of the old workhouse, viz., £260, was applied in partially liquidating the proportion of the township of Barnard Castle towards the expense of building the Teesdale Union workhouse.

Charities of Percival and others.—Robert Percival, merchant, of Newcastle, a native of Barnard Castle, by will, December 9, 1729, gave £40; Christopher Lonsdale, March 11, 1747, £40; Peter Waistell, August 29, 1752, £100; and Dame Elizabeth, widow of Sir William Bowes, in her life-time, £30 to the poor of the parish. The whole of these sums, with the exception of £10 of the latter, was laid out on July 15, 1785, in the purchase of a close in Startforth, which is let at £8 a year. This sum is divided amongst the townships in proportion to their contributions to the church-rate, viz., Barnard Castle, £4 9s. 6d.; Streatlam and Stainton, £1 8s. 6d.; Marwood, £1 6s. 3d.; and Westwick, 15s. 9d.

Emmerson's Charity.—The Rev. Ezra Emmerson, by will, December 25, 1733, gave £50 to be placed out at interest for the poor of Barnard Castle. This sum formed part of the purchase money of Northfield farm, Startforth, bought by the governors of Queen Anne's Bounty for the augmentation of the living of Barnard Castle; and £2 10s. is paid by the incumbent on account thereof, and distributed with other charities as above.

Sanderson's Charity.—William Sanderson, Esq., by will, 175-- , devised to William Hutchinson, Esq., and Christopher Lonsdale, Gent., his land in Barnard Castle, called the Crook, in trust for two poor men of Barnard Castle and one of Eggleston, to receive and

take the profits thereof to their respective uses for their natural lives, and, after their deaths, to such other three poor men as should be named and appointed to succeed them. The two recipients of this charity belonging to Barnard Castle are elected by the vicar of Gainford, the rector of Romalldkirk, and the rector of Middleton-in-Teesdale, and the one out of the township of Eggleston is nominated by the latter rector. Care is taken to select those who have been in better circumstances, but reduced to poverty. The lands described formed part of the common fields, divided and enclosed under an act 23 Geo. III.; the Barnard Castle portion consisting of two plots of 3 acres each, now let by the vestrymen at £20 rent; and the Eggleston share, containing 2 A. 3 R. 27 P., let by the poor man himself at £9 15s. Under the act 35 Geo. III., for enclosing and allotting Barnard Castle Moor, 8 A. 2 R. 33 P. were set out in three plots "to the trustees of Sanderson's charity," and are let together at £8 a year. From the rents of the Barnard Castle share, and two-thirds of the allotments, the overseer allows 4s. 6d. a week to two poor persons of the township, amounting to £23 8s. per annum. In order to defray the expense of the inclosure, in 1783, £20 was advanced by William Hutchinson, Esq., being part of a sum of money left by Lord Vane and Mr. Hutchinson's father for the use of the poor; in respect of which the tenant pays (in addition to the rent) 15s. 4d. annually, and the Eggleston poor man 6s. 8d. The Barnard Castle portion is also subject to a yearly payment of 11s. 11d., and the Eggleston portion to 5s. 11d., for Acre Money, vested in the churchwardens and overseers of the poor of Barnard Castle.

According to the act of parliament, passed in 1783, for enclosing the open fields within the township of Barnard Castle, certain payments called Acre Money are chargeable for ever on the different allotments, in lieu of *winter catage*; unless the same are bought at 25 years' purchase, according to the following rates, viz. 6d. for every cattle *gait* on the town pasture; 1s. 6d. per acre for the Low field, Middle field, North field, the Ings, and the New field; and 2s. per acre for the Crook. Until such Acre Money is purchased, it is to be vested in the churchwardens and overseers of the poor of Barnard Castle for the time being, and by them to be collected from the occupier of each allotment, and applied in reduction of the poor rates, together with the interest of the money paid by the proprietors for the redemption of the Acre Money chargeable on their respective lands. At the time of the Commissioners' Inquiry, there was nearly £1,000 three per cent. con-

sols derived from this source, the interest of which, and the Acre Money then payable, amounted to between £50 and £60 per annum. At present, the unredeemed Acre Money of the Town Fields (see below) amounts to £22 16s. 9d. The list, containing the quantity and amount paid by each person, was revised and printed in 1843, and is publicly exhibited in the Town Hall. There is now £975 14s. 8d. invested in the three per cents, producing £29 5s. 6d. dividend.

Waste Lands.—By the act 35 Geo. III., above alluded to, it was enacted that Barnard Castle Moor, containing by estimation 6,000 acres; the Little Moor, 40 acres; and Glenton Green and the Baiting Steads, 20 acres, should be sold, and that out of the proceeds the commissioners, Arthur Mowbray, Joseph Grainger, and John Bradford, Esqrs., should, in the first place, pay all the costs of surveying and selling the same, and of making a high road through the Little Moor; that the mortgage on the poor-house should be discharged, in lieu of which the overseers should pay £6 per annum to the minister, churchwardens, and vestrymen; and that the remainder of the money should be placed in the funds, and the interest, with the £6 above-mentioned, distributed to such poor persons, male and female, as the lord of the manor or his agent, the minister, churchwardens, and vestrymen, and twelve other respectable inhabitants should think fit; such poor persons not receiving alms or parish relief, and so as no one should receive more than £5 in any one year; and it was provided that the oldest poor persons resident within the said township should be preferred, if otherwise proper objects of the charity. The boundaries of the lands were perambulated on the 15th June, 1795; and the general award of the commissioners was published May 14, 1799.* The net produce of the sale was invested in the purchase of £2,314 3s. 10d. stock in the three per cent. consols, in the names of the minister and churchwardens; and out of the dividends, £69 8s. 6d., and the £6 above mentioned, £5 per annum is paid to each of eight poor men, £4 per annum to each of eight poor women, and the remaining £3 8s. 6d. to one old man, the last elected.

Dent's Charity.—John Dent the elder, of Brightwell, Berkshire, clock-maker, on April 29 and 30, 1706, assigned to trustees certain premises in Stepney for the education of poor boys born in the town of Barnard

* One-sixteenth of the soil and the mines were reserved to the Earl of Darlington, as lord of the manor. There was allotted to Barnard Castle 2,698 A. 2 R. 5 P.; Streatlam and Stainton, 733 A. 3 R. 44 P.; Langley Dale, 29 A. 3 R. 14 P.; Eggleston, 40 A. 3 R. 38 P.; and Marwood Park, 1,140 A. 2 R. 2 P.; total, 4,614½ acres.

Castle. Previous to 1749, the sum of £133, raised by the sale of those premises, had been placed at interest, and is now in the hands of Benjamin Lee, Esq., who pays £5 6s. 4d. interest. This sum is paid to the treasurer of the National School; and ten poor children, nominated by the minister and churchwarden, are taught free of charge.

Charities of Lord Vane and W. Hutchinson.—William Hutchinson, Esq., on July 30, 1718, gave £20 to the poor of Barnard Castle; and William Lord Vane, Viscount Duncannon, bequeathed £50 to the same purpose. These two sums form what is called the Widow's Bread Fund. For the first sum, in respect of which £1 per annum is received as interest, see *Sanderson's Charity*. The other £50 is in the hands of Mr. Hutchinson, of Eggleston, who pays £2 2s. yearly as interest. Seven twopenny loaves are provided every Sunday, and given to seven poor widows attending divine service, who are selected by the minister and churchwardens.

Hutton's Charity.—Matthew Hutton, Gent., by will, November 19, 1726, directed his executors to lay out £120 in the purchase of lands and tenements, the profits and rents thereof to be disposed of in buying bread, to be distributed every Sunday, immediately after divine service, amongst the poorer sort of housekeepers or other poor people of the town of Barnard Castle. In October of the year 1730, two closes in Startforth, called Morton Gill Leazes and the Little Moor, containing respectively 10 and 4 acres, were purchased with this money; and an allotment was since added, making 18 A. 2 R. 7 P., including 1½ acres of underwood. A small cottage has lately been built on the property; and the whole is now let to David Scott at the rent of £25 a year. In conformity with Mr. Hutton's will, the value of a proportion of this money is distributed every Sunday, to 30 poor people, in bread.

The following is an abstract of the charities (exclusive of St. John's Hospital) belonging to Barnard Castle:—

	<i>Ann. Amount.</i>
William Sanderson, Esq., for two poor men - - -	£23 8 0
From waste lands, for nine poor men and eight poor women - - - - -	75 8 6
Matthew Hutton, Esq., bread for the poor - - -	25 0 0
Viscount Vane, and William Hutchinson, Esq., bread for seven poor widows - - - - -	3 2 0
Rev. Ezra Emmerson, for the poor - - - - -	2 10 0
Glenton's Dole and other charities, do. - - - - -	7 2 0
Charities of Percival and others, do. - - - - -	8 0 0
Mr. John Dent, educating ten poor boys - - - - -	5 6 4

£149 16 10

TOWNSHIP OF STREATLAM AND STANTON.—*John Bowes, Earl of Strathmore*, by will, July 3, 1817, directed that £25 a year should be charged upon his Streatlam estate, for the poor of the township. No distribution, however, has ever been made in respect of this legacy.

TEESDALE UNION.

THE poor-rates in Barnard Castle, under the old poor-law, were subject to great fluctuations. In 1816, the rate amounted to £1,651 9s.; and in the following year, to £2,788 11s. In 1820, it was £2,198 9s., but fell, in 1821, to £1,547 17s. A rate of 7s. 6d. in the pound, in 1832, produced £2,300. The poor-house (see CHARITIES) was situated on the Mains, with a kitchen garden attached, and contained three looms and a warping mill, for the employment of such as were able to work.*

The Teesdale Union, formed under the provisions of the New Poor Law Act, is divided into three sub-districts, viz., Staindrop, Barnard Castle, and Middleton-in-Teesdale.

The Staindrop subdistrict contains the parish of Cockfield, including the townships of Cockfield and Woodland; Staindrop parish, including Langley Dale and Shotton, Raby and Keeverston, Staindrop, Wackerfield, Hilton, and Ingleton; part of Gainford parish, including Morton Tynemouth, Langton, Headlam, Gainford, and Cleatlam; Winston parish; and the township of Barforth, in Forecett parish, West Gilling wapentake, North Riding of Yorkshire.

The Barnard Castle subdistrict contains the township of Ovington, or Ovingham, in Forecett parish; the parish of Wycliffe; the township of Hutton Magna, in the parish of that name; the townships of Barningham, Scargill, and Hope, in the parish of Barningham; the parish of Brignall; the parish of Rokeby; the parish of Startforth, including the townships of Startforth with Eggleston Abbey, and Boldron; the parish of Bowes, including the townships of Bowes and Gillmanby; and Lartington, in the parish of Romalldkirk, all in the

* During a storm of thunder and lightning, Sept. 2, 1824, the electric fluid passed down one of the chimneys of this establishment. It came out of the fire-place of the first story; and though some old men were sitting round the fire, it did not hurt them, except striking one deaf a little time. It then proceeded to the next room, tore the plastering from the wall, ploughed up the hoards for two yards or more, and passed under the feet of an old woman who was sitting on an iron bedstead, yet did her no harm. Having descended to the lower story, it played round the room in the most astonishing manner, leaving

North Riding of Yorkshire; with part of the parish of Gainford, including the townships of Whorlton, Westwick, Barnard Castle, Stainton with Streatlam, and Marwood.

The Middleton subdistrict includes the remainder of Romalldkirk parish, comprising the townships of Cotherton, Hunderthwaite, Romalldkirk, Mickleton, Luncdale, and Holwick; and Middleton-in-Teesdale parish, including the townships of Middleton-in-Teesdale, Egglestone, Newbiggin, and Forest with Frith.

The entire union comprises an area of 174,162 acres, of which 95,297 are in Yorkshire. The population, on the Yorkshire side of the Tees, in 1851, was 5,662, consisting of 2,776 males and 2,886 females; and in Durham, there were 7,021 males and 7,130 females, or 14,151 on the Durham side. Thus, the entire population of the union was 19,813.

The expenditure of the townships forming this union averaged, during the three years preceding its formation in 1847, £7,812 per annum. The following is the yearly expenditure (exclusive of the cost of building the workhouse) since that period, as shewn in yearly financial reports, printed and circulated by the board of guardians:—

Year ending March	£	s.	d.	Year ending March	£	s.	d.
1838	4976	2	9	1847	4963	3	4
1839	5338	12	0	1848	4717	10	10
1840	5343	9	2	1849	4720	3	5
1841	6216	16	0	1850	5198	3	5
1842	5285	1	3	1851	4407	17	1
1843	5652	4	6	1852	4065	8	9
1844	5285	1	11	1853	4183	11	8
1845	5497	8	2	1854	4171	8	4
1846	5324	10	7				

The workhouse is situated in Galgate, and admits 160 inmates on a fourfold system of classification. It has a fever ward and a vagrant ward attached. The children are educated in the National School of the town. In addition to the above expenditure, the guardians have laid out in this and other buildings, during the above years, about £3,500. A building debt on the workhouse is now entirely liquidated.

DIETARY TABLE.—The following “amended dietary

marks of its power. From thence it went through the wall into the back kitchen, where it knocked one man down; and though the mistress of the house and a girl were nearly in a line with it, they only felt its effects a few hours. A person in the kitchen said he distinctly saw it go out of the door in the form of a ball of fire. When the master went into the rooms to look after the old people, the sulphur was so strong that he could scarcely enter; and although above 20 persons were in the house at the time, providentially none were materially hurt.

table" for the paupers in the workhouse was adopted by the guardians on the 4th of January, 1854, and received the sanction of the Poor Law Board on the 20th February following:—

Breakfast.—Men, 1 pint of coffee sweetened, and milk, with 8 oz. of bread. Women, coffee as the men, with 6 oz. of bread.

Dinners.—Sunday and Thursday, men, 6 oz. of cooked meat, with 1 lb. of potatoes or other vegetables; women, 5 oz. of meat, with 1 lb. of potatoes, &c. Monday and Friday, men, 1½ pint of hash or peas or other soup, 4 oz. of bread, and 1 lb. of potatoes or other vegetables; women, hash and vegetables same as men, with 3 oz. of bread. Tuesday, men, 4 oz. of bread, and 1½ pint of boiled rice milk, sweetened with sugar or treacle; women, 3 oz. of bread, and boiled rice, &c., same as men. Wednesday and Saturday, men and women, 14 oz. of suet pudding with treacle sauce.

Suppers.—Sunday and Thursday, men, 8 oz. of bread, and 1½ pint of broth; women, 6 oz. of bread, and 1 pint of broth. Monday, Tuesday, and Wednesday, men 1½ pint, and women 1 pint of oatmeal porridge, with 1 gill of milk or 1 oz. of treacle and water. On Friday and Saturday, in lieu of supper, 1½ pint of broth for men, and 1 pint for women, is added to the dinner.

The aged and infirm are, at the discretion of the guardians, allowed at supper, in lieu of the oatmeal porridge or bread and broth at that meal, half an oz. of tea, together with 4 oz. of butter and 4 oz. of sugar per week. At the like discretion, ¾ lb. of prepared peas pudding may be substituted for potatoes occasionally on Sundays and Thursdays, and 1½ pint of milk and oatmeal porridge substituted for any breakfast or supper meal. Children under 9 years of age are dieted at discretion; above 9 and under 16, they are allowed the same quantities as women.

* The whole of the population on the banks of the Tees, above Barnard Castle, says Mr. M. A. Denham, "are designated *Hee-landers* (that is, *Highlanders*) by the lower orders of the masculine gender in the above-named town, between whom and their more civilized neighbours a deadly, or at least an extremely pugnacious and bloody feud, has existed far beyond the period of living memory. The writer recollects, once upon a time, being eye-witness to one of those periodical uproars, which generally occurred at every fair and hiring holden at Barnard Castle; and being at that period only a *young youth*, he was, he full well remembers, most dreadfully alarmed! The Barnard Castle tammy-weavers were, however, no match for the stout, healthy, brawny lads of Mickleton and Middleton, Forest and Frith; it being a well-known fact that it was no uncommon occurrence to see from at least three, to as many as six tammy-weavers, all set, like as many butchers' dogs, upon one *Hee-lander*, who, notwithstanding the serious

MARKETS, FAIRS, COURTS, &c.

A MARKET is held in Barnard Castle every Wednesday during the year; and annual fairs take place on Easter and Whit-Wednesdays, for pedlery, &c., and on Magdalen eve and day, for horses, cattle, and sheep. The Easter and Magdalen fairs,* which had fallen into disuse for many years, were, after several fruitless attempts, revived in 1850, when a communication was received from the Duke of Cleveland, lord of the manor, announcing that his grace had consented to waive his claim of tolls upon all animals exhibited. Since that time, the boundaries of the fair are perambulated, on each occasion, by the jury and bailiff of the manor court, accompanied by the constables of the township, armed with battle-axes and other ancient weapons, and preceded by a band of music. The shows of cattle and horses, and the attendance of buyers and sellers at both fairs, are good. A fortnightly fair for cattle is also held on alternate Wednesdays. The tolls of the fairs and markets are farmed under the Duke of Cleveland.

The borough was anciently governed by the lord's immediate officers, and courts were regularly held before their stewards.† In 1621, Sir Talbot Bowes, Knt., was steward for the crown. In the orders, commencing the 21st of October in that year, the following occur:—"The farmers of the common bakehouse shall have 2d. for every bushell, instead of as heretofore three halfpence and a service worth a halfpenny."—"Whereas heretofore men of turbulent spirits and evil disposed have commenced divers actions and suits in *high and forraine courts* for small and trivial causes,—ordered, that all trespasses shall be settled by two persons elected of the jury, or else by fower honest men dwelling within the burrow, who shall assesse the damage; and if the party trespassed on refuse, &c., he shall commence his

odds against him, often proved the conqueror! Occasionally, when the *Barney-Cassellers* could muster sufficiently powerful, they used to visit Middleton on a fair day, where their temerity generally met its due reward; for they invariably returned home not only worsted, but covered with blood and bruises, and occasionally, also, with broken bones!—Although an occasional outbreak may now take place once in the course of two or three years. I am happy to say that (in the middle of the nineteenth century) a more quiescent spirit is possessing itself of the *Barney-Cassel* and *Teesdale bodies*, and these semi-feudal outbreaks are fast wearing away."

† "His Highnesse Court Leet and Court Baron held at Barnard Castle, the day of _____, anno D'ni 1627, for the Rt. Hon^{ble} Sir Henry Vane, Knight, Controuler of his Majestic's Household, and of his Majties Most Hon^{ble} Privy Councell; Marke Shafto, Esq., High Steward."—*Surtrees*.

suite for the trespass in *this his Majestic's Burrow Court*, and in no other forraine court, if the trespass so assessed do not exceed the sum in which this his Highness Burrow Count can hold plea, on paine of 39s. 11d. April 6, 1627."—"None to buy any wood, either green or dry, which is stolen: for every burthen forfeit to the lord of the manor, 3s. 4d."

April 11, 1634. "Noe person or persons whatsoever doe henceforth scolde one another, on payne of 6s. 8d."

April 15, 1637. "None to suffer any corne to be sold within their houses by foreigners before the ringing of the corne-bell; payne 6s. 8d."—"No tanners to buy any neate-hydes on the market-day till the same be layd forth in the usual place; payne 3s. 4d. Noe gloves, shoemakers, or tanners to sett forth any ware till the ringing of the tollbooth-bell. No walker or fuller shall combe or raise any cloth with woolen cards; payne 3s. 4d. No bleacher shall put any lyme to the bleaching of cloth; payne 3s. 4d. None that hath any egress or outgates, to suffer goods or wares to be carried forth to defraud the towler; payne 12d."—"The constables shall provide weights and measures according to the king's standard, to be kept in the toolbooth, that all having cause to use them may repair unto them."—"It is ordained that the constables do yearly, at the com'on charge of the towne, keep a crow-nett, and see the same employed for the destruction of crows and vermine, according to the statute, upon paine of xs."—"The constable shall yearly, at the head Court at Michaelmass, bring the common armour, crow-nets, and all other things, &c., to the toolbooth to be viewed by the jury."—"No inhabitants of this burrowe shall suffer any single woman, except their hired servants, to dwell in any of their houses, except she be such as by age, sickness, or other impediment, is not able to worke or make service; payne xs." Other orders relate to carrying fire in the streets, and placing straw near a fire-place. An order is inserted against the entertainment of any "strainger or forainer as inmates or under-settlers;" and a list of sub-tenants was to be furnished, "that such persons as are not able to maintain themselves may be knowne, and such order taken as the town or com'on may be eased, and no way pestered, on payne 3s. 4d."—"No constable of this burrow, upon making any affray, blood-shedding, or weapons drawne, shall not suffer such a person to departe forth of his Highness House, untill he find security for his peace, and find a sufficient man to answer his Highness Court for blood, 3s. 4d."—"None to call another theefe, rogue, villain, or words of defamac'on that will bear

action at common law, and cannot prove them; pain 6s. 8d."

Sept. 30, 1639 "No butcher shall hereafter kill any bull but two years old or above, untill he be first brought to the ring to be sufficiently baited; pain xs."

Sept. 27, 1653. "Ordered, that with the consent of the Rt. Hon^{ble} Sir Henry Vane and his learned steward, that, whereas there is a passage made out of Barnard Castle moate, and a way made which hath not been of old into the Flatts, and the tenants and farmers of the Flatts is thereby damnified; whoever shall goe that way shall pay, *toties quoties*, for a horseman 3s. 4d., and 1s. for a footman."

Sept. 20, 1655. "No person shall make any building or lay any rubbidge that may doe harme to the castle wall, or the ground within the walls; pain 2s. 6d."

May 12, 1674. "No person shall keep any *unreasonable* mongrell doggs or mastiffs unmuzzled in the street; pain 3s. 4d."

Oct. 29, 1707. "Whereas the town of Barnard Castle hath been anciently reputed for *tanning of good leather*, and for preservation of the same; ordered, that no tanner sell, stall, or expose any bellies or wombs of hides not well and sufficiently tanned and dressed; pain 5s."

1712-13. "Whereas there has been complaint that some of the former Grand Juries have revealed their fellows' secrets, which is not only a breach of their oath, [but] which often makes heart-burnings among the neighbours, therefore, &c.; pain. 13s. 4d."

The *Court Baron* of the Duke of Cleveland is held in October every year: Mr. Binning, of Staindrop, is the present steward.

The *Police Station* is situated in Hall Street. *Petty Sessions* are held on the first Wednesday of every month, at which the Rev. George Dugard, T. S. Edger, M.D., William John Sawry Morrill, Esq., of Rokeby Park, and other magistrates, attend.

The Barnard Castle *County Court* for the recovery of small debts comprises in its district Cleatlam, Cockfield, Eggleston, Forest and Frith (with Harwood), Gainford, Headlam, Hilton, Ingleton, Langley Dale and Shotton, Langton, Marwood, Middleton-in-Teesdale, Morton Tynemouth, Raby and Keverstone, Staindrop, Streatlam with Stainton, Wackerfield, Whorlton, Winston with Newsham, and Woodland. Assistant clerks, Messrs. Watson; deputy bailiff, John Lax.

On the passing of the Reform Bill, Barnard Castle was appointed one of the polling places for the Southern

Division of the county of Durham. It is the centre of a revising barrister's district, which includes the following townships:—

Barnard Castle, Cleatham, Coekfield, Gainford, Headlam, Hilton, Ingleton, Langley Dale and Shotton, Langton, Lynesack and Softley, Marwood, Morton Tynemouth, Raby and Keverston, Staindrop, Streatlam and Stainton, Waekerfield, Westwick, Whorlton, Winston (including Newsham), and Woodland.

After the Durham militia was disbanded at the peace, the staff was stationed at Barnard Castle; and the annual musters of the South Durham militia are now held at this place.* (See vol. i., page 156.)

MANUFACTURES, TRADE, &c.

THE chief trades formerly carried on in Barnard Castle were tanning, dyeing, and stocking weaving. Flax-spinning by machinery was commenced by Mr. Thomas Porthouse, who afterwards removed to Coatham

* CAPTAIN ROBERT KIPLING.—This veteran soldier enlisted into the 43rd light infantry as a private in 1772, having previously served three years in the Durham Militia. He was with the regiment at the battle of Bunker's Hill, and through the whole of the ten years American war. Having by his merits raised himself to the rank of captain, he was allowed to sell his commission; but was appointed, at his wish, extra recruiting officer, which service he performed for many years. On his retirement, he received a sword with the following inscription on the blade and the scabbard:—"To Capt. Robert Kipling, this sword is presented by his brother officers, as a small token of their sincere regard, and of the high sense they entertain of his meritorious services during a period of thirty-five years, in the different ranks of private, corporal, sergeant, sergeant-major, adjutant, ensign, lieutenant, and captain in his majesty's 43rd light infantry regiment." He died at Barnard Castle, where he had for some time resided, on the 2d of December, 1830.

† In the great flood of 1771, the water penetrated into some cellars occupied by a dyer at the south end of the bridge. A few pieces of tammies were in the kettle at the time, receiving their last process; but the operator, not chusing to run the risk of destruction by attempting to remove them, retreated with the utmost celerity. After the torrent had subsided, the man with great anxiety visited the kettle; when, on removing the sand and mud, the pieces were found to have attained a colour beyond his most sanguine expectations. The articles were sent to London, and gave such satisfaction that orders were forwarded for a further supply of the same shade; but the unlucky dyer, not being again assisted by the Genius of the river, failed in every subsequent attempt to produce it.

‡ It is a rule in this trade to take boys as apprentices at 14 years of age, upon the understanding that the boy shall allow to his master 25 per cent. out of his earnings; and, taking the earnings at an average of 8s. per week for the first three years, and 12s. per week for the remaining four years, assuming the time worked to average 40 weeks a year, it follows that the boy pays a premium of £36 for learning his business. The difficulties and grievances of the workmen generally were explained in the following letter from two of the body to the superintending inspector of the General Board of Health:—

"1st, That they believe irregular employment to be one great cause of both the moral and physical degradation of large numbers of their

Mundeville. The woollen trade, which had been then established, began to decline in 1790. A little cotton trade was also carried on for a few years; and, in the early part of the present century, the manufacturing of carpets was commenced by Mr. Thomas Crampton, who was for some time very successful, and realized a handsome competency. In the latter part of his life, however, reverses in business took place, and he eventually died in the workhouse. During Mr. Crampton's prosperity, several other establishments were commenced in the same line; and, for many years, the staple manufacture of the town has been that of carpets, in imitation of those made at Brussels and Kidderminster, in the dyeing of which the waters of the Tees were formerly supposed to impart a peculiar brilliancy of colour.† The business is now carried on in Barnard Castle by Messrs. Joshua C. Monkhouse and Sons, of Thorngate Mill, who employ a considerable number of workmen.‡ In the

body, who are often out of employment from two to six days, and in some cases even longer; and owing to there being no place of public amusement, the time is too often spent in public houses, where both old and young come in contact with the worst characters, which in the end leads to the ruin of numbers. Again, after having stood so long for a *warp*, we are obliged to work very long hours (often from 6 A.M. to 10 P.M.), which, with the scanty fare we are obliged to subsist on in consequence of being so long out of work, tends very much to the injury of our physical constitution. There is, however, another cause for long hours besides our own necessities,—orders often come in, and the time is so short, that it is impossible to execute them without working through the whole night; the loom is thus kept going by two men, the one relieving the other at stated times. This system is acted on in very many shops in the carpet trade, and is most injurious to the health of those engaged in it, producing disease of a serious nature. We believe competition to be the cause of this; some merchants will go to the shop where they know the goods can be produced in a short time, and we believe a more ruinous system of competition is not carried on in any district than our employers, Messrs. Monkhouse and Sons, have had to contend with; for, in addition, they have had to contend against parties in this town who have carried on a system of *prolonged and even life apprenticeships*.

"In those districts where long hours, and shift or night work has been given up, the practice has proved beneficial both to the employer and employed; no orders are taken where shift work is required, and consequently, every man sticks to his own loom; the work is regular, and therefore better wages earned.

"A public play-ground and baths are much wanted; the one would keep parties from the ale-house, the other tend to personal cleanliness. Again, juvenile intemperance, we do think, ought to be stopped, by prohibiting the ale-house keepers from harbouring youths; a practice, which, we are sorry to say, is carried on to a great extent, and is the cause of great immorality and wickedness, gambling, &c. We would also suggest the propriety of obliging apprentices to attend a school after work hours until they arrive at the age of 17 or 18; and this, we think, might be done by making it part of the agreement between their employers and parents; and for the purpose of encouraging the youths themselves, prizes might be distributed at the end of their apprenticeship to those who had been most attentive scholars, most industrious at work, and of the best moral character. In conclusion, we hope the

great industrial display in 1851, this firm exhibited carpets of Kidderminster fabric, cumber and point styles, and Dutch fabric carpets, warp made from silk noils.

An extensive manufacture of shoe thread is carried on by Messrs. Ullathorne and Longstaff, at the Bridge End and in Marwood. Messrs. Steele, tanners and curriers, have also a large establishment. Barnard Castle contains a number of smiths, machine-makers, joiners, braziers, and other mechanics. There are several corn-mills in the town and vicinity. The principal streets contain many good shops, belonging to grocers, flour-dealers, drapers, &c.; and there are three printing offices. The newspaper now called *The Darlington and Stockton Times* was commenced at this town in 1847, and removed to Darlington in 1848. There are in the township several wine, spirit, and porter merchants, a brewery, 28 licensed inns and public-houses, four beer-shops, and a spirit-bar.*

The bank of Messrs. Backhouse and Co., of Darlington, Mr. J. C. Monkhouse, manager; the Darlington District Banking Company, Mr. Thomas Caldwell, manager; and the National Provincial Bank of England, Mr. George Pippet, manager, have each a branch in the Market Place, Barnard Castle. There are branches of several fire and life insurance companies in the town.

A *Savings Bank* was established April 13, 1816. In 1832, the total amount deposited was between £9,000 and £10,000. Since that time, the number of depositors and the sums deposited have gradually increased. In the report for 1854, T. Richardson, Esq., actuary, there were 530 depositors, and four charitable societies; the amount being £15,080 11s. 5d., with a surplus fund of £250, making a total of £15,330 11s. 5d. The depositors were—

8 under £1	24 above £40 and under £50

"W. BAKER."

* It was assumed by Mr. Ranger, superintending inspector of the Board of Health, that the average expenditure of the licensed public

DARLINGTON AND BARNARD CASTLE RAILWAY.

SINCE the opening of the Stockton and Darlington Railway, and more especially since the success of that undertaking has been established, the want of a similar means of access to the town of Barnard Castle has been severely felt; and between the years 1833 and 1845, efforts were made by the inhabitants of that town to attain the desired object. In the latter year, the Duke of Cleveland consented to the formation of the Northern Counties Union Railway, which included a line from Barnard Castle to Bishop Auckland; but the act of parliament which was obtained for that undertaking was never carried out, partly owing to the state of the money market, and partly to dissensions in the directory. Early in 1852, this act being about to expire by effluxion of time, another effort was made to obtain a branch railway from some of the leading trunk lines. A company for a railway between Barnard Castle and Darlington was organized, and registered provisionally pursuant to 7 and 8 Vict., cap. 110, with a capital of £80,000, in £4,000 shares of £20 each. The original provisional directors were, the Rev. Thomas Witham, Lartington Hall; Owen Longstaff, Richard Dunn, Joshua C. Monkhouse, John Steele, Isaac Cape Cust, and John Dickenson Holmes, Esqrs., Barnard Castle; Henry Pease, Joseph Whitwell Pease, Alfred Kitchinge, Robert Thompson, John H. Bowman, Thomas MacNay, and John Buckton, Esqrs., Darlington; Morley Headlam, Esq., Wycliffe; and Mark Sherlock, Esq., Middleton. Mr. George Brown acted as secretary. The objects and nature of the undertaking were thus described in the prospectus issued:—

"The railway is intended to commence by a junction with the Stockton and Darlington Railway, a short distance to the west of that company's passenger station at Darlington, passing near to Pierce-bridge, Gainford, Alwent, Winston, and Newsham, to the north side of Galgate Street, Barnard Castle.

"The line will be sixteen miles in length, with very favourable curves and gradients, admitting of the traffic being wrought with the greatest economy and dispatch by locomotive power. It will be a single line, constructed on economical principles, and remarkably free from heavy works.

"The cost of construction, including rails, sidings, stations, land, engineering, parliamentary and law expenses, and a liberal allowance

houses amounts to £4 per week, and at the beer-houses £2; and omitting the spirit-shop, and allowing a moiety of the above sums to be expended by non-resident parties attending the market, it follows that the annual expenditure in the above-named houses, by the inhabitants alone, amounts to about £3,328. It has also been stated that the average consumption of tobacco in the town alone amounts to 6,729 lb. per annum. Estimating this quantity at 3s. 8d. per lb., a further annual expenditure for stimulants of £1,233 is given.

for contingencies, has been estimated by the engineer at £77,191; and there is every reason to believe, from the configuration of the country, that this sum will be ample.

"The proposed railway will pass from Darlington up a rich and fertile country, and will afford every facility to the important villages on the route, is within a short distance of Staindrop, and terminates in the town of Barnard Castle, which contains important manufactories, and is one of the best market towns in the North of England. It will extend to the borders of upper Teesdale, receiving the traffic from its numerous lead mines, together with ironstone, freestone, limestone, slates and flags, which abound, and require only railway communication to convey them to market, and augment the production of this extensive district. A large coal traffic may be expected, not only from the population upon and contiguous to the line, but from the inhabitants of the eastern part of Westmoreland, who now have recourse to eart conveyance to obtain a supply of the Durham coal, and who will then be able to resort for this article to the depots at Barnard Castle."

Resolutions in approval of the scheme were adopted at a meeting of the inhabitants of the town and district, held in the Witham Testimonial, November 3, 1852; and a bill for the construction of the railway was introduced into parliament in 1853. But the scheme not having met with the approval of the Duke of Cleveland, one of the greatest landholders in the district, it was opposed before a committee of the House of Commons, H. Baillie, Esq., chairman, during a prolonged sitting of ten days; one of the objections being that the width upon which it was proposed to make the formation level of the railway was only 15 feet, and consequently unsafe.* The bill was ultimately rejected.

In the mean time, the project of a railway from Barnard Castle to Bishop Auckland was revived (see vol. i., p. 565). The York, Newcastle, and Berwick Railway Company, the West Hartlepool Harbour and Railway Company, and the Sunderland Dock Company, though having distinct interests, united in giving their support to this line, and each took powers to subscribe £30,000 towards carrying out the undertaking, which was further supported by petitions from Durham, Newcastle, Sunderland, and Hartlepool, from the bishop and the dean and chapter, and from numerous persons on the line; and it was also urged in its favour that it rendered probable an extension of the line westward,

* A petition from the trustees of turnpike roads and the surveyors of public highways, in the district, showed that the proposed railway would cross the several turnpikes and roads at the places following, on a level, namely—the public highway from Cockerton to Harrogate, in the township of Cockerton; the turnpike from Darlington to West Auckland, in the said township of Cockerton (by the same road being raised 10 feet by an embankment); the turnpike from Cockerton to Staindrop, in the township of High Coniscliffe; the turnpike from Piercebridge to West Auckland, partly in the township or hamlet of Carlbury, and partly in the township of Piercebridge; the turnpike from Stockton to Barnard Castle, in the said township of

so as to form a direct communication between Sunderland on the east and Liverpool on the west coasts.

On the other hand, in the opinion of the promoters of the original measure, as expressed in a memorial to the Duke of Cleveland from the Stockton Chamber of Commerce, such a railway as that from Barnard Castle to Darlington "would confer great benefits upon the port of Stockton; whilst a line of railway from Barnard Castle to Auckland by Haggerleazes would tend to divert the traffic from the ports of the Tees (the natural sources and outlets of the commerce of the Tees valley, and much of the southern division of the county of Durham) to the ports of the Wear and the Tyne." A committee was also formed in Barnard Castle, November 8, 1853, to oppose the Auckland line, which was described as "unlikely to remunerate shareholders, and inconvenient and circuitous in its route to the main line of communication (viz., the York, Newcastle, and Berwick railway), and to the natural ports of the district, and for these and other reasons is not only not adapted to meet the wants of this town, but likely to prove injurious to its interests." At the meeting at which this proceeding took place, it was announced that the opposition of the Duke of Cleveland had been withdrawn.

Both projects came before a select committee of the House of Commons, consisting of Mr. T. Egerton, Lord Lovaine, Mr. Adderley, Mr. Lochkart, and Mr. A'Court. After hearing evidence on the Barnard Castle and Auckland line, they proceeded with that on the Darlington and Barnard Castle railway on the 30th of March, 1854. Their sittings were continued on the following day, and on the 3rd, 4th, 5th, and 7th of April, during which the witnesses examined were, T. E. Headlam, Esq., M.P. for Newcastle; the Rev. T. Witham; Joshua C. Monkhouse, Esq.; William Ullathorne, Esq., of London; Mr. Tarn, of London; Mr. John Badcock, and Mr. Joseph Dixon, of Barnard Castle; Mr. John Wrightson, coach proprietor, Darlington; Mr. Thomas Harrison, carrier, Barnard Castle; Mr. John Anderson, of Middlesborough, contractor; Isaac Wilson, Esq., of the firm of Gilkes, Wilson, and Co., of the same place;

Piercebridge (by the same road being raised 7 feet by an embankment); and also twice in the township of Gainford, which said last-mentioned turnpike road and proposed railway run alongside of and near to for a considerable distance, and intersects four times within a space of 4 miles, the public highway from Gainford to Ingleton, in the said township of Gainford, and the Bowes and Sunderland Bridge Turnpike Road; and the public highway from Barnard Castle to Egglestone, in the township of Barnard Castle. Also, that the said crossings and proximity of the proposed railway will be highly dangerous, inconvenient, and injurious to the public passing along the said several turnpike roads and public highways.

Messrs. George and James Graham and Mr. Edward Potter, colliery viewers; Mr. Christopher Hartley, quarryman, Staindrop; Mr. Mark Sherlock, Middleton-in-Teesdale; Mr. Isaac Cape Cust, surgeon, Barnard Castle; Thomas Bouch, Esq., engineer of the line; Messrs. Blythe and Hawkshaw, civil engineers; Mr. Brown, under steward of the Earl of Harewood; Mr. John Outhwaite, of Bainesse, near Catterick; Mr. G. P. Harrison, solicitor, Forcett; Mr. Thompson Richardson, solicitor, Barnard Castle; Mr. MacNay, secretary of the Stockton and Darlington Railway Company; and Joseph Pease, Esq. On behalf of the Auckland line, Ralph Ward Jackson, Esq.; John Vaughan, Esq., of the firm of Bolckow and Vaughan; Mr. Lax; W. T. Scarth, Esq.; and Mr. Booth, were examined. Evidence was also heard on the Stockton and Darlington Railway (Haggerleazes Branch) Bill; and the opinion of the committee was, that the preamble of the Stockton and Darlington bill was proved; that the preamble of the Barnard Castle and Bishop Auckland bill was not proved; and that the preamble of the Darlington and Barnard Castle bill was proved; thus deciding the subject on the merits of the respective schemes, and not on a point of the standing orders, as stated at page 566 of vol. i.

The intelligence of this decision was telegraphed, on the same day, to Darlington; and a great number of the inhabitants of Barnard Castle assembled on the road to meet the expected messenger from the former place. The wished-for tidings at length arrived; and a procession was formed, with banners and music; a ceremony which was repeated on the following evening, when the directors of the successful railway arrived from London.

The select committee of the House of Lords on the Darlington and Barnard Castle railway bill met on the 19th June, 1854; it consisted of Lord Panmure (chairman), the Earl of Ilchester, the Bishop of Carlisle, Lord Wynford, and Lord Hamilton. The petitioning land-owners against the measure were W. Surtees Raine, Esq., Messrs. Smurthwaite, Hunter, Topham, and others. The principal arguments of their counsel were directed to show the fallacious character of the company's traffic case; but as the opinion of the committee appeared to be made up on that subject, the opposition was withdrawn; and the preamble of the bill was declared to be proved. It received the royal assent on the 3rd July, 1854, and is intituled "An Act to make a Railway from the Stockton and Darlington Railway, near Darlington, to or near to Barnard Castle,

both in the county of Durham, and to make arrangements with the Stockton and Darlington Railway Company, and for other purposes."—17 and 18 Vic., c. 115.

The ceremony of cutting the first sod of the railway took place, amidst great rejoicings, on the 27th July, 1854. A procession was formed, consisting of the Grand United Order and the Manchester Unity of Odd Fellows, the Ancient Order of Foresters, the Free Gift Club, the chairman and officers of the company, and a large assemblage of the inhabitants of Barnard Castle, Darlington, Stockton, and other towns. The ceremony was performed by the Rev. T. Witham, chairman of the committee, and repeated by Henry Pease, Esq., vice-chairman, by both of whom appropriate addresses were delivered.

It is anticipated that the railway will be opened in November, 1855. The present directors are, the Rev. Thomas Witham, Lartington Hall; H. Pease, J. Bowman, J. Buckton, T. MacNay, and R. Thompson, Esqrs., Darlington; Owen Longstaff, Isaac C. Cust, J. C. Monkhouse, and J. D. Holmes, Esqrs., Barnard Castle. Treasurers, Messrs. J. and J. W. Pease; solicitors, Messrs. Mewburn and Co., Darlington, and Mr. Richardson, Barnard Castle; secretary, Mr. George Brown, Barnard Castle; contractor, Mr. Anderson. The capital of the company is £100,000, with the usual borrowing powers. The length of the line, which passes from Darlington, by Piercebridge, Gainford, Winston, Staindrop, and Newsham, to Barnard Castle, is 15½ miles; and the estimated cost of construction, &c., including law expenses, is only about £7,000 per mile. The Barnard Castle terminus is near Galgate.

The district west of Barnard Castle is an immense grazing territory of several miles area, extending far into Westmoreland. The corn-growing district has its boundary a little east of Barnard Castle. The railway will be of great advantage in conveying cattle from the west to the great consuming districts of the iron-fields, the West Riding of Yorkshire, and London, and facilitate the transmission of grain to the grazing districts, where it is wanted. It will give an impetus to the manufactures of Barnard Castle, and open out to tourists the splendid scenery of Teesdale, as well as the mineral resources of that lovely dale in lead, iron-stone, and mountain limestone; conveying the latter to Middlesbro' as a flux. It will also take the celebrated magnesian building lime westward, cheapen the transit of coal to Barnard Castle and westward, and generally open to the great highways of the land, and to commercial

enterprise, a wide and rich district hitherto entirely locked up.

The people of Westmoreland and Cumberland are now actively engaged in promoting a line from the Lancaster and Carlisle Railway, near Penrith, to the Barnard Castle terminus of the Darlington and Barnard Castle Railway, thus uniting the German Ocean and the Irish Sea. There is every reason to believe that this new project will succeed. If it does, the Darlington and Barnard Castle Railway will become one of the most important lines in the kingdom.

SANITARY CONDITION.

IN the year 1847, when alarming accounts of Asiatic cholera reached England, a committee of the guardians of the Teesdale Union was appointed, under the Nuisances Removal Act, to visit Barnard Castle. They found it abounding in nuisances of a very unwholesome kind; but, though some temporary remedies were adopted, the powers of the act were found insufficient for the sanitary requirements of the place. The Public Health Act, 11 and 12 Vic., c. 63, having been passed in 1848, a petition, duly signed by more than one-tenth of the rated inhabitants of the town, was presented to the General Board of Health; and W. Ranger, Esq., superintending inspector, was appointed to make the necessary preliminary inquiry as to the necessity for an application of the act to the town. In the mean while, in August, 1849, the cholera visited Barnard Castle, where its effects were appalling. Mr. Ranger's first sitting took place on the 17th of October, in the Witham Testimonial, and was continued on four following days, during which he received much information from the Ven. Archdeacon Headlam; the Rev. G. Dugard, A.M., perpetual curate; Rev. T. Jones, sub-curate; Dr. Edger, and Messrs. Benning, Kipling, Slader, and Cust, surgeons; Messrs. Watson, W. Watson, Richardson, Charlton, and Holmes, solicitors; Messrs. Longstaff and J. C. Monkhouse, manufacturers; Messrs. J. Steele, G. Brownless, George Brown, clerk to the Union, and acting secretary to the Sanitary Committee, and other inhabitants. Mr. Ranger also personally visited numerous courts, yards, and streets, and extended his inspection to the sleeping and lodging places

of the working classes, particularly in those parts where the epidemic had been most rife.

It was shewn that, in 1841, the proportion of deaths to the population was 1 to 46, and of births 1 in 27; whilst the proportion of deaths from epidemics to the population was 1 in 197. The average age of all who had died in the district was 27 years and 6 months, being one-fourth less than that attained in more healthy localities. The proportion of deaths to 1,000 of population, on an average of 7 years, amounted to 26, being 3 in excess of the average calculation of the Public Health Act. The cases of fully developed cholera in the town, in 1849, were 159 males, of whom 65 died; and 218 females, of whom 80 died. There were, besides, 1,297 cases of premonitory diarrhœa, from the 24th of August to the 18th of October. The charge of the union during that time amounted to £530; and a further sum of £400 was raised, in relief of the distressed, by a subscription among the neighbouring gentry and inhabitants; whilst the members of five sick and burial clubs expended, in a period of about six weeks, among sick members, £235 19s. 10½d., making a total of £1,165 19s. 10½d., exclusive of private donations.

Mr. Ranger having recommended "that the Public Health Act, 1848, except the sections numbered 50 and 96 in the copies of that Act printed by her majesty's printers, should be applied to the township of Barnard Castle, in the county of Durham," an order in council to that effect was issued. Mr. Ranger, however, visited Barnard Castle a second time on the 25th of April, 1851, to determine the boundary of the district for the purposes of the act; and after hearing evidence for and against the extension of the limits of the township, recommended that the district should consist of those parts of the townships of Barnard Castle, Marwood, and Startforth,* comprised "within the area of the watershed," together with the hall, out-buildings, and gardens, occupied by the Misses Hutchinson in Startforth, the woods on the banks of Percy Brook, and of the Tees as far as the spring called the Spa, which are sometimes called Flatts Wood, Percy Beck Wood, and Marwood Banks or Wood. Also, "that the Local Board of Health for Barnard Castle consist of fifteen persons, three of whom shall be chosen

* Startforth is a small but pleasant village and township adjoining Barnard Castle bridge, on the Yorkshire side of the Tees. The parish, which includes the township of Boldron, comprises 3,060 acres, and contained, in 1851, 165 inhabited houses and 6 uninhabited, with a population of 823 persons, of whom 350 were males and 438 females.

It is included in the Teesdale Union. The church is situated in the village; and the living is a vicarage. There were formerly several first-class schools in Startforth; but these have been latterly discontinued. The ruins of Eggleston Abbey, noticed hereafter, are in the township of Startforth.

by the persons entitled to vote in that part of the district which is within the township of Startforth, and the remaining twelve by the persons entitled to vote in the other parts of the district; and that any person at the time of his election, and as long as he continue in office by virtue of the same, be seised or possessed of real or personal estate, or both, to the value of £600, or shall be resident and rated to the relief of the poor of some parish, township, or place, of which some part is within the said district, upon an annual value of not less than £20."

Under the powers of the Act, the Local Board appointed Mr. Ranger their engineer, and have made considerable progress in cleansing the town from the filthy state in which the inspector had described it. Besides providing an abundant supply of water, the drainage of the town has been considerably improved. The Board are now engaged in completing the connection of the house drains with the public sewers; their attention is also directed to the removal of nuisances, providing convenient receptacles for house-refuse, and adopting means of effecting its quick removal, and its profitable application to agricultural purposes. The narrow courts and yards in the lower part of the town are kept purified by water, and the houses are regularly whitewashed. On the appearance of cholera in various places, in 1853, every preventive means was found to have been taken at Barnard Castle, and the epidemic did not appear there.

The cost of the application of the Public Health Act, including the necessary legal powers for the execution of the works, and the expenses of the second inquiry for altering the boundaries of the district (by which house property is relieved from a large portion of the burthen of the outlying highways, and the land from contribution to the general district rate), was £116; whereas the cost for an act of parliament would not have been less than £2,000: a sum more than sufficient for the drainage of the district.

SUPPLY OF GAS AND WATER.

A JOINT stock company, for supplying the town with gas, was established some years ago, under a deed of co-partnership. The works are situated on the Flatts, near the Castle. The streets are lighted by means of 82 public lamps, at a charge of £90 per annum. Of these lights, 64 are allowed to burn till eleven o'clock every night except Saturday, when they are kept open till twelve; and the remaining 18 burn till daylight.

The price charged to private consumers was originally 10s. per 1,000 cubic feet; but in 1845, it was reduced to 6s., subject to a discount of 1s. to large consumers. In the ten years ending 1849, 3,052 tons of coals had been consumed, and 38,913 bushels of coke sold. Some improvements in the working department were introduced in 1845, the value of which was proved by the circumstance that, in the preceding year, 222 tons 2 cwt. of coals were required to produce 372,200 cubic feet of gas; whilst, in 1845, 188 tons 18 cwt. of coals produced 541,253 cubic feet.

The supply of water for the town was formerly derived from five pumps, from a well called the Demesne Well, from a few private wells, from roofage, and from the Tees; but the quantity, particularly in summer, was frequently insufficient. That derived from the few wells was hard, varying from 40 to 49 degrees, besides being liable to adulteration from the percolation into the wells of the matters of sewers and cesspools, so that much of the water from this source was absolutely poisoned. The supply from the Demesne Well was very scanty; and numbers of persons might be seen around it, in the summer months, waiting for a supply. The rain water collected in butts soon became putrid; whilst, in numerous places, particularly in the majority of yards, there were neither pumps nor wells of any description. The river water was generally much discoloured, often thick and muddy, and always involving great labour and cost in carrying by hand or horse to the houses. Thus, it was necessary for many persons to bring their supply from a distance of nearly a fifth of a mile.

In 1849, the various sources of supply in and around the town were examined, with a view to the erection of water-works on a scale of sufficient magnitude for the town; and the results of Professor Playfair's analyses of those submitted to him induced his recommending that of Stainton Hill. In addition to the superiority of this water, the configuration of the ground intervening between it and the town was considered well adapted for the formation of reservoirs, both with reference to position and cost. The water of the Tees was disapproved by the General Board of Health; and it was ultimately determined, on the advice of Mr. Ranger, engineer to the Local Board of Health, to adopt the springs called *Stoneykeld*, near Strandforth, in the parish of Bowes.

Works for drainage and water supply have been executed simultaneously in Barnard Castle, and of water supply alone in Startforth, the drainage of which still remains to be done. The water at *Stoneykeld* is of 3 degrees of hardness, and rises vertically

from the ground in two or three places. These have been surrounded by puddle dykes, and formed into two covered wells, with stone work set in cement, and communicating with each other. From the lower well (after providing for the supply of two farms) an education pipe of earthenware, of 9 inches diameter, has been laid for 3 miles and 1,533 yards, to an eminence called Westwood, about a mile from Barnard Castle, where it is discharged into a covered reservoir, and from thence brought into the town in iron pipes of 7 inches internal diameter. The total length of iron pipes, which vary from 1½ to 7 inches in diameter, is 5 miles and 469 yards; making, altogether, 9 miles and 242 yards of earthenware and iron pipes for the water supply. The mains and submains of the sewerage works are of tubular impermeable stone ware, of diameters varying from 6 to 15 inches, joined with cement, and imbedded in puddle. Their total extent is 3 miles and 239 yards. The cost of the combined works, as nearly as can at present be ascertained, is £6,000; being £4,100 for water supply, including land-owners' charges; and £1,900 for drainage, including damages, &c.*

The supply of water, though sometimes insufficient in droughty summer weather for the manufacturing purposes of the town, is generally very plentiful. It is beautifully clear, soft, and pleasant to the taste, and well adapted for drinking, washing, and culinary uses. It is never exposed to the light from its source at the spring till it issues from the tap of the consumer. The unusual operation of cutting up the streets, with the occasional bursting of pipes, and other inconveniences incidental to such proceedings, were regarded by some of the primitive inhabitants with alarm, which was only dispelled by the successful completion of the undertaking. The highest pressure of the water is about 250 feet, and the lowest about 90 feet.

* The cost of draining the town with brick sewers, upon the old system, would not have been less than £4,000, taken at the very lowest estimate.

† So early as 1824, a member of the working classes (a dyer at Barnard Castle), in an essay read to the Mechanics' Institution, said, "Those manufacturers who are in the habit of using the water as drawn from the river Tees in dyeing must be aware of the variable results which are obtained in delicate colours, or in dyeing to pattern; for by following exactly the same process, the same shade is only obtained at certain periods; thus creating vexation and disappointment to the operative, and certain loss to the manufacturer."

‡ THE WITHAM FAMILY.—The Withams of Cliffe, now living at Lartington are descended from a Lincolnshire family, who are supposed to have derived their name from Witham Common, in the neighbourhood of Grantham, or from the river Witham, in the same county. Robert Wytham, of Grantham, whose will bears date December

The total cost for a cottage tenement, for the whole of the works of water service, drainage, and water closet, is 2½d. per week; but the rates have been so arranged that only about 1½d. per week will be paid by the tenant. The advantages of this supply have been fully appreciated; and it is now introduced into almost every house and cottage; 542 tenants being supplied from 555 service pipes. The works were inspected, in January, 1853, by Edwin Chadwick, Esq., and Dr. Southwood Smith, two of the commissioners of the General Board of Health. On the 14th February, 1854, Mr. Commissioner Lewis visited Barnard Castle, and, amongst other suggestions, recommended the formation of an additional reservoir in connection with the water supply.

The water thus brought into the town has been found very valuable for the dyeing purposes of the carpet manufacturers. Specimens of the dyes obtained by the use of the waters of the Tees, even when subjected to a purifying process, have been compared with those obtained from the new water supply as it issued unfiltered from the service pipe, and the result has proved the superiority of the latter in producing intensity and brightness of colour; a circumstance which, it is hoped, will have a favourable effect on the welfare of the town.† The profits from the sale of water for manufacturing purposes, will also tend to lower the rates to private consumers.

THE WITHAM TESTIMONIAL.

A SUBSCRIPTION library, with about 100 members, was established in 1824, but has been long extinct. The Mechanics' Institution was commenced in 1832, chiefly through the exertions of H. T. M. Witham, Esq., of Lartington,‡ and other gentlemen of the district. "The

30, 1440, was grandson of Sir Robert Wytham; he married Margaret, daughter of Richard Skeldenby, and had six sons, the second of whom, Thomas, was Chancellor of the Exchequer; the third, William, Dean of Wells; and the fourth and sixth, Sir Henry and Sir Richard, Knights of Rhodes. John, the fifth son, married Margaret, daughter of — Barton, of Whembie, and had issue two sons (from the youngest of whom descended the Withams of Bretonby and Ledstone) and two daughters. George, the eldest son, married Margaret, daughter and coheir of John Wawton, of Cliffe, and by her (who died in 1479, and is buried at Mansfield) had three sons and three daughters. The eldest son, John Witham, Esq., of Cliffe and Cornburg, married Agnes, daughter of Sir Thomas Goyer, of Stytnam, Yorkshire, and had a son and two daughters. Thomas, the son, married Cicely, daughter of John Conyers, of Hutton-upon-Wysk, Yorkshire; and his son, John, married Eleanor, daughter of James Fox, Esq., of Thorpe-under-Willow. Their daughter, Margaret, became the wife of Anthony Chater, Esq., of Butterby; and their son,

objects that these early patrons of the society had in view," it was observed in the first report, "were, first, to afford to the working classes of Barnard Castle access to a good library at an easy rate, and to give to all members of the community an opportunity of improving themselves in those sciences more immediately connected with the different arts they respectively practise; and, secondly, to induce them to pursue knowledge as an amusement, rather than those low and debasing pleasures that tend only to debilitate the body and vitiate the mind. Another object of this Institution was to afford the town and neighbourhood an opportunity to keep pace with the other parts of the kingdom in their prodigious advancement in literature and science; which you must either do or be left behind, as a gazing-stock to those who have profited more by their opportunities."

From the commencement of its existence, this Institution, notwithstanding the efforts of a few zealous members, had to struggle against great discouragements. The working classes generally did not appreciate the importance of such institutions; religious prejudices, at that time, prevailed strongly against them; and the middle classes gave very partial encouragement, many keeping altogether aloof. The lectures and meetings were very thinly attended; and the income scarcely met the current expenditure, exclusive of books or

Anthony, who married Anne, daughter of John Middleton, Esq., of Stokeld, Yorkshire, was succeeded by his eldest son, John, who married, 1st, Dorothy, daughter and coheir of William Wycliffe, Esq., of Wycliffe; 2nd, Mary Rudd; and 3rd, Jane, daughter of Cuthbert Radcliffe, Esq., of Blanchland, Northumberland. By his first wife he had three sons (one of whom became a monk in Germany) and two daughters. William, the eldest son and heir, married Anne, daughter of George Collingwood, Esq., of Eslington, Northumberland, and had four sons and three daughters.

During these successive eras in the family history, the Reformation, which had gathered proselytes amongst many of the families of landed gentry in the kingdom, passed lightly over the Withams, who steadily adhered to the ancient faith. George Witham, Esq., of Cliffe, who succeeded William, just mentioned, had, by his wife, Grace, daughter of Sir Marmaduke Wytile, Bart., of Constable Purton, Yorkshire, seven sons and two daughters. George, the second son, became a Roman Catholic bishop and vicar apostolic of the northern district; Christopher, fourth son, was a priest; Robert, fifth son, was president of the English College at Douay; and one of the daughters, Dorothy, became a nun. Mr. Witham died in 1648, and was succeeded by his eldest son, John, who married, 1st, Elizabeth, youngest daughter of Edward Standish, Esq., of Standish, Lancashire; and 2nd, Troth, daughter of — Nicholas Tempest, Esq., of Halliwell. William Witham, Esq., his eldest son, whose will is dated July 8, 1723, married, in 1707, Anne, daughter of Sir Henry Lawson, Bart., of Brough, Yorkshire, by whom he had five sons, the second of whom, Thomas, was an M.D. in Durham, and was buried in St. Oswald's church in 1786. Henry, eldest son and heir of William, had, by his wife, Catherine, daughter and coheir of Anthony Meaburne, Esq., of Pontop, two sons and

teachers. From 1839 to 1844, strenuous efforts were made, by reducing the working outlay and other reforms, to impart stability to the society. In the latter year, the president, H. T. M. Witham, Esq., expressed a wish that some appropriate building should be erected for the purposes of the society. His death, in November of that year, suggested to Messrs. Cust, Monkhouse, and Brown, three of the members of the Institution, the propriety of erecting a testimonial to his memory, which should consist, not of an idle column, but of a building devoted to some of those benevolent purposes which he had patronized during his life. They therefore convened a meeting of the committee and a few respectable inhabitants of the town; and a subscription was immediately set on foot for the proposed object. In a short time, £750 was thus raised; the directors of the Dispensary (in which Mr. Witham had taken a great interest) gave £240, on condition of having accommodation in the building; and a ladies' bazaar realized £240 more, which completed the subscription.

The building is situated in the Market Place, and presents an elegant stone front, two stories in height, in the Italian style of Grecian architecture. The lower story is rusticated, with a handsome central door-case, ornamented with Ionic columns, supporting an entablature and pediment, and having on each side a circular arched window. The upper story consists of two Ionic

six daughters. He died in 1771, and was succeeded by his elder son, William, who married Winifred, daughter of Nicholas Stapleton, Esq., of Carlton; but dying without issue, August 2, 1802, he devised the estate of Cliffe (since sold to — Wilson, Esq.) to Eliza, daughter of his brother Thomas, of Headlam, by his wife, Mary, daughter of James Thornton, Esq., of Netherwitton, Northumberland.

Eliza Witham was married to Henry Silvertop, Esq., born 28th May, 1779, (younger son of John Silvertop, Esq., of Minster Acres), who assumed the surname of Witham, and had issue, 1. Henry-John, born July 17, 1802, died August 20, 1835; 2. William Lawrence, born September 18, 1804, married Anne Maria, daughter of William Salvin, Esq., of Croxdale, and died without issue in 1841; 3. George, died Sept. 8, 1847; 4. Thomas-Edward, in holy orders of the church of Rome, born December 6, 1806, now of Lartington; 5. Charles-James and Alfred-Oswin, died young; 7. Catherine, married, in 1823, to H. Englefield, Esq.; 8. Maria, died in infancy; 9. Emma-Seraphina-Mary, married, in 1841, to William Dunn, Esq., of Hedgfield; 9. Elizabeth-Mary, a nun, deceased; and, 10. Winifred-Mary-Anne, married, September 23, 1834, to Gerald Salvin, Esq., of Croxdale. Mr. Witham, who served as high sheriff of the county of Durham in 1844, died on the 28th November in that year, and was succeeded by his son, the late George Witham, Esq., of Lartington Hall, Yorkshire, who was captain in the 68th Light Infantry; born October 9, 1805. Captain Witham was a magistrate and deputy-lieutenant for the counties of Durham and York.

Arms—Or, a bandlet, gu., between three eaglets, sa. *Crest*—Out of a ducal coronet, or, a demi-woman, her hair dishevelled, ppr., in her dexter hand a gem ring, or. *Motto*—Optime Merenti.

Seat—Lartington Hall.

columns, and pilasters at the angles, the full height of the story, with a rich entablature, in which is carved the name of the gentleman in whose honour the building is erected; the same breaking over the two centre columns, and terminating with a pediment, flanked by a low and well-proportioned attic. Between the centre columns is a rich Venetian window, with two Ionic columns supporting a plain head only, which, though somewhat singular, is yet simple and consistent in effect. The interior contains a spacious lecture room, library room, and librarian's residence; with a dispensary, a surgery, and out-offices.

During the erection of the building, the subscription to those members of the Institution who were mechanics and artizans, was reduced from 8s. to 5s. per annum. In accordance with a suggestion from the Rev. T. E. Witham, president, an evening school is carried on during the winter months, in which, reading, writing, arithmetic, geography, and history are taught. The number of volumes in the library exceeds 2,500, exclusive of periodicals. The present number of members is 150, and the income about £70 per annum. The anniversaries of the Institution are enlivened by soirees; and occasional excursions are made during the summer months, which the objects in the surrounding country tend to render highly attractive, as, in addition to the historical associations connected with the district, its botanical, mineralogical, and geological features are peculiarly interesting.

At the annual soiree held on the 22nd of September, 1854, it appeared from the report, read by the secretary, Mr. Brown, that the Institution, though not in a declining state, was capable of more extended usefulness, as many of its members did not show the disposition for acquiring useful knowledge, or for scientific attainments, that its supporters might have expected, nor such as the means of the Institution provide.

MISCELLANEOUS INSTITUTIONS.

DISPENSARY.—A dispensary was established in January, 1835, which is supported by donations and subscriptions. During the year ending October, 1848, 116 cases were attended in the town alone; and in the following year, there were 125 cases. In the year ending January 2, 1854, the number of patients cured was 169; relieved, 8; remaining on the book, 15; had extra tickets, 17; died, 9; total, 218. The subscriptions, during the twelve months, amounted to £47 17s.; and the expenditure for drugs was £23 1s.; for instru-

ments, 4s. 3d.; for stationery and printing, £2 4s. 6d.; for carriage, postage, and sundries, 9s.; and one year's salary of medical officers, £25. There is a deposit of upwards of £70, belonging to this institution, in the savings bank. A benefaction of £5 and upwards constitutes the donor a governor for life. In consideration of a donation of £240 to the building fund of the Witham Testimonial, the institution is held in apartments provided for the purpose in that erection. The present officers are—*President*, His grace the Duke of Cleveland; *Vice-presidents*, the Revds. G. Macfarlan, G. Price, and G. Dugard, and John Bowes and William Maude, Esqrs.; *Consulting Physician*, Dr. T. S. Edger; *Surgeons and Apothecaries*, Messrs. Benning and Slater; and *Secretary and Treasurer*, Mr. Richardson.

INDIGENT SICK SOCIETY.—This society is also supported by voluntary contributions; and its objects are effected by searching out persons in distress, to whom relief is afforded at their own homes. Upwards of 200 cases have been annually attended to.

THE CHURCH CLOTHING SOCIETY is supported principally by members of the Established Church; and, in connection with the schools, there is a clothing fund for boys and girls, to which each contributes one penny per week. There is also a general **CLOTHING SOCIETY**, unconnected with any religious party. **THE FEMALE CHARITY FOR THE BENEFIT OF POOR LYING-IN WOMEN** is supported by public contributions.

THE SOCIETY FOR PROMOTING CHRISTIAN KNOWLEDGE has a branch at Barnard Castle. The branch of the Darlington **AUXILIARY BIBLE SOCIETY**, during the year ending Midsummer, 1853, transmitted £37 10s. 11d. on the purchase account, and £15 3s. 5d. free; total, £52 14s. 4d. In the same period, 142 Bibles and 178 Testaments were distributed.

BENEFIT SOCIETIES.—The Ancient Order of Foresters have a lodge in Barnard Castle. Their allowance to a member's family, on his death, is £10; and to a member, on his wife's death, £7. The Victoria Free Gift Society allow to a member's wife, &c., on his death, £5; and to a member, on his wife's death, £3. The Manchester Unity, and the Grand United Order of Odd Fellows, have each a lodge in the town; and there are a few other clubs, for mutual support during sickness, &c. The benefits afforded by *Building Societies* have also been appreciated and acted upon.

AGRICULTURAL SOCIETY.—This society, which has been established some years for the improvement of the breed of cattle, resolved, at the general meeting held on the 30th August, 1854, that persons at any distance, whether members or not, should be at liberty to exhibit and compete for the society's premiums; the rules having hitherto admitted, for this purpose, those only who resided within 10 miles of Barnard Castle. The public exhibitions of the society are considered to have been the earliest in the kingdom; and at the annual show held in the Castle Garth, on the 11th October, 1854, the cattle on the ground were pronounced to be superior to any hitherto exhibited. On that occasion, the principal landowners and agriculturists of the society were present; and at the dinner of the society, held on the same day, his grace the Duke of Cleveland presided. John Michell, Esq., is president of the society; and Christopher Cradock, Esq., and the Rev. W. F. Wharton, are the vice-presidents. Secretary, Mr. W. Watson.

HORTICULTURAL SOCIETY.—The exhibitions of this society are held in the Castle Garth; and prizes are awarded for the best specimens of flowers, fruits, vegetables, &c. At the exhibition held on the 8th September, 1854, the allotment and cottage gardeners took the prizes in the vegetable class.

CO-OPERATIVE CORN MILL SOCIETY.—This is a society recently formed in Barnard Castle, having for its object the supply of flour, meal, &c., on favourable terms, and is managed by a body of directors.

NATIONAL SCHOOLS.—The National School for boys was founded in 1814, by subscription, towards which Bishop Barrington contributed £100. The school-room is situated on the south side of the church-yard. The girls' school, established in 1850, and to which the Duke of Cleveland subscribed £50, is on the north-west side of the church-yard. On the government inspector's visit, June 17, 1853, 191 boys were present at examination. During the preceding twelve months, 45 had left, and 46 had been admitted; average attendance, 170. The inspector's general observations were—

“Buildings, a large room; no class room; a wooden floor has been substituted for a stone one. Eight loose desks. Furniture, clock, stove. Playground, no freehold. The school stands on the edge of ‘The Mains.’ Books, methods, discipline, and instruction, fair. Organization; standard of classification: reading and arithmetic. Eight classes for all subjects, under master, with certificate of merit, and four pupil-teachers; one division (1st and 2nd class) for scripture. Every class is in three groups for arithmetic. Each pupil-teacher is confined to one class for two months.”

At the girls' school, visited on the same day, 102 were present at examination; 38 had left during the year; 40 had been admitted; and the average attendance was 95. General observations:—

“Buildings, a fair-sized room; no class-room. Four loose desks. Furniture, clock. No playground. Apparatus, six black-boards, five easels. Organization; standard of classification: reading. Six classes for all subjects; two divisions for scripture, geography, and object lessons. Each pupil-teacher is confined for one month to two classes.”

OTHER SCHOOLS.—There are several boarding and day schools in Barnard Castle.* The Roman Catholics have a school in Queen Street, attended by about 30 boys and 20 girls. There is a school belonging to the Wesleyan Methodists on the Demesnes, at which about 80 boys and girls attend. At the infant school, also on the Demesnes, about 64 boys and 50 girls are at present instructed.

The Sunday schools connected with the various places of worship have been already noticed. The first in Barnard Castle was commenced in the workhouse by a poor man named William Emmerson, who, observing the want of education amongst the children employed in the manufactories, assembled as many as he could for instruction on Sundays. His efforts were at first regarded with contempt, and he struggled on for some time amidst the derision of those around him. Happily, he persevered in his useful enterprise; and the result was, that in a few years, Sunday schools acquired the popularity they still possess in the town.

INHABITANTS.

THE town of Barnard Castle has produced some individuals whose talents and virtues would have graced a

* Mr. George Layton, author of “Castle Barnard, a Poem,” published in 1823, was for some time teacher of a school at Bowes. He was born in or near Baldersdale in 1790 or 1791, and, after quitting Bowes, kept a school at Heworth Shore, on the Tyne. Whilst employed in a chemical manufactory at that place, he became a member of the Northern Political Union, and was one of the speakers at the

great public meeting held on the Town Moor of Newcastle, on the 11th of October, 1819, to deliberate on the “Manchester massacre.” In various situations in life, he energetically advocated the popular principles of annual parliaments, universal suffrage, and vote by ballot. Some of the notes to “Castle Barnard” are piquant, and are illustrative of circumstances connected with the history of the town.

wider sphere of action.* Amongst those who have acquired more than a local fame may be mentioned the late Baron Hullock; William Hutchinson, Esq., F.A.S. historian of the county (see vol. i., p. 10);† and George Edwards, Esq., M.D.‡ The gradual progress of refinement has, of course, extended itself into this, as well as into other and more remote districts of the country; and the courtesies of life are as well understood, and as gracefully practised in and around this town, as they are generally amongst the educated classes of society. Peculiar circumstances, however, though sometimes isolated in themselves, have occasionally been taken advantage of for the purpose of throwing discredit on the character of its population. The following remarks by Mr. Justice Cresswell, at the county assizes, March 6, 1851, in passing sentence of two years' imprisonment on Edward Harper, for an assault on Elizabeth Aarday at Barnard Castle, produced a considerable sensation at that place. His lordship read over a list of the culprit's offences, including one conviction at the sessions, and numerous summary convictions before the magistrates, and observed that it was right the public should know what sort of a character he was. Indeed, he was a fair specimen of the men belonging to Barnard Castle, and who reflected such disgrace upon the county. It was a sink of vice and profligacy, for there was more

crime committed in Barnard Castle than all the places of the county put together. That, indeed, had always been its character ever since he (his lordship) had known it, and it was a great disgrace to the county that it should continue in such a state.§

This sweeping charge called forth several indignant replies, through the medium of the press, from inhabitants of the town, one of whom says, "That there have been, and perhaps still are, vicious and worthless characters in Barnard Castle, I readily admit; but that the party alluded to is a fair sample of the inhabitants, I most emphatically deny. The learned judge seems to have forgotten that Barnard Castle has produced men eminent alike for their learning and piety, and, amongst others, the late Baron Hullock, whose calm dignity, and placid, even temper, under the most trying circumstances, Mr. Justice Cresswell would do well to imitate."

General charges against whole communities are too indiscriminate to be just; and it is but fair to state that a subsequent report of the chaplain of the county prison proved that the learned judge's observations had been hasty and inaccurate.

The Rev. George Dugard, incumbent of the chapelry, and a magistrate of the county, in a report delivered to the superintending inspector of the Board of Health,

* The ancestors of Sir Roderick Murchison, the eminent geologist, resided at Barnard Castle. Mr. Kipling, a celebrated mathematician of the last century, was born here; Mr. Ewbank, the well-known writer on Hydraulic Engineering, is also a native of this place.

† Several letters in the possession of R. H. Allan, Esq., F.S.A., Blackwall Hall, relate to the authorship of Hutchinson's invaluable History of Durham. Mr. Hutchinson himself says, in one of his letters, "Mr. Allan's (the antiquary) indefatigable labour has accumulated most of the materials from which this work is compiled, and from whose unexampled bounty and generosity they are submitted to the author's arrangement for the public eye."

‡ In a letter dated April 30, 1786, poor Hutchinson thus bemoans himself to his kind and worthy friend, Allan:—"I am still to endure very insolent and impertinent reprimands from Hodgson the printer, who complains so much of the length of the work, that, with your leave, I am determined to strike out every thing possible, and withdraw the appendix touching Holderness, Norham and Bedlingtonshires, and reserve them all, with notes already withheld, for a volume of addenda after the work has passed his hand. I was so pleased at what you said that he appeared better satisfied with the work, that I congratulated him thereon, and was replied to, 'that the judicious readers condemned the method, and he was heartily sick of it.' These are painful things after my laborious journey through so many volumes. Please therefore, sir, to expunge all you can."

§ Dr. EDWARDS.—George Edwards, Esq., M.D., was the representative of a respectable and wealthy family, established for some descents in Barnard Castle, but said to be originally from Wales. Dr. Edwards graduated at Edinburgh, but never practised except

gratuitously, and spent the greater part of a handsome estate in philanthropic projects. He was the author of several books and pamphlets on political, medical, and agricultural subjects, the first of which, "The Aggrandisement and National Perfection of Great Britain," in 2 vols. 4to, was published in 1787; and the last, "The National Improvement of the British Empire, or an Attempt to rectify Public Affairs," in 2 vols. 8vo, appeared in 1808. During the latter part of his life, Dr. Edwards resided in Suffolk Street, Charing Cross, London; and he died at Hammersmith, on the 17th of January, 1823, in the 72nd year of his age. Many of the improvements in and around Barnard Castle were projected by him.

§ In his charge to the grand jury at the same assizes, Mr Justice Cresswell, with reference to the county at large, remarked that "in looking through the calendar he was struck with two circumstances—one was, that the amount of education amongst the criminals appeared to be very small, and the other, that the amount of drunkenness appeared to be very great. In this county, these two prolific sources of crime—ignorance and intemperance—seemed greatly to prevail. He therefore trusted in their respective stations, they would apply themselves in such a manner as to remedy these evils; and that, from the spread of education, and the greater caution that would be exercised in granting and renewing licenses for public-houses, they would be the means of improving the morals and habits of the population of the county." With respect to the alleged want of education, the learned judge ought to have remembered that the county should not justly be held responsible for the united ignorance of the multitudes of Irish, Scotch, and other labourers, who have been for some years back, and are still attracted by the prospect of employment at the public works in progress.

THE RIVER AT THE FALLS

gave an appalling picture of the moral depravity of the working classes in Barnard Castle, which he attributed, amongst other causes, to the apprentice system, whereby youths and girls are allowed to receive their own earnings, and are thus placed beyond the control of their parents or friends. He states that at the age of 15 or 16, boys and girls quit the paternal roof, and reside with each other; and a long list was furnished to the inspector of parties thus living, under the term of *going tally*, some with children varying from one to eight in number. That the picture is overcharged, however, may be safely presumed; as, were such the general state of society, the evil would be so intolerable in its consequences to tradesmen and ratepayers as to work its own cure.

ENVIRONS OF BARNARD CASTLE.

FEW towns in England can compete, for beauty of scenery, with Barnard Castle. The country around is richly wooded, fertile, and highly cultivated; and the banks of the winding Tees, descending in gentle slopes, or projecting in overhanging precipices, form picturesque and graceful combinations with the rocky bed over which its foaming waters force their way.

The Flatts, a beautiful woodland scene, on the west of the Castle, and which commands several delightful views of that venerable ruin, the church and town, the village of Startforth, and the fields and pastures on the Yorkshire side of the river, has been already alluded to (see page 15). The walks were formerly almost impassible, until the late Dr. Edwards, having obtained permission from the Earl of Darlington, planned and carried out, at his own expense, a series of meandering footpaths, adapted to the surrounding scenery, and leading to a sulphureous spring, about 2 miles north-west from the town. "The walks through wild Marwood," says Surtees, "were planned with admirable simplicity—threading the thicket, crossing the ravine, scaling the cliff, and again descending to the shelving margin of the river, with all the effect of natural forest-tracks." "A small expense," says the author of "A Tour in Teesdale," "might protect the spring from the floods; and a well-built, though not a large inn, would afford sufficient accommodation to establish its credit."

The Mains is a fine level pasture close to the Tees, bounded on the west by the houses in Thorngate, and on the north by a steep green hill, on the ridge of which stand the church, the National School, and the houses of one side of Newgate Street, stretching towards the east.

At the eastern extremity of the Mains is the *Abbey Bridge*, a beautiful structure of one bold arch, with embattled parapets, over which the ivy has thrown its dark green tapestry. It was erected at the sole expense of John Sawrey Morritt, Esq., of Rokeby Park; and opened with an imposing Masonic procession and ceremony on the 19th of June, 1773. In a little dell near the south end of the bridge, and on the west side of the road leading from it to Rokeby, stand the romantic ruins of Egliston Abbey, from which the bridge derives its appellation. Part of the east window still remains, and crumbling fragments of walls and arches remain to attest its former architectural splendour; the whole scene softened down by time since the period when its demolition was recent:—

"The reverend pile lay wild and waste,
Profaned, dishonoured, and defaced.
Through storied lattices no more
In softened light the sunbeams pour,
Gilding the Gothic sculpture rich
Of shrine, and monument, and niche.
The Civil fury of the time
Made sport of sacrilegious crime;
For dark Fanaticism rent
Alter, and screen, and ornament,
And peasant hands the tombs o'erthrew
Of Bowes, of Rokeby, and Fitz-Iugh."

Rokeby.

Of the objects above noticed, a writer already quoted says, "Walk over the Mains, a large pasture on the contrary side of the town to the Flatts; cross it towards the mill, and follow the Tees to the Abbey Bridge. A segment of the arch is seen, deeply shaded by the hanging woods on each side of the river, which, considerably below, presents an unbroken lake-like surface, but within a hundred yards resumes its rough impetuous character, and foams over opposing rocks towards the bridge. Endeavour to get on the rocks, and pass under the bridge, to the distance of about a hundred and fifty yards, till you are opposite to a large mass of rock in the mid-stream. Turn round, and through the majestic arch the ruins of Egliston Abbey appear like a framed picture. Climb the hill, and return by the fields to the high road. As you approach, you have another and perhaps the best view of the abbey, and an extensive and diversified country. Go down to the bridge, which looks on two fine avenues of wood and rock, both up and down the river; one terminated by the town of Barnard Castle, and taking in the ruins and a rude bridge over a small rivulet; the other closed by the house at Rokeby." In returning to the town by the Yorkshire side of the river, the writer says, "The town, the castle, the bridge, appear spread

before the eye like a map in a fine sunset, so inimitable are the variety and richness of tint afforded from so many different objects, and from five distinct ranges of hills which form the lofty back-ground." The environs of the river Greta, which flows into the Tees from the south, are admirably described in the notes to Sir Walter Scott's poem of Rokeby.

KINNINVIE.—This hamlet, which is partly in the township of Barnard Castle and partly in that of Marwood, is situated $3\frac{1}{2}$ miles north from the town, and contains a school, a public house, and the shops of a cartwright and a blacksmith.

MARWOOD.

THIS township forms the north-western part of the chapelry of Barnard Castle, and adjoins the town on the west, part of which, with the Flatts, are included in it. Its extent is 3,675 acres; and the population, at the successive returns, was 156, 177, 212, 200, 224, and 205. Of the latter number, 108 were males and 97 females; and there were, at that date, 35 inhabited houses. The annual value of property, assessed for the county-rate in 1853, was £2,457 14s. 11d.

The contributions of the township of Marwood to the Teesdale Union, for the year ended March, 1854, were, for in-maintenance, clothing, and funerals, £9 1s. 5d.; out-relief and lunatics, £15; irremovable poor, salaries, and other common charges, £9 18s. 3d.; constable and costs before magistrates, 14s. 6d.; law costs, revising barrister, and jury lists, 10s.; journeys, salaries of assistant overseers, incidental expenses, &c., £1 0s. 1d.; total of expenditure, £36 4s. 3d., being £5 19s. 7d. less than that of the preceding year. The vaccination fees amounted to 12s., and registration to 11s. 6d. The overseers paid to the county rate £41 10s. 2d.

Marwood anciently contained a town of its own name; but the erection of the castle and town of Barnard Castle, and the successive grants of land made to the burgesses and freeholders, gradually induced its decay and final disappearance. Marwood Chase or Park extended along the north bank of the Tees, and bordered on the southern verge of Langley. It was purchased from the grantees of the crown, with Barnard Castle and Raby, by Sir Henry Vane, and was disparted in 1628. It is now the property of the Duke of Cleveland. *Woolhouse* was, in the 17th century, held by the Thoresbys. *High Shipley*, or *Marwood Hag*, was the property of the Raynes;

and Cuthbert Rayne, who died unmarried before 1715, with Emma his sister, sold it to George Bowes, Esq., of Streatlam, for £2,100. *Low Shipley*, which belonged to the Simpsons, was, with *Roger Moor*, sold, in 1709, to Lady Elizabeth, widow of Sir William Bowes, for £1,500. *Robert Knott*, with *West Roger Moor*, passed from the Traynes to William Robinson, of Rokeby, Gent., whose descendant, Sir Thomas Robinson, Bart., conveyed them, in 1742, to George Bowes, Esq. *Holehouse* was part of the estates of the Raynes. *Hullerbush*, one of the old estates of the Boweses, was repurchased from the Hodshon and Bell families, in 1692, by Mrs. Ann Bowes, for £210. It is now the property of the Duke of Cleveland. *Parrock Mire* was the estate of Sir John Hullock, who left a life interest in it to Lady Hullock.* On her decease, it passed to J. Lamb, Esq., solicitor, son of Sir John Hullock's sister.

STREATLAM AND STANTON.

This township contains the village of Stainton, the castle and park of Streatlam, and a number of scattered houses. It comprises an area of 2,907 acres. The population, in 1801, was 272; in 1811, 232; in 1821, 251; in 1831, 324; in 1841, in consequence of several workmen being temporarily employed at the castle, it had increased to 373; and in 1851, it was 344, of whom 177 were males and 167 females. There were, at that time, 69 inhabited houses and 2 uninhabited; and the property was valued for the county-rate, in 1853, at £2,450 16s. 10d.

During the year ended March, 1854, Streatlam and Stainton contributed to the Teesdale Union, for in-maintenance, clothing, and funerals, £1 13s. 7d.; out-relief and lunatics, £28 13s. 6d.; irremovable poor, salaries, and other common charges, £31 19s. 7d.; constable and costs before magistrates, 8s. 6d.; law costs, revising barrister, and jury lists, 10s.; journeys, salaries of assistant overseers, incidental expenses, &c., £1 10s. 6d.; total of expenditure, £64 15s. 8d. The repayments of relief by relations and other receipts were £1 4s. 6d., leaving a net total of £63 11s. being £11 8s. 8d. less than that of the preceding year. The vaccination fees were £1, and for registration, £1 1s. 8d. The county-rate paid by the overseers was £41 19s. 10d.

* A mural tablet of marble, to the memory of Lady Hullock, has been erected in the chancel of Barnard Castle church, on the opposite side to that on which Baron Hullock's is placed.

STREATLAM.

WARIN TRAYNE is the first named lord of Stretlam and Staynton. With his son Hugh, he endowed a chapel for their men there, with the consent of Gny de Laci, vicar of Gainford, in 1210. John, great grandson of Hugh, married Agnes, daughter and heiress of Ralph de la Haye, of Staynton-in-the-Street, said to be a niece of Hugh Baliol; and their sole daughter and heiress, Alice, about 1310, married Adam de Bowes, Knt., who thus became lord of Streatlam in right of his wife.

THE BOWES FAMILY.

THE descent of the Bowes is traced from a cousin of Alanus Niger (the Black), Earl of Richmond, who appointed him captain of the tower of Bowes, and leader of 500 archers. Sir Adam Bowes, above named, sometimes styled of Richmond, was "learned in the lawes," chief justice of the Court of Common Pleas, by patent, 5 Edw. III., 1331; steward of Richmondshire, and seneschal to Bishop Kellaw. In 1333, he settled Osmonderoft and Stubhous on his son Robert, reserving to himself an annuity of £9 out of the former and 40s. out of the latter. He was succeeded by his eldest son, Robert, whose son, also named Robert, released all right in Helton, Barford on the Moor, Whorleton, Osmonderoft, and Cockfield, to his father's trustees, 12th December, 1356, and died without issue. Thomas, his eldest brother, was succeeded in the Streatlam estates by William, a third son of the elder Robert. He is said to have been created a knight banneret at Poitiers in 1346; and, in 1384, became heir to his mother, Elizabeth, daughter of Sir John Lilburne, of Lilburne, Northumberland. He married Maude, daughter and sole heiress of Richard de Dalden, lord of Dalden, Pallion, Hamildon, and Clowcroft. His will is dated January 17, 1420. Sir Robert Bowes, his eldest son, was created a banneret at the siege of Rouen in 1419; and was slain, with Thomas Duke of Clarence, at Baugy Bridge, in 1421. His widow, Joan, daughter of Sir Robert Conyers, of Ormesby, Cleveland, married Thomas Bromflete.

Sir William Bowes, son of Sir Robert, and only surviving heir of the whole family, had livery as heir to his grandfather, Sir William, in 1410, and became heir to his mother, Joan Bromflete in 1438. He married Jane, daughter of Ralph Lord Greystock, on whose death in the first year of their marriage, and before she had reached the age of twenty, he "toke much thought, and passed into France," where he was engaged in the wars, and knighted at Vernoyle in 1424. Leland says of him,

"One of this house, caulled Syr Gul. Bowes, was Chambrelayne with the Duke of Bedeforde, brother to Henry the 5, and uncle to the 6, and Protector and Governour in Fraunce, by whos favor Bowes, caullid in Frenche *Mounseir de Arches*, being in Fraunce with hym a xvii yeres, waxid riche, and comming home augmented his lande and fame."—"Syr William Bowes, that was in France with the Duke of Bedeford, did build a *fundamentis* the manor place of Stretlam in the Bishoprik of Dirlham, not far from Barnardes Castelle." Having retired to his hereditary mansion, which he had caused to be rebuilt from a model sent from France, he continued, for the sake of his beloved wife, a widower till his death in 1465, at the age of at least 86. He is distinguished in the family roll as "old Sir William Bowes," and was warden of the Middle Marches and governor of Berwick.

Sir William Bowes, only son of the last-named Sir William and Jane Greystock, was sheriff of Northumberland 6 Edw. IV., and warden of the Middle Marches under John, Marquis of Montacute, and Richard, Dnke of Gloucester. By his wife, Maude, daughter of Henry Lord Fitzhugh, of Ravensworth, he had issue five sons and seven daughters. Six of the latter married respectively into the families of Hilton of Hilton Castle, Bulmer of Wilton, Conyers, Lisle, Swinnow, and Wycliffe.

William, eldest son of Sir William, married Isabel Clifton, a neice to Bishop Booth, but died without issue, and was succeeded by his brother, Sir Ralph Bowes, of Streatlam and Dalden Tower. He became entitled to considerable property in Richmondshire, by his marriage with Margery, daughter and co-heiress of Richard Conyers, Esq., of South Cowton. His son, Sir Ralph Bowes, of Streatlam, Dalden, and South Cowton, was appointed high sheriff of Durham on the 4th of October, 1482, and served that office 30 years under Bishops Sherwood, Fox, Sinews, Bainbrigg, and Ruthall. He was at Flodden Field in 1516. By his wife, Elizabeth, daughter of Henry Lord Clifford, and sister of Henry, first Earl of Cumberland, he had issue two daughters and a posthumous son, George, born in 1517, and in ward of Sir William Bulmer 10th February, 2 Wolsey. He married Muriel, daughter of William Lord Eure, of Witton, and sister of Sir Ralph Eure. The latter married Margery, sister of Sir George Bowes, thus doubly cementing the union of the families. Sir George died in 1546; and his only son, Ralph, having died young, the estates and representation of the family passed to his uncle, Sir Robert Bowes. He was of the

Privy Council to Henry VIII., the Council of the North, Master of the Rolls, warden of the Middle Marches, and escheator of Durham by patent from 1529 to 1543. He married Jane, daughter of Sir James Metcalfe, of Nappa; but his four sons died young; and he was succeeded by his nephew, George, son of Richard Bowes, Esq., of Aske, by Elizabeth, daughter and co-heiress of Roger Aske, Esq.

Sir George Bowes, of Streatlam, was heir male of the whole family, and was styled of Aske, 7th April, 1 Eliz.; of South Cowton, 1st July, 4 Eliz.; and was sheriff of Yorkshire in the same year. Like most of his ancestors, he was early trained to the profession of arms, and distinguished himself in the Border wars. The Earl of Shrewsbury, marshal of Berwick, conferred on him the honour of knighthood in 1558, in which year, in conjunction with Sir Henry Percy, he invaded the Merse, burnt Dunse and Langton, and repulsed the Scotch and French at Swinton. He married, first, Dorothy, daughter of Sir William Mallory, of Studley Royal, Yorkshire; and, secondly, Jane, daughter of Sir John Talbot, of Grafton, Worcestershire, by Frances, daughter of Sir John Guildford, only sister of John Talbot, Esq., and aunt of George, Earl of Shrewsbury. Supported by powerful family connexions, and endowed with splendid talents, Sir George Bowes continued to occupy an honourable position in the North, where he was distinguished for his loyalty to Queen Elizabeth, and attachment to the Protestant faith.

He was induced by principle to resist the Northern Rebellion, on its outburst in 1569. The first muttered thunder of that event is contained in Sir George's diary, which commences, "I met the Earl of Westmerland of Saturday next after St. Matthew's day (21st September), or there about, as our ways crossed, his to Branspeth, and mine to the Isle: and appointed

then to meet the said Earl of Westmerland of Wednesday next, after our hawking; which appointment I kept, but he came not, nor sent, though he were not far thence." Assured of his fidelity, the Earl of Sussex and the Privy Council kept up an unintermitting correspondence with Sir George,* who says, "Seeing I have a charge of the Quene's Majestie's Castle of Barnard Castle, wherein I have bestowed my small portion of armor and weapon, and meaneth yf there be any further assembly, to draw thither." The Earl of Sussex, in one of his letters, says, "Suerly you deserve grete thanks for your dylygence in advertysements, which the quene shall well understand; and I pray you to contynue them, for I wyll grownd moste upon that [which] cometh from you."

Thus trusted and complimented, Sir George devoted all his political tact and military skill to the circumvention of the insurgents. On the 15th of November, he writes, "I thought yt good to begin th' assemblye here (at Barnard Castle), where ys alredeye comed unto me, with greate haste, and well appoynted, to serve as light horsemen, the whole gentlemen dwellinge upon the ryver of Teyse of both syds, whose names I thoughte good to advertyse your lordship of. And as I judge, they brought with them ny about a hundred lighte horsemen, well mounted, and armed with playte coyt and speares, and I have of my owne verye nye an hundred light horsemen. And there ys also assembled hether of the countrethes next adjoynng, two hundred able men, armed and weaponed with playte coyt, jack, bowes and arrows, and bylles, and twenty corslets of my owne, and thirtie arquebusses; the effect of which number ys a choyse of my owne tenants and others under my rewle, of the quene's majestie's tennants of Barnard Castell lordship.† And most dewtyfullie and obedyntlye the people nye these parts assemblythe

* This correspondence, with other memoranda on the same subject, which have been called "the Bowes papers," consist of a large collection of original letters, copies of letters, and other documents. Some fragments were discovered in a closet in the library at Gidside, which had been long shut up; and the remainder were found on the 6th of October, 1833, after a most laborious search by W. Hutt, Esq., M.P., and Sir Cuthbert Sharp, in an old deal box, thrown carelessly aside, in the room used as an armoury by the Derwent and Gidside yeomanry. They were in very bad condition; but by dint of industrious patching and pasting, with great care and labour, they now form eighteen folio volumes, with perfect indexes to the whole, and are deposited at Streatlam Castle.

† "A note made the xxiiiith of Nov. Eliz. xii, of all the horsemen at Barnard Castle to serve the Queenes Majestie. Spears, Bow, and Harquebusses:—

styl, whereof the best lyke, in person and furnyture, I staye, and the reste with thanks, and good words, I returne home." Speaking of the depredations committed by the rebels, he says, "They soght for my children, where they were at scole, but yesterdaye I brought them hyther."

On the 29th November, this sturdy loyalist writes, "They mean to holde me shett with ther horsemen, cuttinge me from my vyttales, and to break my mylls, all which lyethe a good waye from me, save one, which ys beyond the ryver, but lyethe nye the Castell, and, therefore, I truste gardable; but I am indifferentlye well provyded, thoo they tooke from me thirte quarters of malte and a good portyon of wheate, by good intelligens then had (as I feare). They everye daye come and offer serymyshinge, and beareth in our scoute and scowryers; but we take noo layrom, but kepethe close, for cawses [which] shall after be tolde to your lordship. The Stable within Braeckenbury Tower—The Constable, 5; Henry Wandesford, 2; Leonard Bennes, 1; Francis Parkinson, 1; 9.

Lords Stable, Bowes Tower, Stable in the South Wall—Sir George Bowes, 13; his servants, 16; his servants, 3; 32.

The House within many Gates, the west end of Constable Tower—Robert Bowes, 34; Mr. Blakiston, 4; 33.

Lordship, whoes setting forth the butt one dayes jorney owtt of Yorke, I trust wold feare (frighten) theyme, and Yorkshire ys now clene swepyd of theyme. Notwithstanding many of those that came home from them receyving theyr vyttayles, and gettinge such money as they cold, ar returned to them agayn; but yf some soldyers were shewen, I fully hope yt wold do much good. Fynally, I have, and shall serve dewtyfully; and so long as I shall leve, I shall keep my faythe and treuthe to our good Quene Elizabeth unspotted.—It were conveyant that some of good credytt were sent into Cumberland, without which, Symon Musgrave (who ys very forward and willing in thys service, and so ys the L. Scrope, but not so well inclyned as the other ys) lytle will be done for the servyce; and, therefore, the said Symon ys mete to serve.—Thus having myne cares full of ther shoting, and informed that ther fyve peeces of ordynance now in sight, which I think they meane this nyght to plant, I humbly take my leave. From the Quenes Majesties Castell of Barnard Castell, in haste, the first of December, 1569.—Yt is necessary that we be hastely releved."

On the 6th of December, a sally was made by 200 horsemen, two of whom were slain and 30 taken by the rebels. An immense mass of depositions occur in the Bowes Papers respecting the skirmish, to prove the damage done, and to implicate those who took a part in it. Sir George sent forth a party of horse, with cattle, from the west gate, to be placed in the park. Some of the horsemen were taken, and stripped to their "dublets and hose;" and their horses were sold by the captain, and the money distributed to the men. Captains Robynson, Tatam, and Metcalfe are named; and Sampson Norton appears to have held a high command.†

The difficulties experienced by Sir George during the siege, and the manner of its termination, are narrated in a note from Lords Sussex, Hunsdon, and Sir R. Sadler, to the privy council:—"It may please your

† In the siege of Barnard Castle, the rebels killed five men, three within and two without. On the night of the skirmish, they wounded, with arquebus shot, 67 within the castle.

good LL. This day Sir George Bowes, Robert Bowes his brother, and diverse of the gentlemen that were with him in Barnay Castell, came hether to us; by whom we understand that the soldiers that were in the Castell did daily, by great numbers, leape over the walls to go to the rebells.* And on Friday last, ther leaped over the walls, at one tyme, abowt the number of fourscore; since which tyme, they have growen to such mutenies, as, upon Saturday, vii or viii score of them, that were appointed to garde the gates, and had alwaics ben of the best disposed, did sodenly sett open the gats, and went to the rebells; wherupon Sir George Bowes, seing the falshode of his men, was driven to composicon, and is, with all his men, horses, and armor that remayned there, come away in saulftie. He hath had longe lacke of drink, and was scanted of bread; and yet, if his men had ben trewe, he mighte and wold have kepte it untill he had ben releved. He hath served very faithfully and stoutly, and the rebells have spoiled him of all he hathe, so as his losse is very greate; and yet it semeth the delivery of the Castell, by the falshode of his men, doth greve him more than all his losses, although, considering he and the gentlemen be in saulity, we finde the rebells have smale comoditie by the Castell. We have made the greater haste forwards upon hope that when we sholde come towards the river of Teise, the rebells wold levy the seege; and that being now at an ende, we will marche forwards more easely. We thinke it will be two dayes longer before we come where the rebells be. Cesame, by Toplif, 12 Dec., 1569.”

Whilst Sir George Bowes was closely besieged in Barnard Castle, the rebells took possession of his castle of Streatlam, and destroyed, or carried away, the whole of his goods, after having committed every possible excess. On this subject, he says, “At my comyng abrode, my storers and kepers off my houses repayed to me with the sayme speache that Jobes servants to him (save only for my children); for I am utterly spoylled off all my goodes, bothe within and without my housses; and all my corn and cattle karried away;

* Sir George himself thus describes his difficulties:—“I was he-seged by the rebells, and conteneuing there in straye seage, wythe very hard dyett and great want of bread, drynck, and water, which was our onely dryneke, save I myxed yt with some wyne. I founde the people in the Castle in continuall mutenyes, seaking not only, by great numbers, to leape the walles and run to the rebells, but also by all menes to betraye the pece (a fortified place), and with open force to deliver yt, and all in yt, to the rebells. So far, as in one daye and nyght, two hundred and twenty six men leapyd over the walles, and opened the gaytes, and went to the enemy; of which

and my housses fully defaced, by pulling away off the dores, wyndowes, irons off the windows, syling, and all my brewe vessels and other vessels, and chymnees apperteyning my kytchyn; so that I now possess nothing but my horse, armor, and weapon, brought out from Barnard Castle, which I more esteem than twenty times so much off other things; for that by yt I am enabld to serve my good quene, whom God preserve, and I wey not all my losses.” To repair those losses, the Earl of Sussex gave him the household goods of the Earl of Northumberland, remaining at Brackenborough and Topcliff, by grant, dated the 16th of December, 1569, and confirmed by the commanders of the southern army, the Earl of Warwick and Edward Lord Clinton, on the 27th.

On the suppression of the rebellion, Sir George was created, by special patent, Provost Marshal North of the Trent; an office which gave him an opportunity of wreaking his vengeance on the enemies of the queen and himself, and which he is said to have exercised with great severity. There can be no doubt that he executed this duty with the same stern fidelity with which he had perilled life and property on behalf of the queen; and the usual warrant of execution was an order from him, to persons in the immediate neighbourhood of the prisoners, on whom he could rely. The notices were brief, as will appear from the following example:—

“xxij die Jan.

“Men of Craven to be executed nythe the townes where they dwelled.—*Throffeld*—Robert Araye. *Rylleston*—Richard Kaley. *Hanlyth*—Wm. Scranston.

“I will that you, Henry Girlington, Thomas Rolandson, George Unes, and Richard Garthe, do see the execution of these above naymed, in some place nyghe the townes where they dwelled.

“*Hanlyth*—Wm. Lawson to be hangman, and so discharged.

(Signed) “GEORGE BOWES.”

Then follows an order for the discovery of their property:—“I will that you, George Unes, do inventorye the goods of these men, within named to be executed; promysing the wyffes and children, that I will be good with theyme.—Inquer for leases.

(Signed) “GEORGE BOWES.”

But it must be remembered that the instructions under which Sir George Bowes acted were of the most

number, thirty five broke their necks, legges, or armes in the leaping. Upon which espeece all extremityes, and that day our water that we had, by the intelligens off them that fled from us, being strait, or taken away, and by other great occasions, I was forced, by composityon offered, to leve the pece; takyng with me all the men, armor, weapons, and horses; levyng my household stuffe, which I made no account off, in this tyme of servyce, tho the valewe wer greatt, so as the enemies receyved only the bare pece and stuff aforesaid, which, by the causes aforesaid, I could holde no longer.” It would appear, from the above, that the enemy had cut off the water-pipes from the Flatts.

positive nature, and extremely sanguinary character. On the 4th of January, 1569 (70), the Earl of Sussex, in a note to Cecil, says, "300 and odd be appointed in the county of Duresme to be executed by marciall lawe:—

Of the cite of Duresme, the aldermen and townsmen	XXX.
Of constables	XL.
Of servinge men, of the meaner sorte and worst disposition, taken prysoners	XXX.
Of townsmen of Darneton	XVI.
Of the country men appointed to be executed in every towne where they dwell	CLXXII.
Of those that did leape over the walles at Barny Castle . .	XX.
	xx.
Whereof, at Duresme	III.
At Darneton	XLI.
At Barny Castle	XX.
In towns and villages in the contrey	CLXXII."

In the execution of his dreadful duty, Sir George says, "I have taken such order with thes that dealeth with the goods of thos executed, that they should deale favorable with the wyfes and children, so as they might [not] onely not have cause to complaine, but be satisfied; and, so far as I knowe, so they are; for in all Darneton, by this composicon, I caused [to] make for me an agrement with the wyfes, cometh but to £viii; for wher I fynde them, and hathe many children, I take nothing at all. And for the more favoring of them, I have committed the doying hereof to the worshipful neighbours, with instructions to favor the poor, and to deal favorable with all."

On the 10th of January, the Earl of Sussex writes to Sir George, "I have sett the numbers to be executed in every towne, under the name of every towne, as I did in your other book, which draweth nere to two hundred; wheryn you may use your dyscretyon in takyng more or lesse in every towne as you shall see juste cause for the offence and fitness for example, so as in the hole you passe not of all kynde of such, the number of two hundred; amongst whom you may not execute eny that hathe freholds, or noted welthe; for so is the Quenes Majesties plesior, by her special comandment."

Though thus armed with an almost discretionary power to put to death or save alive, it appears that Sir George's measures, energetic as they were, were not sufficiently prompt to satisfy the vengeance of his royal mistress and her ministers. On the 14th of January,

the Earl of Sussex writes to him, "It is thought that the executyons be very longe in doynge, and I fere the Quenes Majestie wyll fynde cause of offence with her charge contynued so longe for that purpose; and, therfor, I praye you make all the haste you can, to avoyde offence, for a lyttell matter wyll styrre offence where charge growethe by it." And on the 19th, Sir George was again admonished, "I receyved, yesternight, letters from the corte, wherby I perceyve the Quenes Majestie doth much marvell, that she dothe not here from me that the execution is yet ended; and that she is disburdened of her charges, that was considered for that respect; and, therefore, I hartely praye you to use expedyton, for I fere this lymgering wyll brede dysplesor to us bothe."

The minutes of the courts which Sir George held for the trial of the parties implicated, are not preserved; and the proceedings must have been brief and expeditious, as the queen was so impatient to be relieved from further expense. Sir George states that he executed none but such as confessed that they had been in actual rebellion two days, at least, after the expiration of the first pardon, or who took an active part in exciting their neighbours.*

In the mean while, Sir George's private resources were crippled by the exertions he had made; and he laid his case before her majesty as follows:—

"The humble Petition of Sir George Bowes.

"To the Quene's Most Excellent Matie.

"In moste humble wise besechith yr Highnes. Yor obedient subject and faithfull s'unte George Bowes, of Stretlam, in the countie palatine of Duresme, Knight, that whereas yr Matie saide subject in testificac'on of his dewtifull good harte towards yr Highnes, and to advance yr Matie against the late rebelle in the Northie, hath truly s'ved your Matie against the ungodly and unnaturall attempt of the said rebelle; and in all that late s'vice sustayned such great charge in the furnytur and execu'on of the same, and suche extreme losses by the spoyles of his goodes and houses defaced, as w'out yr Matie gracious relief and goodness to be extended towards him, he shall neither be hable to recover and hold his former estate, nor yet be hable to s've yr Matie in suche callinge and sorte as before he hath done, and as he is most desyrous during his whole life to doe, being fullie resolved and redye therein to bestowe his life, landes, and all that he possesses. Maie it therefore please yr most excellent Matie, of your bountifull goodness towards yr said subject, to graunt to him and his heires in fee simple landes and ten'ts of the yearly value of one hundred markes of the possessions of the late rebels in the Northie attaynted; and also lands and ten'ts of the yearly rent of cleven pounds of the possessions of the late dissolved monastarye of Fountaine, in the countie of Yorke, now in th' occupac'on of yr saide subject, lying undevydeable together with other landes in Cowton, a

number of juries of such as be untouched in this rebellion, unto thei be auther quited by law, or pardoned bi the Q. Majestie. The number off offenders is so grete, that few innocent are left to trie the gillie."

* The deplorable state of the bishopric is thus described by Bishop Pilkington, in a letter dated January 4:—"The cuntre is in grete mysere; and, as the shireff writes, he can not doe justice bi anie

manor of yor said subjecte, gevinge to your Highness for the same ninetene hundreth marks, to be paid in fower yeares by equal pore'ons; or ells to graunte to yor said subject and his heires in fee farne, one hundred pounds by yeare, p'cell of yor Matie crowne possessions, givinge to yor Highnes for the same fourtene hundreth pounds, to be paid in fower yeares by equal pore'ons; and also to paie to yor Matie, yor heires and successors, th'acustomed rent and flarme. And yor Highnes saide subject shall, is he is most bounden, gladly employe himself and all that he hath in yor Matie s'vice, and continuallye praye unto God to grant unto yor Matie a long and most prosperous reigne over us yr most humble and faithfull subjects."

At length, on the 4th of November, 1572, Sir George received, as the reward of his loyalty, some portions of the forfeited estates, amongst which were Bradbury and the Isle, Bradley, and Markenfield in Yorkshire; but these, in each case, were burthened with a heavy reserved rent. The letters patent state that the queen had granted to him and to John Hutton and David James, the lordship of Bradley, being part of Robert and Michael Tempest's estate, attainted; the lordship of Scruton, and Markington, in co. York, part of the estate of Thomas Markenfield, attainted; with all the privileges and customs in Bradley, Rogerley, Frosterley, Sonnecyside, Blackbank, Dayborne-syde, Newlandside, Rucopp, and Wolsingham, in co. Durham; and in Scruton and Markington, in co. York; also, four messuages and 120 acres of land in Colierly, with the messuage in Vylhurst (alias Ivyhurst), and Lince; and three mess. in Murdon als Morden; and one mess. in Brusplatte, part of the said Tempest's estate, in co. Durham; two mess. in Sunderland, part of John Swinborne's estate, attainted; one mess. called Carter House, in Fishbourne, part of Tempest's estate; one mess.,

five closes, and two copices of wood, called Dalbank-spring and Middleton-spring, co. York, out of Markenfield's estate; and three mess. in Unthank, in parish of Romykirk; and the mess. in Ellerton with Bolton, Laverton, Grantley with Hungate, and Kirk Staynley, the said Markenfield's estate. Bradley, Scruton, &c., to be held, *in capite*, by the service of the fortieth part of a knight's fee; paying various charges.

The constant engagements of Sir George Bowes in public life prevented his frequent residence at Streatlam. He was elected M.P. for Knaresborough in the short parliament of 1571; and, in 1572, he represented the borough of Morpeth. On the 27th July, 1576, he was appointed high sheriff of the county palatine by the queen; and in 1579 he was governor of Berwick. He died at Streatlam on the 1st of August, 1580, aged 53, and was buried in the family vault at Barnard Castle. His character for loyalty is summed up by Christopher Rokeby, Esq., of Mortham Tower—"He was the sureste pyllore the Quens Majestie had in thes partes."

The children of Sir George Bowes by his first wife, Dorothy Mallory, were, Sir William, who succeeded him (see BRADLEY, vol. i., p. 643); Robert, bred to the profession of the law, but killed in the Keswick mines, 1600; George, of Biddie Waterville; Henry, married Anne Carnaby, of Kelso, and died without issue in 1603; Elizabeth, married to Sir Christopher Wandesford, of Kirklington, Yorkshice; Agnes, married to Sir John Conyers, of Sockburn; and Jane, died unmarried.

By his second wife, Jane Talbot, the Knight Marshal had five sons, Francis, Talbot, Richard,*

* The will of this gentleman, who died unmarried in 1599, is preserved in the Consistory Court of York. As a description of the wardrobe of a fine gentleman of that period, his insertion may furnish a relief to the important, but somewhat gloomy history of his predecessor:—

In the name of God, Amen. The foure and twentieth day of June, in the xlist year of the raigne of our Sovereigne Ladie Quene Elizabeth, I Richard Bowes, of Richmond, within the countie of Yorke, Esquier, sicke in bodie, but of perfect remembrance, &c., declare this my last will and testament. I commit my soule unto Almighty God my Creator, and my body to be buried in the church of Richmond. Item, I give unto my brother, Talbot Bowes, my two stoned horses, my two gray naggges, and my dainty pasing black nagge. Item, I give more unto my brother Talbot a paire of britches of haire colored velvet, thicke laid over with silver lace, a white satan dublet, and a paire of silver colored silke stockings. Item, to my brother Thomas my lease of the tythes of Gaynforth. Item, to my sayd brother a sewte of haire colored satann, a black taffatie cloke, lined with sarcenet, and laced about the skütes and down the bodie with a large blaekke silke lace. Item, I give further to my said brother a paire of purple silke stockinges. Item, I give to my brother

John threescore and six poundes ten shillings and eight pence. Item, unto my said brother John my seute of plain blaekke satann, a large blaekke cloake, and a long pheson (pheasant) colored cloake laid about the skirts and color (collar) with goulde lace, my two fether beddes with the furniture, a canopie, a pair of hollin shittes (Holland sheets), and a paire of hollin pillow biers. Item, to my sister Hilton my gould ringe set with diamond: Item, I will that my execeutor make two like unto it, the one whereof I give to my sister Agnes Bowes, the other to my sister Hutton. Item, to my sister Jane vii. vis. viii*l*. Item, to Ambrose Barnes, x*l*s. Item, to Mrs. Anne Warcop a brood (? a brooch, or a broad piece) and plaine goulde ringe, and my scarfe and a cammeriecke handkerchef, laid about with gould lace and wrought with silke. Item, to my cousin Johnson, parson of Richmond, xxs. and one goulde ring set with a Cornish diamond; to Arthur Hallowell, xxs.; to Humphrie Claxton, xxs.; to Christopher Mickleton, xxxs. Item, to my man Kirton, x*l*s. and a seute of russet fustain and a Scottes sworde. Item, to Annas Blenkinsop, iii*l*. vis. viii*l*. and all my ruffes and shertes. Item, to Thomas Caldwell, my boy, my blaekke grogeram seute and a paire of taunye sattan britches, laid thicke with blaekke silke lace. The rest of all my goods, moveable and immoveable, I give to my brother Talbot Bowes, whom I

Thomas,* and John; and three daughters, Anne, married, first, to Thomas Hilton, Esq., of Hilton Castle, and, secondly, to John Delaval, Esq., of Dissington, Northumberland; Elizabeth (to whom the queen was god-mother), married to Sir Timothy Hutton, Knt., of Marske; and Jane, married, first, to — Chatterton, of Ireland, and, secondly, to — Peacock. Margery Bowes, fourth sister of the Knight Marshal, was the first wife of John Knox, the Scottish Reformer.†

On the death of Sir William Bowes, eldest son of Sir George, in 1611, an entail, created by the latter in 1569, came into operation; and Sir Talbot Bowes, eldest surviving son of the Knight Marshal's second marriage, entered on Streatlam and the other principal estates. It was afterwards arranged by Sir Talbot, with his brother Thomas, that the half of Streatlam, Stainton, Cleatlam, and Barford, should be enjoyed by Sir George Bowes of Biddick, representative of the elder line; but he sold his right in the two first-named places, for a perpetual rent-charge of £100 per annum, to Matthew Hutton, Esq., of Marske, from whom it was subsequently purchased by the widow of Thomas Bowes, Esq. Cleatlam also, after passing through intermediate proprietors, was eventually united to the principal family estate.

Sir Talbot Bowes was elected M.P. for the borough of Richmond eight times. He entertained James I. at Aske, and was knighted by him on the 24th of April, 1617; being also master and keeper of the chases, &c., within the lordship of Barnard Castle, and steward of the castle. He married Agnes, daughter of Thomas

ordine the full and sole executor of this my last will and testament, to see my debts paid, funerall charges, legaces, and bequests performed. In witness, &c. RICHARD BOWES.

"I am to receive of my cosin Jenison, of Cleasbie, at Martinmas Eve next, x/s.; cousin Rokeby, vi. I owe cousin Blakiston the mercer, ix/."

* Thomas Powes was of Gray's Inn, and of Chelsea, and afterwards of Streatlam. He was sometime a gentleman pensioner. He married Anne, daughter of Thomas Warcop, Esq., of Tanfield, Yorkshire, by whom he had three sons and a daughter.

† The acquaintance of Knox with the daughter of Richard Bowes, commenced at Berwick, in 1551. Her father and uncle, Sir Robert, were decidedly adverse to the union; but her mother was constant in her inclination to the connection, and tried every means to obtain her husband's consent. "On the 6th November, 1553," Knox says, "I spake with Sir Robert Bowes on the matter ye know, whose disdainful, yea despightful words have so pierced my heart, that my life is bitter to me." They were married in 1553. She accompanied her husband to France in 1556, as well as her mother; and they are mentioned as being at Geneva, 13 Sept., 1556. Many of the letters of Knox are addressed to Mrs. Bowes, whom he always designated by the appellation of *mother*. Mrs. Knox died in 1560, and Mrs. Bowes

Warcop, of Smardale, Westmoreland, and died without issue in February, 1637-8.

Talbot Bowes, Esq., (who succeeded,) was the eldest son of Thomas, fourth son of Sir George's second marriage. He died in December, 1654, and was succeeded by his next brother, Thomas. Being imbued with the hereditary loyalty of the family, a heavy fine was imposed upon him as a delinquent, on payment of which he received a certificate from the committee sitting at Newcastle, dated September 27, 1649. He married Anne, daughter and co-heiress of Anthony Maxton, chaplain to Charles I., rector of Wolsingham, and prebendary of Durham. He died in February, 1706; and to the prudence of his widow, during a period of 30 years after his death, the family are indebted for the re-annexation of much of their original property. By this lady, Thomas Bowes had six sons‡ and five daughters.

The three first-born sons died in infancy; and the fourth, William, became successor to the estates. He was born in 1656; admitted of Trinity College, Cambridge, May 26, 1672; and entered of Gray's Inn, June 4 of the same year. He was employed abroad under Sir Leoline Jenkins; and, after the peace of Nimeguen, travelled into France and other European countries. He was elected M.P. for the county of Durham in August, 1679, and also in 1680, 1695, 1702, and 1705. On the 13th of April, 1684, he was knighted by Charles II. at Whitehall; and on July 15, 1685, he received the appointment of master forester and chief warden of all the king's forests and chases in

in 1572. Letters are extant addressed by Mrs. Bowes to Knox, and couched in the most affectionate language. The circumstances of this connection place the domestic character of Knox in a favourable light. By this marriage he had two sons, Nathaniel and Eleazar, both educated in St. John's College, Cambridge, where the elder proceeded A.B. and A.M., and died Fellow of the Society in 1586. Eleazar was B.D., vicar of Clacton Magna, Essex, and preacher of the University. He was buried in St. John's chapel in 1591. Both died without issue. The only notice of the family in the Bowes papers is in a letter from Thomas Appleby, Sir George's servant, to his master, dated London, May 29, 1580:—"The seneor Knox, your nephewe, who proceedid Mr. of Arte senee Easter, was buryed at Cambridge yesterday, and disseasid uppon Frydaye in the afternoone. His sicknesse was, they write, a tertiane ague, and he hath had it aboute xiiii. dayes before God toke him to his mercye."

‡ John, the fifth son, born 1658, was of Trinity College, A.M., 1684; S.T.P., 1698; rector of Elwick, 1701; of Bishopwearmouth, 1715; prebendary of the 5th stall, 1696; of the first stall, 1712; died unmarried on the 14th of January, 1721-2, and was buried in Durham Cathedral. George, the sixth son, born 1659, was solicitor-general to Bishop Crewe, and recorder of the city of Durham. He married Anne, daughter of Anthony Salvin, Esq., of Sunderland Bridge, and widow of Gilbert Machon, Esq.; and he died without issue on May 14, 1724.

the lordship of Barnard Castle, Teesdale, and Marwood. In 1688, he raised a troop of horse, which were reviewed on the Palace Green, Durham, by Bishop Crewe, as Lord Lieutenant of the county; and it is said that higher honours were proffered to Sir William, had he been disposed to accept them. He married Elizabeth, eldest daughter and at length sole heiress of Sir Francis Blakiston, Bart., of Gibside, by Anne, daughter of Sir George Bowes, of Biddic, and thus united the two lines of Bowes, besides adding to the family estates those of Gibside. Sir William died in London, and was buried at Barnard Castle on the 11th of February, 1706, leaving four sons and five daughters.

William Blakiston Bowes, eldest son of Sir William, was born January 1, 1697, and admitted a fellow commoner of Trinity College, Cambridge, September 25, 1707. He died intestate on the 7th of October, 1721. Thomas, his next brother, having also died on the 18th of May, 1700, the estates descended to George, third son of Sir William, born August 21, 1701. He was a captain in a regular regiment of horse in 1722, but retired from the service, and was a candidate for the representation of Berwick in the following year. On the 21st of August, 1727, he contested the representation of Morpeth; and, two days afterwards, he was elected M.P. for the county of Durham, which he continued to represent in the successive parliaments of 1734, 1741, 1747, and 1754. He was chairman of the grand jury in the years 1730, 1736, 1741, 1746, 1747, 1750, 1753, and 1757, and was an active and able magistrate. In 1745, he took an active part in raising forces to repel the Pretender; being appointed deputy

lieutenant on the 14th of September, a captain of the first troop of horse militia on the 21st, and colonel of the armed association on the 15th of October. Mr. Bowes's first wife, to whom he was united on the 10th of October, 1724, was Eleanor, the beautiful daughter and sole heiress of the Hon. Thomas Verney, eldest son of George Lord Willoughby de Broke, by Eleanor, daughter of Thomas Lord Leigh, of Stoncleigh. She died on the 14th of December following the marriage; and her husband remained a widower until June, 1743, when he married Mary, only daughter and heiress of Edward Gilbert, Esq., of Paul's Walden, Hertfordshire, by whom he had issue, a daughter, named, after both his wives, Mary-Eleanor. He died on the 17th of September, 1760, and was buried at Whickham.

Mary-Eleanor, daughter and sole heiress of George Bowes, Esq., was born on the 24th of February, 1749, and married on her birth-day, in 1767, John Lyon, Earl of Strathmore, son of Thomas, eighth earl, by his wife, Jane, daughter and co-heiress of James Nicholson, Esq., of West Rainton, M.P. for the city of Durham in 1708. In compliance with the will of his wife's father, the earl, by act of parliament, took the name of Bowes. The issue of this marriage were three sons and two daughters. Lady Maria-Jane, the eldest daughter, was born April 2, 1768; married at Hallgarth, May 11, 1789, Col. Barrington Price; and died at Cerney, Gloucestershire, April 22, 1806. Lady Anna-Maria, younger daughter, was married at London, January 28, 1758, to Henry-James Jessup, and died March 29, 1832. The earl died on a voyage to Lisbon, March 7, 1776, aged 39.*

John Bowes, tenth Earl of Strathmore, born April

and his schemes too deeply laid for the competition of ordinary characters.

This was Andrew Robinson Stoney, Esq., a younger son of a respectable Irish family, born in 1745. He became a lieutenant in the 30th regiment, which was quartered at Newcastle-upon-Tyne, where he contrived to win the hand of Hannah, daughter and heiress of William Newton, Esq., of Burnopfield, who possessed about £50,000. His regiment being shortly after disbanded, he took up his residence at Cold-Pig Hill, the seat of his wife's ancestors. Mrs. Stoney was an amiable woman, but was hastened out of the world by the cruelty of her husband, by such ingenious processes as pitching her headlong down a flight of stairs, shutting her up in a closet in her chemise (some say without it) for three days, and feeding her on an egg a day, and by other modes of torture, mental and physical, of which he was an eminent master. Having thus disposed of his first wife, he began, whilst carrying on a system of gaming, cock-fighting, and horse-racing, and visiting watering-places and the petty clubs in St. James's, to look out for another. His attention was caught by the gay widow of Grosvenor Square, and he determined to make a bold stroke for so tempting a prize. The mode by which he set about this was one of the most remarkable and inspired efforts of demoniac genius. There

‡ ANDREW ROBINSON STONEY BOWES.—On the death of the Earl, the Countess of Strathmore, then 27 years of age, was not only a pretty, lively, and very accomplished woman, but was considered the best female botanist of the time, and had the character of being literary, having written a dramatic piece, called "The Siege of Jerusalem," in five acts. She was, moreover, in possession of immense wealth, with the splendid adjuncts of a fine house in Grosvenor Square, a house and extensive gardens and conservatories at Chelsea, the seats of Paul's Walden, Gibside, Barnard Castle, and the castles of Streatham and Hilton, besides lands in Middlesex. "She possessed a very pleasing *en bon point*. Her bust was uncommonly fine. Her stature was rather under the middle class; her hair brown; her eyes light, small, and she was near-sighted. Her face was round; her neck and shoulders graceful; her lower jaw rather underhanging, and which, whenever she was agitated, was moved very uncommonly, as if convulsively, from side to side. Her fingers were small, and her hands exceedingly delicate." Her house in Grosvenor Square was the resort of many literary and scientific men, and in particular of naturalists. Soon after her husband's death, a Mr. Grey, who had made a fortune in India, aimed at her hand, and became an accepted suitor; but a new candidate appeared, whose arts were too powerful,

11, 1769, was a cornet in the "Blues," November 15, 1786, and captain in the 65th foot, May 15, 1789, but retired from the army, February 2, 1791. He was elected a representative peer of Scotland in 1796, 1802,

were, of course, characters about the countess adapted to the promotion of his object; and the acquaintance of these he cultivated, corrupted them, and engaged them in his cause. Thus, by flattery, by gallantry, by every possible means, he made his way to the countess through her creatures. His connection in the county of Durham through his first marriage, afforded a plea of introduction; and, that effected, he made his attack by every stratagem that man or woman could devise. He soon perceived that the countess was of a romantic and visionary turn of mind; and he therefore got a conjuror tutored to his wishes, and with a female emissary, planned a party in which the countess was to be included, to have their fortunes told. He caused letters to be sent to her, with the Durham postmark on them, purporting to be from a lady, who complained that for the sake of the countess he had forsaken her. In these letters suspicions were thrown out that Mr. Grey, the accepted lover, was in the interest, and supported in his wishes by the relatives of the late Lord Strathmore; a thing which, above all, was calculated to alarm the countess, and excite a jealousy of their interference. These schemes succeeded; but the grand stroke was to come.

Whilst he was thus cultivating the acquaintance of the countess, a sweeping attack was made on her character, pursuits, and associates in the "Morning Post." Vindications were made by her friends; and replications ensued. The attention of the public was attracted; and the aspersions on the countess became so intolerable, that she declared that whoever would avenge her, by challenging and fighting the editor of that paper, should be rewarded with her heart and hand. Stoney, who had himself been the secret assailant, immediately challenged the unwary editor (the Rev. Henry Bate, afterwards Sir Henry Bate Dudley), fought him, and contrived both to wound and be wounded in the affair; and on the 17th January, 1777, only four days after the duel, he was rewarded with the hand of the grateful countess. He soon after assumed the name of Bowes, by his majesty's pleasure.

Having thus stepped into the possession of a most splendid fortune, this adventurer, the month following his marriage, offered himself as a candidate to succeed Sir Walter Blackett as one of the representatives for Newcastle. His opponent, Sir John Trevelyan, Bart., polled 1,163, and Bowes 1,068 votes. The latter lodged a petition, which accused Sir J. Trevelyan of bribery; but no sufficient proof having been produced, the election was declared valid by a committee of the House of Commons.

Bowes now took the house at Hammersmith, which the Margravine of Anspach had just left, and which was afterwards the residence of Queen Caroline, the unfortunate consort of George IV. He cut down much of the valuable timber on the Gibside estate; but the public were afraid to purchase it, and it lay on his hands. From the Shaftoe family he purchased the Benwell estate, and, in 1780, served the office of high sheriff of the county of Northumberland. This year, he was more successful in his electioneering attempts, being, on September 21, returned member for Newcastle by 1,135 votes. Mr. Delaval petitioned against him; but nothing was done in the business. At this time, Gibside was the scene of feasting and extravagance; but the expenses of Bowes's shrievalty, his election contests, his horse-racing, his insurances, and his purchase of Benwell, compelled him to retreat, in 1793, to Paul's Walden, the seat of Mrs. Bowes, his mother-in-law. The countess, about this time, was delivered of a son; and Mr. Bowes affected much solicitude for her health. Having taken a furnished house in Grosvenor Square, they returned to Lon-

and 1807; and on the 7th of August, 1815, was created an English peer, by the title of Baron Bowes, of Streatlam Castle, in the county palatine of Durham, and of Lunedale, in the county of York. The Der-

don, where this arch-tormentor continued his malignant practices. While pretending great tenderness to his unhappy wife, it is easier to imagine than describe all the secret villainies and degradations by which such a tyrant can make every moment of a woman of feeling and refinement bitter as death. In the first place, Bowes carried on the most licentious intercourse with women of all kinds. He seduced almost every maid-servant, and all the farmers' daughters that he could. He expended on other women great sums in jewellery and other extravagances; and he cared not how much of all this came to the knowledge of his wife. Amongst others was a beautiful young woman, one of his farmers' daughters, whom he had seduced, and for whom he had at one time purchased £50 worth of trinkets in Cockspur Street; "her mother and sister," says his biographer, "came after dinner, and they all took tea with the countess."

In order to silence his wife, and to hold her *in terrorum*, as well as to provide himself with a weapon against her, should she be at any time driven by desperation to seek the protection of the laws against him, he resorted to one of those means which only a first-rate scoundrel could imagine or accomplish. He compelled his wife to write, or wrote for her, "*The Confessions of the Countess of Strathmore*," in which he made her to draw the strangest picture of herself, and her life before her marriage with him, imaginable. That any woman of education would voluntarily thus sketch out a confession of the grossest infamy against herself, is beyond all conception. The cruelties and indignities by which she was coerced have not been all recorded; but one means said to have been employed was to enclose her hair, which was long and very fine, in a chest, and locking it down, keep her thus confined in a lying posture till her will gave way to his diabolical wishes! Having extorted from her the "Confessions," they were "laid behind his pillow by night, and read by him in scraps for his purpose by day. He got them by heart; they formed a part of his travelling equipage to Paris, and every where else. They were a treasure which he lugged to his bosom, and over which he brooded with a rancorous rapture." Nor did he forget, at the necessary moment, to hand them into a public court of law against his wife. Meanwhile, every mental and physical suffering that ingenuity could devise was inflicted upon her. "Her person, accustomed only to distress and confinement, found no alleviation of the bitterest sorrow. Mind and body jointly submitted to receive the pressure which Bowes, like a MANGLE, daily rolled upon them, and both were grievously collapsed."

Bowes now commenced a series of stratagems to obtain possession of the countess's two daughters, who were wards in Chancery; and, under the plea that the very life of their mother depended on seeing them, he succeeded in escaping with Lady Anna-Maria, the youngest, to Paris, taking the countess with him. Though he employed the professional powers of the greatest lawyers of their time, Erskine, Law, and Scott, (afterwards respectively Lords Erskine, Ellenborough, and Eldon), the Court of Chancery compelled him, in November, 1784, to restore the young lady to her proper protectors.

The continued cruelties of Bowes at length roused the mind of the unhappy countess to a paroxysm of desperation; and she determined to escape from him, and put herself under the protection of the laws. Accompanied by a faithful waiting maid, she contrived, whilst Bowes went out to dine, on the 7th of February, 1785, to elude the vigilance of his satellites, and got undiscovered into Oxio d Street, where, after

went infantry and Gibside cavalry were raised, during the late war, at his expense, and were placed under his command. On Sunday, July 30, 1820, he married Miss Mary Milner, of Staindrop, and died on the day

some torturing delay, they entered a hackney coach. Scarcely was this effected, when they saw Bowes in pursuit, looking out of the window of another coach, without his hat, and driving very fast. Fortunately, he did not see them; but the escape was so narrow, that the countess, in her low state of health, fell into hysterics, and could with difficulty be persuaded that she was out of danger. She was conducted to the house of Mr Shuter, barrister, in Cursiter Street, and exhibited articles of the peace against her husband in the Court of King's Bench. Bowes took lodgings in the same street, and watched her as a cat would a mouse; whilst he appealed, as an injured man, to the Courts of Chancery, of King's Bench, and even of Doctors' Commons. He had, however, employment enough of itself to bribe all the maid servants and others whom he had seduced, to silence the cries of their distressed children and to keep hunger and ruin out of the way of any honest justification and strong temptation; but in spite of all this, there were sufficient who found their way to Doctors' Commons to answer the countess's purpose.

The proofs exhibited in court were of the most horrid kind: and to feel the force of them, the rank and sensitive mind of the countess must be taken into consideration, with what she had done for Bowes, and that these inflictions had been the ordinary treatment of long years. They consisted in "beating, scratching, biting, pinching, whipping, kicking, imprisoning, insulting, provoking, tormenting, mortifying, degrading, tyrannizing, cajoling, deceiving, lying, starving, forcing, compelling, and a new torment, wringing of the heart." To all these allegations Bowes had little to oppose, except those *Confessions* which he had had manufactured expressly for such an emergency; and the trial terminated most decisively in favour of the countess.

Bowes was, however, determined not to be foiled; and he kept a constant watch upon the motions of the countess. Aware of her danger, she took into her weekly pay a constable named Lucas, a highly respectable man, in whom the court had great confidence, but whose honesty was not proof against the temptations of Bowes. This man, on the 10th of November, 1786, inquired of the coachmen, as his custom was, if his lady went out that day, and was answered in the affirmative, receiving orders to attend between one and two o'clock in the afternoon. About that time, her ladyship had business at a Mr. Foster's, in Oxford Street; and for company, took Mr. Farrer, brother to her solicitor, and her maid, in the coach with her. In their way they met with no interruption; but they had scarcely been five minutes in the house of Mr. Foster, before some persons known to be emissaries of Bowes came into the shop. Alarmed at their appearance, the countess withdrew to an inner room and locked the door, requesting Mr. Foster, at the same time, to go privately and procure assistance, to be in readiness for her protection, in case any violence should be offered. He had scarcely left the house when Lucas tapped at the room door, and, on being admitted, informed her ladyship that she was his prisoner, that a warrant had been put into his hands, that he must do his duty, but that it was rather fortunate for her ladyship, as he would take her before Lord Mansfield at Caen Wood, who, no doubt, would frustrate all the wicked purposes of her enemies, and take her under his own immediate protection. With this artful tale, in the then state of her mind, she was easily prevailed upon to step again into her coach, as Mr. Farrer was permitted to accompany her. The moment she was seated, her servants were all discharged by a pretended order from her ladyship, a confederate coachman mounted the box, and a new set of attendants, all armed, surrounded the coach. In this manner they proceeded, with-

after the nuptial ceremony, in the 52nd year of his age. His estates were not entailed; and he made a full settlement of his property previous to his death. The English barony expired with him; and a doubt arose

out noise or interruption, till they reached Highgate Hill, at the bottom of which stood Mr. Bowes, who, addressing himself to Mr. Farrer, very civilly requested to change places with him, and then seated himself at the right hand of his lady, who was no longer in doubt as to his design. The coachman was now ordered to proceed, and to quicken his pace.

Mr. Farrer, being now at liberty, made all possible haste to London, and application was made immediately to the Court of King's Bench, in order to effect a rescue. Two days afterwards, two of Lord Mansfield's tipstaffs set off for that purpose to the North. In the mean time, Bowes continued his journey. At Barnet, fresh horses were ready to put in; and a post-chaise and four, with some accomplices, were in waiting to attend. Though the windows of the coach were broken, and the lady appeared in great distress, yet not the least effort was made to interrupt their progress; and it was not till the next day at noon, when a servant of Bowes arrived at the Angel inn, at Doncaster, 195 miles from London, that there is any account of their further proceedings. In half an hour, the coach stopped in the street; and while the horses were being changed, Mr. Woodecock, the master of the inn, handed some cakes to Bowes, which the latter presented to the lady; but whether she accepted them or not, the landlord could not positively assert. The moment the horses were in harness, they pursued their course northward; and the next place where they were noticed was Bransby Moor, where the lady was shown into a room, attended by a chambermaid, and guarded by Bowes, who hastened her return, and seemed all impatience till she was again seated in the coach. At Ferry Bridge, she had leave to go into the garden; but Bowes waited at the door.

What further passed till they arrived at Streatlam Castle remained a secret till her ladyship's arrival, in the evening of the 21st of November, at the house of Messrs. Farrer and Lacy, on Bread Street Hill. The detail she then gave of her sufferings, during the eleven days of absence, was truly pitiable. She stated that, at the time of taking her away, the confederates were all armed; that, as they drove along, Bowes endeavoured to persuade her to sign a paper, to stop proceedings in the Ecclesiastical Court, and to consent to live under the name and character of his wife, both which she positively refused to do; that he then beat her on the face and body with his clenched fists; that, when she attempted to cry out, he thrust a handkerchief into her mouth; that, on the most trifling contradiction, while on the road, he beat her with the chain and seals of his watch on the naked breast; and that, at last, provoked by her firmness, he presented a loaded pistol to her head, and threatened her life if she did not instantly sign the paper, but this she was determined never to do. On arriving at Streatlam, he endeavoured to persuade her to take the government of the family, and to act in every respect as his wife, which she still most solemnly refused to do; on which, in a glow of passion, he pulled out a pistol, bid her say her prayers, and, with a trembling hand, presented it to her head. This, too, failing of effect, he violently beat her, then left her, and she saw no more of him for a whole day, when coming up to the room rather more calm than usual, he asked her if she was not yet reconciled to a dutiful domestic life; and being answered with some asperity, he flew into a more violent passion than she had ever yet seen him, pulled out the pistol, and bid her say her last prayers—she did say her prayers, and then bid him fire!

By this time, the whole country began to be alarmed for her, and he for his own safety. He, therefore, in order to cover his escape,

whether a marriage in England, subsequent to the birth of a child, would legitimize that child in Scotland. The question was determined in the negative; and the Scottish peerage devolved upon his lordship's youngest brother, the Hon. Thomas-Lyon Bowes, who became Earl of Strathmore, Viscount Lyon, and Baron Glamis,

and keep her still in his power, ordered two of his domestics to be dressed up so as to personate himself and her ladyship, and to shew themselves occasionally before the windows to appease the populace, and to deceive his pursuers. This stratagem had its full effect; the people were quiet while they thought her ladyship was safe; and the sheriff's officers, who were sent to execute the attachment, actually served it on the wrong persons; while, in the mean time, Bowes took her out a back way; dragged her, between ten and eleven o'clock, in the dark, to a little cottage in the neighbourhood, where they spent the remainder of the night, and where he behaved to her in a manner shocking to the delicacy of civilized life, by reiterating his threatenings, and, finding threats in vain, throwing her on the bed, and flogging her with rods. On leaving the cottage in the morning, he had her set on horseback behind him, without a pillion, and took her over a dismal and trackless course, covered with snow, to Darlington, where, in the house of an attorney, which occupied the site of the present Joint Stock Bank, she was shut up in a dark room, and threatened (a red-hot poker being held to her breast) with a mad doctor and strait-waistcoat; but all in vain.

The hour of deliverance drew near. Here they had been tracked; the house was beleaguered by the tipstaffs from London; and it was no longer safe for Bowes to remain. He therefore skulked out the back way, through the Sun inn yard, and set out with her before day, in the same manner that he brought her, taking her over hedges and ploughed fields, till, being seen by the husbandmen at work, he was so closely hemmed in, that an old countryman caught hold of his horse's bridle. Bowes presented his pistol to frighten him, but was knocked down by Christopher Smith, a constable of Neasham, who was in pursuit of him, and felled to the ground with the butt-end of one of his own pistols. He had previously endeavoured to cajole the countrymen by offering to reward them if they would conduct him across the Tees. The countess having slipped off the horse, and made herself known, Smith bade the men get sticks, set upon him, and take him at all events. "Anthony Claxton," says he, "put off his hat, and went near Bowes, which I perceiving, bid him put on his hat and be upon his guard; and seeing Bowes rest his pistol upon the other in the belt, I rushed upon him and seized them both, and called for assistance, when John Walton came and took hold of the horse and led him past me. While Bowes struggled with me, one of the pistol handles broke in my hand; and by pulling them away, the guard of the trigger cut a piece out of the foremost finger of my right hand. I threw that pistol away, and with the other gave Bowes a blow upon the right side of his head, which knocked him from the horse. Fearing he had more pistols about him, and that he might shoot some of us, I gave him another blow upon the back part of his head, and cut it about two inches. Lady Strathmore asked if he was killed, and desired we would not strike him again; and several times bade us search his pockets for pistols, and take care he did not shoot some of us. Her ladyship, being then upon her horse before Gabriel Thornton, bade us farewell. I sent John Gunson away for a surgeon to dress the wound, and took him to Eliza Stubbs's till Tho. Bowes, Mr. Turner, and Mr. Rudd's man came and dressed the wound, and then carried Bowes away to Mr. Tho. Bowes's house at Darlington. And on the Wednesday, he was conducted to London by three men from Lord Mansfield's and Bow Street offices." The countess,

Tanadyer, Scidlaw, and Stradichtie. His grandson, Thomas-George Bowes, born September 28, 1822, is the present inheritor of the Scottish titles and estates.

The Hon. George Bowes, of Paul's Walden, eldest brother of the tenth Earl of Strathmore, was born November 10, 1771; married, June 14, 1805, Mary,

meanwhile, made the best of her way to London, attended by some of her deliverers.

On the 22d of the month, she appeared in the Court of King's Bench; but the court being up, no proceedings could that day be had on her case. The next day, she was again presented to the court; and as soon as the judges were seated, Mr. Law, her council, moved, "That she might exhibit articles of the peace against her husband, A. R. Bowes." The articles were read, and being sworn to and signed, an attachment was immediately granted against Bowes. On the 27th, he was produced at court, to answer the articles. He was dressed in a drab-coloured great coat, with a red silk handkerchief about his head. He was supported by two men, yet nearly bent double with weakness, in consequence of his wounds. He frequently appeared on the point of fainting; and his appearance, on the whole, was the most squalid and emaciated that can possibly be imagined. The result of his desperate undertaking was, that he was sentenced to pay a fine of £300 to his majesty; to be imprisoned in the King's Bench for three years; and at the end of that term to find security for fourteen years, himself in £10,000, and two sureties of £5,000 each. Lucas, the constable, was very justly sentenced to a fine of £50, and three years imprisonment in Newgate; and the other accomplices received proportionate punishments. The countess obtained a sentence of divorce from Doctors' Commons, and in her exultation at her liberation, wrote the following epitaph on the fallen villain, and sent it by Lady Strathmore to Bowes in the King's Bench prison:—

"HERE RESTS,

Who never rested before,

The most ambitious of men; for he sought not

Virtue, wisdom, nor science,

Yet rose by deep hypocrisy, by the

Folly of some, and the vice of others,

To honours which nature had forbade, and

Riches he wanted taste to enjoy.

He saw no faults in himself, nor any worth in others.

He was the enemy of mankind;

Deceitful to his friends, ungrateful to his benefactors, cringing

To his superiors, and tyrannical to his dependants.

If interest obliged him to assist any fellow creature, he regretted the effect, and thought every day lost in which he made none wretched.

His life was a continual series of injuries to society,

Disobedience to his Maker; and he only lamented in despair

That he could offend them no longer.

He rose by mean arts

To unmerited honours, which expire before himself.

Passenger! examine thy heart,

If in aught thou resemblest him;

And if thou dost—

Read, tremble, and reform!

So shall he, who living was the pest of society,

When dead, be, against his will, once useful to mankind."

The remainder of Bowes's life, which continued for 22 years after his trial, was spent in prison, or within the rules of one; first, in the State Rooms; then, within the walls of the Bench; and about

daughter of Edward Thornhill, Esq., of Kingston Lisle, Berkshire; and died without issue, December 3, 1806. His widow, in December, 1811, married Col. Barrington Price, widower of Lady Maria-Jane Bowes (see page 54).

the last 12 years, within the rules in St. George's Fields. But he was by no means idle during this period. Law and intrigue still continued to be his favourite pursuits. Soon after his marriage with the countess, he discovered that she had contrived and signed a deed, reserving to herself the estates left by her father whether she married or remained single. This deed he had induced her to revoke. She had also been considerably in debt, and joined Bowes in a deed, granting annuities to the yearly amount of £3,000 for the countess's life, by which measure £24,000 was raised. In order to secure the payment of these annuities, certain parts of the estates, in which the countess had a life interest, were vested in trustees, who were to pay the surplus, if any, to Bowes and the countess. By the decision of the Court of Chancery in 1785, the deed of revocation, which he had forced the countess to sign, was declared a nullity; and it was referred to a Master in Chancery to take an account of the rents received by Bowes since the commencement of the suit; a large sum was reported to be due from him; and a receiver of the rents and profits was appointed. A long train of litigation followed, during which, on the 20th of April, 1800, the countess died; when Bowes moved from the Bench to St. George's Fields. In June, 1807, the deed of revocation was brought before Sir James Mansfield, and a verdict was found in favour of the Earl of Strathmore, which terminated Bowes's legal transactions. During this time, his tricks and contrivances were innumerable. He could beil at pleasure—asthmatic—spitting blood from the rupture of a vessel, but in reality having swallowed calves' blood for the purpose—and sick to death in a coach, when called to appear before the Court, having provided himself with a dose of ipecacuanha in readiness for such an occasion. He laid all manner of schemes to cheat all whom he had any thing to do with, even the husbands of his sisters, on pretence of leaving them his Benwell estate, provided they guaranteed him an annuity; and what shewed his extreme cunning was, that he contrived to fleece a whole series of attorneys, one after another, making them advance money to him while he employed them in his lawsuits, till they each in turn refused to advance any more. These exploits gave him the highest delight.

Amongst the catalogue of his villainies in seduction, the most strange is that of a respectable young woman, whom he used to see as she went to visit her father in prison, who had been a man of large landed property, but had ruined himself by keeping a pack of hounds. This young lady had five children by him, which were ties of such strong affection to her, that they made her undergo all the cruelties she suffered at Bowes' hands rather than be separated from them. Indeed, he kept her locked up in a room by herself, and she was literally a prisoner in his house from 1787 to the day of his death. He watched her, notwithstanding, with the most vigilant and inquisitive jealousy. On one occasion, a gentleman had chambers in the King's Bench which happened to face those of the apartment in which he kept this young lady. The gentleman could not look out of his window without Bowes imagining instantly that he was in love with the fair captive. He therefore dressed himself up in her clothes, and flirted with this gentleman at the window. This he repeated for many successive mornings, and had satisfactorily engaged the gentleman's attention. When he had worked up his plot, and brought his deception to the proper pitch, Bowes threw open the window, shook off his female dress, and displayed his own proper

The dowager Countess of Strathmore, widow of the tenth earl, was married at St. George's, Hanover Square, London, on the 16th March, 1831, to William Hutt, Esq., then M.P. for Kingston-upon-Hull, and now for Gateshead. Her son, John Bowes, Esq.. of

person, laughing, insulting, and jeering by breaths, as he could do in a manner to confound those whom he had caught in his toils. The poor man was so disconcerted, that he was not visible for a long time after.

His amusements and habits of life became lower as he grew older; and they were the more demonstrable, as he not only drank his wine selfishly, but also took to spirituous liquor. He kept no servant; and would buy neither brushes nor brooms, but the two daughters—daughters of the locked-up lady—went down upon their knees, and gathered up the dirt with their hands. To induce new and unwary attorneys to bite, and advance money, he would pretend that he would sell his estates—Benwell, deeply mortgaged, and a property which had fallen to him in Ireland, with about three hundred a-year; and would make a grand display of this property; would produce the reports of surveyors who had valued it, at the same time that he pleaded his great necessities, his own tattered appearance, and the state of his children, whom he contrived should be seen without shoes or stockings. He would even name the day of sale; yet he never sold, always having in the mean time effected his purpose of spunging his dupe.

At the last extremity, this extraordinary man made his will, leaving something to each of his children by the captive lady, but not even mentioning her in it who had so long suffered all his tyrannies, capricious cruelties, and asperities of temper, with the most exemplary patience, and with every endeavour to the last moment to contribute to his comfort. It was not without the earnest entreaties and tears of his and her own children, and by the persuasions of Mr. Foote, that he was at the last moment prevailed on to name her with £100 per annum. His death took place on the 16th of January, 1810.

Mr. Jesse Foote, surgeon, who concludes his biography of Bowes with the pithy sentence, "He was a villain to the back-bone!" thus describes him:—"His speech was soft, his height more than five feet ten, his eyes were bright and small, he had a perfect command over them, his eyebrows were low, large and sandy, his hair light, and his complexion muddy; his smile was agreeable, his wit ready, but he was always the first to laugh at what he said, which forced others to laugh also. His conversation was shallow, his education was bare, and his utterance was in a low tone and lisping. There was something uncommon in the connexion of his nose with his upper lip; he never could talk without the nose, which was long and curved downwards, being also moved ridiculously with the upper lip." Another writer describes Bowes as possessing the most fascinating manners, and as being witty, hospitable, and convivial, and a most pleasant table companion. He lived on terms of great intimacy and friendship with the late Duke of Norfolk, and Mr. Lee, the celebrated lawyer, for some time attorney-general; and, in early life, he was respected by both the Scotts, afterwards Lords Stowell and Eldon. That Bowes, even in later times, retained some opulent friends is certain, or he never could have obtained security to the amount of £14,000 for the privilege of the Rules of the King's Bench prison. He had a sister, who married the Hon. Arthur Moore, judge of the Common Pleas in Ireland. The issue of Bowes by his marriage with the Countess of Strathmore, were, 1, William Johnstone Bowes, born May 8, 1782, at Paul's Walden, lieut. R.N., lost in the *Blenheim*, with Sir Thomas Trowbridge, 1807; 2, Mary, resided for some time at Bath, unmarried.

Streatlam Castle, is proprietor of the English estates of the junior branch of the ancient family of Bowes. He was elected M.P. for the Southern Division of the county of Durham in July, 1837, in July, 1841, and in January, 1847.

ARMS OF BOWES OF STREATLAM—1. Ermine, three long bows Gules. 2. Argent, a cross flory inter four martlets Vert, *Dalden*. 3. Azure, a maunch Or, *Conyers*. 4. Azure, a maunch Or, an annulet for difference, *Conyers of Cowton*. 5. Barry of Or and Azure, *Aske*. 6. Azure, five fusils in fesse. CREST—On a wreath, a sheaf of six arrows, salterwise Or, banded Gules.

STREATLAM CASTLE.

THE original castle of Streatlam is supposed to have been built by the Baliols, and was the residence of the ancient family of Trayne, predecessors of the Boweses. Sir William Bowes, as has been seen, rebuilt the castle from the ground about 1450. That it was a place of considerable strength may be inferred from the fact, that though Sir George Bowes threw himself into Barnard Castle on the 27th of November, 1569, yet Streatlam was not taken by the rebels till the 4th December. They evacuated it on the 16th of the same month; but during the brief period of its occupation by them, every species of wanton excess and depredation had been committed. The glass windows and iron stancheons had been torn out, and every thing carried away which could be removed; so that the loss sustained by Sir George was estimated, at Streatlam alone, at £1,200. Amongst the articles plundered on this occasion were, a "gilded" suit of armour, which stood in the gallery; "40 fether beds; the hangings of tapestry, for ij chambers; the hangings of say, for ij chambers; a gowne of plaine black velvat, a gowne of tawnye velvat, and one of black wrought velvat; a fore parte of blacke velvat, laide all over with lace of goulde; one of black velvat, laid all over with bonne lace of silver and goulde; a kyrtle of crimisin damaske, and overbodie of blacke velvat, all imbroderyd; a doublet of white satten; as much long frence and narrow frence as would dresse a saddle and a pillion; a littell gilted cofer, with half a dosen peaces of goldesmithe worke; a dosen great pearle; a blew sayfer and an amyntas; one paire of crymisin velvat bretches, laid all over with silver lace; ij tunce of gascoigne wine, one firkin of sacke; iiij tents, with their furniture," &c. The work of destruction was so complete, that Sir George was obliged to take up his residence at the Isle for several months afterwards; and he was unable to

receive the Earl of Sussex at Streatlam until the 10th of September following.

Some portions of the old walls, &c., have been retained in the present building, which was new fronted and modernized by Sir William Bowes, great grandson to the Knight Marshal, in 1708, 9, and 10, when the stone was won from the quarries of Stainton and Lingbury. Its front elevation, which is towards the south, consists of a centre and projecting wings, on each of which there is a cupola; the walls being surmounted by a handsome balustrade, from whence a rich and undulating prospect may be enjoyed. The castle is three lofty stories in height, and 152 feet in length, which is less by 12 feet than the front of the former castle. Near the western extremity, the remains of a square tower are visible in the wall. At this end of the castle, and below the level of the present passage, there was formerly an iron "grille," which separated the portion called the dungeon from the more habitable part; and rings, with chains attached, were fixed in the walls. In 1580, after the death of Sir George Bowes, four vaults are mentioned in the inventory of his household furniture; one of which was called the "great vault" beside "Haddox hole," which was the lower dungeon. The great hall was above the dungeons; and the chapel was on the next floor above. Two pointed arches, now built up, are supposed to have been lights to the ancient chapel. Two antique sculptures of the arms of Sir William Bowes, builder of the previous castle, impaling those of Greystock, are built up in the north wall of the present edifice; as is also a representation of the seal of Sir William, with the arms of Baliol, Dalden, Greystock, and De la Haye. Towards the north-east end of the building there were formerly a gateway, a moat, and a drawbridge; and the remains of ancient buildings still exist beneath the adjacent ground, which also contained a pond, called the "moat." To the north of the western wing there was a sort of walled and deep tank, in which articles of value were secreted in times of danger and alarm. Several human skeletons, skulls, &c., have, from time to time, been found to the north and north-east of the castle.

The principal family portraits at Streatlam are—Sir George Bowes, Knight Marshal, 1572, aged 45; Sir George Bowes, his grandson, in the dress of a gentleman pensioner, 1628, aged 32; a portrait unknown, dressed in a buff jerkin; Mrs. Bowes, widow of Thomas (Miss Maxton), 1688, aged 65; Sir William Bowes and Lady Bowes, with their daughters and sons,

William Blakiston and Thomas; George Bowes, Esq., in his favourite blue frock coat, and several portraits of his first wife, the beautiful Miss Verney; Mary-Eleanor Bowes, afterwards Countess of Strathmore, in crayons; John Lyon, ninth Earl of Strathmore, painted in 1762; "John, Earl of Strathmore, given to his son, by Thomas, Lord Camelford;" John Bowes, tenth Earl of Strathmore, in the uniform of the "Blues;" John Bowes, Esq., in a Spanish dress, by Jackson; and Sir Martin Bowes (not of the Streatlam line), "The gift of the Right Honourable Arthur Onslow, Speaker of the House of Commons." There are also several pictures by eminent masters, amongst which are, a portrait of the Archduke Albert, by Rubens; a Fruit Stall, a Boar Hunt, and a Game Stall, by Snyders; the Holy Family, by Annibal Caracci, after Raphael; and several smaller paintings. A heavy cuirass and a helmet, reputed to have been worn by Sir George Bowes, are preserved at Streatlam; and the room in which he died has still the reputation of being subject to his occasional visitations.

Hutchinson and others have designated the situation of Streatlam Castle as "gloomy and confined;" whilst Sir Cuthbert Sharp says that its general features are "quiet grandeur and solemnity," though he admits that "it has evidently been chosen and retained from more imperious considerations than the smiling and picturesque beauty of the landscape." The castle, indeed, occupies the bottom of a deep valley, of no great width, through which flows, immediately in front of the building, a little rivulet, here called Streatlam Beck, but which higher up is known as the Forth Burn, and lower down as the Alwent Burn. The rising ground, on the south side of the stream, cuts off the prospect in that direction. The park, which surrounds the castle, contains about 400 acres, nearly one-fourth of which is planted with ash and sycamore.

STAINTON.

THIS village has been variously termed *Stainton Law*—*Black Stainton*, from the moorish character of its situation—*Stainton en les Craggs*, from its extensive quarries of freestone, from which the stone for the castle and town of Barnard Castle has been dug—and *Stainton in le Kerris*, or Carrs, from a tract of bog land, nearly a mile in extent, on the south side of the road from Barnard Castle to Staindrop, called Broomielaw Stell, or Blackbeck Bog. The village contains a public house; but no business of importance is carried on.

There is a school for boys and girls, at which, on the visit of the government inspector on the 15th of June, 1853, 38 children were present at examination, 17 had left, and 12 had been admitted during the preceding twelve months. The following are the inspector's general observations:—

"Buildings, fair-sized room, floor half of wood and half of stone; no class-room. Desks, four loose. Furniture, clock. Playground, good-sized yard. Books, fair. Apparatus, black-board. Organization, methods, discipline, and instruction, fair."

The minister of the Independent chapel in Barnard Castle formerly held a service in the school-room every Sunday afternoon; but this duty has, for the last few years, been performed alternately by the Rev. George Dugard, incumbent of the chapelry, and the Rev. Thomas Evan Jones, curate. There was anciently a chapel of ease at Stainton; but no traces of it now remain. The Wesleyan Methodists have a chapel in the village.

The highway through the village of Stainton runs close by the front of the dwelling-houses; and on the opposite side of the road there is a large space of ground, which has always been used as a village green. On the 26th of November, 1851, Mr. John Dent, agent to John Bowes, Esq., appeared before the magistrates at the Barnard Castle petty sessions, on the information of Mr. Thomas Cruddas, of Stainton, charging him with having caused an obstruction and encroachment on the highway, by building a stone wall between the outer side of the road and the village green, so as to inclose the latter, and lay it to the adjoining lands belonging to Mr. Bowes. The magistrates decided, that as the wall was built in some places within 15 feet of the centre of the road, it was an encroachment, and fined the defendant 40s. and costs; the surveyor being ordered to pull down the wall. A countercharge was then made by Mr. Dent against Mr. Thomas Cruddas and Mr. Martin Atkinson, of wilfully injuring the surface and highway, by tearing up the stones and soil thereof. It appeared that there was an ancient well and spring of water upon the village green, and within a few feet of the road, at which the inhabitants had been accustomed to draw water for upwards of 50 years, but which had been enclosed by the wall above alluded to. The charge arose from the defendants having pulled down a part of the wall near this well, which they admitted, but contended that Mr. Bowes had no exclusive right to inclose an ancient accustomed well in his grounds. The information was dismissed.

The Traynes, lords of Streatlam, were early proprie-

tors of Stainton, which they originally obtained by grants from the Baliols. Margaret, daughter of Hugh Trayne, became the wife of John Norays, of Dalton, when her father granted to her two oxgangs in Stainton, consisting of twenty-four acres lying separately at Applebrewall, Blakelawe, Milnstanside, Pikelawe, Normanlawe and Hermire, and Sengelawc. In 1262, after the death of her husband, she released the same lands to her brother, Robert Trayne. Adam the Smith, of Midleton, for the service which the said Robert had rendered to him at his great need, surrendered to him his land in Staynton. Robert Trayne granted to Harold de Stainton a messuage and nine portions of land lying at Greenwellflat, Lucewell Chestres, at the Lady Cross, *ad Crucem Dominae*, on the east of the road to Cletlam, at Stainton Law, and at the Old Assart betwixt the thickets on the north and the brook on the south, at Suthenesflatt, at Blakelawe, and the portion called the Rood, between the grantor's lands and the road to the castle. Other small properties are named in ancient charters.

Geoffrey, son of Jordan Russell, seneschal to Bishop Stichill, acquired a considerable estate in Stainton by various purchases. Amongst these were the lands of Sir William de Hamildon, who, in 1300, released them to Sir John de L'Isle, by whom they were transferred to Russell. The latter also acquired Methestres, Dolfinrydding, and Quarinangyll, from Theophania, daughter of John; and Robert Mustel, of Kendale, and his wife, Amabil of Burnhousehead, granted a messuage and lands to him. These estates, together with the lands released to Geoffrey by Endo Trayne, passed to Peter Russell, brother to Geoffrey, and from him to a third brother, Simon, who had assumed the surname of Headlam. John, great-grandson of Simon, granted a lease of the Bailzie Haule of Stainton to the widow of his father, of which transaction the following testimony is preserved at Streatlam:—

“For alsmuch as it is meritore and needfull to oec trew Christen-men to profis and testifyc the trewth of enie doubtfull mater standyng in variance, y'rfor be it knowne to all Crysten peple to gwom ys present wrytlys shall com to here or see, yatt wee Hery Johnson, of Hedlam, and Willm Perceles, of Wynston, witnesseth, that John Hedlem, of Hedlem, efter the decease of Henry Hedlem, suted pesably to the Bailzyhaul of Staynton, and sone after lete to ferme the said haulc wth the appurtenances y'rto belongyng to Elisabeth

Hedlem, wyfe of the said Hery, for y^e terme of hyr lyfe; and after hyr decease the sayd John Hedlem, fadyr of Gyffray Hedlem, entred pesably to the said haulle, wth th' appurten'ts, &c., and yen sone after y^e sayd John lete to ferme the same haulle, wth th' appurten'ts, &c., to oon Coke of Changyll; the guych paid ferme for it the space of thre yer. In witness, &c. Yeven at Hedlem, y^e fyrst day of May, y^e yer of our Lorde 1476. Wytnes to y^e seylling, Thomas Garth and John Syngylton.”

John Hedlam, Esq., in 1526, conveyed all his lands in Stainton to Sir William Bowes. A part of the estate was mortgaged, about 1630, by Sir George Bowes, of Biddick, to Matthew Hutton, Esq., of Marske, from whose descendant it was purchased, in 1801, for £27,895, by the late Earl of Strathmore, and thus again re-united to the Bowes' possessions.

WESTWICK.

THE township of Westwick adjoins that of Barnard Castle on the east, and is bordered by the Tees on the south. It contains an area of 1,445 acres. The number of inhabitants, at each respective return, was 93, 95, 97, 98, 67, and 63; the latter number consisting of 33 males and 30 females, inhabiting 12 houses. The value of property assessed for the county-rate in 1853 was £1,506 16s. 3d.

During the year ended March, 1854, the township of Westwick contributed to the Teesdale Union, for out-relief and lunatics, £26 15s.; for irremovable poor, salaries, and other common charges, £8 6s.; for constable and costs before magistrates, &c., 10s. 6d.; for law costs, revising barrister, and jury lists, 10s.; for journeys, salaries of assistant overseers, incidental expenses, &c., 2d.; total of expenditure, £36 1s. 8d., being £6 more than that of the preceding year. The registration cost 3s. 10d.; and the county-rate paid by the overseers was £25 14s. 11d.

There is no village in this township, the population of which is chiefly agricultural. Westwick Moor, containing 824 acres, was inclosed about 1765. The estate was part of the forfeited possessions of the Earl of Westmoreland. It is at present the property of — Webb, Esq., whose family have held it for several generations. The tithes of Westwick belong to the rector of Winston.

PARISH OF MIDDLETON-IN-TEESDALE.

THE extensive parish of Middleton-in-Teesdale forms the south-western extremity of the county of Durham. It is separated from the county of Cumberland by an undefined line* and the Crook Burn; below which the Tees divides it, on the south-west, down to the Cauldron Snout, from the county of Westmorland. Thence the river forms the boundary between this parish and that of Romaldkirk, in the North Riding of Yorkshire, until it reaches the western extremity of Marwood, in the chapelry of Barnard Castle, which forms the south-eastern boundary of this parish. On the east, it is bounded by Langley Dale, in the parish of Staindrop, and by Woodland, in the parish of Cockfield; on the north-east by the chapelry of Lynesack; and on the north by the parish of Stanhope. Middleton-in-Teesdale is divided into four townships, viz., 1, Middleton; 2, Eggleston; 3, Newbiggin; and, 4, Forest and Frith. Eggleston Common, now a stunted pasture, forms the eastern portion of the parish. Middleton Common (now inclosed), Newbiggin Common (partially inclosed and the remainder stunted), Etersgill Common, and Langdon Beck Common, extend along its northern boundary; and West and Back Commons are situated in the west and south-west.

THE whole of the extensive territory included in the parish of Middleton-in-Teesdale, which anciently consisted of a large forest and chase, was held, with the lordship of Barnard Castle, by the Baliols and their successors in that princely domain. Like the other estates forfeited by the Earl of Westmoreland in 1569, it has become, with the exception of Eggleston and a few smaller portions, the property of the Duke of Cleveland.

MIDDLETON-IN-TEESDALE.

THE township of Middleton-in-Teesdale, extending from the river Tees on the south to Bollilhope and Westenhope Commons, in the parish of Stanhope, on the north, contains 10,434 acres. The property assessed for the county-rate in 1853 was valued at £3,037 18s. 6d. The population, in 1801, was 796; in 1811, 988; in 1821, 1,263; in 1831, 1,824; in 1841, 1,770; and in 1851, 1,849, of whom 932 were males and 917 females. There were, at that time, 357 inhabited houses, 3 uninhabited, and 5 building.

This township, during the year ended March, 1854, contributed to the Teesdale Union, for in-maintenance, clothing, and funerals, £12 8s. 8d.; for out-relief and

lunatics, £244 1s. 8d.; for irremovable poor, salaries, and other common charges, £102 5s. 6d.; for constable and costs before magistrates, &c., £1 8s. 9d.; for law costs, revising barrister, and jury lists, 6s.; for journeys, salaries of assistant overseers, incidental expenses, &c., £13 17s. 7½d.; total of expenditure, £374 8s. 2½d., from which were deducted repayments of relief by relations and other receipts, £12 12s. 6d., leaving a net total of £361 15s. 8½d., which was an increase of £44 19s. 2½d. over that of the preceding year. There was paid for vaccination, £6 17s.; registration, £7 8s. 2d.; and the county-rate paid by the overseers was £52 12s.

The town of Middleton is situated on the north bank of the Tees, 10 miles north-west from Barnard Castle, 12 south-west from Stanhope, and 253 (by road) north-north-west from London. There is no regular street, the houses being scattered in rows or singly along the sides of the hills on which the town is built. The most regular and ornamental part is called *Masterman Place*, situated in the south-east portion of the town. It was erected in 1823 by the London Lead Company, under the direction of their managing agent, Robert Stagg, Esq., from designs by I. Bonomi, Esq., architect, of Durham. The cottages of which it consists are arranged in uniform rows, and are surrounded

* ORDNANCE SURVEY.—The boundary between the county of Durham and parts of Westmoreland, Cumberland, and Northumberland, is an undefined straight line, running from stone to stone, mound to mound, or post to post. It has recently been surveyed under the directions of the Board of Ordnance (see page 169). In the first instance, it was arranged that the scale of the plans for

the county of Durham should be six inches to the mile; but, in consequence of the importance of the mining and engineering operations of the district, the scale adopted is 25·344 inches to the mile, being 1·2500th of the actual lineal dimensions of the ground. It is intended to execute the plans of the towns on a scale five times the size of the other portions of the county.

by a spacious garden, a suitable portion of which is appropriated to each dwelling. The first occupants of those cottages took possession in May, 1824, accompanied by bands of music, &c.; and as vacancies occur, they are filled up by the Company from amongst their most deserving workmen, each of whom pays a rent of £3 per annum for his cottage and 10s. for his garden. Additional cottages have recently been erected, which are also intended for meritorious workmen. *Middleton House*, at the west end of the town, was the residence of Robert Stagg, Esq., above noticed, by whom both it and the adjoining grounds were considerably improved and beautified: the mansion is now the residence of the present superintendent, R. W. Bainbridge, Esq.

A *market* is held in Middleton every Saturday, at which a few samples of corn are sold; but Barnard Castle is the principal corn-market of the district. The general market is not very well supported: it is most numerously attended on those alternate weeks in which the miners, as in Weardale, receive their monthly pay. On the third Thursday in April, and the second Thursday in September, fairs are held; but the cattle, sheep, and horse fair has been discontinued since the establishment of that at High Force.

There are six inns and public houses in Middleton, with several shopkeepers, tradesmen, and mechanics, a post office, a rural police station, and two corn-mills, worked by the Hudshope Beck, which flows through the town from the north.

Middleton is one of the polling places at parliamentary elections for the southern division of the county; and the revising barrister's district is identical with the parish.

The *Town Hall* is situated at the west end of the town, and was built by the late Duke of Cleveland, for the convenience of the markets. A railing around the lower story encloses the stalls of the butchers; and the upper story contains offices for the accommodation of the duke's agents, for the savings bank, the mechanics' institution, and a room in which public meetings are held.

The *Bridge* across the Tees was erected by public subscription, and is a handsome structure of one arch, 80 feet in span. During the floods in the winter of

1853, it received some trivial damage, which was speedily repaired.*

There is an excellent road from Middleton to Alston, constructed under the superintendence of the celebrated M'Adam: the parliamentary powers for its formation were obtained in 1824. The road leading from Middleton towards Westmoreland passes north-west along the banks of the Tees. An excellent road has also been recently formed from Middleton to Stanhope.

The *supply of water* to the town is neither sufficiently abundant nor of good quality. Means, however, are about to be taken to remedy this inconvenience. It is proposed to lay pipes to a fine spring a short distance from Middleton, the cost of which, including the erection of public fountains, is estimated at about £500. Towards the undertaking the Duke of Cleveland has promised £100; the London Lead Company, £100; J. Hill, Esq., Appleby, £20; the Rev. J. Brown, £10; R. W. Bainbridge, Esq., £10.

THE CHURCH.

MIDDLETON church is situated on a rising ground, on the north side of the town, and near the eastern bank of the Hudshope Beck. There are several traces of antiquity in the main building. It is entered by a porch on the south, above which there is a pointed arch. The body of the church consists of a nave with a south aisle, and a chancel; the latter separated from the nave by an elliptical arch. An oblong and a cylindrical pillar form the aisle, and support an elliptical and two circular arches. The font is an upright cylinder of stone. The piscina remains in the wall near the north door of the chancel; and there is a pointed niche in the south wall, near the altar-table. The windows of the chancel are pointed; but the rest are irregular and modern. Sepulchral relievos of crosses are placed above the vestry door and the principal entrance to the church.

At a few yards distant, to the north of the church, there is a small square structure, called the *bell house*; and here the three bells belonging to the church are hung. At the entrance to the church-yard stands an ancient cross, consisting of a small round stone pillar, surmounted by a sun dial, and rising from the centre

* A previous bridge, built in 1811, fell when nearly completed. Richard Attee, a butcher, who was in the habit of crossing between Middleton and Mickleton in Yorkshire, had frequently predicted its fall, and, at the time of this catastrophe, happened to be on the spot with his wife. Full of his favourite theme, he ventured beneath it to

point out its imperfections; when his wife perceived the structure moving, and instinctively rushed forward to drag him from his perilous situation. At that instant the bridge fell and destroyed them both, in the presence of numerous persons who had assembled at the time.

of a square base, on each side of which are three or four steps. The preservation of this neat and interesting relic is much endangered by the mouldering of the lime or cement used in joining the steps; but this may easily be remedied by a little timely attention.

The second Barnard Baliol confirmed to the abbey of St. Mary's of York the church of Middleton, with two oxgangs of land, a toft, and a croft in the town; and the abbot presented to the living, at the nomination of the Baliols, for the Bishop of Durham's institution. On the forfeiture by the Earl of Westmoreland, the right of presentation was vested in the crown.

REGISTERS.—Books Nos. 1 to 6 contain baptisms, burials, and marriages from 1578 to 1812.

Middleton-in-Teesdale rectory is in the deanery of Darlington; the queen, patron. King's books, £25 17s. 1d.; Tenths, £2 11s. 8½d.; Episc. proc., 16s.; Archid. proc. 3s.; Syn., 3s. Dedication to St. Mary.

RECTORS.—Walter de Langchester; Roger de Kirkeby, 1378, p. res. Langchester; John Bromley, 1416; John Bower, 1432, p. m. Bromley; Stephen Wilberfos, 1434, p. res. Bower; John Palswell, 1501; Edward Natres, S.T.P.; William Bell, 1549, p. m. Natres; Leonard Pilkington, S.T.P., 1559; Anthony Maxton, 1619; Timothy Tullie, A.M., 1660; John Allason, S.T.P., 1700, p. m. Tullie; John Emerson, A.M., 1728, p. m. Allason; Thomas Dade, A.M., 1774, p. m. Emerson; Robert Lascelles, A.M., 1778, p. res. Dade; Charles Bailey, A.M., p. m. Lascelles; John James Thornhill, A.M. (rector of Cockfield and vicar of Staindrop), p. m. Bailey; John Henry Brown, A.M., 1829, p. m. Thornhill.

The rectory-house stands on an elevated site to the north of the church, and was nearly rebuilt by the present incumbent. The glebe, containing about 50 acres of land, is situated to the west of the town. The rector is entitled to all tithes except lead. On the inquiries instituted by the ecclesiastical commissioners in 1835, as to the nature and amount of income belonging to the various rectories, &c., no return was made by the rector of Middleton; nor, since that time, has any official statement appeared. The living, however, is said to be worth about £600 per annum.

CHAPELS.

BAPTIST CHAPEL.—This chapel, a neat stone building, with a dwelling house for the minister, was erected at the expense of Robert Stagg, Esq., and his family. It is registered for the solemnization of marriages. The register of births, kept by the minister and deacon, contains 18 entries, extending from 1829 to 1836. The

chapel was opened for public worship on the 21st June, 1827.

The WESLEYAN METHODISTS and PRIMITIVE METHODISTS have substantial stone buildings, as places for public worship, each capable of holding from 300 to 400 hearers.

The Independents had at one time a place of worship in Middleton; but it has been discontinued for the last 30 years.

CHARITIES.

School.—By indentures of lease and release, dated March 18 and 19, 1729, Christopher Stephenson and Mary his wife, Robert Hoggart and Elizabeth his wife, and Margaret and Grace Robinson, which said Mary, Elizabeth, Margaret, and Grace, were the sisters and co-heiresses of William Robinson deceased, conveyed to Edward Oxned and Joseph Bainbridge, and their heirs, a messuage and three closes, called Jacob Croft, Lenny Croft, and Kirk Close, all in Middleton, in trust, after the decease of the first named parties, to apply the rents and profits for the endowment of a free school at Middleton. The schedule annexed to the deed contains rules or statutes, by which it is ordered, that the master of the school shall be appointed by the rectors of Middleton, Stanhope, and Wolsingham, who shall also have power to suspend or remove him for any default, neglect, immorality, or crime; that the messuage above mentioned should be fitted up for the school, the future repairs of which were to be paid for out of the rents and profits of the other premises, after which the surplus was to go to the master; that 16 poor children of the constabulary, or, in default thereof, of the parish of Middleton, should be taught gratis; that they should not be admitted under the age of six, nor continue after the age of twelve; that they should be taught to read and write, and should learn arithmetic, and that care should be taken that they were duly catechised; that, on vacancies occurring, the rector of Middleton should nominate to the first, and the overseers of the town to the two next, and so on in succession; but that if any person should neglect to nominate for a month, he should lose his turn; that the visitors should have power to alter the statutes, and that the curate of Middleton should not be schoolmaster unless the rector should pay him such reasonable stipend as should be approved of by the rectors of Stanhope and Wolsingham, and such as the said curate might have reasonably expected or deserved in case he was not

schoolmaster, it being intended that the endowment should not be made use of to ease the rector of Middleton in the stipend to be paid to his curate. No new trustees were ever appointed; and the Kirk Close, containing about 3 acres, was given up by a former schoolmaster, on a suit being instituted against him by the heir of William Robinson, by whose posterity it is still held. The property now belonging to the school consists of two closes, containing about 3 acres, let to a yearly tenant at £13 10s. rent; about 5 acres inclosed from the Fell, and allotted to the school under an inclosure act, let at 30s. a year, the landlord paying the poor-rates; and about 5 or 6 acres of Fell, let at 6s. The school and house of the master, having become much dilapidated, were repaired about the year 1833, partly with a sum of money obtained by the rector from the National School Society, and partly from his own resources; the buildings continued a long time unfinished, but were at length completed. The gross amount of the master's income, besides the use of the school-house and a small garden, is £15 6s. per annum, for which 16 boys (eight in respect of what remains of the original endowment, and eight in respect of money laid out on the school-house), appointed by the rector and overseers, are instructed in reading, writing, accounts, and the church catechism, without any charge except for coals. He has also about 30 pay scholars; and the free children, if desired, are instructed with the others in drawing, geography, and mensuration.

Parish Land.—A parcel of land, containing 6 A. 1 R. 6 P., belongs to the parish, though it is not known how acquired. A building, formerly used as a workhouse, stands upon it, and is now let in tenements; the rents being paid to the parish, and divided amongst the townships.

Perkin's Charity.—Thomas Perkin, of Hudgill, by will, February 9, 1711-12, charged his house and close, called Hudgill Close, containing about 3 acres, with a yearly payment of 5s. to the poor of Middleton township, 10s. to those of Newbiggin, and 10s. to those of Forest. On the Commissioners' Inquiry in 1828, no payment had been made for 14 or 15 years; and they wrote on the subject to the then proprietor, Mr. Thomas Robinson, who declared his intention to resume payment when called upon by the parish officers. The money, however, is still unpaid.

TOWNSHIP OF MIDDLETON.—Poor's Stock.—Under date of April 15, 1719, in one of the parish books, there is an account of poor stock, belonging to this township, amounting to £28 15s. 4d., to which is

added, "Left by Cuthbert Lind (de Poortree), £10, for which Dr. Allanson (the then rector), John Lind, and John Johnson, are trustees." In 1729, the stock at interest was £54, which, in 1764, was put out to interest in the hands of the trustees of the turnpike road between Appleby and Kendal. The interest, £2 14s. per annum, has been improperly carried to the general account of the poor's rate.

The charities belonging exclusively to the townships of Eggleston, Newbiggin, and Forest and Frith, will be noticed under their respective heads.

EDUCATION, INSTITUTIONS, &c.

BESIDES the parish school, and that belonging to the London Lead Company (noticed below), Middleton contains several day-schools, for the education of those who are disinclined or ineligible for admission into those two establishments.

A *Mechanics' Institute* was established in Middleton in 1847. Its meetings are held fortnightly in the Town Hall, which is granted for the purpose gratuitously. It consists of about 25 members, who pay one shilling per quarter subscription. There are about 400 volumes belonging to the institution, towards the support of which the Duke of Cleveland contributes £5 annually.

A *Subscription Library*, supported by the monthly payments of the members, aided by occasional donations from the friends of such institutions, has been for some time established in the town.

There is a branch of the *Darlington Auxiliary Bible Society*, which, in the year ending Midsummer, 1853, contributed £39 0s. 4d. on the purchase account and £15 as free, and distributed 181 Bibles and 100 Testaments.

A *Floral and Horticultural Society* has been established six years. An annual exhibition takes place in the Lead Company's school-room, when various prizes are awarded for the best specimens of flowers, fruits, vegetables, &c.

The *Parochial Clothing Society* is under the management of Miss Stagg and a committee of ladies. It consists of about 140 members, who contribute a trifle monthly, and have a proportionate addition allowed from the funds, for the purchase of clothing. The annual expenditure is about £150.

The *Fuel Society* is supported by the Duke of Cleveland, the Lead Company, and a few resident subscribers. During the winter months, about 50 cart loads of coals are distributed to the poor in the township.

There are also two *Miners' Refuge Clubs*, a *Benefit Club*, and a *Foresters' Society*, established in the town.

Savings Bank.—The Middleton-in-Teesdale savings bank was established in May, 1838; and the report of the institution for November, 1854, shews the following details:—

13 depositors whose respective balances (including interest) did not exceed £1 each	£6	12	1½

During the year, 38 new accounts were opened; deposits to the amount of £1,705 11s. 7½d. were received; £1,659 4s. 1d. was repaid to depositors, and £32 5s. 6d. for expenses of management.

LONDON LEAD COMPANY.

THE population of the parish of Middleton-in-Teesdale is chiefly employed in lead mining, and in the smelting works connected therewith. The Duke of Cleveland is proprietor of the largest portion of the mines, and Timothy Hutchinson, Esq., of the remainder. Neither of these proprietors work the mines themselves, but let them to different mining adventurers at a render of a pecuniary composition in lieu of one-sixth of the ore raised. But in order to give encouragement to further exploration, Mr. Hutchinson has agreed to accept a reduced composition, on the basis of a render of one-eighth of the raisings from the whole of his mineral ground, with the exception of those portions of the veins under which levels had been previously driven.

“The Corporation of the Governor and Company for smelting down Lead with Pit Coal and Sea Coal” (usually styled the Lead Company, see vol. i., page 187) are the chief lessees of the lead mines, the produce of which is converted into pig lead and de-silverised at their Eggleston smelting works. The refined lead of this Company, produced from their Teesdale mines, is shipped from the Tees, and is very generally used in the manufacture of white lead, for which it is found well adapted. The produce from those mines has recently been on the increase; and in the year ending October, 1854, about 4,000 tons of pig lead were realized.

The mining operations of the Lead Company in the north of England have, for many years past, been conducted with a high regard to the promotion of the welfare of the numerous body of workmen employed; and it is a most satisfactory and pleasing fact to find, in these days of migratory labour, that the Company's present operatives are the descendants of a line of people who for generations have served the same employers. Great attention is paid to the ventilation of the mines, and to the lodgements of the men and boys when engaged at a distance from their homes; and the substantial and commodious erections the Company have fitted up for the accommodation of their workmen at Sharnberry, Lodge-syke, Manorgill, and more particularly at their newly-opened mine at Little Egglesthope, in connection with the extensive underground levels at the mines, all supported with stone arches, indicate that the operations of the Company are contemplated to be of a lasting character.

The practical mine agents of the Company are usually selected from the most intelligent and best conducted of their overmen, and these latter from those of similar character among the workmen; thus affording to the youth in the Company's employment a great inducement to their mental and moral improvement, and to the exercise of their skill and energies. The bargains to the miners are let quarterly, which gives the men a stake and interest in the places wherein they are engaged; and in arranging and fixing the bargains, the judgment and experience, not only of the local agents, but of their fellow agents engaged in the other mining districts of the Company, are put into requisition by the Company's superintendent. The agents are not allowed to engage in other business, or to supply any goods to the workmen; and the latter are left perfectly free in the disposal of their wages, except the Company's discountenance of drunkenness can be considered

an interference. The Company, many years ago, built a store shop at Nenthead, in Alston Moor, which is let to a tenant on the express condition that he shall sell exclusively for ready money; but even there, the workmen are left entirely unbiassed in the outlay of their earnings, and nothing in the shape of truck is allowed to exist. In Teesdale, the Company's workmen, in 1848, established a corn society, for the purpose of obtaining a supply of grain and other articles of consumption at moderate prices; and although the Company aided them in this enterprize, yet every one is left entirely to his own discretion as to becoming a member of the society.

The wages are paid in monthly advances on account, and the balance at the end of the year. All monies are paid direct to the workmen in the Company's own offices, and no part thereof, on any account, in a public house, or through any interested medium. Medical attendance and medicine, for the workmen and their families, are provided at the cost of the Company. In 1817, the Company established a fund throughout their works, for aiding their men in sickness and old age, and yielding other benefits. For some years after its first establishment, the payments were so much in excess of the capital as to induce a state of bankruptcy; but through judicious arrangements, and the liberal aid of the Company (who for many years contributed not less than £450 annually to it), the fund has now attained a position for meeting all its liabilities. The present yearly contribution of each member is 30s.; and the allowances are, for sickness, 7s. per week; and for pension on attaining 65 years of age, 5s. per week; with £2 for funeral expenses, and £3 to the widow or family on the death of a member. The state of the fund undergoes a septennial revision by a professional actuary; and the benefits are increased or diminished by the fund committee (composed of the Company's district agents and of men selected by and from the workmen at large) with his advice. In November, 1853, the number of fund members was 884, and the invested capital amounted to £21,221 14s. 11d.

In the promotion of education, the Company have been among the foremost; their schools for their workmen's children at Middleton-in-Teesdale, and also at Nenthead in Alston Moor, having been erected in the years 1818 and 1819, at the instance of their late superintendent, Mr. Stagg. At these schools, the Company provide and pay the masters, and find books, stationery, and every school requisite; and in return exact regularity of attendance from the age of six to that of twelve

in the case of boys, and up to fourteen in the case of girls then remaining members of their parents' family, and a contribution of one shilling per quarter from the parents of each child taught, with the exception of orphans and the children of widows, who are taught free. Admission into the Company's employment is made dependent upon a school character; and on passing a satisfactory Bible examination, each child is presented with a handsome Bible, having inscribed thereon, "The Gift of the Lead Company." By the principles upon which these schools are conducted, religious instruction is so combined with secular as to meet, probably as far as is practicable, the antagonistic views that so much abound at the present day on that important question. The rules of the week-day schools provide—

"That the school be opened with singing and prayer; and the teaching be carried on not less than six hours each day, for five days in the week.

"That the Sacred Scriptures, in the authorised version, or extracts therefrom, shall be read and taught in school.

"That no Catechism, peculiar to any religious denomination, shall be used in the school, nor any peculiar tenets of any religious sect inculcated on the scholars.

"That every child attending the Company's week-day school shall be required to attend twice every Sabbath such place of religious worship as his or her parents may think proper."

The Sunday schools are conducted on a similar system:—

"Every child attending the Company's week-day school, shall, when required, attend the Sabbath school taught in the Company's school room, on the Sabbath morning; and, twice on the Sabbath day, such place of religious worship as his or her parents may think proper.

"Every child must be present at the hour fixed for the opening of the school, and must come prepared with such portion of Catechism, Bible Lesson, &c., as may have been previously appointed by the superintendent or teacher, and must conform to all the school regulations."

Exceptions from the rules are allowed in cases where parties reside at a distance from the schools, or where religious scruples are entertained by the parents; but, in either case, it is required that the children shall attend some other school for the specified period.

A free library has for many years existed, not only for the use of the scholars attending the schools, but of the whole of the Company's workmen. It now contains about 1,000 volumes; and additions thereto are from time to time being made. In 1854, the Company erected a reading room at Masterman Place, for the use of their workmen; and it is intended that this room shall be heated, lighted, and kept in order at the cost of the Company, leaving the men to provide books, periodicals, and newspapers from their own resources.

Discouragement is given to those drinking and disorderly habits which are, in too many places, so great a bane to society; and these offences incur, in the Company's works, either a pecuniary penalty payable to the workmen's fund, or dismissal from the Company's service, at the discretion of their superintendent.

Governor of the Company, John Masterman, Esq., M.P.; deputy governor, Octavius Wigram, Esq.; and superintendent, Robert Walton Bainbridge, Esq.

The *Hope* farm, or *Hope House*, situated on the moorland, was anciently part of the possessions of Ricvaux Abbey. After the Dissolution, it was purchased of the crown by William Bitchburn and Roger Marshall, who afterwards conveyed it to Ralph Tailbois, of Thornton: his descendants sold it to Richard Clervaux of Croft, from which family it passed to the Tempests, and is now the property of Timothy Hutchinson, Esq. Another farm, called *Foggyforth*, or *Foggerthwaite*, part of the ancient possessions of the Scroops, was, in 1638, conveyed by Lady Scroop to Anthony Maxon, and afterwards became the property of Sir Nicholas Tempest. It is now, with the old mansion house and farm called *Stolley*, once the property of the Cumins, and recently of the Bowes family, in the possession of Timothy Hutchinson, Esq. *Hoodgate*, *Middleside*, *East and West Birch Closes*, *Long Lands*, *The Rigs*, *High and Low Nook Closes*, *The Crofts*, *Broadlegate*, *East and West Woolpits*, *East Friar House*, and *How Gill*, are the names of small portions of land in the township.

An act for inclosing lands in the parish of Middleton was passed 45 Geo. III., c. 13. The award of the commissioners was read at Eggleston on the 25th, and at Middleton on the 27th of April, 1815; and deposited in the Exchequer, city of Durham, on the 10th of October, 1816. The accounts were examined and passed September 16, 1830, when there was a balance in hand of £743 9s. 2d.; and in September, 1839, the balance was £398 12s. 10d.

Another act was passed June 16, 1834, by which the above act was in part repealed. Allotments were to be made for stone and lime quarries, for repairing roads and buildings, and for public watering places. The rector's allotment was to be fenced at the general expense; and he was empowered, with the consent of the ordinary and the patron, to lease his allotment for 21 years, to commence within twelve months after the passing of the act. The rights of the Duke of Cleve-

land, as lord of the manor, were secured. The whole of the commons are now allotted and enclosed.

EGGLESTON.

THIS township, which forms the eastern portion of the parish, contains 7,919 acres; and the property was valued for the county-rate, in 1853, at £2,335 11s. 7d. The population, in 1801, was 306; in 1811, 335; in 1821, 464; in 1831, in consequence of the erection of a mill, it had increased to 623; in 1841, it was 617; and in 1851, 636, of whom 307 were males and 329 females. There were, at that time, 113 inhabited houses and 1 uninhabited.

In the year ended March, 1854, the township of Eggleston contributed to the Teesdale Union £8 8s. 10d. for in-maintenance, clothing, and funerals; £77 11s. for out-relief and lunatics; £28 3s. for irremovable poor, salaries, and other common charges; 14s. for constable and costs before magistrates, &c.; 10s. 6d. for law charges, revising barrister, and jury lists; and £3 6s. for journeys, salaries of assistant overseers, incidental expenses, &c. Total of expenditure, £118 13s. 4d., from which £4 10s. 3d. was deducted for repayments of relief by relations and other receipts, leaving a net total of £114 3s. 1d. This was £3 13s. 7³/₄d. less than the expenditure of the preceding year. The expenses of vaccination amounted to £3 1s. 6d., and the registration to £1 16s. 8d.; the county-rates paid by the treasurer being £39 4s. 9d.

The village of Eggleston is situated 4 miles south-east from Middleton, and 6 north-by-west from Barnard Castle. A small stream runs through it from the hills on the north to the Tees; and a bridge across the river forms a communication with Yorkshire. There is a public house in the village, and a few mechanics. At a short distance is a smelt mill, belonging to the London Company, at which about 40 workmen are engaged. It was erected under the direction of Robert Stagg, Esq., and is so constructed and arranged that the lead ore requires no lifting, but descends from process to process, until it is brought out as lead at the lower part of the mill. The Company have recently erected a number of cottages, with small gardens attached, which are to be occupied by their workmen here on the same terms as those in Masterman Place, Middleton.

The chapel of ease adjoins the botanic gardens of T. Hutchinson, Esq. It is a neat building, consisting of a nave and chancel, capable of accommodating 150 persons. There is a small cemetery attached to the

chapel; but it is much too crowded. The living is a curacy, not in charge nor certified, but endowed by a grant from Queen Anne's Bounty. The rector of Middleton, who presents to the living, pays an annual stipend of £6 to the curate; and by an order in council, April 17, 1844, the ecclesiastical commissioners were empowered to make an annual grant of £27 to the chapelry of Eggleston, the net income of which was to be £100. There is no glebe house. The Rev. Wilson Brown, A.B., is the present incumbent. The register book contains baptisms, burials, and marriages from 1795 to 1812.

There was a small chapel at Eggleston, built by Mr. Emerson Dowson, of London, for the use of the Independents and Wesleyans; but it is now converted into a dwelling house. The Wesleyan Methodists erected a spacious chapel in 1828, capable of seating about 150 hearers. It was built by subscription, £20 being contributed by Mr. John Parker, and £5 each from various other persons. It is a stone building, with a roof of Westmoreland slate. The school, properly divided for boys and girls, is attended by about 100 children, and is maintained by the Duke of Cleveland, the London Lead Company, and T. Hutchinson, Esq.

For an account of *Sanderson's Charity*, one of the recipients of which must be an inhabitant of the township of Eggleston, see page 29.

In the savings bank at Barnard Castle there is a sum of £20 lodged, stated to have been left many years ago by a lady, the interest to be given to the oldest poor widow at Eggleston. The interest, 17s. per annum, is disposed of accordingly.

The *Eggleston Mechanics' Institution*, established about seven years ago, is held in the school-room. There are from 50 to 60 members, and the library consists of about 700 volumes. It is supported by public contributions and a small charge for membership.

The *tolls* on the Egglestone coal road produce about £670 per annum, as follows (1853):—Eggleston gate, £295; Stotley gate, £168; and West Pits gate, £206—total, 669; this sum being above the expenses of collecting.

Eggleston Hall, the seat of Timothy Hutchinson, Esq., is situated to the south-west of the village, and is an elegant residence, surrounded by tastefully arranged pleasure grounds, contrasting happily with the bleak hilly region in its immediate vicinity. An artificial cascade of considerable height is formed by the stream which runs through the grounds; and a subterranean promenade, excavated by blasting the solid rock, winds

along the side of the Tees, which here divides itself into several channels.

An ancient monument, consisting of a circle of rough stones, with a cairn in the centre, known by the name of the *Standing Stones*, stood about a mile north from the village, and, from the proximity of a large tumulus, was supposed to be a memorial of some battle fought in early times, but was more probably a druidical remain. For many years, the stones were removed for the purpose of repairing the neighbouring roads; and no remains of the circle are now left.

The manor of Eggleston formed part of the possessions of the Earls of Westmoreland; and, on the breaking out of the Northern Rebellion in 1569, sixteen persons joined it from this place. In 1631, it was purchased from the citizens of London by John Child, of the Inner Temple, Esq., and Daniel Britain, citizen and vintner, who, in the following year, conveyed it to Tobias Ewbank, of Staindrop. It was afterwards the property of a family named Sanderson, and, about the beginning of the last century, came into the possession of an ancestor of the present proprietor, Timothy Hutchinson, Esq.

An act for dividing and inclosing certain parts of the moors, commons, and waste lands within the manor of Eggleston, was passed in 1785; and the plots were marked out on the 23rd of May in that year. The award of another act, for dividing a part of the remaining portion of the common, was deposited in the Exchequer, city of Durham, on the 18th of January, 1817. The undivided portion is now a stinted pasture. *Folly*, or *Foxgill* farm, containing about 100 acres, was purchased some time ago from — Harrison, Esq., and is the property of T. Hutchinson, Esq.

NEWBIGGIN.

THE township of Newbiggin adjoins that of Middleton on the north-west, and contains 4,627 acres. Its population, at the six periods of enumeration, was 281, 294, 416, 507, 516, and 583. Of the latter number, 307 were males and 276 females; and there were 92 inhabited houses and 1 building. The annual value of property was estimated for the county-rate, in 1853, at £1,190 15s. 6d.

For in-maintenance, clothing, and funerals, the Teesdale Union received from the township of Newbiggin, in the year ended March, 1854, £4 17s.; for out-relief and lunatics, £64 12s. 3d.; for irremovable poor, salaries, and other common charges, £44 15s. 5d.; for

constable and costs before magistrates, £1.; for law costs, revising barrister, and jury lists, 7s.; for journeys, salaries of assistant overseers, incidental expenses, &c., £4 3s. 6d.; total of expenditure, £119 15s. 2d., towards which £12 0s. 6d. was received as re-payments for relations and from other sources, shewing a net total for the year of £107 14s. 8d.; whilst that of the year 1852-3 was £119 18s. 6d. £3 2s. 6d. was paid for vaccination, £1 5s. for registration, and the overseers paid to the county-rate £19 16s. 11d.

The village of Newbiggin is situated on the north bank of the Tees, 2½ miles north-west from Middleton. It contains a small Wesleyan chapel, which is one of the oldest in the district, and in which the Rev. John Wesley occasionally preached. There is a smelt mill and a few tradesmen. A former public house is now converted into a private dwelling. A road from Newbiggin to Daddiy-Shields, in Weardale, was constructed between 20 and 30 years ago, and affords a track over the wild and steep fells between the two places. The principal part of the township of Newbiggin is the property of the Duke of Cleveland; but some portions of it were held by the late Ven. Archdeacon Headlam.

School.—By indenture, July 18, 1799, William Tarn gave £400 three per cent. consols, upon trust, to the Drapers' Company of London, from the annual dividends of which 20s. was to be deducted for expenses, and the balance paid to the rector and churchwardens of Middleton, who were to pay 10s. 6d. annually to the curate for examining the children of Newbiggin school, on the Sunday nearest to the 2nd day of July (the birth-day of the said William Tarn), in the parish church, and preaching a sermon upon the occasion. Should there be no curate, the money was to be paid to the rector, or such other minister as should perform the duty. From the remaining money a competent supply of coals was to be provided for the school, and the balance paid to the schoolmaster. The sum of £10 9s. 6d., the net proceeds of the charity, is now paid to the master, who engages to supply the school with firing, which the churchwardens consider it a part of their duty to see fulfilled. The average attendance of children at the school is about 50, all of whom pay for their instruction. The building belongs to the township, the inhabitants of which claim the right to appoint

the schoolmaster, which has been hitherto exercised by the rector of the parish; and the subject is under judicial inquiry.*

Lind's Charity.—£1 12s. 6d. per annum, the interest of £40 left by Cuthbert Lind to the poor of this township, has been improperly carried to the account of the poor-rates.

Poor's Stock.—There is now no trace of about £20, mentioned in the parish books as poor's stock belonging to this township.

BOWLEES HOUSES.—A Primitive Methodist chapel was erected at Bowlees about three years ago. The site was given by the Duke of Cleveland, and the cost of the building defrayed by public subscription. It is understood that the promise of the site was procured from his grace by one of the members of the Primitive Methodist body, who, meeting the duke one day, made known to him personally the wants of his brethren. His grace demanding to know what good the Primitive Methodists had ever done, that they should ask such a favour, the supplicant immediately replied, that "they had made the drunkard cease to drink, the swearer cease to swear, and the *poacher to lay down his gun.*"

The Bowlees Burn flows into the Tees from the north, a short distance north-west from Newbiggin.

Winch Bridge.—The river Tees is, near Bowlees Houses, crossed by the Winch Bridge. The original structure is said to have been the earliest suspension bridge in Europe, having been certainly in existence more than a century ago, though the exact date of its erection is unknown. Its original purpose was to afford a passage for the miners residing in the village of Holwick, on the south side of the river, to and from their work in the mines in Middleton. Its dimensions were much exaggerated in the accounts given by tourists; and Hutchinson states its length at 70 feet, and its height from the river at near 60. In a description given by W. C. Trevelyan, Esq., in Brewster's *Philosophical Journal*, 1828, its real dimensions are thus stated:—

Length of bridge between the rocks, 59 feet 4 inches. Length of chain supported by the rock on the north side, 12 feet. Length of do. on the south side not visible, being covered with earth. Centre of bridge lower than the ends, about 3 feet. Height of bridge above the surface, 21 feet. Depth of the river, 8 feet 6 inches.

* An act was passed in the parliamentary session of 1853, entitled "An Act for the better Administration of Charitable Trusts," (cap. 137). A board of commissioners, inspectors, &c., has been appointed under its provisions, with powers to inquire into the condition and management of charities, to compel the production of accounts, to

examine parties on oath, &c.; but as the various clauses of the act are important, especially in the county of Durham, where charitable endowments are numerous, an epitome of the provisions of the Administration of Charitable Trusts Act will be given at the close of the account of the present division of the county (Darlington Ward).

The iron links were about 6 inches long, $1\frac{3}{4}$ inches broad, and the bars of which they were formed, $\frac{1}{2}$ inch and $\frac{3}{8}$ inch thick. The chains were fixed by bolts into the rock at each end, and on them were laid wooden cross-rails $3\frac{1}{2}$ feet distant; on these were laid deals lengthwise, forming a floor 21 inches broad, with a hand-rail $2\frac{3}{4}$ feet high on each side. Smaller chains near the ends were fixed to the rocks, to prevent the bridge from swinging; a purpose which was very imperfectly attained.

From long exposure to the weather, as well as from friction, some of the iron links were latterly almost worn through, and the boarding and hand-rails were rotting and crumbling away. In August, 1820, a party of nine men and two women were passing the bridge from Holwick, most of whom being upon it at the same time, the unusual weight destroyed the balance; and one of the chains being overstrained by a previous inclination to one side, it snapped, and three men were thrown into the Tees. One of them was dashed to pieces on the rocks; the others, falling into the water, were saved. The bridge was soon after repaired by the late Earl of Strathmore; but it was subsequently taken down, and a substantial modern foot-bridge, suspended from metal posts, was erected in its place by the late Duke of Cleveland. The precipices on each side of the river at this place, and the rocks in its channel, are of basalt; their ruggedness breaks the torrent into numberless turbulent cascades, rapids, and eddies, which, especially in times of flood, render the scene wild and romantic in the extreme.

FOREST AND FRITH.

THE extensive township of Forest and Frith consists of three Parts, known as Ettersgill, Middle Forest, and Harwood Parts, containing altogether 17,270 acres, and extending from the township of Newbiggin, about $4\frac{1}{2}$ miles north-west from Middleton, to the borders of Westmoreland. Its population has progressed, at the six periods of return, as follows:—460, 601, 723, 760, 884, and 904; the latter number consisting of 483 males and 421 females, inhabiting 119 houses. The

* THE REV. GEORGE CARPENDALE died on the 13th April, 1838, aged 73. He faithfully discharged his duties as schoolmaster and reader at Harwood chapel from the year 1789, and with equal usefulness and propriety those of his sacred office from the time of his ordination in the year 1808. The following interesting sketch of the romantic career of Carpendale is from the pen of the Rev. J. L. Low, A.M. :—

property assessed to the county-rate was valued, in 1853, at £1,366 7s.

This township contributed to the Teesdale Union, during the year ended March, 1854, 10s. 6d. for extra medical charges; £138 12s. 10d. for out-relief and lunatics; £74 4s. 4d. for irremovable poor, salaries, and other common charges; £1 8s. 6d. for constable and costs before magistrates, &c.; and £21 14s. 7½d. for journeys, salaries of assistant overseers, incidental expenses, &c.; making the total of expenditure, £236 7s. 9½d. The repayment of relief by relations and other receipts amounted to £12 1s. 3d., leaving a net total of £224 6s. 6½d., which was £19 1s. 1¾d. more than that of 1852-3. For vaccination, £11 7s. was paid; and for registration, £2 11s. 4d. The overseers paid £22 11s. 8d. to the county-rate.

Harwood district is the highest and most remote portion of the parish, and the westernmost part of the township. Within the last thirty years, considerable improvements have been made in the roads of the district. A former road, ascending steeply by the side of Harwood Beck, has been superseded by a new line, which, leaving the old one at Bowlees, near Newbiggin, passes the High Force, crosses the old road, and, winding to the north of it, ascends with a more gradual inclination, traversing the lofty moors which divide the county of Durham from Westmoreland and Cumberland. Where this road has attained its highest elevation, nearly 2,000 feet above the level of the sea, commences the dreary and apparently boundless waste of *Yadmoss*, which in former days was all but impassable, especially in winter; and many casualties occurred during the heavy snow storms, which frequently bewildered and overwhelmed the solitary traveller. *Yadmoss*, however, is not, where it is traversed by the road, so extensive as it appears to be. A little beyond the middle of it is Crook Burn, an insignificant brook, which here forms the boundary between Cumberland and Durham. A stone with B on its front, G on one side, and H on the other, indicates the division of the township of Garragill and Harwood district.

Harwood Chapel and *School* stand by the river side, near the head of Harwood Beck, some distance from the road. The old chapel, in which Carpendale* so

“Between 50 and 60 years ago, a somewhat remarkable man became schoolmaster of Harwood. His name was George Carpendale, a person of a very respectable family; a brother of his being a clergyman at Armagh, connected, it is believed, with the cathedral there. In his early days, however, George had led a dissolute life, and had been impressed as a sailor. After having been for some years at sea, he was discharged as unfit for service, on account of his wounds. He

CAULDRON SNOT, HIGH FORCE, &c.—The course of the Tees, as it rushes along the south-western border of this district, displays a succession of natural wonders. The tour from Yadmoss to Cauldron Snout and the High Force is thus described by Mr. Sopwith:—

“Pedestrian tourists, accustomed to mountain travelling, may readily find their way from the descents of Yadmoss to Cauldron Snout; but most visitors will do well to engage a guide, who may readily be procured by inquiry at any of the farms or ‘onsteads.’ From Harwood, access may nearly at all times be had on foot; but only in dry weather by horses. In either case, it is a fatiguing journey of about three miles, chiefly over the steep and rugged sides of Harwood Fell. On gaining the summit of this lofty moor, an expansive but dreary prospect bursts upon the view. Wide and moss-covered moors extend in a gradual slope to the Tees, which here winds its way through a wilderness of the most stern and desolate aspect. In the distance, a vast amphitheatre is formed by successive ranges of mountains in Yorkshire, Westmoreland, and Cumberland, and which, towards the north, seem blended like waves into each other. But the bright spot and redeeming interest of this prospect is the Weel, whose waters, spread in the hollow of a vast and dreary basin, present a beautiful contrast to the dark heath of the barren moors which surround it, while its width and serpentine form give it the appearance of a broad river flowing through the midst of a desert.

“The Weel is a sullen lake, in breadth about half a mile, and three or four times that length, formed by the interception of the Tees by basaltic rocks, over which the water flows into a deep and rapidly descending gorge, and forms the waterfall of Cauldron Snout.

“On approaching the foot of the Weel, the rough road, over moss and ling, is suddenly more roughened by numerous projecting points and edges of basalt, which render either riding or walking both troublesome and somewhat dangerous. On descending the rocks, the visitor beholds the waters of the Tees rushing with impetuous force down a steep basaltic chasm of two or three hundred yards in length. Near the top is

a wooden bridge, thirty feet long, over the fall, from whence the visitor may view the swift and foaming current beneath. The fall is interesting at any time even in very dry weather, the stream gamboling in its descent amongst the various channels which the rocks afford. But when the Tees is swoln with rains, it rushes down in one impetuous and unbroken torrent of almost resistless force, and, with its sides of frowning tower-like cliffs, forms a spectacle truly terrible and sublime.

“Those who delight in the minor beauties of nature will here find them united with her boldest works. The variously-coloured lichen on the surface of the basalt is extremely beautiful, and not less so are the wild flowers which spring from the sides of the chasm. The examination of these, and viewing the fall from various situations, will, to most persons, afford much gratification. But it must be admitted that to some, and especially to ladies, the attractions of Cauldron Snout may scarcely repay the difficulties of the journey. A good horseman with a skilful guide will enjoy a ride on the rocky edges of scars, and over loose basaltic stone, deep moss-ruts, and frequent banks, both deep and stony; but it is well that the tourist should be apprised of this before he undertakes a jaunt in which such fatigues must necessarily be encountered.

“Following the course of the Tees by rugged banks for nearly five miles, the tourist reaches the well-known cataract of High Force. The river, in traversing the mountainous country which has just been described, becomes rapidly augmented by various tributary streams, and, after its junction with Harwood Beck, assumes a wide and noble aspect. The fall of such a river, at fifteen miles from its source, over a precipice of upwards of fifty feet in height, may readily be conceived to be an object of the highest interest as regards remarkable and sublime scenery; and it is scarcely less interesting to the geologist from the clear development of the strata it displays.

“The river immediately above the fall is divided by a lofty rock into a greater and a less channel, the former of which in dry weather contains the whole

the interior, and the professor, who supposed the family to be absent, ventured to indulge in a temptation so irresistible as the sight of a good library. Great was his surprise and consternation to behold the family and a circle of friends! Explanation of so unwonted a visit in such a costume, so armed, and on a Sabbath eve, seemed beyond hope, and a speedy retreat was made. Safely returned to the inn, carrying the sturdy sapling, nearly seven feet long, he rejoiced in his escape, and declared he would keep the said sapling as a household god; but, alas! on the following morn a portion of it had

been taken to light the fire. The worthy landlady, observing that the professor did not enter the church, at once expressed her opinion to his two companions that he “surely maun be a Papist.” Professor Pillans still occupies the honourable position he then held, as Professor of Humanity, in the University of Edinburgh; and it was entirely from his suggestion that Mr. Sopwith was induced to write the “Account of Mining Districts,” from which the above and other quotations, relating to Weardale and Teesdale and to the lead mines generally, have been made.

stream, while at other times both channels are filled with impetuous torrents, which, rushing over the precipice, form a cataract on each side of the central mass of cliffs—

'That rear their haughty head
High o'er the river's darksome bed.'

The principal channel is worn into a rugged descent at the edge; but the greater part, probably about 40 or 50 feet, is quite perpendicular; and over this the descent of so large a body of water at all times insures a gratifying treat to the lovers of natural scenery. The less channel is considerably worn, so that, when dry, a person may without much difficulty climb up it, and examine the junction of the basalt with the adjoining strata.

"Hutchinson describes the main channel as having a perpendicular fall of 82 feet; but this is much over-rated. The height of the central rock is stated in the 'Tour of Teesdale' to be only 63 feet; the entire perpendicular height of the fall probably does not exceed 50 feet, and the inclining falls above may be 15 or 20 feet more. Nearly one-half of the entire depth of the adjacent rocks consists of basalt, which, in the middle of the stream, towers up into a rugged but picturesque summit. Except in high floods, this station may easily be gained, and from thence the spectator can look down and behold the rolling torrent precipitated into the abyss below. Being on the giddy verge of so lofty a rock, the rapidity of the stream, the thundering noise with which it mingles with the deep sullen waters below, and the clouds of foam which often reflect the iris' lovely hues, altogether combine to produce mingled sensations of terror, astonishment, and delight.

"Having taken this *inverted* view of the Force, the tourist, by walking about two hundred yards along the top of the banks on the north side of the river, will find a somewhat rugged but not very difficult descent down the rocks and underwood, and from the sides of the river may command a view of the fall at various distances. Here lofty precipices on each side form a magnificent amphitheatre, on the sides of which may be traced the rapid rise of the strata in a north-west direction, and the basalt regularly ranging with the

other strata. The upper part and summit are more or less covered with brushwood and a few ash and yew trees; while, at the extremity of the vista, the ceaseless roar of the descending flood completes the majestic character of the scene."

The wild scenery above described owes its peculiar character to the rugged outline, the great extent, and thickness of a large bed of stratiform basalt. At High Force and Cauldron Snout, the river cuts through it, and displays the beds upon which it reposes. About half a mile below Cauldron Snout, on the north bank of the river, the violent action of heat upon the beds below the basalt is very evident. An example of the mechanical effects produced on the strata is to be met with by the side of the foot-path leading to the pool, beneath the High Force, which may be easily observed by any one visiting the waterfall. The limestone under the whin is much altered, having become white and crystalline.

In the Tees, above Cauldron Snout, the whin sill may be seen about 300 yards above the Weel. The bed above it here is a limestone of considerable thickness, rendered generally of a coarse granular texture, and of a white colour. In ascending the stream, the basalt is covered by the superior strata; but at a lead mine called Nether Hurth,* the whin was worked into in following a vein, and found to bear a good deal of ore. In the mine at Troutbeck Foot also, on Tees side, four miles above Cauldron Snout, the whin was sunk through in following the vein for lead ore, of which it contained a rib 12 to 14 inches wide. It was here found 3 fathoms below the surface, and was 11 fathoms thick. At Birkdale lead mine, by the side of Maize Beck (a considerable stream, which joins the Tees near Cauldron Snout), two shafts were sunk into the whin in search of a lead ore vein, which was found 3 feet wide, having in it sometimes a rib of ore 1 foot thick. Maize Beck, for the greater part of its course, runs upon the surface of the whin sill; and in the higher part, near the edge of the fells, that bed is laid bare by denudation for a great extent of surface. The whin occurs in the lower part of Lunedale: it is also found at Lune Head, but is not known any further

* Besides the extensive lead mines worked by the London Company, there are several royalties taken by adventurers, who form themselves into companies. The *Nether Hurth Lead Mining Company* is divided into 64 shares, and has been established about 20 years; the royalty belongs to Sir Richard Tufton, and was previously the property of the Earl of Thanet. A duty of 1-7th is paid to the lord of the manor. *Tees Side Lead Mining Company* has been established

about three years. It is divided into 6,400 shares. The workings are in the parish of Alston, near the source of the river Tees; the commissioners of Greenwich Hospital are lords of the manor, to whom 1-7th dues are paid. Adjoining Tees Side Mine is *Green Hurth Mining Company*, divided into 128 shares, and has been established many years. *Cross Gill Head Consols*, another mining company, divided into 6,400 shares, was established in 1854.

to the south. In a section below Cauldron Snout, the basalt is seen crossing the edges of several inclined beds of limestone, &c.

“In no situation,” says Mr. Hutton, whose description has been followed in the above detail, “is the chemical action of the basalt so apparent as in Teesdale; in no other situation are the limestones and shales acted upon so powerfully as they are there, both above and below that bed; and the impression upon my mind is, that, by the depth of the valley, we there cut so far into the strata as to approach near to an outlet of the volcanic matter. Not that I suppose the basalt of Belford or Holy Island to be ejected from hence as from a crater; but that, perhaps, a great crack or fissure in the strata existed, of which the whin sill is the overflowing. This idea of High Teesdale marking, as it were, a centre of volcanic action, is perhaps corroborated by the general direction of the great basaltic dykes of Durham and Yorkshire, they appearing to spring from hence as from a focus, which had continued in activity at different periods, up to one beyond even the consolidation of the oolitic series.”

BLEAK HOUSE.—The external features of Teesdale resemble those of Weardale; and the identity of occupation in the two districts, have naturally tended to produce a similarity of character amongst their inhabitants. (See vol. i., p. 677.) A local pen has given a graphic description of some of the features of landscape attractions which tend, in no small degree, to attach the inhabitants of Teesdale to what, on a first inspection, and especially if visited in stormy weather, might seem bare and cheerless hills, such, indeed, as the same writer has, in another production, called “treeless, miserable wastes”—“region of mists, and birth-place of the storm.” Yet, on a further acquaintance, deep and impressive scenes of beauty and sublimity are to be found—a stillness—a quiet grandeur and amplitude, which, in solemnity, and even in landscape effects, far exceed what is commonly found in lower districts. This has been well described by Mr. Pearson, formerly of Middleton, in a visit to *Bleak House*—not the ideal fabric of Mr. Dickens’ tale so called, but a veritable dwelling in Lunedale bearing that name in 1827. As the influence of scenery forms the groundwork of the earliest local attachments, our readers will perhaps not object to the portraiture of a true *Bleak House* and its desolate adjuncts, situated nearly on the very borders of the county of Durham:—

“We slowly, and on foot, ascended the mountains

that separate Teesdale from Lune. The road, a very twisted and zigzag one, wound its way by mount and hollow, rock and pool. I was amazed to see so many deep gills, or ravines, in the mountain side, which appeared from Middleton to be uniformly smooth and regular in its ascent. We pursued our way, however, sometimes scrambling over its bold elevations, and at others plunging into the deep and hidden recesses, until we reached the fell top, where we made a ‘breathless pause.’ An extended prospect opened to our view. To the right of us, the romantic and varied scenery of Teesdale lay stretched out before us. The Tees, seen in various points, had a curious and picturesque appearance: at one place, it made a bold curve—at another, a right angle—then was lost in a chasm—then sprang over a precipice—and then, as if tired of gambolling, it swept proudly on in a right line. The scenery was congenial to the stream: here a terrific line of basaltic precipices carried the eye to the bleak and boundless wilds that stretched beyond—there, smiling woods, villages, white-washed hamlets, with the fugitive rivulets that were coming in from the mountains, mingled beautifully with each other, and formed a scene that, to a poet’s eye, might have been fraught with inspiration. On our left lay a far-extended waste of heath, bounded by, and melting into a chaos of lowering clouds, whose alpine ridges, catching the sun beams at partial openings, produced a mimic representation of mountain scenery, in all its fantastic and dismaying forms.”

To Bleak House, then distant more than seven miles from any church, the writer and his friend, a Home Missionary, were going, to meet an assembly of the rustic dwellers of the lonely dale. They found it more populous than it had at first appeared; “most of the farm houses and miners’ cottages being built in the sheltered hollows by the water side, and not visible at any distance, from the numerous intervening hills;” a description which applies generally to the habitations throughout the adjacent dales. An account is given of the interior of the dwelling which served on this occasion as a place of worship for seventy persons. Those who would study the manners and trace the character of a people so secluded as these are from the world, must accurately regard many humble details which escape attention in the crowded thoroughfares of the world. Travellers on the continent, who follow only high roads and railways, travel in steam boats, and dwell in fashionable and expensive hotels, can form no idea of the quiet, simple, and inexpensive modes of life

which prevail in less frequented districts; and tourists, who visit the Lakes of Cumberland and Westmoreland, see indeed the mountains, dales, and lakes, but meet at every stage an artificial and modernized condition of things, altogether different to that which the pedestrian finds on penetrating the inner recesses of the country.

Bleak House consisted of "two rooms on the ground floor in a line with each other; the first and largest being the kitchen—the other answering the double purpose of parlour and bed-room. The windows were extremely low, and the bank on the opposite side, rising abruptly to a considerable height, gave to the house a dark and gloomy appearance. The accommodations were of the most humble order: a large copper kettle, hanging above the preacher's head, was his only sounding board; and a chair, turned towards him, his pulpit. All the chairs, benches, and stools in the house were arranged for the hearers; and a ladder set upon trestles supplied ten or a dozen of them with seats. Yet rude as these accommodations were, there was one part of the arrangement which might have taught a more polished congregation a charming and perhaps requisite lesson:—the long settle, and the chairs by the fire side, were reserved for the old people and those females who had young children in their arms. Whether the warmth of the fire had a kindly influence in preventing the coughing of the former and the crying of the latter, I cannot pretend to determine; but they were as much hushed as any of the rest of the little assembly. Both kitchen and parlour were crowded, and comprised every age, from infancy to grey hairs. Some of the venerable old men appeared like solitary remnants of a former generation—*pieces of wreck left on shore* by the storms of former years—survivors of the tempests in whose billows our fathers found their graves. Their faces told the tale of long-past years. Single-breasted coats, with huge flat buttons, exhibited a fashion that had elsewhere become obsolete. Their trembling knees, feebly knocking against each other, proclaimed that they also had nearly reached *the mouth of the stream*—the roar of the ocean was sounding in their ears—the tide of life about to subside in the waters of eternity.

"The preacher was listened to with deep and earnest attention, as he discoursed from words of exquisite beauty and impressiveness, well suited to these lonely wilds: 'For the Lord shall comfort Zion: he will comfort all her waste places; and he will make her wilderness like Eden, and her desert like the garden of

the Lord.' His appropriate and affectionate address seemed to make a strong impression on the minds of his rustic hearers. Nothing could be more gratifying than the reception he met with at the close of the meeting. Many shook him cordially by the hand, and thanked him for coming so far to preach to them; and others, who only wished him 'Good day,' did it in that kind, warm-hearted manner, which seemed to acknowledge a benefit and solicit a better acquaintance. The good people of the house also, Martha like, hastened to make the parlour ready for our reception.

"Whilst taking a little refreshment, I asked the master of the house where all the people came from, and give his characteristic reply:—'Many of them come a gay bit off from the dales further ower, some from the houses along the fell edges by the limestone quarries, and a canny few from the onsteads (houses) by the beck meetings, a mile further up. It's not much preaching one has the chance on here; and folk *are fain to come* when they can get it so near them.'

"We set out on our return. A considerable quantity of rain had fallen during our stay; the sun was sinking amidst the broken clouds; a hundred new-formed rivulets, glittering in his beams, crossed the dark heath with lines of light; the beautiful iris, heaven's own messenger of peace and good will to man, stretched its bold arch from fell to fell, amidst the crags; the fleecy mists floated in fantastic and ever-varying shapes; the mountain tops, towering above the shadowy chaos, revelled in the sun's unclouded brightness; while in the distance, the lofty ridges of the Westmoreland hills were seen emerging, like a new creation, from the dissolving glories of the western sky. We looked back on the scenery we had left—the rainbow stood directly over it, the extremity of the magnificent arch almost touching the humble roof of the dwelling which had formed the little church of the valley. The wilderness was indeed like Eden, and the desert smiled 'like the garden of the Lord.'"

Such is a vivid portrait of landscape scenery, of rustic habits, and of devotional feelings, which form the deep foundations of that ardent love of home which so strongly attaches the miner to his native dales. Neither words nor pencil can convey an idea of the romantic charms of wild moorland scenery: aerial tints often clothe the summits of the mountains, so blended with floating mists and clouds that it is difficult to distinguish the hues of earth from those of heaven.

PARISH OF COCKFIELD.

THE parish of Cockfield is bounded on the west by Middleton-in-Teesdale, on the south by the chapelry of Barnard Castle and the parish of Staindrop, on the east by the chapelry of St. Helen's Auckland, and on the north by that of Lynesack. It consists of the townships of Cockfield and Woodland, containing together 4,416 acres. The latter township, however, is completely separated from that of Cockfield by the chapelry of Lynesack and the township of Langley Dale in the parish of Staindrop.

COCKFIELD.

THE annual value of property assessed for the county-rate in the township of Cockfield, in 1853, was £1,518 18s. 6d. The number of inhabitants, in 1801, was 461; in 1811, 475; in 1821, 533; in 1831, in consequence of the employment of labourers in railway works, it had increased to 790; in 1841, it was 994; and in 1851, owing to the partial working of collieries and the cessation of labour at a large stone quarry, it had decreased to 647, consisting of 341 males and 306 females. In 1841, there were 194 inhabited houses and 17 uninhabited: in 1851, the numbers were, 147 inhabited, 46 uninhabited, and 1 building.

In the year ended March, 1854, the township of Cockfield contributed to the Teesdale Union £12 17s. 10d. for in-maintenance, clothing, and funerals; £83 5s. 6d. for out-relief and lunatics; £42 16s. 8d. for irre-

moveable poor, salaries, and other common charges; 18s. for constable and costs before magistrates, &c.; £1 13s. 6d. for law costs, revising barrister, and jury lists; and £4 4s. 6d. for journeys, salaries of assistant overseers, incidental expenses, &c.; the total of expenditure being £145 16s., which was less by £9 15s. 9d. than that of 1852-3. The cost of registration was £2 13s. 4d.; and the county-rate paid by the overseers was £25 13s. 3d.

The village of Cockfield is situated 6 miles south-west from Bishop Auckland, and 3 north from Staindrop. It is irregularly built; and much of its primitive rural character has been superseded by the erection of houses for the colliery population which has, for some years, found employment in the vicinity. There are a brewery, three public houses, a few beer shops, and several mechanics, tradesmen, and shopkeepers. A school-house was erected by Mr. George Dixon,* of

* GEORGE AND JEREMIAH DIXON.—These eminent and ingenious men, born at Cockfield, were the sons of an old and faithful servant of the Raby family, whose portrait is preserved at the Castle, inscribed, "An Israelite indeed, in whom there is no guile." They received the rudiments of the mathematics under Mr. John Kipling, of Barnard Castle; but their education was chiefly self-acquired. George, named in the text, though of a genius that rivalled Jeremiah, confined himself to a more retired life, being employed in the north in various coal works and other mining adventures, in which he displayed an extensive knowledge and competent judgment. He is also said to have been a good mathematician, a mineralogist, a painter, an engraver, and a great experimentalist in chemistry, hydraulics, and pneumatics, an excellent land surveyor, and a most beautiful draughtsman.

Jeremiah Dixon was a contemporary, and on very intimate terms, with that celebrated and strange compound of genius and eccentricity, William Emerson, of Hurworth; and also with John Bird, of Bishop Auckland, another kindred spirit, (see vol. i., p. 558,) through whose recommendation he was selected by the Royal Academy of Woolwich, as a fit person to be sent out to the island of St. Helena, for the purpose of observing the transit of the planet Venus across the sun's disk. When Dixon was undergoing his examination, at that establishment, with respect to his qualifications for the task, the first question put to him was, "Whether did you study mathematics at Cambridge or Oxford?" With a good deal of natural simplicity he replied, "At

neither place." "Then at what public school did you get your rudiments?" "At no public school," was the reply. "Then at what particular seat of learning did you acquire it?" "In a pit cabin upon Cockfield Fell," said the humble scholar.

His abilities were tested, and found equal to the task; he was accordingly sent, and performed it to the satisfaction of his employers. The academy which sent him out, was a military one; and from that time, till the day of his death, he wore its uniform, which was a red coat and a cocked hat. He was also employed to set the limits and bounds of the provinces of Maryland and Pennsylvania, in America.

His genius for invention manifested itself in many other ways, originating many of the mechanical contrivances and machines now used about the coal works. It has been stated, that he was the original discoverer of coal gas; and that his own garden wall, on the edge of Cockfield Fell, was the first place ever lighted by coal gas. This discovery is generally attributed to William Murdock, a native of Cornwall, who, in the year 1792, employed it for lighting his own house and offices at Redruth; and, in 1798, constructed the apparatus for the purpose of lighting Bolton and Watt's works, Soho, near Birmingham. With respect to Dixon's claim to the discovery, the probability is, that it was simultaneous with that of the other; and that, from his residence in an obscure locality, and unostentatious disposition, his discovery did not become known till after that of Murdock. His first experiment is said to have been made—like that of many other embryo philosophers—with

Cockfield, which was afterwards enlarged at the expense of the parishioners, and used as a meeting-house by the *Wesleyan Methodists*. It is now a Centenary chapel, and is a neat building, capable of holding about 200 persons. The *Primitive Methodists* erected a chapel in 1826. *Cockfield Hall*, formerly the property of the ancient family of Watson, and now of the Boweses, is an old mansion, similar in style to many common in this part of the county of Durham: it is situated a little to the south of the village, and has long been occupied as a farm house. A considerable portion of the moat around it is still visible.

THE CHURCH.

COCKFIELD church is a humble structure, consisting of a nave and chancel, without side aisles or tower, capable of accommodating 200 persons. The entrance is on the south; and a pointed arch separates the nave from the chancel. The font is a ponderous octagonal basin of freestone; and the piscina still remains in the wall near the altar-table. The pulpit is of oak, ornamented with antique carving. The arms of Charles II. are sculptured on the north wall of the chancel; and near it is a painting of the royal arms, dated 1726. The nave is lighted by three narrow pointed windows on each side; and there are three lancet lights on the east, and two on the south side of the chancel. At the west end of the nave there is a gallery.

In the church-yard, near the south-east corner of the chancel, is a recumbent figure of a female in stone, 3½ feet long, which village tradition asserts to be a representation of a pupil drowned in the moat at Cockfield

rather a rude sort of apparatus: his retort being an old tea kettle; and for pipes, to convey it along the orchard wall, he used the stalks of hemlock (locally called humlock). He died in Cockfield, and was buried at a little chapel belonging to the Society of Friends (of which body he was a member), which stood at the village of Old Raby, near Raby Park. This chapel was pulled down, many years ago, by the late Duke of Cleveland, for the purpose of improving the park and road near the castle; and a dog-kennel was built upon its site, so that the grave of this man of genius has neither line nor stone to indicate where his bones are laid. The neglect which the burial places of the two Dixons seem to have fallen into may be attributed, in a great degree, to the peculiarity of the Society of Friends, in objecting to monuments and tomb-stones in memory of their departed friends.

JOHN BAILEY, Esq., of Chillingham, Northumberland, was the son of Mr. William Bailey, of Blades Field, near Bowes, in the county of York. He showed a taste for drawing very early in life, and was patronized and assisted both in that and in mathematical studies by Mr. George Dixon, of Cockfield, who was his uncle by marriage. He was employed when a young man by that gentleman as tutor to his children, during which time he devoted his leisure

Hall, at some time when that building was a school; but as the effigy is evidently of higher antiquity than such an appropriation of the hall would warrant, the probability is, that, allowing the truth of the catastrophe, the sufferer was a member of the resident family.

REGISTERS.—Book No. 1 contains entries of baptisms, burials, and marriages from 1578 to 1617; Nos. 2 to 4, baptisms and burials from 1652 to 1812, and marriages from 1652 to 1753, interrupted by No. 5, baptisms from 1806 to 1811; and No. 6, marriages from 1754 to 1812 (deficient from 1617 to 1652).

Cockfield rectory is a discharged living in the deanery of Darlington, with Staindrop vicarage annexed; the Duke of Cleveland, patron. King's books, £9 18s.; Tenth, 19s. 9½d.; Episc. proc., 4s. 6d.; Archid. proc. 2s.; Synodals, 2s.

RECTORS.—Robert Arnays; William Horne, 1411; John Lyndesay, 1411, p. res. Horne; John de Hoton, 1420, p. m. Lyndesay; Thomas Sproxtton, 1432, p. res. Hoton; William Burgh, occ. July 12, 1452; William Askewith, cap. 1504; Nicholas Stocall, cl., 1522, p. res. Askewithe; William Clayburgh, cl., November 30, 1540, p. m. Stocall; Richard Baylis, cl., August 28, 1548, p. res. Clayburgh; Robert Dixon, A.M., April 13, 1575, p. m. Baylis; Timothy Bossall, A.M., June 24, 1616, p. res. Dixon; Thomas Lyndley, June 27, 1617, p. m. Bossall; George Trench, A.M., July 1, 1621, p. res. Lyndley; * Toby Sedgwick, occ. June 18, 1658; Simon Gilpin, September 27, 1690; Peter Farren, May 13, 1700, p. res. Gilpin; Simon Gilpin, A.M., 1714, p. m. Farren; Thomas Browne, 1717, p. m. Gilpin; Benjamin Worgom, 1724; William Gibson, March 14, 1734; William Addison, cl., July 20, 1746, p. m. Gibson; Peter Fisher, cl., 1751, p. res. Addison; George Davison, 1793, p. m. Fisher; John Jones Thornhill, A.M., (rector of Middleton-in-Teesdale,) 1806, p. m. Davison; J. W. D. Merest, A.M., (rector of Cockfield and perpetual curate of Darlington,) 1829, p. m. Thornhill; Harry C. Lipscomb, A.B., † 1846, p. res. Merest.

hours to drawing and engraving many of the pieces which bear his name; but he never followed engraving as a sole occupation. No doubt Mr. Bailey profited largely in his scientific knowledge by living under the roof of his relative. After attending to the education of his cousins, he practised land-surveying, and for a short time was mathematical teacher under the Rev. John Farrer at Witton-le-Wear. He there married the daughter of Nicholas Greenwell, Esq., and shortly afterwards became Lord Tankerville's land-agent at Chillingham, which appointment he retained to the time of his death. He, at the same time, did a great deal of business as a general land-agent and surveyor, and few men have greater claims to the gratitude of posterity for the many lasting improvements in rural economy planned and executed by him. Mr. Bailey engraved several of the plates of Hutchinson's topographical works: he was also the author of an "Essay on the Construction of the Plough," 8vo., and joint writer with Mr. Culley of the Northumberland Report, drawn up for the Board of Agriculture. He died June 4, 1819, aged 68.

* Lyndley, by his proctor, assigned, as a reason for his resignation, that being in debt, he durst not show his head abroad, and so the cure was entirely neglected, June 19, 1620.

† Author of a "History of Staindrop Church, Durham."

The glebe consists of 18 acres of land; but the rectory house, an old thatched building north of the church, has long been unfit for an ecclesiastical residence, and is let in tenements.* The gross income of the rectory, with Staindrop vicarage attached, is stated at £390 per annum, subject to permanent payments amounting to £36. From the remaining £354, £60 is paid to a curate for Cockfield. The Rev. Peter Barlow, A.B., is the present officiating clergyman.

The Rev. J. W. D. Merest, as a tithe-owner of not less than one-fourth of the tithes of the parish, by notice, dated May 15, 1837, called a parochial meeting of the land and tithe-owners, to take place on the 19th June following, to discuss a proposed commutation of tithes. The measure was carried into effect upon a seven years' average.

CHARITIES.

French's Charity.—A freehold house in the Back Row, Newcastle-upon-Tyne, was bequeathed, August 11, 1686, by George French, citizen and haberdasher, of London, to the poor of the town and parish of Cockfield for ever. The house is let in tenements, at rents amounting to £8 8s. a year; but the premises are out of repair, and the rents have long been irregularly paid. When received, they are divided, at May-day and Martinmas, in sums varying from 2s. 6d. to 4s. or 5s., amongst the poor of Cockfield, according to a list made out by the churchwardens.

Hutton's Charity.—Out of the estate of Hindon, in this parish, John Hutton, by will, July 16, 1657, gave 20s. per annum for ever to the poor of the parish; the overseers to dispose of it according to the monthly cess for the poor. For some years, it has been received by the overseer of Woodland, and applied wholly for the benefit of that township.

Donor unknown.—The tenant of a small farm called Fold Garth, in Woodland, belonging to the Duke of Cleveland, pays 5s. yearly to the overseer of Woodland,

who gives it, with the proceeds of Hutton's charity, to one poor widow not receiving any relief from the township.

From an early period, the manor of Cockfield was held by the family of Vavasour. Henry Vavasour, 5th Bishop Hatfield, died seised of Cockfield, holding of the bishop *in capite*, by homage, fealty, service at the court, and a quarter part of a knight's fee. William Vavasour, in the 31st year of the same prelate (1375), died seised of the manor, with the advowson of the church, and a certain mine, *Carbonum Maritimorum*, value 20 marks when let to farm. In Bishop Langley's time, Cockfield had become the property of the Nevilles, as, in 1420, that prelate granted a pardon to Ralph Earl of Westmoreland, for purchasing without license, from Henry le Vavasour, Chiv., the manor, with the advowson of the rectory; and on the 16th of March, 1425, the bishop confirmed the settlement made thereof by the earl, which had been executed without license, to Johanna his countess, and the heirs male of their bodies. In 1569, fifteen persons from Cockfield followed their lord in his disastrous rebellion, three of whom suffered death by the public executioner after its suppression. This estate, like the other possessions of the earl, was forfeited to the crown; and on August 17, 2nd James I., that monarch granted to Henry Lidley, of Halden in the county of Kent, Knt., and John Starkey, of the same, Gent., all the manor and appurtenances of Cockfield, valued at £20 13s. 4d. per annum; with the profits of the courts there, valued at 2s. per annum. The estate subsequently became vested in the modern lords of Raby; and the Duke of Cleveland is now lord of the manor.

The royalty of the estate, south of the village, is held by John Bowes, Esq., and others, under whom the *Seven Sisters Colliery* has been worked. On August 25, 1851, the Inclosure Commissioners of England and Wales gave notice that John Bowes, of Streatlam Castle, Esq., had made application, under the provi-

* In this house resided the Rev. William Nicholson, who for 23 years officiated as curate of Cockfield on a salary of £20 per annum. When incapacitated from duty by age, he was allowed an annual pension of £10; but having no person to attend upon him, and his faculties being impaired, he gradually became extremely dirty in his person, and used to be hooted about the village by the children, with whom it was a customary sport to "plague t'ould parson." At length, Mr. John Hinseliffe, the parish clerk, took pity on the forlorn and degraded state of this unfortunate son of the church, and had him removed into his own house, where, with much difficulty, the vermin, &c., were cleansed from his body, and his last moments

rendered comparatively comfortable. He died on March 8, 1805, and was buried on the south side of Cockfield church.

Another retired clergyman was the Rev. William Wilson, better known as *Fiddler Willie*, who was a native of Cockfield, where his father carried on business as a master mason. Having received a liberal education, he was ordained for the church, and resided for some years at Morpeth and other places in the north of England as curate, never having obtained superior preferment. He was twice married; and, at the latter period of his life, removed to his native place, where he resided, till his death about 15 years ago, on the property left him by his father.

sions of the act 13th and 14th Vict., cap. 31, for the sum of £1,800 by way of loan, for the drainage of his lands in the parish of Cockfield. Mr. Bowes is the principal landed proprietor; but there are several others in the township. Twenty-two lots of houses, cottages, a brewery and malting, a garden, and closes of land, belonging to Mr. George Dixon, were sold, on the 8th of April, 1830, to various purchasers. An estate called *Wigglesworth* is the property of P. H. Stanton, Esq. There are three farms belonging to the township of Cockfield, but situated on the south of Woodland township. One of these, *East Hindon*, containing 72 acres, with an allotment of 133 acres, belongs to a school at Burton in Kendal, and is charged with the payment to Hutton's charity of 20s. per annum.

Cockfield Fell.—This large tract extends northward from the village to the Gaunless, and is about 2 miles in width from east to west. Coal has been worked on it from an early period, as may be seen from the above notice of Vavasour's mine, which is the first inland colliery upon record. The "lines and entrenchments" on Cockfield Fell, described by Bailey in the Antiquarian Repertory, are probably the remains of old coal workings; the moderate depth to which it was necessary to sink rendering this district, in the infancy of mining machinery, available to the enterprize of early speculators; though its distance from the nearest port prevented competition with the more maritime collieries. The opening of the Stockton and Darlington railway, however, removed this difficulty; and the coal on Cockfield Fell, the royalty of which belongs to the Duke of Cleveland, has been nearly all worked out.

One of the most remarkable peculiarities which occur in the coal field of the county of Durham, is the great *Greenstone Dyke*, which enters the county from the south-east, a little above Preston-upon-Tees,* and, passing by Bolam, intersects the coal beds on Cockfield Fell, from which circumstance it has been commonly called the Cockfield Fell Dyke. Passing to the north-west, it appears to run into the Butterknowle slip dyke and the Hett basaltic dyke, and thence on towards the western sea. Its effects on the seam of coal are thus described by the late H. T. M. Witham, Esq.:—

"Although innumerable examples of the changes caused by the action of volcanic dykes have been already described by various authors, yet I have read

* In the neighbourhood of Roseberry Topping, Yorkshire, this dyke deteriorates the quality of the iron-stone to the south of it, in the same manner as the Hett dyke injures the coal in its southern vicinity.

of none whose influence has been more powerful or more extensive than that produced by the great Cleveland or Bolam Dyke upon the coal which lies under Cockfield Fell.

"This colossal dyke is too well known to geologists to require here any particular remarks. The distance of its course, running from S. E. to N. W., is computed to be about 70 miles, and how much further it may go in either direction is as yet a matter of uncertainty. The breadth differs; but from its extent generally, the mass of volcanic matter injected must have been enormous.

"Under this common several seams of coal are worked. The coal, with the other strata, is thrown up to the south six yards by the dyke. In working towards it, when within fifty yards, the coal begins to change. It first loses the calcareous spar, which occurs in the joints and faces, and begins to look dull, grows tender and short, and also loses its quality for burning. As it comes nearer, it assumes the appearance of half-burnt cinder; and approaching still nearer the volcanic mass, it grows less and less in thickness, becoming a pretty hard cinder, and only two feet six inches thick. Eight yards further, it is converted into real cinder; and more immediately in contact with the basalt, it becomes, by degrees, a black substance called by the miners *dowk* or *swail*, resembling soot caked together, the seam of coal being reduced to nine inches in height. There is a large portion of pyrites lodged on the roof of that part of the seam which has been reduced to cinder. On each side of the dyke, between it and the regular strata, there is a thin gut or core of clay, about six inches thick, which turns the rain water on the rise side, and forces it to the surface, forming numerous springs as it traverses the country. The coal spoiled by the action of this greenstone dyke is as follows:—twenty-five yards of bad short coal, half reduced to cinder, sixteen yards of cinder, and ten of the sooty substance before described, making, together, fifty-one yards. Should a similar effect have taken place on the rise side, of which (from what has already been wrought) no doubt can be entertained, it will make altogether upwards of one hundred yards in breadth of coal, which the effect produced by this dyke has rendered quite unfit for ordinary colliery purposes. The dyke itself, at this point, is eighteen yards thick.

"Here, then, we have a most convincing proof that the substance ejected into and through this immense crack, must have arrived at the surface in a state of most intense heat, and which, when cooling, shrunk and contracted, so as to produce on each side what is

called the gut or core of 6 inches, now filled with clay, as before observed. Water-worn stones have occasionally been found embedded in the solid coal of the main seam.

“The Greenstone of the dyke is of great value throughout the whole line for making and repairing roads, for which purpose it is quarried in every direction upon Cockfield Fell; it has been used for the above purpose upwards of seventy years, Mr. Dixon being the first person there who so applied it.

“Whilst mentioning the Whin Dyke of Cockfield Fell, I must observe, that there are here, as throughout the whole coal field, numerous faults, all of which by the miners are called dykes: these are, perhaps, more difficult of explanation than the other, and as materially affecting the regular stratification of the coal, are of more importance to the mine owner. These are those cracks and slips which throw the coal and other strata out of their regular bearing, either up or down. These cracks are generally not more than five or six inches wide, and the substance contained in them is an indurated impervious clay.”

Mr. Witham illustrated the dislocations of the coal strata in the Auckland district by a section, “from which,” says he, “will be apparent the amazing force which must have been in operation when they were formed; the surface of the earth must have been agitated like that of the sea, and by a force which there can be no doubt was volcanic, from the identity of the effects produced on a small scale at the present day.”

Mr. Francis Forster, colliery viewer, in 1830 published an investigation of the nature of the several specimens of coal, &c., from this dyke, from which the following conclusions are drawn:—The basalt is light grey, fine-grained, and compact, interspersed with crystals of felspar; specific gravity, 2.672; loses eight per cent. in a strong air-furnace heat, and becomes fused into a brown glass. The coke or carbonized coal, mixed up with the basalt, is extremely hard, fracture uneven, grey, mixed with irregular streaks of carbonate of lime and sulphuret of iron; specific gravity, 1.957, that of the coal which it represents being 1.27. The coke, when reduced to powder, and calcined in a strong red heat, leaves 23 per cent. of heavy incombustible powder, of a reddish colour.

The “water-worn stones” alluded to by Mr. Witham, commonly called “rolled stones,” are found in a portion of Cockfield Fell colliery, of about 3 acres in extent, on the north side of the dyke. Their position does not seem to be influenced by that disruption, as

they occur, in many instances, 400 yards from it, and occasionally at greater distances. Similar specimens have been also met with on the south of the dyke, as far as the outcrop of the coal. In the coal which is altered by the dyke, only one solitary specimen has been found, though they are abundant in the solid coal adjacent.

WOODLAND.

THIS township, as above observed, though belonging to the parish of Cockfield, does not adjoin the township of that name, but is bounded on the south by that of Langley Dale (from which it is divided by the Hindon Burn), by Eggleston on the west, by South Bedburn on the north, and by the last named township, Hamsterley, and Lynesack and Softley on the east. This boundary includes Woodland Common on the west, a large tract of land which was formerly moor; but an act for its division having been obtained in 1814, the whole is now inclosed and cultivated, except some large portions awarded to the Duke of Cleveland, John Bowes, Esq., and some other land-owners. In 1851, there were 46 inhabited houses, and 5 uninhabited, scattered over a bleak, sterile, and hilly district. The population of the township, at the periods of enumeration, was 78, 102, 155, 223, 241, and 240; the latter number consisting of 122 males and 118 females. The value of the property assessed to the county-rate in 1853 was £685 16s. 4d.

Woodland, during the year ended March, 1854, contributed £30 12s. to the Teesdale Union for out-relief and lunatics; £16 18s. for irremovable poor, salaries, and other common charges; £1 0s. 6d. for constable and costs before magistrates, &c.; 15s. for law costs, revising barrister, and jury list; and £3 1s. 4d. for journeys, salaries of assistant overseers, incidental expenses, &c.; making a total of expenditure, £52 6s. 10d. This was less by 14s. than the expenditure of the preceding year. The expenses of the registration amounted to £9 8s. 6d.; and the county-rate paid by the overseers was £11 19s. 10d.

The village of Woodland is 3 miles north-west from Cockfield, and 7 north-by-east from Barnard Castle. It contains a public house, and a Methodist chapel, erected in 1826. A church school was commenced in 1850, and is under the superintendence of the Rev. Peter Barlow, curate of Cockfield, who also performs divine service in the school-room every Sunday afternoon or evening. The only support given to the

school is from the Duke of Cleveland, the Rev. H. C. Lipscomb, and the Rev. P. Barlow, whose yearly donations are paid to assist the master, as he has only a small weekly pence from the parents of the children. The school is well attended.

A shot factory was carried on in Woodland in 1797, by Messrs. Todd and Walker, a portion of the buildings of which still remain; but the manufacture has been long discontinued. A tile-shed, with cottages and grounds attached, were sold by the Rev. J. J. Thornhill, in 1826, to Mr. Jeremiah Gibson, whose widow now holds the land upon which they stood; but, since the sale, the making of bricks and tiles has been discontinued, the erections have been taken down, and the ground renovated to its former state.

Woodland Colliery is near the outcrop of the coal

seams, and is the most westerly coal mine in the county of Durham; it was worked by Messrs. Sharp and Hardy, under a lease from the Duke of Cleveland, up to May, 1837, and is now carried on by the assignees of the late Rev. William Luke Prattman. The coal is a continuation of that of the Auckland district. The colliery is situated within a mile north from the Cockfield Fell Dyke, and somewhat less than two miles south from the Hett Dyke. The latter runs nearly parallel with the outcrop of the coal from Witton-le-Wear, and shows itself west of Hamsterley.

Woodland was anciently part of the estate of the Earls of Westmoreland, and now belongs to the Duke of Cleveland. Three of the farms, adjoining this township on the south, are an isolated portion of that of Cockfield.

PARISH OF STAINDROP.

THE parish of Staindrop is bounded on the north by Cockfield and the chapelry of Lynesack, on the north-west and west by the chapelry of Barnard Castle, on the south by Gainford, and on the east by the newly-formed chapelry of Ingleton. It contains the townships or constaberies of, 1, Staindrop; 2, Raby and Keeverstone; 3, Shotton and Langley Dale; and 4, a portion of Cleatlam, the remainder of which is in the parish of Gainford, with which parish it will be noticed. The townships of Ingleton, Hilton, and Wackerfield, previously portions of the parish of Staindrop, were in 1845 formed into the parochial chapelry of Ingleton.

STAINDROP.

THE township of Staindrop comprises an area of 1,751 acres. The property was valued for the county-rate, in 1853, at £4,542 12s. 3d. In 1801, the population was 1,156; in 1811, 1,087; in 1821, 1,273; in 1831, 1,478; in 1841, 1,399; and in 1851, 1,429, of whom 649 were males and 780 females. There were, at the latter date, 292 inhabited houses, 6 uninhabited, and 3 building.

In the year ended March, 1854, the township of Staindrop contributed £34 13s. 3d. to the Teesdale Union for in-maintenance, clothing, and funerals; £1 1s. for extra medical charges; £170 10s. 6d. for out-relief and lunatics; £75 7s. 8d. for irremovable poor, salaries, and other common charges; £2 12s. 6d. for constable and costs before magistrates, &c.; £1 8s. 6d. for law costs, revising barrister, and jury lists; and £3 14s. 6d. for journeys, salaries of assistant overseers, incidental expenses, &c.; the total of expenditure being £289 7s. 11d. The repayments of relief by relations, and other

payments, amounted to £7 18s. 6d., leaving a net expenditure of £281 9s. 5d., which was £39 8s. 1d. more than that of the preceding year. The cost of registration was £3 3s.; and the overseers paid £46 18s. 6d. to the county-rate.

The town of Staindrop is a place of great antiquity; its name is derived from *Stein Dorf*, the stony village, probably from its proximity to the Roman road between Street-le-ham and Watling Street. In veneration of St. Cuthbert, King Canute, when he performed his pilgrimage by Garmondsway, to the shrine in the cathedral at Durham, offered up at the altar Staindrop and Staindropshire, viz, Cnapaton (Snotterton), Scottun (Shotton), Rabi, Wacerfeld, Efenwolda (Evenwood), Alelet, Luterington, Elledun (Eldon), Ingeltun, Ticelea (Thiekley), and Mideltun. Bishop Flambard seized the dominion of Staindropshire from the convent, but restored it before his death; and in 1131, it was granted by Prior Algar to Dolphin, son of Uchtred, to be holden of him *in capite*, under the yearly rent of £4. The history of Staindrop is, after this event,

involved in that of Raby. In devotion to the last of the Nevilles, 44 of the inhabitants of Staynedroppe joined in the Northern Rebellion, of whom 7 were afterwards executed.

The town of Staindrop is situated on the turnpike road between the city of Durham and Barnard Castle, 19 miles from the former and 6 from the latter place. It is 32 miles by the turnpike road from Gateshead, 39 from South Shields, 32 from Sunderland, 35 from Hartlepool, 24 from Stockton, 12 from Darlington, and 244 from London. The town consists principally of one wide and well-built street, of about half a mile in length, and contains several elegant and substantial houses, the residences of many respectable families.* *Staindrop Hall*, formerly the property of the Ewbanks, was some time occupied by the widow of the Hon. Raby Vane, and is now the residence of John Gregson, Esq.

Bishop Hatfield, on the 24th of January, 1378, granted a charter for holding a weekly market in Staindrop every Saturday, and annual fairs on the vigil of St. Thomas the Martyr and the two following days. The fairs have been long discontinued. The weekly market is tolerably well attended; but the corn market, which was revived about 30 years ago, is again discontinued. The stalls for the use of butchers and others attending the markets with their goods, are miserable erections, standing in the wider part of the street; their removal, however, is contemplated. Staindrop has a rural police station in the Barnard Castle district; and there is also a post-office, and several good inns and public-houses; business to some extent is also carried on by drapers, grocers, shoemakers, joiners, smiths, and others. A mechanics' institution and literary society has recently been formed; it consists of about 100 members. Lectures are delivered during the winter months, and besides the daily and weekly papers which are taken in, the library consists of upwards of 600

* A commission *de lunatico inquirendo*, which excited considerable attention in the county, was opened in the county courts, in the city of Durham, on July 5, 1854, in order to enquire whether Martha Colpitts, spinster, late of Staindrop, was a lunatic on the 1st of July, 1852, or at any time subsequent to that period. The object of the inquiry was to test the validity of the will of Miss Colpitts; and Mr. Commissioner Barlow presided during the investigation. After an adjourned hearing, the jury found Miss Colpitts of unsound mind from the 30th July, 1852, and that she had continued to be so up to that time. The master, who concurred in the verdict, appeared to have been under the impression that it was unanimous; but when the inquisition had to be signed, William Greenwell, of Bearpark Lodge; Augustus Hind Hunt, Birtley House; William Hunter, East Parks; and William Jones, Cassop, dissented. Of course, this

volumes; the subscription is 8s. per annum for adults, and for young men under 18 years of age, 4s.

The *Staindrop Farmers' Club*, commenced in 1846, through the exertions of Mr. Dean and a few other persons, continues in a flourishing state. The anniversary meetings are held in January, at which, as well as on other occasions, addresses are delivered and papers read illustrative not only of the details of farming, but also of the position and prospects of national agriculture.

The town is well supplied with good spring water. The *Staindrop Gas Company* was established in 1853; the works are erected at the east end of the town, and cost £1,300. The capital of the company is divided into shares of £5 each. The gas is of a very pure quality, and is introduced into the principal dwelling houses, inns, and places of business.

Petty sessions are held on alternate Saturdays, at which the presiding magistrates are, the Rev. H. C. Lipscomb, A.M., vicar; Thomas M. Maude, Esq., of Selaby Park; and T. E. Edger, Esq., M.D., of Gainford. Their sittings were for many years held in a room of the Queen's Head Inn; but recently a place was obtained, adjoining the lock-up, at a rent of £8 a year, one-half of which was to be paid by the county, and the remainder by the magistrates, who, at the sessions held October 15, 1851, presented a memorial, requesting that the whole might be paid by the county treasurer. The chairman of the quarter sessions replied that the Staindrop magistrates had pledged themselves to pay this rent in consideration of the county enlarging and improving the court-house. At the sessions on April 7, 1852, an application was made on behalf of the Rev. H. C. Lipscomb, stating that his brother magistrates had refused to contribute towards the rent, the moiety of which had consequently to be defrayed by himself. The rule, however, was, that the county should, on the erection of any justice-room, contribute a sum equal to any local subscription.†

made no difference in the result, as unanimity amongst 12 of the 17 who composed the jury was sufficient to carry the verdict. The majority were, Thomas Crofton, Holywell; Robert Brack, Shincliffe; John Furneis, Coxhoe; Richard Greenwell, Bishopwearmouth; Charles Garthorne, Cornforth; Robert Jackson, High Burnigill; George Liddell, Great Chilton; Philip Miller, Esh Hall; John Pratt, Streatham Mill; William Proud, Cocken; Thomas Wearmouth, Byers Garth; Robert Wilkinson, Great Chilton; and William Millar, Old Pittington.

† One of the magistrates observed that when a justice-room was held in a public-house, it inevitably led to drinking. If parties were victorious, they went to rejoice over their victory; if they were defeated, they went to condole with their friends.

The Langley Beck, which runs from the north-west, passes the town on the north, and separates it from Raby Park. It is crossed by a bridge near the east end of the church. A footpath was recently formed from this bridge to the church-yard, two-thirds of the expense of which was defrayed by the county.

THE CHURCH.

THE original foundation of a church at Staindrop is considered to be coeval, at least, with the time of Canute's grant. The first incumbent is named in 1131; and the date of the nave, the earliest part of the church, has been conjectured to be about the year 1200, the period of transition from the Norman to early English.*

The Rev. H. C. Lipscomb, in his "History of Staindrop Church," says that "no part remains (if we except one or two stones built into the walls which appear to have vestiges even of Saxon Work) of an earlier date than the middle of the 12th century. The church then consisted of a chancel and a short nave with very low aisles, and probably a low massive tower. In this state it appears to have remained for rather more than half a century, when an alteration took place which might more properly be called a reconstruction." This "was accomplished by elongating the structure two arches westward, which necessitated the erection of a new tower. The north aisle was then lengthened, and likewise the south one; the transepts were added, the chancel constructed anew with its present existing sedilia, and a building erected on its north side two stories in height, the lower room being used for the purposes of a vestry, and the upper one possibly for the abode of an Anchorite. This room had three small windows pierced in a slanting direction through the wall, giving a view of the high altar, and still visible in the north chancel wall. These additions had hardly been perfected twenty years when it was found desirable to widen the south aisle, and this new addition was made in a superior style of masonry known by the name of ashlar work. The porch was at the same time built in a peculiar manner, being entirely constructed, even to its outside covering, of stone. The window at the west end, the only one remaining of its date (the middle of the 13th century), is a fine specimen of a triple-lancet under a hood-moulding. At this time also some erec-

tion was contemplated and commenced near the east end of the aisle. A small triple shaft with a moulded capital, surmounted by the first stone of the arch, was placed against the south side of the easternmost pillar of the nave. [This was removed when the church was restored in 1849.] It appears, however, that the work was abandoned—probably on account of the nave pier not being sufficiently substantial to form an abutment."

The edifice, as it now stands, is spacious and stately, consisting of a tower, a nave and side-aisles, and a chancel, but no transept, though there is a slight projection northward at the east end of the north aisle, containing three lancet lights. The principal entrance is by a south porch, above which is a sun dial. The doorway consists of plain mouldings, and the roof is strongly groined. There are four circular arches on each side of the nave; those on the south side being adorned with the zigzag ornament, and supported by three lofty pillars, two of which are cylindrical and one clustered, with capitals of sculptured foliage. The cylindrical pillars, with their arches, may be considered the oldest portion of the present building, being of the Norman period, about the year 1170. Leland says, "I heard that afore Rafe of Raby time, there was that alonely that now is the south isle." The arches of the north aisle resemble those of the south, but want the zigzag sculpture. This part of the church is probably of the date of 1343, when Ralph Neville founded the chantries in the south aisle. It was enlarged and rebuilt about the close of the 15th, or beginning of the 16th century; at which time the ridged roof of the chancel was removed, and the present flat one substituted. The windows of the south aisle, which were restored about 50 years ago, are of the decorated style, under low arches. That at the east end is of the time of Bishop Neville, about 1345. Those in the north aisle are nearly in the same form as the south ones, but more modern. The clerestory has four low arched windows on each side.

The tower is supported by lofty pointed arches, and has a large square staircase turret. The upper part of it, above the corbels, appears to have been added, about 1360, to the lower, over which it projects as a cornice. In 1788, the Hon. Mrs. Raby Vane made the parish a present of six bells, cast for the purpose in London. She died in May, 1789; and until within the last few years, a peal was always, on the anniversary of her death, rung to her memory.

A pointed arch and a screen separate the nave from the chancel, which is a spacious and handsome portion of the church, being 49 feet in length, and 18 feet 8

* On the corner of a house at the east end of the town is an ancient sculpture of a man and a dog; traditionally said to represent a person who jumped or fell from the church while it was being built, and was followed by his faithful dog.

inches in width. Within the altar rails, in the south wall, are three niches or stalls for the officiating priests, supposed to have been a part of the original chancel; their date being probably about 1230. The arches have trefoil heads and deep mouldings; but the intervening shafts have been cut away. The keystones in the roof of the chancel are sculptured with the Neville's saltire. The east window, of about the date of 1500, is divided by mullions and transoms into three tiers of pointed arches under a low arch at the top, and retains an armorial coat of the Nevilles and their alliances with the Beauchamps and Plantagenets, in ancient stained glass. There are three large pointed windows on the south side of the chancel. To the north are two handsome windows, lately restored by the Duke of Cleveland, from a design in the perpendicular style by John A. Cory, Esq., architect. The place of the ancient roodloft, the stone stairs to which still remain, was long occupied by a seat for the Raby family; but the oaken stalls, twenty-four in number, having been restored by the Duke of Cleveland, are now occupied by his grace. Some of the desks had been removed; but the carvings are bold and well executed.

The Duke of Cleveland, when Earl of Darlington, presented the church with an excellent organ, the organist of which was also appointed and paid by him. The font is a plain octagon of Teesdale marble, with the Neville quarterings on its sides.

In 1849, extensive repairs and restorations were made in the church. A new roof was placed over the south aisle, and the lead-work of the other parts re-cast. In the interior, the stone-work was cleansed from whitewash and repaired; the northern and western galleries were taken down, and the organ placed on the floor, by which arrangement the beautiful arches supporting the tower were thrown open. The old pewing, constructed shortly after the Restoration of Charles II., was also removed, and replaced by seats of a more ecclesiastical character. The pulpit and reading-desk are executed in oak, of very elaborate designs, and with the seats, harmonize with the ancient perpendicular screen and stalls remaining in the chancel. The floor was paved with encaustic tiles of a chaste pattern, which gives an air of warmth to the whole. The architect employed was John A. Cory, Esq. The organ, on its removal, received several alterations and repairs, by Mr. Hoggett, of Darlington. By the alterations in the seats, additional accommodation for 75 persons was obtained. A grant of £30 in aid of the undertaking was made by the Incorporated

Society for the Enlarging, Building, and Repairing of Churches, on condition that 86 seats, described in the plan, should be set apart and declared to be free for the use of the poor for ever. There are now 436 appropriated sittings, 86 free, and 113 for children; being a total of 635. The remainder of the expense, except £100 raised by church-rates for the roof, was defrayed by private subscription.

MONUMENTS.—The first monument which now attracts the eye of the visitor on entering Staindrop church, is that of Ralph Neville, first Earl of Westmoreland of that name, "who," says Leland, "is buried yn a right stately tumber of alabaster yn the quire of Stainthorp college, and Margarete his first wife on the left hond of hym; and on the right hond lyith the image of Johan his second wife; but she is buried at Lincoln, by her mother Caterine Swinesford, Duchess of Lancaster." This beautiful monument has been removed from the chancel, and placed, many years ago, in the south-west corner of the church, immediately within the entrance. Here, unfortunately, it was exposed for some time to the heat of a stove, under the influence of which one side of it, with its beautiful sculptures, were mouldering away; some injury was also done to it by the perverted ambition of the ignorant, many of whose initials are scratched upon it. It seems to have been much mutilated, indeed, at the time of its removal. It is still, however, one of the finest specimens of ancient sepulchral monuments to be found in the north of England; and the description given of it by Gough is still generally applicable:—

"It is an altar tomb of alabaster, with rich niches at the sides. The earl is represented in plated armour, a pointed helmet, with a flowered wreath and mail gorget. On the frontlet of the helmet, I. H. S., and from the sides a strap charged with SS, and closed by a triple ring. He has a large pair of curled whiskers. The seams of his armour are richly ornamented, and also the borders of his elbow-pieces. The saltire is on his breast: a belt crosses him with a sword at his left side, and a rich studded belt girds round the flaps of his armour, under which is a shirt of mail: his kneec-pieces, and the beltings and seams of his cuises and gaberdines, and the instep-pieces, are also richly ornamented. Under his head is his helmet, supported by an angel, with the bull's head, his crest. At his feet, a lion, and behind the lion two monks at a desk. His second wife, Joan, daughter of John of Gaunt, at his left hand, is habited in a mantle, kirtle, and surcote, all richly edged

and faced; her hair braided and coomed with quatrefoils, with a cordon from two lozenge-fashioned studs: her sleeves buttoned to the wrists; on her head, which rests on two cushions, the undermost tasselled, supported by three angels, is a coronet, and round her neck a collar of SS, fastened with a triangular ring, and a medal appendant. His first wife, Margaret Stafford, on his right hand, has a similar coronet and collar of SS; at the feet of each of the ladies are two dogs, collared, peeping out from under their robes; and at the feet of all two monks kneeling at their desks. The whole work was (from apparent remains) gilded and painted."

At the north-west corner of the church is another monument, which has also been removed from the chancel. It is of wood, and inferior in elegance of design to the first, but is, notwithstanding, a highly interesting specimen of antique carving. It represents Henry, fifth Earl of Westmoreland, and two of his wives. By his will, dated 1563, he desired to be buried in the church of Staindrop, near Jane, his second wife. He is represented in armour, except the head, which is bare, the hair curled and the beard pointed; the hands are elevated without gawtlets, the legs extended, and the feet resting on a greyhound. The hands of the two countesses are elevated; and they are dressed in the fashion of their time, without ornament, and stiffly executed. There is no effigy of the earl's third wife. The following inscription, in the old English character, now partly defaced, runs round the edge of the tomb:—
 "THIS TOMBE MADE IN THE YERE OF OUR LORD GOD 1560, AND IN Y^e SECOND YEARE OF ELIZABETH, BY THE GRACE OF GOD QUENE OF ENGLAND, FRANC, AND IERLAND, DEFENDER OF THE FAITH, BI THE COMMANDAMENT OF THE RIGHT HONORABLE HEN. ERLE OF WESTMERLAND FOR HIMSELF AND HIS THREE WIVES, THAT IS TO SAY, ANNE, DOUGHTER TO THERL OF RUTLAND, JANE, MARGARET, DOUGHTERS
"
 There are four compartments on each side of the tomb, formed by small carved pillars, and containing effigies of the eight children of the earl, dressed according to the time in which they lived, and respectively surmounted by the names of ELINOR—KATHARIN—RALFE—CHARLS—EDWARD—HION—MARE (obliterated)—ADELI. On the ends of the tomb are carved the arms of the family, with their alliances, the Plantagenets and Manners. Beneath, at the west end, "ALL YOY THAT COME TO THE CHVRCH TO PRAYE, SA PATERNOSTER AND A CREDE, FOR TO HAUE MERCY OF VS, AND ALL OVR PROGENY." On the east end,

under the panels, "MADE BY THE HANDES OF JOHN TARBOTONS."

The south aisle appears to have been the burial place of the Nevilles. "In it," says Leland, "as I hard, was buried the grandfather and grandedam of Rafe Raby, and they made a cantuarie there. In the waul of this isle appere the tumbes and images of three ladys, wherof one hath a crounet, [this figure is not now to be found,] and a tumbre of a man child, and a flat tumbre varii marmoris. Ther is a flat tumbre also, with a playn image of brasse [still in the church], and a scripture, wher is buried Richard, sun and heire to Edward, Lord of Bergavenny. This Edward was the fift son of Daraby" (de Raby). There are two mural arches in the south aisle, one of which is surmounted by a crocketted triangular canopy, with pierced tracery of a beautiful character, and springing from two heads, the one plain, the other crowned. The canopy terminates in a finial upon a bracket, probably intended for an image. Underneath is a recumbent effigy of a female, veiled by a deep hood, with garments descending to the feet. Another effigy, which seems to have been removed into this recess, from some other part of the church, is now placed near the alabaster monument. The other arch, which is a plain circular one, also contains the recumbent effigy of a female; that of a child, which lay by it, has been removed into the other canopy. Figures of lions, &c., on which the feet of the effigies have formerly rested, are deposited with them in the recesses. To the east of the ornamented arch are the sedilia, or stalls for the priests who sung the office for the dead. Ralph de Neville, in 1343, obtained license from Prior Fossour and the convent to found three chantries to the Virgin in Staindrop church; and it is probable that the south aisle was appropriated to that purpose. The two principal effigies have been supposed to represent Eufemia, daughter of Sir John Clavering, and Margery, daughter of Marmaduke Thweng, the first and second wives of John Lord Neville, father of the founder of the chantries. A small porch, with a groined roof, in the south-eastern angle of the south aisle, the door of which is now closed up, afforded ingress and egress to the chantry priests: a new doorway to the church-yard has been formed by cutting down the east window of the aisle. The endowment consisted of three acres of land for the building of a habitation for the priests, and of twenty marks annually issuing out of Stayndrop and Stayndropshire; the founder covenanting, notwithstanding, that the prior and convent, of whom he and his ancestors held Stayndropshire, should

continue to receive their annual rent of four pounds without deduction.

Near the tombs of the Earls of Westmoreland is a beautiful mural monument of marble, with a bust, by Nollekins, inscribed to John Lee, Esq. ;* and there is another to the memory of Richard Sherwood, Esq., who died May 26, 1816, and Elizabeth his wife. The south aisle contains several inscriptions to the Blacketts of Hoppyland. Sepulchral stones of the Hutchinsons and others, the brasses of which have been taken away, are in various parts of the nave, &c. Within the altar-rails are stones over the burial places of Thomas Vane, Esq., who died June 25, 1675, aged 23; the Hon. Raby Vane, died October 23, 1769; and William, Duke of Cleveland and Southampton, died May 12, 1774, aged 76. A white marble points out the burial place of the Hon. Grace Vane, daughter of Christopher Lord Barnard, and the Lady Eliza, daughter of the Earl of Clare, who died October 2, 1710, aged 19. A lofty mural monument of white marble, on the south side of the altar, represents a sarcophagus, on which is a view in relief of Raby Castle; above is a recumbent

effigy, looking up to a cherub, which displays a wreath; and the inscription commemorates Henry, the second Earl of Darlington, who died at Raby Castle on the 10th September, 1792, aged 65. On the north side of the altar is a beautiful mural monument, on which is sculptured Faith leaning on an altar; a cherub near her supporting an urn; and beneath is an inscription to the memory of Margaret, Countess of Darlington, eldest daughter of Robert Lowther, Esq., of Meaburn, Westmoreland, who died September 10, 1800. Adjoining this is another, representing a sarcophagus, above which is a female figure reclining on a couch, and an angel directing her attention upwards to cherubs who are presenting a crown: it is inscribed to the memory of Katherine Margaret, Countess of Darlington, daughter of the sixth and last Duke and Duchess of Bolton, who died at Cleveland House, in the 40th year of her age, on the 16th of June, 1807. A beautifully sculptured monument, of the purest white marble, by Westmacott, was erected in the centre of the chancel to the late Duke of Cleveland, on the 2nd of August, 1843, by the duchess dowager.

* JOHN LEE, ESQ., an eminent barrister-at-law, for many years resided at Staindrop. He was a native of Yorkshire, and was born in 1733. For several years he attended the northern circuit, where he was familiarly known in the legal and professional circles of that time as Jack Lee. Notwithstanding his talents, he was not at first successful in his native county, but went many years to York assizes without receiving a single brief. On this subject, the following anecdote was related by the late Earl of Eldon:—"One afternoon, after dinner, he declared that he found a prophet had no honour in his own country, and that as he never received a single guinea in York, he would shake the dust off his feet and leave it, the next morning, never to return again. Now Davenport, on hearing this determination, went to his own lodgings; and himself, with Wedderburn, drew up a brief."—It "purported to be in a matter entitled the king against the inhabitants of Hum town, for not repairing a highway; setting forth the indictment and the names of the witnesses to be examined, and their testimony, in a most skilful manner, and they sent it to Lee's lodgings, with a guinea as the fee. Lee came into the circuit room in the evening, and Wedderburn exclaimed, 'Bless me, Lee, I thought you were gone!' 'Well,' said Lee, 'it is very extraordinary: I was just going. I was shaking the dust off my feet in this place, as an abominable place, that I never would see again, when, lo! a brief is brought to me, and I must stay.' 'Well,' said Davenport, 'in what cause may that be?' Lee said, 'In an indictment, the king against the inhabitants of Hum town.' 'O dear!' said Davenport, they brought me a brief in that case with a bad guinea, and I would not take it. I dare say they have given you the bad guinea.' 'I have it in my pocket,' said Lee; 'here it is.' Davenport looked at it and said, 'Yes, this is the same guinea,' and put it in his pocket. Wedderburn and Davenport then told him the joke they had practised to have the benefit of his company a little longer at York. I think, upon memory, though he was a very good-tempered man, he never forgave this joke." From that time, however, he led almost every cause at York; and when Mr. John

Scott (afterwards Lord Chancellor Eldon) joined the northern circuit, he was treated with great distinction and kindness by Mr. Lee, who then had a good deal of business. As the circuit, in those days, was usually performed on horseback, Lee and Scott used to ride homeward together at its close, one to Staindrop and the other to Newcastle. "Of John Lee" wrote the Earl of Eldon, "I love to indulge in the remembrance. To me he was most kind in my younger days. He was a very powerful cross-examiner of a witness. I remember a witness remonstrating against the torture of his cross-examination. The man, who was clothed in rags, said, 'Sir, you treat me very harshly, and I feel it the more because we are relations.' 'We relations, fellow!' said Lee; 'how do you make out that?' 'Why,' said the man, 'my mother was such a person, and she was the daughter of such a man, and he was the son of a woman, who was the daughter of a person (naming him), who was your great grandfather, or great, great, great grandfather.' 'Well,' said Lee, 'you are right, he was so. And then, my good cousin, my good fourth or fifth cousin, speak a little truth, I beseech thee, for the honour of the family—for not one word of truth, cousin, hast thou spoken yet.'"

The subsequent career of Mr. Lee was successful and dignified. He was for some time attorney-general for the county palatine of Lancaster, and afterwards for that of Durham; and he represented the borough of Ilgham Ferrers in parliament. He also, under Lord Rockingham's administration, successively filled the offices of solicitor and attorney-general to the crown, to the latter of which he was promoted in November, 1783. After a life of probity and honour, he expired on the 5th of August, 1793, in the 61st year of his age, and was interred in Staindrop church, where the monument was erected to his memory by his widow. This lady was the daughter of Thomas and Tabitha Hutchinson, and died on the 17th of August, 1812, in the 78th year of her age. A tablet, bearing an elegant inscription, was placed on the most western pillar of the south aisle by her daughter, the late Miss Lee, of Staindrop, who died on the 4th of April, 1851, aged 74, after a life of unobtrusive benevolence.

THE COLLEGE.—Bishop Langley, by license, dated November 10, 1408, empowered Ralph Neville, Earl of Westmoreland, to found a college in Staindrop, to consist of “one custos. eight chaplains, four secular clerks, six esquires, and six other poor persons;” the license does not confine the founder to numbers or their quality.

In Tanner's Notitia, the establishment is described as “a college for a master or warden, six priests, six clerks, six decayed gentlemen, six poor officers, and other poor men, to the honour of the Virgin Mary. It was endowed at the Dissolution with £170 4s. 6d. per annum, in the whole, and £126 5s. 10d. clear.” The endowment originally consisted of two messuages and twelve acres in Staindrop, granted by the earl towards the maintenance of divine service; besides which the churches of Letham in Lancashire, and of Brigham in Cumberland, were appropriated in augmentation.

The college adjoined the church, and appears to have been finished by the surviving countess, as Leland states that “Johan erectid the very house self of the College of Stainthrop. It is set on the north side of the collegiate chirch, and is strongly builded all of stone.” The remains of its ruins were in the recollection of the last generation of inhabitants in Staindrop. The number of stalls in the chancel was increased on the foundation of the college, and those at present existing were then erected. It is probable that the earl intended this house for the reception of his military retainers, or those servants more immediately about his person who should be reduced by misfortunes, or otherwise disabled. In 1544, William Rievau, Conan Denande, Charles Elmedon, William Wren, jun., Ralph Gower, and James Tenante were the inmates. The following is a list of the masters:—

Robert Knayton, cl., 1432; John Norman, 1438; William Lambert, occ. May 1, 1459, and 1477; Thomas Neville, priest, (rector of Brancepath); William Pollerd, July 20, 1498; John Claymond, A.M., (vicar of Norton, 1498), October 12, 1500; William Maudesley, A.B., 1501, p. res. Claymond; Edmund Natras, S.T.P. (rector of Middleton-in-Teesdale), 1537; Thomas Garnard, 154—, p. res. Natras.

REGISTERS.—Books Nos. 1 to 3 contain baptisms and burials from 1635* to 1759, and marriages from 1635 to 1719 and 1723 to 1760; No. 4, baptisms from 1760 to

1806, and burials from 1760 to 1893 and 1805 to 1806; No. 5, baptisms from 1806 to 1812; No. 6, burials from 1807 to 1812; and Nos. 7 and 8, marriages from 1760 to 1812.

THE IMPROPRIATION, ADVOWSON, AND VICARAGE.—That the prior and convent of Durham continued to exercise some jurisdiction over the church of Staindrop, after the territory had been granted to Dolphin, son of Uhtred, has been inferred from the license granted to Ralph Neville in 1343. It was, however, rectorial till 1412; the Bishops of Durham being the patrons. In 1319, an agreement occurs between Bishop Beaumont and Nicholas de Stayndrop with Isabella his wife, by which the bishop gives a sparrow-hawk for the advowson of the church. The rights of Bishop Hatfield also, as patron, were reserved on the institution of John Ingilby to the rectory in 1347; but in 1372, the advowsons of Staindrop and Brancepeth had become vested, by some exchange, in John of Gaunt, Duke of Lancaster, from whom they are supposed to have passed to the Nevilles.

On the institution of the college, Bishop Langley, April 12, 1412, with the consent of the prior and chapter of Durham, annexed the impropriation and possessions of the church. “Yet, lest the cure of souls should suffer neglect, the bishop ordains that a perpetual vicarage shall be instituted, to which, when vacant, the warden and chaplains of Staindrop college shall present a clerk, being either one of their own number, or some other fit person being in priest's orders, of sufficient learning, and honest conversation, and who shall have competent skill in chaunting, and shall be able to perform and administer all other duties to the cure of souls pertaining, to be admitted and instituted by the bishop and his successors; and that the parishioners may, on emergency, have the readier access to their vicar, the incumbent for the time being shall occupy one decent and sufficient chamber within the college, nigh to the gate, in which he shall abide and sleep, and shall daily eat at the costs of the college, with the wardens and chaplains, as one of the establishment, lest living alone he should be tempted to *extravagation*.” “And besides the premises assigned for his residence, the vicar shall receive, in full of his

* There were, in that year, 43 baptisms, 11 marriages, and 33 burials. As compared with this, there were, in the year 1850-51, 44 baptisms, 8 marriages, and 39 burials.

From 1644 to 1646, “through want of a minister, and carelessness of the clerk during the wars, much of the Register is lost; only here and there a name registered.”

1652, June 14. “Mem. From this time till August there was noe minister; soe that the children were carried to other parishes to be baptized.”

1709, March. “From this time till 21st Nov., 1710, no account at all can be given of the register, by reason of the carelessness of John Pearson, the late clerk. Tho. Lamb, Curate.”

portion, twenty marks annually from the warden in penny rent, by two equal payments at Martinmas and the Nativity of St. John the Baptist; and in every case of such payment being in arrear for fifteen days, the warden, &c., shall forfeit twenty pounds sterling to the bishop's almoner." The warden was also to pay 40s. annually to the bishop's exchequer, and 20s. to the prior and convent, as an indemnity for any loss by reason of the premises; also 10s. annually from the glebe to the bishop.

After the Dissolution, the advowson of Staindrop church remained for some time in the crown. King James I., by letters dated January 24, 1612, granted to Francis Morris and Francis Phillips all the tithes, &c., of the parish, of the value of £55 10s. 9d.; they agreeing to pay to the vicar £6 13s. 4d., and £6 13s. 4d. to an assistant chaplain. In 1635, Charles I., on the humble petition of Sir Henry Vane, Knt., granted license to Bishop Morton to create and establish a perpetual vicarage within the parish church of Staindrop, with power for Sir Henry to endow it to the annual value of £57 or thereabouts. Under this license he endowed it with a manse and garden, the petty tithes of Ingleton, Hilton, Wakerfield, and Staindrop, and the oblations and Easter dues, and presented the living to the Rev. Nathaniel Ward.

Staindrop rectory; patron, the Bishop of Durham. Dedication to the Virgin.

RECTORS.—Aldwin presbyter de Stayndrop, oec. 1131; John de Clithe, pr. Edw. I., 1274; William de Routhbur, 1294; William de Quickham, 1325; John de Ingleby, 1347, p. m. Quickham; William de Dent, 1362, p. res. Ingleby; William de Deighton, 1363, p. res. Dent; John Alwent, 1410, res 1412.

* NATHANIEL WARD.—This martyr to his loyalty was one of the sons of John Ward, minister of Haverhill in Suffolk. His elder brother, Samuel Ward, B.D., was a preacher of considerable eminence at Ipswich. Nathaniel is understood to have been originally a student at law; and, after a residence of some years abroad, he was presented to the vicarage of Staindrop by Sir Henry Vane, where, it has been said of him, "He was upon an outpost, and he did his duty there, as feeling that he belonged to the main body." In January, 1639, he writes, "At home I am engaged in a constant struggle against my corrupt nature; abroad I have to contend with impiety and barbarism." The obligations required of the clergy, at that time, by the ruling powers, were very distasteful to Mr. Ward, who, in 1644, either left or was ejected from his living, and joined the Cavaliers, then in arms in Cumberland. At the siege of Millum Castle, the ancient seat of the Huddlestons, he received a mortal wound. His nuncupatory will, by which he bequeathed his lands, tenements, and hereditaments to his wife Mary and her heirs, was made in the presence of John Huddleston, John Tempest of the Isle, Thomas Hutton of Hutton-John, John Heath of Kepyner, and Robert Grey.

† REV. PETER FISHER.—Dr. Sherwood, of Snow Hall (which see), contributed the following obituary notice to the Gentleman's Maga-

VICARS.—(Patron, Staindrop College).—William Horne, 1412; John Norman, 1432; John Rote, or Note, 1471-1476; John Robson; Thomae Horner, 1498, p. res. Robson; Thomas Bentley; Thomas Gurnell, 1537, p. res. Bentley (Bishop Tanstal granted him license to resign to John Wareyn, for a competent annual pension, dated 27th December, 1537); Robert Skyrro, 1541.

Stipendiary Curates. Annual value, £6 13s. 4d. for the officiating minister, and £6 13s. 4d. for an assistant; in toto, £13 6s. 8d. reserved out of the impropriation.

Fisher; John Jones Thornhill, A.M., June 21, 1806, p. m. Davison; John William Drage Merest, A.M., June 8, 1829, p. m. Thornhill; Harry Curteis Lipscomb, A.M., October 30, 1846, p. res. Merest.

The great tithes of the whole parish are vested in the Duke of Cleveland. In January, 1838, T. F. Scarth, Esq., agent for his grace, called parochial meetings of the six townships of the parish, for the purpose of making an agreement for the general commutation of the tithes, agreeably to the act of 6 and 7 Geo. IV.; and an arrangement was made for the purpose.

Two small fields or closes are attached to the living

zine:—"On the 5th of Sept., 1793, died at Staindrop in the county of Durham, in the 85th year of his age, the Rev. Peter Fisher, who had been vicar of that parish upwards of fifty-six years. He was rector of Cockfield, in the same county, and of Woodham Walter, in Essex; a man no less venerable for his virtues than his years; who, without any extraordinary brilliancy of intellect, had plain good natural parts, which he had diligently cultivated. In divinity his reading was constant, almost to the last moment of his life. He was rich in the knowledge of the scriptures, and happy in his manner of expounding them; a neat composer, a grave and dignified preacher; but he was chiefly distinguished by the more rare and valuable qualities of the heart, by his unaffected piety and unbounded benevolence. Mildness and condescension, humility and gentleness, beamed from his countenance, and influenced all his demeanour, rendering him very amiable in common life, and much regarded by all who knew him. Of the sick he was a diligent and conscientious visitor; to the poor and needy a liberal benefactor. By his parishioners, among whom he had been abundant in labours more than half a century, he was greatly beloved; and no doubt the 'good old parson,' as they used affectionately to style him, will long live in their remembrance."

as a glebe, subject, at the discretion of the Duke of Cleveland, to the payment of £10 per annum; and there is also a parsonage-house. The living is held with that of Cockfield, see page 79.

CHAPELS.

FRIENDS' MEETING HOUSE.—The Society of Friends formerly had a meeting house at Raby, on the demolition of which they erected a substantial building at Staindrop, capable of accommodating about 250 persons. There is a burial ground attached. The register books contain entries of births from 1777 to 1793 and from 1795 to 1819, and burials from 1776 to 1799 and 1795 to 1820.

INDEPENDENT CHAPEL.—A congregation of Independent Calvinists has long existed, through the instrumentality of the late Rev. J. L. Prattman, in Staindrop. The present neat and commodious chapel, capable of seating about 350 hearers, was opened on the 30th of May, 1827. The Rev. J. Jackson, who was minister at that time, was succeeded by the Rev. R. Thompson, A.M., the present pastor. The register book, which is kept by the minister, contains 57 entries of births and baptisms between 1806 and 1837. The chapel was registered, pursuant to the acts 6 and 7 Wm. IV., c. 85, and 1 Vict., c. 22, for solemnization of marriages, on the 8th July, 1837.*

WESLEYAN METHODIST CHAPEL.—Between 30 and 40 years ago, the Wesleyan Methodists purchased a house on the south side of the street, which they converted into a chapel, capable of containing about 150 persons. Sunday schools are attached both to this and the Independent chapel.

THE PRIMITIVE METHODISTS are not numerous in the town of Staindrop; but since 1827 they have had a room appropriated as a place of worship.

In the year ending Midsummer, 1853, the Staindrop branch of the Darlington Auxiliary Bible Society contributed £3 10s. on the purchase account, and £11 10s. free; and 25 Bibles and 24 Testaments were distributed in the same period.

* In April, 1837, a distraint for church-rates was made on the Rev. R. Thompson and four of his congregation, and on three members of the Society of Friends. The goods were sold by auction in the market-place; but as there was no competition, the proceeds fell short of the expenses.

CHARITIES.

School.—In 1710, John Grainger, Esq., bequeathed £300 for teaching 30 poor children of Staindrop. The sum of £15 yearly, being interest at the rate of five per cent., was, a few years ago, paid by Thomas Papillon, Esq., of Acrise, near Folkestone, in whose hands the principal was vested; and the schoolmaster, in consideration thereof, instructed 30 children in reading, writing, and accounts, without any charge. The interest, however, is not now paid, the bond for the same having been lost.

Sunday-school.—A Sunday-school was established for the poor children of this parish above 70 years ago, by a subscription of the then Earl of Darlington, Mrs. Raby Vane, and other parties. The capital was afterwards augmented by the late Duke of Cleveland; and the amount, £300, was placed in his hands, at five per cent. interest. The school was held in the vestry; but during the incumbency of the Rev. J. W. D. Merest, a large and commodious building was erected near the church, as a school-room, having distinct portions for boys and girls. About 60 children usually attend. A salary of £6 6s. a year is paid to the master, and the rest of the income is applied in the purchase of books.

Brabant's Charity.—In respect of this charity (see vol. i., p. 428), 19s. is received by the churchwardens at Easter; 1s. being deducted for land-tax. This money is carried to the general charity account.

Poor's Lands.—It is not known from whom the following lands were derived; but for a considerable length of time they have been let by the vicar, churchwardens, and twenty-four for the time being, for charitable purposes. 1. A field, containing about 3 acres, called the Lee Close, let at the yearly rent of £10 10s. 2. About 7 acres of land, called the Ackwards, let at £34. 3. A garden, containing about three-quarters of an acre, let at £7 14s. 6d. 4. An allotment, called the Moor Butts, set out upon the inclosure of Staindrop Moor, in 1764, to John Brownless, the churchwarden, in trust for the poor, in respect of their ancient lands. The allotment contains 2½ acres, and is let at £14 15s. A small parcel of land was sold in 1826; and the produce of the sale, £32 5s. 7d., is deposited in a bank in Darlington. The whole of these sums, with the proceeds of Brabant's charity, amounting to £67 18s. 6d., are divided into 20 parts, as follow:—For Staindrop township, 7; Raby, 5; East Quarter (including Wackerfield, Hilton, and Ingleton), 4; and Langley Dale and Shotton, 4. The Staindrop share is distributed

soon after Easter, chiefly to widows and other poor persons not receiving parochial relief, in sums varying from 5s. to 10s. each. In Raby, the donations vary from 8s. to 10s. The township of Ingleton receives two-fifths of the portion assigned to East Quarter, and the remainder is divided equally between Wackerfield and Hilton: these shares are distributed in sums varying from 5s. to 25s. In Langley Dale and Shotton, the donations vary from 10s. to £2.

TOWNSHIP OF STAINDROP.—*John Simpson*, by will, dated April 5, 1680, bequeathed to his wife, Ann Simpson, all his lands in Staindrop, subject to an annual payment of 20s. to the minister, &c., for the putting out poor children apprentices, or to be distributed at their discretion amongst poor widows and fatherless children in Staindrop. Before the year 1794, this property had been divided; and 14s., part of the rent-charge, is now paid by the Duke of Cleveland's steward, as charged upon a house belonging to his grace; 4s. is paid by John Hodgson, shoemaker, in Staindrop, as charged upon a house belonging to him; and 2s. is paid by the representatives of the late Miss Lee. The whole is generally applied towards putting out a child of the township of Staindrop apprentice, or in supplying clothing for such child when bound out.

SNOTTERTON, supposed to be the Cnapaton of Canute, is situated about a mile west from Staindrop. It was anciently a manor, though it now consists of only a farm, with a house called *Raby Grange*, built in 1831 on the site of the old family mansion, the walls of which were surmounted by an embattled parapet, with crocketed spires at the corners. The Fitz-Meldreds, and their descendants the Nevilles, are its first recorded possessors; and it passed from the latter, in 1411, to a family whose heiress married John Bainbrigg. He died in 1516; and his successors for four generations were owners of Snotterton, leaving their coat and crest sculptured over the principal door of the mansion. In 1607, George Bainbrigg (who married a sister of Sir George Bowes, Knight Marshal) sold the estate to Toby Ewbanke, Esq., of Staindrop Hall, eldest son of Henry Ewbanke, prebendary of Durham. It was afterwards held by the Smarts,* from whom it passed to the Earl of Darlington, and is now the property of the Duke of Cleveland. A portion of the freehold called *Blakeley*, however, passed through the Bailceses, Douth-

* Of this family was Christopher Smart, the poet, of whom a notice appeared in vol. i., p. 327.

waites of Westholme, Garths of Somerhouse, and Hilltons of Killerby, to Sir William Bowes, Knt., of Streatlam, in whose descendant it is still vested.

Staindrop Moor.—In 1764, an act was passed for dividing and enclosing Staindrop Moor, stated to contain about 500 acres. The Right Hon. Henry Earl of Darlington, as lord of the manor of Raby, claimed the soil of the said moor; and Francis Smart, Esq., as lord of the manor of Snotterton, also claimed such soil, as being parcel of and belonging to the said manor. The Earl of Darlington was also impropiator of all the tithes, both great and small, arising within the township and parish of Staindrop. The proprietors entitled to right of common were, the said Henry Earl of Darlington, Thomas Hutchinson, John Tidy, William Hutchinson, William Lodge, William Blackett, James Hudson, and others. The act provided that the said moor be set out, divided, and allotted, on or before the 1st of May, 1765, by the commissioners, William Jepson of Heighington, John Dobbinson of Witton Castle, and Michael Hodgson of Field House, gentlemen. One full sixteenth part (quantity and quality considered) was to be allotted in lieu of the right to the soil, and the remainder divided amongst the whole of those holding right of common, in satisfaction of such rights, after the formation of proper highways, quarries, and watering places. The act was not to prejudice the rights of the lord of the manor, nor his privilege of working mines and quarries, and of making roads and waggon-ways to them, or removing hedges and other obstructions thereto. Damages to individuals by such means were, after notice given in Staindrop church on a Sunday morning, to be decided upon by two or more justices of the peace, who were to order the same to be paid by the lord of the manor; and if the parties should be dissatisfied with their decision, then such damages were to be settled by a jury. No tithes of corn or hay were to be paid from the allotments for five years after the award of the commissioners was given. The expenses of the act, surveying, &c., were to be jointly borne by the owners of allotments.

Mary Bowes, widow of George Bowes, Esq., claimed a right of common on the above moor, in respect of certain lands or tenements within her manor of Streatlam, over and above what she was entitled to in respect of Blakeley farm; which right was denied by the Earl of Darlington and the other proprietors of land. It was therefore directed by the act that the said claim should either be decided upon by a feigned action at

law or by arbitration; and that no part of the said moor should be divided, nor the act be any-ways put in execution, until after such trial or award.

Francis Smart, Esq., lord of the manor of Snotterton, also contended that he and his ancestors, and all those whose estate he hath in the said manor, had, time immemorial, claimed and exercised a right of dominion and seigniorship in, upon, and over the said common or moor, as lords of the said manor, over and besides a right of common to which he was entitled in respect of his lands and tenements; and this claim of dominion and seigniorship was denied by Henry Earl of Darlington. It was therefore enacted that the said Francis Smart should be at liberty either to try the said right at law, or to have it determined by the arbitrators; and that no part of the common or moor should be divided, nor the act be any-ways put in execution in relation thereto, until the decision of such trial or arbitration.

The decisions were in favour of the duke, and a division thereupon took place. The award was deposited in the office of the Exchequer, city of Durham, on March 21, 1765.

RABY AND KEVERSTONE.

THE township of Raby and Keverstone, to the north of that of Staindrop, contains an area of 2,752 acres; the property was valued for the county-rate, in 1853, at £2,649 12s. 11d. The population, at the six decennial returns, was 213, 201, 203, 247, 284, and 313. Of the latter number, 148 were males and 165 females; and there were, at the same date, 51 inhabited houses.

The contributions of the township of Raby and Keverstone to the Teesdale Union, for the year ended March, 1854, were as follow:—For out-relief and lunatics, £23 11s.; for irremovable poor, salaries, and other common charges, £19 16s. 7d.; for constable and costs before magistrates, &c., 12s.; for law costs, revising barrister, and jury lists, 10s.; and for journeys, salaries of assistant overseers, incidental expenses, &c., £1 10s. The total of expenditure, £45 19s. 7d., was £7 10s. 5d. less than that of the preceding year. The cost of registration was 10s. 8d.; and the overseers paid £43 14s. 8d. to the county-rate.

* Some have endeavoured to prove that the provincial word *nevel*, to pummel with the fist, is derived from the pugnacious character of the lords of Raby; but the word is evidently founded on another, common both in the north of England and in Scotland, namely, *nief*, or *neave*, the fist. The name of Neville is derived from *Nova Villa*.

HISTORY—THE NEVILLES.

RABY formed a part of the grant of King Canute in Staindropshire, and was also included, though not by name, in that of Prior Algar and the convent to Dolphin, son of Uchtred, Earl of Northumberland. Raby is first mentioned as being the lordship of Meldred, the son of Dolphin; and his successor, Robert Fitz-Meldred, intermarried with Isabel, daughter of Geoffrey, and sister and heiress of Henry de Neville, who died without issue, 11 Henry III., 1227. The ancestor of the Nevilles was Gilbert, an admiral in the fleet of the Conqueror in 1066, whose grandson, Geoffrey, married Emma, daughter and heiress of Bertram Bulmer (see BRANCEPETH, vol. i., p. 429); and gratitude for the possessions acquired by these marriages induced Geoffrey, the son of Robert Fitz-Meldred and Isabel his wife, to assume the Neville surname.*

ROBERT NEVILLE, eldest son of Geoffrey, was lord of Raby, Brancepeth, and Sheriff Hutton, and flourished from 1257 to 1282. He appears as governor of the Border castles of Wark and Norham in 1258-9; warden of the forests north of Trent, 1261; governor of York castle, 1264; of Pickering castle, 1266; and of Bamborough, 1270. From Geoffrey, a younger brother, were descended the Nevilles of Hornby.

Robert Neville, son of Robert above named, by his wife Isabella, daughter of Roger Bertram, Baron of Mitford, married Mary, one of the daughters, and eventually sole heiress of the powerful Baron, Ralph Fitz-Ribald, lord of Middleham. Dugdale relates that this Robert Neville frequented the company of a certain lady in Craven, in an adulterous manner; and, being surprised by some of her husband's friends, was by them so mutilated that he died of the wound, June 6, 1271, and was buried at Coverham, Yorkshire. His wife, Mary of Middleham, remained a widow 49 years, "dwelling upon her own inheritance," and, on her death in 1320, was buried at Coverham, of which her ancestors were the founders.

RALPH LORD NEVILLE.—On the death of the elder Robert Neville,† he was succeeded by his grandson,

† A rhyme, supposed to be the oldest in the north, is a lament for this baron:—

“ Well I wa sall ys hornes blaw
 Haly Rude this day;
 Nou es he dede and lies law,
 Was wont to blaw them ay.”

Ralph, only son of the second Robert and Mary Fitz-Ranulph, who, though represented as spending his time amongst the monks of Marton and Coverham, occasionally took that part in public affairs which befitted his rank. Amongst other things, he, with John Fitz-Marmaduke, espoused the popular cause against Bishop Beck, when that prelate infringed the privileges of the tenants of St. Cuthbert. (See vol. i., p. 48.) He was summoned to parliament from 23 Edward I., 1295, till 5 Edward III.; and was ordered to join Edward I. at Portsmouth, in the 22nd year of his reign. He also shared in the disastrous campaign in Scotland with Edward II. When long past the prime of life, he was sentenced by Bishop Kellaw to do penance in Staindrop church for the crimes of incest and adultery with Anastasia his daughter, wife of Lord Walter de Fauconberg. He married, first, Eufemia, daughter and coheir of John de Clavinger; and, secondly, Margaret, daughter of John Thweng. On his death, April 18, 1331, he was buried at Coverham. During his life, a dispute arose relative to the annual offering of a stag to the prior of Durham, on St. Cuthbert's day in September, as a part of the tenure of Raby, but which would appear to have been rather a custom than a legal claim. "Contrary to the custom of his ancestors," says Dugdale, "he not only required that the prior of Durham, at the offering of that stag, ought to feast him, and all the company he should bring, but that the prior's own menial servants should for that time be set aside, and his peculiar servants and officers put in their stead. Whereupon, amongst other of his guests, he invited John de Balliol of Barnard Castle, who refused to go with him; alleging, that he never knew the Nevills to have such a privilege there; Sir William de Brompton (the bishop's chief justice) likewise acknowledging, that he himself was the first who began that extravagant practice: for being a young man, and delighting in hunting, he came with the Lord Nevill at the offering of the stag, and said to his companions, *Come, let us go into the abbey and wind our horns*; and so they did. The prior further adding, that before the time of this Ranulph, none of his predecessors ever made any such claim; but when they brought the stag into the hall, they had only a breakfast, nor did the lord himself ever stay at dinner, except he was invited." This baron not being thought competent by his mother to manage the world's wealth, she settled her manors of Middleham and Coverdale on her grandson.

This "gentleman," Robert Neville, commonly known as *the Peacock of the North*, has left little memorial

behind him, except his being "a very, very peacock,"* and that, on the bridge of Elvet in Durham, he assaulted and slew Richard Fitz-Marmaduke, while the latter rode to open the county courts, as the bishop's seneschal. In the year following this outrage, of which, it appears, no public account was taken, the "peacock" led a band to plunder the Scottish March, when he was met by James, Earl of Douglas, at Bewick Park, Northumberland, and was there overthrown and slain in the contest.

RALPH NEVILLE, next brother to Robert, was taken prisoner on the same field on which his brother fell, and succeeded to the estates 5 Edward III., being then 40 years of age, and steward of the royal household. He revived the dispute with the prior of Durham, relative to the stag, and claimed "to be entertained the whole day, and likewise the morrow at breakfast;" his own officers being admitted to wait on him, jointly with those of the prior. The prior knowing him to be powerful, and that the country durst not displease him, and to gain his favour, in regard he had no small interest at court, "was content that for one time he should perform it as he pleased, yet so that it might not be drawn into example." And so Lord Neville, having carried his point, brought but few with him, and these more for the honour of the prior than a burthen; and shortly after dinner took his leave, but left one of his servants to lodge all night, and breakfast there, pretending that, as a son and tenant of the church, he would not be burthensome to it by bringing a great train; for, said he, "*What does a breakfast signify to me? Nothing.*"

This Ralph Lord Neville, in 7 Edward III., was a commissioner to settle articles between the king and Edward Baliol, and was joint warden, with Henry Percy, of the East and Middle Marches, in the following year, when he was also governor of Bambrough castle. In the 11th year of that reign, he was again a commissioner in Scotland, and, shortly after, lent the king all the money arising from the sale of wood in his manor of Flaxfleet in Yorkshire. From the 5th to the 39th year of Edward III., he was summoned to parliament. He was also employed in several of the subsequent negotiations, both with Scotland and France; and in the 33rd Edward III., he attended the king into

* It has been conjectured that this title originated in an armorial badge. In 1651, the manor of Winston was held of Raby by one broad arrow feathered with *peacock feathers*; and a sculpture above the north door of Staindrop church bears a faint resemblance of some bird, rather than to a lion.

the latter country, marched to Montlehery, and, according to Froissart, "placed himself in ambush, with Lord Mowbray and other knights, about three leagues from Paris, where, after a sharp skirmish, the French were defeated." But the most conspicuous event in his life was his presence at the battle of the Red Hills, popularly known as the battle of Neville's Cross. (See vol i., pp. 52, 384.) He married Alice, daughter of Sir Hugh de Audley, sister of Hugh Earl of Gloucester, and widow of Ralph Baron of Greystock, by whom he had issue six sons and four daughters. After an active life, Sir Ralph died on the 5th of August, 1367, and was buried in the nave of Durham cathedral, being the first layman to whom that honour had been conceded. The tomb and mutilated effigies of himself and his wife still remain.* (See vol i. p. 266.)

Sir Robert, second son of Ralph Lord Neville, married Margaret, widow of Sir Thomas Grey, and died without issue.

Alexander, third son, born at Raby, became first canon and then archbishop of York, where he beautified and strengthened the castle of Cawood. Being much in favour with Richard II., the enemies of that king designed to imprison the archbishop in Rochester Castle; but he fled for protection to Pope Urban at Rome, "who partly out of pity (that he might have something for his support), and more out of policy (that York might be in his own disposal upon the removal of this archbishop), translated him to St. Andrew's in Scotland, and so dismissed him with his benediction." This translation, however, was by no means agreeable to the applicant; as the archbishoprick of St. Andrew's was inferior to that of York in honour and revenue; and, besides, the Scots, looking at that time with jealousy on all Englishmen, could not but be particularly opposed to one of the family of Neville, so active in the wars against them. "Indeed," says Fuller, "half a loaf is better than no bread; but this his new translation was rather a *stone* than *half a loaf*, not filling his belly, yet breaking his teeth, if feeding thereon. This made him preferre the pastorall charge of a parish church in Lovaine, before his arch-no-bishoprick, where

he died in the fifth year of his exile, and was buried there in the convent of the Carmelites."

Sir William Neville, fourth son of Sir Ralph Neville, is frequently mentioned as having distinguished himself in arms, from 35 Edward III. to 8 Rich. II., and is noticed, in the latter reign, as a chief leader of the Lollards.

JOHN LORD NEVILLE, son of Ralph, was with his father at the battle of Neville's Cross, and afterwards, by his bravery and talents, contributed much to the aggrandizement of the house of Raby. He was knighted for his services at the barriers of Paris, and summoned to parliament 42 Edw. III. In the 44th of the same reign, he was constituted admiral of the royal fleet from the mouth of the Thames northwards, and retained by indenture to serve John Duke of Lancaster in war and peace. Two years afterwards, "about the Feast of the Nativity of S. John Baptist, he made that new work of marble and alabaster in the church of Durham, under the shrine of S. Cuthbert, which cost above two hundred pound." (See vol. i., p. 268.) To this warlike baron is also to be chiefly attributed the building of Raby Castle, which he had a license to castellate in 1379. Whilst lieutenant of Aquitaine, he reduced that province to quiet, and took 83 walled towns, castles, and forts. On the expedition of Richard II. into Scotland in 1385, Lord Neville's train (which, with those of the other nobility of the north, formed the rearward of the army) consisted of 200 men at arms and 300 archers. His first wife was Maude, daughter of Henry Lord Percy, by whom he had two sons and five daughters. By his second wife, Elizabeth, daughter and heiress of William Lord Latimer, (who, after his death, married Lord Willoughby, of Eresby,) he had a son and a daughter. He died at Newcastle-upon-Tyne on the 17th October, 1389, and was buried in Durham cathedral, where his altar-tomb remains between the pillars of the south aisle.

Sir Thomas Neville, second son of John Lord Neville, was summoned to parliament as Lord Furnival, 7 Richard II.

* The offerings of his funeral consisted of a vestment of red velvet, richly embroidered with gold, silk, great pearls, and images of saints standing in tabernacles, which he gave to St. Cuthbert. His body was brought in a chariot drawn by seven horses into the bounds of the church-yard, and then carried upon the shoulders of knights into the middle of the church, where the abbot of St. Mary's in York (in consequence of the bishop's absence, and the impotency of the prior) performed the office of the dead, and celebrated the morrow mass, at which were offered eight horses, viz. four for the war, with

four men armed, and all their harness and habilaments; and four for peace; and also three cloths of blue and gold. Four of the horses, however, were redeemed after the funeral, by John de Neville, son of the deceased, for 100 marks. Alice, his widow, sent to the sacrist 120 pounds in silver, to be employed in the repairs of the cathedral; and also, for celebrating his anniversary, one vestment, two tunicles, one cope, three albs, three stoles, four maniples of black satin, and another embroidered vestment to be used at the celebration of the sacrament.

John, son of Lord Neville by his second wife, was summoned to parliament as Baron Latimer, 5 Henry V. to 9 Henry VI., and married Maud, daughter of Thomas Lord Clifford, and widow of Richard Earl of Cambridge. His sister, Elizabeth, married Sir Thomas Willoughby, son of her mother's second husband.

FIRST EARL OF WESTMORELAND.—Ralph, eldest son and successor of John Lord Neville, was advanced, under the name of Dan (*Dominus*) Raby Nevell, to the title of Earl of Westmoreland, in 1398, by Richard II., from whom he received many other favours. When, however, Henry Duke of Lancaster landed at Ravenspur, the earl joined him, and was one of the principal actors in placing him on the throne as Henry IV. For these services, he was rewarded with the earldom of Richmond, and the office of Earl Marshal of England for life; and he continued to enjoy the favour of Henry, sometimes seasonous the grave counsels he tendered by such rhymes as the following:—

“Who so wyll Fraunce wyne,
Must with Scotland fyrst beginne.”

After the death of his first wife, Margaret, daughter of Hugh Earl of Stafford (for his marriage with whom a dispensation was obtained from the Pope, the parties being between the third and fourth degrees of consanguinity,) the Earl of Westmoreland married Joan, legitimated daughter of John Duke of Lancaster, and widow of Sir Robert Ferrers, Knt., and thus became brother-in-law to the king. When the Percys, aided by Owen Glendower and the Earl of Douglas, rose in rebellion against Henry, Westmoreland adhered faithfully to the monarch; and, by driving back to Prudhoe Castle his old associate, the Earl of Northumberland, he prevented the junction of the latter with Hotspur at the battle of Shrewsbury. He afterwards, on the insurrection of Richard Scrope, Archbishop of York, made him prisoner by a stratagem of at least a dubious character, and delivered him to the king.

Holingshead's account of the transaction is that the earl sent messages to the archbishop, in the forest of Galtres, to understand the cause of his great assembly, to which the prelate (who was in armour) answered that it was for fear of the king only, to whom he could have no free access for the multitude of flatterers about him, and shewed the articles of their complaints. The earl professed that he “liked of the archbishop's holy and virtuous intent,” and induced him to persuade Mowbray, the earl marshal, also in rebellion, to accompany him to a place of conference with himself.

At this meeting, Westmoreland agreed to do his best towards effecting a reformation, and said, “Well then, our travail is come to the wished end; and where our people have been long in armour, let them depart home to their wonted trade and occupations. In the mean time, let us drink together, in sign of agreement, that the people on both sides may see it, and know that it is true that we be light at a point.” The archbishop sent a knight with a message to this effect, to his people, who, seeing shaking of hands and drinking, returned home. Meanwhile, the other party stealthily increased, and the archbishop and earl marshal were arrested. Leland states that Westmoreland's army pursued that of the archbishop, stripping and severely scourging those that they could lay hold of. The king then marched north against Northumberland, and, on his way, executed at Durham the Lord Hastings, Lord Fauconbridge, Sir John Colville of the Dale, and Sir John Griffith.

In the reign of Henry V., the Earl of Westmoreland accompanied that monarch into France, and was present at the battle of Agincourt, where he had in his train five knights, 30 lances, and 80 archers. Shakespeare, who has pourtrayed a sketch of the sagacity, prudence, and subtlety of the earl, makes him wish, on this occasion, for “more men from England;” to which the chivalrous king replies, “The fewer men the greater share of honour.”

The collegiate church of Staindrop owes its foundation to the earl; and on his death, October 21, 1426, he was buried there, and the gorgeous alabaster altartomb erected over him which still commemorates his memory (see page 86).

His possessions in the county of Durham, at the time of his death, were immense. Besides the parishes of Staindrop and Brancepeth, and the advowsons of the respective churches, he had, according to an inquisition, manors, lands, buildings, or mines, at Elwick, Dalton, Hurworth, Nether Coniscliffe, Bolam, Ullerbush, Alwent, Denton, Eglesten, Holmeland, Hunwic, Tudhowe, Sunderland (Bridge), Wodyfal, Halleywell, Britley, Fyshburne, Oxenade, Cockerton, Cocksyde house, Derlington, Halghton, Mawfeld, Cockfield (with the advowson of the living) and Wodland, Eldon, Alansheels, Blakwell, Ivesley, Roulee, Hedeley, Corneshowe cum Hedleyhop, Thornell, Grenwell, Helmpark, Bynchestre, Bires, Whitworth, Whetlaw, Westberden, Pelton, Winlawton, in the city of Durham (with the advowson of St. Mary's in the South Bailey), Cambous in Bedlyngtonshire, &c.

The domains of the earl in other parts of the king-

dom were also extensive;* but most of them were bestowed on the favoured issue of the second marriage.

Sir John Neville, eldest son of the earl, commenced early in life to serve in the wars of France, where he was made governor of Vernoi in Normandy. "John Neville, Knight of England, with thirty grayves, discomfited, by Estampes, fifty Frenchmen, taking divers of them." He was appointed to receive the submission of such places as succumbed to Henry V., and to "assault, reduce, and garrison those who stood out." In his own country, he was governor of Roxburgh and warden of the West Marches. He married Elizabeth, daughter of Thomas Holland, Earl of Kent, and sister and coheirress of Thomas Holland, Earl of Kent and Duke of Surrey, by whom he had three sons, Ralph, John, and Thomas (ancestor of the Nevilles of Wear-dale), and three daughters. He died in 1423, in his father's lifetime.

Ralph, second son of the earl, married Mary, daughter and coheirress of Sir Robert Ferrers, of Oversley.†

The daughters of the earl by his first marriage were, Maud, married to Peter Lord Mauley; Philippa, to Thomas Lord Dacre, of Gilsland; Alice, first to Sir Thomas Grey, of Hoton, and afterwards to Sir Gilbert Lancaster; Elizabeth, a nun at the Minoreses in London; Margery (or Anastasia), abbess of Barking; Anne, married to Sir Gilbert Umfreville; and Margaret, married first to Richard Lord Scrope, and afterwards to William Cressener, Esq.

Richard Neville, K.G., eldest son of the earl by Joan Plantagenet,‡ and to whom his father gave Middleham, was warden of the East and Middle Marches; created Earl of Salisbury by patent, 4th May, 20 Hen. VI., 1442; governor of Carlisle, 1448; and grand chamberlain of England, 1460. He married Anne,

* They are enumerated by Dugdale as follows:—the manor of Stifford, co. Northumberland; the manor of Boston, called Burt-hall; the soke of Mumby; the manors of Wikes, Frompton, Ledenham, Fulbeck, and Wastinburgh, co. Lincoln; the manor of Cheshunt, co. Hertford; Clavering and Calmore, co. Essex; the castle and manor of Sheriff-Hotton; the manors of Elmington, Skirbembek, Yaresthorp, Raskel, Howke, Soreby, Wiberfosse, Stanfordbrigge, Haund-Burton, Knapton, Rise, Sutton-super-Darwent, Shirborne in Herford-Lithe, Apelton in Ridale; the castle, manor, and lordship of Middleham; the manors of Carlton, Coverdale, West Witton, Woodhall, Kettlewell in Craven; Thoraldby, New-biggin, with Bishopdale, Bainbridge, Esingwold, and Hoby; Gilling, Aideburgh, Bowes, Forset, Daby, Catrike, Arkelgarthdale, and New Forest; also the castle of Richmond, with its members, the manors of Snape, Well, Crakhal, Rand, Newton, East Hawkeswel, Ruskby, Paccöy, Carlton in Cleveland, Hilderwel, Caldington, South Cowton, Fergherby, Leybourne; Sutton in Galtres, with the bailiwick of Langbergh, all in the county of York. Likewise the manor of Basingbourne, in

daughters and sole heiress of Thomas Montacute, Earl of Salisbury, and was beheaded at Wakefield by the Lancastrians in 1461. His eldest son became Earl of Warwick (the "king-maker," see page 10).

John Neville, second son of the Earl of Salisbury, was summoned to parliament as Baron Neville, 38 Hen. VI.; as Baron Montague, 1 Edw. IV., 1461; created Earl of Northumberland, 1465, which dignity he resigned 1470, and was created Marquis of Montague, K.G., and Chancellor of England. He was slain at Barnet, April 14, 1471, and attainted. By his wife, Isabel, daughter and coheirress of Sir Edmund Ingelthorpe, of Borough Green, Cambridgeshire, he had two sons and five daughters. George, the eldest son, was created Duke of Bedford, 1469; succeeded as Marquis of Montague, 1471; degraded from his dignity by act of parliament, 1477; and died without issue in 1483.

Sir Thomas Neville, third son of the Earl of Salisbury, who married Maud, daughter of Robert Lord Willoughby, of Eresby, was slain at Wakefield with his father.

George Neville, fourth son of the Earl of Salisbury, was born at Middleham, educated at Baliol College, Oxford, and consecrated bishop of Exeter before he was 20 years of age. Five years afterwards, he was made Lord Chancellor of England. On his consecration to the archbishoprick of York in 1470, he made a prodigious feast at his instalment to all the nobility, most of the prime clergy, and many of the gentry; the contents of whose bill of fare were as follow:—300 quarters of wheat, 330 tuns of ale, 104 tuns of wine, 1 pipe spiced wine, above 400 bucks, does, and roebucks, 80 fat oxen, 6 wild bulls, 1,000 wedders, 300 calves, 200 kids, 300 hogs, 300 pigs, 4,000 rabbits, 3,000 capons, 100 peacocks, 200 cranes, 3,000 geese, 2,000 chickens,

Cambridgeshire; Perrit, Soureby, the hamlets of Langwathby, Scouthy, Carleton, Lidell, Gamelesby, Blenherhasset, Wigton in Allerdale, and Bolton in Allerdale, all in co. Cumberland.

† "Sir Raff the rich Rugbe, [mentioned in the Battle of Chevy Chase], was probably Sir Ralph Neville of Raby Castle, son of the first Earl of Westmoreland, and cousin-german to Hotspur. In the more modern edition of the ballad, he is expressly called Sir Ralph Rabby, i. e. of Raby."—*Minstrelsy of the Scottish Border*, vol. i., p. 63.

‡ After the death of King Henry V., a petition was sent to the regency by Lady Westmoreland, his aunt, praying that her "Chronicles of Jerusalem," and the "Expedition of Godfrey of Boulogne," borrowed of her by the late king, might be returned. Henry, though a learned prince, seems to have had the bad habit of borrowing books and never returning them. The prior of Christchurch, in a most pitiful complaint, said that he had lent to his dear lord, King Henry, the works of St. Gregory, who had never returned them to him, their rightful owner.

4,000 pigeons, 200 bitterns, 4,000 ducks, 400 hernsews, 200 pheasants, 500 partridges, 4,000 woodcocks, 400 plovers, 100 curlews, 100 quails, 1,000 egrets, 200 reese, 1,506 hot venison pasties, 4,000 cold venison pasties, 1,000 dishes of jelly parted, 4,000 dishes of plain jelly, 4,000 cold custards, 2,000 hot custards, 300 pikes, 300 breams, 8 seals, 4 porpoises, and 400 tarts. At the dressing and ordering of this feast, no less than 1,000 servitors, 62 cooks, and 515 kitcheners were employed. "But," says Fuller, "the inverted proverb found truth in him, *One glutton-meal makes many hungry ones*: for some years after falling into the displeasure of King Edward the Fourth, he was slenderly dyetted, not to say famished in the castle of Calis; and being at last restored by the intercession of his friends, died heartbroken at Blyth, and was buried in the cathedral of York, 1476."

Sir William Neville, fourth son of the Earl of Westmoreland, was governor of Roxburghe Castle, and summoned as Baron Fauconberg 7 Hen. VII., 1429 to 1460; created Earl of Kent, 2 Edw. IV., 1461; Lord Admiral of England, and K.G. He married Joane, daughter and heiress of Thomas Lord Fauconberg, by whom he had three daughters. He died in 1462, at Pondelarche, in Normandy.

George Neville, next son of Ralph, Earl of Westmoreland, had the estates of his father's uncle, John Lord Latimer, settled upon him, and was consequently summoned as Baron Latimer, from 10 Hen. VI., 1432, to 1469. He married Elizabeth, third daughter and coheiress of Richard Beauchamp, Earl of Warwick, (see page 10,) and died December 9, 1469. His de-

* The fortunes of this last-mentioned daughter, who was mother to *two* of the *three* kings of England belonging to the *House of York*, and grand-mother to the *other*, "may pass," says Fuller, "for the clearest instance of humane frail felicity.

"HER HAPPINESS.

"She was youngest daughter and child to Ralph, Earl of Westmerland, (who had one and twenty) and exceeded her sisters in honour, being married to Richard, Duke of York.

"She was blessed with three sons, (who lived to have issue) each born in a several kingdom, *Edcard*, at Bourdeaux, in France, *George*, at Dublin, in Ireland, *Richard*, at Fotheringhay, in England.

"She beheld her eldest son Edward king of England, and enriched with a numerous posterity.

"HER MISERIES.

"She saw her husband kill'd in battel; George, Duke of Clarence, her second son, cruelly murdered; Edward, her eldest son, cut off by his own intemperance in the prime of his years; his two sons butchered by their uncle Richard, who himself, not long after, was slain at the battle of Bosworth.

"She saw her own reputation murdered publicly at Paul's Cros s by the procurement of her youngest son Richard, taxing his eldest brother for illegitimate.

scendant, Edmund Neville, of Latimer, on the attainder of the Earl of Westmoreland in 1569, claimed the earldom, as heir male of Ralph, first earl. On his monument in Eastham church, Essex, he is styled Lord Latimer and Earl of Westmoreland.

Thomas, next son, married Alice, daughter and heiress of — Seymour.

Robert Neville, seventh son, was consecrated Bishop of Salisbury, 1427, and translated to Durham, 1438. (See vol. i., p. 57.)

Edward Neville, eighth son, married, first, Elizabeth, sole daughter and heiress of Richard Beauchamp, Earl of Worcester and Lord Bergavenny; and secondly, by papal dispensation, Catherine, daughter of Sir Robert Howard, and sister to John, first Duke of Norfolk. He had livery of the lauds of Bergavenny, 14 Hen. VI.; summoned as Baron of Bergavenny, 1450; and died October 18, 16 Edw. IV., 1476. From his first marriage were descended the Barons and Earls of Abergavenny and the Nevilles of Billingbere.

◆ Cuthbert, Henry, and John, the remaining sons of the Earl of Westmoreland, died young.

The daughters of the earl and his second wife were—Catherine, first married to John Mowbray, Duke of Norfolk, who died in 1434, and afterwards to Sir John Wydville, Knt., son of Richard Earl Rivers; Eleanor (or Elizabeth), to Richard, Lord Le Despencer, and afterwards to Henry Percy, Earl of Northumberland; Anne, first to Humphery Stafford, Duke of Buckingham, and afterwards to Walter Blount, Lord Mountjoy; Joane, a nun; and Cicely, the youngest of twenty-one children, married to Richard Plantagenet, Duke of York.*

"Yet our Chronicles do not charge her with *elation* in her good, or dejection in her ill success, an argument of an even and steady soul in all alterations. Indeed she survived to see *Elizabeth*, her grand child married to King Henry VII.; but little comfort accrued to her by that *conjunction*, the party of the Yorkists were so depressed by him. She lived five and thirty years a widow, and died in the tenth year of King Henry VII., 1495, and was buried by her husband in the quire of the collegiate church of Fotheringhay in Northamptonshire, which quire being demolished in the days of King Henry the Eighth, their bodies lay in the church-yard without any monument until Queen Elizabeth coming thither in progress, gave order that they should be interred in the church, and two tombs to be erected over them. Hereupon, their bodies, lapped in lead, were removed from their plain graves, and their coffins opened. The Duches Cicely had about her neck hanging, in a silver ribband, a pardon from Rome, which penned in a very fine hand, was as fair and fresh to be read as if it had been written but yesterday. But, alas, most mean are their monuments, made of *plaister*, wrought with a *trocell*, and no doubt there was much *daubing therein*, the queen paying for a tomb proportionable to their personages. The best is, the memory of this Cicely hath a better and more lasting monument, who was a bountiful benefactress to Queen's College in Cambridge."

SECOND EARL OF WESTMORELAND.—Ralph Neville, eldest son of Sir John, succeeded his grandfather as second Earl of Westmoreland. He married, first, Elizabeth, widow of John Lord Clifford, daughter of Henry Lord Percy (Hotspur), eldest son of Henry, Earl of Northumberland; and, secondly, Margaret, only daughter of Reginald Lord Cobham, of Starborough, Snrrey. He died November 3, 2 Rich. III., 1480.

John Lord Neville, only son of the earl, married Anne, daughter of John Holland, Duke of Exeter, but was slain, on the part of Henry VI., at the battle of St. Alban's, 1451, during the life of his father, and left no issue.

Sir John Neville, brother of the earl, married Anne, widow of his nephew, and also espoused the cause of the house of Lancaster, fighting on whose behalf, he was slain at Towton, on Palm Sunday, 1461.

THIRD EARL OF WESTMORELAND.—Ralph, eldest son of Sir John Neville, and his wife, Anne Holland, succeeded his uncle as third Earl of Westmoreland in 1480. He served in the army of the Earl of Surrey, and is mentioned in that nobleman's letter to Henry VIII., giving an account of the storm of Jedburgh. He married Matilda, daughter of Sir Roger Booth, Knt., of Barton, Lancashire, and niece of Laurence Booth, Archbishop of York, by whom he had a son, Ralph Lord Neville, who married Edith, daughter of Sir William Sandys, of the Vine, Hampshire, but died in the lifetime of his father. Leland says, "This Lord Neville died, his father the earl yet living; whereupon

* At a horse-race on Gatherley Moor, near Richmond, Christopher Neville made an assault on the heir of Rokeby. It is said that he was sent by his brother Henry, fifth Earl of Westmoreland, with 100 men, to kill Rokeby; but the father of the latter was so beloved that the son "was both defended and guarded from the violence of his adversaries, and was able so to have rebounded the blows given him by them, that they should have spilt the best blood in their bodies if his party had been willing." The old man, however, as justice, commanded peace, saying, "Gif [although] it grieves me to see him bleed that bleeds, yet peace, the peace."

† To Margaret Gascoigne, a daughter of this countess by her first marriage, whose fortune had been entrusted to the earl, he granted in lieu a lease of Oxon-le-Field. The following appears in the Wills and Inventories published by the Surtees Society:—

"An Inventory of all the goods and cattells wiche were Margaret Gascoigne's single-woman, within the bishoprick of Durham, lait deceased, at the whyt friers in London, praised by Thomas Lacy, gentelman, Anno Domini 1567, the xxiiij of March. First, one lesse of grang called Oxnold Feld night Dallington, maid by the Right honorable Henry lait Erle of Westmerland, to hir in recompene of hir child's porcion wiche he had remaining in his hands of the yerely value of *lxxl.*, the rents paid and all other paments discharged. Item

the erle took much thought, and dyed at Horneby Castle, in Richmondshire, and there is buryed in the paroche chirche." The death of the broken-hearted earl occurred in 1523.

FOURTH EARL OF WESTMORELAND.—Ralph, son of Ralph Lord Neville and Edith Sandys, born February 21, 1499, succeeded, on the death of his grandfather, as fourth Earl of Westmoreland, K.G., and was one of those who signed the letter to Pope Clement VI., threatening to throw off his supremacy unless he consented to the divorce of Henry VIII. and Queen Catherine. He married Catherine, daughter of Edward Stafford, Duke of Buckingham, by whom he had issue seven sons (two of whom, Cuthbert and Christopher,* were attainted for their participation in the rebellion of their nephew) and eleven daughters. He died April 24, 1549-50.

FIFTH EARL OF WESTMORELAND.—Henry Neville, fifth Earl of Westmoreland, K.G., and warden of the West Marches, married, first, Anne, daughter of Thomas Manners, Earl of Rutland; second, Jane, daughter of Sir Richard Cholmondeley, Knt., and widow of Sir Henry Gascoigne, Knt.; † and a third wife, named Margaret. ‡ He died in August, 1563, and was buried at Staindrop, beneath the tomb which he had prepared for himself and two of his wives (see page 87). By his first wife he had issue four sons (the three youngest of whom died without issue) and four daughters.

SIXTH EARL OF WESTMORELAND.—Charles, son and heir of the above, and sixth Earl of Westmoreland,

the said erle did by his last will and testament geve and bequith vnto hir all that his interest and lease for terme of yeres which he had in the deanrye of Darlington of yerly value the rents paid, &c., of *xij.* She neither aught any debts nor yet gave any legaces." Her wardrobe, "First a goune of chaungable taffatie laid one with gold laic, 66s. 8d. A goune of silk grogram laid one with silk laic, 46s. 8d. One old goune of macedo, 26s. 8d. Two kirtells wherof one of changable taffatie th' other of grogram, 30s. Two peticotts, thone of skerlet th' other of stamell, 55s. Two frenche hodes with lytle billiment of gold, 66s. 8d. Other necessary apparell, 26s. 8d. Smmma of the apparell, £14 18s. 4d."

In reference to the deanery of Darlington, it may be observed that the editors of Spelman's *Sacrilege* attribute the misfortunes of the later Nevilles to their possessing certain dissolved monasteries.

‡ Dugdale mentions but two wives; *Jane*, daughter of the Earl of Rutland; and *Margaret*, daughter of Sir Richard Cholmley. Surtees, in his pedigree of the Nevilles, enumerates Anne Manners, a second wife named Jane, and Margaret Cholmondeley; but, in the text, he mentions the will of the earl, dated 1563, in which "he desired burial in the church of Staindrop, near Jane (Cholmley), his second wife." The authority of the will is conclusive.

was 21 years of age at the time of his father's death, and married Jane, eldest daughter of Henry Howard, Earl of Surrey* (the poet), beheaded in 1547, and sister to the Duke of Norfolk, who was also beheaded June 2, 1572. It does not appear that the earl was imbued with any of that martial feeling which had characterised his ancestors, but rather that he was inclined to field sports and private enjoyment. With Sir George Bowes, of Streatlam, he seems to have lived on friendly terms; and on the 17th of May, 1569, as commissioners under the great seal, they attended the musters, taken upon Hamilton Hills, of all the inhabitants of the wapentake of "Langbarughe," from the age of sixteen and upwards. In September following, he appears to have been engaged in dispensing hospitality at Brancepeth; as, on the 7th, Lord Hunsdon, having finished his warden court at Alnwick, writes to Cecil, from Newcastle, "I rode to my Lord of Westmerland, too be mery." It may be hence inferred that his loyalty hitherto was unimpeached.

The fatal Rising of the North, however, occasioned by the designs of the friends of Queen Mary of Scotland to effect a marriage between her and the Duke of Norfolk, brother-in-law to the Earl of Westmoreland, was accelerated by the indiscreet representations of those in the confidence of the latter nobleman. Wavering between allegiance and fear, both he and the Earl of Northumberland delayed obeying Elizabeth's summons to appear before her, until it was too late, and they were fully committed to the insurrection. The alarms to which Northumberland was exposed at Topliff, where it was insinuated that he was to be seized and conveyed away "*moffeled*" to the council, induced him to fly to his coadjutor at Brancepeth. On the 14th of November, according to Sir George Bowes, "at iiiii of the clocke in the afternoone, the said erles, accompanyd with Rychard Norton, Francys hys sone, with dyvers other of hys sayd sones, Xpoferr Nevell, Cudbert Nevyll, uncles of the sayd Erle of Westmerland, and Thomas Markynfelde, wythe others, to the number of three [score] horsemen, armed in corsletts and coyts of playt, with speares, harquebusses, and dagges; and entred the mynster theyr [at Durham], and theyr toke

* When the Earl of Surrey was confined in the Tower, his children were placed under the charge of the Duchess of Richmond, their aunt, to be brought up and educated; and Fox (the martyrologist), their instructor, bears honourable testimony to the talents and abilities of the Lady Jane, who, he says, profited so wonderously in the Greek and Latin tongues, "that she might well stand in competition with the most learned of the time, for the praise of elegancy in both kinds." She is described as being one of the most learned ladies of a

all the bokes, but one, and theyme and the comunyon table defaced, rentt, and brok in peces. And after made a proclamatyon in the quenes name, that no man, before theyr pleasur knowne, shuld use any servyce: and callyng the cetezens before theyme, told theyme how they had done nothyng but that they wold avowe, and was after the quenes procedynges. And so taryng about the space off one hour, they departed; puttyng a watch of twenty-four townsmen to the towne, which tooke a servante of myne which I sent thither, and hyme caryed to hys lodgyng, and theyr he was kept tyll this morninge, and so came away.—In haste, at Barnard Castle, the xvth of Nov., at xii of the cloke, 1569."†

The queen's command that Westmoreland should instantly repair to court, was, unfortunately, not delivered until he had thus gone beyond the power of retractation. On the same day on which the above transactions took place at Durham, he wrote from Brancepeth to the Earl of Sussex as follows:—

"My Lord—I ame sorie that my happe is so harde that I can not obey the Quenes Majesties letter, in coming up to her presence, with howe greate a grefe it is to my harte, God knows, who ever loved her, and will do during lyfe, never meninge anie thing prejudiciall to her Majesties person, but have bene, and ever wil be, her faithfull and trewe subiecte. Althoughe I be now forced to thos extremities, contrarie to her pleasure and your counsell, to remaine here, seking to strengthen myself against the malice of myne enemies, which daily seke my destruction; for which cause I am compelled to gather my frends by anie meanes I thinke would beste serve my torne; nevertheless mayning faithfully to her highnes, althoughe I knowe it shall be otherways taken. If the Quenes Majesties letters had come before this day, I had been more clere from offence than now I ame; because my going to Duresme hathe made the pepell which I have been the stay of, all this whyle, till I feared to have bene plukt out of my howse; which unlawful means I never ment to yelde to, rather chosing to dye, then thus cruelly to have bene sent up. But, if her Majestie had, before this extremitie, preparyd for me, I would willingly

learned age, when knowledge, as well as virtue, was deemed essential to the female character.

† This letter, which is extremely difficult to be read, has been evidently written in great haste; as it is addressed to "my singular good Lord the Erle of Westmerland, Lord President of the Quenes Majesties counsell established in the North Parts," instead of to the Earl of Sussex.

have obeyed; but not to avoyde those dangers I have presumed so far, as I dare not venture to come in [her] Majesties presence. But, good, my lord, for the frendship sake before tyme profeste, cease not to be a frende for me to her Majestie, though I look you will be otherwyse. Thus wysing you much honor and helth, and trusting you will advertise her Majestie of this my excuse, I will make an ende."

An outline of the history of the rebellion has been given in vol. i., p. 67; and various circumstances connected with its details will be found under the heads of the localities in which they occurred. It is, therefore, only necessary in this place to mention such particulars as relate to the Earl of Westmoreland. The proclamation issued at Darlington was penned, by his command, by Thomas Jenny, at the dictation of Marmaduke Blakiston. Like other documents promulgated by the earls, it accuses the queen's counsellors of seeking to destroy the ancient nobility and the true religion:—

"Thomas, Earl of Northumberland, and Charles, Earl of Westmoreland, the queens most trewe and lawful subjects, and to all her highness people, sendeth greeting:—Whereas diverse newe set upp nobles about the Quenes Majestie, have and do dailie, not onlie go aboute to overthrow and put downe the ancient nobilitie of this realme, but also have misused the Quenes Majesties owne personne, and also have by the space of twelve years nowe past, set upp and mayntayned a new found religion and heresie, contrarie to Gods word. For the amending and redresing whereof, divers foren powers doo purpose shortlie to invade thes realmes, which will be to our utter destruction if we do not ourselves speedilie forfend the same. Wherefore we are now constreynd at this tyme to go aboute to amend and redresse it ourselves, which if we shold not do, and forenners enter upon, as we shold be all made slaves and bondsmen to them. These are therefore to will and require you, and every of you, being above the age of sixteen years and not sixty, as your dutie towards God doth bynde you, for the settinge forthe of his trewe and catholike religion, and as you tender the common wealth of your cuntry, to come and ressort unto us with all spede, with all such armour and furnytur as you, or any of you have. This fail you not herein, as you will answer the contrary at your perills. God save the Quene."

On the retreat of the insurgents from Yorkshire, the Earl of Westmoreland superintended the siege of Barnard Castle, and was present at its surrender. On the advance of Sussex, he fled with the horsemen. The adventures of the earls, during their flight, are thus narrated in a letter, dated the 22nd December, from Sussex to Sir W. Cecil:—"I have intellygens of suche as were present, and sawe it, that the next morning

* "Of Liddisdail the common theifis
Sa peartlie steillis now and reifis,
That name may keip
Horse, nolt, nor scheip,
Nor yett dar sleip
For their mischiefis."—*Maitland.*

after the erles came in to Lydysdale, Martyne Elwood, and dyvers others of the pryncypall men of Lydysdale, dyd rayse thier force agenst the erles, Black Ormston, and the reste of ther company, and offered the fyght; so as both partyes were lyghted, and in the end Marten Elwood sayd to Ormston, he should be sory to enter deadly feude with him by bloodshed, but he would charge him and the reste before the Regent, for keeping of the rebells of England, jf he did not put them out of the country; and that, yf they were in the country after the next day, he would do his worste agaynst them, and all that mayntained them. Wherupon the erles were dryven to leave Lydesdall, and to fly to one of the Armstrongs, upon the *batable*, or the borders betwyn Rydsdale and England. The same daye the Lydesdale men* stole my Lady of Northumberlands horse, and her ij wemens horses, and x other horses; so as when the erles went away, they left her and all the reste that had lost their horses on foote, at John of the Sydes† House, a cottage not to be compared to any doge kennel in England. Such is their present mysery; and at their departing from her, they were not 50 horse, and my L. of Westmorland changed his cote of plate and sword, with John of the Syde, to be the more unknowen."

Two days afterwards, Lord Hunsdon writes, "The erles rebelles and their principall confederates (as I here) do lurke and hide themselves in the woodes and desertes of Lyddesdale; but, if they tary on the Borders there, Sir Jo. Forster is in good hope to have som of them, or it be long. The erles have changed their names and apparell, and have made themselfes lyke to the owtlawes of Liddersdale. We have to presume and to suspect gretely, that they shall receyve som helpe and comforte of the L. Hume and of the Carres in Tividale; but the greatest feare is, of their escape by the sea, eyther on the este, or on the west coaste. Order is given here to the capteynes of the Q. Mates shippes, to attende well on the este coaste; and if you have done any thing for the west coast, they shall the more hardly escape."

On the 7th of January, Sir John Forster writes to Cecil, "Treuth it is, the Earl of Westmoreland presently lying in the overmost-chamber in Farnyhurst Tower, and my Lady of Northumberland is lodged in the lowest chamber. Ther is in the erles companie

† "He is weil kend, John of the Syde,

Francis Norton and other six of the erles servants, the Welberies, Henry Ridley, and others; old Norton, Markenfield, Egremont Radcliffe, Swinborne, and Tempest. They are all presently with the Lord of Buckleugh, at Braxham."

Whilst the Earl of Westmoreland was sheltered by Sir Thomas Ker, laird of Farnihurst, he was visited by his kinsman, Robert Constable, who had been employed by Lord Leicester and Sir Walter Wildmay, to go to Scotland after the rebels, where he might perceive "worke sum feate to betray some of them."* Constable endeavoured to gain his confidence, for the purpose of betraying him, and represented the disgrace brought on the house of Neville, which, he said, had "been honourable, and of great antiquity, and never spotted till now." The earl's tears, on this, flowed abundantly, and he confided his hopes and sorrows to the bosom of his treacherous relative, who advised him to come to his house when all was quiet; a course which would have consummated Constable's villainy. The earl gave him a ring from his finger, to present to the countess as a token, and to will her "to take no care nor thought for him, for all his care was for her and his children;" and that he hoped by God's grace to recover the queen's favour. He also desired that his lady should send one of her best jewels to Lady Ker, and the fairest gelding she could procure for the laird, as a return for the charges he had put them to. Notwithstanding these particulars, related by Constable himself, that wily

hypocrite hints at a jealousy of the laird of Farnihurst about Westmoreland and his "new wanton lady." The events which followed prevented the Earl from accepting his kinsman's *hospitality*. The particulars of the interview of the latter with the countess at Brancepeth have been given in vol. i., p. 430.

The earl was strongly suspected of remaining concealed about Brancepeth for some time after the rebellion, and also to have been present at several inroads on the English Border. He is said to have been at the convention of Leith, and to have "sat in counsell wyth the rest of the lords." In the autumn of 1570, he embarked at Aberdeen, and shortly afterwards arrived at Flanders, where, on the representation of the Duke of Alva, King Philip of Spain allowed him a pension of 50 crowns per month. He was anxious to obtain a pardon; but the correspondence that has been preserved shows that his hopes continued to grow fainter with the lapse of time.†

The Countess of Westmoreland, after many ineffectual endeavours to procure the pardon of her husband, died in retirement in 1593, and was buried at Kenninghall on the 30th of June. Her attachment to the Protestant religion seems to have weakened the charge brought against her by the Earl of Northumberland, of having instigated her husband to the rebellion ‡ Queen Elizabeth had at first allowed her a pension of £200 per annum for herself and her three daughters; § and in May, 1577, an additional annuity of £100 was granted.

* Constable did not afterwards attempt to palliate the baseness of his conduct in trying to *trap* those that trusted in him; but said that he hoped, if he were successful in his villainy, the queen would spare their lives, otherwise his *conscience* would be troubled.

† By the following extract of a letter from the Queen of Scots to her ambassador in France, the Archbishop of Glasgow, dated August 4, 1574, some negotiations appear to have been in progress:—"To the English, and more especially to the Earl of Westmoreland, you will communicate my good intentions when I shall have the power [alluding to the means in France]; and with regard to his appointment, I should be very glad that he had it, provided that two things were secured—the one his safety, of which I entertain doubts, because the remainder of those who are of his religion, and who are better supported than he would be, are beginning to withdraw, as you will hear is the case with Oxford. In short, it is not easy for a good Catholick to continue here, without danger of his life, or of what is still dearer to him—his conscience. Thus, informing you of the offers which have been made to him, I shall in my first dispatch, state what I may hereafter discover. Certainly, I will not advise him to refuse a good offer, if it occurs; but I would admonish him in accepting it, that he takes good care not to injure the service of God, his friends, and his reputation; and not to be certain of his life, except on dishonourable conditions." She then directs a sum to be paid to Westmoreland, the amount of which is not named.

‡ "What meanes did the Lady of Westmorland use to provoke the erle, hir husband, to procede?"

"None that he knoweth, till the last daie, when they thought to have broke [up], and every man to have shifted for himself; at which tyme, she dyd provoke hym and the rest, with vehement perswasion and cryengs, as he hath formerlie declared."—*Northumberland's Examination*.

§ The family of the Earl and Countess of Westmoreland consisted of four daughters, viz., Catherine, Eleanor, Margaret, and Anne. Catherine Neville was married privately to Sir Thomas Grey, Knt., of Chillingham, Northumberland, at the manor house of Battersby, Yorkshire, on the 7th of November, 1585. He died without issue April 9, 1590, leaving his fortune, after the payment of some legacies, to his widow. The degrading suspicions to which this descendant of a noble house was afterwards subjected, are exemplified in the following letter from Bishop Mathew to Lord Burleigh, 27th May, 1598:—

"Right Honorable:—Maie it please your good lordshipp to be advertised, that I have lately caused the lady Katherine Gray, widdow, one of Westmoreland's daughters, to be apprehended by Mr. John Conyers, the sheriff of this countie, and Mr. Robert Tailbois, one of the justices of peace, and have admitted her to the safe custodie of Christopher Glover, gaoler of Duresm Castle, to be kept forthcoming in his private house nihe the gaole. This ladie was

She was, says Henry Howard, of Corby Castle, "a lady of great virtue and acquirements, accompanied with such gentle feminine manners, sense, and affec-

tionate love of her family and her duties, that had her father lavished on her all the praise of the imaginary Geraldine, he could scarce have made her more inter-

for many yeares sought by the late earle of Huntington; was detected for the receaving and releiving of sundrie seminarie priests, as Stafferton, with the flesh mark in his face, (with whose too much familiaritie she hath been *judged* in London,) Bost, who since was executed, Mushe, and Patteson, besydes many others, whose names come not presently to mynde. She hath always illuded the processes and messengers of the ecclesiasticall high commission, by eloyning and withdrawing herselfe hitherto from all appearance. Of late tyme, somewhat synce Martinmas last, she took to farme a house and land, called Grenercroft, nigh Lanchester, in this countie, 8 myles hence, northe and by west, letten unto her by M^{rs} Hall, a widowe, conformable, and sister to Nicholas Tempest's wife of Stella, that great recusant, where the ladie hath been coming and going ever since, and sometimes made good cheere to twentie of her frendes at once, especially at Christmas: and where, if I be truly informed, there was bad rule kept, both spiritually and carnally. Within half a mile of that house, on this side Lanchester, dwelleth at the manor-house, one William Hodgson, an olde servant and follower of the earle, whose sonne, called John, is a speciall recusant, and is reported (but how certainly, I know not) to have married this ladie. This William Hodgson is a perilous fellow, conformable to her majestie's proceedings, and fermior to her highness of the whole deanery of Lanchester dissolved, worth, it is said, some cc markes, or better, above the yerely rent. In Lanchester towne dwelth Lancloct Hodgson, when he is at home, but he is now in prison for recusancie a dangerous person, and not unlerned; who the last yere was married, as himselfe confesseth, by an old popish priest, but no seminarist, nor at a masse, as he allegeth, to Marie Lee, daughter to another of therle's chefe old servants and officers at Brancepeth, in those daies. The manor of Lanchester belonging to me, and Brancepath lordship to her majestie, by therle's attaynder, doe adjoin together, and therefore, I thinke, the ladie Graye did there mean, for the tyme, to sett up her rest so nigh her father's olde tenants; the house itselfe also (standinge towards the fells, and nigh a pretty wodde) strongly built of newe, with many shifting contrivances, may yelde good opportunitie to lodge and intertayne, not only other ill guests, but, percase, thearle himselfe, *si et quatenus*. Nowe, that she is in hands, I would from your lordship be directed, with some expedicion, how she shall be dealte with and used; 1. whether detayned in durance, or bayled upon good bond for her appearance from tyme to tyme; 2. whether she shall be touched only for recusancie, or charged with other matters that may occurre; 3. whether, if any thinge amountinge to felouye shall arise against her, she shall be tried thereof at the next assises here, or in Northumberland, as her sister the ladie Margaret was anno 1593, and by her majestie was gratuitously pardoned in hope of the continuance of her pretended conformitie (from which I heare she has relapsed since); 4. whether she shall be suffered to keepe house of herselfe, with some of her owne servants about her, and other friends sometimes resorting to her, as she desyretH earnestly, or lyve, as her keeper shall provide for her, in a more private and close manner; 5. whether she shall be permitted to ryde abroad and take the aire, or continue within her lodging; with such other particulars as your lordship, in your wisdome, shall think fitt to impart unto me. My healtHe will not yet serve me either to sende for her, or goe to her; but at the tyme of my visitation, about a fortnight hence, or xviii dayes, I shall take occasion to speak with her, and examine her, if your lordship, before that tyme, shall so advise me, and if God will give me leave. The whyle, with humble thanks to your good lordship for the allowance of my impost, I betake your lordship to the grace

of God.—At B. Auckland, 27th Maii, 1598.—Your lordship's most humble in Christ, **TORIE DURESME.**"

Margaret Neville, who was only five years old at the time of the rebellion, was tried and convicted at the Durham assizes in 1594, for having been found in company with a seminary priest, John Boast (see vol. i., page 200). A letter from her to Queen Elizabeth has been preserved in the Lansdowne MSS. :—

"To the Quenes most excellent Maiestie: most humblie with teares beseecheth your highnes, your maiesties most desolate poore subject, Margaret Nevill, one of the daughters of the infortunate late Erle of Westmerland, to take princelie pittie upon my lamentable estate. With great greefe, I doe confesse (most gracious sovereign) that sithins the death of my deare mother, having no part of that allowance which it pleased your Majesty most gratuslie to bestow upon me, nor any of her maintenance, I was forieid, by reason of great want, to receive reliefe of papistes, by whose subtiltie, my needie simplicitie was allured from myne obedience and loialtie to their superstition and errors; and so being drawne into the companie of a seminarie priest, I was condemned. At the assizes the last somer, being destitute of help, it plesed the good bishop of Duresme, at the motion of my Lord President and the judges, to take me into his house, where he onelie hath, and doeth yet whollie releeve me; and by his godlie and sounde earnest instructions, he hath (I moste humble praise God) fullie reformed me in religion, which (by God's grace) I shall, with all obedience to your highnes, constantlie professe, while I live. And now (alas) sceinge this pitifull bishop, my onelie help, is verie shortlie to leave this conntrie, and I know not how or where to be relieved, I commend my cause and woeful estate unto God and your Majestie, most humblie beseeching your highness, of your princelie and moste grations wanted compassion, to be mercifull unto me, a moste distressed poore maiden; and to vouchsafe me your most comfortable pardon for my life, and somewhat also for my releife (which if I still want, my liefie wil be no life, but mere misserie); so shall the enemies of true religion have no cause to reioice at my woe; the repenting poore converts, by myne example, will be comforted; and I (as most bonnde) shall never cease with them to praie for your Majesties moste happie reigne, in all wished felicitie, long to endure.—Feb. 14, 1594.—Your Majesties moste woeful poore prisoner, **MARGARET NEVILL.**"

As this letter was written whilst she was in the house of a Protestant bishop (Hutton), who had laboured hard for her conversion, and when she was under sentence of death, she would naturally adopt the sentiments most likely to obtain grace from the queen. Two days afterwards, the bishop wrote to the Lord Treasurer to solicit her pardon; but she continued a prisoner till the following year, when she received a pardon. She married Nicholas Pudsey, a Yorkshire gentleman, and received an annuity of 100 marks from James I., in 1604.

Anne Neville married David, younger brother of Sir William Ingleby, of Ripley, Knt. In the enquiry and survey of Brancepeth, in 1614, it is stated that she held a lease from the queen, of the herbage of the East Park, at a yearly rent of £40. She left an only daughter and heiress, Mary, married to Sir Peter Middleton, Knt., of Stokefield, Yorkshire. Eleanor Neville, the other daughter of the Earl of Westmoreland, died unmarried before 1604.

The Lady Adeline, the maiden sister of the Earl, appears to have survived all her own generation, and even her nieces. She had an estate in Willington, where she resided in the house recently belonging to Col. Mills. It is said that Mary Queen of Scots once slept here.

resting than what has been written of her by Robert Constable, the wily betrayer of the Earl of Westmoreland." It was her sad destiny to be bereaved of a father and a brother, who both died on the scaffold, and of a husband who lingered in misery and hopeless exile.

It appears that, during the latter years of his life, the Earl of Westmoreland was treated with neglect by the government under which he was pensioned, and only regarded with consideration as a person whose influence might be useful in the event of an invasion of England. In 1601, he is represented, at an advanced age, as a suitor for the hand of a daughter of Richardot, who insisted, as a condition to his consent, that the earl should procure an addition of 200 crowns per month to his pension. On the 16th of November, in the following year, however, he died at Newport, after an absence of 30 years from his native land. Camden, in noticing his death, says, "From this family, fruitful in nobility, there sprung (besides six Earls of Westmoreland) two Earls of Salisbury and Warwick; an Earl of Kent; a Marquess Montacute; a Duke of Bedford; a Baron Ferrers of Ousely; Barons Latimers; Barons Abergavenny; one queen; five dutchesses, to omit countesses and baronesses; an Archbishop of York; and a great number of inferior gentlemen."

On the death of the earl, no claim was made on behalf of the Nevilles of Weardale; but Edmund Neville of Latimer urged his pretensions to the lands and honours of Westmoreland, reminding James I. of his assurance that "if you were King of England, I was Earle of Westmoreland without exception; the credit of which message was warranted by a letter from my Lord of Darlington, assuring further, that now my fortunes shall rise with yours; and irrevocably ratified by your sacred Majestic in your postscript, written with your royal hand, which was never yet known to retract what it deliberately set downe, in the words, 'I shall now with grace promise you to your right, and satisfy you to your expectation;' which letters was also styled to the Earl of Westmoreland." Neville's letter concludes by claiming the title and honours of the earl who fell "*for his service and affection to the king's mother.*" This appeal, however, was not merely unsuccessful, but Edmund was actually cited for having assumed the title with which the king had accosted

him. The judges also decided that the earldom was legally forfeited.

Raby, after the attainder of the Earl of Westmoreland, continued vested in the crown until 1613, when it was granted, with Barnard Castle, &c., by James I., to his favourite, the Earl of Somerset; but, after a brief possession, these lordships reverted to their royal master (see page 11). They were subsequently purchased of the lessees of Charles I. by Sir Henry Vane the elder, Knt.

THE VANES.*

SIR HENRY VANE THE ELDER.—This distinguished politician was knighted by King James I. in 1631, in which year he was ambassador to the states of Denmark, Sweden, Holland, and Bohemia, comptroller of the king's household, and a privy counsellor; and, in 1639, he was secretary of state, and treasurer of the household. King Charles I., on his progress to Scotland, in May, 1633, was entertained at Raby Castle by Sir Henry Vane; and on April 29, 1639, that monarch again visited Raby, on his march against the Scottish Covenanters, when Sir Henry commanded a regiment of 1,000 men. His dismissal from his offices, and enmity to the Earl of Strafford (who, out of contempt to the Vanes, had been created Baron of Raby), are matters of general history. During the civil wars, he took part with the parliament.

A daring *coup-de-main*, by which Raby Castle was taken in 1645, with the subsequent events, are thus narrated in the newspapers of that time:—

In the *Kingdom's Weekly Intelligencer*, July 8, it is stated that, "Upon the Lord's day, June 29th, by five of the clock in the morning, 120 Horse and Dragoons came out of Bolton Castle, and scaled the walls of Raby Castle, where the draw-bridge was, & surprised Mr. Singleton & Mr. William Allison, servants to Sir Henry Vane, in their beds; whereupon Sir George Vane raised the country forthwith, both horsemen with arms, & the foot also, well armed, in all about 300 men. Upon Monday, the 30th, at twelve of the clock, they came to Staindrop, about a quarter of a mile from the castle: then came also six troops of horse out of Yorkshire, which Col. Wasdale & Major Smithson commanded—they were all there by seven a clock at night.

* Though the ancestors of this family anciently wrote their name *Vane*, it appears that, from before 1488 to 1582, they altered it to *Fane*. They descended from Howel-ap-Vane, who was seated in Monmouthshire after the Norman Conquest; and their family pedi-

gree contains the names of several illustrious individuals. Henry Vane was knighted by the Black Prince at the battle of Poitiers, September 19, 1356. Sir Ralph Fane was created a Knight Banneret at the battle of Musselburgh, September 21, 1547.

After their coming, they rescued many cattell, which the rebels were driving into the Castle: they took fifty-five horses from them, with the loss of one man, some of them worth £20 a piece. Next day they took nineteen horses more of them, so that they have now but sixty left, which will not be kept long. Sir Francis Liddale is commander in cheife of the enemy: the rest are Bishoprick and Yorkshiresmen. They have sent Sir George Vane's horses to us, by reason they wanted hay extremely. They are destitute of bread very much, which, it is hoped, will make them yield within few dayes. They are now so blockt up that they dare not stirre out."

The *Mercurius Civicus*, July 17, says, "Sir Francis Liddel offers to go away & leave the Castle as they found it."

In the *Kingdom's Weekly Intelligencer*, July 29, it is said, "Raby Castle is certainly surrendered to the Parliament's forces." And the *Scots Dove*, of the 1st of August, states that "Raby Castle is yielded up; the officers to march away with arms, & the common soldiers with their lives upon their legs: they may put their hands in their pockets if they will. They left 300 good armes behind them: powder, and other ammunition, good store." The *Mercurius Veredicus*, of the 4th of August, adds that "Rabby Castle was surrendered to Sir George Vane: Sir Francis Liddel, the Governor, & the souldiers to march to Boulton or Newark."

From the following entry in Staindrop parish register, it appears that Raby Castle was again besieged in 1648:—"William Joplin, a souldier, slaine at the seige of Raby Castle, was buried in the church, 27 Aug. 1648.—Mem. many souldiers slain before Raby Castle, which were buried in the Parke, & not registered."

Sir Henry Vane died in 1654-5, aged 69. His wife was Frances, daughter and coheirss of Thomas Darcy, Esq., of Tolshunt-Darcy, Essex, by whom he had issue, 1, Sir Henry, his successor; 2 and 3, Thomas and John, both died in infaney; 4, Sir George (afterwards of LONG-NEWTON, which see); 5, Sir Walter, of Shipbourne, a major-general under the Prince of Orange, and killed at the battle of Seneffe in Germany, in August, 1647; 6, Charles, of Chopwell, died unmarried; 7, and 8, William and Edward, died unmarried; 9, Margaret, married to Sir Thomas Penham; 10, Frances, married to Sir Robert Honeywood; 11, Anne, married to Sir Thomas Liddell of Ravensworth; 12, Elizabeth, married to Sir Francis Vincent; and, 13, Catherine, died unmarried, 1692.

SIR HENRY VANE THE YOUNGER.—This extraordinary man was born at Shipbourne, and educated at Westminster school, whence he was removed to Magdalen College, Oxford. He then proceeded to Geneva, where he imbibed opinions antagonistic to the Liturgy and the government of the Established Church, inclining to the opinion of Origen that devils and all should be saved. About this time, several persons, who were uneasy at home on account of their religious opinions, emigrated to New England; amongst whom was Vane, who, notwithstanding his youth, was elected governor of Massachusetts; but his enthusiasm soon induced the colonists to repent their choice, and his government terminated at the next election. He then returned to England, was appointed a joint treasurer of the navy, chosen M.P. for Hull, and, notwithstanding his republican predilections, was knighted by Charles I. in 1640. He was, however, instrumental in producing the condemnation of Lord Strafford, and carried up to the lords the articles of impeachment against Archbishop Laud. He took no part in the king's trial and death, but was one of the council of state appointed to supreme power after that event. He continued a strenuous opponent to Cromwell, whose well-known apostrophe, "O Sir Harry Vane, Sir Harry Vane—the Lord deliver me from Sir Harry Vane!" has become a historical by-word, and who even sought to intimidate him by questioning his title to the Raby estates, and causing him to be imprisoned in Carisbrook Castle. While treasurer to the navy (a place he held till the first wars with the Dutch), Sir Henry Vane's fees amounted to little less than £30,000 per annum; but considering this too much for a private subject, he, with rare honour, gave up his patent (from Charles I. for life) to the then parliament, desiring but £2,000 yearly for an agent he had bred to the business, and the rest to go to the public. The restoration put an end to his labours for the perpetuation of a republic; and Charles II., though he promised that his life should be spared, thought "certainly he is too dangerous a man to lett live, if we can honestly put him out of the way." He was accordingly tried, found guilty in spite of an eloquent defence, and brought to the block June 14, 1662; when his address to the spectators was rudely interrupted by drums and trumpets.

The wife of Sir Henry was Frances, daughter of Sir Christopher Wray, of Glentworth, Lincolnshire. Henry, William, and Richard, their elder sons, died without issue. Thomas, fourth son, married Frances, daughter of Sir Thomas Liddell: he was elected M.P.

for the county of Durham, June 21, 1675, but was attacked by the small-pox, and "was in a fever at Raby upon y^e day of his election, whereby he died y^e fourth day after, June 25th, in the morning," aged 23, and was buried at Staindrop. Christopher, fifth son, succeeded his father; and Cecil, Edward, and Henry died infants. There were six daughters, of whom Dorothy, the eldest, married Thomas Crispe, of Essex, in 1679; Frances, married Edward Kegwick, Esq.; Mary, married Sir James Tillie, of Pentillic Castle, Cornwall, Knt., died without issue in 1682, and was buried at Shipbourne; Anne and Catherine, died unmarried; and Albinia, married Henry Forth, Esq., an alderman of London, and had issue Henry Forth, Esq., of Darlington, who married Anne, daughter of Richard Hilton, Esq., and died June, 1746.

FIRST BARON BARNARD.—Christopher Vane, Esq., fifth son of Sir Henry, was elected M.P. for the county of Durham, in the room of his brother Thomas, on the 25th of October, 1675, but was an unsuccessful candidate in the elections of 1678-9, 1679, and 1680. He was created Baron Barnard of Barnard Castle, July 8, 1699, with remainder to heirs male. The title of Raby would have been preferred; but it was still in the male descendants of the unfortunate Strafford's younger brother. The wife of Lord Barnard was Elizabeth, eldest daughter of Gilbert Hollis, Earl of Clare, and sister and coheirress of John, Duke of Newcastle, by whom he had issue four sons and four daughters. Two of the sons, Henry and Christopher, and three of the daughters, Elizabeth, Albinia, and Mary, died in infancy; the fourth daughter, Grace, survived her father, and died unmarried.

"In the year 1714," according to Vernon's Reports, "Lord B. having taken some displeasure against his son [Gilbert], on whom the castle was settled, got 200 workmen together of a sudden, and in a few days stripped it of its covering of lead, iron, glass, doors, and boards, &c., to the value of £3,000. The son filed his bill, praying an injunction to stay committing waste in pulling down the castle: on a hearing, the court not only continued the injunction, but decreed that the castle should be repaired, and put in the same condition it was, August 1714; for which purpose a commission issued, to ascertain what ought to be done, and a mas-

ter appointed to see it done, at the expense of Lord B." This strange proceeding, on the part of his lordship, is said to have been instigated by his wife, who was so strongly exasperated against her son, that she attempted to set fire to the castle. "This old jade," says Surtees, in a letter to C. K. Sharpe, Esq., "after her death, used to drive about in the air, in a black coach and six; sometimes she takes ground and drives slowly up the lawn to Alice's Well, and still more frequently walks the battlements of Raby, with a pair of brass knitting needles, and is called Old Hell Cat.*" Lord Barnard died on the 28th of October, 1723, aged 70, and was buried at Shipbourne.

The Hon. William Vane, of Fairlawn, Kent, second surviving son of Lord Barnard, was elected M.P. for the county of Durham in 1708, but was an unsuccessful candidate in 1722. He was created Viscount Duncannon of Ireland, June 12, 1720, and Viscount Vane and Baron Duncannon on October 13, in the same year. His wife was Lucy, daughter and coheirress of William Jolliffe, Esq., of Caverswell, Staffordshire, who died March 7, 1742. Lord Duncannon died suddenly of apoplexy, at his seat of Fairlawn, May 20, 1734, aged 53, having three days before been elected M.P. for Kent. His first-born son, Christopher, died in 1721, aged 17. John, second son, died at Naples, February 5, 1723, aged 17. William, third son, born 1714, succeeded as Viscount Vane in 1734: he married Frances, daughter of Francis Hawes, Esq., and widow of Lord William Hamilton; and died April 5, 1780, without issue, when the title became extinct. An act passed for the sale of his estates to pay his debts; and the tithes of Darlington, which had been settled upon the lords of Fairlawn, reverted thereupon to the main line by purchase.

SECOND BARON BARNARD.—The Hon. Gilbert Vane, eldest son of the first Lord Barnard, succeeded to the title on the death of his father. He married Mary, daughter of Morgan Randyll, Esq., of Chilworth, Surrey, who died at Newark, August 4, 1728, aged 47. His lordship died April 27, 1753, aged 75. Their children were, 1, Henry. 2, Morgan, made comptroller of the stamp office in 1732; married, first, Margaretta, daughter of Mr. Robert Knight, formerly cashier to the South Sea Company, by whom he had a son, Morgan

* "The coach and six," adds the facetious writer, "is nothing extraordinary, but perhaps the following equipage may be a little unusual. 'John Borrow departed this life, the 17th day of January, being Saterdag, this yeare 1684-5, and was reported that he, see a

coach drawne by six swine, all blaek, and a black man satt upon the cotch-box. He fell sick upont and dy'd, and of his death severall apparitions appeared after.' Verbaton from the diary of Jacob Bee."

Vane. She died at the Bath in May, 1739. He married, secondly, Anna Maria, daughter of — Fowler, Esq.; and, thirdly, Mary, sister of John Woodyear, Esq., by whom he had a daughter, Mary Vane. 3. Thomas, died February 19, 1758. 4. Gilbert, a lieutenant-colonel in the army, died unmarried in 1772. 6. Charles, of Mount Ida, Norfolk, had an only daughter, Henrietta, who married Sir William Langham, Bart. 7. Anne, maid of honour to Queen Caroline; she died at the Bath, unmarried, March 11, 1735-6. 8. Elizabeth, married to Sir William Humble, Bart.; she died February 22, 1770. 9. Jane, married to Thomas Staunton, Esq., of Stockgrove, Bucks.

EARL OF DARLINGTON.—The Hon. Henry Vane was born in 1705. He was vice-treasurer of Ireland, receiver and paymaster-general of the army in 1742, and was elected M.P. for the county of Durham, July 1, 1747. Being made a privy counsellor, joint paymaster of the forces, joint treasurer of war, and lord of the treasury, in 1749, he was re-elected M.P. on the 3rd of May. He succeeded his father as Baron Barnard in 1753, and was made Lord Lieutenant and Vice-admiral of the county of Durham. On the formation of the Duke of Newcastle's ministry, he was, on April 3, 1754, created Viscount Barnard and Earl of Darlington. In consequence of the violent state of party feeling at that period, his character has been variously represented; Horace Walpole lashing him in his most bitter style, whilst the premier duke panegyricised him in the House of Lords as "Harry Vane, who never said a false thing, or did a bad one." He married Grace Fitzroy, daughter of Charles, first Duke of Cleveland (son of King Charles II. by Barbara Villiers, who was created Duchess of Cleveland), and sister and heiress of the second duke.* By this lady the earl had three sons and three daughters. He died March 6, 1758, and his widow in 1763, aged 66.

The Hon. Frederick Vane, of Selaby, their second son, was born June 26, 1732. He was treasurer of Chelsea Hospital, and elected M.P. for the county of

* This nobleman often resided at Raby, and, in the hunting or sporting season, had also an occasional dormitory and refectory (both one room) in the house of one of the Raby tenants at Piercebridge, which is still pointed out. "He seems," says Mr. Longstaffe, "judging from the popular traditions floating in South Durham, to have been a quiet unoffending man, of the most unassuming simplicity. He doated upon the chase; and once, when out on his favourite bent, his horse happened an accident, and he was compelled to mount a haystack to obtain as wide a scope of view as possible. The farmer's wife, tenanting the adjacent farm, bustled out, and fiercely called him down. The peer's gentle explanation, 'My good

Durham in 1761 and 1768, but declined a contest in 1774. He married, first, Henrietta, sister of Sir William Meredith, Bart.: she was buried at Gainford, March 10, 1796, "above 70." On September 7, 1797, he married, at Gainford, Jane, eldest daughter of Arthur Lysaght, Esq., of Bath.

The Hon. Raby Vane, third son of the Earl of Darlington, was born in 1736, and succeeded his eldest brother in the representation of the county of Durham, March 22, 1758. He afterwards represented Carlisle, and was a captain in the navy. He married Elizabeth, daughter of George Sayer, D.D., archdeacon of Durham; died October 23, 1769, and was buried at Staindrop.

Anna, eldest daughter of the earl, was married, first, to the Hon. Charles Hope Weir, brother of James, third Earl of Hopetown; and, secondly, to Brigadier-general the Hon. George Monson. Mary, second daughter, was married to Ralph Carr, Esq., of Cocken, and died in 1781, without issue. Jane, youngest daughter, died unmarried, January 20, 1759.

SECOND EARL OF DARLINGTON.—The Hon. Henry Vane, born in 1726, was elected M.P. for the county of Durham, on the elevation of his father to the peerage, on May 5, 1753, and was again returned in the following year. On his father being created Earl of Darlington in 1754, he assumed the title of Viscount Barnard; and he succeeded to that of Earl of Darlington, &c., in 1758. He was Lord Lieutenant and Vice-admiral of the county, an alderman of Durham city, colonel of the Durham militia, governor of Carlisle, and master of the Jewel Office. His greatest enjoyment, however, was the superintendence of Raby farm, which included lands of the annual value of £1,200, on which all the improvements in agriculture were practised; though there was one ancient usage retained, the tillage lands being ploughed by between 20 and 30 teams of four oxen each. In the farm-yard were close stands for upwards of 40 oxen, besides an open spacious fold with a cistern of water perpetually running: there

wouan, I am the *duke*,' only added fresh fuel to the termagant's fire. 'Why, I dinna care whether ye be *duke* or *drake*, ye shall come down.' Another story has been bandied about in newspaper literature in fifty changes: but it is very generally localized in Darlington Ward. It seems that the hot blood of Finch did not satisfactorily naturalize itself with the amiable duke, who used to hold his high-spirited wife's hanks of linnen thread while she wound them, but often entangled them with his awkward handling. On one of these occasions, she angrily exclaimed, 'You fool you!' a taunt which even he could not tamely submit to, for he replied sharply, 'Yes, I was a fool when I married you.'

were also covered racks and pens for 800 sheep, with various other conveniences.

On the 10th of March, 1757, the earl married Margaret, eldest daughter of Robert Lowther, Esq., of Meaburn, Westmoreland, and sister of James, the first Earl of Lonsdale, by whom he had two daughters, who died in infancy, and one son. The earl died on the 8th of September, 1792, and was buried at Staindrop. His widow survived him till the 11th of September, 1800, when she expired at Langton Grange, and was interred at Staindrop.

DUKE AND MARQUIS OF CLEVELAND.—William Harry Vane, third Earl of Darlington, Viscount and Baron Barnard, was born July 27, 1766. He was Lord Lieutenant, Custos Rotulorum, and Vice-admiral of Durham, colonel of the Durham militia, and some time M.P. for Winchelsea. On September 17, 1827, he was created Marquis of Cleveland; in January, 1833, he was advanced to the titles of Duke of Cleveland and Baron Raby; and in 1839, he was elected K.G. On September 19, 1797 (being then Earl of Darlington), he married Lady Katherine-Margaret Powlett, second daughter and coheirress of Harry, sixth and last Duke of Bolton, and coheirress of a moiety of the barony of St. John of Basing, by whom he had issue—1. Henry, his successor. 2. Louisa-Catherine-Barbara, born January 11, 1791; married July 29, 1813, to Francis Forester, Esq., brother to the late Lord Forester; and died January 8, 1821. 3. The Hon. William-John-Frederick, born April 3, 1792; took the name of Powlett, by royal license, dated April 20, 1813, in compliance with the last will and testament of his maternal grandmother, Katherine, Duchess of Bolton; and married, July 3, 1815, Caroline, fifth daughter of William, fourth Earl of Lonsdale, K.G., born February 17, 1792. He succeeded his brother in the representation of the county in 1815, and was also elected in 1818, 1820, 1826, and 1830. He became Lord William on the elevation of his father to a marquissate. 4. Caroline-Mary, born February 8, and died May 11, 1795. 5. Augusta-Henrietta, born

* On his coming of age in 1809, a plentiful dinner was provided at Raby Castle for the tenantry. The park guns were fired at one o'clock, and a ball was given to the tenants' wives and daughters in the evening. An ox was roasted whole at Darlington, and distributed with plenty of bread and ale to the populace; another was roasted and distributed in like manner at Piercebridge (where the skull and gilded horns are still preserved in a butcher's shop), a third at Staindrop, a fourth at Cockfield, a fifth at Barnard Castle, and a sixth at Middleton-in-Teesdale, at all of which places there were great

December 26, 1796; married, June 2, 1817, to Mark Milbanke, Esq., of Thorpe Perrow, near Bedale, Yorkshire. 6. Laura, married, February 24, 1828, to Lieutenant-colonel William-Henry Meyrick, of the 3rd Foot Guards. 7. Mary-Arabella, born June 2, 1801; and married, April 23, 1831, to the Hon. Richard Pepper Arden, of Pepper Hall, Yorkshire, now Lord Alvanley. 8. Harry-George, born April 19, 1803; and elected M.P. for the Southern Division of the county in 1841, twice in 1847, and in 1852.

The Countess of Darlington died June 17, 1807; and the earl married, July 27, 1813, Elizabeth, daughter of Robert Russell, Esq., who survives him. The duke died January 29, 1842, aged 75, at his residence in St. James's Square, and was buried in Staindrop church.

SECOND DUKE AND MARQUIS OF CLEVELAND.—Henry Vane, Duke and Marquis of Cleveland, K.G., Earl of Darlington, Viscount and Baron Barnard of Barnard Castle, and Baron Raby of Raby Castle, was born August 16, 1788.* He married, November 16, 1809, Sophia, eldest daughter of John, fourth Earl of Powlett; was elected M.P. for the county of Durham, October 14, 1812, and continued its representative until July, 1815, when he accepted a commission in the army, which vacated his seat. In 1824, he obtained the rank of lieutenant-colonel of the 75th regiment, and is now colonel of the Durham militia.† He became Earl of Darlington on the elevation of his father to the rank of a marquis; and after he retired from the representation of the county of Durham, he sat in parliament for Tregony, Totness, and Saltash. His grace is now the representative of the titles and honours acquired by the elder branch of the Vane family.

INSIGNIA.—*Arms.* Quarterly. I. and IV., az. 3 sinister gauntlets or, for VANE. II. and III., Quarterly, 1 and 4 quarterly France and England; 2 Scotland, 3 Ireland (being the arms of Charles II.); over all a baton sinister, compony ar. and az. for FITZROY.

Crests.—I. On a wreath, a dexter hand, couped above the wrist, erect in a gauntlet proper, bossed and rimmed or, brandishing a sword, also proper, for VANE. II. On a chapeau gu. turned-up ermine, a lion passant, guardant, or, crowned with a ducal coronet az. and gorged with a collar counter-compony ar. and az., for FITZROY.

joicings. The ox-roasting process on such occasions, it is gratifying to observe, is now considered "a custom more honoured in the breach than the observance."

† A correspondence of some interest, on the subject of military discipline, took place in September, 1854, between his grace and Colonel Garrett, arising out of proceedings in a court martial, held on Lieut. Perry, of the 46th regiment of foot, and which appeared in the public journals of the day.

THE CITY OF BOSTON FROM THE COMMONS

Supporters.—Dexter, a griffin ar.; sinister, an antelope or, each gorged with a plain collar az. (formerly the griffin was worn charged with 3 gannets as in the arms, and the antelope with 3 martlets). These are the supporters of VANE; but those of FITZROY have occasionally been adopted, viz., dexter, a lion guardant or, crowned and gorged as in the crest; sinister, a greyhound ar., collared as in the dexter.

Motto.—Nec temere, nec timide.

RABY CASTLE.

THIS "noble pile of stately towers" is situated about a mile north from the town of Staindrop, and is supposed to occupy the site of the mansion given by Canute to the church of Durham. The earliest record relative to its erection occurs in 1379, when John de Neville obtained a license to "make a castle of his manor of Raby, and to embattle and crenelate its towers." The architecture of nearly the whole castle agrees with this date; and as most of the modern repairs and additions have been made in unison with it, this edifice is now the most perfect specimen of a feudal baron's palace to be seen in the north of England.

Immediately after the Northern Rebellion, a survey was made, June 14, 1570, and Raby is therein described as "the most anneynt house of th Erle of Westmerland; and scytuat in the south part of the busshopryk, tenne myles from Darneton, and fyve miles from Barnard Castle. And the Castell of Raby is a marevelouse huge house of buyldyng, wherin are three wards, and buylded all of stone, and covered with leade; and yet ys there no order or proporecyon in the buylding therof, and standyth in a playne countrie. The ground and soyle aboute yt very good and bountefull for corn and grasse, but very barren of wood and tymber. Neyther the scytuacon of the place, or the Castell ytselke, of any strengthe, but lyke a monstrouse old abbey, and will soone decay yf it be not continually repayred, yt standeth so open and playne, and subject to all wynd and wether. And, albeyt, the same is tenne myles further south than Branspeth, yet ys yt more subject to all extremyte of wether than Branspeth, bycause yt standyth naked and bare, without covert, and more open upon the great waste called Feuds Fell and Weredale, which begyne within two myles of Raby,

and so continue to Hexam, a great wast country and nothing so well inhabyted as th est parte of the busshopryk, and few gentlemen of any lands or lyving inhabyting there; for the most parte of all the possessions in those partes are eyther belonging to the busshoprick or to the erle. And the gentlemen that were [of] any possessions were planted in the este parts of the country; and that dyd wel appere at this horryble and monstuous entrepryse, for ther were not many gentlemen of many possessions inhabyting between the houses of Raby and Branspeth on the west parte of the country and th est sea, but were infected with this rebellion, and toke part with th erle, to the utter subversion of themselves and their posteryte, as shall right well appere, by reason whereof the country is left voyde and barren of governors and gydes, and very much empoverysed, not without ther greate deserte."

Raby Castle stands upon the summit of a gentle slope, and has certainly owed little of its military strength to its position. The resources of art, however, have compensated for natural disadvantages; and the lofty embattled wall which still surrounds the vast assemblage of towers, and the moat around this exterior defence, must have rendered the fortress almost impregnable before the invention of cannon. The water has long been drained from the moat on the north, west, and south sides of the castle, and its banks have been formed into grassy slopes; but on the east, the bed of the water has been considerably extended, and it now presents the appearance of a small lake. The outer wall, above mentioned, encloses an area of about two acres, into which there is only one entrance, by a gateway tower on the north, defended by a portcullis and flanking parapets. A spacious raised terrace within the battlements, passes entirely round the main buildings, the principal entrance to which is by a massive gateway on the west, with a double gate and covered way, strengthened by two square towers. From one of these, a hanging gallery forms a communication with Clifford's Tower; and a second gallery extends eastward to a smaller turreted tower. Crossing the courtyard, the carriage drive is extended, by a modern alteration, into the hall.*

* George Colman, the younger, the well-known dramatist, in relating the particulars of a journey in the north in 1775, in company with his father, says, "The late Earl of Darlington (then Lord of the Castle) was an old acquaintance of my father; and when first we came beneath his roof, it presented to us a warmer picture of ancient hospitality than I had ever witness'd, or may, perhaps, ever see again.

"We were benighted on our road thither;—our day's journey had

been all along unpropitious; it rained heavily and incessantly; and we had met with delays, and petty accidents, and vexations, at every turn. In the last seven miles, after sun-set, a fog arose;—one of the horses cast a shoe, and his rider dismounted to grope for it in the mud and in the dark;—my father let down the glass, to ask what was the matter, in phrase too classical for a north-country post-boy to understand; and the post-boy answered in a dialect quite incomprehensible to the translator of Terence. I could not act as interpreter between

One of the most prominent features in the east front of the castle is Bulmer's Tower, so called from Bertram Bulmer, lord of Bulmer and Brancepeth, whose estates passed to the Nevilles by marriage with his daughter, about the year 1190. This tower is totally unlike any known example, being lozenge-shaped instead of rectangular; and, from this singularity, some antiquaries have imagined it to be of Danish origin, and that it was part of a castle existing previous to the erection of the present one. A further inference is, that this is a part of the original building mentioned in the grant of Canute. In the upper story there are two square-headed panels, which have, at a distance, the appearance of windows, but each of which contains an enormous t. The whole of this front of the castle, which is of great extent, presents a most imposing and warlike appearance. The south front is also very effective; but the central part was restored by Inigo Jones in the Italian style, totally out of keeping with the rest of this venerable fortress. The different towers of the castle are designated by the names of those commanders to whom it is supposed their defence was assigned during the periods of Scottish incursion or civil war.

Of the exterior of the castle, "Its grey extent of towers," says Mr. Howitt, "rises before us, with its park, well peopled with herds of deer, stretching around it. Comparatively flat again as is the situation, and which would seem to have been better liked by the Nevilles than more hilly and romantic ones, there is nothing that we recollect to have seen any where which impresses us at the first view with a stronger feeling of the old feudal grandeur. It stands in its antiquity and vast-

them; for I knew nothing of the north-country language. All this time, the rain was pelting in upon us, at the chaise window; we were chilly—hungry—impatient—comfortless—sitting dinnerless in a post-chaise—and waiting the issue of a hunt after a horse-shoe.

"As we passed through the outer gateway of the Castle, the vapour was dense upon the moat, and we were enveloped in night-fog, while the rolling of the carriage wheels, and the trampling of the horses' hoofs, sounded dolefully over the draw-bridge;—we might have fancied ourselves victims to the darkest times of Gallic despotism, condemn'd by a *lettre de cachet* to linger out our lives in the deepest dungeons of the Bastille; but, lo! on the opening of a massive door, a gleam of light flash'd upon us;—crack went the whips—we dashed forward at full trot—and, in a moment drew up,—not to a piazza, nor a vestibule, nor a flight of steps in a cold courtyard—but before a huge blazing fire, in a spacious hall! The magical effect of this sudden transition, from destitution to luxury, has never occur'd to me any where else—except in the two last scenes of every pantomime, when the Guardian Genius, with a wand, waves and recitatives Harlequin and Columbine out of a Coal-pit, into the temple of the Goddess of Gas;—

'Hence grief and darkness, enter light and joy!'

ness, the fitting abode of the mighty Nevilles. We can almost imagine that we shall find them still inhabiting it. The royal Joan, walking with her maidens on the green terrace that surrounds it, or the first great Earl of Westmoreland setting out with all his train, to scour its wild chases and dales for the deer, or to proceed to the Marches to chastise the boldness of the Scots. The exterior of the whole place has been well preserved in its true ancient character; it is the great, grey, and stately feudal castle,

'With all its lands and towers.'

"It is, in fact, these old towers, these old courts, this great baronial hall, and the kitchen, that are the objects of real interest in Raby; remnants of its antiquity, the cotemporaries of those who stamped them with the feeling of belonging to them and their fortunes. The Clifford's Tower, and the Tower of Bertram Bulmer, let us ascend to them, and gaze over the parks and glades of Raby, to the far distant scenes that once formed the princely possessions of the Nevilles. Near the top of this tower, which stands separated from the rest of the building, and to which you ascend by eighty-nine steps, are raised those old letters, the initials of Bertram Bulmer, mentioned by Leland,* and a splendid prospect south-eastward lies before you. Coniscliffe, Darlington, Sadberge, Long-Newton, Stockton, with the Cleveland Hills and 'Black' Hamilton. From other points of the castle you catch equally noble and far views—the distant mountains of Hope and Arkendale, and westward the vale filled with the woods of Streatlam and Lady Close."

In the centre of the great entrance hall, above

* According to Leland, "Raby is the largest castel of loggiees in all the north country, and is of a strong building, but not set other on hill, or very strong ground. As I entered by a causey into it ther was a litle stagne on the right hond; and in the first area, were but two towres on a ech ende as entres, and no other buildid; yn the 2 area, as in entring was a great gate of iren with a tour, and 2 or 3 mo on the right hond. Then were al the chief toures of the 3 court, as in the hart of the castel. The haul and al the houses of offices be large and stately; and in the haul I saw an incredible great beame of an hart. The great chambre was exceeding large, but now it is fals rofid and dividid into 2 or 3 partes. I saw ther a litle chambre wherein was in windowes of colerid glasse al the petigre of the Nevilles; but it is now taken down and glased with clere glasse. Ther is a tower in the castel, having the mark of 2 capitale B's from Bertram Bulmer. Ther is another tower, bering the name of Jane, bastard sister to Henry IV. and wife to Rafe Neville the first Erl of Westmerland. Ther long 3 parkes to Raby, whereof 2 be plenished with dere, The midle park hath a lodge in it; and thereby is a chace, bering the name of Langeley, and hath fallow dere: it is a 3 miles in lenght."

noticed, there is a row of six octagonal pillars, supporting a roof of lofty groined arches. Above the hall is another stately room, called the Baron's Hall, 120 feet long by 36 broad, and the same in height, terminating in a circular tower. Two of the windows front the east, beneath a modern archway, which extends from the Central Tower to Bulmer's Tower. The west end of the hall is crossed by a gallery for the musicians, whose duty it was to enliven the feasts of its feudal lords and their numerous guests. "Here assembled, in the time of the Nevilles, 700 knights who held of that family."

....."Neville sees
His followers gathering in from Tees,
From Were, and all the little rills
Concealed among the forked hills—
Seven hundred knights, retainers all
Of Neville, at their Master's call
Had sate together in Raby's hall."—*Wordsworth.*

The kitchen, from whence those feasts were supplied, is a magnificent and lofty square of 30 feet each way. Its roof is groined, supported by four semicircular ribs, which spring from the sides of the square, and leave a square ventilating shaft in the centre. There are five windows in the side walls, with a gallery passing all round before them, and four steps downwards from each, but ending at a great height above the floor. The old fire-place and larders render this the most perfect ancient kitchen in existence. "The oven," says Grose, "was of dimensions suited to the hospitality of those times, higher than a tall person, for the tallest may stand upright in it; and I think its diameter must be fifteen feet. At present it is converted into a wine cellar; the sides are divided into ten parts, and each holds a hogshead of wine in bottles."

The rooms in the castle are numerous, handsome, and conveniently disposed; several of the passages and galleries having been scooped out of the solid walls. One of the drawing-rooms is 30 feet by 20, and the adjoining dining-room is 51 feet by 25. A circular room in the south front, built in anticipation of a visit from George Prince Regent, is characterized by Billings as "a wretched attempt at modern Gothic." "It is, in fact," says Mr. Howitt, "this complete adaptation to modern uses and splendour, which disappoints one in the interior of Raby. The exterior is so fine, so feudal, so antequely great, that when we step in and find ourselves at once in modern drawing-rooms, with silken couches and gilt cornices, the Nevilles and their times vanish. We forget again that we are at Raby, the castle of the victims (victors) of Neville's Cross, and of

Joan, the daughter of John of Gaunt, and feel that we are only in the saloons of the modern Duke of Cleveland. We revert to the quaint description of Leland, and wish that we could see it as he did."

In several of the apartments of the castle there are excellent paintings, including interesting portraits of personages connected with the present family. There is a large music piece in the dining room in Clifford's Tower, containing the group of figures which Rubens placed in the centre of the Marriage Feast of Cana, in which he introduced his own portrait as a chief musician, with his contemporaries as performers.

About the year 1850, the Baron's Hall was new roofed and lengthened, and the old towers fitted up into handsome bed-rooms, from designs by Mr. Bourn, architect. The old chapel of the castle has also been recently fitted up for worship: the windows contain two or three scriptural representations, executed by Mr. Wailes of Newcastle, and are filled up with stained glass collected from various sources. The ancient font and piscina, however, have been thrown aside. About the same time, an elegant *Mausoleum*, in the ecclesiastical style of architecture, was erected, as a place of sepulture for the Raby family, on part of the site of the ancient College, on the north side of Staindrop church-yard.* It was consecrated by the Bishop of Durham in September, 1851; and the remains of the deceased members of the family were removed into it from the vault in the church.

A beautiful and extensive conservatory was erected in the gardens in 1850, under the direction of Mr. Roberts, gardener to the Duke of Cleveland. It is covered with patent rough plate glass, from the manufactory of Messrs. Hartley and Co., of Sunderland.

"The park," says the lively writer above quoted, "has many fine woods, glades, and lawns, and prospects of far beauty; but its aspect partakes of the character of the interior of the castle—newness. We are surprised to see so little timber bearing a relative antiquity to the castle. The trees are comparatively young. You see groups and plantations of a very modern date. The whole has the air rather of a place new made, than of one as old as the days of Canute, who is said to have built some part of the original house. You do not see those old, grey, and gnarled oaks around that you see in the

* The widow of the Hon. Raby Vane, who died May 28, 1789, aged 47, desired burial in the north-west portion of the cemetery, where an altar-tomb perpetuates her memory. By this choice she dissipated the popular prejudice against being buried on the north side of the church.

forests of Sherwood, Needwood—Chartley and other parks. It seems as if some great revolution, as is the fact, had passed over it; and that in its days of change, the axe of the spoiler had laid low its ancient forests. The castle looks like a grey patriarch left amid a more juvenile race. Let us rejoice that the strong walls of the stout old Nevilles have defied the ravages of politics as well as of time, and that future generations may see in them a fine example of what the habitation of the great old English noble was."

* A commissioner from the *Times* newspaper, Mr. Caird, in one of his letters on the agriculture of the county of Durham, in 1850, says, "The tenants of the Duke of Cleveland have no leases, but the holdings are hereditary, the same families in direct descent occupying the same farms for centuries. His Grace's estates were valued fifty years ago, and the rent has never since undergone any change. One of the best farmers on the estate has in his possession a lease of the land he now occupies, granted to one of his ancestors in the reign of Queen Elizabeth."

Some of Mr. Caird's statements, however, relative to the state of the farms and the system of farming pursued on the estates of his grace, were considered by the tenantry to be unjust and calumnious, and elicited the following rejoinder from the Staindrop Farmers' Club, January 27, 1851:—

1st. "That the commissioner only saw two farms (the one the farthest east—the other only three miles west of the former) on an immense estate, extending from Cumberland to within six miles of Darlington.

2nd. "The rents, instead of being 'fifty per cent. lower than the neighbouring estates,' are quite as high, and have been increased by interest on buildings, cross-draining, &c., done by the landlord.

3rd. "Whether the valuation made fifty years since was a low one or not we cannot say, but many of the tenantry have been changed—some farms, on reletting, being raised—others lowered in rental; and many of the farms are known to be dear.

4th. "The tenantry, as a class, may not be 'wealthy;' but there is not, and never has been, one farthing of arrears on the entire property; and, as to their being 'neither industrious nor enterprising,' the fabrication is far too gross to be credited in this district; for, though the '*Times*' Commissioner might not see the 'high farming' of Baldoon, yet, had he taken any pains in looking over this neighbourhood, and been wishful to give a correct report, instead of one for a party purpose, he would have seen or been told of (and *ex parte* hearsay seems to be his favourite and general plan of gaining knowledge) the many and great improvements which have been made and are still going forward—with the assistance of a good landlord, aided by a respected agent, and the energy of an industrious tenantry, whereby the labourers of a thickly-populated district have full employment, at wages too from 10s. to 12s. per week, and whose comfort and happiness are cared for more than in perhaps any other part of England."

Mr. Caird justified his statements as to the rents by asserting that his information was derived from competent authority. "He spent the greater part of two days in examining the Duke of Cleveland's estate in Durham, and traversed many miles of it. He visited the farms of three gentlemen mentioned to him as among the best managed on the estate. Two of these farms he walked over and minutely examined, accompanied by the tenants; the third he drove through, and had an opportunity of seeing the general style of management, but declined (in the absence of the tenant) to survey

The avenue leading to the castle from the Durham road is near Keverstone Hall; and there are also approaches from the Darlington road and from Staindrop bridge, besides a road for the use of domestics. The surrounding country is richly cultivated, and in every direction presents delightful specimens of the rural scenery of England.*

RABY was formerly a considerable village; and 27 of its inhabitants followed their lord in his ill-fated rising

minutely without his permission. All these farms were several miles distant from one another, and were pointed out to him by the most competent authority as very favourable specimens of the general farming on the estate. Besides this minute examination of individual farms, our commissioner observed the state of the neighbouring farms, and of all those which he necessarily traversed in passing from point to point."

On October 5, 1850, the *Times* commented at some length on a speech delivered by the Duke of Cleveland at an agricultural meeting in the county of Durham, in which his grace concluded "by referring to the great increase of wealth and luxury during the last few years, and the hardships which farmers would be subject to were they compelled to forego those comforts which their forefathers did not enjoy, but which with them had become almost necessaries of life, while other classes of the community continued to enjoy them." On this, it is remarked that in all professions, but more especially in that of the small farmer, such fluctuations must necessarily occur, and that the state of things described, is not peculiar to the existing crisis. In reference to the county of Durham, the writer says—

"Of all places in the world, 'a coal field' has the least right to cry out for protection. The county of Durham is very little more than one huge colliery, the prosperity of which rises and falls every day with that of the commerce and manufactures of the world. Every fresh steamer on the German Ocean, the Thames, the Mediterranean, or even the Red Sea; every street added to this metropolis, or any other town in the eastern and southern counties; every factory built either here or on the neighbouring shores, every new railway in a great part of this island, is a fresh customer to Durham, to South Shields, to Sunderland, to Bishopwearmouth, to Monkwearmouth, to Gateshead, to Darlington, and half a dozen other populous centres and ports of the coal trade. The cities, the villages, the nobility, the clergy, the tradesmen, the labourers, and, we must add, the farmers in the county of Durham, all derive their wealth or their competence from coal. But for that coal, one-half of them would never have been there, and the indigenous inhabitants would by this time have been almost reduced to eat one another. They know their own interests, and it is as much their choice as it is their destiny that their fortunes are linked with those of the world at large. It was at their continual importunity that the export duty on coal was removed, and British coal made cheaper at Boulogne than in London. It is all the same to them whether they feed the furnace for a British, a French, or a Belgian mill. It is the crop below ground, not above, that they depend upon; and, if there is plenty of work below, there will be plenty of cheer above. As for the pretence that Durham is, even in an ordinary sense, an agricultural county, it is enough to mention that at the last census, 'the farmers and graziers,' male and female, old and young, only amounted to 3,538, being about one in a hundred of the whole population; while the men and boys returned as agricultural labourers only amounted to 8,844; that is, about one in forty of the whole population."

in 1569, 5 of whom suffered for their offence by the hands of the public executioner. The village was pulled down during the last century, for the purpose of improving the park and the road near the castle. The Friends' meeting house has already been alluded to (see pp. 79, 91). Its registration books of births, burials, and marriages contain entries from 1669 to 1804. A dog-kennel occupies the site of the chapel; and above the grave-yard there is a row of stately trees. *New Raby*, erected between 1780 and 1790, consists of a few houses to the east of the castle, chiefly occupied by persons employed on the estate. A gasometer has recently been erected near it, from which the castle is supplied with gas.

KEVERSTONE was held by the Setons under the priors of Durham, till it was forfeited by Christopher Seton, during the episcopacy of Bishop Beck. Edward I. granted it to Geoffrey de Hethpole, from whom it passed to the Nevilles and Burtons, and was purchased by an ancestor of the Duke of Cleveland. *Keverstone Hall*, the residence of Thomas Freshfield Scarth, Esq., land-agent to his grace, is situated near the north-eastern angle of Raby Park.

LANGLEY DALE AND SHOTTON.

THIS township extends from 2 to 4 miles north-west of Staindrop, along the north side of the Staindrop Beck, westward from Raby park, in which that part called Shotton is situated. The whole contains 4,685 acres; and the property was valued for the county-rate, in 1853, at £1,972 15s. 6d. The population has varied, at the periods of enumeration, as follows:—143, 160, 198, 217, 185, and 163. Of the latter number, 78 were males and 85 females. There were, at the same time, 29 inhabited houses and 1 uninhabited, but no regular village. The township comprises fifteen farms.

In the year ended March, 1854, the township of Langley Dale contributed to the Teesdale Union, for

in-maintenance, clothing, and funerals, £16 4s. 6d.; for out-relief and lunatics, £14 18s.; for irremovable poor, salaries, and other common charges, £26 10s. 11d.; for constable and costs before magistrates, 15s.; for law costs, revising barrister, and jury lists, 10s.; and for journeys, salaries of assistant overseers, incidental expenses, &c., £1 19s.; total of expenditure, £60 17s. 5d. The repayments of relief by relations and other receipts amounted to 10s.; and the net expenditure exceeded that of the preceding year by £3 17s. 11d. The cost of registration was 13s. 10d.; and the county-rate paid by the overseers was £33 8s. 10d.

The Gaunless Smelt-works are situated in Langley Dale, and contain three smelting furnaces, two refining furnaces, two slag hearths, with blast, a reducing furnace, one bone and two assay furnaces, a smith's shop, sleeping rooms for the smelters, a cottage for the superintendent, a stable, and other appurtenances. There are also two fire-brick kilns, and a brick-shed and drying floor, contiguous to the smelt-mill.

A small Methodist chapel was erected about 40 years ago, on a piece of land which, previous to the inclosure of the extensive commons in the district, was considered as a part of Marwood township.

Langley Dale and Shotton were anciently parcels of the estates of the Earls of Westmoreland. An old tower, close by the Langley Burn, is said to have been the residence of a mistress of the last earl; "a nobleman," says Surtees, "who, from more than one authority, appears to have been of a very amorous disposition." From "the Forest of Langley," 19 followers attended him in 1569, of whom 6 expiated their offence with their lives. The Duke of Cleveland is the present proprietor. *Slaughter Closes* and *Scotch Stone* are supposed, from the quantities of human remains and rusted armour dug up, to have been the scenes of sanguinary contests at some remote period; but neither history nor tradition alludes to any such circumstance.

CHAPELRY DISTRICT OF INGLETON.

THE chapelry district of Ingleton, formed by an order in council January 13, 1845, and licensed by the Bishop of Durham under the act of 6 and 7 William IV., c. 85, consisted of the townships of Hilton, Ingleton, and Wackerfield; being bounded on the south and east by the parish of Gainford, on the north by the parochial chapelry of St. Helen Auckland, on the north-west by the parish of Cockfield, and on the west and south-west by the townships of Raby-cum-Keverstone and Staindrop-cum-Snotterton in the parish of Staindrop. By an order in council, bearing date January 8, 1850, the township of Killerby, in the parish of Heighington, was separated from the said parish, and united to the chapelry district of Ingleton.

INGLETON.

THIS township comprises an area of 813 acres; and the annual value of property assessed for the county-rate in 1853 was £1,261 11s. 3d. In 1801, the population was 236; in 1811, 285; in 1821, 293; in 1831, 355; in 1841, 344; and in 1851, 305, of whom 156 were males and 149 females. There were, at that time, 80 inhabited houses, 8 uninhabited, and 1 building; and the township contains six farms.

The contributions of the township of Ingleton to the Teesdale Union, for the year ended March, 1854, were, for out-relief and lunatics, £23 15s.; for irremovable poor, salaries, and other common charges, £25 18s. 1d.; for constable and costs before magistrates, 18s. 6d.; and for journeys, salaries of assistant overseers, incidental expenses, &c., £1 8s. 3d.; being a total expenditure of £51 19s. 10d. The repayments of relief by relations and other receipts were £6 1s. 4d.; and the balance, £45 18s. 6d., was 18s. 1d. less than the net expenditure of the preceding year. The cost of registration was £1 1s. 4d.; and the county-rate paid by the overseers was £21 17s. 5d.

The village of Ingleton is situated on the high road between Staindrop and Darlington, 3 miles from the former place. It contains four public-houses and several shopkeepers and mechanics. The village school was rebuilt by subscription in 1816; after which it was partly pewed off, by the consent of the freeholders of the township, to be occupied as a meeting-house for the Methodist body. It is now used on Sundays as a Primitive Methodist chapel. About 50 scholars attend the week-day school; and the church Sunday school is held in the same building. The village contains a post-office, and is the station of a parish constable.

Ingleton was one of the places included in the grant

of Canute to the church of Durham. The Nevilles possessed the greater part of the township, as a member of Raby; and a portion of land was held under them by the family of Bowes. The principal freeholders at present, are T. Hutchinson, Esq., and C. Middleton, Esq., who is lord of the manor.

THE CHAPEL

Is a neat plain edifice, of the early pointed style of architecture, consisting of a nave and chancel, the latter being entered by an elegant archway. There is a bell-turret and an entrance porch at the west. The roof is of high pitch, and covered with slate. There are three windows on the south side and three on the north, each of two compartments. The east window is of three compartments. The chapel contains 206 sittings, all of which are free. The building cost £430, towards which the Church Building Society gave £100, the Duke of Cleveland £100, and the remainder was made up by subscription; the neighbouring farmers and others leading the required materials free. The church is dedicated to St. John, and was consecrated by the Bishop of Durham, November 1, 1843. A spacious burying ground is attached.

The vicar of Staindrop is patron of the living; and the Rev. Martin Wright is the present incumbent, who entered upon his duties in 1845, though no endowment was made until 1849. By an order in council, July 30, in that year, the ecclesiastical commissioners made an annual grant of £30 to the living; the net income being stated at £35, and the commissioners were at that time unable to raise it to the full extent of the scale of population. The order in council of January 8, 1850, mentioned above, which annexed Killerby to this chapelry, declared that "so much and such of the tithe

rent-charges belonging to the vicarage of Heighington as arise and accrue within the townships of Killerby and Walworth, in the said parish of Heighington, were transferred to the said district chapelry of Ingleton for ever." The rent-charge for the township of Killerby is £20, and that for the township of Walworth £31,* or £51 in all; this sum being subject to all rates and charges. In 1850, a donation of £350 was made from the Maltby Fund towards the erection of a parsonage house at Ingleton. The house cost about £830, including the ground; and the remainder, besides the above grant, was raised by subscription.

For the charities payable to the chapelry of Ingleton, see STAINDROP, p. 91.

HILTON.

THE township of Hilton, which adjoins that of Ingleton on the north, contains 1,092 acres. The number of inhabitants in 1801 was 88, and at the following successive periods of enumeration, 104, 113, 118, 112, and 101. Of the latter number, 58 were males and 43 females; and there were 22 inhabited houses and 3 uninhabited. The township, which contains eight farms, was assessed for the county-rate in 1853 at £861.

The Teesdale Union received from the township of Hilton, during the year ended March, 1854, £31 10s. for out-relief and lunatics; £12 8s. 5d. for irremovable poor, salaries, and other common charges; 16s. 6d. for constable and costs before magistrates, &c.; 10s. for law costs, revising barrister, and jury lists; and £3 0s. 6d. for journeys, salaries of assistant overseers, incidental expenses, &c. The total expenditure, £48 5s. 5d., was £7 12s. 8d. more than that of the preceding year. The cost of registration was 11s. 2d.; and the overseers paid £14 11s. 10½d. to the county-rate.

The little village of Hilton is pleasantly situated on an eminence, 3 miles east-north-east from Staindrop, and is chiefly inhabited by persons engaged in agriculture. *Hilton Hall*, the ancient family seat, is now a farm-house, occupied by Mr. J. J. Read. When the

estate was purchased by the Earl of Darlington in 1789, "right of court-leet and court-baron, and several quit-rents payable to the lord of the said manor," were attached to the lordship of Hilton. With the mansion house were "several messuages or tenements, farms, and closes of arable, meadow, and pasture ground, parcel of the said manor, containing together, by estimation, 838 acres or thereabouts, greatly underlet to substantial tenants, at the yearly rent of £566 and upwards." The estate was described as "capable of very great improvements, lying compact together, pleasantly situate on a gentle rising ground, commanding a most beautiful prospect of an extensive vale, and in the centre of the several market towns of Darlington, Bishop Auckland, Barnard Castle, and Staindrop. There are coal pits within three miles of Hilton, and every reason to suppose coal may be found in the premises: the land-tax remarkably low, and several valuable quarries upon the estate."

The manor of Hilton was anciently held by the Boweses of the Neville family. Thirteen of its inhabitants joined the Northern Rising, three of whom suffered death in consequence. James I., in 1606, granted the manors of Hilton and Bradbury to Thomas Emerson, Esq., for 1,000 years, under the yearly rent of £550. Hilton afterwards passed to the Mannings, from whom it was purchased by Henry Marley, at which time it was charged with £160, as its portion of the rent.

A family named Hilton subsequently held the manor for several generations. They were descended from Thomas Hilton, of Hilton Bacon, in Westmoreland, Esq., and Catherine, daughter of Anthony Brackenbury, of Selaby. Lancelot, their second son, married, first, Catherine, daughter and coheir of Ralph Alwent, of Dyons, by whom he had issue James Hilton, of Dyons, three other sons, and four daughters; and, secondly, Elizabeth, daughter of Leonard Smelt, of Kirby-Fletham, Yorkshire, and relict of Richard Cockfield, by whom he had issue Leonard Hilton, died in 1605-6; Francis Hilton, of Killerby; Lancelot Hilton,

* The dean and chapter of Durham, and the Rev. Wilson Beckett, incumbent of Heighington, made it a condition, in giving their consent to the arrangement, that the commissioners should recommend to her majesty in council that additional provision for the cure of souls in that parish should be made; and they accordingly proposed "that all our estate and interest in all the yearly rent-charge or sum of fifty-four pounds ten shillings, lately belonging to the second canonry in the cathedral church of Durham, awarded to the Right Reverend John Bird, Bishop of Chester, the then holder of such canonry, and his successors, in lieu of the rectorial tithes arising or

growing within the township of Redworth, in the parish of Heighington, in the county of Durham, and apportioned upon the lands lying within the said township, shall forthwith, and without any conveyance or assurance in the law other than this scheme, and any duly gazetted order of your majesty in council ratifying the same, become and be vested in the said Wilson Beckett, clerk, vicar of Heighington aforesaid, and his successors, vicars of Heighington, for ever." This scheme was confirmed by an order in council, dated on the 9th, and gazetted on the 15th of March, 1850.

of Durham and of Hilton; and a daughter. He died in 1636.

Lancelot, son of the above, born in 1608, was an attorney-at-law, a collector of ship-money in Crossgate constabulary in 1635-6, and under-sheriff during the Commonwealth in 1652. He married, first, Mary, daughter of Thomas Colmore, of Durham, by whom he had issue Lancelot, Abraham, Richard, Cuthbert, Robert, Eleanor, and Elizabeth; secondly, Dorothy, daughter of William Wright, and relict of John Craddock, of Gainford, by whom he had issue three sons* and three daughters; and, thirdly, Anne, daughter of Ralph Salkeld, of Berwick-upon-Tweed, and widow of William Hilton, apothecary, of Newcastle-upon-Tyne.

Abraham, second son of Lancelot Hilton, succeeded to the estate on the death of his father in 1685 (the first-born, Lancelot, having died young), and married, first, Eleanor, daughter, of Henry Marley, of Hilton, by whom he had issue Mary, who died young; and, secondly, Eleanor, daughter of Thomas Massock, of Headlam, who survived him, and afterwards married Samuel Burton, of Keverstone. On the death of Abraham Hilton in 1718, he was succeeded, as lord of the manor of Hilton, by Abraham, grandson of Richard, his eldest brother. He married Margaret, daughter and coheirress of Isaac Surtees, of Myresflatt, near Darlington, and had issue Henry (who succeeded him in 1748), Abraham, and Mary.

Henry Hilton, of Hilton, died in 1759, without issue, and was succeeded by his brother, Abraham, born in 1731, one of the six clerks in Chancery, who married, in 1765, Anne, daughter of James Close, of Richmond, Gent. He advertised the manor and mansion house of Hilton for sale by auction on the 11th of July, 1785; and they were purchased in 1789, as above noticed, by the Earl of Darlington, for £10,040. Abraham Hilton died December 22, in the same year: he had issue Abraham, born 1766, died unmarried October 1, 1792; Ralph, who died in infancy; Henry, a spirit-merchant at Barnard Castle, died in 1843; James Surtees, lieutenant in the 62nd regiment of foot, and captain in the 16th light horse, died unmarried at

* One of these, Alexander, was curate of Denton, and rector of Romalldkirk, and died in 1682, leaving two sons; William, an attorney, who carried about a brief describing himself as mad, and praying for means to put himself into prison; and Cuthbert, noticed at page 17.

† The arms of the Hiltons of Hilton, co. pal., are the same as the old coat of Hilton in Westmoreland, viz., Sable, two saltires in chief and three annulets, two and one, argent; Crest, on a wreath a demi-

Darlington, after his return from the West Indies, October 30, 1796, aged 22; William Freeman, some time cornet in the 27th light dragoons, died May, 1798, aged 23, on his passage home from the East Indies; Margaret, born 1770, married to Harrington Lee, of Darlington, and died in 1830; and Mary-Anne, who died unmarried May 6, 1803, aged 25.†

WACKERFIELD.

THE township of Wackerfield, to the west of that of Hilton, contains 744 acres, divided into five farms. The value of property assessed for the county-rate in 1853 was £1,011 18s. 11d. The number of inhabitants, at the respective decennial returns, was 94, 113, 105, 112, 122, and 136. Of the latter number, 70 were males and 66 females, inhabiting 24 houses.

During the year ended March, 1854, this township contributed £5 1s. 8d. to the Teesdale Union for in-maintenance, clothing, and funerals; £5 4s. for out-relief and lunatics; £8 6s. for irremovable poor, salaries, and other common charges; 16s. 6d. for constable and costs before magistrates, &c.; 7s. 6d. for law costs, revising barrister, and jury lists; and £1 10s. 6d. for journeys, salaries of assistant overseers, incidental expenses, &c.; being a total expenditure of £21 6s. 2d. Towards this sum, £5 6s. 2d. was received as repayments of relief by relations, &c.; the balance, £16, being £22 11s. less than the net expenditure of the preceding year. The registration cost 1s. 10d.; and the overseers paid £17 to the county-rate.

The village of Wackerfield, 3 miles north-east from Staindrop, contains two public houses and a blacksmith's shop. It was one of the places included in the gift of Canute, and was held of the prior and convent, in the time of Cardinal Langley, by a family named Sockburn, by fealty and 12d. rent. The Nevilles afterwards held it as a member of Raby; and a portion of it is now the property of the Duke of Cleveland, the remainder belonging to W. W. Hawdon, Esq.

For an account of the township of KILLERBY, recently attached to this chapelry, see vol. i., p. 535.

griffin. The family has been widely diffused, through the Killerby, Dyons, and other branches throughout the county of Durham. Mr. Longstaffe derives the Westmoreland family from Robert de Hilton, younger brother of William de Hilton, baron of the bishopric, who died before 1208; but Raine curtly observes, "The Hyltons of Hylton Castle, county palatine, and the Hiltons of Hilton Bacon, county of Westmoreland, are two distinct families, utterly unconnected with each other in their origin, whatever may be said or assumed to the contrary."

PAROCHIAL CHAPELRY OF WHORLTON.

THE parochial chapelry of Whorlton is bounded by the township of Westwick, in the chapelry of Barnard Castle, on the west; by the parish of Winston on the north and east, and by the Tees, dividing it from the parish of Wycliffe, in the North Riding of Yorkshire, on the south. It consists of one township, but includes the estates of Sledwish, Arlaw Banks, Whorley Hill, Etherley, and Humbleton, and a portion of that of Stubb House, the remainder of which is in the adjoining parish of Winston.

THE township of Whorlton comprises an area of 1,760 acres, the property in which was valued for the county-rate, in 1853, at £1,800 17s. 8d. In 1801, the number of inhabitants was 245; in 1811, 246; in 1821, 300; in 1831, 311; in 1841, 286; and in 1851, 296, of whom 154 were males and 142 females. There were, at the latter date, 60 inhabited houses, and 1 uninhabited.

The chapelry of Whorlton, during the year ended March, 1854, contributed to the Teesdale Union, for in-maintenance, clothing, and funerals, £4 11s. 1d.; for extra medical charges, 10s.; for out-relief and lunatics, £33 2s.; for irremovable poor, salaries, and other common charges, £19 16s.; for constable and costs before magistrates, &c., 14s. 6d.; for law costs, revising barristers, and jury lists, 10s.; and for journeys, salaries of assistant overseers, incidental expenses, &c., 9s. 11d. The repayments of relief by relations and other receipts amounted to 15s., which reduced the expenditure to the net sum of £58 7s. 6d.; being £1 19s. 3d. less than that of the preceding year. The vaccination fees were 12s. 6d., and the expenses of registration, £1 2s. 8d. The overseers paid to the county-rate £31 7s. 8d.

Being a member of the great lordship of Barnard Castle, Whorlton passed with it to the successive noble families enumerated in the history of that place, till the attainder of the Earl of Westmoreland in 1569. In the reign of James I., it was comprised in the grant to the citizens of London, in trust for sale; and the principal part of it was purchased from the trustees by Taylor and Lee, who sold it to Ambrose Johnson. This family

* Some years ago, the Earl of Darlington summoned Archdeacon Headlam, and Robert Dinsdale and Thomas Harrison, Esqrs., to do suit and service to the honour of Barnard Castle, in the prosecution of which claim he caused certain inclosures belonging to the Archdeacon and Mr. Harrison to be broken down. The latter, however, recovered damages from the duke in a cause tried at Durham.

continued to hold the estate till 1725, when it was purchased by Robert Sanderson, Esq.; and it afterwards passed by marriage to the Milburns, of Armathwaite Castle, Cumberland. In 1819, on the sale of the property in Whorlton belonging to R. S. Milburne, Esq., Thomas Harrison, Esq., of Stubb House, became the purchaser of the manor of Whorlton, and of *Whorley Hill*, a farmstead and cottages, occupying 79 A. 3 R. 18 P. Mr. Harrison was also owner of *Etherley* and other property in the chapelry, which now belong to P. H. Stanton, Esq., of Newcastle-upon-Tyne. *Arlaw Banks* is the property of Mr. Christopher Lonsdale. An estate, anciently belonging to the Wycliffes, was afterwards held by the Bacons of Newton Cap, and is now the property of Morley Headlam, Esq., son of the late Ven. Archdeacon Headlam.* The town pasture was divided in 1677.

On February 4, 1851, the Inclosure Commissioners for England and Wales gave notice that the Ven. John Archdeacon Headlam had applied for £1,200 by way of loan for the drainage of lands in the parish of Gainford and township of Whorlton.

The village of Whorlton is situated 3 miles east-south-east from Barnard Castle, and contains an endowed school, attended by about 60 children, two public-houses, and a few mechanics. Several of the houses bear dates of the early parts of the last century. A row of stone cottages, with flagged roofs, and small gardens in front, were erected on the east side of the road through the village, by the late Archdeacon Headlam, about 20 years ago.† A chapel belonging to the Independents was erected near the church in 1840; the ministry is

† ARISTOCRATIC SWINDLERS.—In September, 1851, Whorlton became the residence of a gentleman and lady, bearing the names of William O'Brien Fitzgerald, Esq., and the Hon. Lady Emily Augusta Fitzgerald. On the 9th of April, 1852, they were brought up in custody before the Ven. Archdeacon Headlam, at Wycliffe, charged with having obtained £40 from Mr. Wm. Henry Payn, solicitor, at

conducted by Mr. Ferdinand Raine, who attends every Sunday. The village is well supplied with water.

The situation of Whorlton is extremely beautiful; the Tees, with its overhanging cliffs, thickly fringed

Dover, in the county of Kent, under false pretences. It appeared, from the statements and deposition of Mr. Payn, that in the month of September last he was sent for by the prisoners (who were then incarcerated in a prison at Pau, in France), to defend them against some charges brought against them of defrauding the tradesmen there to a great extent, by appearing as, and representing themselves to be English aristocrats, and living in splendid style without paying their accounts. On Mr. Payn's arrival at Pau, he found the prisoners had been tried and sentenced to 12 months' imprisonment five days previously; but he obtained an appeal to a superior court, and it was ultimately decided that if the prisoners discharged the accounts of the tradesmen, and found bail for their appearance on a future day to answer any further charges which might be preferred against them, they were to be liberated. From the plausible statements made by the prisoners to Mr. Payn, backed by false names in their passports, a false entry from a marriage register in Yorkshire, and an affectionate letter from the Queen of the French, obtained by trickery, he was induced to advance money to discharge the debts incurred by the prisoners, and deposit a sum by way of bail, amounting together to between £700 and £800, and they were thereupon liberated. The prisoners then came to England with Mr. Payn, and on their arrival at Dover, pretended to him that they were entitled to a sum of £3,000, which was in the hands of their agent, Mr. Henry Foster, an Irish barrister, residing at Furnival's Inn, London; that this sum was due to them in the month of November then last past, and as they were then without funds wherewith to convey them home to Durham, they requested Mr. Payn to advance them £40, to be repaid with the other sums he had laid down for them out of the £3,000 to be received from Mr. Henry Foster. They also represented themselves to be of noble birth, and that the female prisoner was the Hon. Lady Emily Augusta Fitzgerald, daughter of Lady Ann Isabella Howard; that the said Lady Emily was the widow of Count Eltz, an Hungarian nobleman, who died eleven years after their marriage, and during part of which period the Countess Eltz resided at Florence, where the count was commandant at the time of the revolution; that the Lady Emily was entitled to large estates as the widow of the count, and to money lent by him to Lord Normanby; and that the papers were with their agent, Mr. H. Foster; that the Lady Emily was at the present time under the displeasure of her mother for marrying her present husband, who was only a private gentleman; and that the Lady Emily was related to the family of the Duke of Cleveland, had resided at Raby Castle in her youth, and was also related to Lord Carlisle's family, resident at Castle Howard, in Yorkshire. From these and other similar representations, Mr. Payn advanced them £40. He soon commenced enquiries after Mr. Henry Foster, but finding no such person, he communicated with his agent in Durham, who watched the whereabouts of the prisoners, and it seems they had come to Whorlton very shortly after leaving Dover. Mr. Payn having ascertained their residence, wrote several letters to Mr. Fitzgerald, at Whorlton, stating he was unable to find Mr. Henry Foster, and requiring an explanation; to these letters he received evasive replies. He also advertised for Mr. Foster in the French journals, and searched Dublin and Liverpool for him without success.

Mr. Payn's evidence was taken, wherein he deposed to the material facts above mentioned, and stated he believed the representations of the prisoners to be false, and that, in fact, there was no such person as the Mr. H. Foster alluded to by the prisoners. In answer

with trees, passing near it on the south. On the opposite bank, the village of Wycliffe, with its church steeple, forms a beautiful object,* and a fine range of country extends to the south-east, south, and west, in

to the charge, the prisoners stated that Mr. Payn was not promised to have the money from Mr. Foster, but told that he had a bond for the money, and that it was not their faults that Mr. Foster could not be found. Archdeacon Headlam committed the prisoners to Dover, where the offences were stated to have occurred, but consented to take bail in £100 for their appearance, which not being produced, the prisoners were conveyed to the police station at Barnard Castle, from whence they were removed to Dover, and committed for trial by the magistrates of that place. It appeared that the gentleman had been a wine-merchant's clerk and a broker at the Stock Exchange, named William Bennet Sothers; his father being a grocer at Gravesend. He wrote articles on finance and Stock-Exchange transactions for the papers, getting into debt, and something worse. Having had an action of *crim. con.* brought against him, in "Wakefield v. Sothers," he thought it best to fly the country, and change his name, going to Italy. For some years, his talents were employed in victimizing the nobility, gentry, and the trading community. Strange to say, the legal profession were duped by him and his "Lady" Emily (the widow or wife of an Austrian officer) with some success, until cut short in his deep-laid artifice against Mr. Payn. In October following, Mrs Sothers, Dienbacher, *alias* Lady Emily Fitzgerald, who had been arrested some weeks before at the suit of Emily Baillie, was discharged out of custody by Mr. Sutton of Ormond-street, London, on her paying to his client £50 in discharge for £315. Mr. Sutton's own debt amounted to £750; and Mr. Ford, of Henrietta-street, Convent-garden, held a bill for £400, drawn by Sothers and accepted by Emily Fitzgerald de Dienbacher before marriage. These debts were stated to the grand jury. Mr. Addison was employed by "Lady Emily" to plead her discharge for some informality before Mr. Justice Erle, but without effect, and she was returned to custody. Finding no hope left of obtaining her discharge, she tendered the £50, which was accepted. The male prisoner was, in the interim, transported.

* WYCLIFFE.—This village, the birth-place of John Wycliffe, the great reformer of the church, and long the seat of his family, is situated on the southern bank of the Tees, about four miles east from Barnard Castle. Access is gained to the opposite bank of the river by means of an ancient rustic ferry, or by the modern suspension bridge at Whorlton. The village is embosomed in trees, and the river flows close by. The parish contains 2,162 acres; and the population, in 1851, was 144, consisting of an equal number of males and females, inhabiting 24 houses. Wycliffe Hall, formerly the seat of the local family, and now the property of their descendant, Sir C. Constable, stands boldly on the summit of a cliff, divided by a brook from the adjacent woods. The foundations of the church are coeval with the Conquest, though some remains are supposed to be of earlier date. During the succession of ages, it had suffered great dilapidations, and had become almost a ruin. The tasteless repairs and alterations which had from time to time been effected also contributed much to detract from its venerable appearance. Under the auspices of the late rector, the Ven. Archdeacon Headlam, and his son, the Rev. Arthur Headlam, the long-needed restorations and repairs were effected in 1853, from plans furnished by Mr. Austin, architect, of Newcastle, and by which the church has resumed much of the appearance which it originally presented. Some of the monumental brasses, notwithstanding the neglect to which they have been exposed, are in fine preservation: they are principally memorials of the

which latter direction the now classical woods of Rokeby and Mortham are visible.

The Bridge.—In 1829, an act of parliament was obtained for building a bridge over the Tees at Whorlton, and making a turnpike road from Staindrop to Greta Bridge, with a branch from Whorlton to Barnard Castle, and another from the south end of the bridge to the turnpike from Winston Bridge to Smallways. The foundation stone of the bridge was laid on the 9th of June in that year by Miss Headlam, daughter of the archdeacon, amidst great rejoicings; but, during the flood which occurred in the night of October 13, the structure, so far as completed, was entirely carried away, to the ruin of the contractors. At this juncture, the Ven. Archdeacon Headlam, Thomas Harrison, Robert Dinsdale, and Thomas Wheldon, Esqrs., undertook, at their own risk, to erect a suspension bridge of iron, the foundation stone of the north pier of which was laid on the 19th of August, 1830; and the main chains were thrown over the piers, and safely moored into the rock on each side, on the 1st of April, 1831. On July 7, this elegant structure, which was erected from the designs and under the direction of the late Mr. Green, architect, Newcastle, was opened for public use by a procession, consisting of a band of music, the architect, and the committee of management, on horseback, followed by a train of twenty-seven carriages, and a numerous assemblage of spectators on horse and foot, who proceeded over the bridge, and along the line of road to Thorpe, the seat of

Colonel Cradock, M.P., one of the chief promoters of the undertaking, and returned along the bridge again to Whorlton. The span between the points of suspension is 180 feet. Some repairs being required, the bridge was closed for a short time, and re-opened to the public in September, 1854.

THE CHAPEL.

THE old chapel was a small, ancient edifice, consisting of a nave and chancel, divided by a round-headed arch, without ornament, and afforded accommodation for about 90 persons. The door-way, which opened to the south under a low porch, was early Norman. The building, falling into decay, was recently pulled down, and a new chapel built upon its site at the south of the village. It was opened in 1853, the ceremony of consecration being performed by the bishop of Cape Town. It is an elegant stone building, in the decorated style of architecture, and consists of a nave and chancel, with an open roof of oak, stained and varnished. The chancel is floored with Minton's encaustic tiles, and the portion of the nave occupied as sittings is floored with wood. The seats are oak, stained and varnished, and all open, capable of accommodating about 150 persons. The chapel is entered by a porch on the south, and at the south-west corner an octagonal turret or spire, about 50 feet high, forms a belfry. The roof is of high pitch, covered with Westmoreland slate. There is a large window at the west end, divided into four compart-

Wycliffe family, and the most ancient are about 500 years old. The church was re-opened for worship on the 8th of October, 1853, by the Bishop of Ripon.

The life of Wycliffe forms a portion of the history of his country and of Europe. He was born about the year 1324, and studied at Oxford, where he distinguished himself by his attention to his studies. As early as 1356, he inveighed against the authority of the Pope; and in 1360 was active in opposing the mendicant friars. His subsequent life was spent in struggling with what he conceived to be abuses in the church, in which he was sometimes supported by the aristocracy, and always highly popular with the people. His opposition to the claims made by the Pope made him favourably known to many of the nobles; whilst his doctrines were frequently subjected to the censures of the hierarchy. Like many other bold spirits, who have had the courage to denounce abuses, he was frequently led into extremes of an opposite character; but his talents and learning were unquestionable, and he evoked a spirit of enquiry, the effects of which are still felt, and will long continue to influence both the speculations and the practices of mankind. He died of paralysis on the 31st of December, 1384, at Lutterworth, of which he was rector; and 30 years after his death, his bones, by order of the Council of Constance, were taken up and burnt, and the ashes thrown into a brook.

* On Saturday, June 25, 1842, four anglers (a clerical gentleman, a shoemaker, a schoolmaster, and a boy), in order to pursue their sport,

went on to a small island in the middle of the Tees, a short distance from Whorlton. The island is easy of access when the water is low, but unapproachable when the contrary is the case. They had not been long on the island when it began to rain, and they were glad to seek shelter among the bushes. But while they were in this situation, a great body of water came rolling down the river, owing to there having been a great fall of rain further westward. The poor fishers leaped up in astonishment, and to their infinite mortification, not to say dismay, found that the tiny stream which before had scarcely wet their feet, had now become an impetuous flood, seven feet deep, precluding every possibility of escape. To add to their disaster, the rain now fell in torrents. In the evening, their situation was deserted by some neighbours, who, by means of ropes, conveyed to them refreshments and materials for making a fire, which somewhat cheered them through the long and dreary night that ensued. When morning came (being Sunday), a large crowd of people were collected on the opposite bank, to view the forlorn islanders. In the evening, however, the flood abated, and they were enabled to quit the place of their captivity. The clerical gentleman, who was a tall man, waded through, with the boy on his shoulders; and the others were pulled through the still deep and rapid stream by a rope. One of the spectators, to show his agility, went along the provision rope to the island; but, on his returning, the rope broke, and he narrowly escaped drowning.

ments, with trefoil openings crowned with rich tracery, and in the gable is a small circular window. That at the east end is of three compartments, and similar in other respects to the west window. Of the same character are three windows on the north side, two on the south, and two in the chancel. The east and west ends of the building are surmounted by crosses. The pulpit is of stone, of neat construction. There is a stone baptismal font, lined with lead; and near to it is a stove, by which the church is warmed. The building is surrounded by a well-laid drain of earthenware pipes. The stone for the church was procured within a few hundred yards of the place. The erection of the edifice cost £600, which was raised by public subscription, a rate of 2s. in the pound on a rental of £1,800,* and a grant from the Church Building Society. The burying ground remains unaltered.

REGISTERS.—Book No. 1 contains baptisms from 1626 to 1724; burials, 1678, 1688, to 1725; and marriages from 1713 to 1725 (imperfect). No. 2, baptisms from 1725 to 1797; burials, 1724 to 1797; and marriages, 1727 to 1753. No. 3, baptisms and burials, 1798 to 1812; No. 4, marriages, 1754 to 1812.

Whorlton is a perpetual curacy; the vicar of Gaiulford, patron. Cert. val., £12 10s. Dedication to St. Mary.

CURATES.—Henry Armitage, 1636; John Moresby, (“a laic, celebrator of clandestine marriages, and guilty of other misdemeanors”), 1677; William Brockell (curate of Wycliffe), September 29, 1716, p. susp. Moresby; — Grey (“a vagabond Scot”), Christmas-day, 1724, p. exp. Brockell, who “was unjustly and violently ejected from the same cure, and from his stipend of fourteen pounds, by James Malled, *Gallo perfido et profligato*, on the instigation of T. E. (Thomas Eden), rector of Winston; — Parkins; Peter Fisher (vicar of Staindrop, &c.); James Farrer (vicar of Brignall, Yorkshire, not licensed to Whorlton); Philip Airey, 1757, p. exp. Farrer; Richard Wilson (perp. curate of Bowes), 1793, on presentation of Thomas Harrison, Esq.; Robert Green, A.M. (curate of All Saints, Newcastle), 1822; James Potts, 1827, p. res. Green; John George Edwards, A.M., 1849, p. m. Potts; Arthur Headlam, 1854, p. res. Edwards for the vicarage of Pittington.

The parsonage house has long been unfit for residence. In 1767, Whorlton received £200 by lot from Queen Anne’s Bounty. In 1771, the Rev. John Rotherham contributed £200; in 1795, £200 was given by the trustees of Mr. Marshall (a great benefactor to the Bounty fund); and in 1800, £200 was given by Bishop Barrington. Each of these donations was met

* The Ven. Archdeacon Headlam, and P. H. Stanton, Esq., of Newcastle, paid this rate for their tenantry, in aid of the building fund.

by one of similar amount from Queen Anne’s Bounty; and with the proceeds various parcels of land in the chapelry, containing altogether 59 A. 2 R., were purchased as glebe, in addition to the cemetery, containing half an acre. The corn-tithes were formerly paid to the representatives of the late Earl of Strathmore; a modus of 6s. 8d. was paid to the curate for hay from the estates of Sledwish, Arlaw Bank, and Humbleton; and the hay-tithe of the remainder of the township was paid to the late Archdeacon Headlam. The curate received all other tithes in kind. In 1850, all the tithes were commuted for £257 per annum, viz., to the incumbent curate, £75; to Archdeacon Headlam, £37; and to William Hutt, Esq., and his wife, the dowager Countess of Strathmore, lessees of the Master, Fellows, and Scholars of Trinity College, Cambridge, £145. The latter sum is now collected by B. Simpson, Esq., solicitor, Richmond, as agent for the college. The gross income of the living is stated at £113 per annum, subject to permanent payments amounting to £6.

CHARITIES.

Lonsdale’s Charity.—Christopher Lonsdale, by will, dated March 11, 1747, bequeathed £20 to Thomas and Richard Holmes, to be put out at interest by them and the survivor, the heirs, executors, and administrators of such survivor, and the interest to be paid yearly to the use of the poor of Whorlton on Christmas-eve. By an award, May 13, 1793, Cornelius Harrison, Esq., of Stubb House, was adjudged liable to the payment of this interest, as being the legal representative of T. and R. Holmes; and he consequently, until his death in 1806, paid 16s. a year to the curate for distribution, or distributed it himself. His sister also, who was his executrix, continued the same practice until her death in 1810. Thomas Harrison, Esq., who succeeded to his father’s property, and P. H. Stanton, Esq., the present owner, have also kept up the payment.

Donor unknown.—About half an acre of land in the township is supposed to have been left many years ago, the rents to be given to the oldest poor inhabitant not receiving relief. This land produced £1 per annum; but money being wanted to rebuild the village school-house, the land was sold, and the money laid out upon the school, on account of which the master pays £1 annually to the oldest poor inhabitant. The school is attended by about 60 boys and girls, who are instructed on the national system. A clock, presented by Mr. Dove, of Greta Bridge, is fixed above the entrance.

PARISH OF WINSTON.

121

SLEDWISH.—About half a mile to the west of Whorlton stands Sledwish Hall, now occupied as a farm-house. It is one of those ancient and venerable dwellings which are still to be found in isolated and lonely places, scarcely reached by the revolutionary hand of modern improvement, but bearing in its grey old age the memorials of former splendour. That portions of it were built or restored by one of its possessors in the time of Queen Elizabeth, is evident from an elaborately decorated ceiling, in which the armorial emblems of that sovereign are conspicuous objects; but there are other parts of the building which bear traces of a higher antiquity. In the large hall there is a wide fire-place, with an antique bracketted chimney-piece. The south front appears to be the most ancient part of the edifice. Like many similar remnants of former times, Sledwish Hall has its grim traditions of mystery, concealment, and secret passages, which received a seeming corroboration, some years ago, by the discovery of the remains of an infant in a stone coffin in an adjoining field. This, however, has been accounted for on the supposition that the Catholic possessors of this place, in times of persecution, might bury their dead privately with their own ceremonies, and that some priest of their faith might have found a refuge in the intricacies of this remote and secluded edifice. The hall was repaired and restored in 1854; but many of the interior decorations have been removed.

Sledwish was held from an early period by the Menvils. Ninian Menvil, after his participation in the plot for placing Lady Jane Grey on the throne, fled and was outlawed, but was restored in blood and estate on the accession of Elizabeth. Towards the latter end of the 16th century, Sledwish passed from Ralph Ashton, Esq., to John Clopton, Esq., the queen's receiver for several of the northern counties, and who displayed his loyalty by decorating the "orchard chamber" as above described. From his descendant the estate passed to the Townleys, of Lancashire, from whom it was purchased, in 1642, by Sir John Clavering, of Callaly, Northumberland, for £2,370. After belonging to the Withams, of Cliff, it was bequeathed by Thomas Breaks, of London, Gent., to his nephew, Charles Allen, surgeon, of Greenwich Hospital, whose daughter intermarried with James Poole, Esq., of Gray's Inn; and Sledwish is now the property of their son, Edward Poole, Esq., barrister-at-law, of Ledbury, Herefordshire.

Stubb House, to the east of Whorlton, is a handsome residence, occupied by Richard Dodgson, Esq. The estate, which is partly in the parish of Winston, was derived from the Holmeses by Cornelius Harrison, Esq., whose son, Thomas Harrison, Esq., bequeathed it to P. H. Stanton, Esq., of Newcastle-upon-Tyne, the present proprietor.

PARISH OF WINSTON.

THE parish of Winston is bounded on the west by the chapelry of Whorlton, on the north and east by the parish of Gainford (the Langley Beck forming the boundary), and on the south by the Tees. It forms one township, including the villages of Winston and Newsham, the estates of Heighley (or Heighcliffe) Hall, Osmondcroft, Barford-on-the-Hill, and Westholme, and part of that of Stubb House.

THE parish and township of Winston contains 2,961 acres; and the property in it was assessed to the county-rate in 1853 for £2,679 11s. 11d. The population, in 1801, was 307; in 1811, 284; in 1821, 287; in 1831, 327; in 1841, 293; and in 1851, 301, of whom 155 were males and 146 females. There were, at the latter date, 55 inhabited houses and 5 uninhabited.

The contributions of the parish of Winston to the Teesdale Union, in the year ended March, 1854, were as follow:—For in-maintainance, clothing, and funerals, £26 11s. 1d.; for out-relief and lunatics, £34

16s. 6d.; irremovable poor, salaries, and other common charges, £57 4s. 11s.; for constable and costs before magistrates, &c., 17s.; for law costs, revising barrister, and jury lists, 10s. 6d.; and for journeys, salaries of assistant overseers, incidental expenses, &c., £1 15s. 3d.; making a total expenditure of £121 15s. 3d. The repayments of relief by relations and other receipts amounted to 10s.; and the balance exceeded the net expenditure of the previous year by £42 7s. 1d. The registration cost £1 3s. 2d.; and the overseers paid £45 19s. 3d. to the county-rate.

The village of Winston stands on the ridge of a hill overlooking the Tees, and contains a public house, and a few masons, wrights, small shopkeepers, &c. The village is well supplied with water. Besides the endowed school (see CHARITIES) there is a dame-school in the village.

Winston Bridge.—In 1424, Ralph Neville, Earl of Westmoreland, by will, dated at Raby, October 18, bequeathed 100 marks towards building a bridge at Wynston. There is, however, no record of the erection of such a fabric, though the necessity of having a passage across the Tees at this place must even then have been apparent. "Before the building of Winston Bridge," says Bailey, "towards the latter end of the eighteenth century, the coal carriers from the North Riding of Yorkshire, when coming into the county of Durham, always provided themselves with axes, in order to be prepared to render the roads passable by mending them after the primitive fashion now pursued on the corduroy roads in the backwoods of America." The present bridge was built in 1763 and 1764, from a plan designed by Sir Thomas Robinson, Bart., of Rokeby. It consists of a single arch, the segment of a circle, measuring 112 feet span, 22 feet broad, and 20 feet between the parapet walls. It was long considered by architects the largest arch in Europe. The elevation renders the road nearly level with the Yorkshire side. The material is a hard blue ragstone. When most of the bridges in the north of England were washed away by the great flood in 1771, Winston bridge remained uninjured. The river scenery in the locality is extremely beautiful.

The manor of Winston was anciently a part of the estates of the Fitz-Meldreds of Raby, and was granted, in 1313, by Ralph Lord Neville to Geoffrey le Scrope, of Masham, chief justice of the King's Bench. On the execution of Henry Scrope for treason against King Henry V., the estate was considered a forfeiture to the see; but being entailed, it was restored by Bishop Neville to John, brother of Henry Scrope, and continued in the family till the death of Emanuel, Earl of Sunderland, whose estates were inherited by three natural daughters. By marriage with one of these,

Winston came into the possession of Scrope Egerton, first Duke of Bridgewater, in whose posterity it continued till the death of John, seventh Earl of Bridgewater, on which event his brother, the Hon. and Rev. Francis Henry Egerton, succeeded to the title as eighth Earl of Bridgewater.* John, dying without issue in 1823, devised his freehold estates in trust, to convey them to Lord Alford, his great nephew, with a proviso that if the latter died without having acquired the dignity of Duke of Bridgewater, then the estates should go over to other persons. Lord Alford died, leaving a son, but without having acquired the stipulated dignity; and the House of Lords, in 1853, held that the condition as to acquiring the dignity was void, being against public policy, and that the estates descended to the son of Lord Alford.

THE CHURCH.

WINSTON church is situated to the east of the village, on the summit of the lofty and picturesque banks of the Tees, which are here beautifully interspersed with overhanging wood. The edifice is of a peculiar architectural character, of the early pointed transitional style. It consists of a chancel, nave, and south aisle; the latter formed by four pointed arches, supported on cylindrical columns, with somewhat peculiar square plinths. It is entered by a projecting porch on the south. The nave is lighted by treble windows at the west, and long narrow single windows on the north; and the aisle by low double windows to the south. The chancel is lighted by treble windows at the east, and very narrow windows in the sides. When the Rev. W. Turner entered upon his duties as rector in 1846, he found the building in a most dilapidated state, and commenced the repairing of the chancel, with the assistance of Mr. Thompson, the bishop's architect; and it is a matter of regret that the roof, though neat, should not have been restored in harmony with the building. The restoration of the body of the church was soon afterwards undertaken, and a considerable portion of the edifice rebuilt, including an open timber roof, and an octagonal bell-tower and spire at the south-west angle

* EARL OF BRIDGEWATER.—With this nobleman, a descendant of the Duke named in the text, the title of Bridgewater became extinct. By his will, his lordship bequeathed his manuscripts to the British Museum, with the interest of £7,000 to the librarians in whose charge they were placed, and £5,000 to augment the collection of manuscripts of that institution. He also left £8,000 to the President of the Royal Society, for some person or persons whom he might appoint, to write, print, publish, and expose to public sale one thousand copies of a

work "On the Power, Wisdom, and Goodness of God, as manifested in the Creation;" and the productions resulting from this munificent bequest are popularly known as the Bridgewater Treatises. The Right Hon. and Rev. Francis Henry Egerton, eighth Earl of Bridgewater, was a son of John Egerton, Lord Bishop of Durham; and at the period of his decease, he was a prebendary of the fourth stall of Durham Cathedral. See vol. i., page 255, where a brief memoir of his lordship is given.

of the building, which forms a marked feature in the landscape when viewed from the Yorkshire side of the river. The present rector, the Rev. W. Webb, completed the interior fittings, new pulpit, open seats, &c. The old baptismal font, curiously sculptured with dragons in combat, festoons of roses, &c., remains; but the royal arms, painted above the chancel, dated 1661, have been removed. The whole of the restorations of the body of the church have been executed in harmony and strict historical accuracy with the date of the original building, for which we are indebted to the taste and judgment of the architect, Mr. Dobson, of Newcastle; and the sacred edifice, which contains sittings for about 170 persons, is now in a most perfect state, presenting an admirable model of a country church.

REGISTERS.—Books Nos. 1 and 2 contain entries of baptisms from 1572 to 1644, and 1646 to 1812; burials from 1573 to 1812; and marriages from 1572 to 1753. No. 3 contains marriages from 1754 to 1812.*

Winston rectory is in the deanery of Darlington; the Bishop of Durham, patron. King's books, £9 18s. 1½d.; Tenths, 19s. 9¾d.; Episc. proc., 7s.; Archid. proc., 2s.; Synod. and proc., 2s. Dedication to St. Andrew.

RECTORS.—Ricardus, 1254; Robert de Ingilby, 1371; Robert de Subblesdon, 1376, p. m. Ingilby; Robert de Conton, 1379, p. res. Subblesdon; John Gudhogh, 1391; William Marshall, 1406, p. res. Gudhogh; William Slegall, 1406, p. res. Marshall for Boldon; John Huntman, S.T.P. (vicar of Norton and dean of Lanchester), 1409, p. res. Slegall; Robert Steele, p. res. Huntman; Richard Burgh, 1420, p. res. Steele; Lancelot Claxton (dean of Lanchester and master of Sherburn Hospital), 1458; Thomas Yakesley, 1496, p. res. Claxton; Christopher Hobson, 1511, p. m. Yakesley; Thomas Chambre, 1553, p. m. Hobson; Anthony Salvayn (successively rector of Ryton and Sedgfield, and prebendary of the 12th stall), p. m. Chambre; Richard Farrowe, 1559, p. res. Salvayn; Edward Bankes, A.M., 1570, p. m. Farrowe; Richard Revington, 1572, p. res. Bankes for Washington; Henry Ewbank, A.M. (sometime rector of Wolsingham), 1588, p. m. Revington; Daniel Birkhead, S.T.P. (also rector of Egglecliffe, successively preb. of the 6th and 10th stalls), 1620, p. res. Ewbank for Whickham; Thomas Jackson, S.T.P. (see vol. i., p. 618), 1625, p. m. Birkhead; Richard Thursby, A.M. (previously vicar of Kelloe), 1631, p. res. Jackson; Cuthbert Marley, A.M., 1662; Peter Lancaster, A.M., 1672; Sir George Wheler, Knt., S.T.P. (see vol. i., p. 254), 1706, p. m. Laneaster; Thomas Eden, LL.D. (fourth son of Sir Robert Eden, Bart., preb. of the 9th and then of the 7th stall, rector of Brancepeth), 1709, p. res. Wheler; John Emerson, A.M., 1754, p. m. Eden; Hon. Richard

* "Die Sabb. 1 Jan. 1583, Office against William Bernard, he is presented to be an usurer." "19 Oct. 1583, sentence that William Bernard shall do penance in his parish church of Winston on the Lord's Day next ensuing, in the usual dress, and shall there publicly read the fiftenth Psalm, *Domine, quis habitabit*, &c., and shall give up a bill for three pounds to Robert Appleby to be cancelled."

Byron, A.M. (also rector of Ryton), 1774, p. m. Emerson; Thomas Burgess, D.D. (preb. of the 2nd stall, afterwards successively Bishop of St. David's and of Salisbury), 1795, p. res. Byron for Haughton-le-Skerne; Frederick Mundy, A.M., 1804, p. res. Burgess; William Turner, 1846, p. m. Mundy; William Webb, A.M., 1848, p. res. Turner.

The rectory house stands a little towards the east of the church, and is a neat and commodious building, with beautifully arranged hanging gardens towards the river, commanding one of the richest and softest views on the Tees.† Contiguous is the church-yard, which is gracefully shaded by a number of fine old trees, beneath whose branches a noble prospect of Raby opens to the north.

The rector receives the rectorial tithes of Westwick, in the parochial chapelry of Barnard Castle. The vicar of Gainford is entitled to the great tithes of Primrose Hill or Winston Demesnes; the rector of Winston holding the vicarial tithes. The income is £557 per annum.

CHARITIES.

School.—Lord Crewe's executors entrusted to the Rev. Thomas Eden, rector of Winston, the sum of £70, to be laid out in land for the use of a school in the parish, in which the master should teach as many poor children, at 8s. a year each, as the rent would maintain; the boys to be nominated by the rector for the time being. The Rev. T. Eden bequeathed this sum to Sir Robert Eden and his heirs, to carry out the required objects. The money was for some time in the hands of Sir William Eden, Bart., of Windlestone, and who allowed five per cent. interest for it. On his declining to do so, the principal was placed in the hands of the Rev. W. Webb, rector, by whom it was deposited in the bank of Messrs. Backhouse and Co., Darlington, at the ordinary rate of interest. The Countess of Bridgewater invested £304 11s. 4d. in the three per cent. consols, the interest of which, with that of the £70 above-named is paid to the schoolmaster, who, in consideration thereof, instructs twelve children (boys and girls) free, in reading, writing, and arithmetic. The average attendance at the school is about 30. The school-house, an excellent stone building, was erected at the expense of the late Lord Alford.

† 1632. Richard Sowerby, of Newsham, ordered to do publique penance for adultery, and to pay 40s. to the poor."

† From the beautiful situation of the church and parsonage, it has been said that a rector of Winston should never offer to a lady who had seen this enchanted spot, as he could never be sure that she did not marry the situation.

NEWSHAM is a little village, $2\frac{1}{4}$ miles south from Staindrop. *Newsham Hall*, formerly the property and residence of the late Robert Moses Dinsdale, Esq., is now occupied by Miss Moses. Newsham anciently gave name to a local family, from whom it passed to the Boweses; after whom, the Headlams of Stainton were proprietors. Ralph Bowes, Esq., of Barnes, having acquired the estate by marriage with the heiress of Headlam, sold it, in 1591, to Francis Bunny, rector of Ryton. The Douthwaites of Westholme, in 1692, acquired Little Newsham from the Bunnys, and in 1717 sold it to the Bacons of Newton Cap. The ancestors of the present owner of Newsham Hall acquired other portions of the estate, which became much divided. The present proprietors in Newsham are Miss Moses, and Captain Bacon Grey, of Styford, Northumberland. *Walker Hall*, to the south of Newsham, is the property and residence of John Bourne, Esq.

Barford-on-the-Moor, or *Barford-on-the-Hill*, is an estate on the north-western verge of the parish; a part of it was given to the church of Durham by the Fitz-Meldreds of Raby, and is now held by lease from the dean and chapter. The lordship of Barford was held by the family of Bowes, and afterwards by the Huttons. Lord Rokeby and G. M. Taswell, Esq., are now the principal proprietors.

Westholme is another estate formerly belonging to the Boweses, from whom it passed to the Douthwaites, 44th Elizabeth. The daughter of the last heir male of the family, Bernard Douthwaite,* married Jonathan

* The deaths of the father and son of this sole survivor of the name are recorded on a flat stone in the nave of the church, bearing the following inscription:—"Here was buried y^e body of John Douthwaite of Westholme, Gen. who dyed Sept^{br} 16th 1680, aged 80

Newton, of Barnard Castle, who sold the estate to the Bacons of Newton Cap. It is now the property of Captain Bacon Grey. The mansion-house, erected by the Douthwaites in 1607, consists of a centre and two gavelled wings, with mullioned windows. It is at present a farm house, in the occupation of Mr. J. C. Wetherilt.

Osmondcroft.—Robert Fitz-Meldred granted Osmondcroft to the church of Durham, under which it was afterwards held by the Boweses. In 1564, it was purchased by Thomas Myddleton, Esq., of Barnard Castle, who resold it in 1571 to Henry Brackenbury. After passing through several intermediate proprietors, it came into the possession of the late Lady Peat, and is now the property of John Leadbitter Smith, Esq. The exterior of the old mansion-house has been somewhat modernized; it is now used as a farm house.

Heighley (or *Heigheliffe*) *Hall* was a possession and residence of the Scropes, situated to the south-west of Winston. It was an antique mansion, with pointed and mullioned windows, capable of admitting but a dim light into the interior, in which a huge fireplace was one of the most conspicuous features. This house, and the last remains of a chapel or hermitage, which once stood near a neighbouring wood, were removed a few years ago.

Primrose Hill is a farmhold forming a part of the Winston demesnes, and adjoins the parish of Gainford; it was the property of the Earl of Bridgewater, and now belongs to the representatives of Lord Alford.

years.—Here lyeth y^e body of John Douthwaite his grandson who died Iune y^e 11th 1707, aged 23 years son of Bernard Douthwaite of Westholme Gent now liveing the last heir male of y^e familie owne^{rs} of Westholme above 200 years."

PARISH OF GAINFORD.

THE once extensive parish of Gainford anciently included the chapelries of Barnard Castle, Whorlton, and Denton, and occupied (with the exception of the intervening parish of Winston) about 18 miles of the north bank of the Tees, between Piercebridge on the south-east and High Shipley on the north-west. Exclusive of the above chapelries, it is bounded by the parish of Winston on the west, by the parish of Staindrop (and chapelry of Ingleton) on the north-west, by the chapelry of St. Helen's Auckland on the north, by the chapelry of Denton and the parish of Coniscliffe on the east, and by the Tees (separating it from the parishes of Manfield and Gilling, in the North Riding of Yorkshire) on the south and south-west. The parish of Gainford, as at present constituted, includes the following townships or constaberies:—1, Gainford, including Selaby; 2, Langton; 3, Headlam; 4, part of Cleatlam; 5, Morton-Tynemouth; 6, Bolam; 7, Summerhouse; and, 8, Piercebridge. The two latter, though in the parish of Gainford, are in the south-east division of Darlington Ward, and attached to the Darlington Union.

GAINFORD.

THE township of Gainford comprises an area of 2,274 acres. The population, in 1801, was 445; in 1811, 431; in 1821, 500; in 1831, 524; in 1841, 585; and in 1851, 669, of whom 349 were males and 320 females. There were, at that date, 142 inhabited houses, 8 uninhabited, and 4 building. The value of property assessed to the county-rate in 1853 was £3,785 15s.

This township, during the year ended March, 1854, contributed to the Teesdale Union £6 10s. 1d. for in-maintenance, clothing, and funerals; £64 10s. for out-relief and lunatics; £37 15s. for irremovable poor, salaries, and other common charges; £1 10s. for constable and costs before magistrates, &c.; £1 1s. for law costs, revising barrister, and jury lists; and £6 12s. 9d. for journeys, salaries of assistant overseers, incidental expenses, &c. Towards the total expenditure, £117 18s. 10d., there were repayments of relief by relations and other receipts amounting to £3. The vaccination fees were 9s. 6d., the registration £1 19s. 6d., and the county-rate paid by the overseers £62 15s. 10d. The net expenditure of the preceding year was £90 14s. 2d.

The earliest historical notice of Gainford* occurs in Simeon of Durham's narrative, in which it is stated that Eda, or Edwine, a Northumbrian chief, who had

* Originally written Giganford from the Saxon *gegan*, to go, and a ford which crossed the Tees there, the remains of which are still visible. The name has also been written Geagenforda, Gegainford, Geimeforde, Geneford, Gincford, Gayntford, Gaynesford, Gayneford, Gaineford, Geynford, Gainsford, Genford, Gainforthe, Geinford, Gaynforde, and Gaynford.

† Mr. Brown, in a recent lecture at the Mechanics' Institution,

exchanged his helmet for a cowl, was, on his death in 801, buried in the monastery of Gegenforda. The same authority states that Egred (Bishop of Lindisfarne 821-845) "gave the church and vill which he had built on the spot which is called Geinforde, with whatever belonged to it from Tees to Wear, to the holy confessor, St. Cuthbert." The appurtenances extended from Deorstreet (Watling Street) on the east to a certain mountain on the west, and also included lands on the south side of the Tees, three miles towards the south and six to the west, with the two villis of Ilecliff and Wigecliff which he had built, and Billingham in Hartness. Camden mentions the occupation of these parts by the Danes.† Gainford was one of the places which Bishop Aldunc mortgaged to the Earls of Northumberland, and were never restored to the see.

It appears probable that the lordship of Gainford had been seized by the Norman Conqueror from a descendant of the earls, as it continued to be independent of the see of Durham. William II., as has been seen (page 4), granted it and its dependencies to Guy Baliol. In 1293, Agnes de Valencia, widow of Hugh Baliol, held Gainford in dower, and had gallows and infangenetheof, or the privilege of judging thieves taken within her liberty, the chattels of felons convicted in her court, and free warren in all her lands. The subsequent history of Gainford, till the attainder of the

Gainford, observes, in reference to the valley of the Tees, near Barnard Castle, "The very name of her hills and valleys are inspiration to the antiquary, and carry the mind back to the times when in Thorsgill, Wodencroft, Frigasgill, or Fragill, and Baldersdale, the deities of our forefathers received their wonted homage, and when on Baal-hill, near Barnard Castle, the ancient inhabitants lighted their fires to the Phenician god."

Earl of Westmoreland in 1569, is identical with that of Barnard Castle, already given.

The lands in this township were granted and distributed in comparatively small freeholds. In 1686, the freeholders were, Sir Richard Sandford, Bart., of Howgill, Westmoreland; Richard Cradocke, Esq., of London; Thomas Cradocke, Esq., counsellor-at-law, Durham; Gilbert Marshall, Esq., of Selaby; Cuthbert Rayne, Gent.; Henry Eden, Robert Stoddart, John Burrell, John Rayne, Francis Blakiston, and Richard Swainston. The possessions of the Cradocks, with some augmentations, are still held by their descendant, Capt. Christopher Cradock, of Hartforth Hall, Yorkshire. The house belonging to the Edens still bears the inscription, "[16 · I E · 96]." The representative of the Swainstons is John Swainston Goodger, Esq., solicitor. The principal proprietors in the township at present are, the Duke of Cleveland; John Bowes, Esq.; Capt. Cradock; William Surtees Raine, Esq.; Thomas Smurthwaite, Esq., of Holme House; the representatives of the late John Chapman; William Bowman; Mrs. Capt. Goodger; and Mrs. Graham.

The manorial rights of Gainford were purchased from the crown, about the year 1634, by Sir Henry Vane the elder, and are now possessed by the Duke of Cleveland.

The village of Gainford stands nearly equidistant between Darlington and Barnard Castle, or 9 miles from each, and 4 south-east from Staindrop. It occupies the undulating brow of a hill which slopes gently

* JOHN CADE.—This industrious collector and antiquary chose Gainford as a place of residence after his retirement from business. He was born at Darlington in January, 1734, of humble but respectable parents, and received the rudiments of his education at the grammar-school of his native town. From school he was sent to the warehouse of a wholesale linen draper in London, where he rose, by honest industry, from the lowest to the highest station, and obtained a share in a branch of the concern at Dublin. Having realized a small but competent fortune (it has been said by successful smuggling), he retired, about 1775, to Durham, from whence he removed to Gainford, where he devoted the subsequent part of his life, except a few of his last years, to antiquarian researches. These were principally of a topographical character, and were directed to the undefined traces of roads and fortifications, in examining which it was his peculiarity to attribute every thing to the Romans. He traced a Roman road from the mouth of the Tees along the coast to Shields, and another from near Neasham by Great Stainton, Mainsforth, and Old Durham, to Chester-le-Street and Gateshead; "but every hill, natural or artificial, mound or earthwork near his line of march, was to be Roman. The moated house of Bellasis, the mount at Bishopton, and the natural sand-hills at Mainsforth and Acleys-heads were all declared stations." Hutchinson, as Surtees observes, "took a pleasure in ruining poor Jack Cade's castles, and breaking up his roads;" and the difference in the opinions of these two antiquaries on this subject was the cause of some ill feeling. Cade's communications on this Roman

to the Tees, on the opposite side of which the bank rises abruptly, and is overhung with scattered trees and clumps of brushwood. In the western part of the village is one of those open spaces or greens, so characteristic of this part of the county, and which, while adding much to the general comfort and salubrity of their respective localities, afford suitable rendezvous for the sports of childhood, the recreations of youth, and the relaxations of old age. The subject is thus alluded to by Sir Walter Scott:—

"He views sweet Winston's woodland scene,
And shares the dance on Gainford green."

The pedestal of what appears to have been a market cross, removed from the middle of the green by Vicar Cranke, now lies near the church-yard gate. Around the green the principal houses of the village have been erected; and a range of respectable dwellings extends along the brow of the hill towards the east. The aspect of the place is considered more that of a minor watering place than of a retired village, and the adjacent scenery is very beautiful. "There is here," says Mr. Walbran, "none of that utter poverty and squalid wretchedness which too often meet the eye in the villages of the north; and, on the whole, few places afford a more comfortable and suitable retreat, either for those who wish for retirement, or who are not inclined to spend their time, or hazard their competency, in commercial pursuits."* Seen from a distance, Gainford forms a pleasing object in a landscape diversified and relieved

remains to Dr. Kaye, afterwards dean of Lincoln, and Mr. Gough, are in the *Archæologia*, vols. viii., ix., x. His peculiar diffidence and ill health prevented him from becoming a member of the Society of Antiquaries; but his communications to that learned body were always received by them with respect. Much of his attention was also directed to what has been called Gothic architecture, the modern innovations on which he viewed with the true eye of taste. His passion for illustrating books is said to have been so strong as to have led to the expansion of his copy of Dugdale's works to no less than a hundred volumes; and his illustrated Camden was a splendid and magnificent exhibition. He assisted Pennant, and in 1783 communicated to Gough several corrections by himself and Allan for the counties of Durham and York, in the new edition of Camden; and in the same year, he favoured Mr. Nicholls with "Some Conjectures on the Formation of the Peat-Mosses in the Mountainous Parts of the Counties of Durham, Northumberland, Cumberlând, &c., in which other analogous Circumstances are briefly mentioned," printed in the *Genl. Mag.*, vol. lix. p. 967. "About sixteen years before his death," says Mr. Allan, "he had a paralytic stroke, which deprived him of the use of his legs, and he was confined to his bed ever after. During that period, he was, nevertheless, always cheerful; and frequently, after dining below with his sister, I have enjoyed two or three hours of sociable conversation with him, over a bottle of wine, by his bed side. Some years before his death, I visited him, and he gave me Drayton's *Polyolbion*, Harding's *Chronicle*, Lord Clarendon's *His-*

by the winding river, with its steep wood-crowned cliffs on the one bank, and beautiful slopes of verdure on the other.*

There are several springs of excellent water in the neighbourhood, from which the village is well supplied. About a quarter of a mile to the west, and on the bank of the Tees, there is a sulphureous spring, resembling in quality and sediment those of Dinsdale and Croft.

The county police have a station at Gainford, under the Barnard Castle division; and there is a post-office receiving house, three inns or public houses, and a few tradesmen and shopkeepers. The Gainford branch of the Darlington Auxiliary Bible Society, in the year ending Midsummer, 1853, contributed £3 8s. 4d. on the purchase account, and £2 6s. 3d. free, and distributed 14 Bibles and 8 Testaments.

The railway between Darlington and Barnard Castle passes within a few yards of Gainford, where a station will be erected. The line crosses the Tees twice near this place; one of the bridges being about 300 yards to the west, and the other about a mile further.

The village contains a respectable boarding school, for the education of young gentlemen, conducted by the Rev. William Bowman, and at which there are three resident tutors. The proprietor has erected a small gasometer for his establishment, but allows parties the use of it at a certain rental. The parochial school will be noticed with the CHARITIES. There is also a girls' school, attended by about 40 children, supported by the subscriptions of Mrs. Macfarlan and others, and a weekly pence from the scholars.

LITERARY INSTITUTE AND NEWS ROOM.—Gainford Library, News Room, and Literary Institute was established November 13, 1852. It contains upwards of

tory of the Rebellion, and Knight's Life of Erasmus. He told me he had sent all his illustrated books on antiquities as a present to the son of his early benefactor when in trade, who he said was a gentleman of property and education. I have heard of his name; but were I inclined to mention it, I must dip my pen in gall or vinegar, or at least in bitter black ink, for the unfeeling inellegant wretch sold them in Mr. Cade's lifetime. After this, my friend devoted himself entirely to reading sermons and theological tracts, of which he went through an immense mass before his death. His conversation on this subject could not be learned or critical; but it was sensible, lively, and never gloomy. I believe, indeed, no man ever waited with firmer patience for his dissolution, or with a stronger reliance on Christianity. He died at Gainford, December 10th, 1806, aged 72, and was buried at Darlington." He was never married; but a maiden sister, who resided at his house, survived him, and died at Darlington on the 14th of October, 1812, when she was buried by his side in the church-yard. A profile portrait of Cade, probably the only one ever sketched, is at Crook Hall, the residence of the Rev. James Raine, who purchased it at the sale of the effects of Mr. George Ashton, of Durham. It is in crayons, by Sykes, and represents a man of great mildness of coun-

500 volumes, and the news room is well supplied with the London and provincial papers, together with some of the leading periodicals of the day. There are about 80 members, whose subscriptions vary from 4s. to 10s. per annum. The undertaking having proved highly successful, a new building was agreed to be erected, "suitable to the growing wants of the institute, the neighbourhood, and the times." For this purpose, Richard Hodgson, Esq., of Beverley, presented a piece of ground; his grace the Duke of Cleveland contributed £20; the Rev. T. Witham, £20; the Rev. G. Macfarlan, £10; Joseph Hawdon, Esq., £10; R. Hodgson, Esq., of London, £5; T. M. and W. Maude, Esqrs., £5 each; Capt. Cradock, £5; G. Piggot, Esq., £5; the Rev. W. Webb, £5; R. Ableson, Esq., £5; W. S. Raine, Esq., £5; John Mitchell, Esq., £5; G. B. Wharton, Esq., £5; Mr. Thomas Raine, £5; Mr. W. Simpson, £5, &c.; together with the proceeds of a bazaar. The building, which is situated in the western part of the village, consists of a large room for public lectures, a library room, and suitable apartments as a residence for the librarian; the whole from designs by Mr. T. Gibson, architect, Newcastle. The cost of the erection was upwards of £400.

THE CHURCH.

THE church alluded to in the grant of Egred doubtless occupied the site of the present edifice; and several fragments of sculptured crosses, &c., are built up in its walls. Guy Baliol, after acquiring the lordship of Gainford, gave its church two oxgangs of land, and the tenth of the demesne of his manor, with the churches of

tenanee, with a sensible face, not devoid of character. It has a powdered head, with horizontal curls at the ears, a sky-blue coat, with a low turned down collar, and shirt frills of lace in profusion.

WILLIAM STEPHENS, an engraver both on stone and metal, and well known for his peculiar skill in copying ancient records and inscriptions, was for some time resident in Cambridge; but having come into possession of a house with a small property attached in Gainford, through the death of an uncle, who was cook to the Shuttleworth family at Forcet, he removed to this place, where he resided for several years, and where his taste and talents were exercised in his peculiar department. He died at Gainford, and was buried there October 16, 1781.

* "The extreme narrowness of the ancient ways," says Mr. Langstaffe, "would almost lead to the impression that sidings for the passing of vehicles would be required. There is a small lane leading from Gainford to the Tees, the queer nooks of which have been supposed to have answered the same purpose. Popular tradition places a sentry in each in rebellion time. I confess these assumed sidings were not of the width I expected; yet in so contracted a lane the smallest advantage would be of service."

Stainton, and of Stokesley in Yorkshire, to the convent of St. Mary at York, for the benefit of the soul of King Henry, Henry's father King William, his mother Queen Matilda, his brother King William, and his son William; as also for that of his own soul, that of Dionisia his wife, Barnard Baliol his nephew, and of all faithful people deceased. At the close of the grant, he states that the donation was for the good of the souls of his father and mother, and of all his progenitors. Subsequent confirmatory grants were made by other members of the Baliol family; and the convent would appear thereafter to have enjoyed or delegated the right of presentation to the vicarage. Disputes between the monks and some of the vicars were occasionally referred to the mediation of the Bishops of Durham. After the Dissolution, the living of Gainford, including the great tithes of the whole parish, and the advowson of the vicarage, was granted by the crown to Trinity College, Cambridge; the vicar presenting to the dependent chapelries.

The erection of the present church is attributed to the convent of York, about the middle of the 13th century. It is situated at the south-western angle of the village green, and its cemetery is bounded on the south by the Tees, the encroachments of which rendered a considerable outlay necessary, for embankments and other means of security, some years ago. The ground-plan of the church is regular, consisting of a tower, a nave with side aisles, and a chancel. The tower is open to the nave, and rests on three pointed arches; that to the east has swerved from its perpendicular, and is supported on each side by flying buttresses, which rest on the exterior walls of the aisles. The superstructure is low and finished by a plain parapet, with corner spires. To the middle of the west front is attached a heavy buttress, inclosing the belfry stairs. There are three bells, two of which are of considerable antiquity: on one of them is inscribed, in narrow Longobardic characters, "† SAYNT CWTHERBERT SAF WS VNOWERT;" and on the other, "† † HELP MARJ QWOD ROGER OF KYRKEBY." (See list of vicars.) The third bell bears the inscription, in Roman characters, "THO: SWAINSTON CHURCHWARDEN. GLORIA IN ALTISSIMUS DEO. 1715. S.S. EBOR." The tower contains a good clock, on one of its angles.

The south entrance to the church is by a porch, once the burial place of the Garths. On the north, the entrance is beneath a plain arch. Including the space under the tower, the nave is 60 feet 3 inches long, and, with its aisles, 39 feet wide. The side-walls are supposed

to have been reconstructed about the time of Henry VI., or later, and are supported on the outside by buttresses. The aisles are each formed by pointed arches of unequal span, supported by cylindrical pillars; the capitals of those adjoining the chancel arch being slightly ornamented with flowers. From a mark remaining on the eastern face of the tower, it appears that this part of the building was once surmounted by a clerestory; but this has been removed, and a sloping roof, covered with Westmoreland slates, extends to the walls of the aisles. The windows appear to have been subjected to several alterations, and are very irregular.

The chancel opens from the nave under a plain pointed arch, supported by brackets, beneath which are traces of the masonry on which the beam supporting the rood-left formerly rested. This part of the church is 31 feet 3 inches long, and 16 feet 11 inches broad. The windows on the east are three lancet lights; and there are two of the same character on the south. Those on the north have been closed, in consequence of the erection of a vestry. The leaden roof of the chancel, like that of the nave, has been replaced by one of slate.

The pews in the nave are of the period of Charles II., though with several injudicious repairs and alterations. A gallery was erected over the north aisle by the late John Walton Elliott, Esq. The church is estimated to contain accommodation for 350 persons. The font is a plain round basin, supported by a cylindrical shaft, 3 feet 9 inches high. The altar-table is curiously carved.

There was a chantry in this church, dedicated to St. Mary. In 1501, Joseph Cocker was incumbent, with an income valued at £2 19s. 4d. John Betson was the last chaplain, and returned his revenue as arising from the site of his house and garden, four cottages, and certain ploughing and meadow lands in Gainford, worth £3 annually; issues from the chantry of the Blessed Virgin, in the castle chapel of Barnard, 10s.; from a tenement and lands in Cleatlam, 6s. 8d.; from a tenement in Bolam, 3s. 4d.; from a certain parcel of land called Assilbroke, 12s.; from the king's receiver, a payment of 6s. 8d.; in all, £4 18s. 8d., with a deduction of 9s. 10d. for tenths. In 1553, he was in the receipt of a pension of £4 per annum.

There is a rich sepulchral stone in the floor of the chancel, within the altar-rails, sculptured with highly decorated crosses, the chalice, and other ornaments. A fragment of another sculpture lies near it. Several monumental stones and brasses in the church and church-yard record the deaths of various incumbents of the parish, or refer to the burial places of the most

distinguished families in the neighbourhood.* In a grove, by the side of the church-yard, there is a spring still called St. Mary's Well

REGISTERS.—Books Nos. 1 and 2 contain registers from 1560 to 1812.†

Gainford vicarage is in the deanery of Darlington; the impropriation and patronage in Trinity College, Cambridge. King's Books, £36 6s. 0½d.; Tenths, £3 12s. 7¾d.; Episc. proc., 18s.; Archid. proc., 2s.; Synod. and proc., 4s. Dedication to St. Mary.

RECTORS.—Bernardus (son of Hugh de Baliol) occ. 1174; Guy de Lacey, 1210; Stephen, circ. 1220; Alexander Nolan, 1228; G. St. Adrian (a cardinal deacon); Opicion St. Vitalis (the pope's nephew and chaplain), p. m. St. Adrian.

VICARS.—William Roundel, 1261;‡ Robert de Mortuomari, or

* "Mr. Stephens communicated a fragment of an inscription dug up in the green: it was cut under an indented roll, and what was legible is as follows: ...ΑΙΝ ΤΗ CΕΤΑΕ..... in a very rude letter. Among many nations, the idea of putting into the grave, with the dead, utensils to which the party was much attached, hath prevailed: in a grave was lately dug up a tobacco stopper, cut in boxwood, tipped with silver, marked *r. r.*, a hand grasping a bible at the top. In the green were lately discovered, in a gravel pit, many human skulls, but no other bones; probably the evidence of some dreadful decapitation, in the feudal ages, by the guillotine."—*Hutchinson, vol. iii. p. 223.*

Mr. Cade mentions a rude-shaped stone coffin, with a circular cavity for the head, and containing a skull and some bones, discovered in digging a grave at Gainford. Part of an antique seal-ring was found in it, containing a green stone or flux, the intaglio a Cupid, with something like a hammer or pick-axe in his hand, raised against a festoon or olive-branch. Mr. Cade conjectures that this ring belonged to some of the lords of Raby, who might be interred here before the foundation of Stainthorp. About 100 years before the discovery of this coffin, another of a similar shape was found a little below the surface, where that was deposited. "On taking it up, there appeared, for some depth, a fabrication of mortised stone and clay, in every respect resembling those receptacles of mortality at Twyneham." The coffin was afterwards purchased by a publican in the village, who used it as a cooler for his wort; and after being prostituted to other ignominious purposes, it was observed by Mr. Cade, in a mutilated state, in the shape of a pump trough.

† In 1659—"Courteous Reader, this is to let thee understand that many children were left unrecorded or redgestered. But the reason and cause was this: some would and some would not, being of a fickle condition, as the time was then: this being their end and aim to save a groate from the poor Clarke, so they would rather have them unredgestered. But, now seeing it hath pleased almighty God of his Love and mercy to send us a king, now it is their design to have them redgestered, who before were unredgestered, as namely," &c. In a private book of Dr. Robert Swift, who was vicar-general and official principal of the diocese of Durham from 1561 to 1577, are the following depositions relative to an unlawful marriage:—

"Edward Ward, of Langton near Gainford, husbandman, aged 40 years.—

"He saith that ther is dyvers writing (no doubt the Table of Kindred and Affinity respecting marriages between relations) lang-

Russell (Cranke was so subject to fits, that he never preached during his incumbency, except when he read the articles on his induction); James Blackburn, A.M. (rector of Romalldkirk, Yorkshire, some time perpetual curate of the donative of Gibside, and lecturer of St. Nicholas', Newcastle), 1816, p. m. Cranke; George Macfarlan, A.M. 1824, p. m. Blackburn.

The corn-tithes of the parish were leased by Trinity College, Cambridge, to the representatives of the late Earl of Strathmore, but are now collected by a local agent, having been commuted for annual payments amounting to £1,891.

The vicarage-house adjoins the church-yard on the west. It was chiefly built by the Rev. T. Malet, during his incumbency, and has received considerable additions from the present vicar. Its annual value is

* Greswold says, in the parish register, that he collected as many of the scattered leaves of Cradock's old register as had escaped the talons of Sanderson, the intruder's children, taught by their father's example to plunder—harpy like.

† TOBIAS HEYRICK was the sixth and youngest son of the Rev. Samuel Heyrick, rector of Lodington, Northamptonshire, and was born in 1710. He was vicar of Over, Cambridge, and was a senior fellow of Trinity College, Cambridge, where he was greatly esteemed, and where many pleasant anecdotes, both of him and his elder brother Nathaniel, are still recollected. "I was accustomed," says Mr. Allan, in his contribution to Nichol's *Literary Anecdotes*, "to visit him, with my father, at Gainford, when very young; and he struck me, at that time, as a most extraordinary character. If I may be permitted to use the expression, he was a remarkable epicure (*deditus centri*), though a man of wit and otherwise good manners. I have seen a copy of a note of his, declining to partake of a haunch of venison, apologizing, as a reason, he understood that *four* were invited; and as Mr. — was one of them, he was sure there would not be *more than fat for two!* I was once sent with a servant, to carry him a present of smelt, or sparlings as they are called here, being the first that had been caught in the river Tees that season. He had dined before I arrived, but received me with attention, and produced plenty of sweetmeats and dried fruits for my entertainment. As I was amusing myself, he opened a door that led from his parlour to the kitchen, and cried out, 'Ellen, fry a dozen!' In about five minutes afterwards, he opened the door again, and said, 'Ellen, make the dozen a score!' He gave me half-a-crown and filled my pockets with good things. When I got home, I related what had passed, and it afforded entertainment to a party my father had to sup with him, at which I was permitted to be present, although I was not conscious how I had been the cause of their merriment."

Another gastronomic anecdote, told in the village, relates that Mr. John Eden, of Gainford, one day invited Heyrick to dine with him, but, previous to the appointed time, requested him to call at his house, when he afforded him a preliminary gratification by the exhibition of a fine haunch of venison, that was acquiring a proper gusto in the larder. Toby paced round and round the joint, rejoicing in prospective at its forthcoming demolition, while Mr. Eden was

estimated at £50. The gross income was stated in 1835 at £1,020 per annum, subject to permanent payments amounting to £252, leaving £768 clear. Since that time, however, the vicarial tithes of the parish have been commuted for rent-charges, amounting, in the whole, to £1,173 10s. 2½d. per annum, of which £540 14s. 10d. arises from the chapelry of Barnard Castle.

The measures taken to obtain a more equitable division of the income of the parish have been alluded to at page 21. The Barnard Castle committee, though pointing out the justice of dividing the vicarial tithes in proportion to the population, conceded that this might be taken as an extreme view, and submitted "that the very lowest measure of justice which ought, under any circumstances, to be accorded to them, is that the vicarial rent-charge of £540 14s. 10d., arising from the chapelry of Barnard Castle, should be appropriated wholly to its own spiritual use;" and they further urged that the

discussing who should be invited, and hinted that Wood, the curate of Darlington might be one. "Wood! no, no," said Toby; "Wood! No. He'll eat it all. We must not have *him*." Wood accordingly was not invited; but, shortly after, he heard of the circumstance, and had not long to wait before he had an opportunity of paying Master Toby in his own coin. One Monday morning, he espied him in Darlington market, purchasing a pair of soles, which he eyed with uncommon delight, and carefully deposited in the pocket of his upper coat. Wood being assured that, according to his usual custom, he would call at his house before he left the town, patiently waited his advent, for the consummation of his joke. On his arrival, he lavished every species of attention on him, and invited him to dinner. Toby, in the contemplation of the delicacy in his pocket, declined. Wood became still more urgent, and induced compliance at last, by the announcement, that a remarkably fine pair of soles was to form part of the entertainment. So he stayed, and was delighted, and at length departed in peace to his vicarage at Gainford. He had not long been ensconced in his parlour, before he cried out, "Lucy, take those soles out of my coat pocket." Lucy forthwith duly searched the coat, but to no purpose, and reported the same. "Child, you're mistaken," cried he; "go again." A "*non inventus*" was again returned to the inquisition; and his own personal investigation confirming the dread certainty that they had vanished, he very justly exclaimed, "Oh, that Wood! that Wood! he *has done me!*"

His sister, Miss Elizabeth Heyrick, resided with him. "He delighted in teasing her before company; and when she came into the room in which her morning callers were waiting for her, dressed out in silks and satins, he soon afterwards followed, and then began the fun, which ended in his sister's leaving the room in high displeasure; and then old Toby would, in half joke and half earnest, shout out, 'There she goes—a duchess! a duchess!'"

But Heyrick was not a mere gourmand or heartless man of pleasure or wit. His learning and benevolence were long gratefully remembered and acknowledged; and he was generally classed with that good old race of pastors whose memory continues to linger in the affections of their parishioners. He always resided at his benefice, and at length died on the 30th of March, 1782. The inscription on his tomb-stone in the church-yard, and a tablet in the church, are his memorials.

time had arrived for erecting the chapelry into an independent vicarage. After some further correspondence, conducted, on the part of the committee, by Mr. Richardson, solicitor, of Barnard Castle, a scheme proposed by the Master and Fellows of Trinity College was received by that gentleman in May, 1850. It provided "that the said chapelry of Barnard Castle should be forthwith separated from the vicarage and parish church of Gainford, and be constituted a separate parish for ecclesiastical purposes, and a perpetual curacy and benefice," subject to the same ecclesiastical jurisdiction as Gainford, and with its own peculiar churchwardens. The pecuniary arrangement proposed was as follows:—

"That from and after the next avoidance of the said vicarage and parish church of Gainford (but subject to the proviso next hereinafter contained) all so much and such part of the tithe rent charges, or other payments, or compositions for or in lieu of tithes belonging to the said vicarage of Gainford, as arise and accrue or are payable within or in respect of the said chapelry of Barnard Castle, (and now amounting to the annual sum of £540 14s. 10d. or thereabouts,) shall belong and be attached to the said proposed separate benefice of Barnard Castle for ever, and be held, received, and enjoyed by the incumbent thereof for the time being accordingly. Provided, nevertheless, that in the event of any vacancy or vacancies happening in the said vicarage of Gainford, by the death, removal, or other avoidance of the present or any succeeding vicar thereof, before any vacancy shall happen in the said benefice of Barnard Castle, by the death, removal, or other avoidance of the present incumbent thereof, then and until such vacancy shall happen in the said last-mentioned benefice, all the aforesaid tithe rent charge or rent charges of the said chapelry of Barnard Castle, shall belong and be attached to the said vicarage of Gainford and perpetual curacy of Barnard Castle, in the shares and proportions following; (that is to say) three undivided fifth parts or shares thereof to the said vicarage; and two undivided fifth parts or shares thereof to the said perpetual curacy, and shall be held and enjoyed by the incumbents of the said benefices for the time being accordingly.

"That when and so soon as under the provisions hereinbefore contained the whole of the tithe rent charge or charges of the said chapelry of Barnard Castle shall become absolutely attached to the said said perpetual curacy of Barnard Castle, the payment of the annual sum of £7 10s., now made by the Vicar of Gainford to the perpetual curacy of Barnard Castle shall cease, and the said vicarage and the incumbent thereof shall thenceforth be exonerated and released from the same annual sum; but without prejudice to any arrears thereof which may be then due, or to the right of the incumbent of the said chapelry for the time being, or his representatives, to receive a proportionate part of the said annual sum up to the time of such discharge."

The committee having claimed the whole portion of the tithe rent-charge, immediately on the next avoidance of the parish of Gainford, the masters and seniors of the college replied that not having appointed the Rev. G. Dugard to the living of Barnard Castle, and that appointment not having conduced in any way to a vacancy in one of their followships, they considered

they had acted liberally in making provision for an increase of £216 to the living before such an advantage might accrue to them. Eventually, under the advice of the Duke of Cleveland, John Bowes, Esq., and other influential land-owners, the committee consented, though reluctantly, to the proposed arrangement, which was shortly after confirmed by an order in council.

CHAPELS.

ROMAN CATHOLIC CHAPEL.—Through the liberality of the Rev. T. Witham, of Lartington Hall, aided by partial assistance from other parties, the foundation of a new Catholic church and presbytery was laid at Gainford on the 2nd of March, 1854; and it was completed in the following year. The church is a Gothic erection, of the early English style of architecture, capable of holding about 300 people, and stands east and west, with a south porch. The side walls are buttressed and pierced with plain lancet windows; the east end having a triplet, and the west end two lancets, all surmounted with hood mouldings, terminating in carved heads and flowers. The west end is also surmounted by a small belfry; and floriated crosses form the terminations of the east end and porch gables. The whole of the windows are filled with stained glass; the side windows being enriched principally with armorial bearings, and the centre light of the eastern triplet containing a figure of Christ ascending; whilst the lights on each side of it are filled in with figures of St. Thomas of Aquin, the learned doctor of the Catholic church, and St. Osmund Martyr, to whom the chapel is dedicated. These are the productions of Messrs. John and Joseph Gibson, of Newcastle. The chapel has a high-pitched roof of open timber, illuminated, in gold and colours, with texts of scripture running along the ribs and principals, the work of Mr. Henderson, church decorator. A corridor connects the chapel with the presbytery, which is a building in a later style of architecture. The whole has been built from the designs of Mr. T. Gibson, architect, Newcastle.

INDEPENDENT CHAPEL.—This place of worship was opened on New-year's day, 1850. It is of stone, in the early English style, and is lighted on the sides by eight lancet-headed windows, and at the south end by two of a similar kind, and a large three-lighted window above the door. The weathering of the gables, finials, and label moulds are very neat. The roof is much elevated and strong: the construction, however, gives

it a light and airy appearance; the rafters are framed together with a collar beam, under which braces and brackets are fixed, forming a semicircle, and terminating in strong moulded stone corbels. The side walls and angles are supported by buttresses of hewn stone, which give a strong and substantial appearance to the building. The pulpit is part of an octagon, with Gothic-headed panels, and moulded framing; and the chapel contains an organ. Instead of pews, the body of the chapel is fitted up with forms, having sloping backs, which contribute much to the comfort of the occupants, and will seat about 130 persons, but are so arranged that 70 additional sittings may be provided at a trifling outlay. The building, which cost £350, is warmed by hot water, and fitted up with gas. Being altogether different from any previous erection in the neighbourhood, it forms a pleasing object, and is easily accessible from the neighbouring villages. The resident minister of Staindrop officiates in the chapel.

WESLEYAN METHODIST CHAPEL.—The Wesleyans have a chapel in Gainford, erected in 1834, and capable of accommodating 150 persons.

CHARITIES.

School.—Henry Greswold, vicar of Gainford, who for many years gave an annual donation of £6 to the village school, on October 12, 1691, gave £100 to John Raine, Henry Eden, Cuthbert Swainston, and Cuthbert Raine, to be laid out in the purchase of lands or an annuity, the proceeds to be paid towards a yearly salary for the schoolmaster, for teaching the poor children of the parish. In January, 1804, the representatives of two of the obligees paid in £25 each, which, together with £39 10s. 6d., an ancient poor stock, was laid out in the purchase of £156 0s. 3d. three per cent. consols,

* The stock of money belonging to the poor of the parish of Gainford, April 16, 1664, was as follows:—£5 given by Richard Garth, of Langton, and £5 by Thomas Morton, of Darlington, in the hands of George Sanderson, of Forcet. £5 given by William Garth, of Headlam, in the hands of Richard Walbank, of Gainford, and Ralph Carter, of Piercebridge; the interest to be distributed to necessitous widows. £5 given by Margaret Natters, of Bolam, in the hands of Francis Sotheran, of Cleatlam. £2 given by the Rev. John Lively, vicar of Gainford, in the hands of Lancelot Shawter, of Summerhouse. £3 given by Thomas Fawdon, of Piercebridge, 10s. for 10 years (and he was buried March 14, 1659). £10 left by Henry Carter, of Gainford, in the hands of Robert Smith, of Hurworth, weaver. £10 given by John Stoddert, of Gainford, in the hands of Robert Stoddert, brother of the deceased, who promised to pay £2 to the poor, "for his years," every Easter-Tuesday. £5 given by John Eden, of Gainford, in the hands of Ann Eden, his widow. £10 given by John Garth, in the hands of John Burrell, of Gainford. £5 given by Mrs. Elizabeth Garth, of Headlam, April 5, 1670. £5 given by

in the names of the Earl of Darlington and R. E. D. Shafto, Esq. The remaining £50 had been previously paid up, and invested on mortgage of the tolls of the turnpike road leading from Barnard Castle to Stockton, producing £2 10s. interest yearly. The schoolmaster receives this sum, and £2 16s. 2d. as his proportion of the dividends from the above stock, for which he instructs, in reading, writing, and accounts, six children recommended by the churchwardens, from any part of the parish, exclusively of the chapelry of Barnard Castle. The village school is a substantial building of considerable age, and stands near the entrance of the church-yard. It is attended by from 30 to 40 boys, who pay a weekly pence.

Poor Stock.—Some person unknown, in 1639, gave to the poor of Gainford £20; Robert Burrell, in 1665, £18 13s. 9d.; and Mary Swainston, in 1738, £2. The poor stock, invested as above stated, is supposed to have arisen from these donations; and a moiety of £1 17s. 4d., from the dividends thereof, is given away at Christmas and Easter amongst the poor of the parish (except those of Barnard Castle), one-fourth being appropriated to each quarter, in small sums of 6d. to 1s. each.—Four other sums of money, amounting to £26, were lent out; but no interest has been paid on them for many years.*

GAINFORD HALL.—A castle at Gainford, built by Bishop Beck, is mentioned in Grey's Notes; but there are no remains, or even tradition of a castle, though it is probable that some tower or other building might be attached to the lordship. The present Hall, supposed to occupy the site of a previous "manor place," stands at the west end of the village. Its erection was commenced by Vicar Cradock,† but it appears never to

William Garth, of Headlam, December 22, 1670, witness his own hand. "William Mann, of Piercebridge, by will, dated March 26, 1674, gave 10s. to the poor of the parish of Gainford, to be distributed on St. Thomas's day, for ever,"

† **THE REV. JOHN CRADOCK.**—A descent has been claimed for the Cradocks from Caradoc, the Caractacus of the Romans, who was defeated at a mountain near Shrewsbury, called *Caer Caradoc*. The family was diffused through several counties in England, and even in Britany, where, at a village called Caradoc, their crest has been discovered. The Rev. John Cradock, named in the text (from whose character seems to have been derived the saying, "*As cunning as a crafty Cradock*"), was the youngest son of John Cradock, of New Houses, in Baldersdale. On his appointment to the vicarage of Gainford, he purchased property in the parish, and erected Gainford Hall. In 1619, he was appointed archdeacon of Northumberland, which office he resigned on the 6th of August in that year, on being appointed the bishop's spiritual chancellor and vicar general. He was, at the same time, collated to the prebend of the 5th stall. On the 3rd of May,

have been finished. Its appearance at the ends is that of three tall gable-ended houses joined together. Over the doorway in the north front, which is very plain, are the arms and name of John Cradock, 1600, and the initials I. C., M. C., and B. C. The south entrance is highly decorated with fluted pilasters and other ornaments. The windows are square and mullioned. Several of the rooms are wainscotted; and one, in the lower story, has a stuccoed cornice of flowers and fruits. The staircase is unfinished. An old stone wall surrounds the house, and incloses the space formerly occupied, or intended to be so, by gardens and orchards. A circular turretted dove-cot stands in the eastern portion, where there it also a deep well. The hall is the property of Capt. Cradock, and is occupied by Mr. Thomas Raine.*

SELABY.—The Brackenburys of Burn Hall† (see vol. i., p. 382) appear to have first acquired possessions in this part of the county by the marriage of Nicholas, heir male of the family, with Agnes, the heiress of Denton. Sir Robert Brackenbury, whose name is familiar to the readers of Shakspeare, was proprietor of Selaby. He was the second son of Thomas Brackenbury, of Denton, and was Lieutenant of the Tower during the whole of the reign of Richard III.,‡

1624, Sir H. Anderson, of Haswell, M.P. for Newcastle, presented a petition to the House of Commons accusing Cradock of extortion in the discharge of his office. On the 22nd of the month, the Committee for Courts of Justice reported that he, "being a high commissioner for Durham, a justice of peace, and a chancellor, was found to be a great offender in all these—confounding their several jurisdictions, and making one to help the other. That on the sequestration of one Allen's goods, worth £1,000, it was granted to two strangers, who ransacked the house, and seized upon divers bags, during the funeral sermon. On the will being found, and one Hawden executor, probate was refused, and a second sequestration granted; when Cradock, in his capacity of justice of peace, broke open the house, and after ransacking it, offered an oath, *ex officio*, to the executor, and upon that asked him what he had done with the bags of money. New sequestrators were then appointed—the chancellor's man being summoner. These eat up all the provisions in the house, took Hawden and sent him to gaol, whence he could not be released until 20 pieces were given, and a fine of £50 paid to the Bishop of Durham. All which was done out of any session, at the cost of £6 in fees, and no act of sequestration made." Other offences were also stated; and the Committee gave it as their opinion that this man deserved greater punishment than Lambe, another offender of the same class. What the decision of the house was does not appear; but his chapter do not appear to have attached any importance to the proceedings, as they shortly after presented him to the vicarage of Woodhorn. For his death, see vol. i., p. 256. His son, Sir Joseph Cradock, Knt., LL.D., some time of Harperley, was commissary of the archdeaconry of Richmond, and died in 1686, aged 81. Thomas Cradock, his son, was a barrister-at-law, attorney-general to Bishop Cosins, and M.P. for Richmond. He died in 1689, when the entailed estates descended

to whom he appears to have been faithfully attached, and died with him on Bosworth Field. His name is still applied to one of the towers of his royal master's fortress of Barnard Castle. After the defeat and death of Richard, an inquisition of the forfeited estates of himself and adherents was held, on which it appeared that, with the exception of a small property in Darlington belonging to the fallen king, Selaby was the only estate in the county of Durham owned by any of his friends. This being entailed, and Sir Robert having left issue two daughters only, it passed to his nephew, Richard, fifth son of Anthony Brackenbury, of Selaby, Gent., bailiff of Gainford. He was gentleman usher to Queen Elizabeth, and frequently employed in the ceremonies, receptions, and embassies which took place during her reign. Selaby became the property of Gilbert Marshall, of Newcastle-upon-Tyne, Gent. (who had married Agnes, daughter and coheir of Cuthbert Brackenbury), by purchase from John Brackenbury, of Gainford, in 1657. His granddaughter, Anne, married, in 1702, Richard Freeman, Esq., of Batsford, Gloucestershire, Lord Chancellor of Ireland, whose descendants by his first wife sold Selaby to the Earl of Darlington; and it now belongs to the Duke of Cleveland.

Selaby Hall is beautifully situated about half a mile

to his nephew, Richard Cradock, whose great grandson, Marmaduke Cradock, sold Harperley to George Pearson, Esq. His descendant, Capt. Christopher Cradock, is the present representative of the family.

* Mr. Raine is well known as an agriculturist and a first class cattle breeder on the banks of the Tees; and amongst the various prizes awarded to him is a silver cup, with a suitable inscription, presented by Sir Matthew White Ridley, Bart.

† A tradition states that Perse Brackenbury came in with the Conqueror, had a grant of Burn Hall, and married the heiress of Robert de Mervayle, of Selaby. Of him, and in allusion to the family crest, an old rhyme says,

"The black lion under the oken tree
Made the Normans fight and the Saxons flee."

Robert, son of William de Brackenbury, of Great Burne, was appointed, with 30 others, February 4, 1342, to array all the defensible men in Darlington Ward to oppose the Scots.

‡ According to Shakspeare, he had held the office in the previous reign of Edward IV. In the tragedy of Richard III., his principal characteristic appears to be a prudent desire to avoid discussion on matters not immediately connected with his duty; as, "With this, my lord, myself have nought to do;" and when the villains, sent to the Tower to murder Clarence, show to Brackenbury their warrant for admission, he quietly remarks—

"I am, in this, commanded to deliver
The noble duke of Clarence to your hands.
I will not reason what is meant hereby,
Because I will be guiltless of the meaning.
Here are the keys;—there sits the duke, asleep."

north from the Tees; and the estate, which contains 750 acres, is well wooded. Selaby was for many years occupied by the Hon. Frederick Vane, second son of the first Earl of Darlington, and afterwards by Richard Bell, Esq. It has since been the residence of Jacob Maude, Esq., and more recently of the late Thomas M. Maude, Esq., who died at Barnard Castle, March 2, 1855, when on duty with the Durham Militia.

ALWENT, a little to the south-west of Selaby, and containing about 310 acres, anciently gave name to a local family. John de Alwent confessed before Bishop Kellaw that he had committed adultery with Agnes de Raby, and Annabella de Durham, and also *failed to prove that he had not* committed the like offence with Christiana Clergis, Annabella de Castle Barnard, and Emma le Aumbeleur. The prelate mitigated the sentence somewhat in consequence of the station in life of the offender; nevertheless he was, clad only in linen, to be whipped round his parish church of Gainford on six several Sundays and festivals, and also round the market-place at Darlington on six several Mondays, during that part of the day when it should be most thronged. By mandate, dated at Stockton on the 6th of August, 1313, the vicar of Gainford was directed, under pain of the major excommunication, to monish publicly the said John to appear, and to see that he did appear on the succeeding Sunday in the church-yard and so forth, from the one day to the other, until the expiration of the term: and it was provided that, if he did not submit himself, he should be excommunicated throughout the whole archdeaconry of Durham, and shunned by his fellows as excommunicated until he should conform and obtain grace and favour. The

* This gentleman had a horse called Old Drummer, which had been wounded in the neck by a bullet at the battle of Sheriff-Moor in 1715, and died in 1753, at the age of 45. His remains were buried near the Tees, where a Latin inscription on a wooden tablet, now somewhat mutilated, is affixed to a tree, and records his name and good qualities.

† DR. SHERWOOD.—Thomas Sherwood, Esq., M.D., besides the ordinary routine of professional education, applied himself with ardour, during the early years of his life, to the study of such authors as enabled him to combine theory and practice in perfection, and by which he gradually acquired that confidence in himself which was through life his characteristic, and by which he was enabled instinctively, as it were, to recognise latent disease, and to administer promptly either to its prevention or its cure. For 30 years he engaged himself, with zeal and ability rarely surpassed, in the active duties of his profession. In cases of fracture of the skull, or natural derangement of the head, he was eminently successful. From circumstances, his classical education was limited; though in after life he evinced an amount of knowledge and taste in polite and elegant literature with

vicar was also desired to return, about the Feast of St. Cuthbert, an account of what had been done, and whether the culprit had been in any wise disobedient and refractory.

Alwent passed at an early period to the Nevilles. After the attainder, it was purchased by Richard Brackenbury, Esq.; and a portion of it subsequently passed from the Marshalls to a family named Thompson, whose descendants, in 1728, sold it to Ralph Hodgson, Gent., of Barnard Castle. Another portion came into the possession of the Metcalfes, who sold it in 1636 to John Witham, Esq., of Cliffe. From his descendants it passed, in 1699, to Thomas Maire, Esq., of Hardwick, who, in 1716, conveyed it for £850 to Ralph Hodgson, Gent. A part of Alwent was sold by the Hodgsons, in 1753, to George Bowes, Esq., and is now held by the trustees of the late Earl of Strathmore; the remainder, belonging to the representatives of the late Ralph Hodgson, Esq., was offered for sale in 1837; when it was described as a farm house with 188 acres of land; a water corn-mill, with a house, a garden, and 8 acres of land; and a close containing 5 acres. It was purchased by the late Mr. John Chapman, of Headlam, and is now held by his representatives.

SNOW HALL, about a mile east from Gainford, was for some generations the property of the Raines, of whom Richard, born in 1622, was first named of Snow Hall. Edward Raine, who died in 1758, left the estate to his nephew, Timothy Wright;* and the latter bequeathed all his property to Richard Sherwood, surgeon, of Staindrop, father of Thomas Sherwood, Esq., M.D.,† whose son, Christopher Sherwood, Esq., is the present proprietor.

which few could compete. The history, poetry, and biography of his own county, also, occupied a considerable share of his attention; and Surtees, in the first volume of his History, p. 10, speaks of him as one "without the early and valued assistance of whom that work would never have been undertaken." It is sad to add, however, that the latter days of Dr. Sherwood were clouded by misfortunes. The perfidy of friends has been mentioned as bearing heavily upon him; but it was his domestic bereavements which most powerfully affected him, and finally led to the painful catastrophe which closed his existence.

RALPH SHERWOOD, a younger son of the doctor, was born April 3, 1798, and received a liberal education at Witton-le-Wear. He was destined for the medical profession; and with this view he studied for a while in London, and was afterwards removed to Edinburgh, where he studied anatomy under James Wilson, Esq., at St. George's Hospital. Here his quickness and talent, his great attention to anatomical and surgical pursuits, and the accuracy of his pencil and pen in sketching off-hand, in the hospitals to which he had access, those various morbid and other appearances produced by nature or the hand of the operator, quickly gained for him the notice and approbation of those best qualified to appreciate his abilities.

East or Low Greystone, a little to the north, was formerly a part of the Snow Hall estate, but was sold, in 1757, to Robert Elliott, of Middleton-in-Teesdale, from whose grandson it passed to the Raines. It was purchased by Dr. Sherwood, in 1811, for £3,150. By marriage with Mary, his youngest and only surviving daughter, it became the property of William Surtees Raine, Esq. *Greystone Hall* belongs to Mr. Robert Elliott, a descendant of the family just named, who resides on the estate.

Field House, an adjoining property, was sold by the Burrels, to Francis Holmes, of Darlington, and by him to John Jones, gardener at Raby. In 1825, Dr. Sherwood purchased it from the Rev. John Jones Thornhill, vicar of Staindrop, for £4,100.

Dyons, anciently a village, but now a farm of about 200 acres, was named with Summerhouse in ancient charters. It passed from the Alwents to the Hiltons, who held it for several generations. Afterwards, it passed successively to the Honeywoods and the Baileys of Chillingham, Northumberland, and is now the property of the Duke of Cleveland.

GAINFORD GREAT WOOD, about a mile north-west from the village, was one of the baronial appendages to the honour of Gainford and Barnard Castle. Whilst vested in the crown after the attainder, the timber was cut down; and a second growth was felled in the early part of the 18th century. The wood, in its present state, presents a dark, regular, and monotonous mass,

Whilst in Edinburgh, he became possessed of five very amusing letters written by Mr. Ritson to Mr. Laing, which, with a portrait of their author etched by himself, he communicated to Mr. Nicholls, who inserted them in the third volume of "Literary Illustrations of the Eighteenth Century," p. 775, &c. A strong predilection for the stage, however, acquired whilst in London, now received an additional stimulus from an acquaintance with Mr. Yates (afterwards of the Adelphi Theatre, London), Mr. J. Russell, and other eminent performers; and an unfortunate difference having occurred between himself and his father relative to his expensive habits, he made his debut at York, in July, 1818, in the character of *Dandie Dimmont* in the opera of *Guy Mannering*. Under the assumed name of Sherwin, he continued to perform with the York company, sustaining the countrymen, Scotchmen, and sailors with success. It is said that at this time he was visited by an uncle, a physician, who had returned from the East Indies with an independent fortune, and who, after expostulating with him on the profession he had chosen, offered to be at the expence of finishing his medical education, and sending him out to the same situation which he himself had occupied. The reply of Ralph was, "It is my father's duty to do all this for me; and I will not receive the obligation from any other person." In the Lichfield, Birmingham, and Brighton Theatres, he endured all the vicissitudes and privations of a country actor's life, wearied of which, he at length sought and obtained his father's forgiveness, and was received under the paternal roof. Soon after, however, the celebrated

occupying about 100 acres of somewhat swampy ground, tangled with brushwood, and affords a secure retreat for foxes and other animals. It is the property of the Duke of Cleveland.

LANGTON.

THE township of Langton contains 1,061 acres; and, in 1853, the property was valued for the county-rate at £1,175 6s. 4d. The population, at the several returns, was 78, 65, 90, 107, 99, and 95, of which latter number 52 were males and 43 females. In 1851, there were 18 inhabited houses and 1 uninhabited.

The Teesdale Union received from the township of Langton, for the year ended March, 1854, £2 2s. for in-maintenance, clothing, and funerals; £5 11s. 6d. for out-relief and lunatics; £9 18s. 3d. for irremovable poor, salaries, and other common charges; 14s. for constable and costs before magistrates, &c.; 7s. 6d. for law costs, revising barrister, and jury lists; and £1 6s. for journeys, salaries of assistant overseers, incidental expenses, &c. The total sum contributed to the township, £19 19s. 3d., was £3 16s. 8d. more than that of the preceding year. The charge for registration was 8s. 6d.; and the overseers paid £19 11s. 8d. to the county-rate.

The hamlet of Langton is situated 2 miles north from Gainford, and 3 east-by-south from Staindrop. Languardun was one of the unrestored villages resigned to the Earls of Northumberland by Bishop Aldhune, and

comedian, Emery, died; and an observation once uttered by him at Brighton, "When I am gone, Ralph, of all the actors I know, is most likely to supply my place," having dwelt on the mind of the young man, he once more abruptly left his father's house, and repaired to London. After some difficulty, the doors of Drury were opened to him, through the mediation of Mr. Oxberry; and he appeared on February 14, 1823, in his favourite character of *Dandie Dimmont*; the result being an immediate engagement for three years, at £7, £8, and £9 per week. Here he continued to represent the characters in which his great predecessor had acquired his fame; but his debilitated constitution never recovered the effects of sleeping in a damp bed at Cambridge.

In the mean while, Elizabeth Sarah Sherwood, the eldest sister of Ralph, who was laid on a lingering death-bed, earnestly besought her father, as a last request, to be reconciled to Ralph, which, after some hesitation, he promised; and his son was suffered to come home to die. The daughter expired on the 25th of October, 1829, aged 22. The bereaved parent, overwhelmed by accumulated misfortunes, spent his time in gazing vacantly on a portrait of his son in one of his characters, or in talking incoherently of his daughter. The mind of Dr. Sherwood at length gave way, and his body was found in the Tees near his own house, Feb. 28, 1830, and interred in the family burial-place in Staindrop church-yard. At the time of his decease he was in the 60th year of his age.

afterwards belonged to the Nevilles.* It is now the property of the Duke of Cleveland. *Langton Grange* was for some years occupied by the dowager Countess of Darlington, afterwards by Captain Watts, R.N.,† and is now the residence of Archbold Cochrane, Esq.

HEADLAM.

THIS township comprises an area of 780 acres. The population, in 1801, was 89; in 1811, 175; in 1821,

* In Dr. Swift's private book, already quoted (1561-1577), the following depositions occur, relative to a breach of the Sabbath by Thomas Betson and John Fowler, of Langton:—

“Cuthbert Potter, of Lankton, husbandman, aged 50 years.

“He saith that the said Betson and Fowler dyd use ther bodyly labour with ther beasts in harrawinge and sawinge upon a Sondaye, about Michaelmas last past, against the commandements of God and the lawes of holly churche. Examined upon what day of the moneth neisit deponere. Examined what maner of grain yt was that the said Betson and Fowler dyd sawe, he saith wheat. Examined what tyme of the said (Sondaye) that they dyd harowe and sawe, he saith airly, bifore none, for this examine sawe them bothe that daye at the service in Gainfurth church, at the beginnunge of the morning prair. Examined whether any moo of the said parish dyd so lykewise, or no, he saith none, to this examine's knowledg, saing that ther was yere enough, and that they might well enough have taried unto the Monday and Tewsdays next after, as this examine and many other dyd. †

“Thomas Stoddert, of Headlam, yoman, alias husbandman, aged about 50 years.

“They neyded not so do but upon folish oversight, for not only in Langton, but also in many other townes in that parish, many had plewed upon the Setterday next byfore besyd those 2, and sufferde the sawinge to the weke after, for ther was tyme and yere enough, saing he thinks yt was not godly doon of them. †”

The following is the “confession or declaration to be maid by Thomas Betson and John Fowler, in the parishe Churche of Gaynefurth:—

“Derely beloved, Although he be one of the chefest of Godd's commandements when he saythe thus, ‘Remember that thowe kepe holy the Saboth daie; sex daie shall thou labor, and doe all that thou haist to doe; but the seventh daie is the Saboth, or resting daie, of the Lorde thy God; in it thou shalt doe no maner of worke, thou and thy son, thy daughter, thy man servant and thy maide servante, thy cattell and thy stranngers that is within thy gaits; for in sex dayes the Lord maide heaven and earthe, the sea and all that in them is, and rested the seventh daie; wherefore the Lorde blessed the seventh daie and hallowed it,’ yet we, Thomas B. and J. F., forgettinge our obediente dewties to the lawe of God aforesaid, and to the Quene's Majestic's ecclesiasticall lawes of this realme, have of late prophaned, unhalowed, and, as muche as in us lyeth, dishonored Godd's holly saboth daie, which daie is appointed emongest all Christian men to prayse God for his benefites, to aske those things that be nedefull, at Godd's hands, and to doe other works acceptable in Godd's sight, [not] gyvinge our selves to worke unlawfull, servile, and bodyly labors of sawinge, harowinge, without any urgent necessarye, in which doings as we have offended the lawes of God and the Quene, to our reproche and your evill example, so we humbly here before you all acknowledge our selves to be sory for that and all our misdeds and offences, besechinge God to turne this our

232; in 1831, in consequence of the removal of a boarding school, it had declined to 109; in 1841, it was 117; and in 1851, 129, of whom 61 were males and 68 females, inhabiting 20 houses. There were also 2 houses building. The value of property assessed for the county-rate in 1853 was £1,104 0s. 6d.

During the year ended March, 1854, the township of Headlam contributed to the Teesdale Union £1 14s. for in-maintenance, clothing, and funerals; £11 6s. for out-relief and lunatics; £7 13s. 6d. for irremovable poor,

punishment as well to our amendement as your good example. In testimony wherof we pray you all to lifte up your harts and voices with us to our Heavenly Father, in the name of his deare son Jesus Crist, sayne, ‘Our Father, which art in heaven,’ &c.”

† MRS. WATTS (MISS JANE WALDIE).—Mrs. Watts was the daughter of George Waldie, Esq., of Hendersyde Park, Roxburghshire, and of Forth House, Newcastle-upon-Tyne. Jane, the youngest of five children, was born in 1792. From earliest childhood, her quickness of intellect and original talent were remarkable. She was in infancy passionately fond of reading; and, when only five years of age, had made considerable progress in the science of astronomy. The first five summers of her life were passed at the sea-side, in the village of Tynemouth, where she took great delight in wandering about the Gothic and mouldering cloisters of the ruined abbey. She did not go through any regular system of education, but was a day-scholar at a boarding school in Newcastle during the winter months, until she was fifteen years of age, when she was sent, though for six months only, to a boarding school in Edinburgh, kept by Miss Playfair, sister to the celebrated professor; and that learned student, during the short time Miss Waldie was in his sister's seminary, discerned the great powers of her bright and original mind; and both at that period, and afterwards, when he met with her in Italy, Professor Playfair honoured her with his marked notice and approbation.

Miss Waldie's genius for painting manifested itself in infancy. Unaided by teachers, uninduced by example, no sooner could her little fingers grasp the pencil than she eagerly attempted to delineate the trees, cottages, and other rural objects which surrounded her when residing in the country. When quite a child, she pored for hours over an old quarto volume on perspective, the only work on any branch of art which her father's library contained. In sketching from nature, she possessed unrivalled and incredible facility. Often, in the romantic regions of Italy or Switzerland, and while the carriage rolled along, or the boat glided swiftly over the blue bosom of the lake, her rapid pencil, with a few master strokes, would delineate the features of scenes, which, when afterwards painted in the glowing hues of nature, were recognized and admired by all; especially by those artists who, with every advantage of time and instruction, had themselves depicted the same subjects. The paintings she occasionally sent to the Royal Academy and British Gallery, and which always appeared without her name, were invariably distinguished and admired by the most eminent judges of art, for their beauty of composition, fine tone of colouring, truth to nature, and feeling and expression. Her characteristic modesty led her to attribute the high encomiums she received to flattery or good nature; and she resolved, by an ingenious experiment, to ascertain their real estimation. Accordingly, she sent a painting for actual sale to the British Gallery, where it would necessarily stand in competition with those of the best British artists; but a member of her own family, unwilling that the picture should be irrecoverably disposed of, privately desired

salaries, and other common charges; £1 for constable and costs before magistrates, &c.; 12s. 6d. for law costs, revising barrister, and jury lists; and £1 18s. for journeys, salaries of assistant overseers, &c., being a total of £24 4s., which was £3 12s. 5d. more than the expenditure of the preceding year. The cost of registration was 6s. 10d.; and the county-rate paid by the overseers was £18 9s. 1d.

Headlam, at a very early period, gave name to a resident family; and in 1309, Simon, brother of Peter and Galfrid Russell (the latter senechal of Durham), also assumed the name of Hedlam. The estate itself was included in the barony of Gainford; and, in 1304, Agnes, widow of Hugh Baliol, held it in dower. An inquisition taken after the attainder of John Baliol, returned the rents of the free tenants, with the duty paid for license to brew ale, at 62s. Another inquisition, taken on the death of Guy, Earl of Warwick, by Simon de Hedlam and other jurors, shewed that the annual rents of the freeholders had increased to 65s. 3½d.; the return from the bondholders, and the license to brew, produced the large sum of £13 6s. 11½d.; certain services were valued at 4s. 3d., save reprisals; and a forge only produced 6d. Headlam formed part of the forfeited estates of the Earl of Westmoreland. The property was afterwards much divided. The Garths held an estate for several generations; and the Lancasters, of Socbridge, Westmoreland, acquired property in the 16th century, which was afterwards sold to the Birkbecks, a Cumberland family. Anne, daughter of Henry Brackenbury of Selaby, and widow of Chris-

topher Hutton of Hunwick, married Henry Birkbeck* in 1606; and their daughter Eleanor married Henry, eldest son of Timothy Draper, "one of his majesty's customers" at Newcastle-upon-Tyne, in 1636. The estate afterwards passed, by successive marriages, to the Mossacks and Clarks; and Ann, only surviving child of Ralph Clark, Gent., of Headlam, married, in 1699, Lawrence Brockett, attorney-at-law, of Hilton. The hall and estate were sold in 1845, by the widow of Richard Hodgson Brockett, a descendant of the family, to the late John Hett, Esq., by whose representatives it is now held.

The village of Headlam is 2 miles north-east from Gainford, and 3½ east-by-south from Staindrop. It is pleasantly situated on the south side of a rising ground, and is watered by a small stream, which, after supplying the hail ponds, winds its way towards the south-east, and falls into the Tees at Carlbury. The remains of an ancient chapel, in the middle of the village, are now converted into a stable. Some venerable willows, which overhung its bank, were wantonly destroyed, on the anniversary of Gunpowder Plot, some years ago.

In a retired situation at the east end of the village is the ancient residence of the Birkbecks, originally of the time of Elizabeth or James I., but now modernized into a commodious mansion, called *Headlam Hall*, the residence and property of the representatives of the late John Hett, Esq. The original staircase and hall are preserved; the latter being a fine wainscoted apartment, 30 feet 10 inches by 17 feet 9 inches, with a richly ornamented fire-place at the south end, bearing

the keeper of the gallery, to whom it was left to fix the price, to put upon it nearly double the sum usually demanded for landscapes of a similar kind. Yet, almost at the opening of the exhibition, the picture was purchased by a British nobleman distinguished for fine taste in the arts.

From Mr. Williams, the celebrated landscape painter, Edinburgh, Miss Jane Waldie received some slight instructions in etching, which art she pursued with considerable success. She also executed several paintings which were deservedly admired, from sketches of scenery which she made whilst on a tour in North and South Wales. During the "hundred days," Miss Waldie accompanied her brother and sister on a tour to Flanders and Holland, and was at Brussels during the eventful battle of Waterloo. Her account, recorded in her journal, of the circumstances attendant upon that important event, is highly graphic and interesting. She took a panoramic sketch of the field after the battle, drawn with masterly firmness, accuracy, breadth, and feeling. It was published with her journal, and went through ten editions in the course of a few months.

In 1821, Miss Jane Waldie became the wife of Captain Watts, a naval officer who had distinguished himself in numerous actions; and they adopted Langton Grange as their residence. Unfortunately, however, the health of Mrs. Watts, which had been severely affected whilst in Italy, became gradually worse; and after enduring great

suffering with uncomplaining patience, she died on the 6th July, 1826, in the 34th year of her age, leaving only one son.

Her published literary productions are, "Sketches of Italy," "A Tour in Flanders, Holland, and France," "Continental Adventures," and sundry contributions in prose and verse to various periodicals. As an artist, however, Mrs. Watts was more distinguished than as an authoress; and few have attained, without instruction and in so short a time, so high a degree of excellence in the various branches of art as this highly gifted and amiable woman.

* THE REV. SIMON BIRKBECK, brother of Henry, born in 1584, was a noted preacher, a good disputant, and well read in the fathers and schoolmen. In 1617, he was presented by his kinsman, Richard Wharton, Esq., (receiver-general within the archdeaconry of Richmond, the bishopric of Durham, and the county of Northumberland,) to the vicarage of Gilling, Yorkshire, where he died September 14, 1656. In 1634, he published "The Protestant's Evidence, shewing that for 1500 years next after Christ, divers Guides of God's Church have, in Sundry Points of Religion, taught as the Church of England now doth;" in 1657, "Answer to a Romish Antidotist;" and a "Treatise of Death, Judgment, Heaven, and Hell." The two first-named works are still considered by many as amongst the most powerful and argumentative works that Protestantism has produced.

the arms of Henry Birkbeck and Anne Brackenbury, his wife. At the other end of the room is a large full-length portrait, rudely executed, of some member of the family, probably of Henry Birkbeck himself, dressed in the fashion of his time. Attached to the house are a garden, lawn, orchard, pleasure grounds, and plantations. Tradition points out one of the enclosed grass yards, on the east, as the place of interment used by the Puritan family of Mossock in the 17th century. The house and grounds command views up and down the valley of the Tees, extending on the south-east to the Yorkshire hills, and on the west and north-west including the woods of Raby and the distant hills of Teesdale. The hall was for some years occupied as a boarding school.

CLEATLAM.

THE township of Cleatlam, partly in the parish of Staindrop, contains 1,097 acres, and was assessed for the county-rate in 1853 at £1,166 10s. 4d. There were 73 inhabitants in 1801, 103 in 1811, 126 in 1821, 94 in 1831, 95 in 1841, and 107 in 1851. Of the latter number, 52 were males and 55 females, inhabiting 27 houses.

The contributions of this township to the Teesdale Union, for the year ended March, 1854, were, for maintenance, clothing, and funerals, £6 8s. 11d.; for irremovable poor, salaries, and other common charges, £6 1s. 7d.; for constable and costs before magistrates, &c., 14s.; for law costs, revising barrister, and jury lists, 5s.; and for journeys, salaries of assistant overseers, incidental expenses, &c., 11s. 6d.; the total expenditure, £14 1s., being 14s. 5d. more than that of the preceding year. For registration, 3s. 6d. was paid; and the county-rate paid by the overseers was £19 10s. 11d.

The village of Cleatlam is situated on an eminence, $3\frac{1}{2}$ miles north-west from Gainford, and 2 south-by-east from Staindrop. The principal estate is one of the hereditary possessions of the Bowes family, who also acquired other property from a family named Ward. The old mansion of the latter, still the property of John Bowes, Esq., a gavel-ended old house, with mullioned windows, remains. The collegiate church of Staindrop, and the chantry of St. John the Baptist in St. Andrew's Auckland, had lands in Cleatlam, in which also were the estates forfeited by Sir John Somerset. The present owners of land are, John Bowes, John Barnes,

and John Smith, Esqrs. Cleatlam Moor was inclosed in 1636.

MORTON-TYNEMOUTH.

THE little township of Morton-Tynemouth contains 399 acres, on which, in 1851, there were 5 inhabited houses and 1 uninhabited. The value of property assessed to the county-rate in 1853 was £498 17s. The population, at the six decennial returns, was 23, 28, 31, 19, 28, and 28, of which latter number 13 were males and 15 females.

Morton-Tynemouth contributed to the Teesdale Union, during the year ended March, 1854, for out-relief and lunatics, £13 12s.; for irremovable poor, salaries, and other common charges, £9 11s. 11d.; for constable and costs before magistrates, &c., 8s.; and for journeys, salaries of assistant overseers, incidental expenses, &c., 6s.; being a total expenditure of £23 17s. 11d., or £1 19s. 11d. less than that of the preceding year. The cost of registration was 1s. 10d.; and the county-rate paid by the overseers £8 10s. 7d.

Morton, which derives its addition from having once belonged to the priors of Tynemouth, was one of the villis given up by Aldhune to the Earls of Northumberland, but which reverted to the see of Durham; for Bishop Kellaw granted to Thomas de Graystones five messuages, 45 acres of arable, and 1 of meadow in Morton nigh Kyllerby, to hold by the thirtieth part of a knight's fee. The estate was held by the families of Graystones, Morton, Alwent, and Birkbeck, and was purchased in the latter part of the 17th century, by the Cradocks. It is now the property of Christopher Cradock, Esq., of Hartforth Hall, Yorkshire.

BOLAM.

THE township of Bolam contains 989 acres, with 28 inhabited houses and 2 uninhabited; the whole valued for the county-rate in 1853 at £960 6s. $3\frac{1}{2}$ d. It is included in the North-west Division of the Ward, and in the Hamsterley sub-district of the Auckland Union. The population is given in the returns as follows:—95, 121, 121, 115, 129, and 125, of whom 61 were males and 64 females. The Cockfield Dyke, which passes through this township, is quarried for the roads.

The village of Bolam is situated on an eminence commanding an extensive prospect to the south and west, $4\frac{1}{2}$ miles north-north-east from Gainford, and 7 north-west from Darlington. It contains a public house.

At the east end of the village, a chapel of ease was erected about 20 years ago. The building is in the Gothic style of architecture, and is capable of accommodating nearly 200 persons. Service is performed on Sundays by the vicar or the curate of Gainford.

By Hatfield's Survey, the tenants of Bolam paid 5s. annually to the farmers of Midridge Grange for leave to water their cattle at Wydhop-pool. The De la Poles held a large estate in the township, by rents and services under the Percys. An inquisition taken on the death of Ralph, Earl of Westmoreland, in 1425, states that he held 40 acres of land in Bolam of the Earl of Warwick. In 1510, Richard Lord Lumley died seised of this estate. By letters patent, June 5, 1561, Robert Pursglove, the last prior of Guisborough, founded a school and hospital at that place, and endowed them with his lands, tenements, rents, and services in Bolam. This property, consisting of about 400 acres, still belongs to the institution, and gives to the six beadsmen

* SIR. SAMUEL GARTH, M.D.—This elegant poet and talented physician was the son of William Garth, of Bolam, though, in biographies, he is generally styled a native of Yorkshire. He received his academical education at Peter House, Cambridge, where it is said he resided until he took his degree of M.D. on July 7, 1692. At the period of his admission to the college, a violent dispute existed amongst the members, relative to the establishment of a dispensary for distributing medicine gratis to the poor of the city of London and its environs. The measure, which was founded on a unanimous vote of the college, July 28, 1687, was opposed by the apothecaries, who found means to raise a party in the college itself, and a violent dispute arose. Dr. Garth warmly espoused the cause of the liberal party; and the result was the production of his admirable satire, "The Dispensary." It was first published in 1694, and being widely read and admired, contributed materially to the fame of the author. In a few months, it passed through three editions, in consequence of which he afterwards made many additions and corrections; and, in 1706, he published a sixth edition, with several descriptions and episodes not before printed.

In 1703, William Garth, father of Sir Samuel, states in his will, that "Whereas he hath been at great charges in the education of his eldest son, Samuel Garth, at the University of Cambridge, and in his taking his degree there of Doctor of Physick; and whereas his son, William Garth, hath several times denied great and good preferments offered to him, chusing rather to live and remain with me, though to his loss of time, &c., he hath therefore, as part recompence, granted to William all his leasehold lands, &c., in Bolam, held under the hospital of Jesus in Guisbrough, and he now devises to him all his free lands in Bolam." To Samuel he gives £10, and a like sum to his third son Thomas, a major in the army. But though a good education and the sum just named were the sole patrimony of Dr. Garth, he soon attained the first rank in his profession. He was a zealous Whig; and his companionable talents, and proficiency in polite literature, acquired him patrons of great rank and influence. In 1697, he composed and printed his "Harveian Oration," which was much extolled for its Latinity. In this oration he ridiculed the multifarious classes of quacks with a just spirit and inimitable humour. Although a party man, he was always ready to benefit men of merit on every side, and hence was an early encourager of Pope. He was

of the hospital, in right of their life interest, the privilege of voting for members for the Southern Division of the county of Durham. The Garths,* Raynes, Trotters, Wranghams, Crawfurds, and South-erns held divers estates in Bolam. Besides the hospital, the principal proprietors are, the Duke of Cleveland, G. B. Wharton, Esq., Mr. Geo. Marley, and Mr. John Sowerby.

SUMMERHOUSE.

SUMMERHOUSE is a township in the South-east Division of Darlington Ward, and is included in the Aycliffe subdistrict of Darlington Union. It contains 809 acres, and was assessed for the county-rate in 1853 at £1,028 11s. 4d. The population, in 1801, was 158; in 1811, 156; in 1821, 189; in 1831, 192; in 1841, 165; and in 1851, 177, of whom 84 were males and 93 females.

also the principal means of procuring the last decent attentions to the neglected remains of Dryden, which rendered him highly and deservedly popular. In 1710, he addressed a copy of verses to Lord Godolphin on his dismissal, and displayed his attachment to the house of Hanover by an elegant Latin dedication of an intended version of Lucretius to the Elector, afterwards George I. On the accession of the latter, the honour of knighthood was conferred upon Dr. Garth in 1715; the ceremony being performed with the Duke of Marlborough's sword; and he was appointed physician in ordinary to the king, and physician-general to the army. He is said to have had a very extensive practice, in which he conducted himself with great moderation, as to his views of pecuniary reward, and with a strict regard to the honour and interests of the profession. He died in the height both of medical and literary reputation, January 18, 1718, and was buried in the church of Harrow-on-the-Hill.

The minor poems of Dr. Garth consist of "Claremont," a poem descriptive of the seat of the Duke of Newcastle; Verses to Lady Louisa Lenox; to the Duchess of Bolton; to the Earl of Darlington, with Ovid's Art of Love; Addresses to Lord Godolphin and the Duke of Marlborough; Verses inscribed on the drinking-glasses of the Kiteat Club (instituted in 1703, with the design of supporting a warm zeal for the Protestant succession of the house of Hanover, and which consisted of about 30 noblemen and gentlemen, including "all the talent" of the Whig party); Lines on Queen Anne's Statue; on the Conspiracy, 1716; and Prologues and Translations from Ovid. He has left no work directly professional; his mind being too much directed to polite literature and social intercourse to allow of his paying any great degree of attention to science. Though he was deemed a latitudinarian as to religion, yet Pope says, in a letter, "His death was heroical, and yet unaffected enough to have made a saint or a philosopher famous; and if ever there was a good Christian without knowing himself to be so, it was Dr. Garth." His wife was Martha, daughter of Sir Henry Beaufoy, of Enescote, Warwickshire, by the Hon. Charlotte Lane, eldest daughter of George Viscount Lanesborough. Martha Beaufoy, sole daughter and heiress of Sir Samuel, married William Boyle, captain in the Duke of Schomberg's horse, brother to Henry Earl of Shannon, and fourth son of the Hon. Henry Boyle, youngest son of Roger, first Earl of Orrery. Their descendants are the Bainbrigges, of Hugglescote, Leicestershire.

There were, at the latter date, 42 inhabited houses and 1 uninhabited.

The hamlet of Summerhouse is situated on the turnpike road between Staindrop and Darlington, 6 miles west-north-west from the latter place, and 2 north-east from Gainford. A subscription school was erected in 1821, and is capable of holding 70 children. The late Duke of Cleveland, the Rev. J. Blackburn, vicar of Gainford, Messrs. George Dent, T. Wilkinson, and others, were the principal contributors. The school at present is but indifferently attended. A Methodist chapel was opened in 1823, but is now discontinued. The village contains a few tradesmen and mechanics, and one public house. Obscure traces of extensive foundations remain in a field on the south side of the village, which are locally called "The Castle Garth."*

At the feast of St. Cuthbert, in September, 1207, William, son of Robert Beneit, gave to the monastery of Durham certain lands in Summerhouse; and by another charter, he added six oxgangs which William Mastel held. These lands were afterwards granted by the prior and monks to the Nevilles. After the attainder, the estate was sold, and became the property of the Sandfords of Hewgill Castle, Westmoreland, and subsequently passed by marriage to Philip and Filmer Honeywood, of Markshall, Essex, from whom it was purchased, in 1786, by John Bailey, Esq., of Chillingham, Northumberland. William Bailey, Esq., of Haslerigg, sold it to the Duke of Cleveland; and with the exception of about 24 acres belonging to the representatives of the late John Wilkinson, the whole township belongs to his grace.

PIERCEBRIDGE.

THIS township forms the south-eastern portion of the parish of Gainford, and is, like Summerhouse, included in the south-east Division of Darlington Ward, but is a member of the Darlington subdistrict of the union. Its area is 920 acres, divided into five farmsteads; the property was valued for the county-rate in 1853 at £1,184 6s. 6d. The number of inhabitants, in 1801, was 193; in 1811, 231; in 1821, 236; in 1831, 278; in 1841, in consequence of the discontinuance of a

boarding school, it had declined to 224; and in 1851, it was 235, of whom 119 were males and 116 females. There were, at the latter date, 52 inhabited houses and 2 uninhabited.

The village is beautifully situated on the banks of the Tees, 5½ miles west-by-north from Darlington. Tradition has derived the name from *Priestbridge*; the bridge over the Tees, previously of wood, being said to have been built of stone by two priests of the neighbourhood, "or from the priests appointed to serve the devotion of travellers, as well as in the neighbourhood of a chapel, the ruins of which remain hard by the bridge." But the name in early records, is generally *Persebridge*, as in Leland, "*Persebridge*, sumtime of five arches, but a late made new of three arches. There is a prati chapel of our Lady, hard by *Persebridge*, of the foundation of John Balliol, king of Scottes."

Piercebridge stands on the site of a considerable Roman station, to the east of which, at about 200 yards distance, the great Roman road called Watling Street entered the county of Durham from Catterick (the Roman *Cataractonium*),† and passed on, in the direction of the present road to Legs Cross, towards Binchester (see vol. i., p. 104). Maclauchlan agrees with Horsley and Hodgson, in placing *Magis* at Piercebridge, the station at which contains about 8¾ acres within the walls. A part of the western side of the vallum remained till the year 1822, when it was demolished by the occupant, James O'Callaghan, Esq., M.P. for Winchelsea, and the stones, (many of which were of very large size, and of an oblong shape) used in the erection of farm buildings, with the exception of a few that retained fragments of inscriptions; but the north and west sides of the mound are still visible, as also the south-western angle. Like most other Roman stations, this has been erected on a lingula, or neck of land formed by the junction of two streams; the small stream which here flows from the north-west into the Tees dividing the township of Piercebridge from that of Carlbury,‡ in the parish of Coniscliffe. "This brook," according to Dr. Hunter's MSS., "supplied the ditch of the fortress with water, and also the garrison by an aqueduct, firmly arched at the top, so as to bear the public road, till 1730, when some coal

* Surtees conjectures the name of the township to have been originally applied to a summer residence of the early lords of Raby.

† To the north of Catterick, the great Roman road, which may be traced through the county in a continuous line from Doncaster to Catterick, separates into two branches, one of which, passing by Greta Bridge and Bowes, proceeded to Carlisle (*Lugwallium*); and the other, crossing the Tees at Piercebridge, was continued to Newcastle

(*Pons Ælii*). These two lines of communication connected the south of England with both the eastern and western extremity of the Roman Wall.

‡ "The occurrence of this name so near to the Roman camp," says Mr. Maclauchlan, "renders it possible that the Britons called the place *Caer*, and that the Saxons added their own word *Bury*—a Camp."

draughts penetrated through it, discovering the cavity above a yard wide and a yard and a quarter deep."

This ancient work was evidently intended to protect the ford by which the road from the south passed towards Scotland. The road itself does not appear to have passed through the station; but Mr. M. A. Denham, of Piercebridge, who has paid considerable attention to the antiquities of the place, affirms that in dry weather the mark of a way may be seen across the field called the Tofts, to the Roman road. In descending the hill on the south side of the river, from the turnpike gate towards Piercebridge, at a spot where the modern road branches off to Cliffe Hall, a Roman monumental slab, with an inscription, was recently found, in lowering the bank to join the Roman way.

Mr. Maclauchlan supposes that the station at Piercebridge, with Howbury camp, that at Greta Bridge, and the commanding post at the fords of Barforth, called Old Richmond, formed a line of defence for this part of the Tees. The position at Howbury is well chosen, as it commands a view of the river as far as Winston Bridge on the one side, and above the ford at Wyclffe on the other; being also equidistant (3 miles) from the two last-named places.

A great number of coins, urns, and other antiquities, have been found in and around this station. A small brass statue of Mercury, of elegant workmanship, said to have been found here, forms the subject of an engraving in the *Archæologia*, xix., 289. An inscription on an altar, erected by Antonius Quintianus to the memory of Condatus, is given in Gough's *Camden*, &c. A massive thumb-ring of pure gold (weight 182 grains) was found in 1818, with some other Roman remains, at this place, and is now in the possession of the dowager Duchess of Cleveland. The hoop, wrought by the hammer, is joined by welding the extremities together: to this is attached an oval facet, the metal engraved in intaglio; the impress, though somewhat effaced, being two human heads, probably male and female, *respectant*, or gazing upon each other, the prototype of the numerous "love seals" of a later period.* A beautiful gold coin was found April 6, 1853, bearing the following inscription:—(Obv.) "IMPTRAIANOAVGGERDACPMTRP." (Rev.) "COSVPPSPQROPTIMOPRINC." It is now in the possession of Mr. M. A. Denham.

* This is not the first Roman example of the kind found in England. The same device appears on a ring, apparently of the Roman period, found on Stanmore Common in 1781, and mentioned in Gough's *Camden*, vol. i., p. cxx. Where the idea occurs on medieval seals, the heads are usually accompanied by the motto,

The number of interesting coins found at Piercebridge, and the thoroughly distinct character of its Roman remains, have of late attracted much of the attention of antiquaries; and his grace the Duke of Northumberland, with other distinguished persons, frequently visit the station.

Several rude stone coffins, projecting from the bank of the river Tees, have been exposed as the earth was washed away by the river; and one, projecting from the face of a quarry at Carlbury, on the west side of the road, may be seen in passing by.

A number of smoking pipes, made of clay, and locally known by the name of fairy pipes, are often found, many of which are in the possession of Mr. Denham.

The chapel mentioned by Leland, of which some traces still remain, was dedicated to the Virgin, and is first mentioned in 1315-16, on the inquisition of the property of Guy Earl of Warwick. In the inquisition taken on the forfeiture of Thomas Earl of Warwick, 1397-8 (see page 9), mention is made of the advowson of the "church" in Piercebridge; and in another inquisition, it is described as the "free chapel of Percebridge." A survey was made, 2nd Edw. VI., describing "The chauntry of Priestbrig, granted for terme of liffe to the incumbent, Peter Carter, of the age of L. yerres, incumbent. The yerelie valewe c. iiij. s. iiij. d. Stoke, none. Plate, one challes of silver, pois v. ounces. Goods and ornaments, not praysed. Lead, none. Bells, one, pois by estimation xvi lib." The commissioners, on this occasion, were Sir Thomas Hylton and Sir Robert Brandling, Knts., and Robert Mennell and Henry Whilrcson, Esqrs. In Mr. Allan's *Collections*, quoted by Hutchinson, it is stated that "In St. Mary's chapel was a chauntry, which had £2 2s. 4d. salary annexed to it: for the which, every farm in this town, Langton, and Headlam, presented a petition to Trinity College, Cambridge, as being of old erected, though now ruined, to excuse them from going to their parish church at Gainford. The whole sum annually collected, and called chauntry money, amounts to £8 13s. 4d. A load of wheat was first proposed by the inhabitants, then the sum of money above, paid in lieu, for the service of their chapel. This collection was, about 30 years ago, unpaid during the term of three years. Twenty-two years ago, a stranger from York,

"Love me, and I thee;" to which also a counterpart is found amongst relics of a more remote age. Galeotti, in his curious illustrations of the "*Gemmæ Antiquæ Litteratæ*," in the collection of Ficoroni, gives an intaglio engraved with the words, "AMO TE AMA ME."

demanded the money upon the inhabitants, when, particularly George Hobson, desiring to know by what authority he asked it, he refused to show any, but threatened them with an exchequer writ; they, frightened at this, were forced to comply."

There was also another chapel, dedicated to St. Helen; but its origin and history are altogether unknown.

Piercebridge was one of the places resigned to the Earls of Northumberland. As it formed a portion of the possessions of the Nevilles, 13 of its inhabitants joined the insurrection of the last earl, two of whom suffered death.

On the 1st of September, 1642, "the Earl of Newcastle," says Rushworth, "being upon his march from Newcastle upon Tyne to York, with a considerable army, when he was advanced as far as Piercebrig (being a pass over the river Tees, which parts Yorkshire and the county palatine of Durham) a party of the Lord Fairfax's horse, commanded at that time by Captain Hotham, disputed the pass with the said earl several hours, having but two small pieces of ordnance with them. But the Earl of Newcastle did over-power the Lord Fairfax's forces with great cannon; whereupon Capt. Hotham, and those forces with him, retreated towards the Lord Fairfax's head-quarters at Tadcaster. In the said dispute Col. Thomas Howard [of Tursdale, youngest son of Lord William Howard], with several other gentlemen, under the command of the Earl of Newcastle, were slain. So the Earl of Newcastle marched towards York, and had his commission enlarged to command in chief in Yorkshire, and other southern

counties, as well as in the rest of the northern counties." In this engagement, the royalists erected a battery on Carlbury hills; and the Parliamentarians placed theirs on the opposite banks. Cannon balls, human bones, and entire skeletons have occasionally been found in the banks overhanging the road near the scene of action.

With the exception of about 10 acres, and a few of the houses in the village, the property of Mr. Denham, Mrs. Stoddart, and Miss Winston, the whole of the township belongs to the Duke of Cleveland. *Piercebridge Hall*, now a farm-house, belongs to his grace. *Bridge or Chantry House* is the property of Mr. M. A. Denham. The skull of the ox roasted on Lord Barnard coming of age in 1809, with its horns gilded, is preserved in a butcher's shop; as is also that of the ox roasted on his father's attaining his majority.

The village includes an open green; and the road passes through it to the bridge, below which is an ancient corn mill. The houses are mostly cottages. There are two schools, and a post-office receiving house, but no public houses. The bridge, which here crosses the Tees to Cliffe, is of three arches. Previous to the great flood of November, 1771, the timber, piles, and foundations of an ancient bridge were visible at a short distance further down the river; but they were torn up and washed away on that memorable occasion.

A sum of money, producing 10s. yearly, was given by a Mr. Hobson, at some unknown date, to the poor of the township of Piercebridge. Nothing has been paid for the last 50 or 60 years, nor is it known where to apply for it.

THE AREA, NUMBER OF HOUSES, POPULATION, &c., IN EACH PARISH AND CHAPELRY OF DARLINGTON WARD.

THE particulars relative to the extent and population of each township in the Ward have been given under their respective heads. The following table shews the number of acres contained in each parish and chapelry district; the number of houses inhabited, uninhabited, and building; and the population at the two last periods of enumeration:—

In 1831, the population of the South-east Division of Darlington Ward was 16,837; of the North-west Division, 24,118; and of the South-west Division 12,912; the entire population of the ward being 53,867. In 1841, as shown above, the number of inhabitants was 63,176, being an increase, during the 10 years, of about 17·28 per cent. In 1851, it was 73,050, which was an advance of 15·43 per cent. above the number at the preceding census, and of 35·63 per cent. above that of 1831. In 1841, the total number of houses was 11,815 inhabited, 808 uninhabited, and 66 building; in 1851, there were 13,671 inhabited, 723 uninhabited, and 84 building. The total area of the Ward is 256,968 acres; and the annual value of the property assessed to the county-rate in 1853, was £286,334 19s. 2½d.

In Darlington district (which includes certain parishes in the North Riding of Yorkshire), there were, in 1851, 210 persons to a square mile. One person was above 100 years of age. Of 5,305 males above 20 years of age, 1,514 were bachelors, 3,422 married, and 369 widowers; of 6,385 females, 2,041 were spinsters, 3,468 married, and 876 widows. Of 9,928 persons below 20 years of age, 7,324 were born in the county of Durham; 1,956 in Yorkshire, 48 in Scotland, 283 in Ireland, 2 in foreign places, and the remainder in other parts of the British dominions; and of 11,690 above 20, 6,244 were born in the county, 3,903 in Yorkshire, 163 in Scotland, 301 in Ireland, and 14 in foreign places. There were 30 blind, 11 deaf and dumb, and 63 in the workhouse.

The population of Auckland district shewed there were 490 persons to a square mile. Of persons above 20 years of age, 2,654 males were bachelors, 5,038 married, and 521 widowers, or 8,213 in all; and 1,313 females were spinsters, 4,956 married, and 793 widows, being a total of 7,062. Of 14,808 persons under twenty years of age, 12,402 were born in the county, 953 in

Yorkshire, 76 in Scotland, 341 in Ireland, and 4 in foreign places; and of 15,275 above that age, 9,061 were born in the county, 2,592 in Yorkshire, 234 in Scotland, 881 in Ireland, and 14 in foreign places. There were 3 persons blind, 12 deaf and dumb, and 57 in the workhouse.

The Teesdale district comprises a portion of Yorkshire, and contained 73 persons to a square mile. There was one person above 100 years of age. Of 5,069 males above 20, 1,704 were bachelors, 2,962 married, and 403 widowers; and of 5,490 females, 1,700 were spinsters, 2,998 married, and 792 widows. There were born in the county 6,169 persons under 20 years of age, 2,654 in Yorkshire, 32 in Scotland, 62 in Ireland, and 2 in foreign places; the total number in the district being 9,254; and above that age, of 10,559, 5,641 were born in the county, 3,532 in Yorkshire, 113 in Scotland, 166 in Ireland, and 8 in foreign places. There were 19 persons blind, 9 deaf and dumb, and 53 in the workhouse.

There were 103 persons to a square mile in Weardale district. Of 3,854 males above the age of 20, 1,429 were bachelors, 2,120 married, and 305 widowers; and of 3,439 females, 812 were spinsters, 2,125 married, and 502 widows. Of 7,274 persons below 20, 6,739 were born in the county, 84 in Yorkshire, 13 in Scotland, 52 in Ireland, and 2 in foreign places; and of 7,293 above that age, 5,549 were born in the county, 304 in Yorkshire, 76 in Scotland, 240 in Ireland, and 3 in foreign places. There were 17 blind, 6 deaf and dumb, and 32 in the workhouse.

The amount of immigration, as compared with the number of inhabitants born in the respective districts, will be estimated from the above statements: to what extent the native population has removed to other places, cannot, however, be shewn, nor is it, perhaps, relevant to the subject.

OCCUPATIONS.

IN the classified population tables published in 1854, and founded on the census taken in 1851, a statement is given of the number of persons engaged in various professions, trades, and offices in each district and large town. The following particulars relative to Darlington Ward are selected:—

In Darlington district there were 17 males and 4 females in the post-offices, 6 in the inland revenue, 13 police, 20 clergymen, 6 Protestant ministers, 4 priests and other religious teachers, 39 schoolmasters, 62 schoolmistresses, 12 governesses, 12 other female teachers, 60 male and 31 female innkeepers, 4 male and 45 female lodging-house keepers, 40 male and 429 general domestic servants, 6 coachmen, 16 grooms, 1 gardener, 20 male and 28 female inn servants, 86 housekeepers, 48 female cooks, 47 housemaids, 31 nurses, 2 mid-wives, 58 engine and machine makers, 56 railway engine drivers and stokers, 95 other men engaged in railway traffic, 2 female railway attendants, 116 railway labourers, 7 male and 34 female house proprietors, 47 male and 36 female land proprietors, 368 farmers, 24 female do., 1 grazier, 12 farm bailiffs, 103 farmers' sons, &c., 273 do. wives, 136 do. daughters, &c., 752 male and 302 female out-door agricultural labourers, 141 male and 99 female in-door farm servants, 9 other males connected with agriculture, 6 female hawkers, 124 washer-women, &c., 254 males and 100 females engaged in woollen cloth manufactures, 28 male and 85 female worsted manufacturers, 5 maltsters, 13 brewers, 9 male and 5 female licensed victuallers and beer-shop keepers, 10 victuallers' wives, &c., 10 wine and spirit merchants, 3 coal-miners, 6 coal-merchants and dealers, 26 iron-manufacturers, 8 independent gentlemen, 39 do. ladies, 38 male and 201 female annuitants, 10 male and 110 female paupers of no stated occupation, and 3 male and 1 female lunatics do.

In Auckland district there were 4 male and 3 female post-office attendants, 3 inland revenue officers, 15 police, 17 clergymen, 4 Protestant ministers, 9 priests and other religious teachers, 43 schoolmasters, 40 schoolmistresses, 12 governesses, 45 male and 18 female innkeepers, 6 male and 4 female lodging-house keepers, 18 male and 242 female general domestic servants, 3 coachmen, 9 grooms, 5 gardeners, 7 male and 25 female inn servants, 64 housekeepers, 13 cooks, 13 housemaids, 11 nurses, 76 engine and machine makers, 68 railway engine drivers and stokers, 33 other persons engaged in railway traffic, 79 railway

labourers, 10 male and 34 female house proprietors, 33 male and 10 female land proprietors, 382 farmers, 35 female do., 10 farm bailiffs, 106 farmers' sons, &c., 267 do. wives, 106 do. daughters, &c., 740 male and 58 female out-door agricultural labourers, 111 male and 89 female in-door farm servants, 7 other males engaged in agriculture, 10 female hawkers, 35 washer-women, &c., 4 maltsters, 21 brewers, 15 male and 12 female licensed victuallers and beer-shop keepers, 14 victuallers' wives, &c., 4 male and 1 female wine and spirit merchants, 13 woollen cloth manufacturers, 3,179 coal-miners, 3 lead-miners, 13 iron-miners, 238 iron-manufacturers, 4 independent gentlemen, 3 do. ladies, 15 male and 77 female annuitants, 33 male and 162 female paupers of no stated occupation, and 2 male lunatics do.

In Teesdale district, there were 3 male and 3 female post-office attendants, 3 inland revenue officers, 9 police, 20 clergymen, 7 Protestant ministers, 4 priests and other religious teachers, 30 schoolmasters, 33 schoolmistresses, 9 governesses, 51 male and 18 female innkeepers, 2 male and 14 female lodging-house keepers, 47 male and 267 female general domestic servants, 5 coachmen, 12 grooms, 8 gardeners, 10 male and 15 female inn-servants, 45 housekeepers, 33 cooks, 34 housemaids, 13 nurses, 2 pawnbrokers (the only establishments of this description in the whole Ward), 10 engine and machine makers, 8 male and 16 female house proprietors, 52 male and 40 female land proprietors, 613 farmers, 85 female do., 10 farm bailiffs, 480 farmers' wives, 202 do. sons, &c., 177 do. daughters, &c., 639 male and 106 female out-door agricultural labourers, 179 male and 137 female in-door farm servants, 9 other males connected with agriculture, 8 female hawkers, 67 washer-women, &c., 2 maltsters, 9 brewers, 8 male and 3 female licensed victuallers and beer-shop keepers, 7 victuallers' wives, &c., 8 wine and spirit merchants, 78 coal miners, 635 lead-miners, 85 lead-manufacturers, 7 independent gentlemen, 8 do. ladies, 44 male and 159 female annuitants, 9 male and 40 female paupers of no stated occupation, and 2 male lunatics do.

The Weardale district contained 5 male and 1 female post-office attendants, 1 inland revenue officer, 5 police, 11 clergymen, 6 Protestant ministers, 2 priests and other religious teachers, 28 schoolmasters, 16 schoolmistresses, 1 governess, 20 male and 7 female innkeepers, 1 male and 1 female lodging-house keepers, 15 male and 133 female general domestic servants, 1 groom, 3 gardeners, 3 male and 12 female inn-servants,

29 housekeepers, 8 cooks, 8 housemaids, 1 nurse, 6 engine and machine makers, 2 railway engine drivers and stokers, 7 other males engaged in railway traffic, 29 railway labourers, 5 male and 12 female house proprietors, 29 male and 8 female land proprietors, 227 farmers, 35 female do., 100 farmers' sons, &c., 168 do. wives, 56 do. daughters, &c., 157 male and 28 female out-door agricultural labourers, 49 male and 47 female in-door farm servants, 4 other males connected with agriculture, 4 female hawkers, 12 washer-women, &c., 2 maltsters, 5 brewers, 7 male and 2 female licensed victuallers and beer-shop keepers, 5 victuallers' wives, &c., 1 wine and spirit merchant, 268 coal-miners, 1,232 lead-miners, 87 lead-manufacturers, 175 iron-miners, 144 iron-manufacturers, 1 independent gentleman, 2 do. ladies, 9 male and 47 female annuitants, 10 male and 22 female paupers of no stated occupation, and 1 male lunatic.

There were, in each district, a proportionate number of grocers, drapers, millers, shopkeepers, smiths, joiners, builders, tailors, shoemakers, dress-makers, clerks, agents, &c., suitable to the requirements of the locality.

“CHARITABLE TRUSTS ACT.”—The provisions of this act have been noticed at page 70; and as a new act, amending that of 1853, is about to pass the legislature, the intended insertion, in this part of the work, of an epitome of the present act, is omitted.

STOCKTON WARD.

Stockton Ward comprises an open, pleasant, and healthy district, occupying the south-eastern angle of the county of Durham. An imaginary line running nearly north from the Tees at Middleton-one-Row, and the river Skerne, divide this Ward from the South-east Division of Darlington Ward on the west; the parish of Bishop-Middleham, in the recently formed Ward of Durham, abuts on the north-west corner of Stockton Ward, the boundary of which runs from thence east and north to the parish of Kelloe, in the South Division of Easington Ward, whence it passes, by an imaginary line in nearly an east-south-east direction, to the sea, a little to the north of Hartlepool. The German Ocean washes the eastern shore of the Ward; and it is divided from Yorkshire on the south-east and south by the river Tees. The Ward, from its south-eastern extremity at Middleton St. George to its north-eastern point at Hartlepool, is about 18 miles long; and from Stockton on the south-east, to the verge of Sedgefield parish on the north-west, it is about 10 miles broad; but this width diminishes nearer to the sea.

Stockton Ward is not, generally, so hilly as the other parts of the county; the acclivities being more gradual and extended. The soil is fertile; and watered, besides the Tees and the Skerne, by the Billingham, Embleton, and Greatham Becks. That part which adjoins the Skerne near Sedgefield, is low and marshy; whilst

near the Tees, at the south-western extremity of the Ward, the country resembles, in character, as well as situation, the rich pasture lands around Darlington. The Tees itself, having left far behind the rocks and precipices of its early course, and wheeled its devious way around the meadows of Blackwell, Hurworth, Sockburn, and Dinsdale, continues its windings, by Yarm and Stockton to the wide estuary by which it is disembogued into the sea; but, even below the latter town, its course is so tortuous as to have required artificial cuttings to facilitate the operations of commerce.*

The introduction of railway communication, which has brought the latent productions of the interior into active demand, has produced a corresponding revolution in this part of the county, by rendering its ports and shores available both for the transmission of that produce, and the reception of merchandize from abroad. The shores at the mouth of the Tees are now furnished with shipping places for the coal and iron of Durham and Yorkshire; and populous and bustling towns and villages occupy situations which were formerly marshy swamps. The long-neglected lagoon of Hartlepool has also, within the last twenty years, been improved and extended to a degree approaching the marvellous.

The market towns in Stockton Ward are Stockton, Hartlepool, and Sedgefield. The southern portion has also the advantage of proximity to the market town of

* From its winding eccentric curves, says Mr. Longstaffe, "it derives its name, the Celtic *Taoi*, signifying winding. We have more rivers than one of this name in her majesty's dominions; and the Thies, a large river, flows into the Danube. In 'the winding Tay,' we have the word in nearly its original form, and a pleonasm strikingly expressive of the propriety of its appropriation. Dyer fell into

the same venial error when he talks about 'the shady dales of winding Towy, Merlin's fabled haunt,' Towy being only a modification of Tay. Every one recollects the Tajo (pronounced Tayo) flowing past Lisbon; there is a Tava flowing into the Danube, and another river of the same name in Moravia; nay, there is even a Tay in China!"

STOCKTON WARD.

Yarm, in the North Riding of Yorkshire. Wynyard, the seat of the Marquis of Londonderry, Hardwick House, Sands House, Preston Hall, Norton Hall, Elton House, Fishburn Hall, and several other gentlemen's residences, adorn various localities. The Ward comprises two divisions, the South-west and the North-east; which respectively include the following parishes and chapelries:—

SOUTH-WEST DIVISION.

Stockton parish, with Holy Trinity chapelry.
Parish of Norton.

Parish of Elton.
Parish of Egglecliffe.
Parish of Middleton St. George.

Parish of Long-Newton.
Parish of Redmarshall.
Parish of Bishopton.

NORTH-EAST DIVISION.

Chapelry of Hartlepool.
Parish of Hart.
Parish of Stranton.
Chapelry of Seaton Carew.

Parish of Greatham.
Parish of Billingham.
Chapelry of Wolviston.
Parish of Elwick Hall.

Parish of Grindon.
Parish of Stainton-le-Street.
Parish of Sedgfield.

The parishes of Hurworth, Dinsdale, and the Durham part of Sockburn, which were formerly a part of the South-west Division of Stockton Ward, were, under the provisions of the act 9 Geo. IV., c 43, attached to the South-east Division of Darlington Ward; as were also the townships of Sadberge, Morton-Palms, and Coatham-Mundeville, in the parish of Haughton-le-Skerne. On the formation of Durham Ward, the parish of Bishop-Middleham, previously belonging to the North-east Division of Stockton Ward, was constituted a part of the new district. Stockton Deanery, however, is still co-extensive with its old boundary.

The parish of Craike or Craike Hall, in the wapen-

take of Bulmer, in the North Riding of Yorkshire, though 28 miles from any part of the county of Durham, was formerly a part of it,* and attached to the South-west Division of Stockton Ward and to the deanery of Darlington. By the act 2 and 3 Wm. IV., c. 64, s. 26, however, all such detached portions of counties were to be considered, for the purposes of elections, as parts of the counties by which they were surrounded; and by the act 7 and 8 Vict., c. 61, which received the royal assent August 6, 1844, every detached portion became, after the 20th October in that year, *for all purposes*, part of the county to which it had been attached by the previous act.

* Craike was given by Egfrid, king of Northumberland, in 685, to St. Cuthbert, on his being elevated to the see of Lindisfarne; and the later Bishops of Durham had a castle within the manor of Craike, with a seneschal, a chief forester and keeper, a park keeper, and a bailiff. The ruins of the castle, now fitted up as a farm-house, oc-

cupy the site of a Roman fortress. The living is a rectory, and the church is dedicated to St. Cuthbert. The parish is about 2 miles from Easingwold, and comprises an area of 2,779 acres, with a population, at the last census, of 608 persons. The order in council for its incorporation in the diocese of York is dated January 24, 1837.

SOUTH-WEST DIVISION.

PARISH OF STOCKTON.

STOCKTON was anciently a part of the parish of Norton, and contained a chapel of ease to its church; but as the town increased in trade and population, and the chapel fell into decay, an act of parliament was obtained, 12th Anne, 1711, to make Stockton, with East Hartburn and Preston, a distinct parish. Another act was passed, 1st Geo. I., 1713, to explain and amend the former. The parish of Stockton, thus formed, is bounded on the south and south-east by the river Tees; on the east and north by the parishes of Billingham and Norton; and on the west by Elton, Long-Newton, and Egglecliffe. It includes four constaberies, viz., 1, The Borough of Stockton; 2, the Copyhold Township of Stockton; 3, East Hartburn; and, 4, Preston-on-Tees.

STOCKTON.

STOCKTON, including the Borough and Copyhold Township, comprises an area, including the adjacent water of Tees, of 3,032 acres. Its population, in 1801, was 4,009; in 1811, 4,229; in 1821, 5,006; in 1831, in consequence of the formation of railways to the coal-field and the progress of trade in the port, it had increased to 7,763; in 1841, to 9,825; and, in 1851, to 10,172, of whom 4,766 were males and 5,406 females. The workhouse of the Stockton Union, situated in the township, contained 37 persons in 1841, and 36 in 1851, in the census of which year 96 persons on board sea-going vessels were included. It will be seen, from the above statements, that the population of the town has increased, during the present century, more than 150 per cent. The Rev. T. Rudd stated the number of families, "poor and rich," in 1666, at 166, which, estimating four to a family, gives a population of 544, so that since that period the number of inhabitants has increased twentyfold. In 1841, there were 1,859 inhabited houses, 55 uninhabited, and 28 building; and in 1851, 1,975 inhabited, 128 uninhabited, and 3 building. The value of property assessed for the county-rate, in 1853, was £30,604.

In 1851, the Stockton and Darlington railway, which has an extent of 2 miles and an acreage of 21A. 1R. 32P. in the township, contributed £129 13s. 6d. to the local

rates, and, in 1852, £120 8s. 3d. The Clarence railway, extending 1M. 2F. and covering 14A. 1R. 24P., contributed (including stations, coal depots, &c.) £50 5s. 8d. in 1851, and £46 13s. 10d. in 1852. The gross amounts collected in the Borough and town of Stockton, during these two years, were, £3,082 1s. 1d., and £2,097 19s. 10½d.

HISTORY.

ACCORDING to Cade, "Stockton derives its name from the stocks or stumps of trees with which the site was formerly overspread. It may be presumed the country from Egglecliffe towards Norton was a forest of oaks (similar to that where Oakham is situated) in the time of the Britons. The Roman station was at Thornalby, on the opposite side of the Tees; and no doubt the conquerors of the old world, at an early period, denuded a district from whence they were subject to frequent sallies and dangerous encounters." This derivation, so characteristic of the antiquary who propounded it, has been succeeded by another, perhaps equally fanciful:—"The name of Stockton must have been given by Teutonic invaders, or not till after the language became Teutonic. It is not unreasonable to suppose that Stockton was originally a Danish post—a depot of plunder for Danish freebooters; or it might have been the medium of a more peaceful intercourse with the

Baltic and this northern district of England—the word *Stock* signifying *a fund or depository of goods,*” &c.

In the account given by Simeon of Durham of the ravages of Scula and Onlafbal, which extended to Billingham, Stockton is not mentioned, and was therefore probably not then in existence; as, from the proximity of the two places, the latter could scarcely have escaped the fury of the Danish warriors. But though early history is thus silent relative to this town, its antiquity may be inferred from its giving name to one of the wards of the county.* It has been conjectured that the castle and manor of Stockton belonged, about the time of the Conquest, to some of the Norman barons, by whom they were given to the see of Durham; as, although a member of the wapentake of Sadberge, this place was part of the possessions of the see before the purchase of that earldom. The town, like many others similarly situated, probably owed its origin to the protection afforded by the fortification, which, in its turn, derived its conveniences and luxuries from the markets held near its walls. The earliest authentic account of the bishop's manor is contained in Boldon Book, to the following effect:—

There were eleven and a half tenures in villenage; each tenure consisting of two oxgangs, the rents and services the same as Boldon, except cornage. Six farmers held nine oxgangs; their rents and services like Norton. Adam Fitz-Walter held a carucate and an oxgang under one mark rent. William de Tumba held three oxgangs for half a mark, and one oxgang by permission of the bishop, and was quit of all services so long as he remained in the bishop's service; but on quitting it, he was to work as Walter did for his half carucate. Robert held the old hall toft near his dwelling for 16d. rent. Elwin and Robert, cottagers, paid 12d. for two tofts; Goderic, the cottager, 6d.; and Suane, the smith, 4d. for a toft. The punder held six acres, and had the thraves of Stockton and Harteburn, rendering fourscore hens and 500 eggs. The passage of the Tees paid 20d. The whole vill provided one milch cow. One oxgang, which the bishop held across the Tees opposite the hall, paid 4s.

In the time of Richard I., “Robert de Stoketon sailed

* The *ward* is a subdivision corresponding to *hundred* in the south of England. The origin of the latter is explained by stating that England was divided into *hides*, about 294,950 in number. The hide was the measure of the *alod*—the *ethel*, or inherited individual possession; it was the lot or share of the first settler, and kept a plough at work, being supposed to suffice for the support of one *hivise* or household. For this purpose, it was considered that 100 or 120 acres, the area of a hide, was then necessary. Ten such free families con-

stituted a *tything*; ten or twelve *tythings*, a *hundred*; and an indifferent number of hundreds, a *shire*. This arrangement, however, was never carried out; in the course of the thousand years which have since elapsed, the face of the county has undergone great changes; and the distribution of the population, which from less than four millions has increased to eighteen millions, is no longer the same. Hence, the necessity has arisen for the modern division of counties and wards into districts and sub-districts.

the Bishop of Durham's (Pudsey) great ship to London;” and it is probable the same munificent prelate might occasionally honour Stockton Hall or Castle with his residence. Tradition states that Bishop Pictavia was visited at Stockton by King John, who, a few years afterwards, dated his charter of privileges to the burgesses of Newcastle from this place, February, 5, 1214. Bishop Poor erected a chapel at Stockton, to St. Thomas the Martyr. When Bishop Farnham abdicated the see, he reserved for himself, by the Pope's license, the manors of Stockton, Easington, and Howden, and retiring to the first-named place, “betoke himself to contemplacon.” He gave four oxgangs, and the toft and croft which belonged to Matildis de Cumba, to the chapel of St. Thomas, and died at Stockton in 1257.

Bishop Stichill, in the first year of his episcopacy, “granted to his beloved and faithful Gamellus de Jarve (Jarrow) two oxgangs of land in the vill de Stoketon, which Elyas once held, and one acre and one rood of meadow at Halneshalnes in the said vill, and also two oxgangs in the said vill which Adam Castlelok once held, which four oxgangs Henry de Tuding, clerke, held for his life at his pleasure, to be holden by the said Gamellus and his heirs (not being Jews, but of the true religion) in perpetual fee, rendering and paying for the bishop's life half a mark of silver, and after his decease 20 shillings per each year; and that the said Gamellus shall grind his grain which shall grow on the said land at the bishop's mill de Stoketon.”

At what time Stockton was incorporated as a borough does not appear; but it is supposed to have received this privilege from King John in 1201, when he granted the charter of incorporation to Hartlepool. In 1310, Bishop Beck granted to Stockton a market upon every Wednesday for ever, and a fair every year upon the feast of the translation of St. Thomas the Martyr, Archbishop of Canterbury, to continue eight whole days. Stockton is mentioned as having been one of the places destroyed by the Scots in 1325; and a naval force was consequently stationed at the mouth of the Tees. The town, however, seems to have speedily revived, and enjoyed an increasing trade, as is evinced by the following instrument, dated 17th Edw. III.

stituted a *tything*; ten or twelve *tythings*, a *hundred*; and an indifferent number of hundreds, a *shire*. This arrangement, however, was never carried out; in the course of the thousand years which have since elapsed, the face of the county has undergone great changes; and the distribution of the population, which from less than four millions has increased to eighteen millions, is no longer the same. Hence, the necessity has arisen for the modern division of counties and wards into districts and sub-districts.

1344, from the mayor and bailiffs of Newcastle, to the mayor, bailiffs, and burgesses of Stockton, giving them instructions respecting the usages and customs to be observed:—

“Upon certain articles and customs of our town, the which, amongst you in your towne above remember'd, you claim to use and have, and which to you are not altogether well known, &c., the articles and customs in the manner which with us in our town aforesaid we use the same, and heretofore, time to the contrary whereof memorie doth not remain, have used, &c. That merchandize coming within the port of the said town of Newcastle, ought to be sold by the merchants of the said merchandize, and not by the host, being a burges, and the host ought to receive to himself now part above his fellows, and that the same merchandize ought not to be sold nor delivered before the rising of the sun, nor after the setting of the same. And that every burges according to his stait ought to have of such lik things and victuals for sustentation of his hous, although he was not at the buying th'of, whilst the ship was disburdening, &c. No burgage ought to buy merchandize upon the sea coming, before they come within the harbour of the town, &c. except by the special licence of the major. And that now boat ought to pass upon the sea against the ships with merchandize fraught or carried, except some sign be erected in the same ship, that the same ship is in danger; and that the merchandize may be sold before that ship, or within the ship, or elsewhere within the liberty of the town, after a plank be laid and fastened to the ship, viz. from the rising of the sun to the setting of the same. And that fish and herring may be sold by the host, being a burges, and that the burges being a host shall taik notting for sail of the merchandize of straingers, only for fish and for herring he may. And if more ships shall come at one flowing tyde of the sea, every ship, distinctly and plainly, ought to be sold to the burgesses *pro denariis du'os*, by the noon of the day, and at divers prices, according to the value of the things. And that the major of the town, and sounder part of the commonalty amongst them, order whatsoever for the utility of the town shall seem fit to be ordered, and that which amongst them shall be ordered, shall continue firm and establ. &c. Every burges may have a mill of his own upon his own land, hous-mill, water-mill, or wind-mill, or hand-mill; he may also have an oven or furnace, but not to bake bread to sell; and he may receive his neighbours' unto his oven, saving the right of our Sovereign Lord the King of furnace or bakehouse. Every burges may have his own measur in his own proper hous. The sonn of a burges, whilst he is at the finding or tabl of his father, shall have the same liberty which his father hath. If the servant of a baron or knight be made a burges, and shall remain within the burrough one year and one day, without calumpny of his lord or his bailiff, he shall be a burges for ever. Every burges may send his corn to be ground to whatever mill he will. Now merchant, not being a burges of the town aforesaid, may by in the town wall or hidgs, except it be of the burgesses of the town. Every burges of the town aforesaid in his testants, his lands and tenths which he hath purchased, he may give in legacie to whomsoever he will, according to the custom of the town aforesaid. Butchers which shall sell flesh dead of the murrin, or other flesh unwholesome or superseminate, shall be punished according to the statute, &c. Cooks which shall sell pies half bak'd, or flesh not well sodd, or roasted, or warmed, according to the same statute shall be punished. Hucksters shall be amerced at the first time, which shall by any thing before the fifth hour, as forestalling; for the second fault they shall forfeit the thing bought; for the third fault they shall suffer the judgment on the pillorie; the fourth time he shall be imprisoned and redecmd; and the fifth time shall (decest.) In testimonie whereof the seal of the majorality of our towne afore-

said to these presents to be fixed we have thought good. Given at Newcastle upon Tyne on Thursday next after the feast of St. Matthew the Apostle, in the year of the reign,” &c.

Bishop Kellaw rebuilt the Castle or Manor-house at Stockton in a very elegant style. October 18, 1376 (31st Hatfield), a commission was issued to inquire against “John de Carrow and other malefactors, who entered our Castle at Stockton *vi et armis*, and took away John, son and heir of Alice, daughter and heir of Thomas Seton, being under age, and ward of the bishop.”

Hatfield's Survey contains a very circumstantial account both of the Borough and manor. There were thirty-nine tenants within the Borough, and forty-six without it. The number of free tenants was seven. Richard Maunce and his partners paid for the fee-farm of the Borough, with the tolls, perquisites, fines for alienation, the bakehouse, the toll called *towerst*, and 22s. 11d. ob., Borough-rents as above in two parcels, in all 106s. 8d. There was a park, with an ancient orchard, and seven acres and a rood of inclosed meadow, which were leased for £8; and a pasture called Bishopholme and Turspit, 40s. The ferry and ferry-boat were also leased for 53s. 4d. Thomas Fowler, and Emma, that was wife to William Fitz-Thomas, held messuages by rents and services. The bond-tenants, besides their several rents and services, jointly held Punderland, six acres, 5s.; and paid at Martinmas, in lieu of one milch cow, 6s. Every bond rendered two hens at Christmas, and ten eggs at Easter, in all 20 hens and 200 eggs. Of the selfodes and servants of the bonds, as in Norton. There had been a smithy in the lord's waste which used to pay 4d., then waste and out of lease. The tenants jointly held the common bakehouse for rent for castlemen at the four terms, 12d. Eight persons are mentioned as holding exchequer-lands. The chantry-lands were four oxgangs, with a messuage, once of Robert Combe, which used to pay 6s. 8d., now nothing, because they were in mortmain for a certain chantry, occupied by a certain chaplain, then continually celebrating; an old toft, moreover, once of Robert de Combe, the site of his hall-house, used to pay 16d., also nothing, being at the tenure of the same chaplain. A plot, once of William Fitz-Thomas, exchequer-land, used to pay 2d., now in the lord's hands, since the death of Emma, wife of William. Besides the park and orchard above named, there were seven score acres of demesne meadow, lying in divers parcels, worth 3s. per acre, in all £21. Other distinct portions occur, let at various rents. The punder held, in right of his office,

two parcels of meadow called Mirershevid and Wibbysgat, and the Parkside towards the south, one acre and a half, and Beligate (Bailey-gate), and Jarnirgate (Janiter-gate), and the road which leads to Preston. Divers pasture grounds were let for £6 13s. 4d.; and the woods in the park for 16s. 8d.

Bishop Booth had a "ship" built at Stockton. In his register, 1470, the charges connected with her building are thus stated:—Felling timber in Gatished woods, 12s. Carrying of the wood to the Tyne, two days at 12d., 2s. Two barrels of pitch, 9s. "Flekes," 6d. Seven stone of "sye," 21d. 50 "bords," called "waynscoting," 20s. 10d. 32 st. of iron, at 6½d., 17s. 4d. Working the same into nails, &c., at 3½d., 9s. 4d. 84 nails, called "great spikyng," (ijd.), 100 nails (7d.) called "dowbyl spiking," 60 nails (5d.) called "thaknale," 60 nails (3½d.) called "hechnale," 300 (greater hundred) nails (2s. 6d.) called "takenale," and 300 (greater) nails of wood, 7s. 7½d. For sawing 1¼ rood of timber for the ship, at 3s. 4d., 4s. 2d. Carpenters for the new ship, 36 days, at 7d., 21s. Other carpenters, at 6d. Two new "orez" for navigating the ship across the water and back again, 2s. Sum, £6 5s. 10½d.

The residence of later prelates at Stockton was merely occasional, though the Castle received some repairs from Bishop Barnes in 1578. In 1569, nine of the inhabitants of the town were implicated in the Rising of the North, of whom two expiated the offence with their lives. At this period, Stockton appears, from the following passage in Camden, to have been, though a borough town, a place unworthy of notice. "Beyond Darlington," says he, "Tees hath no townes of any great account standing upon it, but gliding along the skirtes of green fields and by country villages, winding in and out as he passeth, at length dischargeth himself at a large mouth into the ocean, whence the base and botham of the triangle towards the sea beginneth."

In the summer of 1597, Bishop Matthew removed to Stockton to avoid the plague, which raged at Durham; and, in that year, part of Stockton Castle was accidentally burned. In 1602, Nicholas Fleatham, mayor, and the burgesses of Stockton, petitioned Bishop Matthew for a renewal of the charter of Anthony Beck, as, they alleged, the market and fair had for many years been discontinued. The desired charter was granted June 4, 44th Elizabeth. Shortly afterwards, however, the inhabitants disputed with the bishop the right of receiving duties from ships coming into the port for anchorage and plankage. A decree of the bishop's court of chancery,

1620, decided the dispute in favour of the prelate, proving that those duties were paid in the time of Henry VI., and that there was a staith or quay in the outer court of the bishop's Castle at Stockton, at which ships coming into the port arrived, and that the said staith or quay had decayed within two or three years last past.

It has been supposed that the people of Stockton were endeavouring to procure some chartered privileges about the time of Charles the I.'s accession. What these were does not appear; but the jealousy of the citizens of Durham was excited; and, at a meeting of the "Drapers and Taylors' Company" of that city, held February 1, 1677, 58 being present, it was declared that the granting of such privileges would be "to the prejudice, damage, and ruin of this city and corporation." There is no record of these circumstances in the possession of the corporation of Stockton.

Rushworth says, "On August the 29th (1640), Dr. Morton, the Bishop of Durham, a learned and moderate bishop, had an account of the defeat at Newburne, and that the king's army were retreating into Yorkshire, whereupon the said bishop went to his Castle of Stockton, in the bishoprick of Durham, standing on the edge of Yorkshire, but he quickly removed thence into Yorkshire." The Castle, however, continued in the hands of the royalists, as, according to the authority just quoted, the king contemplated increasing its garrison, "in regard the Scots had brought in more men to Newcastle, and placed more at Durham, than were at the beginning of the treaty. However, to avoid all suspicion and jealousie, his majesty was pleased to wave those intentions." In the treaty of Ripon, executed October 26, 1640, the eighth article stipulates "that the river of Tees shall be the bounds of both armies, excepting always the town and castle of Stockton, and the village of Eggscliffe; and the counties of Northumberland, and the bishoprick of Durham, be the limits within which the Scottish army is to reside."

On April 4, 1642, an order of the House of Commons was issued for paying "unto Sir Henry Anderson, Knight, and to the mayor of Stockton for the time being, the sum of £7 2s. 8d., to be distributed to the several inhabitants of Stockton, in discharge of part of the billet-money due unto the several inhabitants for the billeting his majesty's army."

In August, 1644, Stockton was taken by the Earl of Calender, and garrisoned by the Scots, who continued to hold the Castle until after they had, in 1646, received the price for which they sold the king to the parliament. On February 26, 1646-7, the House of Commons

resolved, "that Stockton Castle be made untenable, and the garrison disgarrisoned;" and, on the 13th July following, "that the house doth concur with the Lords, that the works about Stockton Castle made sithence these troubles, be slighted and dismantled, and the garrison disgarrisoned." On March 24, 1647-8, Stockton manor was sold to William Underwood and James Nelthorpe for £6,165 10s. 2½d.; but the Castle was not totally destroyed till four years afterwards.* The state of the manor at that period is described in the following document:—

"An exact survey of the manor of Stockton, and of the townepps thereunto belonging, viz. Carleton, Norton and Stockton, and Hartburne, made and taken by Edward Colston and George Daile, Gentlemen, 1647. But the Court of Survey was begun by Thomas Saunders, Samuel Leigh, Esquire, and George Daile, Gentleman, by virtue of a commission to them and us directed 18th of January, 1646, made from the honourable the trustees in the said commission named and authorised, with others, by 2 several ordinances of the High Court of Parliament, for the disposal of archbishops and bishops lands, throughout the whole kingdom of England and dominion of Wales. The jury enquire into severall articles, and present with the said commissioners as followeth, (viz.)

"That the B'pp's Castle, situate at the South end of the Towne of Stockton by the river Tease, is ruinous, and in great decay; that the River is Navigable, & within 10 miles of the Mayne Sea.—That the towne of Stockton is an antient Burrough & Market towne by antient Charters, but the Market unserv'd of late, it standing very dirty in winter, formerly a fair for 8 days.

"That the Country is a Champion Country, very fruitful, though a stiff clay.

"That the Castle hath had a great moate abt it, but the same is now for want of cleansing filled up in part, & within that moate hath heretofore been orchards and gardens, but all destroyed; there hath likewise been a Parke, but the same hath been disparked.

"That there belongeth to the said Castle good demesnes worth per ann. as it is now lett, £218 1s. 1d. viz. a meadow or parke lying under the Castle Wall, containing 26 acres, now lett for £19 0s. 4d.—The Thornes, with the Intack & horse close, containing about thirty acres, & the other ground abt 20 acres, lett for £30 2s. 8d.—The Park heads 45 acres, Little meadow field 40 acres, lett for £41 9s. 9d.—The great Sum'er field 130 acres, and Winter field, lett for £82 18s. 7d.—Kelsoe Hill 40 acres, and Midnight Hole 40 acres, letten for £41 9s. 9d.—Smithy Hill & orchard, lying under the Castle Wall, is now lett for £00 10s. 0d.—All which amounts together to £218 1s. 1d.—And by the testimony of severall upon oath the same is worth £280 0s. 0d.—That there is no wood growing upon any part of it, or in that part of y^e Country; nor is there any Quarries, Mines, Parks, or Sheep Racks within the said Moate, except the Park above mentioned belonging to the B'pp.

* An imaginary view of the castle, previous to its demolition, is given in Brewster's History of Stockton. The history of the drawing from which this view was taken is thus given by Ritson:—"Old Mr. Burdon, of Norton, told me that Mr. Thompson, the Presbyterian minister here, had collected several very curious papers relating the castle, chapel, and borough of Stockton and Norton, and the county in general, which at his decease came to his daughter,

"That the B'pp has the royalties of the River Tease, as Whales, Sturgeons, Porpoises or the like, taken on that side the River next the County of Durham within his manor of Stockton, & all wracks of the sea, but know not what they are worth:—not £5 per ann.

"That there is one Water Corne Milne called Norton Milne, wch we are informed the Tent^s of the severall Townepps within the said mann'r (save only Carleton) are tyed to grind all their Corne at; & that there belongeth to the said Milne 6 acres of meadow, the hay of which belongeth to the Tent of y^e s^d Milne, but the herbage thereof after the hay taken off belongeth to the Inh'tants of the Townepp of Norton, which s^d. Milne is lett by lease unto Alice Armstrong for 3 Lives.—And the Copyholders within the s^d. severall Townepps by the Custome of the s^d. mann'r. are to repaire the s^d. Milne with Thatch & Wall, & to scour the Race & Dame, when need requireth; & to fetch such timber from time to time from Clarke wood near Osmotherley or elsewhere, within 12 miles distance from the said Milne, as also the Milstones for the use of the s^d. Milne from Raley-Green or Walker field, for which their service every draught is to have 4d. per mile, & their Men's Dinners paid by the tenant: other Milnes we know of none within the s^d mann. belonging to the B'pp.

"That the sev'rall Tent^s. of the afores^d. Townepps (viz.) Copyholders, are to do suit and service to the Lords Courts, & to carry his provision or household stuffe to Durham or B'pp Auckland from Stockton Castle, (viz.) at 1d. per Bushell for Corne, and 4d. per mile for every draught, & meat & drink for men and Cattle:—Wee dont know of any releif or heriott ever paid unto any B'pp after the death of any tenant.

"That there is 60 Oxgangs of Land in Norton, the Owners whereof at such times as the B'pp had his demesnes at Stockton in his owne possession did helpe to winn & mowe the hay, or otherwise to pay the sume of 40s. in lieu thereof, y^e service being 60 days worke.—The Tenants of Hartburne pay yearly for service silver 8s. Stockton townepp for the like, 8s.

"That the ffynes upon Death or Alienac'on of Copyholders are certaine as we believe and not arbitrary, for that time out of mind the severall Copyholders upon death or alienac'on have paid a certaine sume to the Lord of this mann'r. imposed upon them by the title of a Cesse, wch hath been always certaine upon every tenant, although some less than the annual rent reserved, and others the full rent reserved, & upon others more then the rent, but all these certaine, as appeareth by the severall Copyes of one and the same thing for many descentes.

"That the works, customs, and serviees of the Copyholders are little worth, and that we know of no Cottagers within this mann'r.

"That we know not what the p'fits of the Courts, Wayfes, Strayes, Felons goods, Wrecks of the sea, Fynes, Amerciaments, or other the like Casualtyes are worth per ann. unto the Lord.

"That Warrens or Forrests the B'pp hath none within this mann'r. But his Priviledges, Royaltyes, Franchises are great, as he had Jura Regalia within the County Palatine of Durham.

"That the Lord hath the right of Presentac'on of the Vicaridge of Norton, and of the Chapelry of Stockton.

"That there is belonging to the said Vicaridge Glebe lands worth £60 per ann. and the same is a mann'r. and keepeth its Courts two times in the year, and oftener if he please; and one Brough is the vicar

who was married to Mr. Joseph Watt, of Stockton, after whose death she sold them to George Weatherall a grocer there, who mado tobacco and sugar papers of them; and that the only one he (Mr. Burdon) knew saved was part of an account of the castle with a drawing of it, which he now has, and which Mr. Smith had got wrapped about a pennyworth of gunpowder!!!"

there: his tithes are valued to be worth £40 per ann.—Housing he hath very convenient, & the same in reasonable good repaire.

“That the Living at Stockton is a poor pen'con not worth above per ann. £30 or £35 or thereabouts.”

The bailiff of the Borough was also keeper of the Castle, with the territories, gardens, and orchards belonging to it, and was allowed pasture, herbage, and hay, within the pastures of the bishop, for two horses and ten cows; together with a patent fee of £6 13s. 4d. per annum, and other profits, advantages, and emoluments of place. The £6 ceased with the office of keeper; but the steward of the bishop's court retains 13s. 4d.

The sequestration of the property of royalists, and its appropriation to parties friendly to the parliament, have been put on record:—

“Stockton. A warrant to Rowland Burdon, of Stockton, authorizing him to execute the office of bailiff of Stockton, wh^{ch} late belonged to Roger Carre, Gent. decd. Apud Sadberge, 23 Aug. 1644.

“16 Sept. 1644. Certificate for Rowland Burdon, that he is well affected to the parliament. *Eod. die.* Richard Melsonby app^{ted} to looke to preserve the woods of Lieut. Coll. Tho^s Davison att Winyard and Fulthorp, for the benefit of the Com'onwealth. *Eod. die.* Warr^t for George Sayer, of Preston, and Jo. Medcalf, to give satisfacc'on to Rowland Burdon and Robert Burdon for a trespas on the tyth of Preston.

“Friday, 20 Sept. 1644. Warrant for the D. and C. tenants in Stockton Warde to appear before us. High constables for Stockton Warde, Robert Johnson of Greatham, Thomas Welfoot of Bishopton.

“10 Dec. 1644. Warr^t to sequester ths goods of Mr. Philip Mallory, at Norton. 16 Feb. 1644. Seq^t of Mr. Laurence Sayer and Leonard Stott's land in Preston.

“Letten to Rowland and Robert Burdon four and a half organgs of land in Stockton, late belonging to Richard Grubham, delinq^t. £15 10s.

“28 Feb. 1644. Letten to Rowland and Robert Burdon all the demesne-lands of Stockton, viz. the Great Summer-field, the Winter-field, Little Winter-field, Kelsey-hill, and the Parkes, £125 for a year. 11 Dec. 1645. The same lett to George Lilburne, Esq., £166 for a year. 28 Feb. 1644. The Thornes, Horseclose, and Intack, parcel of the demesnes, lett to Robert Guy, Bryan Crosby, W^m Usher, and Catherine Fowler, £25 per ann. *Eod. die.* Letten to Richard Wilkinson, of Paul Hartburne, one tenement, now in his possession, belonging to Mr. Robert Ellis, delinquent, rent 40 marks.”

In 1660, the township of Stockton sent nine men, with arms, being its proportion, to a muster of the militia on Chester Moor; the charges on the township for the same being £3 3s. 10d. On the 1st of May, in the following year, the town contained only 120

* The presence of these auxiliaries seems to have been very distasteful to the male part of the inhabitants, as is evinced by the following extracts, quoted by Brewster:—“Stockton, Jan. 2, 1745-6. We are all here in confusion, with having so many Dutch quartered among us. We had three at the first, but have now got happily rid of their nauseous company.” Jan. 30, 1745-6. “The people you mentioned are Dutch, and not the Royal Hunters; and though they

dwelling-houses, and none of them of brick; the few which were of stone having been constructed of materials from the Castle.

On the 24th of April, 1666, Stockton obtained a charter from Bishop Cosin, for a fair and market, similar to those granted by Bishops Beck and Matthew. About the same time, it was represented that there were “divers large and spacious fields and parcels of ground lying and being within the township territories of Stockton, which lay in common and undivided.” The inclosure of these wastes created a spirit of improvement in the town, which has ever since prevailed.

During the winter of 1739-40, the weather was extremely severe; and apprehensions being entertained of a scarcity of grain, the price rose considerably. In May and June, 1740, there was much rioting in Stockton, whence there was an exportation of corn. No troops could be had; and the mob seized the boats laden with wheat, which they declared a lawful prize, before “Admiral Haddock,” their commander. At length, soldiers arrived; and some of the ringleaders were taken, though not without opposition, to Durham gaol, and afterwards transported for seven years to America.

The panic during the rebellion of 1745-6 was as prevalent in Stockton as elsewhere; the town was filled with German troops,* and a small corps of volunteers was raised for its protection. There were great rejoicings when news arrived of the victory at Culloden; and a raft laden with combustibles was set on fire, and floated down the river.

On December 9, 1780, the shock of an earthquake was experienced at Stockton.

Loyal addresses from Stockton were presented to the king and his ministers at various periods during the American war, and on the breaking out of the French Revolution. In 1798, the Loyal Stockton Volunteers were enrolled for the defence of the town, and upwards of £850 was subscribed in aid of government, for prosecuting the war with France.

In July, 1799, a powerful whirlwind carried several hundredweight of hay to an immense perpendicular height, whilst some haymakers were at work in a field near the town.

are the very outcasts, yet have they found a way to make themselves agreeable both to young and married ladies in this place. They had an assembly last Monday night, to which was invited several married ladies, unmarried, and widows, but with strict injunction that no Englishman should come in. . . . they placed a sentinel at every door. . . . but the soldiers have now got an order to hold themselves in readiness to march, and Sunday is said to be the appointed day.”

On May 13, 1802, the Stockton Volunteer corps was disembodied; but, on the renewal of hostilities in the following year, they were again called out, and arrangements, similar to those adopted in Bishop Middleham, (see vol. i., page 394,) were made for removing the women, children, aged, and infirm to Bishop Auckland, in case the country should be invaded by an enemy. In 1814, the establishment of peace was celebrated by an illumination and other rejoicings.

On the 24th September, 1827, the Duke of Wellington passed through Stockton, on his way towards Wynyard. On this occasion, a triumphal arch was erected at the south entrance of the town; and his grace, having been met at Yarm bridge by a procession of the nobility, clergy, and gentry of the neighbourhood, was conducted, amidst the firing of cannon, to the Town Hall at Stockton, where addresses were delivered from the mayor, aldermen, and recorder of Stockton; the mayor, aldermen, and recorder of Hartlepool; and the inhabitants of Stockton and its neighbourhood. An entertainment, of which about 100 persons partook, was prepared in the Assembly Room; after which the duke departed, with the Marquis and Marchioness of Londonderry, for Wynyard.

The recent legislative enactments, relative to the town and port, will be noticed under their respective heads.

THE TOWN.

THE town of Stockton is 20 miles by road south-south-east from Durham, 27 south from Sunderland, 10 south-south-west from Hartlepool, 11 east-north-east from Darlington, 4 north-north-east from Yarm, and 24½ north-north-west from London. It occupies the outer verge of an angle formed by the river Tees, which here changes from a northerly to an eastern direction. It is described as "bounded on the east and south-east by a range of hills at the distance of 14 miles or more from its site. On the west and north-west there is a general ascent from the estuary or bay towards the centre of the country. A funnel-like valley is thus

* On August 8, 1792, a number of silver coins were found concealed in an inner wall of an old house near the Market Place. Many were in good preservation, among which were some of Edward VI., Queens Mary and Elizabeth, Charles I., and James II., but none of the Commonwealth. They were claimed as treasure-trove, and 840 of them, weighing 9lb. 4oz., were delivered to the Bishop of Durham, as lord of the manor. Several other coins and tokens have occasionally been found at Stockton.

† The Burdon family were extensively ramified in Stockton. The following deposition occurs in 1575, "on the part of Agnes, alias

formed between the high lands of Durham and the Cleveland hills, through which the river Tees flows. The town is seated on a bed of diluvial clay of great thickness, overlaying a stratum of sandstone, which is principally visible in the bed of the Tees, at the great whin dyke at Preston, because, it is said, of the immense thickness of the diluvian beds which occupy almost entirely the country between Stockton and Darlington. The red marl between Yarm and Darlington is ascertained to be at least 120 fathoms thick. The upper soil is loamy, resting upon a stratum of gravel and sand, overlaying a solid blue clay."

The principal street of Stockton, called *High Street*, runs north and south, and is about three-quarters of a mile in length, and at the *Market Place*, at the southern portion, is 180 feet wide. These dimensions are much beyond what are usually found in either old or modern towns, and impart an open, cheerful, and cleanly aspect to the place. Originally, however, it was unpaved; the houses were constructed of lath and plaster, with roofs of straw thatch; and, in 1611, even the mayor's house was of no better materials. Brick, which is now commonly applied in building, seems to have been sparingly used; and the only stone erections were those constructed from the ruins of the castle. The first order for paving was made in 1717, and soon after two pumps were directed to be sunk. In 1718, an order occurs "that all the whole Borough from the common channels shall be paved; that a smith's shop adjoining to the Toll-booth shall be purchased, and that the moneys which shall yearly come to the Borough shall be laid out in paving." The last thatched house in Stockton was pulled down in 1788.* The east side of High Street was flagged in 1810, and the west in 1812. On this side, and near the south end, stood the oldest house in the town, well known by the name of "*The Blue Posts*," from two pillars of blue marble, that had been taken from the Castle; they supported a projecting gable, on which was inserted the date, 1485. This was the family house of the Burdons, ancestors of Rowland Burdon, Esq., of Castle Eden.†

Anne Burden, wife of William Burden, against Elizabeth Anderson, in a cause of defamation":—

"Thomas Fewler, of Stokton, coteman, alias chapman, aged about 50 years.—He saith that, about Candlemas last past, this deponent, being their nigh neighbor, was bringing in two stirks of his from the wayter into his owne house, at what tyme the parties was chidyng, and one of them revilinge the other. And this deponent then hard Elizabeth Anderson caull the said Anne Burden 'crowket handyd wytych.' He saith the words was spoken audiently there; ther might many have hard them; beinge spoken so neigh the crose and in the towne gait as they were.—Signum † THOMÆ FEWLER."

It was taken down in 1811, and the stone posts were added to the remains of the Castle. Its site is now occupied by an inn. A house west of the church, which belonged to a branch of the Burdons whose heiress married into the Webster family, is inscribed "*Hæc domus ædificata fuit, Anno Domini 1671, per E. B.*" Nearly the whole of the houses in High Street are now modern erections, and contain the principal shops, inns, &c., in the town.

At the north entrance into the town, by the Norton road, which is crossed by the Stockton branch of the Clarence railway, various new streets and rows have been erected during the last 20 years. Amongst these may be named *Albert Place, Major-street, Haffron-street, Thorpe-street, Garbutt-street, Catholic-street, King-street, Queen-street, Thomas-street, Thompson-street, Wellington Place, Victoria Terrace, Tennant-street, Mount Pleasant, Elysian Place, Hewgill-street, Clarence Terrace, Bulmer's Buildings, and North Terrace.*

Several streets and passages branch off from the High Street towards the river on the east. The first of these is *Church Row*, the front of which faces the parish church on the south, and is continued towards the east by *Paradise Row*. In front of the latter, which was erected on the site of an old ropery, is *The Square*, a spacious green, planted with trees and shrubs. It was inclosed with wood rails in 1803; and, in 1822, these were succeeded by a paling of iron. The vicarage and other good houses range along the row on the north side of the square. Other streets and lanes extend eastward from Paradise Row to the railway. *Commercial-street, Maritime-street, and Fletcher-street*, are recent erections in this locality, comprising what is known by the name of the *Ranters' Buildings*.

From the south-eastern angle of the Square, a lane leads in a south-south-east direction to *Smithfield*, so called from a field belonging to John Smith, who erected a considerable portion of the houses upon it. A line of pleasant houses extends along the banks of the Tees, called *Cleveland Row*, from the fine prospect of the Cleveland hills which it commands. *Housewife Lane* and *Cherry Lane* (once a garden) lead from the south side of the Square to the Tees, near which stands the old Custom-house.

The south-west corner of the Square communicates with an open space called *Thistle Green*, formerly of greater extent. Near this place, the banks of the Tees, which here form a crescent, are bordered by a number of good houses, quays, wharfs, granaries, bond and other

warehouses, breweries, manufactories, ship-building and timber yards, &c.

The next avenues leading eastward from the High Street are *Bishop-street* and *Silver-street*; the former joining the south-west corner of Thistle Green, and the latter ending at *Calvert's Gate*, which leads to the river. These two streets, in the beginning of the last century, and before the intervening workhouse and alms-houses were erected, were continuous under the common name of *Broad-street*; the two sides being distinguished by the names of *North-street* and *South-street*.

Further to the south, *Finkle-street** branches east from High-street to the river. *Playhouse Yard*, on the north side of Finkle-street, contains the Theatre, and communicates with Silver-street and Bishop-street.

Castle Gate, near the south-eastern corner of High-street, receives its name from its situation near the entrance of the ancient Castle. It was previously called *Cook's Wynd*, from a family named Cook, who, soon after the year 1700, erected a large house, still standing at the corner of the street; and, at a more early period, the passage was called *Ferry Lane*, as having been the road to the ferry-boat, which used to ply at this place before the erection of the bridge.

On the west side of High-street, near its northern extremity, is *Bishopton Lane*, from which the road to Durham branches to the north-west. Further south are *Dovecot-street* (so called from an ancient dove-house or pigeon-cot, recently removed, which stood out of the line in front of the other houses) and *Ramsgate*. *Park Row*, branching off from the south-west corner of High-street, is continued by *Yarm Lane*.

Connecting *Mill Lane* (a continuation of Dovecot-street) and Yarm Lane, are parallel streets, running north and south, called *West Row, William-street, Brunswick-street, and Skinner-street*, and a cross street called *Albert-street*.

Opposite to the south end of High-street are the gas works, from the east end of which the *New Walk* extends in a south and south-east direction to the bridge over the Tees. This Walk occupies the site of the western fosse of the Castle; on the southern part of which several small dwellings are now situated, called *Cottage Row*. On the east front, towards the river, are various granaries and manufactories. The walls of a garden, which occupies the northern ditch, have evidently been built out of the

* "A fennil, vennel, venilla, the common kennel, sink, or drain. The plant fennil is in this country commonly called finkle."—*Ritson*.

squared stones of the Castle. Near the Walk is *King John's Well*, so called from a tradition of that monarch having built the Castle, but still known by its more ancient name of *St. John's Well*: the water from it runs through the southern fosse. On the 20th of August, 1842, a well, supposed to have been closed for nearly two centuries, or since the demolition of the Castle, was discovered by an ingenious mechanic, who occupied a cottage and garden within the precincts of the fortress. The surface, for several inches deep, was covered with gravel, beneath which were found a large number of tiles; these, though apparently fresh when found, were, on being taken out, mostly in a shattered state. The inclosure, in which there is not a stone of the original structure now to be seen, is still called the *Park*. Bishop Barrington appropriated it and other parts of his demesne lands at Stockton, for the purpose of forming a milk farm for the use of the poor of the town; and a sort of embattled cow-house was built on the spot. The Walk was formed by subscription about 50 years ago, and planted with trees by George Sutton, Esq. On the west side of the bridge road is a large coal depot, connected with the Stockton and Darlington railway, which is continued from this place to the quays in the eastern part of the town. Attached to the station there is a commodious inn, and other appropriate erections.

THE BOROUGH of Stockton comprises only a small portion of the town, by which it is entirely surrounded. It extends from Dovecot Street on the north to near the south end of High Street, Park Row, &c.; and from the river on the east to West Row on the west. In 1851, it contained 342 inhabited houses and 15 uninhabited; the population consisted of 888 males and 979 females, or 1,867 in all. The jurisdiction of the town consisted of two parts; one, exclusively that of the Borough, and the other that part beyond its boundary; constables and surveyors of highways being separately appointed for each district.

There are 72 *Borough rights*, each consisting of a certain portion of ground, with the buildings thereon, and laid down on the old plan preserved among the corporation records. On one section (near No. 45) a memorandum states, "This is the thing in question, and has never had a Borough right." The number of holders of these rights is continually varying; the burgages are not all of equal size, many of them having been subdivided; but only one vote in the corporation can be given for each original portion, and this right is

exercised in turns, annually, by each owner; except in some instances, where, at the division, the Borough right has been reserved to some particular property.

The length of carriage-way within the Borough is 1,180 yards, of foot-way 1,808 yards, the total area of paved surface to the carriage-way 18,494 square yards, and flagging 1,888 square yards. Without the Borough, the length of carriage-way is 11,643 yards, and of foot-way 14,235 yards. The length of adopted roads in the township is 3 miles 3 furlongs 8 roods; the requisite expenditure being about £500 per annum.

Some dissatisfaction has recently been expressed in consequence of various public footpaths in the neighbourhood of the town having been closed by the adjoining landowners, or through their influence; and two of them were, in 1853, ordered to be re-opened, one leading across the Park field by the Tees, and the other near Oxbridge Lane. Amongst other alleged grievances was the removal, in 1852, of a wooden bridge across the old channel of the Tees, which preserved the continuity of the foot-road between Stockton and Middlesborough, and saved a considerable distance. This, it appears, was done by the conservators of the river, at the instance of the proprietors of the Stockton and Middlesborough railway, whose property, it was said, was trespassed upon by the public. In July, 1853, Mr. Trotter, mayor of Stockton, declared his intention of bringing the subject before the conservancy board; and the corporation of the town have also expressed an opinion favourable to the restoration of the bridge.

An act of parliament was procured in the 1st year of the reign of George IV., 1820, intituled, "An Act for Lighting, Cleansing, and otherwise Improving the Town and Borough of Stockton," in the preamble of which it is stated that "the streets, squares, and other public passages and places of the town and borough of Stockton are not properly lighted, paved, and cleansed, and are subject to various encroachments, nuisances, and annoyances." The provisions of this act applied to the whole town. The number of commissioners named amounted to 94, exclusive of the mayor and aldermen, all of whom were *ex-officio* members.

At a quarterly meeting of the council, in 1838, it was resolved to procure by-laws for the better government of the town, as regarded the cleansing and watering of streets, removing nuisances, removal of offensive things, &c., to which the Lords of the Privy Council gave their consent on the 20th of October in that year; but these by-laws could only be put in force in the Borough.

On the 27th of November, 1847, at a general meeting

of the inhabitants, a sanitary committee was appointed, consisting of the vicar and the mayor of Stockton, the Rev. R. D. Kennicott, the Rev. A. Gray, Drs. Keenlyside and Whiteside, and Messrs. W. Skinner, T. Wren, J. Smith, J. Byers, W. C. Newby, J. R. Wilson, T. Close, Robinson Watson, and C. H. Skinner; Mr. W. Richardson, secretary; and Mr. R. Richmond, treasurer. In consequence of the statements contained in the report of the committee, as to the drainage, paving, scavenging, &c., in the town, a resolution of the inhabitants was agreed to, calling upon the commissioners under the local act to carry out its provisions, and to enforce those of the Nuisance Removal Act.

In 1848, a petition was forwarded to the General Board of Health, from certain inhabitants of the Borough, and another from inhabitants of the other part of the town, praying that the provisions of the Public Health Act, 11 and 12 Vict., c. 63, might be applied to the Borough and town. W. Ranger, Esq., superintending inspector, after giving the requisite notice, entered upon a preliminary inquiry, in the Corporation Hall, on the 31st of October, 1848, and received evidence from medical men and others. His report is dated April 11, 1850, and contains the usual suggestions as to a plentiful supply of water, the removal of nuisances, the ventilation of streets and dwellings, drainage, &c., together with an opinion that the Public Health Act ought to be applied to the town; three members of the town council, and nine properly qualified inhabitants of the town, to form the local board of health. No further progress, however, was made in the matter at that time.

Simultaneously with a measure for the transfer of the conservancy of the river Tees (noticed hereafter), a bill was introduced into parliament in 1852, "to extend the boundaries of the municipal borough of Stockton, to transfer to the corporation thereof the properties and effects now vested in certain commissioners having jurisdiction in the township of Stockton, and to make provision for better draining, lighting, watching, paving, cleansing, supplying with water, and improving the Borough." The boundaries of the Borough were to be extended to those of the township. With the intended act were to be incorporated the whole or some portion of the following:—An act of 5 and 6 William IV., intituled, "An Act to provide for the Regulation of Municipal Corporations in England and Wales;" "The Towns Improvement Clauses Act, 1847;" "The Town Police Clauses Act, 1847;" "The Markets and

Fairs Clauses Act, 1847;" and "The Public Health Act, 1848."

The necessity of an application to parliament had arisen from the fact that the Borough of Stockton, comprising only one-fifth in value of the rateable property in the town, was placed in the second section of Schedule A, 5 and 6 William IV., whereby her majesty was precluded from granting the desired extension of the town by order in council. The bill met with considerable opposition in parliament; but being supported by the corporation and other influential parties, it was eventually passed, in April, 1852; and the rate-payers of the township generally, instead of those of the Borough only, became invested with the municipal franchise. The anomaly was thus removed of a governing body of 24 members being elected from a constituency of about four times that number, not 50 of whom were eligible for election; whilst the numerous surrounding population were unenfranchised. The act, as amended in committee, is intituled "The Stockton Extension and Improvement Act, 1852."

BOUNDARIES OF THE BOROUGH.—The boundaries of the Borough, as altered and extended by the act, "commence at Portrack Bridge, thence along the south and east sides of a brook called Lustram Beck, up to and as far as a point 188 yards in a direct line from the north side of a bridge called Hartburn Bridge, which crosses the Lustram Beck, on the turnpike road leading from Stockton to Darlington, and at which said point the said beck called Lustram Beck runs entirely into the township of East Hartburn, thence along the boundary fence, between the townships of East Hartburn and Stockton, to the said turnpike road leading from Stockton to Darlington—thence along the north side of that turnpike road in an easterly direction to where such road meets the turnpike road leading from Stockton to Yarm; thence across such last-mentioned turnpike road, and in a southerly direction, along the east side of the said last-mentioned road, to where the same is joined by the Stockton and Darlington Railway, at which point a signal-post is placed, belonging to the said Stockton and Darlington Railway Company; thence along the north boundary of that railway till it reaches the river Tees at the Railway Bridge; thence along the line of high water, at ordinary spring tides, on the Durham shore of the said river Tees till it reaches the bend in that river at the lower end of Blue House Point, near Portrack (which bend was cut off

from, and ceased to form part of, the navigable channel of the Tees by the 'Tees Navigation Company's Act, 1828'); and thence in a northerly or north-easterly direction along the line of high water at the tides aforesaid on the Durham shore of such bend until it reaches the said bridge at Portrack aforesaid."

Within these limits the Borough is divided into four wards,* each of which returns six councillors. The powers and property held by the commissioners† under the act of 1820 are vested in the mayor, aldermen, and burgesses, who are to have power to levy rates, penalties, or other monies; to supply gas and water to the town, for which purpose they may lease the works of the existing companies; to improve the streets, lanes, and roads; to regulate fairs and markets; and to appoint constables for that purpose.

CHURCH OF ST. THOMAS.

It has been seen that Stockton was originally parcel of the parish of Norton. The chapel of ease built by Bishop Poor stood near the centre of the old churchyard, south of the present church, and does not appear to have possessed any claims to architectural beauty. By the original ordination, Bartholomew, vicar of

* BOUNDARIES OF THE WARDS.—The respective boundaries of the wards, as fixed by the act, are as follow:—

"The South-east Ward—to commence at the stone bridge over the river Tees, in the township of Stockton; thence along the east side of the road leading from that bridge to the town of Stockton; thence along the east side of the High Street, in Stockton aforesaid, including on such east side the Shambles and the Town Hall; then to the shop or dwelling house, number 25, on the east side of the said High Street, in Stockton aforesaid; thence along the south side of Bishop Street aforesaid to the point called the Bishop's Landing Place in the Tees; and thence southwards, along the line of high water at ordinary spring tides on the western shore of the said river Tees, to the said stone bridge over the said river;

"The South-west Ward—to commence at the said stone bridge over the said river Tees; thence along the west side of the said road leading from that bridge to the town of Stockton aforesaid; thence along the west side of said High Street to the point where the same meets Dovecot Street, being number 130 in the High Street; thence along the south side of the said street called Dovecot Street, and along the south side of the road or footpath leading from thence, in a westerly direction or north-westerly direction, past Light Pipe Hall, to the wooden bridge over the said brook, called Lustram Beck; and thence southwards, along the eastern margin of the said Lustram Beck, to the before-mentioned point, 188 yards in a direct line from the north side of the said bridge called Hartburn Bridge; thence in the line before described from that point to the said railway bridge over the Tees; and thence along the line of high water at ordinary spring tides on the western shore of the said river Tees to the before-mentioned stone bridge over the same river;

"The North-west Ward—to commence at the said wooden bridge over the said Lustram Beck, and thence in an easterly direction

Norton, agreed to find an officiating chaplain, and the parishioners were to have in their said chapel of Stockton baptism, burial, and all ecclesiastical rights; they were to visit the mother church on the Feast of the Assumption, and pay to the vicar 50s. at four terms, viz., at the Feast of St. Martin in winter, 12s. 6d.; at the Feast of St. Cuthbert in Lent, 12s. 6d.; at the Feast of the Nativity of St. John Baptist, 12s. 6d.; and at the Feast of St. Cuthbert in September, 12s. 6d. The persons who became sureties for the payment of these sums were, Ada son of Ada Preston, Walter Ruffus, Hugo Nasuc, Richard Poker de Preston, Walter son of Walter de Hartburne, William son of Robert Provost, Eudo, clerk de Norton, Roger Corneed, William Smith, Thomas Giei, Ada Carpenter, John Scalin, Thomas Sprot, and Walter de Stockton, clerk. In case of failure of payment, celebration of divine offices and sacraments was to cease; and for contumacy, they were, with the consent of the archdeacon of Durham and the chapter of Darlington, to be altogether revoked. On every Lord's day, the parishioners were to offer one penny with the consecrated bread, except when they attended the mother church.

There was a chantry or free chapel in Stockton, dedicated to the Virgin Mary, endowed with four ox-

along the north side of the said road or footpath leading from such wooden bridge to Dovecot Street aforesaid; thence along the north side of Dovecot Street and the west side of the said High Street; and so, in a northerly direction, along the west side of the road leading from Stockton aforesaid to Norton Bridge; and thence, in a southerly and westerly direction along the east side of the said Lustram Beck to the said wooden bridge before named;

"The North-east Ward—to commence at Portrack Bridge, running thence along the south side of Lustram Beck aforesaid, where the same beck joins the east side of Norton Bridge aforesaid; thence, in a southerly direction, along the east side of the road leading from such last-mentioned bridge, to Stockton aforesaid; thence along the east side of the said High Street to the south-west corner of the Alms-houses in Stockton; and thence, in an easterly direction, along Bishop Street and the Kennel at the south side of Thistle Green in Stockton, till it meets the line of high water at the tides aforesaid at the said Bishop's Landing Place; and thence, along the same line of high water on the north shore of the said river to Blue House Point; and thence along the east side of the said before-mentioned bend at Portrack, so cut off by the said 'Tees Navigation Company's Act of 1828' as aforesaid, until such boundary reaches the said bridge at Portrack aforesaid."

† At the inquiry in 1848, Mr. Wade, a commissioner and treasurer, stated, "that he generally attends the meetings, but he finds very great difficulty in getting five other members to attend, and it requires five commissioners to form a quorum; in order, therefore, to transact the public business and make contracts, he is frequently obliged to send for commissioners residing near to meet him, except on special occasions and they want to serve their own individual interest, when a score of them will attend; but that the average number attending does not exceed eight throughout the year."

gangs of land and four borough houses for the maintenance of a chaplain. The two last chaplains were Thomas Salvin and William Crofton. Shortly before the dissolution, William Baynbrigg gave the third of an oxgang to provide two wax-lights to burn before the altar of St. Thomas-a-Becket. In 1548, the whole revenues of the chapel amounted to £5 3s. 6d. per annum; yet with such avidity was church property at that time appropriated, that this poor pittance was seized by the crown, and granted out to individuals; and St. Thomas-a-Becket's candles ceased to burn. A memorandum in the Harleian MSS. says, "The Chapell of Stoketon aforesaid standeth a myle [two miles] from the pyshe Church aforesaid, not only for the easment of t'inhabitaunts of the towne of Stoketon, but also for theasment of divers p'ishionners of sundrie other p'iches in the Winter tyme, when for rayny fludes they can come none whether els to here Devynn srvice." The obstruction of the "rayny fludes" between Norton and Stockton is, thanks to improved roads and drainage, no longer apparent.

The premises belonging to the chapel were, in the reign of Edw. VI., ordered to be leased to William Crofton, of London, for 21 years, at £8 rent per annum. A minister, however, seems to have been continued; and in 1705, "the inhabitants still paid to the vicar of Norton £3 per annum, commonly called the *Priest's own*"—a corruption of the word prescription. Towards this sum, Stockton paid £2; Hartburn, 13s. 4d.; and Preston 6s. 8d.; the amount being collected of every landed man who had two oxgangs of land of about 12s. per annum, and of their widows, 8d., and of every other inhabitant 6d., except of the chapel-wardens and of their widows only 4d. For the tithe of fish, every fishing coble was to pay 4s. and a salmon cock or scurf worth 6d. on the 8th of September yearly. The vicar maintained a curate at his own cost to serve the chapelry.

SUCCESSION OF CHAPLAINS BEFORE THE REFORMATION.—J. Capellanus, fil. W. Pistoris, 1333; Thomas, 1408; W. Osbern, 1430-1448; * T. Salvin, W. Crofton, the last incumbents.

CURATES AFTER THE REFORMATION.—C. Smith, 1561; Sir R. Synder, 1563; W. Heron, 1565; W. Hogwell, 1566; W. Allen, 1566; R. Blaxton, 1568 (rector of Elton 1571); G. Morden, 1572; W. Fowler, 1578, p. res. Morden; J. Collin, A.B., 1685 (drowned whilst swimming in the Tees); T. Mann, 1585; T. Edyer, 1585; C. Fewster, 1599; T. Robinson, 1609; T. Smithson, 1610; T. Lawson, 1612 (vicar of Stainton in Yorkshire); J. Place, 1617, p. res. Lawson; J.

* It appears that, at or before this time, Stockton gave name to a family. In 1417, Henry Stockton was appointed the first vice-chancellor of Cambridge University, during the chancellorship of John de Richeadale, afterwards Bishop of Chichester. The chancellor's absence in 1413, which rendered the appointment of a vice-chancellor

Wright, 1623, p. m. Place; M. Rawling, 1635; R. Macdowell, 1636, p. m. Rawling; R. Salkeld, 1641, p. m. Macdowell, who was killed by a fall from his horse on Barnby Moor; J. Gregg, May 1, 1662; T. Rudd, May 1, 1663.

The ruinous state of the chapel, and the increased population of the town, at length rendered the erection of a new church necessary. The subject was introduced in a sermon by the Rev. T. Rudd, September 2, 1705; and the brief read May 21, 1710. On the 5th June following, the foundation stone was laid, and the structure consecrated by Lord Crewe on the 21st of August, 1712. On the brief, there was collected in Stockton, £83 7s. 9d.; in Preston and Hartburn, 17s. 6d.; in Billingham and Sedgfield, £14 12s. 6d.; in Norton and Blakiston, £40 8s. 3d.; in Yarm and Egglecliffe, £10 6s. 5d.; in Darlington and Elvet, £6 13s.; in Long-Newton and Redmarshall, £3 14s. 6d.; by the collectors of the brief, £550; the justices of the county, £267; the Bishop of Durham, £100; the dean, £20; and private subscriptions, £528 13s. 10d.; total, £1,625 13s. 9d. The disbursements were, for deals and wood, £350 0s. 7½d.; bricks, £173 16s. 9d.; lead, £337 2s. 1½d.; stone-work, £299 7s.; bricklayers' work, £128 4s. 5d.; plumbers' work, £46 2s.; carpenters' work and laying the roof, £46 14s. 1d.; and for sundries, £194 17s. 1d.; leaving in the treasurer's hands, £48 9s. 7½d.

In the interim, the act of 12th Anne, 1711, was passed, constituting Stockton, with East Hartburn and Preston, a distinct and separate parish from Norton. Under this act, and that of 1st Geo. I., 1714, the direction of parochial affairs is vested in the vicar and twelve vestrymen, to whom the Bishop of Durhan, lord of the manor, is empowered to grant, for the augmentation of the vicarage, a parcel of ground there specified, or any other parcel or parcels of waste ground within the manor, without fine, and under the custom and yearly rent of one penny, provided the same be not of more or greater yearly value than £20 at the time of making such grant. The new-constituted vicarage was entitled to all such tithes within its precincts as had been usually paid to the vicar of Norton; and the patronage of the living was solely vested in the Bishop of Durham. As a recompence to the parish of Norton for the separation, and in lieu of all future demands or contributions for or towards the repairs of Norton church, and all or any other taxes or cesses to the parish

necessary, was his being sent by the king (Henry V.) to Rome, in company with the Bishop of Ely and the chancellor of Oxford, to acquaint the *two Popes* at that time contending for the supremacy of the church, that except one would *yield*, England would acknowledge obedience to neither.

of Norton, the inhabitants of Stockton agreed to pay to the inhabitants of Norton the sum of £100. It was also enacted that the vicar should hold the parcel of waste ground adjoining to the church-yard on the east side thereof, the same being intended to build a house upon for the vicar; and the vicar was thereby empowered to take lands, not exceeding £100 a year, over and above the lands and provisions above stated, and was directed to bear and pay a third part of first fruits, tenths, procurations, and synodals for the parish of Norton.

The church of St. Thomas is situated on the east side of High Street, and is a spacious structure of brick, with copings of freestone to the doors and windows. Though not erected in strict accordance with the mediæval style of architecture, the building combines so many of the elements of comfort and convenience as to entitle it to a favourable place amongst English churches. Its entire length is 150 feet, and its breadth 67. The height to the middle of the roof is 40 feet. The roof was originally covered with lead; but in 1793 this was replaced with Westmoreland slate. A square tower at the west end is 80 feet high, and contains a set of six bells. A clock and chimes were added in 1736, the tunes of which were altered in 1819: in 1832, these were removed, and a new clock, with chimes, introduced. The entrance is under the tower, in the porch of which were formerly placed the fire-engines of the town. The nave is separated from each of the side-aisles by five square pillars, supporting semicircular arches. The windows, generally, are modern sashes under circular arches; besides which there are skylights in the roof above the galleries. The western gallery was erected

in 1719; and an excellent organ placed in it in December, 1759, which was greatly improved and repaired in 1784, by Donaldson, of Newcastle, in consequence of several of the pipes having been maliciously stolen and destroyed. The north gallery was added in 1748, and the south gallery in 1827. The east window contains a beautiful figure, in stained glass, of the Redeemer bearing the cross, and enfolding the reed, the sponge, and the cord. At His feet are placed the crown of thorns and the nails. Above, the Hebrew name of Jehovah; below, inscribed in a circle, in old English characters, "*He was despised and rejected of men.*" The outer compartments are filled with ornamental details. The window was executed by Mr. Gibson, of Newcastle, in 1828. Beneath it, the communion table stands in a recess. The church, which affords accommodation for about 1,500 persons, is regularly stilled with oak; and the reading-desk and pulpit, which are placed against opposite pillars in the nave, are of handsome workmanship.

Comparatively modern as is the date of Stockton church, and consequently destitute of ancient memorials of the dead, the testimonials to the departed worth of recent times are by no means few or uninteresting. In the south aisle are monuments to the memory of Vice-admiral Brunton;* of John Allison, merchant, and lieutenant-colonel of the Loyal Stockton Volunteers; and of Grace, wife of George Sutton, Esq.† In the north aisle, though partially hidden by the staircase of the gallery, is a beautiful mural monument of marble to the memory of Frances, wife of George Hoar, Esq., and daughter of William Sleigh, Esq., who died January

* VICE-ADMIRAL NATHAN BRUNTON was born at Stockton in 1744, and first entered the navy in 1771 as an able seaman on board the *Marlborough*. He shortly after became master's mate on board the same ship; and on the 19th of September, 1777, was promoted to be a lieutenant, in which capacity he served in the *Europe* and *Courageux*. On the 21st of March, 1782, he was made commander of the *Flirt*; and on the 6th of August, 1783, he was promoted to the rank of post-captain. He was successively captain of the *Courageux*, the *Assistance*, the *Meleager*, the *Leviathan*, and the *Dictator*. For much of this success in life he was indebted to the kindness of the Right Hon. Constantine John Lord Mulgrave, who had been his captain in the early years of his service, and whose notice had been attracted by the professional merit and irreproachable conduct of the young sailor. On the 9th of November, 1805, Captain Brunton was made a rear-admiral of the blue; on the 3rd of July, 1810, promoted to be a vice-admiral of the blue; and on the 4th of June, 1814, to be a vice-admiral of the white. By the patronage of the Mulgrave family, Admiral Brunton was presented with the appointment of deputy paymaster to the forces at New Brunswick; but the infirmity of deafness, which increased as he grew old, precluded him from active service in the latter part of his life. He died at Stockton on the 19th of November, 1814, aged 70 years.

† MRS. GRACE SUTTON.—This exemplary lady was the third daughter of William Horsfall, Esq., of Strothes-Hall, in the West Riding of Yorkshire, and in 1780 married George Sutton, Esq., of Stockton and Elton. Her life was one continued series of acts of charity and efforts in behalf of education. The Stockton School of Industry was principally founded through her exertions, and she was indefatigable in her attentions to its prosperity. She also patronized a benefit society for females, to the funds of which she liberally contributed. To alleviate the wants and sufferings of the poor, her purse and her personal exertions were ever spontaneously devoted. Till within a few days of her death, she was assiduously employed in her benevolent labours; but she at length fell a victim to a fever, either brought on by the extreme inclemency of the season, acting on a constitution already weakened, or caught from contagion in some one of the many scenes of distress she was in the habit of visiting at all times, and in all places. She died on the 17th of January, 1814, in the 57th year of her age, and was interred in the family vault at Elton. Some of her most important charities have been perpetuated by her husband, who survived her. See CHARITIES. The tablet to her memory in the church was erected by a subscription from the ladies of Stockton, "as a recording homage of esteem and veneration to private worth from public affection."

24, 1761; there is also a tablet commemorative of Lieutenant-colonel William Sleigh, who died February 13, 1825.* There have been no interments within the walls of the church.

In 1838, in consequence of a grant of £600 towards building an additional church in Stockton, from the Incorporated Society of London, 553 sittings were set apart in the parish church, and declared free for ever.

The district for confirmation includes Stockton, Holy Trinity, Redmarshall, Elton, Wolviston, Grindon, Elwick Hall, Norton, Long-Newton, Billingham, Egglecliffe, Greatham, Bishopton, Stainton-le-Street, and Seaton-Carew.

The church-yard was found too small for the parish so early as 1770, and on the 20th July in that year an additional piece of ground was consecrated by Bishop Trevor. The area of the whole is 4 A. 0 R. 33½ P. The ground, which was originally very wet, was much improved by draining and other means; but notwithstanding the opening of Trinity chapel cemetery, it has been latterly so much crowded that only 189 interments took place during the seven years ending 1848; and it is now virtually closed. A new burying-ground for this church, situated between that of Holy Trinity chapel and Yarm Lane, and containing 2 A. 3 R. 8 S P., was consecrated on the 7th of November, 1849. There is no fence between it and the Trinity cemetery, the limits of each being merely marked by boundary stones. The burial service for funerals belonging to St. Thomas's church is read in Trinity chapel; but the fees are paid to the minister of the former.

REGISTERS.—Books Nos. 1 to 4 contain entries of baptisms from 1637 to 1812, burials from 1621 to 1812, and marriages from 1637 to 1642, and from 1644 to 1812. There are notices of the deaths occurring in the garrison in 1640-1.

Stockton vicarage, being created a parish by a late act of parliament, is not in charge or certified, but pays

* LIEUT.-COL. WILLIAM SLEIGH.—This gentleman, a native of Stockton, was the son of Charles Sleigh, Esq., by Mary Sutton, daughter of William Sutton, Esq., and sister of George Sutton, of Stockton and Elton, Esq. In early life, he entered the 19th regiment of foot in August, 1775, was made lieutenant in 1778, and captain in 1780. He served with his regiment in the American war, and was present at two actions. After his return to England in 1785, he married Ann, the only child and heiress of John Ward, Esq., of Billingham. In 1790, he became captain in the 23rd regiment, and lieutenant-colonel of the 83rd in 1794. On retiring from the army, he accepted the commission of major in the Durham militia, and subsequently was appointed inspecting colonel of volunteer corps in the districts of the West Riding, in Manchester, and in Wales. His

a third part of the first-fruits, tenths, procurations, and synodals for the parish of Norton; the Bishop of Durham, patron. Dedication to St. Thomas.

VICARS.—G. Gibson, A.M., 1713; W. Eden, A.M., 1714, p. m. Gibson (res. for Elwick Hall); G. Walker, A.M., 1715, p. res. Eden (he abolished the practice of interring the bodies of the poor without coffins); J. Skelly, A.M., 1742, p. m. Walker (he put a stop to the inhuman custom of throwing at cocks on Shrove-Tuesday); W. Vaughan, A.M., 1772, p. m. Skelly (res. for Norton, afterwards rector of Houghton-le-Skerne); A. Cleeve, A.B., p. res. Vaughan (res. for Wooler); J. Greville, LL.B., 1780, p. res. Cleeve (res. for Whickham); C. Anstey, A.M., 1782, p. res. Greville (res. for Norton); E. Wilson, A.B., 1786, p. res. Anstey; J. Brewster, A.M. (vicar of Greatham, rector of Egglecliffe, Linc. Coll. Oxon., 1799; George Stanley Faber, B.D., Linc. Coll., 1805, p. res. Brewster (res. for Redmarshall, afterwards rector of Long-Newton); Thomas Baker, A.M., Oriel Coll. Oxon., 1809, p. res. Faber (res. for Whitburn); John Gilpin, B.D., 1810, p. res. Baker; William Nicholas Darnell, B.D. (prebendary of Durham), C. C. C. Oxon., 1815, p. res. Gilpin; James Cundill, 1820, p. res. Darnell for St. Margaret's, Durham; George Newby (see vol. i., p. 619), 1832, p. res. Cundill for Coniscliffe; Hon. R. J. Eden, 1844, p. res. Newby for Whickham; Francis Jos. James, 1847, p. res. Eden.†

A piece of ground, adjoining the church on the east, was originally intended for the site of a vicarage-house, and bricks were made on the spot for that purpose; but a house was afterwards purchased on the north side of the ground so allotted. Bishop Chandler left £200 for this purpose, Lord Crowe's trustees gave £50 in 1750, and £80 was raised by the sale of the bricks which had been prepared. In 1783, the parsonage was repaired and enlarged by the Rev. C. Anstey; and further improvements were effected during the incumbency of the Rev. G. Newby.

The waste granted by the bishop for the augmentation of the living, called Thistle Green, on a part of which Workhouse Street and Silver Street have since been erected, was leased out, under the powers of the act of 1711, by the vicar and vestry, for 1,000 years, in portions as follows:—On August 27, 1716, to James Cook, at a reserved rent of £13; to John Cook, at £4 5s.; to David Douthwaite, at £6 2s.; to William Peacock, at £4; and to Jonathan Watson, at £2 12s. 6d.; on March

last service was commander of the volunteer cavalry in his native district; and in all these services he acquitted himself as an experienced and judicious officer. An attack of paralysis brought on a gradual decline; and he died at Stockton, at the age of 66, on the 13th of February, 1825.

† On the promotion of the Hon. and Rev. R. J. Eden to the bishopric of Sodor and Man, the following impromptu appeared in the *Edinburgh Evening Post*:—

“At first, Eden was given to Man,
A garden to work and to feed in;
But now we've an opposite plan,
For Man is given to Eden.”

4, 1719, to Cuthbert Hodgson, at £2 7s. 6d.; on April 20 following, to Jonathan Watson, at £1 10s., and to John Cook, at £1 11s.; and on January 20, 1783, to John Barker at £19; total, £54 8s. The whole are leased free from taxes imposed or to be imposed by act of parliament; the vicar covenanting to pay land-tax, or allow the same out of the rent then next due. Large sums were expended by the lessees in building and otherwise improving the premises, and valuable considerations were paid by persons purchasing under the first lessees. An attempt was made by the Rev. W. N. Darnell, whilst vicar, to invalidate the leases, on the pleas that the provision partook of the nature of a charity, that the lessees were merely trustees, that the

leases were in effect a total alienation, and therefore a breach of trust, and that only building leases for a term usual in such cases were in the contemplation of the legislature. The case was heard before the Vice-chancellor, Sir Thomas Plumer, in April, 1817, who held the leases good; and on an appeal, the Lord Chancellor, in November, 1821, though observing that the legislature had given a greater power than they intended, confirmed the decision of the Vice-chancellor.

The gross income of the living was stated, in 1835, at £294, subject to permanent payments of £47. From the remaining £247, £50 was paid to a curate. The income of the vicar has since been increased to £300 a year from the bishop's demesne lands.

CHAPELRY OF HOLY TRINITY.

THE boundary of the chapelry of Holy Trinity, Stockton, commences at the centre of the river Tees, opposite to the centre of Finkle Street, and proceeds in a southwardly and westwardly direction along the centre of the same river, to where the parish of Egglescliffe joins the parish of Stockton; thence following in a westwardly and northwardly direction the boundary line that divides the last-mentioned two parishes to where the same meet the parish of Elton; thence in a northerly and north-westwardly direction along the boundary line that divides the parish of Stockton from the parish of Elton, to where those parishes meet the parish of Norton; thence in an easterly direction, following the boundary line that divides the township of Hartburn, in the parish of Stockton, from the parish of Norton, as far as the township of Stockton; thence following the boundary in a southwardly and eastwardly direction that divides the township of Hartburn from the township of Stockton to the point where it crosses the lane or road called Oxbridge-lane, and so along the centre of that road eastwardly, including all the south side thereof, to the point where it forms a junction with the occupation lane leading to Light Pipe Hall, thence along the centre of the said lane, and the footpath in a northerly and easterly direction to an occupation road, leading from Stockton to the windmill, continuing along the centre of the same to Dovecot Street, then east, down the centre of Dovecot Street, crossing the High Street south of the Town House, and down the centre of Finkle Street, including all the houses on the south side thereof to the centre of the river Tees, where the boundary commenced.

THE cemetery of St. Thomas's church having been found insufficient for the population of the parish, a field presented by Bishop Van Mildert, on the south side of Yarm Lane, was opened out as a place of sepulture in August, 1832, and was shortly after consecrated. The contract for the erection of a church upon this ground was let on the 15th of September, 1834; and the foundation stone was laid on the 18th of November following, by the Ven. Charles Thorp, archdeacon of Durham, on which occasion there was a public procession. The church was to be built entirely by public subscription, without the aid of any church-building society. The ceremony of consecration was

performed, on the 22nd December, 1835, by the Bishop of St. David's.

In February, 1836, a meeting was held in Stockton, for the purpose of dividing the town into ecclesiastical districts. The order in council for assigning the boundaries (above given) of the Trinity district appeared in the London Gazette, December 29, 1837; and the church was licensed by the Bishop of Durham, October 3, 1838, under 6 and 7 Wm. IV. In 1851, the district contained 3,631 inhabitants, of whom 1,713 were males and 1,918 females. There were 709 inhabited houses, and 33 uninhabited.

The church is built of stone, and consists of a nave

and chancel, with a small transept towards the south. The building is Gothic, extremely ornamental in the exterior, and intended to be after the decorated style of architecture, from designs by Messrs. B. & J. Green, Newcastle. The entrance door is at the west, in a square projecting tower; the tower is carried up to the height of the roof, and then, taking the form of an octagon above, with four flying buttresses at the base, terminates in an octangular spire, 200 feet high. Each of the external angles of the nave and transept terminates with octangular pinnacles, the main walls finishing with a perforated battlement of the perpendicular style. The vestry is placed in the under part of an octangular apse at the east. The interior is extremely plain; it has a low pitched open timber roof, a gallery on each side, and one at the west end, on which is placed an organ, purchased by subscription and with one-third of the proceeds of a bazaar. It was built by Mr. Nicholson, of Newcastle, and is of great power and compass of tone. The design of the front of the case is Gothic, in a style corresponding with that of the building. The whole of the sittings in the church are stained in imitation of oak, and afford accommodation for 1,200 persons; a proportion of them being appropriated as free sittings for the use of the poor.

During a heavy gale of wind on the morning of December 25, 1852, a portion of the upper part of the spire was blown down. At a vestry meeting, a rate was agreed to, for meeting the cost of reparation, which was estimated at upwards of £100; but the Bishop of Durham having forwarded to the churchwardens the sum of £30 towards the restoration and other expenses connected with the church, and further subscriptions being raised for the same purpose by the inhabitants of the town, the levying of the rate was not carried into effect.

The Bishop of Durham is patron of the living; the Rev. Richard Dutton Kennicott, A.B., incumbent, and the income is stated at £300 per annum.

The parsonage-house stands at the west, adjoining the church-yard. It is a plain brick building, but commodious in its interior arrangements. In 1850, £300 was granted from the Maltby Fund, for the purpose of building it, on condition of the necessary means being forthcoming within a twelvemonth for the completion of the work; and a bazaar on behalf of the object realized £220. The following circular, addressed to various friends, was issued in furtherance of the undertaking:—

“My dear Sir—The Ecclesiastical Commissioners for England having made a grant of £300 out of the ‘Maltby Fund’ towards the building of a parsonage-house in the district parish of the Holy Trinity, Stockton-on-Tees, and the Bishop of Durham allowing me to mortgage the living for £300, I must use my best endeavours to raise by local subscription or otherwise the sum of £300 to meet the deficiency, the estimated cost of the building being £900. I have therefore to solicit the favour of any donation which you may be inclined to give towards this desirable object.—I have the honour to be, dear Sir, yours, very respectfully,

“RICHARD DUTTON KENNICOTT.

“Stockton, July 1, 1850.

“To ———”

The cemetery appropriated to the Holy Trinity church contains 4 A. 3 R. 33 $\frac{3}{4}$ P. With that belonging to the parish of Stockton, which adjoins it on the south (see p. 162), the entire area is about 7 A. 3 R. 2 $\frac{1}{2}$ P., surrounded by walls on the sides next the fields, and by a handsome palisading towards Yarm Lane. The whole is planted with shrubs, and kept in excellent order. The soil is a strong, retentive clay, and not completely drained. No interments take place within the church. The average number of funerals in the church-yard is about 200 per annum.

CHAPELS.

ROMAN CATHOLIC CHAPEL.—The Roman Catholics formerly assembled in a chapel in Play-house Yard. In 1832, whilst the Rev. J. Dugdale, from Ushaw College, was the resident pastor, the building was enlarged and improved; but the situation being inconvenient, funds were raised for a new building, and the

foundation stone of the present chapel was laid on the 31st May, 1841. A bottle, containing a written statement of the circumstances connected with the project, and the names of the reigning sovereign of England and of the Pope of Rome, with several coins, &c., were deposited, covered with a brass plate, inscribed “A.D. MDCCCXLI.” The chapel was opened on the 7th May, 1842, with the usual imposing ceremonies. It occupies

a commanding site in Norton Road, and has two large school-rooms and a cemetery, containing 8 perches, or 242 square yards, adjoining. The edifice, which cost about £7,000, is in the Gothic style of architecture, from designs by Pugin, the present chapel forming one aisle of the general design, the architect intending to add the other portions as required. The chapel, which is dedicated to St. Mary, is licensed for the solemnization of marriages. The Rev. Richard Singleton, the present clergyman, has received an appointment to a chapel in another district.

INDEPENDENTS.—During the indulgence granted by Charles II., the Rev. John Rogers (see p. 24), who may be considered the founder of dissent in Stockton, in 1672 licensed the first place of worship in the town. An Independent chapel was founded in Green Dragon Yard, Finkle Street, in 1799. The register books of the congregation, which contain 67 entries of births and baptisms, extend from 1799 to 1816, and from 1821 to 1836. The congregation removed to a chapel in West Row, which was erected in 1815, at a cost of about £500; the principal contributor being Mr. Henry Beckwith. It is licensed for solemnization of marriages; and the Rev. Thomas Davison is the present minister.

Dissensions having arisen in the congregation, a division took place; and the seceders, in 1845, under the denomination of CONGREGATIONALISTS, built a chapel in Tennant Street, Norton Road, which they licensed for the solemnization of marriages.

UNITED PRESBYTERIAN CHURCH OF SCOTLAND.—This chapel was erected in West Row about the year 1812, and formerly belonged to the Independents. It will accommodate about 300 hearers, and is licensed for the solemnization of marriages.

BAPTIST CHAPEL.—A Particular Baptist congregation assembled in Stockton during a considerable portion of the last century. Salem chapel, which is situated in West Row, was originally built for a warehouse, but converted into a chapel in 1809, and has been for many

* Though the character and manners of the Society of Friends are generally assimilated, by the influence of their principles, yet individual members are sometimes found who stand prominently forth in the general picture. Robert Henderson, of Stockton, was well known all along the coasts of Yorkshire, Durham, and Northumberland, from Whitby to the Farn Islands, by the name of "*The sailing Quaker*." His character was upright, and his generosity extreme, for which latter failing, and the recklessness he evinced, in spite of all remonstrances, to the dangers of the sea, he is said to have been "disowned" by his friends. On January 2, 1791, he and one of his

years under the ministry of the Rev. William Leng. The building has recently been enlarged, and is licensed for the solemnization of marriages.

UNITARIAN CHAPEL.—There was a congregation of Unitarians in Stockton in the 17th century; the Rev. Thomas Thompson having been ordained their minister in 1688, and for whom a meeting-house was erected, at the north end of High Street, in 1699. He was succeeded, in 1729, by his son, the Rev. John Thompson, who was followed, in 1753, by the Rev. A. Blakie. The present chapel, which is licensed for solemnization of marriages, was almost wholly rebuilt on the site of the old one in 1756, and will accommodate 300 persons. The Rev. B. Evans became minister here in 1785, the Rev. Robert Mair in 1792, and the Rev. S. Kennady in 1803. The latter gentleman conformed to the Church of England in 1817; and, in the following year, Mr. Evans was re-appointed minister, which office he held till 1821, when the Rev. J. C. Meeke succeeded him. The Rev. C. C. Nuttar, the Rev. W. Duffield, the Rev. Thomas Cooper, the Rev. J. McDowell, and the Rev. Thomas J. Read, (who is the present minister,) have since successively followed. A good library is attached to the chapel; and a fine organ was erected about 20 years ago.

FRIENDS' MEETING HOUSE.—This building, which was erected in 1814, at the cost of £1,800, including the purchase money for the surrounding cemetery, is situated in Mill Lane, opposite the north end of Brunswick Street. The interior is neat and commodious. The chapel has been enlarged, and will seat about 200 hearers. The inclosed burial ground contains 17 roods, or 514½ square yards. The register books commence in 1647.*

WESLEYAN METHODIST CHAPEL.—The Rev. John Wesley first preached at Stockton on August 16, 1748.† A Methodist chapel was in due time erected, which becoming unsuited for the increasing congregation, another was opened on the 13th of June, 1813. The foundation stone of the present spacious edifice,

men sailed from Newbiggin for Alemouth in his coble, contrary to the advice of all the fishermen, and the expostulations of the other man who completed his little crew. The latter travelled to Alemouth on foot, and arrived just in time to witness the fate of his employer and colleague, who were drowned in attempting to take the harbour, in sight of the whole town.

† The first collection for Wesleyan missions, in a circuit which included Stockton, Hartlepool, Yarm, Darlington, Bishop Auckland, &c., took place in 1799, when only £2 10s. was collected.

which is situated in Brunswick Street, was laid on the 16th of March, 1823, by Richard Walker, Esq., assisted by J. Wilkinson, Esq., mayor; it was opened on the 31st December following, when collections were made amounting to upwards of £200. The chapel is 20 yards long and 18 broad, and will accommodate 1,200 hearers. A Sunday-school and two dwelling houses for the preachers are attached. The register of births and baptisms extends from 1824 to 1837, and contains 21 entries; the building is licensed for solemnization of marriages. There is an excellent organ in the chapel, by Mr. Thomas Charlton, of Stockton.

THE PRIMITIVE METHODIST CHAPEL is situated in Maritime Street, Smithfield. It was erected in 1825, and will contain about 350 persons. Previous to its erection, the congregation met in a room in Playhouse Yard. Their first camp meeting at Stockton was held on St. Swithin's day, 1821.

THE WESLEYAN ASSOCIATION CHAPEL, in Regent Street, will hold about 200 persons. There is a WESLEYAN REFORMER'S CHAPEL in Mill Lane. THE BETHEL MEETING HOUSE FOR SAILORS is on the Quayside. THE LATTER DAY SAINTS have a meeting house in Brunswick Street, at which about a dozen persons attend.

POOR LAW UNION.

THE poor of the Borough and copyhold manor of Stockton, previous to the passing of the present Poor Law Act, were supported by a general rate; and the workhouse, situated at the corner of a street to which it gave name, belonged to the whole parish. The annual amount of poor-rate had increased, between 1816 and 1832, from £1,675 to £2,400.

The district of the Stockton Union is divided into the subdistricts of Yarm, Stockton, and Hartlepool.*

The Yarm subdistrict comprises the parishes of Long Newton, Elton, part of Redmarshall (the townships of Redmarshall and Carleton), Grindon, and Egglecliffe, in the county of Durham; and, in the North Riding of Yorkshire, the chapelry of High Worsall, in Northallerton parish; the parish of Kirk Leavington, consisting of the townships of Low Worsall, Kirk Leavington, Castle Leavington, and Pickton; the parish of Yarm;

* In the population returns of 1851, Sedgfield Union is returned as a subdistrict of Stockton Union. This and some other deviations from the established arrangements of poor law Unions, were made by the parties collecting the census, for the purpose of facilitating their returns.

the townships of Stainton, Maltby, and Ingleby Barwick, in the parish of Stainton; the parish of West Acklam; and the parish of Middlesborough, comprising the township of that name and Linthorpe.

The Stockton subdistrict contains the parishes of Stockton and Norton, in the county of Durham; and the township of Thornaby, in the parish of Stainton, Yorkshire.

The Hartlepool subdistrict contains the parishes of Billingham (including Wolviston), Greatham, Stranton, Hart, and Elwick Hall, and the chapelry of Hartlepool.

The entire area of the Union is 83,774 acres, of which 19,657 acres are in Yorkshire. The whole population, in 1851, was 44,433, of whom 22,389 were males and 22,044 females. In Yorkshire, there were 6,580 males and 6,237 females, or 12,819 in all; the remaining population belonging to the county of Durham.

The income and expenditure of the Union, for the year ending Lady-day, 1851, has been given in vol. i., p. 162. In the following year, the receipts from poor-rates were £10,091 16s., and the receipts in aid of the poor-rates £499 19s., or £10,591 15s. in all; and the total expenditure was £11,043 5s.; that for medical relief being £288. There were 35 children attending the workhouse school. In the year ending Lady-day, 1853, the receipts from the poor-rates were £10,241 1s., and in aid of the poor-rates £245 5s., amounting to £10,490 6s.; whilst the expenditure was as follows:—

In-maintenance	£485 13
Out-relief	4,522 19
Workhouse loans repaid and interest thereon	275 5
Salaries and rations of officers	637 0
Other expenses of, or immediately connected with relief	715 19
Total expended for relief of the poor	6,656 16
Costs of proceedings at law or in equity	200 0
Constables' expenses and costs of proceedings before judges	55 15
Vaccination fees	27 16
Payments on Account of the Registration Act, viz., Fees to clergymen and registrars, outlay for register offices, books, and forms	171 9
Payments for or towards the county, hundred, or borough rate, or police rate	2,473 1
Expenses allowed in respect of parliamentary or municipal registration, and cost of jury list	28 2
Money expended for other purposes	491 7
Total expenditure	£10,104 6

The expenditure for medical relief was £310 6s. The average number of children attending the schools of the workhouse was 28; and the amount of money paid to the board of guardians from the parliamentary

grant in respect of the salaries of teachers was £24 16s. for the year.

In the year ending Lady-day, 1854, the poor-rate received in Stockton amounted to £3,499 18s. There was paid for in-maintenance, £286 9s.; for out-relief, £1,827 15s.; and the total amount, including other payments, expended for the relief of the poor, was £2,698 13s. The law expenses were £77 1s.; vaccination fees, £14 15s.; registration expenses, £35 6s.; and the county-rate, £570 17s.

In 1852, £600 was raised by the sale of the workhouse in Bishop Street, and £601 4s. 9d. directed to be appropriated to the cost of the new Union workhouse in Port-rack Lane, a neat and commodious structure of brick.

CHARITIES.

Alms-houses.—According to a license granted by Bishop Crewe, the alms-houses “for the convenient lodging of poor impotent persons belonging to the township of Stockton,” appears to have been erected about the year 1682. The principal contributors to this benevolent project, which was warmly promoted by the Rev. T. Rudd, were Margaret Bailey, John Stope, Matthew Wiggoner, and James Cook. The latter, on December 29, 1702, bequeathed £100, to be paid to the mayor, vicar, and overseers of the poor, to be placed out at interest at five per cent., or laid out in the purchase of lands or tenements, the yearly produce to be by them distributed amongst the needy and poor people that shall dwell in the alms-houses, for their better support and maintenance; but in case this interest or income was not so paid, it was to revert to his son and daughter, John Cook and Lucy Dalston, whom he appointed his executors. By indenture, November 27, 1732, it was stated that the said John Cook, who alone had administered to the will, had died insolvent; but though Mrs. Dalston was advised that she was not liable to the said legacy, or any part thereof, she agreed to pay £50 for the purposes directed in the will. This donation was applied as part of a sum of £200 payable to Ralph Bunting out of the leasehold premises belonging to the charity school; but no interest has been paid upon it for many years, nor is it known whether the principal was ever paid off.

By will, dated February 16, 1811, George Brown,

* The first master was Mr. Robert Cockerill, who had kept a school in the Toll-booth. His father, “old Cockerill,” was captain of a ship; and, in a violent storm, being washed overboard with one wave, and thrown upon deck again by another, in pious remembrance of this

Esq., (who was also a benefactor to the school,) bequeathed to trustees £3,000 to be applied in rebuilding the alms-houses. With this sum a new building was erected on the same site on the east side of High Street, in 1816, from a plan by Wyatt. It consists of a centre and wings, 123 feet in length, built of brick, with stone dressings. On the right of a spacious arched entrance is a committee room, in which also the business of the Stockton savings bank is transacted; and on the left are commodious apartments appropriated to the dispensary. The upper floor is approached by a covered gallery; and the entire number of apartments in the building, for the residence of poor widows and families, is 36. The alms-people are appointed by the vestry.

Charity or Blue Coat School.—This school was instituted by voluntary subscription in 1721, when a body of trustees was appointed, and it was resolved that a school-room should be taken as near the church as possible; that a master* should be appointed with a yearly salary of £20, to instruct 20 boys to read, write, and cast accounts; and that the said boys should be clothed. In 1759, 16 girls were added, and afterwards four more educated, and, though not clothed, eligible into the school in turn.

In 1729, the trustees purchased the leasehold interest in two closes of meadow-land called Lustram and Elwick-mire, in the town fields of Stockton, which were held under lease from the Bishop of Durham, for three lives, for £670, under a reserved rent of £5 3s. 4d. Towards this purchase, £200, mentioned under *Alms-houses*, was borrowed from Ralph Bunting, Esq. On May 24, 1824, Bishop Barrington renewed the lease of this property at the yearly rent of £5: the fine was £1,080 7s. 4d., from which the bishop made a donation of £700 to the school.

Six copyhold closes adjoining the town, and containing 26 A. 2 R. 31 P., were purchased in 1772 for £1,635, of which £1,205 was advanced by Frances Stapylton. Two of the closes were sold in 1809 for £1,200; and the remainder of the money borrowed for the purchase has been paid off.

The pecuniary legacies and donations, which furnished the means for making the above purchases, have, since 1721, amounted to £2,686 10s. The most important sums are, £100 given by Nicholas Swainston, £100 by Lord Crewe’s trustees, £200 bequeathed by

remarkable escape, he would never afterwards suffer his beard to be shaved, and kept every Wednesday (the day of the week on which it happened) as a solemn fast.

John Swainston, £1,000 bequeathed by George Brown, and the above-named £700 given by Bishop Barrington. The remainder is made up by sums varying from £5 to £50.

The introduction of the national system of education having rendered enlarged accommodation necessary, the present spacious school-rooms, with a garden and dwellings for the master and mistress, were erected in 1816, in Norton Road. Towards this object, £685 12s. 4d. was appropriated from the legacy of George Brown. The building is 58 feet long, 34 broad, and 18 high, and bears an appropriate inscription.

The income of the institution, arising from the leasehold and copyhold property above mentioned, amounted to £199 10s; but an act was passed, June 28, 1833, to enable the trustees of the school to sell and dispose of certain lands and hereditaments belonging to the charity, and to purchase and acquire other lands in lieu thereof, and also the reversion of the lands held by them for lives. The powers thus given have been acted upon for the benefit of the charity.

In the 3 per cent. consols there is a sum of £600, supposed to include £100 given by George Brown in his life-time; another of £550, bequeathed by George Sutton; and another of £400, being the amount of two legacies of £200 stock each, bequeathed by the said George Sutton to the Blue Anchor and Golden Cup clubs, and which came to the funds of this charity when these clubs were discontinued. There is also a yearly rent of £3 paid by the trustees of the said George Sutton, as William Fleatham's gift. To the above regular income of the school, amounting, previous to 1833, to about £250 a year, are added various subscriptions and a collection after a sermon, making an addition of about £30 to £50 per annum.

The school is supplied with books, stationery, and materials for the girls' work, and is conducted (with the modifications noticed below) according to certain rules agreed upon in 1814. By these it is provided that every benefactor of £5 5s., and every annual subscriber of £1 1s., shall be deemed a trustee; that a select committee shall be chosen every year, consisting of five trustees; and that the vicar, the mayor, and treasurer shall always be of the number. That such committee shall visit the school as often as they shall see occasion, particularly at Easter and Michaelmas, to fill up vacancies. That 20 boys and 20 girls of the parish of Stockton shall be clothed according to the old rules; no child to

be taken under 7, or above 11 years of age, and to continue there to the age of 14. That the vacancies shall be filled up from the general school, preference being given to merit. [The number of children clothed is now increased to 40 boys and 40 girls.] That all children who shall continue in the school their full time and behave themselves well, and then go out to some honest employment, shall have a Bible and Prayer Book, and 40s. in money given to them, under certain prescribed regulations. That the joint salaries of the master and mistress shall be £65 per annum [now raised to £100], and that £10 shall be allowed them for coals. That the master shall teach the boys and girls reading, writing, and the common rules of arithmetic, and in the principles of religion and morality; and that the mistress shall instruct the girls in sewing, and such other work as may make them useful. That in the morning and evening, prayers, extracted from the Liturgy of the Church of England, shall be read in the school. That the master, with the scholars, shall attend divine service every Sunday, Wednesday, and Friday, and on other holidays. That the school shall be taught on the Madras system, and that the regulations established in the Barrington School at Bishop Auckland, shall be adopted.

On the visit of the Rev. J. D. Stewart, government inspector, March 10, 1853, there were 64 boys present at examination; 53 had been admitted, and 55 left within the previous twelve months; and the average attendance had been 56. The general observations were—

"Buildings fair; no class-room; brick floor. Desks, two groups of three parallel desks, on a gallery; master's desk. Furniture, stove, gas. Playground, small yard. Books, discipline, and instruction, fair. Apparatus, one large, two small black-boards. Methods; oral lessons might be improved. Five classes for general work, under uncertificated master, and one pupil teacher; three divisions for Scripture, grammar, and geography; one group for arithmetic. The pupil teacher is confined to one class for two months. The boys are arranged in parallel rows."

At the girls' school, there were 54 present at examination. General observations:—

"Buildings, a fair-sized room; separated by sliding partitions from boys' school; no class-room; partly wooden floor; mistress' desk. Furniture, fire-place. Playground, books, discipline, and instruction, fair. Apparatus, two small black-boards and stands. Organization; standard of classification; reading and writing. Four classes for general work, under mistress, with certificate of merit; one division for geography and grammar. The girls are arranged in square classe."*

* One of the most novel and interesting school-treats ever given in Stockton was displayed in the school-room in Christmas week, 1854.

It consisted of a Christmas tree, of unusual dimensions, and decked with about 450 useful and ornamental articles intended as presents for

Jenkins's Charity.—Major John Jenkins, a native of Wales, who came into the north with Cromwell's army, bequeathed, in 1661, 5*2*s. per annum to the poor of Stockton, 1*2*d. to be paid every Sabbath day in white bread. This sum is paid to the churchwardens by the owners of certain lands in the parish, and 1*2* penny loaves are provided every Sunday, which are given to poor widows who attend divine service.

Bunting's Charity.—Elizabeth Bunting, by will, July 14, 1765, gave £300 to the vicar and churchwardens of Stockton, for the poor of the parish, not receiving relief from the rates. Her personal estate not being sufficient for the payment of her debts, George Hartley and Ann his wife, desirous to perpetuate this charitable donation, invested a like sum, on the 25th of February, 1772, in the purchase of £378 1*3*s. 6*d*. three per cent. consols in the names of trustees. The dividends, amounting to £11 7*s*. per annum, are transmitted to the vicar, who distributes the amount amongst poor persons of Stockton, in sums varying from 10*s*. to 20*s*., and in some cases to 40*s*. A book is kept, containing an account of the recipients.

Snowdon's Charity.—John Snowdon, in 1781, bequeathed £100 three per cents. stock for the benefit of four decayed housekeepers of Stockton, shoemakers to have the preference. (See NORTON.)

Sutton's Charities.—George Sutton, besides his legacies to the Charity School, bequeathed to trustees, April 4, 1815, £500 three per cent. consols, the dividends to be paid to the treasurer of the female benefit club in Stockton, whereof his late wife and Mrs. Ann Sleigh were the original patronesses. Also £100 like stock, the dividends to be invested half-yearly, so that the same should accumulate for 20 years, after which time the dividends of the whole should be paid to the

treasurer of the other female benefit club in Stockton. He further directed that his executors should set apart £200 like stock, for each of the five benefit clubs of men in Stockton which should be subsisting at the time of his death, the dividends to be paid to the treasurers of such clubs for the time being, under certain specified regulations; and that in case the said clubs of men or women should be discontinued, the stock which would have been appropriated to their benefit should be transferred to the trustees of the Blue Coat School, for the purposes of that charity.

In respect of the £500 left for the female benefit club first mentioned, £15 per annum is paid to its treasurer. The yearly sum of £3, in respect of the legacy of £100, was re-invested from time to time as directed, and the dividends of the whole are applied to assisting the income of the other female benefit club. Two of the bequests to mens' benefit clubs have fallen to the school; and the dividends in respect of the residue, £600 stock, are divided equally, and paid over to the treasurers of three male benefit clubs still existing. Thomas Richmond, Esq., is the present treasurer.

Mr. Sutton also bequeathed to the late Mrs. Sutton's Blanket Fund the interest of £200 five per cent. consols; to the Dispensary, while that establishment shall continue, the interest of £300 three per cent. consols; to the Sunday schools, the interest of £100 do.; to the School of Industry, the interest of £300 do.; as an addition to the stipend of the church organist (interest to accumulate for 20 years) £400 do.; towards enclosing a burial-ground, if purchased within six years from the testator's death, £600 do.; towards paving, lighting, and improving the town, if an act of parliament should be procured within five years from his death, £200; and to the Bible Society, £100.*

the children. This tasteful and liberal display had been provided by several ladies of Stockton, under the auspices of the vicar. The school was decorated with flags and artificial flowers; and the promenade was enlivened by vocal and instrumental music.

* ADMIRAL SIR THOMAS BERTIE, K.S.—In the will of this distinguished officer was the following passage:—"And if my old nurse, Ann Thompson, of Stockton-upon-Tees, in the county of Durham, widow, shall happen to be living at the time of my decease, I give and bequeath to her the sum of fifty pounds sterling. But in case she shall not then be living, I do hereby give and direct the same to be distributed amongst the poor of the town of Stockton aforesaid (that being the place of my birth). And it is my will and desire that such distribution shall be made under the sole direction and discretion of the mayor of the same town, for the time being, into whose hands I direct my executors, hereinafter-named, to pay the same." Ann Thompson died in his lifetime; and on the death of the admiral, in 1825, his executors and brothers, William and Ralph Hoar, on the

11th of October in that year, paid the full legacy into the hands of William Skinner, jun., Esq., then mayor of Stockton, for distribution.

Admiral Bertie was the fourth son of George Hoar, Esq., of London and of Stockton, deputy master of the Jewel Office in the Tower, by Frances, daughter of William Sleigh, Esq. He was born at Stockton on July 3, 1758; and after being instructed in the theoretical branches of his profession, under Mr. Harris at Christ's Hospital, he entered on actual service in October, 1773, on board the *Seahorse*, commanded by Captain Farmer, and sailed soon after to the East Indies. In this vessel he first met, and became the messmate of Nelson and Trowbridge; and an intimate friendship commenced with them, which continued uninterrupted through life. Whilst serving as lieutenant in the *Monarch*, Capt. Rowley, Lieut. Hoar introduced the life-buoy into the service; and the ship led the van division in the action between Keppel and D'Orvilliers. In 1779, when on board the *Suffolk*, he was in the action of Grenada; and in the following year, he was in the *Conqueror*, which formed part of Admiral Rodney's fleet in the action with De Guichen. In 1789, he was made

BENEVOLENT INSTITUTIONS.

THE DISPENSARY.—This institution, which affords medical and surgical assistance to the poor, was established in March 16, 1790, but was closed at the end of July, 1812, and continued so until January, 1815. It originally occupied part of the workhouse; but on the building of the present Alms-houses in 1816, apartments therein were appropriated to this useful charity. The gentlemen of the faculty give their attendance; and the house apothecary receives a salary of £90 per annum for receiving patients in the forenoons of Mondays, Thursdays, and Saturdays; and for dispensing medicines on every afternoon, Sundays and Tuesdays excepted; as well as for attending at their own houses those patients who are not able to leave home. Contributors of one guinea and upwards annually, and benefactors of ten guineas, are entitled to have at all times two patients on the books of the charity for each guinea subscribed, or benefaction of ten guineas. Contributors of less than one guinea are allowed to recommend to the charity two patients for each five shillings subscribed. The donations to the institution have been—In 1817, a legacy by G. Sutton, Esq., (see CHARITIES,) interest of £300 in the three per cent. consols; in 1820, a legacy by Mr. Robert Christopher, £18; in 1824, the managers of the Newcastle Musical Festival, a donation of £25; in 1831, the Bishop of Durham, £40; in 1832, a legacy by J. R. Rountree, Esq., £18; in 1834, a legacy by Mrs. Elizabeth Crowe, £20; in 1835, a donation by Mr. William Mitcalfe, London, £5; in 1843, L. Raisbeck, Esq., interest of

commander of the *Duc d'Estisac* sloop, in which he served till the end of the American war. On the 20th of May, 1788, he married Catherine-Dorothy, daughter and coheirress of Peregrine Bertie, Esq., of Low Layton, Essex, whose name, agreeably to the will of that gentleman, Captain Hoar assumed.

Whilst Captain Bertie commanded the *Ardent*, the board of ordnance adopted an improvement suggested by him, on the 42-pounder carronades. On the capture of the Texel fleet, he escorted the whole of the prizes to the Nore. At the battle of Copenhagen, under Lord Nelson, Bertie particularly distinguished himself in the *Ardent*, by compelling four of the Danish flotilla to surrender, for which he received the thanks of Nelson, who visited his ship for the purpose on the morning after the battle. After being employed in the blockade of the Spanish fleet at Cadiz, he was appointed to the command of the *Corageaux*, 74, which ship was nearly wrecked in a storm, whilst conveying a fleet of 170 merchantmen to the West Indies. On the 28th of April, 1804, whilst commanding the *St. George*, attached to the Channel fleet, he was promoted to the rank of rear-admiral of the blue; and, during his services in the Baltic in 1809, the king of Sweden created him a commander of the military Order of the Sword. Ill health and an impaired constitution, however, compelled Rear-admiral Bertie, on

£1,700;* and in 1846, a legacy of £200 by the same gentleman.

In the year 1854, the annual subscriptions amounted to £64 8s.; and the total income and expenditure were respectively about £170. The number of patients on the books at the commencement of the year was 61, and 834 were admitted during the twelve months, making a total of 895. Of these, 770 were discharged cured, 7 relieved, 3 discharged for private attendance, 24 transferred to the Union district surgeon,† 1 left the town whilst ill, 26 died, and 70 remained on the books, January 1, 1855.

A SOCIETY FOR THE RELIEF OF LYING-IN WOMEN was commenced in 1817, and is supported by voluntary subscriptions. The Marchioness of Londonderry is the patroness. Each person relieved is supplied with a loan of bedding and baby linen for a month, besides a present of a bushel of coals and a pound of soap, a supply of gruel and bread for twelve days, and a donation of 1s. From 60 to 80 poor women have been annually assisted by this charity.

THE SOCIETY FOR PROMOTING CHRISTIAN KNOWLEDGE.—A sermon is preached annually in behalf of the funds of this society, to which there are also a number of subscribers.

THE TOWN MISSION, established 1849, employs an agent, with a salary of £70 per annum, to visit the poor and sick, the lodging-houses, and the shipping, to deliver and exchange tracts, &c. *A Female Protection*

the 10th of February, 1810, reluctantly to strike his flag. At that time, he had been 25 years afloat, of which upwards of 20 were spent in the service of war; and he had been engaged in between 20 and 30 actions, general or partial. He afterwards passed through the progressive gradations of rank, until, on the 28th of May, 1825, he attained the honour of "Admiral," which, however, he did not long live to enjoy. He died at Twyford Lodge, Hants., the residence of his brother, George Hoar, Esq., on the 14th of June, 1825, in the 67th year of his age.

* At the disembodiment of the "Loyal Stockton Volunteer Infantry," (the non-commissioned officers and privates of which, with their wives, widows, and lineal descendants, are entitled, by the rules of the Dispensary, to a preference as patients,) certain sums had accumulated from officers not accepting the pay allowed, and other sources, which were held by Mr. Raisbeck, the commanding officer, and put out at interest, until they attained to the above amount. This sum was then placed in the hands of trustees, by whom the interest, £65 10s. 5d., is paid to the institution.

† Up to April, 1837, paupers were relieved at the Dispensary, in consideration of a subscription from the poor-rates.

Society is connected with the mission, which also extends its efforts to the Ragged School. During the year 1854, the subscriptions amounted to £54 18s. 9d.; the ladies' basket, £25; children's bazaar, £26; collection at annual meeting, £2 0s. 2d.; interest, 18s. 7d.; total income, £108 17s. 6d.

STOCKTON AUXILIARY BIBLE SOCIETY.—This society, of which the Rev. F. J. James, vicar, is president, and W. Skinner, Esq., secretary, recently contributed £101 19s. 7d. to the jubilee fund of the parent society. In the year 1853-4, the subscriptions, exclusively on the purchase account, amounted to £14 0s. 1d.

EDUCATIONAL AND LITERARY INSTITUTIONS.

GRAMMAR SCHOOL.—In 1785, a spacious room was built by subscription, in West Row, for a Grammar School; the ground on which the building was erected being leased to the corporation from the Bishop of Durham. The school was afterwards removed to a house belonging to the late W. Skinner, Esq., in Skinner Street; and the building in West Row was sold in 1851. The premises in Skinner Street were taken from the corporation on lease for a limited period, which is now about to expire. The master usually receives £76 from the corporation, on condition of teaching six boys recommended by the mayor.

TRINITY SCHOOLS.—These schools, connected with Trinity church, consist of a boys' school, the School of Industry, and an infant school, and are situated in Yarm Lane. The site for the buildings was given by the Bishop of Durham. The schools are under government inspection; and on the visit of the Rev. D. J. Stewart, March 11, 1853, there were 110 boys present at the examination; 63 had left, and 8 had entered during the preceding twelvemonth; the average attendance was 103. The inspector's general observations were—

“Buildings, good sized room; no class-room; brick floor. There are signs of settlement in the building. Desks, three groups of three parallel desks, on a gallery. Furniture, stove. Playground fair. Books and discipline fair. Apparatus, one black-board and easel. Methods and instruction moderate. Organization fair;

* JOHN CHIPCHASE.—Mr. John Chipchase, who died at Stockton, at the advanced age of 70, March 13, 1816, was a member of the Society of Friends, and a distinguished teacher of mathematics. Of industrious habits and close application to study, he was fortunate in becoming a pupil of Emerson (see HURWORTH, vol. i., p. 499). Mr. Chipchase was, for half a century, a successful teacher of mathematics; residing in a seaport town, his instruction was invaluable to young men studying navigation, and many young Danes and Nor-

wegianians were at various times placed under his tuition. He was strongly attached to his native town, and particularly to its local history. He was an active member of the religious society with which he associated, and in controversial politics, in which he never violently engaged, his sentiments were on the liberal side of the question. With much study and attention to his numerous pupils, he appears to have injured his constitution, which had never been strong, and he died much lamented by his scholars and a large circle of friends.

standard of classification: reading and arithmetic. Six classes for general work, under uncertificated master; first and second class occasionally formed into one division for Scripture lessons. Boys arranged in square classes, and at parallel desks.”

The School of Industry was established in Castle Gate in 1803, for educating and clothing females free of expense, and is supported by voluntary contributions. Efforts are now being made to effect an enlargement of the school. For this purpose, an amateur concert was given in the Borough Hall, on the 30th of January, 1855, under the patronage of the mayor, T. Craggs, Esq., and the ladies' committee of the school, when between £90 and £100 was realized. A plan of enlargement was forwarded to the Council of Education by Mr. Clephan, architect, which was approved of. Queen's scholarships have occasionally been obtained by apprentices from this school. The average attendance at the time of the inspector's visit was 88; 78 had been admitted, and 70 left during the preceding twelvemonth; and 93 were present at the examination:—

“Buildings, the room is not large enough for the children; no class-room. Desks, two groups of three parallel desks, on a gallery. Furniture, clock, two flap desks. Playground and instruction fair. Books, a supply is wanted. Apparatus, three black-boards. Method, the oral lessons might be improved. Discipline good. Organization; standard of classification: reading. Five classes for general work, under mistress, with certificate of merit, and two pupil-teachers: first and second class form a division for Scripture lessons. The pupil-teachers are each confined for one month to one class.”

At the infant school, 76 were present at the examination, and the average attendance was 90:—

“Buildings fair. Desks, gallery. Playground, fair-sized yard. Books, apparatus, methods, discipline, and instruction, fair. Organization; standard of classification: reading. Nine classes for general work, under untrained mistress; three divisions for object lessons, Scripture lessons, and arithmetic.”

OTHER SCHOOLS.—There are three boarding schools in Stockton. A school on the national system for boys, girls, and infants, was opened April, 12, 1847, in the Square; and the *British School* for boys and girls, in Tennant Street, has four pupil teachers, and an attendance of above 200 children. St. Mary's Catholic school, in Major Street, is attached to the chapel. Besides the two *infant schools* connected with the national schools, there is one in Regent Street; there are also ten day schools in the town.* Thornaby

wegians were at various times placed under his tuition. He was strongly attached to his native town, and particularly to its local history. He was an active member of the religious society with which he associated, and in controversial politics, in which he never violently engaged, his sentiments were on the liberal side of the question. With much study and attention to his numerous pupils, he appears to have injured his constitution, which had never been strong, and he died much lamented by his scholars and a large circle of friends.

national school, for boys and girls, is in South Stockton. *Sunday-schools* are attached to most of the places of worship in the town. A *Ragged School* was established in the Castle Gate in 1853; it is supported by private subscription, and the average attendance is about 60.

MECHANICS' INSTITUTION.—"The Stockton, Yarm, and Norton Institution for the Instruction of Mechanics and for the promotion of useful Knowledge," was established April 11, 1825, and occupied a large room in Mason's Court. Sanguine hopes of success were entertained on its commencement; but, after the novelty of the experiment had subsided, the number of members declined from 224 in 1826 to 94 in 1829. In the following year, a smaller room was taken for the library, which was opened two evenings in the week for the delivery of books during the next five years. In 1836, a society called the "Reading Association," was formed; and a union of the two institutions was effected April 5, 1837, under the name of the "The Mechanics' Institution and Reading Society." This name was altered in 1846 to "The Stockton Institution of Literature and Science,"

Like many similar institutions, this has required all the energy of its conductors to procure the support requisite for its prosperity. Newspapers were introduced in 1848, in which year the library was removed to the Temperance Hall, Tennant Street. Summer excursions and Christmas festivals were continued from year to year, and numerous lectures were delivered on various subjects, in aid of the general funds. Efforts were for some time made to procure the erection of a suitable building, by shares of £1 each; and donations to the amount of £50 were received, including £20 10s. from the bishop, £10 from Lord Harry Vane, and £5 from C. B. Bewicke, Esq. In 1851, the members, desirous of ensuring the future stability of the Institution, entered into negotiations for the purchase of the *Corporation Hall*, on the north side of Dovecot Street, which was ultimately effected at a cost of £1,100.

The foundation stone of this building was laid on the 30th of November, 1839, by Thomas Jennett, Esq., mayor of Stockton; and a number of coins were deposited under the stone. On the 23d of October, 1840, the building was opened by a splendid soiree. Its interior comprised a range of spacious public rooms, consisting of the Stockton news room, the superintendent registrar's office, a dwelling-house, and cellars. In 1851, however, the building was advertised for public sale. A considerable portion of the purchase money

was allowed to remain on mortgage of the premises; and, amongst other efforts to liquidate the liability, a bazaar on a grand scale, with evening promenade concerts, was held in the Borough Hall, on the 25th, 26th, and 27th of July, 1853. A superb screen, which was disposed of by the committee by lottery, was presented by the Marchioness of Londonderry; and numerous other valuable articles of taste and utility were contributed by the neighbouring gentry and tradesmen. The institution is in possession of a valuable library, consisting, at the close of 1854, of 1,727 volumes, besides a variety of apparatus and mechanical instruments, and a collection of minerals. A general meeting is held quarterly for the discussion of literary, philosophical, and scientific subjects, &c.; and the library is open three evenings in the week from October to April inclusive, and two evenings in the week the remainder of the year. Classes for instruction in various branches have long been established. There are upwards of 400 members, of whom the first class pay 15s., the second 10s., the third 8s., and the fourth 5s., per annum. Ladies are admitted at the latter charge, which entitles them to all the privileges of membership except the news room.

In 1849, the committee engaged two acres of ground in the vicinity of the town, which they drained and divided into 19 compartments; these are relet for gardening purposes to members of the Institute at from 7s. 6d. to 11s. per annum each.

A preliminary savings bank, in connection with the institution, was opened April 17, 1852, by 30 depositors. At the end of the year, the number had increased to 96; the amount deposited being £132. The object of this bank is to act as an auxiliary, by enabling parties to deposit smaller sums than are received by the savings bank of the town, to which, as they accumulate, they are, if desired by the depositors, transferred.

ATHENÆUM.—At the inaugural meeting of this institution, held in the Corporation Hall, April 19, 1850, 50 persons enrolled their names as members.

THE SUBSCRIPTION LIBRARY was commenced July 5, 1791, and contains a number of useful and entertaining volumes in various departments of literature. The members pay a subscription of one guinea per annum each. The business of the institution is under the direction of a committee; and the library is kept in premises in High Street.

CHURCH LIBRARY.—Mr. John Stock, formerly a schoolmaster in Stockton, gave to the church there a collection of books, many of them on subjects of polemical divinity, written in the 17th century, with good editions of some of the Fathers. This collection was made the foundation of a divinity library in 1799; and the vestry room was fitted up for its reception. The subscription is 2s. per annum.

* **JOSEPH RITSON.**—Amongst the erudite and intelligent natives of the town of Stockton, none occupy a higher place than Joseph Ritson, born on the 2nd of October, 1752, and distinguished as a critic and antiquarian. His destination was the law, and he was placed with Ralph Bradley, Esq., an eminent conveyancer of the town. (See GREATHAM.) After some few years, he entered Grey's Inn, where he was called to the bar; and continued a member until his death. He practised exclusively as a conveyancer; and his talents, accuracy, and integrity, secured him a high professional character, which might have led to affluence and wealth; but disdaining the plodding, dry technicalities of the law, he sought out something more congenial to his taste, in ancient English poetry, old ballads, and the drama; contenting himself with a moderate share of business, merely sufficient to eke out a small private income. He spent a great part of his time in the then little explored treasures of the British Museum; his daily walk being, when in London, between his own chambers and that place.

He was naturally of a delicate constitution; which was perhaps rather weakened by the extreme abstinence which he imposed upon himself, being a strict vegetarian, abstaining from animal food from principles of humanity. He wrote a book in defence of his principles on that subject. In this work, which is entitled "An Essay on Abstinence from Animal Food as a Moral Duty, by Joseph Ritson, 1802," he says, "Mr. Richard Phillips, the publisher of this compilation, a lusty, healthy, active, and well-looking man, has desisted from animal food for 20 years: and the compiler himself, induc'd to serious reflection, by the perusal of Mandeville's Fable of the Bees, in the year 1772, being the 19th of his age, has ever since to the revisal of this sheet, firmly adhere'd to a milk and vegetable diet, having, at least, never taste'd during the whole course of those 30 years, a morsel of fish, flesh, or fowl, or any thing, to his knowledge, prepar'd in or with those substances, or any extract thereof, unless, on one occasion, when tempted by wet, cold, and hunger, in the south of Scotland, he venture'd to eat a few potatoes, dress'd under the roast: nothing less repugnant to his feelings, being to be had: or except by ignorance, or imposition; unless it may be in eating eggs, which, however, deprives no animal of life, though it may prevent some from coming into the world to be murder'd and devour'd by others."

Ritson had also adopted peculiar ideas, with respect to both religious and civil government; and in his controversies, is said to have displayed an indefensible asperity, which caused him to be represented rather as a cynic and misanthrope. Sir Walter Scott (with whom he was on intimate terms, brought about no doubt by a similarity of taste for old ballad lore), says, "As for Ritson, he and I still continue on decent terms, but I dread I shall see a whisker first and then a claw stretched out against my unfortunate lueubrations." This was in allusion to the publication of his *Border Minstrelsy*. Scott further says, in a letter to a friend, "I loved poor Ritson with all his singularities; he was always kind and indulgent to me; he had an honesty of principle about him, which, if it went to ridiculous extremities, was still respectable from the soundness of the foundation. I don't

OTHER LIBRARIES.—The Unitarians and Wesleyans have libraries in their respective chapels. The town formerly contained four circulating libraries; but there is now only one.*

SUBSCRIPTION NEWS ROOM.—The subscription to this room, which is in the Town Hall, is 21s. per annum. There is a good supply of London and country

believe the world could have made Ritson say the thing he did not think; I wish we had his like at present."

Ritson once paid a visit to Scott, when the great minstrel lived at Lasswade; and met there John Leyden, another kindred spirit and antiquarian, who, far from imitating his host's forbearance, seems to have taken a pleasure in tormenting and ridiculing the peculiarities of his brother guest. Amongst other circumstances which happened during their stay, Scott delighted to detail the scene which took place when his two uncouth allies first met at dinner. Well knowing Ritson's holy horror of all animal food, Leyden complained that the joint on the table was overdone; "Indeed for that matter," cried he, "meat can never be too little done, and raw is best of all." He sent to the kitchen accordingly, for a plate of literally raw beef, and manfully eat it up, with no other sauce but the exquisite ruefulness of the Pythagorean's glances. Amongst Ritson's peculiarities, he adopted a singular orthography, which he intended should give every word, root, and derivative its full value. Scott says, with respect to this whim, "Ballantyne, the Kelso printer, who has a book of his in hand, groans in spirit over the peculiarities of his orthography, which, sooth to say, hath seldom been equalled since the days of Elphinstone, the ingenious author of the mode of spelling according to the pronunciation, which he aptly termed 'Propriety ascertained in her picture.'"

Though Ritson did not pretend to be an author, yet the many dissertations prefixed to his ancient songs and metrical romances; his life and notes to "Robin Hood," in which he collected together all the Poems, Songs, and Ballads, relating to that celebrated English outlaw; and several other illustrative essays, evince a depth of research and originality of powers of no ordinary character. And at the sale of his books, Johnson and Stevens' edition of Shakespere, with 3 vols. of MS. notes by Ritson, sold for £110. He also wrote and published several works on legal subjects; and is said to have assisted Hutchinson in his *History of Durham*, and prepared some materials for a "Villarc" of his own.

But what connects Ritson more particularly with this district, is his publication of the *Bishopric Garland*, or *Durham Minstrel*, being (as he says in the title page) "a choice collection of excellent Songs, relating to the above County, full of agreeable variety, and pleasant mirth," first published in 1784. This collection of odd rhyme and old song is made up, principally, of that kind of lore, in which are recorded, as Goldsmith says, "the short and simple annals of the poor," ditties which "at her wheel the village maiden sung;" some of them of considerable antiquity, dated as far back as 1282. Some of these pieces, he says, were gathered "orally," others were taken down as they were sung in the Market Place. And of these trifles, collected in this way, it has been recorded, on his own authority, that they sold better than any other of his various publications. The *Bishopric Garland* is made up of eighteen different pieces, the first and longest of which (under the title of "a Durham Garland") is in four parts; and is said by Lockhart to have been taken by Sir Walter Scott as his ground work for the novel of *Guy Mannering*. Ritson also edited and published the *Yorkshire Garland*, the *Northumberland*

journals; and any stranger may be admitted on being introduced by a subscriber.*

PUBLIC BUILDINGS.

THE TOWN HALL, OR TOWN HOUSE.—This edifice, the order of court for the erection of which is dated March 9, 1735, occupies the centre of High Street. In

Garland, and the North Country Chorister. "The Life of King Arthur, by Joseph Ritson," was published, after the death of the author, by his nephew, Joseph Frank, Esq., of Stockton. Ritson died at Hoxton, in the vicinity of London, in the house of Sir Jonathan Miles, under a fatal attack of his mental faculties, September 23, 1803, in the 52nd year of his age.

* **BRASS CROSBY, Esq.**—The politicians of Stockton, whilst discussing "the manna of the day," may well exult in the reflection, that much of the interest of modern newspapers is derived from a source for which they, and the British public generally, are mainly indebted to the patriotism and public spirit of a native of the town. Brass Crosby, born May 8, 1725, was the son of Hercules Crosby, a respectable burghess of Stockton, and of Mary, daughter of John Brass, of Blackhalls, in the parish of Hesleden. After being placed with a respectable solicitor in Sunderland, he removed to London, where he practised with success, and was introduced to public life in the office of city remembrancer in 1760. He served as sheriff in 1764, in the following year was made an alderman, and became lord mayor in 1770. In his address of thanks on this occasion, he assured his fellow citizens that, at the risk of his life, he would protect them in their just privileges and liberties; and the strong political feeling which prevailed at the period, particularly in the city of London, rendered it not improbable that some circumstance would occur to call those principles into action. Mr. Crosby was then M.P. for the borough of Honiton, and was first brought into conflict with the government by refusing to back the press warrants, which, until this period, were current in the city. An exciting contest with the House of Commons followed. The Speaker had issued his warrant against the printers of the *Gazetteer* and the *Middlesex Journal*, two of the papers of the day, on a charge of misrepresenting the speeches of certain members of the house. As the printers refused to appear at the bar, a royal proclamation was issued for their apprehension, and they were brought before Aldermen Wilkes and Oliver, by whom they were not only discharged, but bound over to prosecute the person who made the capture. An appeal to the lord mayor was, about the same time, made by Mr. Miller, printer of the *London Evening Post*, who had likewise been taken into custody by a messenger from the house, on a similar charge to those against the other printers. The serjeant-at-arms consequently attended at the Mansion House, to demand the bodies of both printer and publisher; but as he had not applied to a magistrate to back the warrant, or to any peace-officer of the city to assist him, his lordship informed him "that as long as he held the high office of lord mayor, he was the guardian of his fellow citizens' liberties, and that no power on earth should seize a citizen of London without authority from him or some other magistrate of the franchise." He accordingly declared Miller at liberty, and made out a warrant to commit the messenger for an assault and false imprisonment. At the request of Miller's counsel, the commitment received the signatures of Aldermen Wilkes and Oliver, in addition to that of Crosby; but the messenger was bailed by the serjeant-at-arms.

The House of Commons was indignant at this defiance of its

1744, it was enlarged, on the pulling down of the old Toll-booth, a mean building, ascended by steps, and built on open arches. The present structure is large and commodious, forming a square building, three sides of which are three stories high. Attached to the fourth or north side is a piazza, supported by six pillars, erected in 1768, for the accommodation of the market people. The Assembly Room,

authority, and ordered the lord mayor and Alderman Oliver to attend in their places (together with Alderman Wilkes), to answer for withstanding the execution of the warrant. Oliver was voted to the custody of the lieutenant of the Tower on the 25th of March; and, on the 27th, on a division of 202 to 39, the lord mayor was committed to the same place. It was moved that, in consequence of his bad state of health, he should only be committed to the custody of the serjeant-at-arms; when Crosby immediately rose and said, "An honourable gentleman has talked of the lenity to be shewn me on account of my health, and my being only committed to the custody of the serjeant-at-arms. I know that I was prejudged on Monday, and that the string of resolutions and warrants is now in the gentleman's pocket. I ask no favour of this house—I crave no mercy from the treasury bench—I am ready to go to my noble friend in the Tower, if the house shall order me. My conscience is clear, and tells me that I have kept my oath, and done my duty to the city of which I have the honour to be chief magistrate, and to my country. I will never betray the privileges of the citizens nor the rights of the people. I have no apology to make for having acted uprightly, and I fear not any resentment in consequence of such conduct. I will through life continue to obey the dictates of honour and conscience, to give my utmost support to every part of the constitution of the kingdom, and the event I shall always leave to heaven, at all times ready to meet my fate." The excitement out of doors was very great. In returning from the house, the populace took the horses from the lord mayor's coach, and drew it to Temple Bar, though it was then midnight; and having conceived some suspicion of the deputy serjeant-at-arms who attended him, when they got there they shut the gates, and informed his lordship that those with him had been drawn to the utmost extent of their boundaries, and that they must now immediately get out of the coach. The lord mayor comprehended the full extent of the danger they were in, and pledged his honour that the gentlemen with him were his particular friends, who were to accompany him home; upon which the procession proceeded to the Mansion House with loud huzzas. The lord mayor slept there that night, and in the morning went privately to the Tower.

The committal and imprisonment of the lord mayor of London was felt to be an event of peculiar and extraordinary importance, not only in the city, but in all parts of the kingdom. He was at once honoured with the freedom of the city of Worcester and of the town of Bedford; and addresses to him were forwarded from the counties of Carmarthen, Pembroke, and Cardigan, the towns of Newcastle, Stratford, and Honiton, the common councils of every ward in London, and many patriotic clubs. His lordship remained in prison until the prorogation of parliament, when, on the 8th of May, he left the Tower, accompanied by Alderman Oliver, under the discharge of 21 pieces of cannon belonging to the honourable members of the Artillery Company, and passed along Tower Street, and straight through the city, in the state coach with all the city honours, and with a procession of 53 carriages in his train. At night, the city was illuminated. At the conclusion of his mayoralty, Mr. Crosby received the thanks of the corporation, and a splendid silver cup, value £200. Indeed, the feeling of the nation was unequivocally shown on the

which occupies the whole of the upper part of that side of the building, is now to be converted into a council room, magistrates' room, and county court, instead of that portion of the Borough Hall which is used for those purposes; a portion of the first floor is to be appropriated for the town surveyor, news room, &c. The principal entrance to the Hall, above which is a sculpture of the arms of the borough, is at the south-west angle. On the centre of the building is a square tower, containing a clock, the gift of Robert Clarke, Esq., recorder of Stockton, in 1804. At the top of an upper and diminished story of the tower is an entablature and balustrade, each corner of which is supported by two round columns. The whole is surmounted by a spire.

BOROUGH HALL.—The corporation of Stockton, having decided on the necessity of providing improved accommodation for the business of the borough, purchased a large mansion in High Street, near the south end of the town, the residence of the late Richard Dickson, Esq., and formerly occupied by Colonel Sleigh. The house in front admitted of easy conversion into council-chamber, justice-room, offices, &c.; and behind there was a spacious area, consisting of a yard and garden, on which to build a hall. The adaptation of the premises to the intended purpose was intrusted to Mr. W. Clephan, architect, of Stockton. The front building merely required its interior arrangements to be altered. The yard was covered with a a ridged roof of glass, and forms a pleasant, sheltered approach from the house to the hall, suitable for a conservatory, and in which flower shews may be held with good effect. Its dimensions are 72 feet by 23. A lobby, 27 feet long by 8 wide, with a retiring room on each side, connects this approach with the hall itself. The hall is an elegant building, though in no particular style of architecture. Its interior is 80 feet long, 36 wide, and 36 high. Light is obtained by a large window at each end, filled

occasion; and the fact that, since that period, the proceedings and debates in parliament have been regularly printed and published, which before they were not, is sufficient to secure to Crosby the gratitude of posterity as well as the plaudits of his contemporaries.

It is related that a vagabond, having been brought before Mr. Crosby when sitting alderman, said, "I think you and I have been in all the gaols in England." "How, you rogue?" "Why, your worship has been in the Tower, and I have been in all the rest."

Mr. Crosby's prosperity in life was considerably advanced by three successive marriages. His first wife was Mrs. Walraven, widow of a rich salesman and dealer in seamen's tickets; his second, Mrs. Coombe, was the widow of a collar maker to the ordnance; and in 1772, he led to the altar, as his third bride, Mary, daughter of Mr. James Mead, a wealthy merchant of London, and widow of the Rev. James Tattersall, rector of Gatton, Surrey, with whom he had the manor of Chelsfield

with obscured glass; and there are three elegant gasaliers suspended from the ceiling. The hall is appropriated for holding public meetings, bazaars, assemblies, &c. It was opened on the 15th of May, 1852, by a dinner, to which the mayor and corporation had invited the chairman and directors of the Leeds Northern Railway (the first train of which arrived at Stockton on this day), the chairman and directors of the Stockton and Darlington Railway, the chairman and directors of the Stockton, Hartlepool, and Clarence Railways, the Tees Navigation committee, the Middlesborough Improvement commissioners, and other gentlemen. The total cost of the Borough Hall was £3,300, as appears by the following details:—

	£	s.	d.
Purchase of the premises	1,500	0	0
Site sold off to the county for police station	300	0	0
	1,200	0	0
New hall	1,350	0	0
Vestibule	300	0	0
Alterations and repairs in house	150	0	0
Lighting and furnishing hall and vestibule	300	0	0
	£3,300	0	0

MARKET COLUMN.—A little to the south of the Town Hall there was formerly an old covered cross. It was removed in 1768, and replaced by a handsome Doric column, 33 feet high, resting on a square base, which is approached on each of the sides by four steps.

THE SHAMBLES.—In 1768, shambles were erected for the butchers. Being, in 1821, considered unfit for their purpose, the corporation came to a resolution of rebuilding them; and the foundation stone of the new erection was laid June 21, 1823. After the work had been carried on a few days, however, it was levelled by order of a party in opposition to the measure. It was again begun, and again demolished; and, in the following year, council was heard on both sides at the Town Hall, when a verdict was given in favour of the projected

Court, in Kent. Alderman Crosby was President of Bethlem and Bridewell Hospitals, Governor of the Irish Society, Vice-president of London Workhouse, and Chairman of the four City Commissions, viz., 1, The city and bridge-house estates; 2, the Thames navigation; 3, the control over the corn and coal meters; and, 4, general purposes. He was also trustee (as one of the senior aldermen) of Greenwich Hospital, Wilson's charity, &c. He died February 11, 1793, in Chatham Place, and was buried with considerable pomp in Chelsfield church. As he had no surviving issue by any of his wives at the time of his death, his large property, with the exception of several small legacies and annuities, which latter were to devolve on the decease of the parties to the hospitals of Bethlem and Bridewell, was divided amongst his five sisters or their children. A good portrait of this patriotic magistrate is placed in the Irish Committee-room, Guildhall.

improvement, and notice of appeal laid in by the oppositionists. The work was now proceeded with; and the building completed and opened in June, 1825. It is of brick, one story high, with stone cornices along the tops of the walls and the windows; and with convenient interior arrangements. A portion of the shambles, at the north end, has recently been converted into a corn exchange. The situation of the whole, it must be owned, in the centre of the Market-Place, is prejudicial to the appearance of the High Street.

The erection of a general *slaughter-house* in a suitable place is in contemplation. A field has been purchased for the purpose, situate at the north end of the town, at a cost of £900.

THE CUSTOM-HOUSE.—In 1681, in consequence of the decline of Hartlepool, the chief offices of the customs were removed from thence to Stockton; and in 1683, three free quays were appointed by a commission from the Exchequer. The first Custom-house was in the Red Lion Inn Yard, whence it was removed in 1696 to the foot of Finkle Street. In 1730, a new Custom-house was built by the corporation on the site of the old one. The present building was erected in 1828, to the north of that last named, but still near the Quay. Its interior is commodious, and the principal room is well lighted from a dome in the roof. Several good warehouses for wet and dry goods are attached. The business, however, will, on and after the 17th May, 1855, be conducted in a portion of the Borough Hall.

THE BRIDGE.—The passage between Stockton and the Yorkshire side of the Tees was formerly effected by a ferry boat, the tolls of which were leased under the Bishop of Durham. In 1762, an act of parliament was obtained for building a bridge across the Tees, near the place used by the ferry; and the foundation stone of the edifice was laid August 23, 1764. It was built by subscription, and completed in April, 1771; the cost being £8,000, and the subscribers entitled to interest not exceeding five per cent. In compensation for the ferry-dues, the act gave to the see of Durham an indemnity of £90 per annum, and £3 per annum for every acre of the bishop's ground which might be used as a road leading to the bridge. The boat-house and ad-

joining ground were conveyed to the mayor and burghesses. The act provided, that when the incumbrances should be discharged, and a sufficient purchase of land made as an equivalent for the Bishop of Durham's rent, the bridge should become free, and be repaired at the equal charges of the county of Durham and the North Riding of Yorkshire. In 1792, the tolls were let for £702 per annum; in 1802, for £800; in 1808, for £860; in 1811, for £941; and in 1814, for £1,010; but, in consequence of the discontinuance of Stockton races, which were held on the Carrs in the Yorkshire side of the river, they were reduced to £900. So much more profitable was the speculation than had been anticipated, that the debt on the bridge was cleared off August 2, 1816; and in 1819, a mob, under the impression that the passage should consequently be free, attacked the gates, two of which they threw into the river, carried a third in triumph about the town, and then burnt it in the High Street. The tolls, however, ceased on the 1st of January 1820; and the purchases for the bishop, to which the income had meanwhile been applied, were completed in July, 1821.

The bridge consists of five arches. The span of the centre one is 72 feet, and it is 23 feet high from low water mark; the two next are 60 feet in span; and the end arches are 44 feet. The carriage road is 18 feet wide; and there is a raised pavement of 3 feet broad for foot passengers, who, as well as carriages, &c., formerly paid toll each way. The toll-house, after undergoing some improvements, was converted into a public house. The arches are much impeded by loose stones which have been thrown down for the support of the piers.

THE THEATRE.—This place of public amusement, which was erected in 1768, is situated in Green Dragon or Playhouse Yard; it presents no exterior attractions. The interior was renewed a few years ago. The receipts, when the house is filled, amount to about £40. It was first opened by Mr. Bates's company of actors, who also performed at Durham, Sunderland, Darlington, &c. Since that time, the managers occupying the other theatres in the county have generally rented that of Stockton. It is usually kept open about three months in the year, and is satisfactorily supported.*

* MR. JOSEPH REED.—This well-known dramatist was born at Stockton in 1722, and commenced business there as a rope-maker. He afterwards removed to Sun Tavern Fields, London. His first production appeared in 1758, entitled "Madrigal and Trulletta, a mock tragedy, acted under the direction of Mr. Cibber, at the

Theatre-royal, Convent Garden; with notes by the author, Dr. Humbug, critic and censor-general." In 1761, "The Register Office, a farce," appeared, and at once ranked its author amongst the standard dramatists of the country. Though without a plot, its characters are all well conceived and ably contrasted; and Margery

THE CORPORATION.

STOCKTON was formerly governed by a mayor, recorder, and aldermen; but the office of recorder is now abolished. The mayor was elected, on the first Tuesday after the 29th of September, by a majority of the burgesses or owners of houses, buildings, &c., of burgage tenures in the town; but since the passing of the town extension act in 1852, the franchise is vested in the electors entitled to it under the Municipal Corporations Act, 5 and 6 Wm. IV., c. 76. It is not necessary, as in most other corporations, that the person elected to the office of mayor should be first chosen an alderman; for it does not appear that the latter title was anciently known in this corporation, it being formerly distinguished by the style of "mayor and burgesses," &c.; but having been once elected into the office of mayor, he afterwards became one of the body now called aldermen, and so remained as long as he continued in the possession of burgage property. The mayor, by virtue of his office, was in the commission of the peace, and also a justice of the court of pleas at Durham, during his mayoralty. The town council now consists of a mayor, eight aldermen, and twenty-four councillors; six of the latter being elected from each of the four wards described in the act, in the same manner as directed by the Municipal Corporations Act. The corporation is constituted the local Board of Health, with all the powers of the Public Health Act; and also with power to contract for lighting the streets, and to lay down gas pipes for the Borough. The town's serjeant walks before the mayor in procession, clothed in a large wrapping cloak trimmed with lace. The robes of office worn by the mayor and aldermen are black silk gowns with silk tassels on the arms, trimmed with ermine, and purple facings. The following is a list of the mayors of Stockton from the earliest period:—

R. Burdon, 1495; W. Brown, 1508; W. Laykey, 1546; J. Bayn-
briggs, 1559; R. Bunting, 1564; B. Tunstall, 1588; R. Bunting,
1599; N. Fleatham, 1601; T. Lambert, 1616; R. Wetherall, 1619;
W. Burdon, 1621; W. Swainston, 1622; T. Watson, 1623; W. Harte,
1624; T. Lambert, 1625; W. Harte, 1627; G. Wetherall, 1630; J.
Jessop, 1632; T. Watson, 1634; J. Jessop, 1635; G. Wetherall,
1637; J. Jessop, 1638; T. Watson, 1639; J. Cook, 1640; R. Burdon,

Moorpout is probably the finest specimen of genuine Yorkshire on the stage. She is from "Canny Yatton (Ayton) under Roseberry, the he'est mountain in o' Yorkshire, aboon a mile and a ho'f high, and as co'd as ice a to'p on't t'ettest summer day;" and is, no doubt, drawn from the life. This farce having been put into the hands of Mr. Foote in 1758, the latter copied the character of Mrs. Snarewell into his own farce of "The Minor," under the character of Mrs. Cole; a proceeding which naturally excited the indignation of Reed. In 1766, Reed produced his tragedy of "Dido," which, though well

1641; J. Cook, 1643; R. Burdon, 1644; T. Watson, 1646; J. Bunting, 1648; R. Burdon, 1650; T. Watson, 1653; R. Burdon, 1654; T. Watson, 1656; J. Atkinson, 1657; T. Jessop, 1658; W. Peers, 1660; Ralph Eden, 1662; J. Atkinson, 1663; R. Jackson, 1664; T. Jessop, 1666; J. Atkinson, 1667; T. Jessop, 1668; J. Cook, 1669; T. Jessop, 1670; R. Jackson, 1671; N. Fleatham, 1672; J. Cook, 1674; R. Jackson, 1676; W. Lee, 1678; W. Atkinson, 1680; R. Moor, 1682; J. Burdon, 1683; J. Cook, 1685; R. Moon, 1687; T. Wrangham, 1689; R. Jackson, 1691; J. Cook, 1693; J. Burdon, 1694; W. Atkinson, 1697; J. Cook, 1698; T. Wrangham, 1699; R. Bunting, 1701; J. Cook, 1703; T. Redman, 1704; W. H. Atkinson, 1706; R. Bowlby, 1707; T. Sutton, 1708; J. Cook, 1710; R. Bunting, 1711; T. Redman, 1712; J. Wells, 1713; J. Burdett, 1715; J. Cook, 1717; T. Ogle, 1718; J. Cook, 1719; W. Raisbeck, 1720; J. Cook, 1721; W. Gibson, 1722; D. Douthwaite, 1724; J. Burdett, 1726; J. Finch, 1728, died; W. Sutton, succ., also 1730; H. Brown, 1731; J. Burdett, 1733; R. Bunting, 1734; D. Douthwaite, 1735; J. Raisbeck, 1736; T. Raisbeck, 1737; J. Troy, 1739; W. Sutton, 1741; J. Raisbeck, 1742; W. Sleigh, 1743; H. Brown, 1745; J. Raisbeck, 1746; T. Raisbeck, 1747; R. Whitley, 1748; J. Troy, 1750; R. Ferrand, 1751; W. Sutton, 1753; W. Sleigh, 1754; H. Brown, 1755; J. Raisbeck, 1756; T. Raisbeck, 1757; R. Whitley, 1758; G. Sutton, 1759; W. Sutton, 1761; R. Ferrand, 1762; W. Sleigh, 1763; T. Fall, 1764; J. Wilkinson, 1766; G. Sutton, 1768; J. S. Raisbeck, 1769; R. Preston, 1771; W. Sleigh, 1773; B. Lumley, 1774; G. Hutchinson, 1776; J. Davison, 1778; R. Webster, 1780; C. Sleigh, 1782; J. Sutton, 1783; G. Sutton, 1784; J. Wilkinson, 1785; C. Smith, 1786; J. S. Raisbeck, 1788; B. Lumley, 1789; W. Sleigh, 1790; J. Sutton, 1791; G. Sutton, 1792; R. Burdon, 1793; T. Simpson, 1795; G. Sutton, 1797; C. Smith, 1798; R. Wilkinson, 1799; Richardson Ferrand, 1801; John Carr, 1803; George Hutchinson, 1805; Watson Alcock, 1807; James Walker, 1809; John Hutchinson, 1810; James Walker, 1811; Thomas Hutchinson, 1812; George Sutton, 1813; Richard Dickson, 1814; Henry Hutehinson, 1816; William Braithwaite, 1818; Thomas Jennett, 1819; William Skinner, 1820; Richard Jackson, 1821; John Wilkinson, 1822; William Skinner, jun., 1825; Thomas Walker, 1827; Robert Lamb, 1830; Leonard Raisbeck, 1832; Robert Thompson, 1834; William Skinner, 1835; Robert Lamb, 1836; Christopher Lodge, 1837; Thomas Jennett, 1838; William Skinner, jun., 1840; C. Trotter, 1842; W. Skinner, jun., 1844; J. Crosby, 1845; John Eales, 1847; C. Trotter, 1849; W. Skinner, 1853; Robert Craggs, 1854.

The first municipal corporation, elected December 26, 1835, were—Councillors: Christopher Lodge, Robert Lamb, Christopher Martin, William Robinson, Thomas Walker, Robinson Watson, Joshua Byers, George Walton, Thomas Jennett, Robert Jordison, Joseph Wade, Samuel Braithwaite, George Applegarth, John Robinson Walker, William Skinner, sen., Christopher Coales, Thomas Heaviside, and Joseph Claxton. October 30th, the councillors elected the

received by the audience, was only acted three nights, and was never printed. His last piece, "Tom Jones," a comic opera, was performed at Covent Garden in 1769, and was very successful. Mr. Reed preserved through life the character of a sensible, worthy, friendly, man; and his taste for the drama never prevented his attention to business. He died in London, August 15, 1787, leaving a handsome fortune to his two sons, John Watson Reed, a solicitor in London, and Shakspeare Reed, afterwards of Thornhill, near Sunderland, Esq., and a magistrate for the county of Durham.

following from their own body to be aldermen:—William Skinner, sen., Robert Jordison, Christopher Lodge, Robert Lamb, Robinson Watson, and Thomas Walker; and on the 1st January, 1836, Wm. Skinner, sen., mayor.

A *greve* or *bailiff* is appointed by the Bishop of Durham. The present steward of the bishop's courts in the Borough of Stockton is Mr. Joseph Radcliffe Wilson, who was appointed by his lordship in January, 1853, on the death of Mr. Faber.

It is recorded that the court-leet, which had been granted in the time of Charles II., had, a few years previous to 1770, fallen into disuetude; but upon the representation of the mayor and burgesses, a case was prepared and submitted to a sergeant-at-law, in consequence of whose opinion the court was revived, together with the other courts of the Borough, two meetings being held annually. The jurisdiction of the court-leet not being co-extensive with the town, it has, of late years, again fallen into abeyance.

The revenue of the corporation of Stockton arises from the rents of houses and the stallage of the Shambles and Market Place, which are all freehold, and from the income of other property held by leases under the Bishop of Durham, particularly the Town House, the port, and the anchorage and plankage dues.* The latter (originally granted by Bishop Neile, on the decision in 1620, to Rowland Wetherall) are granted upon trust, from time to time, to apply and dispose of the profits that arise from the premises for making and repairing the public streets and pavements, or for payment of debt contracted on that behalf, or for other public uses, and for the public advantage and convenience, in such manner as the mayor, aldermen, and burgesses, from time to time to be assembled at the courts to be held for the said Borough, or the major part of them, should direct, appoint, or approve of. Out of the income, an allowance of £30 per annum was formerly made to the mayor for the time being, towards the expense of the mayoralty, which allowance is now increased to £50; but the whole of the clear yearly income from anchorage and plankage is appropriated for public improvements. The annual statement of the corporation accounts is printed.

The corporation are empowered to levy rates, not

exceeding 3s. in the pound on the full net annual value of property in any one year; for special district rates, not exceeding 9d. in the pound; and for private improvement rates, not exceeding 6d. in the pound.

In consequence of the defalcation of a tax collector, the following printed hand-bill was issued in February, 1851:—

“Notice is hereby given, that a meeting of the inhabitants and rate-payers of the township of Stockton will be held at the committee room, Alms-houses, Stockton, on Tuesday, the 18th day of February instant, at 11 o'clock in the forenoon, to take into consideration the subject of a letter received from the surveyor of taxes, which states that the township of Stockton has been returned into the exchequer as in arrear, in respect of property and income tax, and that proceedings will be commenced against the township for the recovery thereof. Thomas Lambert and Robinson Watson, *churchwardens*; W. W. Child, George Weldon, and George Harrison, *overseers*. Feb., 1851.”

After some discussion, it was agreed, at the meeting, to make up the amount.

POLICE.—A proposal from Major White to amalgamate the County and Borough Police was accepted at a special meeting of the town councillors; and a police station was erected in West Row in 1851. The site, which formed part of the premises now occupied as a Borough Hall, was purchased from the corporation by the county for £300; and the buildings and cells cost £500.

The following are the Borough magistrates:—The mayor and ex-mayor, Thomas Richmond, Robert Craggs, Robert Keenleyside, M.D., William Richardson, Charles Trotter, Peter Romyn, and Samuel Braithwaite, Esqrs. Their sittings are held in the Borough Hall.

COUNTY COURT.—The county court is held monthly in the Borough Hall; T. Crosby, assistant clerk. Its circuit includes the townships of Aislaby, distant 5 miles; Billingham, 3; Bishopton, 6; Bradbury, 14; Butterwick, 12; Carleton, 4; Chilton, 14; Coopen Bewley, 5; Cornforth, 14; Eggescliffe, 4; Elstob, 9; Elton, 4; Embleton, 10; Ferryhill, 16; Fishburn, 12; Foxton and Shotton, 8; Garmondsway Moor, 14; Grindon, 6; East Hartburn, 2; Mainsforth, 13; Bishop-Middleham, 12; Mordon, 11; East and West Newbiggin, 7; Newsham, 6; Long-Newton, 5; Newton

* In Mr. Davison's evidence, before a committee of the House of Commons, June 22, 1838, he said, respecting the corporation of Stockton, “They have them (the tolls) upon very moderate terms; and at one time, we used to make them a present of the fine, and they in return, when the bishop went there to hold a confirmation, used to

give his lordship and the clergy a dinner, once in four years, and the bishop never took any fine of them. But upon one occasion when we went, by some means they did not give him a dinner as usual, and so we recollected it the last renewal, and we did not return the fine; but it was done always upon very moderate terms.”

Bewley, 6; Norton, 2; Preston-le-Skerne, 10; Preston-on-Tees, 2; Redmarshall, 4; Sedgfield, 8; Great Stainton, 8; Little Stainton, 5; Stillington, 8; Stockton; Thrislington, 13; Trimdon, 13; Whitton, 5; Wolviston, 5; and Woodham, 12.

REVISING BARRISTER'S COURT.—Stockton is one of the polling places for the Southern Division of the county of Durham. The revising barrister's district comprises Aislaby, Billingham, Carleton, Cowpen Bewley (including Saltholme), Eggescliffe, Elton, East Hartburn, Long-Newton, Newsham, Newton Bewley, Norton, Preston-upon-Tees, Redmarshall, Stockton, and Wolviston.

MARKETS, FAIRS, LOCAL TRADE, MANUFACTURES, &c.

STOCKTON market, as established by the successive charters above noticed, is held on every Wednesday. It is well supplied with all kinds of grain, butcher's meat, fish, poultry, butter, eggs, vegetables, &c.; and numerous hawkers attend, with their different wares. A market, on a somewhat smaller scale, is held on Saturdays. The schedule of tolls, fixed by the Stockton Extension and Improvement Act of 1852, is as follows:—

Butchers' stalls per year, for the use of the party taking only, and subject to the lessee for the time being of the market under the corporation having the privilege of letting the same on the days when the same are not actually occupied by the yearly tenant himself, £4. Each butcher, for a stall for a Wednesday only, 2s. Do., for a Saturday only, 1s.

All stalls, 8 feet in length and 4 in breadth, except such as afterwards mentioned, covered, 9d. Do., not covered, 6d. Stalls of greater dimensions in proportion.

Standage on the ground for 12 feet by 6, for pots, glass, wooden ware, baskets, and furniture, 6d. For brooms, 1d. Hucksters' and fruit stalls, covered, 9d. Do., not covered, 6d. Potatoe and fruit earts, 3d.

For standage of goods sold by auction:—Furniture, 1s. Implements of husbandry and farming utensils, 1s. Horses, cows, pigs, sheep, or other beasts, for each lot, 2s. For each hawker's cart or waggon, 5s.—Fish stalls, of the above dimensions, per day, 4d.

Caravans, per day, small, each, 1s. 6d. Do., middle size, each, 3s. Do., large, each, 4s.

A *Fair* is held in Stockton annually, according to ancient charter, on the 18th of July; and other fairs are held on the Thursday before November 19, and on November 23. On the 31st of January, 1770, the first fair for cattle, sheep, and horses was held. A horse fair accompanied the opening of the Shambles, September 28, 1824. On February 7, 1838, a horse

fair was again commenced. Fairs for the sale of cattle, sheep, &c., established in 1811, were held on the last Wednesday in every month; in 1830, it was found necessary to shorten that interval, and hold them once a fortnight; and on the 21st of January, 1851, a commencement was made of holding them weekly. A fat cattle show was established in 1853, by a committee of the corporation.

In 1853, the opening of the Leeds Northern Railway, which established a communication with the manufacturing districts, induced the authorities of Stockton to establish a *Wool Market*, at which farmers and others might more advantageously dispose of their produce than by selling it on their own farms. It was resolved that the last Wednesdays in June and July should be the days for this market; and a commencement was made on the 22nd of June and the 20th of July, 1853. The result was favourable; and there is every prospect of continued success to the market. A *Cheese Fair* is also held annually.

There are in Stockton four iron founders and engine builders, having steam power; Messrs. Brown Brothers are also millwrights; Messrs. Maddison and Pigg, brass founders and finishers; besides the establishments of Messrs. Fossick and Hackworth, Mr. Mainwaring, Mr. Roger, &c., whose various works give employment to a considerable number of men.

Five millers and corn merchants carry on business in the town, generally by steam power. This branch of business is extensive; the supply of grain from the surrounding agricultural districts, with that imported from other parts of England and from abroad being here converted into flour for the supply of the numerous mining population to the west and north, and also for transmission to Newcastle, Dundee, Aberdeen, Glasgow, and Edinburgh. The excellent quality of Stockton flour has long been celebrated. A co-operative corn-mill company was in existence in 1847.

Various descriptions of earthenware are manufactured in three potteries. Bricks and tiles are also made in the vicinity of the town.

An extensive trade in lead is carried on, principally from the mines in Teesdale. There is a large smelting mill in Stockton, the property of Mr. Byers, who ships considerable quantities of sheet and pipe lead to London and other places.*

* At the National Exhibition of 1851, Mr. Byers contributed a series of his products, which included the lead ores as obtained from the Grass-hill mine, Teesdale, the ores prepared for smelting, the lead

in pig, sheet lead, and lead piping. There were also a cake or button of silver, and the different qualities of litharge obtained during cupellation. The slags which accompanied the common and refined

There are three rope and twine makers; one of the establishments being carried on by machinery. Stockton has long been celebrated for its manufacture of canvas, in which two firms are at present engaged.* Flax is imported from Rotterdam and other places; and the flax-dressing trade which has long been carried on in Stockton, is represented by Mr. Richard Walker, West Row.

Several wholesale grocery establishments supply the district around the town. There are ten wine and spirit merchants. There are also large bonding warehouses, situated near the river, for the bonders of spirits, tea, sugar, tobacco, &c. The town contains three breweries (at two of which are maltings); four ale and porter merchants; fifty-seven inns, hotels, and public houses; and nine beer-shops. No less than thirty-four fire and life insurance companies have offices in Stockton. There are five printing offices, with a number of the shops of booksellers,† grocers, flour-dealers, drapers, tailors, shoemakers, dressmakers, &c., besides the workshops of joiners, wrights, smiths, turners, and other mechanics.

The establishment of "The Darlington and Stockton Times" newspaper has been noticed in the account of the first-named town, vol. i., p. 476.

The increase in trade and population of late years has, as a matter of course, occasioned a corresponding addition to the houses and streets of the town; which, to some extent, has been facilitated by the establishment of building societies.

On the banks of the river there are the ship-building yards of F. Coates, Quayside, and M. Pearse and Co., iron ship-builders, North Shore, each of which has a patent slip-way for the repairing of vessels.

On September 6, 1806, a mail-coach commenced running through Stockton to Sunderland and South Shields. The hours of its arrival and departure were adapted to the alterations made in the arrangements of the north mail; but, in 1832, it was discontinued, and the letters were brought from Darlington in a gig. In November of that year, a committee of the inhabitants was formed, to select some competent and influential person, who should be deputed to endeavour to procure a direct mail communication with the metropolis.

lead illustrated the successive conditions through which the ore has to pass in obtaining the various merchantable commodities. A medal was awarded to Mr. Byers for his contributions.

* To the National Exhibition, Messrs. Dixon and Longstaff, of North Shore, contributed a specimen of sail-cloth made from Baltic long flax, and hand-loom woven.

† Mr. Thomas Jennett, printer and bookseller, died June 27, 1846.

Stockton now participates with other places, in this respect, in the advantages derived from railway communication; and there are offices for the electric telegraph at the stations of the North-eastern and the Stockton and Darlington Railways. Carriers diverge from Stockton to all the principal towns and villages in the county of Durham and the North Riding of Yorkshire.

BANKS.

STOCKTON does not at present possess any parent banking establishment, the monetary transactions for the commerce of the port being conducted through the medium of agents of distant banking houses, as those independent firms which have at various periods been established, do not appear to have been successful. The bank of *Messrs. Backhouse and Co.*, and the *National Provincial Bank of England*, have each a branch establishment in High Street; and the *Darlington District Joint Stock Bank* have premises for its agent in Finkle Street. Particulars of these firms have already been given, for which see vol. i., p. 483.

STOCKTON AND CLEVELAND BANK.—This was a private bank, established in Stockton under the firm of Lumley, Wilkinson, and Snowdon. They issued their own notes, and possessed the confidence of a great portion of the trading population of the district. The concern, however, stopped payment on the 2nd of August, 1815, and caused much distress amongst the humbler classes of the neighbourhood, the £1 notes being at the time in general circulation.

TEES BANK.—This was also a private banking company, established in 1785. The partners in the firm were George and John Hutchinson, W. Hutchinson, jun., and Thomas Place. In 1824, a robbery to a considerable extent was committed upon the bank. A reward of two hundred guineas was offered for such information as might lead to the discovery and conviction of the offender; and advertisements to the following effect were inserted in all the leading newspapers:—
Stolen, from the York and Shields Mail, supposed

He was mayor of Stockton in 1819, and was the first chief magistrate under the new Municipal Act. He continued an alderman until the time of his death; and perhaps no man ever enjoyed a larger share of well-merited popularity among his fellow townsmen and neighbours. His funeral was attended by a numerous public procession; and elegiac verses to his memory were published. There is a full-length portrait of him in the Borough Hall.

when changing horses at Stockton,* about 3 o'clock in the morning of Saturday, the 31st January, 1824, a leather portmanteau (under the care of John Dobson, a clerk in the Tees Bank) containing parcels of notes, checks, bills, &c., amounting to £4,970 4s. 8d. Amongst the missing bills were—one on David Carrick, Carlisle, 10*l.* 10s. 7*d.*; Charles Smith on John Rayne, Newcastle, 23*l.* 4s.; George Coverdale, Stokesley, on J.

* AN EXPERT THIEF.—A young man, engaged as a traveller, left York on a Friday evening, inside the London mail; the night bleak and stormy, in the month of January. It was his first journey as a commercial gent. There was not a single passenger in or out till they reached Easingwold, when an outside got up. The mail proceeded on to Thirsk, where the coachman and guard said to the stranger, that as the night was wet and stormy, he might go inside. He did so, and, when inside, wrapped himself up in a dreadnought coat, and turned his back to the young traveller, who, despite sundry courteous endeavours to elicit his views on the state of the weather, neither saw his face nor heard his voice. Nothing transpired till the coach reached Stockton, where a young man enquired if there was room inside. The reply was "plenty." The stranger in the dreadnought by this time left, paying the coachee, but remarking that if he did not find a friend he expected to see, he would return before the coach started. He disappeared in the darkness of the night, but only made a circuit round the coach and stood crouched like a tiger at the opposite door. He was a London thief, and a sharp one, who had laid his plans well. The young gentleman who had asked about the seat, was a banker's confidential clerk, in the charge of a very large sum of money, upwards of £20,000 in bills and notes. Our young traveller also came out here, and was warming himself at the fire; when, as a kindness to the coachman and guard, the banker's clerk ordered some brandy, and whilst it was being brought he took out his tin case with his own hand, and placed it securely under his seat, shutting carefully the door of the empty coach; but before he had left the coach six paces, the London thief had opened the opposite door, and was off with the treasure. The horn blew, the passengers were seated, the mail started. Nothing occurred between Stockton and Sunderland, except that an old woman got a lift of six miles, and left at Castle Eden. When the coach arrived at Sunderland, the young traveller's destination, he had his luggage carried to the principal inn. The banker's clerk was now left alone in fancied security; when, verging towards the conclusion of his journey, he looked to see that his box was safe, and to his horror found it gone. There was an instant and eager search; and a consultation with coachee and guard led to the conclusion that the young traveller was the robber, and the old woman an accomplice. The banker, who was an energetic person, ordered a coach and four, and drove back as fast as wheels could carry him. Here his suspicions were confirmed. The young traveller, finding Saturday market-day at Sunderland, could do no business: he took a gig to Newcastle, where he found it market-day also. He then proceeded to Hexham, where he called upon some customers, after which he returned to Newcastle. He spent the Sunday at North Shields with a friend. By this time, the banker was on his trail, and had magistrates and police out on various routes, tracing him like a fox, and suspicion deepened at every winding. The banker with his party reached Shields a few hours after him, searched all the inns and many houses; but the young traveller's friend chanced to be far above suspicion, and the pursuers were at fault, for the gentleman drove the object of their pursuit past them next day in his own carriage to Sunderland. He then started on the outside of the coach for Newcastle. Two policemen, in plain clothes, were taken up on

Temple and Co., Newcastle, 25*l.* 6s. 6*d.*; do. on George Cowan, Newcastle, 100*l.*; do. on Matthew Renwick, Newcastle, 46*l.* 9s. 4*d.*; do. on John Hodgson, Newcastle, 20*l.*; do. on Samuel Dobson, Newcastle, 24*l.* 11s. 7*d.*; R. the coach beside him. Six expresses passed the coach on the road, summoning the magistrates and making sure arrangements that escape should be impossible. Four policemen were stationed at Gateshead, and as many on Newcastle bridge, and a tolerable party waited the arrival of the coach at the Turf Hotel. Not a word or movement shewed the young traveller that he was exciting any interest. He was allowed to leave the coach, and proceed to the Turk's Head, where he ordered dinner and retired. Before he got his coat off, however, the waiter gave him notice that he was wanted in the traveller's room. He said it was impossible, as he did not know a single gentleman in Newcastle; but on the waiter giving his name as that of the gentleman wanted, he proceeded to the other room, where Forsyth, then at the head of the Newcastle police, met him politely, locked the door, and expressed his regret at the necessity of leading him to prison. It was some time before the young man could be made to understand Forsyth's object, the charge, and the suspicion against him; and when he did, he staggered back and fainted. He was taken before the magistrates; and the more the case was investigated, the more conclusive seemed the evidence, coupled with his flight, and the fact, that in his declaration he forgot to mention the old woman, who could no where be traced, and who was now decidedly regarded as an accomplice. Bail was consequently refused, until the references he gave in Glasgow were applied to. But much to the wonderment of all ready to pronounce him guilty, the replies were that the thing was next to impossible; that his character was unimpeachable; that respectable men pledged their existence for his innocence, and that the writers would bail him to any amount. On this, bonds were immediately executed, and the unfortunate youth was again at liberty; but to his dying day he could never forget the feeling of degradation and injured pride that rose within him, as when liberated he passed out through a crowd of spectators, eager to catch a glimpse of the clever robber; and one desperate character, more acutely cruel than his fellows, gave him a hurrah for his cleverness in baffling justice. The suspicion, groundless as it was, gave him great uneasiness; and a joyful heart had he, when he learned that the harpies of the criminal law had drawn a remark upon the passenger with the dreadnought coat leaving the coach, and had ascertained, that on the night in question, a chaise and four had taken him from the next stage to London, without losing much time by the way, or leaving any trace behind. Advertisements were inserted in the London papers, offering a handsome reward for a box lost at Stockton, containing a large sum of money; but, no reply was made, until a month elapsed after the bank had ceased advertising. Then, however, came a letter from London, saying that the writer had observed several advertisements regarding a box lost at Stockton; that the writer knew of a box lost there on the night named, but it contained a larger sum than was specified, and therefore was probably not the same. If, however, it was, it would be returned in exchange for a draft for £2,000, and £700 more for expenses; but, in the meantime, there must be a bond of security forwarded for the fulfilment of the contract, and no questions were to be asked. This looked like compounding a felony, so a compromise was attempted, but it was never answered. The full terms were then concluded, and

ham, on Mark Hopper, Durham, 10*l.* 5*s.*; George Coates, Norton, on John Riseborough, Sunderland, 77*l.* 5*s.*; J. P. Wimberley, Doncaster, on Miss Jowsey, Sunderland, 7*l.* 5*s.*; do. on John Oyston, South Shields, 6*l.* 13*s.* 1*d.*, &c., &c.

The lost property was somewhat mysteriously recovered; but it was never known by whom the robbery was really committed. The bank stopped payment on the 24th September, 1825, producing that distress in the district which usually accompanied the failure of such establishments.

STOCKTON AND DURHAM COUNTY BANK.—During the prevailing rage for establishing banks on the joint stock principle, a prospectus was issued in 1838, in favour of Stockton, with the above title. The address stated, that the opening out of various railways and branches, the increase of the exports of the port and of trade generally in the district, held out favourable prospects for the success of such an undertaking; the increase of productive industry requiring a corresponding augmentation of banking facilities, and that experience had shown that these facilities can be best secured by the Joint Stock Banking system. The Provisional Committee were—Messrs. Thomas Allison Tennant, Christopher Lodge, John Stagg, Robert Lamb, Andrew Sanders, and Ralph Ward Jackson; solicitors, Messrs. Jackson and Skinner. Capital, £150,000, in shares of £20 each. The requisite amount of capital having in a short time been subscribed, the company commenced business in premises suitable for the purpose. A forgery was committed upon their £5 notes in 1845; and the parties having been discovered, they were tried and convicted at the Durham assizes. In the course of business, the company met with various losses; and in June, 1846, they declined business in favour of the National Provincial Bank of England, transferring their accounts to that establishment.

The sum of £12 10*s.* per share was paid up at the time of the Stockton and Durham County Bank declining business; and though the shareholders were considerable losers in the undertaking, yet, as far as the public were concerned, all current liabilities were ultimately met.

the bond of security despatched; and, eight hours before the mail that carried it returned, a person with the appearance and address of a gentleman, with an easy and confident air, walked into the bank with the identical box, and an open note which told its own tale, simply soliciting an answer. On opening the box, the contents were found precisely as lost. The stranger was paid over £2,700, and left the bank with a bow to the manager, but without uttering a syllable,

SAVINGS BANK.—The bank for savings at Stockton was commenced at May-day, 1816, and, in the first half-year of its operations, accumulated a fund of £1,212. Its progress since that time has been steady and encouraging. Its business is transacted every Wednesday, in a room appropriated for the purpose, in the Alms-houses. On the 20th of November, 1852, there were 1,551 accounts, with deposits amounting to £44,995 16*s.* 7*d.*; and, in 1853, 1,609 accounts, with £46,727 14*s.* 10*d.* In 1854, there was £49,678 8*s.* in the hands of the Commissioners for the Reduction of the National Debt, and £96 2*s.* 7*d.* in the hands of William Skinner, Esq., treasurer. The number of depositors were as follows:—

99	whose respective Balances do not exceed £1	£49	12	5

There was invested with the Commissioners, on the separate surplus fund account, £1,906 9*s.*; and after deducting £100 to meet current expenses, £37 9*s.* 2*d.* remained to be carried to the same account.

AMUSEMENTS, &c.

It does not appear that the amusements and pastimes of the people of Stockton differed materially from those of other places similarly situated. Cock-fighting, it seems, was formerly a favourite amusement. On the 14th of September, 1756, a main of cocks was fought at Stockton, between the gentlemen of Darlington and Helmsley, which consisted of twenty-two battles, twelve won by the former, and ten by the latter.

and posted back to London, as he came, with four horses. A few days after, the manager received a case of excellent wine, value about £30, and a note, thanking him for his good faith, complimenting him on his business habits, telling him that the expenses of his party in the transaction had been heavy, as they had made four attempts before they succeeded, and concluded by an offer of similar services if the writer should be fortunate enough ever again to render them necessary.

Bull-baiting was also a favourite amusement; and the bull-ring, which was in the High Street, opposite the north front of the Town Hall, was not removed till the mayoralty of Robert Wilkinson, Esq., 1799-1800.

In an award of 1658, alluded to in that of 1662, for dividing waste lands near Stockton (see page 154), is this proviso:—"Be it remembered, that whereas Saltholme was to be equally divided betwixt John Jesson, Esq., and Thomas Harperley, and by that award aforesaid, there is ordered and appointed to Thomas Harperley one acre of land more than to the said John Jesson, Esq. And the said John Jesson, Esq., doth abate the said acre of land out of his proportion which is to be set forth to the said Thomas Harperley, in consideration that the said Thomas Harperley and his heirs and assigns shall for ever thereafter permit any that hath a mind to bowl on the usual accustomed place in the Saltholme within the said Thomas Harperley's allotment there." No trace or tradition of this bowling-green remains.

Races have been held at various times on the Carrs on the Yorkshire side of the Tees. In 1809, the course was flooded by the river, and the horses ran in the water. The usual time for commencing the races has been the Thursdays in the first week after the York August Meeting. A *Regatta* was held in June, 1843. There is a *Cricket Club* in Stockton, the members of which have acquired considerable dexterity in that athletic exercise. The cricket ground is in Portrack Lane. *Assemblies* have for many years been popular recreations with the inhabitants of the town; and the celebration of public events, either of a general or local nature, is usually a source of social enjoyment. Music is also much cultivated; amateur concerts are regularly and successfully given in Stockton; and a spirit of literary inquiry is widening the sphere of intellectual knowledge.

BENEFIT SOCIETIES.—Intimately connected with the welfare of the working classes are a number of benefit societies.* "The Loyal Tradesmen's Glory Lodge of Independent Order of Odd Fellows, Manchester Unity," is held at the Vane Arms every alternate Saturday, and consists of nearly 60 members. "The Loyal Blooming Rose Lodge, Manchester Unity," is held at the Green Dragon Inn, and consists of about 50 members. Be-

* A Lodge of Free and Accepted Masons (No. 19), which was constituted on the 3rd of February, 1725, at the Swan and Rummer, Finch Lane, London, was afterwards removed to the Swan, in Exchange Alley, and from thence to the Queen's Head, Stockton, on

sides these, there are upwards of 30 other societies, in which the number of members varies from a dozen to 150. See *Sutton's Charities*, page 169.

MASTER MARINERS' ASYLUM.—This institution was established in 1837. From the annual statements of its accounts, it appears that there is generally a balance kept in hand of about £200.

SUPPLY OF WATER.

At the superintending inspector's inquiry in 1848, it was stated that "the imperfect supply of water (and that very impure in quality) with which Stockton is at present served, has for some years been a subject of serious consideration to the inhabitants; and, as the population increased, the evil of a scanty supply became more apparent." No less than 700 houses took their supply from St. John's Well, the hardness of which was 37 deg. There were, at that time, two public pumps in the Borough and one without. The latter was kept in repair by the surveyors, and was locked up from Saturday night to Monday morning; and the former were locked up at stated periods during each day. To houses of above £30 per annum, common lift pumps were attached; and wells were dug for the purpose to the depth of about 36 feet. For washing purposes, rain water was collected from the roofs. The poorer classes travelled, upon an average, a distance of 100 yards for their supply of water, or were subjected to a charge made by the water carriers of $\frac{1}{2}$ d. for about three gallons. The water in the river Tees being salt, except at low tide, the people resident on its banks abstracted a supply at that period.

In 1850, a plan for a supply of water to Stockton was prepared, by which it was proposed that the water should be filtered from the Tees at Yarm into a reservoir on the south side of the river, and forced along the railway viaduct to reservoirs near Egglecliffe, 60 feet above the level of Stockton. Thence it was to be conveyed by pipes laid along the turnpike road, a distance of $4\frac{1}{2}$ miles. The estimated cost was £10,000; and it was understood that a single capitalist had offered to subscribe a fourth of that sum. The water was analyzed by Dr. Glover, of Newcastle, and was stated to be well suited for domestic purposes. The scheme was registered.

the 2nd of December, 1756, when it was made No. 30. In 1773, it was removed to the inn now called the Vane Arms, and entitled "The Lodge of Philanthropy." It has been closed for many years; and Free Masonry has not since been revived in Stockton.

Mr. Ranger, on his visit to Stockton, urged that "the supply of water, and the machinery for its distribution, should be in the hands of those, and of those only, who have an interest in applying it in combination with house and street drainage, and the prevention of underground collections of liquid filth of every description, whereby alone offensive and pestilential exhalations can be avoided." The promoters of the Stockton water-works, fully concurring in this view, abandoned their intention of applying to parliament for a bill of incorporation, and, in doing so, avowed that their object primarily was that of securing to the inhabitants an unexceptionable water supply.

Mr. R. F. Reed, engineering surveyor, was engaged by several gentlemen resident in the town and neighbourhood to make a survey of the district preparatory to the establishment of a water company. A report, prepared with the assistance of Mr. J. Fowler, C.E., was furnished in October, 1850, in which it was recommended to obtain a supply of water from "a district situated west of Stockton, in the townships of Norton and Carleton, and bounded by the road leading from Stockton to Sedgfield on the north, by that leading from Stockton to Redmarshall on the south, and sloping eastward from an irregular summit lying between those roads, three miles from Stockton, and 170 feet above high water spring tides in the river Tees at that town; and which, by the present natural conveying descents, would comprise a 'gather' of 750 acres, off a clean district, situated on clay, and free from villages—the rain water flowing off which could, by the existing water-courses, and by catch-water drains, be impounded in stone reservoirs, and the main pipes supplied from a service reservoir at a distance of $1\frac{3}{4}$ miles from the town, and at an elevation of 70 feet above high water ordinary spring tides in the Tees at Stockton, and 40 feet above the level of the High Street—an elevation sufficient to lay the water into the highest story of any house in the town.—All the proposed area of gather is a poor tenacious clay; the whole of the district of the lowest scale of fertility."

"The Stockton, Middlesborough, and Yarm Water Works Act" was passed in 1851; and the town has since been supplied with water from their works. (See DARLINGTON, vol. i., p. 486.) In 1854, an act was passed to enable the company to supply water to Norton, Coatham, Redcar, &c. The offices of the company are in Dovecot Street. The town fire-engines, which formerly stood in the church porch, are now kept in premises in Brunswick Street, and are in good repair.

SUPPLY OF GAS.

"The Stockton Gas Light and Coke Company" was formed by act of parliament, 3 Geo. IV.; and the town was first lighted with gas on the 15th November, 1822. A new company having been projected, who applied to parliament for an act of incorporation, meetings were held on the 16th and 18th December, 1845, in the Alms-houses, between its provisional directors and a committee of the old company, at which an amalgamation was agreed upon, and it was resolved to fix the value of stock and materials to be transferred by arbitration. The premises, works, and apparatus, were accordingly valued at £5,532; of this, the new company, on their bill receiving the royal assent, were to pay to their predecessors the sum of £60, and the remaining £5,472 was to be divided into 576 shares, of £9 10s. each. The entire capital of the new company was fixed at £7,980, in 840 shares of £9 10s. each; and until the difference of £2,508 was paid up, the holders of the old company's shares were to receive interest out of the profits of the new one at the rate of five per cent. on the above £5,472; and after the full capital should be paid up, the old company was to merge and be extinguished in the new one. The new act, intituled, "An Act for lighting with Gas the Town and Borough of Stockton, in the County of Durhan," received the royal assent on the 16th July, 1846, and extends over the town and Borough of Stockton, the parish of Norton, and the town of South Stockton. It is provided that the dividend shall not exceed the rate of 10 per cent., except when necessary to make up a deficiency to that amount in the interest of previous years; any surplus that may arise is to go towards a fund, not exceeding £1,500, for contingencies. Power is given to the county magistrates, on petition from ten inhabitants of the company's district, to modify the charges for gas, so that the above limitations may not be exceeded. The capital has been for some time paid up.

The gas works are situated opposite the south end of High Street. The gasometers will hold about 24,000 cubic feet of gas. There are 24 round metal retorts, and 6 clay ones; but the whole of the metal retorts are not in use. The bore of the main pipes is 4 and 5 inches. Three are 211 lights in the streets, each of which, up to September, 1849, was estimated to consume 9 feet per hour, and for which 1s. 9d. per week was charged; but the commissioners, under the Lighting and Paving Act, having requested a reduction to 1s. 7d. per lamp, on the understanding

that the quantity consumed should be reduced to 5 feet per hour, the price was eventually fixed at 1s. 8d., subject to the same reduction. Up to March, 1849, the price to private consumers was 6s. 10d. per 1,000 cubic feet; but, at that date, it was reduced to 5s. 10d. The quantity of gas consumed in the previous year, by 247 private consumers, was 2,298,560 cubic feet. In the year ending March, 1853, £464 was received from street lights, and £1,173 4s. for private lights; and, after the payment of expenses, the sum of £997 11s. 10½d. being at the disposal of the company, a dividend of 19s. per share was declared, and the surplus carried to the next year's account. A reduction of 10 per cent. on the rates of charge, to both public and private consumers, was made on the 1st of September following.

RAILWAYS.

STOCKTON AND DARLINGTON RAILWAY.—An account of the origin and progress of this important undertaking will be found in vol. i., pp. 111 and 484. It appears that, for some time after its opening, September 27, 1825, the locomotives were worked by vertical cylinders, and the motion was communicated to the wheels by an endless chain. Their power was not one-tenth of some of those of the present day, and their greatest speed was about eight miles an hour. Passengers travelled in old stage coaches, mounted upon framings of railway wheels, without springs, and drawn by horses. The motion was described as "fully as easy as in any coach on the road. A very slight jolt is felt, accompanied with a

* The coal field being situated fully 320 feet above the level of the tidal river where the coals are put on board ship, necessarily gives a descending line of railway; and for several miles the inclination is such that the laden waggons will run of themselves, or, more scientifically speaking, by the force of gravitation. But although the laden waggons require no power on such parts to take the coals to the place of shipment, the empty waggons must be hauled back, for which purpose, the horses had to trot down to be ready to begin their work; and as the laden waggons were suffered to run down at a rate of six or eight miles an hour, heavy horses were soon fatigued by the down journey. Some one ingeniously suggested that it would be a great saving of horse-labour to let them ride down those portions of the line where the descending gradient was sufficient to make the waggons run without any dragging or hauling. For each horse, a homely waggon, with low wheels, railed on all sides but at one end, ironically called a dandy cart, was constructed; and although the poor brute might question why he was, through coaxing and whipping, made to mount himself into such a novel situation, yet such is the sagacity of the horse that the species very soon discovered that it was easier and more pleasant to ride than to walk, and, in some instances, became very expert in getting into the dandy car-

riage or rattle, every time the wheels pass over the joints of the several rails, and also at the breaks which occur at the several passing places, and then, if any thing, feel harsher than in a coach. At any bend of the road, or other places where the view is obstructed, the coachman blows a horn to give warning of his approach, to any waggons or vehicles that may be coming or going on the way.—Some parts of the way were laid with rails of cast iron, joined at every four feet; and on coming upon these, the jerks and jolts were more frequent, more audible, and more sensible, resembling exactly, as the coachman justly observed to us, the clinking of a mill hopper." The journey between Stockton and Darlington occupied about an hour and a quarter. The railway commenced with two locomotives; but the traffic in coals soon exceeded their capabilities, and a great portion of it was hauled by horse power.*

The goods depot of the railway is near the end of the stone bridge across the Tees, and the passenger station is on the opposite side of the river, at South Stockton, to which electric wires are extended both from the east and west. At the half-yearly meeting of the company, held in Darlington, February 14, 1855, the report stated that the income during the past six months had been £143,541 6s. 3d., being an excess of £15,466 12s. 7d. over the corresponding six months of 1853, and of £17,976 2s. 8½d. over the half-year ending July, 1854. In consequence of the extension of traffic, application had been made to parliament for leave to increase the share capital by the creation of 8,000 new shares of £25 each. A dividend for the half-year was declared at the rate of £9 per annum.†

riages even when in motion, having been taught that if they did not display some alacrity in mounting, they would have to run on foot several miles. There was, in 1836, according to Sir George Head, an old horse employed in this "cart before the horse" fashion upon the Stockton and Darlington line. On being unhitched, he invariably first allowed the carriages to pass him, and then, trotting after the train, leaped on to the low dandy of his own accord; and he performed the feat not only without urging, but, on the contrary, with so much eagerness as to render it difficult to keep him off, although the carriage was two feet from the ground, and the progressive rate nearly five miles an hour. A basket of hay was suspended on the dandy; and therefore the only wonderful part of the ceremony was its performance.

† A writer in Frazer's Magazine for May, 1844, says, "To the success of the 'Stockton and Darlington Railway' may be traced the rise of all others. . . . We hope the time may never come when the millions at home and abroad, who enjoy the advantages of railways, shall have forgotten that they owe them to Edward Pease of Darlington. It would be idle to relate the endless opposition he received, the hostility of antagonists, the cold support of friends, the vexatious

The Stockton and Darlington Railway Suspension Bridge, for connecting the original line with the Middlesborough and Redcar railway, on the opposite side of the Tees, was the first application of a bridge of suspension for the support or continuation of a railway. It was erected by Captain Brown, R.N.; the foundation stone was laid July 18, 1829; and it was opened December 27, 1830. The space between the supports was 281 feet 4 inches; the versed sine, 28 feet; the width of platform, 16 feet; the height from the surface of high water, 20 feet; and the sectional area of chain, 40 square inches. The weight between the points of suspension was 111 tons; and the structure was calculated to support a load of 150 tons. The weight of an engine and 20 waggons, which were all intended to pass over at one time, was 112 tons; but upon the first trial being made with 16 waggons, as they advanced, the platform, yielding at first to their weight, became elevated in the middle, so as by degrees to form an apex, which was no sooner surmounted by half the number than the couplings broke asunder, and eight carriages rolled onward, and eight back again. In consequence of this misadventure, the construction was necessarily altered, the platform remaining suspended as before, but being fortified underneath by four starlings, upon which it was supported. The bridge then received an indefinite number of waggons; but in 1844 it was removed, with its wooden supports. A flat iron bridge, with stone pillars, was substituted; in consequence, however, of the failure of a bridge on a similar construction in Cheshire, attended by loss of life, supports of wood have also been annexed to the new structure.

WEST HARTLEPOOL HARBOUR RAILWAY.—(See vol. i., pp. 113, 115.) A branch of this (originally the Clarence) railway, crosses the Norton road, and skirts the eastern limits of the town towards the river. The station is in Bishopton Lane.

obstacles, the absurd objections, the doubt of some, and the prejudice of others, the ignorance of all. These matters are now being forgotten. Confident in his judgment, ready in resource, undismayed by difficulty, with indomitable energy and perseverance, he gradually surmounted every thing; and it remains a striking instance of foresight that, without any experience, and with 'all the world before him where to choose,' he selected what, to the ordinary observer, is an unpromising district, and made the first and most successful railway."

* MR. EDMUND HARVEY.—The idea of making a cut or channel at this place was conceived, and warmly advocated, so early as 1769, by Mr. Edmund Harvey, pewterer, a respectable though obscure tradesman of Stockton. He illustrated his plan, in urging the adoption of which he spent his whole life, by making two plates of copper of the exact shape of the curve of the river which was to be cut off, and of the neck which formed the peninsula; one of these plates was of

NORTH-EASTERN RAILWAY.—See *Leeds Northern*, vol. i., p. 115. This line was opened, amidst great rejoicings, on the 15th of May, 1852. The station is in Bishopton Lane, and possesses an electric telegraph.

RIVER, &c.

THE course of the Tees, from its rise in Cumberland to the sea, is between 80 and 90 miles. The tide rises to Worsall, 3 miles above the town of Yarm. Between that place and Stockton bridge, a distance by the river of about 7 miles, it is generally called the upper navigation. The vessels employed upon it have folding masts, to permit them to pass through the bridge. A middle navigation extends from Stockton bridge to Cargo Fleet, a distance of about 6 miles; and a lower navigation from Cargo Fleet to the most seaward buoy, being a length of nearly 7 miles.

Stockton, from the elevation of its site, suffers little from the floods which frequently inundate the opposite low grounds on the Yorkshire side of the river, and by which the shipping are sometimes driven from their moorings. The fresh water sometimes rises at flood time at Stockton about 3 or 4 feet above spring tide level. The river was frozen over at Stockton in 1784, 1795, and 1819.

The sinuosities of the Tees have already been alluded to; and these, immediately below Stockton, were formerly so great as to materially lengthen the navigation between that town and the sea, as well as to prevent an adequate depth of tidal water for shipping.

An extraordinary southern curve in the river between Portrack and Stockton measured upwards of two miles round, though the neck of the enclosed peninsula was only 220 yards across. The improvement of this part of the river many years ago attracted attention;* and considerable exertions were made by William Sleigh,

smaller dimensions than the other, and, when laid upon it, shewed the course of the stream as it then was, and of the canal as he intended it to be. Another pursuit of this worthy, but eccentric man, was the education of half a dozen boys, whom he accompanied to church every Sunday, when it was his custom to lay scraps of paper, with admonitory texts of Scripture, on the vestry table, for the perusal of the clergyman. Having, by some means, received a few sheets of copper, on which the government duty had not been paid, he for several years felt a great uneasiness of mind, but at last resolved to ease his conscience by paying the duty. Often did he attend the Custom-house for that purpose, but the officers only laughed at his scruples; till at length, he threw down the money before them, telling them they might give it to the poor, if they could not carry it to a right account, he being determined to "render unto Cæsar the things that are Cæsar's, and unto God the things which are God's." Mr. Harvey died in 1781, aged 83 years.

Esq., mayor of Stockton in 1791, in which year Jonathan Pickernell, engineer, published a plan and estimates of the cost of the desired cutting. The first act of parliament obtained to improve the river Tees navigation was the 48th Geo. III., c. 48: "An Act for making a navigable cut from the east side of the river Tees near Stockton, into the said river, near Portrack, in the county of Durham, and making various other improvements in the navigation of the said river between the town of Stockton and the sea, 27th May, 1808." The passing of this act had been much delayed by the opposition of Lord Harewood, owner of Mandale mill and granary, on the Yorkshire side of the Tees, and at the very southern extremity of the curve; and this opposition was only withdrawn on condition of his receiving £2,000 as compensation when the cut should be made navigable. Under the powers of this act, the Tees Navigation Company raised £9,000 in £50 shares, to bear interest at 10 per cent., and £3,000 in loans at 5 per cent. The cut was satisfactorily executed by contract; and in the morning of September 18, 1810, it was formally opened; three sloops, the Custom House boat, the Redcar life-boat, and numerous pleasure boats sailing through it from Portrack, amidst the firing of guns, &c. The river navigation was thus shortened 2 M. 2 F. 36 P.; and the depth of water at Stockton was increased 2 feet. The cost of the cut, irrespective of salaries, office rent, and casual expenses, was, for labour and materials, £7,927 6s. 11d.; purchase of lands and compensation, £2,567; engineer's plans, &c., £281 1s. 6d.; and parliamentary expenses, £1,387 16s. 11d.; total, £12,163 5s. 4d.

The act enabled "the Tees Navigation Company" to lay the following duties on all vessels lading or unlading cargoes in the river:—For every British vessel entering or clearing coastwise, 6d. per ton; every British vessel to or from a foreign port, 9d. per ton; except such vessel be laden with Norway timber only, then 6d. per ton; every foreign vessel, 1s. 6d. per ton, except such foreign vessel be laden with Norway timber only, then 1s. per ton. In May, 1811, £615 14s. 6d. had been received; and in the following year, £1,150. From the opening of the cut, to May, 1847, in the year previous to which £1,474 12s. 6d. was received, the entire amount of dues was £21,247 7s. 11d., or an average of about £1,250 per annum. The expendi-

ture on the river, from 1811 to 1828 inclusive, was £2,832 4s. 10d.

In 1824, Mr. Henry H. Price, C.E., was employed to examine and survey the Tees navigation, and made two reports, with plans, sections, soundings, and estimates for making a cut at Newport and other improvements. On the 19th of June, 1828, an act, 9 Geo. IV., c. 97, received the royal assent for enabling the Tees Navigation company "to make a navigable cut from the east side of the river Tees, near Portrack, (Blue House Point,) in the county of Durham, into the said river near Newport, in the township and parish of Acklam, in the North Riding of the county of York." By section 62, the company was empowered to raise £20,000, at an interest of 10 per cent. per annum; and by section 63, to raise in share capital £30,000. The new cut,* which crosses a large curve in the river to the north, was opened in due form on the 10th of February, 1831, the brig *Arno* being towed through the channel, accompanied by a number of steam-boats, &c. It is about 1,100 yards long, 16 feet deep, and 250 feet wide; and by it vessels which could not navigate the old channel are now enabled to sail up to Stockton. The cost, irrespective of salaries, office rent, and casual expenses, was £16,306 15s. 2d. for labour and materials; £5,553 4s. 7d. for purchase of land, compensation, &c.; £1,309 11s. 8d. for engineering plans, &c.; and £2,826 7s. for parliamentary expenses; being a total outlay for the cut of £25,995 18s. 5d. From 1829 to 1850, there was expended on the river £65,243 14s., and paid to engineers £3,765 6s. 7d., amounting to £69,009 0s. 7d. This sum, with the cost of the cut, exceeds the £50,000 raised under the act in capital and loans, by £45,004 19s.

The cut made in 1810, with that of 1831, and the improvements of the river navigation by the erection of parallel works and jetties in Billingham Reach, Bumble's Bight, and Cargo Fleet Reach, shortened, deepened, fixed, and improved the navigable channel between Stockton and the latter place. A steam dredge boat was employed, and about 14,550 tons of clay were removed from the bed of the river. In 1808, vessels drawing only about 8½ feet of water at ordinary springs could go up to Stockton; this can now be done by vessels drawing about 15½ feet. The lower jetties were run out by H. H. Price, Esq., C.E.; and more were

* A forest of fruit and other trees were found buried at a great depth in the earth whilst making this excavation. The roots lay lower than the deepest part of the river. In many places, acorns were found, and nuts of a full growth, some whole, and others

as if perforated by a maggot. The oval circumference of a metal buckle, a stag's horn, a bullock's head, a demi molaris of some ruminating animal, &c., were also discovered. One of the oaks, just above the root, measured eight feet in diameter.

afterward placed by W. A. Brooks, Esq., at first resident, and afterwards consulting engineer to the Tees Navigation Company.

At Newport, about 3 miles below Stockton, the river runs east-north-east to Haverton Hill, and is called Billingham Reach. Hence its course changes south, having the drops at Port Clarence on the Durham side, and the newly-formed town and docks of Middlesborough on the Yorkshire side. At the southern extremity of this latter reach, and also on the Yorkshire side, is Cargo Fleet, from whence the channel of the river, turning eastward, extends into a wide estuary, which is a little contracted at the mouth by a tongue of land projecting from the north, called Seaton Snook. From this point, a sand called the North Gare stretches to the south and east; and nearly opposite to it is the South Gare, a sort of peninsular shoal from the Bran Sand, which occupies the south side of the harbour mouth. The estuary is nearly 5 miles long from Cargo Fleet to a line drawn from Seaton Snook on the north side to Tod Point on the south; its greatest breadth is $3\frac{3}{4}$ miles; and it contains about 8,800 acres. Excepting the central channels, it is nearly all dry at low water; that part of it which lies between the channels and the Durham shore being called the Seal Sand.

Between Cargo Fleet and "the ninth buoy," a distance of nearly 3 miles, are two navigable passages, called the north and south channels. Below their junction, a rocky ledge projects from the Bran Sand into the channel. At the buoy is a pool of about $7\frac{1}{2}$ acres, having a depth of from 2 to 3 fathoms at low water. At the "eighth buoy" there is another pool, with an area of 4 acres, and a depth of from 2 to 4 fathoms; and at the "fifth buoy," a pool having an area of about 50 acres, with a depth of from 2 to 7 fathoms at low water. In these valuable anchorages vessels can lie in safety. Indeed the bay or estuary of the Tees is a place of great security for ships in stormy seasons; and many vessels, which are not concerned in the trade of the river, enter it for shelter.

At spring tides, about 10 or 12 feet is the depth on the bar at low water. The rise on the bar, at springs, is 17 feet; at Middlesborough, 14 feet 3 inches; and at Stockton, 12 feet. On the 5th of March, 1851, during a north-east wind, there was an extraordinary rise of 19 feet 6 inches on the bar, 16 feet 3 inches at Middlesborough, and 14 feet at Stockton. The difference between the time of high water at the bar and at Stockton Quay is one hour.

Lights were placed in the river in 1838. There are

four towers and one floating light at the entrance, placed at the expense of the Tees Navigation Company, under the direction of the Trinity House of Deptford Strond; and the channel, from thence to Middlesborough, was lighted under the direction and at the expense of the Navigation Company, who maintained eleven fixed and one barge light for that purpose. On board the floating light a log-book is kept, containing records of all important transactions, and also an account of all vessels arriving at and sailing from the river Tees. Some of the leading lights are occasionally removed, by persons appointed for the purpose, according to the shifting of the bar or shoals. These lights are so judiciously placed that vessels can come in as well by night as by day. All the eleven bay and river lights burn rape-seed oil, and are equally brilliant with those along the coast; the saving over sperm oil being considered one half. The following letter was addressed to the company from the corporation of the Deptford Trinity House, on August 22, 1851:—

"SIR—The Deputy Master and a Committee of the Elder Brethren of this Corporation having very lately returned from a voyage of inspection on the east coast, and having, in the course of their progress, visited the light-houses on the Bran Sand, I have been directed to express, for the information of the Tees Navigation Company, their satisfaction at the appearance of those lights, and to state that they consider that any alteration in the mode of exhibiting them is rendered unnecessary.

"I am, Sir, your most humble servant,

"J. R. Wilson, Esq.

"J. HERBERT."

The buoys from the sea to the eighth buoy are the property of and under the direction and maintained by the Trinity House; and those above that buoy are under the direction of and maintained by the Tees Conservancy Commissioners.

In the Second Report of the Tidal Harbours Commission, published in 1846, the Commissioners say, "Stockton-on-Tees, including Middlesborough, is one of the most thriving of our coal ports. The channel of the river has been contracted and deepened; the approaches are admirably lighted; a floating dock of nine acres has recently been opened at Middlesborough; the traffic and revenue of the port have doubled within these few years; and, in 1845, the Darlington Railway Company leased the whole of the harbour dues, and declared it a free port. All is bustle and activity, and all seems to prosper. Yet even here, on a close inspection, the want of some control is manifest—the quays are nearly all private, and are falling into the river; the piers of the bridge are only supported by the loads of stone thrown down at their foot; rocks of whinstone impede the upper navigation, and cause

damage to the barges; the entrance of the dock at Middlesborough, completed but five years since, is only thirty feet wide; while about 2,000 acres of the estuary have been enclosed, and the corresponding tidal water excluded; and the channel over the bar, which formerly ran out due east, has, in consequence, changed to north-north-east. Great complaints also are made of the want of a harbour of refuge in the neighbourhood, and of a beacon on Redcar Rock, upon which vessels are annually wrecked."

The same authority states the debt due from the port of Stockton, January 1, 1842, at £43,505; 1843, £41,204; 1844, £42,136; 1845, £41,970; and 1846, £42,002. The gross income in the year ending at the latter date was £9,235; the debt being in the proportion of 4·5 to the income.

In January, 1846, W. A. Brooks, Esq., C.E., addressed an elaborate report to the chairman of the committee of the Tees Navigation Company, in which were stated the means necessary for diverting the navigable channel through the estuary into a more northerly course, and thereby restoring the direct east and west passage into the harbour, which existed previous to 1805. The cost of the proposed works was estimated at £15,211 1s. The report was given at length in the commissioners' second report on Tidal Harbours, 1846.

TEES CONSERVANCY AND STOCKTON DOCK ACT.—In 1851, a bill was prepared and introduced into parliament, for transferring to commissioners the property, powers, and liabilities of the Tees Navigation Company, repealing or amending previous acts, dissolving the company, constructing a dock near Stockton, making cuts, and other works.

A report to the Lords Commissioners of the Admiralty, by W. Bald, Esq., C.E., the inspector appointed by them to make a local inquiry into the case of the Tees Conservancy Bill, was ordered by the House of Commons to be printed, April 28, 1851. Mr. Bald, in concluding his report, observes—

"I am of opinion that the estuary of the river Tees, and the entrance at the bar, are capable of great improvement in being deepened to a considerable extent.

"1. That by a proper arrangement of works seaward at the bar, namely, those of protection, and those of guidance, to direct the scouring currents, many feet of an additional depth of water will be gained, and maintained by the force of the scouring power.

"2. That the channel inwards from the bar to the natural existing anchoring basin at the fifth buoy, may be made, by a proper arrangement of works, 15 to 18 feet deep, at low-water springs, which will be 31 to 34 feet deep at high water.

"3. That the estuary channel, from the fifth buoy up to Cargo Fleet, may be made 12 feet deep at low-water springs, which will be 28 feet at high water.

"4. That the river channel up to Stockton is capable of being made 10 feet deep at low-water springs, which will be 23 feet at high water.

"5. That an asylum basin to any extent can be formed at the fifth buoy (where a natural basin exists of 50 acres from two to seven fathoms deep), and capable of being deepened, so as to float, at low-water springs, vessels drawing more than 20 feet of water.

"6. That in combination with the improvement of the river navigation, an extent of many thousand acres of land could be safely embanked in from the sea without injury to the scouring power required at the bar entrance or in the river, if proper works be constructed to direct and guide the force of the current in the navigable channel."

The inviolate preservation of the existing places of anchorage are emphatically recommended in the report.

Notice of the intended bill was given on the 6th of November, 1851; and the act received the royal assent June 30, 1852. The preamble states the capital of the Tees Navigation Company, created under the acts of 1808 and 1828, at £29,000, in 580 shares of £50 each; and the debt, on mortgage and otherwise, at £39,320. It is enacted that the commissioners to be appointed under this, "The Tees Conservancy and Stockton Dock Act, 1852," shall become subject to the liabilities of the company. The commissioners are to consist of five persons elected annually on the 9th November by the Stockton council, five by the Middlesborough Improvement Commissioners (now by the Middlesborough council), and two by the Yarm rate-payers; five to be a quorum. The commissioners appointed by the Stockton council are to be "The Stockton Dock Committee," and to exercise all powers connected with the proposed dock; three to be a quorum. The body of commissioners are to be conservators of the Tees, vested with the property of the Tees Navigation Company. The works, and the order of their execution, are as follow:—

"First. The channel from Middlesborough to the ninth buoy anchoring pool; (to wit,) a cut and channel from the present channel of the Tees from the river entrance of the Middlesborough dock to the ninth buoy anchoring pool in the Tees, and the diverting by dykes or otherwise through that cut and channel the waters of the Tees.

"Secondly. The widening of the present channel of the Tees on the south bank thereof, from the east end of the Stockton cut next hereinafter described, along the south bank of the Tees down to a point in the Tees near Newport, in the North Riding of the county of York.

"Thirdly. The Stockton cut; (to wit,) a cut or channel from the southern side of the Tees, from a point near to the stone bridge at Stockton across certain lands in the township of Thornaby, in the parish of Stainton, in the North Riding of the county of York, and into the present channel of the Tees, at a point opposite or nearly opposite to the island called Jenny Mill's Island, and then diverting through the Stockton cut of the waters of the Tees.

"Fourthly. The making in the present bed or channel of the Tees, between those two last-mentioned points, and on the land lying south of the present channel of the Tees, between those points and the Stockton cut of the Stockton Dock; (to wit,) a dock or basin for the accommodation of the shipping in the Tees, with or without flood-gates, at the eastern end of the dock or basin, and all necessary wharfs, quays, landing-places, warehouses, works, and conveniences.

"Fifthly. The embanking and filling up of the south-west corner of the present channel of the Tees, to the distance of 400 feet or thereabouts, at the commencement of the Stockton cut.

"Sixthly. The making of a road, or the appropriating and making public of the existing private road leading out of the high road from or near to the west end of that stone bridge over the Tees, and the extending of the same across the principal embankment up to the west side of the Stockton cut at the south end thereof.

"Seventhly. The appropriating and making public of a private road adjoining to or leading from the high road from Stockton to Guisborough, at a point about 330 feet from the east end of that stone bridge, and leading thence to the ship-building yard now occupied by Messrs. William Turnbull and Company on the south side of the Stockton cut.

"Eighthly. The widening, deepening, straightening, dredging, protecting, and otherwise improving of the bed, channel, and banks of the Tees, as the commissioners from time to time deem necessary for maintaining and improving the navigation thereof, from High Ford to the outside the bar at the mouth of the Tees.

"Ninthly. The preventing and removing of all obstructions to the navigation of the Tees, and all encroachments therein, and the preventing of the erection of piers, quays, jetties, wharfs, and other works on the Tees.

"Tenthly. The providing, placing, maintaining, and removing of buoys, beacons, moorings, steam-engines, dredges, and other works and machinery, lights, lightships, and lighthouses in or near the entrance of the Tees.

"Eleventhly. The removing or compelling of the removal of all wrecks, encroachments, and obstructions, which may in any way prejudice or obstruct the free navigation of the Tees.

"Twelfthly. The making, amending, repairing, maintaining, altering, and removing of all such works and conveniences whatsoever as the commissioners from time to time think it proper, for any of the purposes of this act, to make, amend, repair, maintain, alter, and remove; and (subject to the provisions of this act) the commissioners may do all other acts necessary for the conservancy and improvement of the Tees, and the regulation of the navigation thereof; nevertheless doing as little damage as can be, and making full satisfaction (as by this act provided) to all parties interested for all damage by them sustained by reason of the execution by the commissioners of the powers of this act."

The shipping-places of the Clarence Railway Company are to be protected, and disputes with the company settled by arbitration. The Admiralty may make a breakwater from Seaton Snook in an eastwardly direction towards South Gare bank. The works by the commissioners must be completed within seven years from the commencement of the act. Provision is made for the maintenance of proper light; and schedules of harbour and dock dues are included in the act.

"The Stockton Dock Account" is to be kept distinct from the other transactions of the commissioners; as are the receipts and disbursements on account of the

dock. The sum of £80,000 may be raised on mortgage of the Dock Fund, and £207,000 on the Tees Conservancy Fund.

On or before the 1st of December, 1852, the commissioners were to issue mortgages for £18,000 to shareholders in the Tees Navigation Company under the act of 1808, at 4 per cent. interest, and in the proportion of £100 principal money for every £50 share; for £36,320 to creditors under the act of 1828, at the respective rates of interest on the money borrowed; and for £32,000 to shareholders under that act, at four per cent. interest, and in the proportion of £80 principal money for every £50 share. The whole of the principal sums are to be paid off within seven years after the commencement of the act. At the end of ten years, a sinking fund is to be formed, for paying off annually not less than one-thirtieth part of the debts then standing. As soon as the claims of the Tees Navigation Company are discharged, it is to be dissolved. The Tees Conservancy Fund is to be charged, first, with the above interest; and, secondly, with the execution of improvements in the river, and the maintenance of the navigation.

Provision is made in the act for securing the property of Thomas Hustler, Esq., called the Holmes, and situated at the east end of the intended cut, on the south side of the river, by embankments, &c. The owners of property separated by the cut, as well as the occupiers of land on the north side of the canal, are allowed to have ferry-boats, without paying compensation for their use. The property of the see of Durham, at the Samphire Batts, is also to be protected; and if the cut is at any time abandoned for five years, the lands on each side shall be vested in the owners of the adjoining property.

Soon after the passing of the act, the rate-payers of the town became dissatisfied with that part of its provisions which related to the formation of Stockton Dock. A public meeting was held on the subject, at which a committee was appointed, who, after having received information from all parts of the kingdom, and patiently discussed the various schemes proposed for raising the required capital, came to the unanimous conclusion of recommending not only the mortgage of the dock dues, but the rates of the town, to the extent of £70,000. At a full meeting, held October 18, 1852, the report of the committee was adopted, which proposed the imposition of a rate in aid of 1s. in the pound on all house property in the borough. This, it was urged,

would place the superintendence of the concern in their own hands, instead of those of shareholders who might live at a distance, and, having no connection with Stockton, would merely look upon the docks as a profitable investment of capital. Many signatures of rate-payers were obtained in support of the proposed measures; and, in the session of 1853, a bill was introduced into parliament, comprising an amendment of the Tees Conservancy and Stockton Dock Act—a separation of Stockton Dock from the Tees Conservancy—additional powers, including arrangements for traffic between the Stockton Dock and the Stockton and Darlington Railway, the Leeds Northern Railway, and the Stockton, Hartlepool, and Clarence Railways—alteration of dues—and rate in aid on property in the borough of Stockton. Notwithstanding the plausibility of the scheme, opposition was aroused to some of its provisions; and it was rejected by a committee of the House of Commons, the proposed rate in aid being considered without a precedent.

Some misunderstanding occurred in 1853, between the Tees Conservancy Commissioners and the new shareholders of the Tees Navigation Company, respecting interest due; and the latter took council's opinion on the subject. J. W. Willcock, Esq., barrister-at-law, said, "The commissioners are bound to abstain from laying out a shilling in executing the works between Middlesborough and the ninth buoy anchorage pool, or other improvements, works, and conveniences, in diminution of the fund applicable to the interest of the £32,000 mortgagees. It is their duty to follow the order prescribed by the 97th and 110th sections of the act." The learned gentleman concludes by saying, that the mortgagees "are entitled to obtain, by bill in Chancery, the appointment of a receiver to apply the receipts in the order prescribed by the 97th section, and also an injunction to restrain the commissioners from applying the income at least, if not also the capital, of the Tees Conservancy Fund otherwise than in accordance with the directions of that section." The commissioners also signified their intention of taking a legal opinion.

On the 23rd of June, 1853, the Tees Conservancy Commissioners advertised for tenders for loans, in sums of not less than £500, for the terms of five or seven years. On the 19th December following, the works committee reported, at a monthly meeting, that they had inspected the proposed lines laid down by Mr. Bald at Cargo Fleet, and were of unanimous opinion that the alterations proposed to be adopted would be of great advantage to the river.

FISHERIES.—The bishops of Durham have had, for centuries, the royalties of the Tees, including whales, sturgeons, porpoises, and the like, taken on the Durham side of the river. When a whole porpoise, placed on the dinner table at once, was considered "a dainty dish" to set before king, lord, or bishop, this right must have been of considerable value; but, at present, the shoals of porpoises which frequent the sand banks at the mouth of the river, are considered to be very injurious to salmon and other fish of inferior size.

The supply of sea fish is generally abundant. In the Tees itself, flounders, eels, smelts, or sparlings, &c., are found. The river fishery has for centuries been considered an important pursuit. The following document is in the Cursitor's Rolls:—

"**TPORE CUTHBTI EPI. 1530.** (Bishop Tunstall)—Where variance heretofore hath been among the inh'tants of the town of Stockton, for taking of head fishes as Sealles, Purpose, Sturgion, and other lyke fishes, betwixt the fishers with drawing netts on the one p.^t And the fishers with haling netts on the other p.^t—It is ordered, by consent and agreement of both the said p^{ty}s for appeasing of all variance in time to come, in manner and form following, (that is to say) That if fishers of both sorts, some with drawing netts and some with haling netts go about to take any Seale, Purpose, or like fish within the river of Tease. If it fortune the said fish to lyght in the haling netts, then all those fishers with haling netts assembled for that purpose, pursuing the said fish to have him alone, and the fishers then assembled with drawing netts to have no part thereof with the haling netts; and likewise if it fortune the said fish to lyght in the drawing netts, then all those fishers with drawing netts assembled for that purpose, pursuing the s^d fish to have him alone, and the fishers then assembled with haling netts to have no p^t thereof with y^e drawing netts. And also, It is ordered, that every man of both sorts of fishers then assembled for that purpose, shall give unto 5 water-room sufficient and none to come within another to hurt his neighbour gere upon pain of 6s. 8d. on him that shall offend them as oft as he shall so do to be levyed of the same offender at the next court after, without further delay.

"Also, it is ordered, that no man of no sort of the fishers aforesaid shall fish with kydell netts for taking of smelts, sperling, or fry from a certain place called Salthoue, so upward upon the river of Tease, after St. Mark day unto Lammas day 'nly hereafter upon pain of 6s. 8d. of every man so doing as he shall so do to be levyed at the next court after, without further delay."

Shrimps are taken in Tees bay by means of small nets fixed to the end of poles. Cockles are gathered on ridges of sand left dry at ebb tide near the middle of the stream; and a considerable trade is carried on in mussels, of which there is an extensive bed. From ten to twelve tons of this shell fish are gathered weekly, and forwarded by railway to various parts of the country.

In shallow parts of the river, at Middleton-One-Row and higher up, there is abundance of trout. But the principal fishery is that of salmon, which may be

taken in the Tees, according to act of parliament passed in the 1st of George I., from the 22nd of November to the 12th of August, by any of the fishermen, on their paying to the vicar a small sum for each boat as a tithe of fish. In different parts of the river, the salmon fisheries are let as private property, a rent per boat being paid at each station. Otters, however, are exceedingly destructive to the fish; and several of them have been sometimes seen fighting for a salmon.

“An otter in the Wear
You may find but once a year;
An otter in the Tees
You may find at your ease.”

The old English sport of otter hunting may frequently be witnessed, at meetings of “the Stockton and Hurworth Otter Hounds;” and there are several keen sportsmen in Stockton and neighbourhood. The breed of salmon in the Tees, however, has other enemies than the otter; and it was found necessary, in February, 1853, to appoint a committee of the Stockton town council, to investigate the laws for the preservation of salmon and preventing the destruction of spawn, with a view to the protection of the fisheries on the Tees. It was stated by Mr. Alderman Byers, that, high up the river, the spawn was carried off to feed pigs with.

CUSTOMS PORT OF STOCKTON.

IN consequence of the decline of the port of Hartlepool, the chief officers of the customs were removed from thence to Stockton in 1680; and three free quays were appointed by a commission from the Exchequer in 1683. The port is described in that document as a member of the port of Newcastle-upon-Tyne, and its limits are stated to be “from the Black Halls, about eight miles from the bar of the Tease towards the

* THE RUSSIA COMPANY was established in the reign of Philip and Mary, by letters patent, granted to “certain merchant adventurers for the discovery of lands unknown,” and confirmed by act of parliament in the reign of Elizabeth. They are empowered to levy dues in every port and harbour throughout England. The dues are received at the port of London by the secretary of the company, and at the out-ports by the receivers of the revenue, or their clerks, amounting, in round numbers, to from £1,800 to £2,000 per annum. In the year 1852, the amount levied upon the port of Stockton, was £7 16s. 11d. Her majesty’s consul at St. Petersburg, it appears, is the commercial agent of the company, and derives fully one half of his official salary from this appointment. The agent at St. Petersburg superintends the affairs of the chapels at that place, as well as those at Cronstadt and Moscow, towards the erection of which, the company have largely contributed; the company also contribute to the maintenance of chaplains at all those places, as well as at Archangel and Solambol; and a school is established at St. Petersburg under their auspices. The company represents a large colony of British subjects established in the cities of St. Petersburg and Moscow, and in the ports of

N.N.W., and so into the sea to 14 fathoms water; and from thence directly, in a supposed line, till it fall opposite to the promontory or point called Huntcliffe-foot, about six miles from Tease-bar, towards the E.S.E.; and so directly from the said barr and limitts up the river Tease S.S.W. to the horse-ferry, commonly called Stockton Ferry, saving the usual and known privileges by law belonging to the port of Hartinpoole.”

A more extensive jurisdiction is assigned in a commission returned into the Court of Exchequer, Michaelmas term, 3 Geo. II., wherein it is stated that “the port of Stockton extends from the point commonly called Ryhope-nook, adjoining the district or limits of the port of Sunderland, about sixteen miles from the bar of Teese towards the north and by west, and so into the sea to fourteen fathoms of water at low water, and from thence directly in a supposed line till it fall opposite to the promontory called Huntcliff-foot, adjoining to the district or limits of the port of Whitby, about six miles from the said bar toward the east-south-east, and so directly from the said bar and limits up the river Teese to the bridge commonly called Yarm-bridge. Dated October 18, 1729.” In conformity with this arrangement, the new harbour of Seaham was originally considered a member of this port.

The customs port of Stockton now extends from the south side of the town of Seaton, the limit of the customs port of Hartlepool, to Huntcliff Foot, the limit of the customs port of Whitby.

The parties who are empowered to levy dues within the port are—The Tees Conservancy Commissioners, the Municipal Corporation of Stockton, the Trinity House of Newcastle, the Trustees of Ramsgate Harbour, the Warden and Assistants of Dover, Bridlington Harbour Trustees, and the Russia Company.*

Cronstadt and Archangel. The British subjects in St. Petersburg alone, in 1852, amounted to about 3,000; and this number was constantly increasing from the influx of artisans and their families, who are hired by the Russian manufacturers. The Russian Company and the British factory at St. Petersburg, have been always closely connected; and to the profitable carrying on of the Russian trade, it has been deemed essential that English houses should exist in Russia.

The commissioners appointed by the House of Commons to enquire into the local charges upon shipping, in recommending in their report, dated July, 1851, that the exclusive privileges of this company be abolished, state, “The Russia Company is entitled to exclusive privileges in Russia as well as in this country; and in ordinary times this circumstance might have given rise to some practical difficulty. But trade with Russia is suspended, and a favourable opportunity, therefore, is afforded for the abolition of the exclusive privileges of the company, as well as of the maritime charges levied by them. We have reason to believe that the funded property of the company is sufficient to provide for the indemnification of all who possess vested interests.”

The Tees Conservancy Commissioners levy light dues and river tolls. The light dues consist of 1d. per ton upon every vessel entering the Tees, and 1d. per ton on every steam vessel trading to or from the Tees with passengers. The river tolls are, per ton—

For every vessel inwards or outwards, with coals or goods, 3d.

Do. do. to or from any foreign port, during the continuance of any existing lease of any of the said tolls, 6d.

And after the determination of such lease, 3d.

For every vessel entering the Tees for refuge, 1½d.

For every vessel entering the river in ballast and being afterwards towed out without taking a cargo, 1½d.

The above powers are under the act of 15th and 16th Victoria, above quoted. Under its provisions, as has been seen, the Tees Conservancy Commission superseded the Tees Navigation Company, by whom the former light dues and river tolls had been leased to the Stockton and Darlington Railway Company for £8,200 annually, viz., £6,900 for tonnage dues and £1,300 mastage for Tees bay lights. The receipts on these accounts for the preceding six years were as follow:—

	TONNAOE.			MASTAGE.		
Year to April 30, 1840 ..	£9,631	0	3	..	1,184	6 9
..... 1841 ..	8,850	5	6	..	1,064	0 0
..... 1842 ..	7,872	7	4	..	1,053	8 0
..... 1843 ..	7,714	1	8	..	1,292	16 6
..... 1844 ..	7,436	16	5	..	1,212	13 9
..... 1845 ..	7,828	3	5	..	1,492	19 2

The railway company's lease expired on the 1st of May, 1854.

The limits of the jurisdiction of the commissioners extend from outside the bar at the mouth of the river Tees to the High Ford across the river from the township of Aislaby to the township of High Worsall in Yorkshire, and into the various creeks, &c., below, into which the tide flows.

The charges levied by the municipal corporation of Stockton as lessees of the Bishop of Durham, who, in the right of his see, is owner of the port of Stockton, are—first, anchorage and plankage; and secondly, town dues.

The anchorage and plankage comprise 2s. 6d. on each ship per voyage; on foreign vessels, double. These imposts have been considered a hardship by the owners of vessels that only came up to Middlesborough; and, in 1837, a trial took place at Durham respecting them, when a verdict of 12s. 6d. was given in favour of

the bishop, thereby establishing his right. These dues were let in 1852 for £700. The gross amount levied in that year was £779 7s. 6d. The amount of differential duty, paid out of the consolidated fund in respect of foreign vessels privileged under treaties of reciprocity, was, in 1852, £47 12s. 6d.; no differential duty was levied on foreign unprivileged vessels in that year.

The town dues are, 4d. for every 100 bushels of corn landed, and 1s. for each 100 deals. The amount levied in 1852 was £99 1s. 2d. The lease of these tolls is for twenty-one years, renewable on payment of a fine, as is usual in leases of church property. Subject to this fine, and the ancient reserved rent, these dues form part of the borough fund.

The anchorage and plankage dues have been re-leased to trustees for the Stockton and Darlington Railway Company, for £700 annually; the lease expired on the 1st April, 1854.

On the borough fund, £9,099 17s. is secured. The other revenues of this fund amounted in 1852 to £1,458 12s. 5d., of which sum £1,410 was realized by sale of property. There was no borough rate. In that year, £1,055 17s. 6d. was paid to the Bishop of Durham for the renewal of the lease of the port.

During the lease by the Stockton and Darlington Railway Company, the river tolls have not been levied on shipping taking cargoes from the railway, the company bearing the loss with a view to induce traffic to the Tees; from which the railway anticipated an increase of revenue.* The lease of the dues by the company, it was understood, would not be renewed by them at the same rate; but the amount which may be raised when the dues are re-imposed, will probably bear a near proportion to the rent.

The Trinity House of Newcastle levy primage at the port of Stockton, under a charter of James II.; it consists of 2d. on every ton of goods imported; on every last of hemp, flax, &c., reckoned by the last, 3d. The gross amount levied in 1852 was £177 2s. 10½d., which was paid to the credit of the Trinity House funds.

The dock at Middlesborough is the property of the Stockton and Darlington Railway Company, which, being a trading company, levies dues only from those using its property.

Besides the sums above-named, the Bridlington Harbour Commissioners levied at Stockton, for the year

* "NOTICE TO MARINERS.—Tees Navigation Dues. Notice is hereby given, that from and after the 1st November next, the dues heretofore payable to the Tees Navigation Company, for vessels entering the river Tees, either from foreign countries or coastwise

(except from the port of London), will be altogether discontinued; and such vessels will be allowed to enter the Tees free. By order of the committee, J. R. WILSON, chief clerk to the Tees Navigation Company.—Stockton, October 25, 1844."

1852, £143 10s. 6d.; the warden and assistants of Dover harbour, £9 19s. 6d.; Ramsgate Harbour Commissioners, £14 1s. 0½d.; and the Russia Company, £7 16s. 11d.; amounting in the whole to £9,430 19s. 6d. For Middlesborough, the warden and assistants of Dover harbour received £76 0s. 10¼d.; and Ramsgate Harbour Trustees, £80 12s.; making a total sum, levied within the customs port of Stockton, of £9,587 12s. 4¼d.

QUAYS.—There are 22 private quays in Stockton harbour, varying in length from 20 to 260½ feet; eight are of stone, eight of timber, and six of timber and stone. There are four public quays, of which one, of timber, belongs to the Bishop of Durham, and is 111½ feet long and 17 wide; one, of stone, belonging to the Stockton corporation, 79½ feet long and 12½ wide; one of stone, belonging to Mr. C. Martin, 271½ feet long and 51½ wide; and one of stone and timber, belonging to Mr. Sylvester Ingledew, 113½ feet long and 8½ wide. There are five coal staiths belonging to the Stockton and Darlington Railway Company, and two belonging to the Clarence Railway Company.

At Newport there is a private quay of stone, 192 feet long, belonging to T. Hustler, Esq. There are six coal staiths at Port Clarence. A public quay at Middlesborough, 93 feet long, and built of timber, belongs to the owners of the estate; and there are also two private quays of timber, one of which, 301 feet long, belongs to Messrs. Bolckow and Vaughan, and the other, 58 feet long, to the Pottery Company. Mr. Hesselton has a stone quay, 318 feet in length, at Cargo Fleet.

SHIPPING.

BISHOP PUDSEY'S "great ship," intended for the cru-sades, has already been alluded to; and that a native of Stockton was appointed to navigate her is a proof that, at that time, the mariners of this port were skilful in their vocation. In 1635, when the unpopular tax of ship-money was levied, Stockton, Hartlepool, and Sunderland, were charged with providing one ship of 200 tons for the service of the state, manned with 80 men and double equipage, &c., at an expense of £1,850, levied on the whole county.

The convenient situation of the port of Stockton, on the revival of the town from its depression in the 17th century, occasioned a gradual increase in the number of ships, which began to be required for the exports and imports of the surrounding district. The advantages of

united effort in this direction were at length seen; and in January, 1803, a shipping company was formed, under the style or firm of "The Maritime Company;" and in 1806, "The Merchants' Shipping Company," for the purpose of conveying goods to and from London and other ports, commenced with eight ships, of from 105 to 120 tons burthen. This company, which was remodelled in 1824, now possess the "Swaledale," "Teesdale," "Allerton Packet," and "Richmond Packet," schooners, one of which sails from Stockton, and another from London, every Saturday.

The success attending the establishment of the latter company induced "The United Shipping Company," previously formed, to dissolve itself, and form another under the firm of "The Stockton Shipping Company." On the dissolution of the company in 1844, the following ships belonging to it were sold by auction on the 2nd July:—the "Oak," 343 tons n.m., for £1,505; the "Harmony," 254 tons do., £1,105; the "Princess Victoria," 241 tons do., £1,060; the "Stockton," 214 tons do., £1,100; the "Jane White," 204 tons o.m. £880; the "Aimwell," 192 tons n.m., £960; the "Roseberry," 191 tons do., £925; the "William Skinner," 163 tons do., £850; the "Elizabeth," 169 tons o.m., £550; and the "Barbara," 165 tons do., for £455.

"The Stockton and London Shipping Company" was commenced in 1837, and has been generally successful, having realized a considerable reserved fund. Their ships, which are said to be about to be replaced by a new line of iron clipper schooners, are the "Darlington," the "Richmond," the "Barnard Castle," the "Auckland," and the "Thirsk." One of them sails from Stockton every Saturday.

"The Stockton Union Shipping Company," the vessels of which took coals to all parts as cargoes offered, was formed in 1822. At the commencement, the capital was small; but, in December, 1835, it had increased to £12,000, and the average dividend for the three preceding years was 16½ per cent. The company was dissolved in 1853, when the following ships were sold, viz., the "Paragon," for £1,410; the "Commodore," for £1,405; the "Hero," for £1,300; the "Black Boy," for £1,120; the "Hope," for £930; the "Rosebud," for £950; the "John," for £1,455; the "Union," for £765; and the "Empress" (said not to belong to the company), for £1,625.

Other companies have been, from time to time, projected or established. "The Commercial Shipping Company," formed in 1834, had a subscribed capital, in January, 1835, of £2,925, which afterwards increased

to £12,000. "The General Shipping Company," and "The North York and South Durham Shipping Company," both commenced in 1834, with flattering prospects of success. "The Stockton and Cleveland Shipping Company," with a capital of £20,000 in 800 shares of £25 each, issued a prospectus on April 17, 1839; the provisional committee being Messrs. W. C. Newby, C. J. Spence, R. Sherwood, W. Turnbull, W. T. Dixon, W. W. Watson, J. Appleton, G. Walton, and J. Laidler. "The New Merchants' Shipping Company" held its first meeting of shareholders in July, 1852.

Stockton Marine Insurance Association.—The statement of accounts of this association, up to April, 1854, shewed a balance in hand of £2,684 15s. 9d.; and it was therefore agreed to divide 17s. 11d. in the pound upon the amount of premiums received, and any surplus to be carried to next year's account.

There are regular traders from Stockton to Hull, Newcastle, Glasgow, Dundee, Leith, and Montrose.

The number of vessels belonging to this port in January, 1795, was 47; tonnage, 5,730. In September, 1821, there had been an increase of 19 vessels and 1,150 tons. In January, 1827, there were 57 vessels, measuring 5,465 and 18-94ths tons; in 1828, 79 vessels, measuring 6,520 tons; and in 1829, 74 vessels, measuring 7,206 tons. In January, 1832, the number had increased to 80 vessels, measuring 7,970 tons; and in 1850, there were 182 vessels, measuring 27,348 tons. At the close of the year 1854, there were 158 vessels, measuring 28,603 tons: of these, 37 were below 100 tons burthen, 56 between 100 and 200 tons, 51 between 200 and 300 tons, 9 between 300 and 400 tons, 2 between 400 and 500 tons, 2 between 500 and 600 tons, and one above 600 tons.

* MR. CHRISTOPHER ALLISON.—Stockton, like other northern ports has produced its quota of brave and skilful seamen; and, in the list of these, Mr. Christopher Allison, master mariner, may be named, he having materially contributed to the capture of the *Michault* privateer, of 14 nine-pounders and 182 men, on New-years Day, 1758, in Dungeness-road. Mr. Allison was at that time master of the *Adventure* armed ship, which was commanded by Captain Bray for the king. On perceiving the French snow standing in, she was at first taken for an English cruiser. "Dinner being ready," says Allison, "Captain Bray gave orders for all the hammocks up, and clearing the ship, which was done in the time we were at dinner. Monsieur, smelling our beef, roast-pork, and plum-pudding, came down in order to deprive us of it; we dined on our beef and pork before they came: the pudding we fought for." The cable having been veered out to the splice, and then cut, the ship bore away large; but as there was not time to get the topsails hoisted, and the enemy evincing an intention to rake the *Adventure*, the helm was put hard a-port, which

STEAM-BOATS.—The river Tees was first visited by a steam-boat in 1822. In 1824, one was built for the use of the port; and, 20 years afterwards, there were seven belonging to the Tees, which were chiefly employed in towing ships. In 1851, there were 22, varying from 16 to 46 horse power, and possessing an aggregate of 677 horse power. In 1854, there were 26 registered steam vessels, of from 10 to 53 tons burthen, and containing an aggregate tonnage of 574 tons; besides a vessel of 225 tons, belonging to the principal merchants and manufacturers of Middlesborough.

LIFE-BOATS.—About the year 1804, a life-boat was established at Redcar, to the south of the Tees, which has often proved highly serviceable to the crews of vessels wrecked on the coast. As a considerable time necessarily elapsed before this boat or that at Hartlepool could reach ships in distress on the north side of the Tees, Jonathan Backhouse, Esq., of Darlington, provided a life-boat at his own expense, which is stationed at Seaton Carew. In 1825, a meeting was held at Stockton for the purpose of adopting a general system of relief for mariners* shipwrecked on the neighbouring coasts, when a considerable subscription was raised for the purpose. "The Tees Bay Life-boat Society" was established in 1839. The life-boats were formerly maintained by subscriptions raised among the visitors at Hartlepool, Seaton Carew, and Redcar. It was, however, thought desirable that the ship-owners should comply with a voluntary charge, and the boat be placed under the control of the commissioners. The Hartlepool Dock Company are bound to maintain a life-boat, for which, however, they levy a charge on ships. In addition to the life-boat at Hartlepool and Redcar, an order was given in 1853 for one at Middlesborough.

brought the ship athwart the bows of the enemy, whose howsprit was secured by ropes, and lashed to the capstan of the English vessel, the crew of which had thus the advantage of raking the other. The credit of these manœuvres was claimed, and probably with justice, by Mr. Allison. The action was kept up, principally with musquetry, from the quarter-deck and round-house of the *Adventure*, until the enemy struck their colours; but the party who boarded, headed by Allison, was unexpectedly received with a volley of small arms, which compelled them to retreat. About ten minutes firing with the great guns, however, brought the action to a conclusion. Captain Bray was rewarded for this exploit with the command of the *Amelia*, an 80 gun ship; though Allison stated that, during the greater part of the action, he and the pilot were in the round-house, which was musket-proof. Mr. Allison afterwards ushered in every new year with a *plum-pudding*, in remembrance of the dinner and exploit of the 1st of January, 1758. He died at Stockton on the 11th of July, 1808, aged 87 years.

COMMERCE.

WITH other ports on the east coast of England, Stockton is well situated for carrying on a trade with continental ports, and only requires accommodation for shipping to gain its full proportion in the advantages of such trade. In 1815, it was made a bonding port for goods enumerated in Table C. of the Warehousing Act; and in 1818, the indulgence was extended to timber. In May, 1832, the Lords Commissioners of the Treasury were pleased, by their warrant, to approve of the port of Stockton as a warehousing port, for sugar, coffee, dried fruits, rice, cheese, or cocoa nuts, either on importation direct, or removal coastwise. These, with the privileges before mentioned, make Stockton a bonding port for all articles of general merchandize allowed to be warehoused, except tobacco; the proprietor of the extensive tobacco manufactory at Stockton having given the requisite security for the facilities required for his business.

The goods carried coastwise are chiefly lead, flour, butter, cheese, bacon, linen and linen-yarn, worsted-yarn, alum, &c. The imports are wine, groceries, fruit, foreign and British spirits, porter, seeds, hops, and every other article necessary for the consumption of the surrounding country.

The principal export over sea, during the last century, was lead; but this trade afterwards declined. The export of grain also, which, in 1749, amounted to 35,400½ quarters of wheat and 5,387 quarters of rye, is now only occasional. The nature and quantities of goods exported will be understood from the following particulars, extracted from "Brown's Export List,"* for 1854. From January to July inclusive, the Stockton shipments were—

Earthenware, 240,550 pieces	value	£1,928
Bricks, 19,000		47
Wrought iron, 21 tons		305
Painters' colours and materials		180
Machinery		50
Millstones, 1 pair		4
Potters' clay, 133 tons		260
Pulverized glass, 84 cwt.		80
Spirit of tar, half a ton		1
Tissue paper		30
Wheat, 650 quarters		2,180
Carried forward		£5,065

* "We were desirous of shewing the importance of this maritime county," says Hutchinson, "by tables of the exports and imports; but however unaccountable it may be, it is true, that the communication of such tables was prohibited by the board of customs. So illiberal an act gives abundant latitude to conjecture; and, perhaps, the reform which is set on foot under the present administration may take away the necessity of secrecy. Be the cause what it may, the im-

Brought forward	£5,065
Lambs' wool, 88 lbs.	4
Confectionary, 1 cwt.	5
Hardware, 10 cwt.	11
Haberdashery and millinery	300
	£5,385

The Middlesborough exports, during the same period, were—

Bar iron, 21,760 tons	value	£8,320
Rail iron, 644 tons		3,652
Pig iron, 1,780 tons		7,117
Cast iron, 1,168 tons		8,081
Wrought iron, 6,453 tons		58,812
Sundry iron, 60,630 tons		20,516
Steel, 41 cwt.		84
Nails, 100 cwt.		265
Earthenware, 184,950 pieces		1,858
Ironware, 1 case		4
Hardware, 1 cwt.		10
Cordage, 7 cwt.		20
Grindstones, 12		2
Bricks, 2,000		4
Patent fuel, 221 tons		133
		£102,878

During the five months ended December 31, 1854, the following articles, the total value of which was £1,352, were exported from Stockton:—

Earthenware, 55,500 pieces.	Pulverized glass, 40 cwt.
Brown stone ware, 100 pieces.	Cement, 20 cwt.
Bricks, 20,000	Sail cloth, 700 ells.
Yellow metal bolts, 40 cwt.	Haberdashery, £50.
Do. do. nails, 300 cwt.	Painters' materials, £60.
Clay, 137 tons.	Tar, 10 casks.

The exports from Middlesborough in the same period, which amounted to £51,116, were as follow:—

Pig iron, 2,092 tons.	Iron chairs, 83 tons.
Bar iron, 1,523 tons.	Sundry iron, 6 tons.
Iron nails, 2,103 tons.	Shovels, 5 tons.
Iron chains, 340½ tons.	Earthenware, 95,300 pieces.
Iron pipes, 190 tons.	Bricks, 11,200.
Iron pins, 68 tons.	Clay, 12 tons.
Iron switches, 23 tons.	

The chief articles of import are fir timber, wainscot logs, deals, masts, spars, staves, hemp, flax, tallow, oak bark, seeds, raw yarn, hides, &c. In 1808, the import of fir timber was only 408 loads 16 feet, and of deals 186

portance of our county in its trading capacity is shadowed from the eye of the curious." In the works on Stockton which have appeared since Hutchinson wrote, this cause of complaint has not occurred; and the periodical publication of the items and amounts of trade at this and other ports, now systematically issued in comprehensive and elaborate tables, forms a striking contrast to the suspicious secrecy of former times.

cwt. 0 qrs. 9 lb. In 1810, it was 2,966 loads 45 feet of timber, and 174 cwt. 3 qrs. 8 lb. of deals; in 1820, 3,015 loads 12 feet of timber, and 156 cwt. 3 qrs. 8 lb. of deals; and in 1825, 5,255 loads of timber, and 301 cwt. 3 qrs. 29 lb. of deals. In 1854, the importation had increased to the large amount of 30,858 loads of timber and deals, employing 143 ships of 23,396 tons.

The greatest revolutions, however, which have occurred in the trade of Stockton, are in coal and iron. In 1770, 4,096½ chaldrons and 65 tons of coals were landed in the port of Stockton; and the import, though diminished, continued for some time after the commencement of the present century. The opening of the Stockton and Darlington Railway, the first loading of coals from which was made in January, 1826, completely changed the course of the coal trade; and though the subsequent opening of the port of Hartlepool has introduced an important rival into the market, the united vend from Stockton and Middlesborough has continued to shew, generally, a state of prosperity. In 1828, the first year of the railway, 7,295 tons were shipped from the Tees; after which time, the vend was as follows:—

1827	18,588	1835	357,726	1843	438,789
1828	54,290	1836	359,731	1844	380,504
1829	46,216	1837	316,781	1845	562,853
1830	79,433	1838	405,660	1846	527,764
1831	151,262	1839	465,792	1847	489,889
1832	231,959	1840	558,117	1848	428,409
1833	336,060	1841	498,092	1849	354,969
1834	235,765	1842	474,092	1850	491,000

In 1853, 70,701 tons of coal and 16,633 tons of coke were shipped from the Tees for foreign parts. During the year 1854, 12 British and 55 foreign vessels cleared from Stockton for foreign parts, carrying 4,634 tons of coal and 1,224 tons of coke. From Middlesborough, 178 British and 418 foreign vessels cleared, with 37,410 tons of coals and 22,449 tons of coke.

The shipment of coals and coke coastwise, during the last five months of 1854, were as follow:—

	STOCKTON.			MIDDLESBOROUGH.		
	Ships.	Tons coal.		Ships.	Tons coal.	Tons coke.
August	11	1,232	121	16,166	30
September	10	1,245	131	17,011	45
October	13	1,467	81	11,842	
November	9	880	82	14,289	21
December	13	1,254	49	8,905	50
	56	6,078	464	67,213	146

In 1808, nearly 250 tons of iron were imported into the Tees; but, in 1820, the importation had decreased to 23 tons. The establishment of iron works, the produce of which is shipped in the Tees, has been, in a

great degree, produced by the same cause which increased the coal trade. The works of Messrs. Bolckow and Vaughan, at Witton Park and at Middlesborough, have contributed materially to the prosperity of the port and district; and the discovery of an immense bed of iron-stone in the Cleveland hills has presented advantages to an incalculable amount. The tables of exports, given above, include that of iron.

The number and tonnage of vessels entered in and out of the Tees with cargoes, taken at four different periods, and made up to the 30th April of each year, were as follow:—

1812....	452 vessels	42,904 tons,	average 95 tons.
1826....	1,010	87,823	87 "
1846....	5,818	742,521	128 "
1850....	3,550	452,237	129 "

The number of vessels entered inwards and outwards, coastwise and foreign, in the year ending December 31, 1850, was—

Outwards, coastwise, with coals,	2,949 ships,	of 318,256 tons register.
Outwards, foreign, with coals,	558	60,579
Inwards, coastwise, with goods,	1,028	68,171
Outwards, coastwise, with goods,	421	19,171
Inwards, foreign, with goods,	152	17,131

	Stockton.	Middlesborough.
Outwards, coastwise and foreign with coals,	388 ships	3,119 ships.
Outwards, coastwise and foreign with goods,	185	236
Inwards, coastwise and foreign with goods,	445	735

The receipts of the customs at Stockton varied, during the last century, between £3,319 8s. 3¼d. in 1723 and £8,019 7s. 5½d. in 1798. In 1800, the amount was £7,723 14s. 4½d.; in 1816, £5,866 7s. 0¾d.; but, in the following year, it advanced to £10,483 1s. 6¾d. With some fluctuations, the receipts rose, in 1824, to £20,295 0s. 2¾d.; and in the following year, in consequence of the duties on wine and spirits being transferred from the excise to the customs, they increased to £36,257 10s. 6d.; which was followed up in 1827 by £37,024 10s., and in 1828 by £36,798 1s. 7d. In 1831, the duties amounted to £43,994 17s. Since that time, the impulse given to the trade of the port has materially tended to increase those receipts, which, in 1850, were stated at £83,253.

CHAMBER OF COMMERCE.—In January, 1850, a meeting of merchants and others was held in Stockton for the purpose of establishing a Chamber of Commerce. Since its commencement, this body has directed its attention to the promotion of “tribunals of commerce,” to the “Customs Consolidation Act” of 1853,

to the "Stockton Dock Rate in Aid Bill," (towards the expenses of which £25 was subscribed), to the "Darlington and Barnard Castle Railway Bill," the "Stockton and Cleveland Union Railway Bill," and other matters connected with the commercial prosperity of the district. Its business is conducted by a president, a vice-president, a treasurer, a committee of five persons, and two secretaries.

PORTRACK

Is in the township of Stockton, and has usually been described as a hamlet one mile distant from the town. The number of additional buildings, however, in the course of erection at the north-east part of the town for manufacturing purposes, has almost entirely connected the hamlet with the town itself. Extensive iron works are now being erected on this estate; three blast furnaces are nearly completed, belonging to the firm of Messrs. Holdworth, Benington, Byers, and Company; and Messrs. Sparkes and Company have purchased ten acres of ground adjoining, and are arranging for the erection of two blast furnaces. *Blue House* estate is the property of Viscount Boyne, of Brancepeth Castle.

Portrack Holme estate was offered for public sale November 30, 1837; it was described as consisting of about 137 acres of land, the entire village of Portrack, and Portrack Gardens, of copyhold tenure, late belonging to J. D. Nesham, Esq., deceased; and as a portion of the land adjoined the river Tees, it offered eligible sites for ship-building yards and other commercial purposes, &c.

EAST HARTBURN.

THE township of East Hartburn, situated to the west of Stockton, contains an area of 1,020 acres; and the annual value of property assessed for the county-rate in 1853 was £1,326 15s. The population, at the successive periods of return, was 104, 115, 121, 152, 135, and 174. Of the latter number, 84 were males and 90 females; and the number of houses, at that period, was 37 inhabited and 2 uninhabited.

During the year ended Lady-day, 1854, the receipts from poor-rates in the township of East Hartburn amounted to £50 5s.; and receipts in aid of poor-rates, 17s.; total, £51 2s. The expenditure connected with relief was, for in-maintenance, £1 17s.; out-relief, £23 19s.; workhouse loan repaid, and interest thereon,

£1 5s.; salaries and rations of officers, &c., £4; other expenses, £1 13s.; total, £32 14s. Constables' expenses and costs before magistrates, 11s.; vaccination, 1s.; payments or registration fees to clergymen, 7s.; payments towards county and other rates, £22 4s.; registration, 5s.; other payments, £2 16s.; total expenditure, £58 18s.

The village of Hartburn, situated on the brook from which it derives its name, is $1\frac{1}{2}$ miles west-south-west from Stockton, the road from which place to Darlington passes through it. It contains a public-house, and a few tradesmen.

According to Boldon Book, there were twelve villains in Hartburn, each holding two oxgangs, and paying rent and services as those of Boldon, except cornage. Alan son of Osbert held an oxgang; and three cottagers held two tofts, working fourteen days for the lord in harvest. The vill provided one milch cow. Ten carucates of demesne, in Stockton and Hartburn, were on lease, and rendered twenty chalders of wheat.

In Bishop Hatfield's Survey, John Laken is the only free tenant named, holding by charter and knight's service, and aiding to clean the stream and pool of Norton mill. William Baron, besides two other messuages and oxgangs, held, with his fellows, a plot of ground on Northdeynside, containing 43 acres, belonging to the demesne, paying 21s. 8d. Three cottagers and various other tenants are named. The tenants hold the common bakehouse, 2s.; the kiln (no rent); the forge, 2d.; the bond-tenants, in lieu of a milch cow, 6s. Every *selfode* paid 3d. to the lord; and every bond-tenant's servant 1d. to the lord, in lieu of work, at Michaelmas.

Six persons from Hartburn joined the Northern Rebellion, one of whom was executed. The principal proprietor in the township is John Stapylton Sutton, Esq., of Elton Hall.

Thomas Gibson bequeathed to the poor of East Hartburn £20, the interest thereof to be distributed to them in white bread every Lord's day, at the Communion table, in Stockton church, or, failing them, to the other poor then present. This sum appears to have been carried to the account of the church-rate, as 20s. is paid thereout yearly, and disposed of in bread as directed.

PRESTON-UPON-TEES.

THE township of Preston is situated adjoining those of Stockton and Hartburn on the south, and is bounded by the Tees on the east. It contains, including its

liberties in the river, 1,108 acres; and the property was assessed to the county-rate, in 1853, at £1,348 per annum. The population, in 1801, was 64; in 1811, 62; in 1821, 57; in 1831, 76; in 1841, 111; and in 1851, 113, of whom 61 were males and 52 females. There were, at the same date, 18 inhabited houses, and 1 uninhabited. The township contains five farms* and a public-house.

In Preston-on-Tees, during the year ended Lady-day, 1854, there was received from poor-rates, £46 17s.; and payments in aid of do., 3s. The expenditure for in-maintenance was £6 10s.; for out-relief, £13 4s.; workhouse loan and interest, £1 4s.; salaries and rations of officers, &c., 13s.; other expenses, 6s.; total connected with relief, £21 17s. Constables' expenses and costs before magistrates, 17s.; vaccination, 1s.; payments on registration fees to clergymen, 5s.; towards county and other rates, £23 1s.; registration, 4s.; for other purposes, 19s.; total expenditure, £47 4s.

* "OLD GEORGE."—One of the farms at Preston was, for some years, held by Mr. George Ord, a native of Great Stainton, where his father was an eminent farmer and cattle-dealer under the Pennymans. He died while George was young; and his widow removed to a farm at Cowpen. As George grew up, he began to suppose himself handsome, and fancied that every young female who looked at him was in love with him. He made a prudent choice, however, in his first wife, Miss Polly Preston, of Yarm, whom he married in March, 1773. During her life, she made an amazing improvement in her husband; but unfortunately for him, she died, five or six years after their marriage, in giving birth to twins, leaving them and other three children to the widower. He soon got another helpmate, who was virtuous, careful, and industrious herself, but gave in to all his whims, and a dormant mental malady began to appear. He left the Cowpen farm, and took one of Sir John Eden's at Preston; and having been always a dreaming, musing fellow, he began to suppose himself superhuman, and to see most absurd and chimerical visions. Every thing went wrong; his corn failed for want of cultivation, and for want of attention his cattle died. He now became a vagabond, carrying his dreams, visions, and hymns from one side of the island to the other; and twice he wrote (of course without receiving any answer) to Mr. Pitt, representing that the nation was in great danger, and could not be saved without his helping hand. Although he could scarcely spell a word right, he was continually using his pen on hymns and spiritual plays of the most doggerel character. Sometimes he sung them at the market crosses during the hirings of servants, or at other public meetings; and he commonly had a crowd of disorderly persons about him, some commiserating his conduct, others casting dirt, stones, or vile potatoes in his face. Sometimes a too well directed aim brought the blood from his nose; but he never ceased his singing, and seemed to take no notice. Amongst others to whom he directed some of his unconnected effusions was his landlord, Sir John Eden, who long suffered him to remain on his farm: but wearied at length by the foolish conduct of his tenant, let it to a more deserving person. By this time, George had a host of children by his second wife, who, with his elder ones, were reduced to ruin and distress. He was father, grandfather, and great grandfather to descendants almost innumerable, who were living in low employments: most of them he married off when they were little more than children, being a great stickler for matrimony.

The Stockton and Darlington railway passes through this township over an extent of 1 M. 3 F. 19 V., and covers an area of 7 A. 1 R. 16 P. In 1851, when the gross amount collected for local rates was £27 12s., the railway contributed £8 0s. 5d.; and in 1852, when the gross amount was £56 1s. 8d., the railway contributed £16 0s. 10d.

The celebrated whinstone dyke, described in page 81, here enters the county from the east-south-east. In this place, it is 75 feet wide, and has been quarried to a considerable depth. The whinstone is of a fine grain, very hard, and of a dark grey or bluish-black colour: it is disposed in large horizontal blocks, which intersect nearly at right angles a light-coloured sandstone, and are covered with a thin crust of ferruginous ochre. The whole is capped by a bed of diluvian, 45 feet in thickness, consisting of a different coloured clay, somewhat calcareous, and partaking of a gravelly nature. A little below the quarry, the basalt crops out into the bed of

George had once an interview with Johanna Southcote; but as two of a trade seldom agree, they came outrageously to cross purposes in their doctrines. George considered *himself* the true Shiloh; and the vulgar prophetess was then destined to become *the mother* of Shiloh. In his writings, he styled himself the chosen minister of God, the only true Branch, the great I AM, the Messiah or Shiloh, the Prince of Peace, and many other names; and the good folks that knew him called him a second Solomon, Preacher George, the Antichrist, the Pope in disguise, the Ancient of Days, and sometimes the wandering Jew. For nearly fifty years he frequented the markets of Darlington, Stockton, Sunderland, and other places in the county, where, plainly but decently dressed, he paraded the streets or visited the inns, carrying under his arm a large collection of ballads or pamphlets, which he modestly offered to the persons he met with, crying, "Buy a book! buy a book!" If one was bought for a penny, he was perfectly satisfied; and gentlemen who had known him in better times occasionally presented him with a sixpence or shilling. In his wanderings, he traversed the three kingdoms; often, when his finances were low, he was conveyed in a pass-cart from one township to another, and sometimes, on his route homewards, was farther from Preston-on-Tees at night than he had been in the morning. He declared most solemnly that he would never die, and was certainly, notwithstanding his age, very active. In 1830, he was still rambling from house to house, but was not so erect as formerly; he had lost his teeth, and his hair was as white as snow. Still he was as amorous as ever; and the matrons and young lasses scampered off at his approach, to avoid a divine salute, or a Sion kiss from the Ancient of Days. Such damsels as submitted patiently to his tales of heavenly love and delight, were immediately registered in his Book of Books, being destined afterwards to be seen hand in hand with him, singing and dancing in the air, and kicking with their feet the heads of those who were so stubborn as not to hearken to the charmer's voice. Notwithstanding his predictions, he was at last gathered to his fathers, though maintaining to his dying moment that he was a true prophet. His eldest son, whose imagination was filled with wheels, perpendiculars, and diameters, and who firmly believed he had discovered the perpetual motion, was, on his death, buried beside the patriarch at Seymour, in Cleveland, where a small property had been left to the parties.—*Longstaffe's Darlington*, p. 254.

the river, and forms a portion of the western bank, four or five feet in height.

Preston Hall, the property and residence of Marshall Fowler, Esq., stands beautifully on the northern bank of the Tees, and commands the view of a fine bend of the river, enclosing a plain of considerable extent, terminated by the woods of Thornaby and Stainsby, with the picturesque range of the Cleveland hills in the distance.

By Boldon Book, there were seven villains in Preston, holding and paying the same as in Hartburn. Walter, Waldewin, Adam son of Walter of Stockton, Orine son of Toki, William son of Utting, and Richard Rand, are named as tenants. The whole vill provided one milch cow.

In Hatfield's Survey, John de Carrowe paid for the lands of Thomas de Seton, rents amounting to 38s. per annum. William Baron, Thomas Baron, and Matilda Bowes held parcels of ground, at various rents.

Preston conferred its name on a local family at an early date. In the foundation charter of Stockton chapel, about 1234, Adam son of Adam de Preston is mentioned. Alice, daughter and heiress of Ranulph and Cicely Preston, married Robert de Eden, who died

seised of their lands in 1413. Meanwhile, various other families held property in Preston. John Randolph died seised of nine messuages and oxgangs in 1362; and the principal and manorial property belonged to the Setons. Alice, daughter and heiress of Thomas Seton, who died in 1360, married Sir Thomas Carrowe, Knt.; and, on the death of their son, John de Carrowe, without issue, in 1386, the estate reverted to the heirs of his mother, the Sayers and Setons. A portion of it descended to the Hotons of Hardwick; and the property of the Sayers was purchased by Sir Marmaduke Wyvill, Bart. From the Wyvills, Sir Marmaduke and Sir William, the "manor or lordship of Preston-on-Tees" passed to George Witham, Esq. In 1722, William Witham, Esq., granted the manor to Sir John Eden, Bart., whose great grandson conveyed it, with the rest of his property here, to David Burton Fowler, Esq., of the Inner Temple. The latter gentleman erected Preston Hall in 1825, and died January 30, 1828, aged 92 years. He bequeathed the estate and manor to his great nephew, Marshall Robinson, Esq., the present proprietor, who, by royal letters patent, assumed the name of Fowler.

SOUTH STOCKTON, YARM, MIDDLESBOROUGH, &c.

WITHIN the last few years, these districts have risen into considerable importance. Although situated on the Yorkshire side of the Tees, they are within the boundaries of the Customs Port of Stockton; and their trade and increasing commerce being so interwoven with that of the town of Stockton itself, a brief account of South Stockton, Yarm, Middlesborough, &c., may not here be inappropriate.

SOUTH STOCKTON.

THE estate of South Stockton is situated at the south end of the bridge, on the Yorkshire side of the Tees, and has of late years become a considerable manufacturing district. During a recent joint stock mania, a large cotton manufactory was commenced, the requisite capital being divided into a number of shares. The undertaking, however, was a failure; and the large brick building used as the factory having long stood empty, has recently been purchased by Joseph Pease, Esq., together with about 30 acres of ground adjoining, for the sum of £7,000, and will, no doubt, be appropriated to some important undertaking. The ship-building yards and patent slip-way of Messrs. Turn-

bull and Craggs are at the south end of the bridge; near adjoining are the timber yards of Messrs. Armstrong; there is also an iron ship-building establishment, belonging to Messrs. Richardson, Duck, and Co. The Teesdale Iron Works are the property of a London firm. There are also, at South Stockton, three saw mills, extensive bottle works, a pottery, a steam corn mill, an artificial guano manufactory, &c.; and the principal dwelling houses comprise the following streets:—*Bridge Street, Britannia Street, Cleveland Terrace, George Street, Middle Street, Norton Place, Queen Street, Stafford, Thornaby Lane, Thornaby Terrace, and Trafalgar Street.* The places of worship are *Stafford Pottery* chapel, and the *Wesleyan Reformers'* meeting-house.

YARM.

YARM is a small market town and parish of considerable antiquity, the estate of Yarm having been granted by William the Conqueror to Robert de Brus. The town stands on the Yorkshire side of the Tees, about 4 miles south-west of Stockton, on a peninsula formed by the river, and is connected with the Durham side by an ancient stone bridge. It maintains a considerable trade, principally carried on by water, by means of river craft or barges, of from 40 to 60 tons burthen. There are also vessels of from 80 to 100 tons, which trade from Yarm to Boston in Lincolnshire and various Scotch ports; the vessels, which draw seven feet water, proceeding from Stockton and Yarm in one tide. In Yarm there are two extensive steam flour mills; one the property of Mr. Benjamin Wren, who turns out several hundred sacks of flour per week, and during the year 1850 imported and exported, by the river only, flour to the amount of £50,000 in value; his mill has two engines of 40 horse power, turning 17 pairs of stones. There are also in the town a tannery, a tobacco-pipe manufactory, tile and brick works, the usual miscellaneous shopkeepers, and a considerable trade in agricultural produce.—The town-hall is a neat building; and the parish church, which stands at the west end of the town, is an unpretending edifice, rebuilt in 1730. The Society of Friends, the Independents, Wesleyans, and Roman Catholics have each places of worship; and there are several schools, besides the free Grammar School, founded and endowed in the time of Queen Elizabeth. The population of the parish of Yarm, in 1851, amounted to 1,647. The market is held on Thursday weekly, and there are four annual fairs. The Friarage, a commodious mansion, erected on the site of a house of Black Friars, is the property and residence of Thomas Meynell, Esq.

In the year ended Lady-day, 1854, the receipts from Yarm for the Stockton Union were £642; and the expenditure for the relief of the poor was £465 18s. Other disbursements amounted to £107 2s., making a total outlay of £573.

NEWPORT

Is a small hamlet near the Tees, on the Yorkshire side of the river, where there is a wharf, extensive granaries,

* A circumstance is stated to have recently occurred in the Tees, which shews the necessity of a minute as well as a general knowledge of geography. Between Stockton and Middlesborough, there is a little hamlet, containing some half a dozen houses, which rejoices in the name of Newport; and to this little place came a little Dutch galliot, laden with wheat, the captain of which proceeded on shore

and a commodious quay.* The cut formed by the Tees Navigation Company (see page 187) runs to a point at a distance of about 600 yards from the west end of the upper quay at Newport; and the large slip of valuable land, left by the bed of the river, gave rise to expensive litigation, as to who was entitled to the land. On the Durham side of the river, the bishop, as possessing *jura regalia* in the county, and as lord of the manor of Stockton, claimed the land, and granted a lease of it to Messrs. Rowntree, Clarke, and Grey, of Stockton. On the Yorkshire side, the adjoining owners claimed and took possession of the residuary portion; but in 1827 Mr. Marwood, of Busby Hall, as chief bailiff of the liberty of Langburgh, and therefore grantee of the crown, laid claim to the land on the Yorkshire side; and in 1841 brought an action of ejectment against the Earl of Harewood, whose estate joins the river. The cause was tried at the Yorkshire spring assizes of that year, and a verdict given in favour of the defendant, the Earl of Harewood.

MIDDLESBOROUGH.

MIDDLESBOROUGH (or Middleburg, the name supposed to be of Danish origin), is a corporate and maritime town, in the North Riding of Yorkshire, on the southern bank of the Tees, four miles east from Stockton, seven miles from the sea, and about three miles from the village of Marton, the birth-place of the celebrated circumnavigator, Captain Cook. The town has risen into notice since 1830. The estate in 1546 was granted to Thomas Reeve, and latterly came into the hands of William Chilton.

The Stockton and Darlington Railway Company, in 1829, obtained an act of parliament to extend their railway to the south side of the river Tees, near Middlesborough; and to the construction of this line may be attributed the immediate cause of the unexampled rise of Middlesborough; for at that time the estate upon which the town is built contained only one house. The originators of the railway perceived the incalculable advantage of selecting Middlesborough as a place for the shipment of coals, the water being much deeper here than at Stockton, and having greater facilities for the unloading and loading of vessels. A company was

to seek his consignee. He was not long in discovering there was no such firm in the place as the one he sought, and the result of his enquiries was to convince him that he had arrived there, instead of his proper destination, Newport in Wales, for which place he set sail with a heavy heart.

therefore at once formed, under the name of the Middlesborough Company, the members being Thomas Richardson, Henry Birkbeck, Simon Martin, Joseph Pease, jun., Edward Pease, and Francis Gibson, Esqrs. They purchased some ground of Thomas Hustler, Esq., and about 500 acres of the estate of William Chilton, Esq., as the site of a new town, a terminus of the Stockton and Darlington Railway, and for the erection of coal staiths or "drops," warehouses, &c. The speculation proved highly successful, building sites being sold at prices leaving a large profit. A well-built, commodious town speedily sprung up, diverging at right angles in well formed streets from a large square in the centre, used as a market-place, where court houses and commodious covered buildings have been erected.

The Middlesborough "drops" were opened in 1831, on which occasion T. Y. Hall, Esq., a spirited colliery owner, sent one block of coal, hewn at Black Boy colliery, of which Mr. Hall at the time was manager, weighing $3\frac{1}{2}$ tons, for shipment to the London Coal Exchange, being the largest block ever shipped from the northern coal field. Large quantities of coal were soon forwarded from Middlesborough to the metropolis; and from that time to 1841 the coal trade continued to increase, when it was deemed expedient to construct the present dock, which was planned by W. Cubitt, C.E., and executed under the superintendence of George Turnbull, C.E. On the 11th May, 1842, ships were admitted into the dock. Vessels are loaded afloat at all times of the tide, and the shipment of coals has been regularly and extensively carried on.

Middlesborough Dock has an area of nine acres of water surface; it is entered by a channel, rather more than a quarter of a mile in length, leading from the mid-channel of the river Tees. The entrance lock is 132 feet long and 30 feet wide; the bottom of the dock is 3 feet under the level of the sills; the depth of water on the sills is 15 feet at neap tides, and 19 feet at spring tides. For the shipment of coals there are ten staiths or drops, at each of which coals may be loaded at the rate of five keels per hour, being equal to 1,050 tons. The dock will contain 135 ships of 16 keels each. Ballast is taken from vessels at a very low rate, by means of cranes worked by steam at the different wharves on the river banks, and also in the dock. The branch railway, which communicates with the dock, is situated on the south side of the town, and terminates in the double lines of railway leading to the ten drops. The raised platform, covered by diverging lines of railway, comprises an area of 15 acres, and affords standage room

for 3,000 waggons, or more than 9,000 tons of coal, besides ready means of egress for locomotives with their trains of waggons. The coals shipped are from the collieries of Evenwood, Witton Park, Butterknowle, Woodfield, Adelaide, St. Helen's, Whitfield, Old Etherley, North Bitchburn, &c. There are eight coal-fitters' offices, and several ship and insurance brokers.

The *Advance*, steam-ship leaves Middlesborough for London every Saturday, with goods and passengers. There are three maritime insurance offices in the town; besides nineteen offices and branches for fire, life, and guarantee insurances.

In addition to the establishment of Middlesborough Dock, and the trade connected therewith, there are several extensive manufactories and mercantile establishments in full operation on the banks of the river. The most important of these are the extensive iron forges and engine building establishment of Messrs. Bolckow and Vaughan, for the making of railway bars, bar and sheet iron of all descriptions, having a number of steam engines, a tilt hammer, cast iron foundry, and anchor forge, with a river frontage of 650 feet, including a wharf of 320 feet, on which are three powerful cranes for the shipment of their produce. In connection with these works, are the iron, smelting, and rolling mills at Witton (see vol. i., p. 599), and iron-stone mines at Eston, where the firm have also erected extensive furnaces. An interesting feature, in connection with these works, is the working of the oolitic iron-stone on the Cleveland hills, of which Messrs. Bolckow and Vaughan possess an extensive tract, where they work the ore open-cast to a thickness of from 18 to 23 feet. In winter, the works are carried on by tunnelling, for the protection of the men; and on the return of spring the roof is thrown in, or otherwise, as may be desirable. The iron produced from this stone is of the most valuable kind, malleable and ductile to a great degree. Messrs. Bolckow and Vaughan are also owners of Woodfield, West Auckland, and Whitelee collieries, in the county of Durham.

Messrs. Gilkes, Wilson, Leatham, and Co., have an extensive locomotive engine manufactory and iron foundry at Middlesborough. An earthenware manufactory and the Cleveland bottle works employ a number of workmen. There are also ship-building yards, patent slip-ways, chain manufactories, &c.

At *Cargo Fleet*, a little to the south of Middlesborough Dock, Messrs. Gilkes, Wilson, Leatham, and Co., have four iron furnaces; and Messrs. Cochrane and Co., have also four. Messrs. Swinburne and Co.,

have two furnaces at *Eston Junction*; where three have also been erected by Messrs. Elwin and Co.*

In 1840, an elegant church was erected, on the site of an ancient chapel, at the cost of £2,500. There are also places of worship for Catholics, Independents, the Society of Friends, Baptists, Wesleyans, and Primitive Methodists; also various schools, including a free grammar school.

The Exchange Hotel, a handsome Grecian structure, was erected at a cost of £4,500, raised in shares of £100 each. To the shareholders, however, the speculation proved unprofitable; the property was ultimately purchased for public purposes, and now belongs to the corporation.

In 1841, an act of parliament was obtained for paving, watching, lighting, and otherwise improving the town, and for establishing a market.

The Town Hall, with an enclosed market, was built in 1846; it is a neat building, faced with a fine fire brick, with apartments for various public offices.

A charter of incorporation was obtained for Middlesborough in 1853, the honour of the mayoralty being conferred, by the unanimous voice of the council, upon H. W. F. Bolckow, Esq. The first town councillors were—H. W. F. Bolckow, Isaac Wilson, John Vaughan, Robert Elliott, Edgar Gilkes, Henry Thompson, James Harris, W. Blenkinsop, S. Stonehouse, G. Bothomley, J. G. Holmes, and W. Fallows.

The population of this district, in 1801, consisted of 25 inhabitants; in 1829, of 40 inhabitants; and reached, in 1851, 9,000; it is now 12,000.

The township of Middlesborough, in the year ended Lady-day, 1854, paid £715 1s. in poor-rates, and the receipts in aid of the rates were £10 8s., making a total income of £725 9s. The expenditure for relief of the poor was £437 9s.; the payments to county and other rates, £135 7s.; and for other purposes, £191 4s.; making a total expenditure of £764.

THE CLEVELAND DISTRICT.—That portion of North Yorkshire, known as the Cleveland district, is now generally admitted to be inexhaustibly rich in its mineral wealth. The iron-stone has been properly tested, and by analysis found to produce nearly 40 per cent. of

* CONSUMPTION OF COAL.—To produce 140 tons of pig iron weekly, each furnace requires 600 tons of coal; and for each ton of that portion which is converted into bars, rails, and sheets, which may be two-thirds of the whole quantity, or 93 tons, 3 additional tons of coals will be required. Assuming that each of the above eleven furnaces, and of three erected at Port Clarence, on the opposite side of the Tees, produces the average quantity of 140 tons, the weekly produce will be

metal of a first-rate description. A seam of ore runs along the line of hills on the lower chain, commencing at Lofthouse alum works, extending to Eston Nab Beacon; and the second chain of hills, with the intervening valleys of Dale House, Skelton, and Guisborough, extending to the Ben Nevis of Cleveland—Roseberry Topping, has the same bed or stream of ore. The beds lie nearly level for several miles, varying in thickness from 12 to 20 feet. The greatest facilities exist for working the ore, as, by a moderate computation, no less than ten millions of tons of stone may be obtained by open quarrying alone. A railway unites Redcar with Middlesborough, where it joins the Stockton and Darlington railway; and branches are formed from the Redcar and Middlesborough line to Birdley Moor, Eston Nab, Roseberry Topping, Birkaldby Moor, Guisborough, Cod Hill, and the iron-stone deposit at Huntcliffe and Redcliffe, on the sea banks. Though it is only since 1850 that public attention has been directed to this important portion of North Yorkshire and that its mineral treasures have become developed, yet more than twenty years ago some gentlemen of scientific attainments placed on record their belief that valuable seams of iron-stone abounded in Cleveland. Charles Attwood, Esq., in one of his geological investigations, about the year 1830, communicated his conviction, that a large extent of valuable iron-stone existed in this district; and Mr. T. Y. Hall, author of a treatise on the Northern Coal Field, states, that in the year 1833, he accompanied Mr. Brooks, now engineer to the commissioners of the river Tyne, "to examine and report upon these valuable iron ores, as may be seen in the report made by Mr. Brooks, when engineer for the river Tees, and published in the Nautical Magazine for May, 1833. Notwithstanding the publication of this long and valuable report, calling attention to the subject generally, and to the immense beds of iron ore existing, from that time until very recently, little notice was taken of that which has since turned out to be so important."

REDCAR.—Redcar is situated about 4 miles south of the Tees; though not established as a port for the shipment of coals, it has lately risen into importance, in consequence of its proximity to the Cleveland Hills.

1,960 tons, requiring, for the manufacture of pig iron alone, 8,400 tons of coals, or 436,000 tons per annum. But if the proportion of iron above indicated be manufactured into malleable iron, the consumption of coals will be 12,320 tons per week, or 640,640 tons per annum. There are now at least 40 furnaces in blast in the county, which, on the above calculation, will require 24,000 tons of coal weekly, or 1,248,000 tons yearly, for the production of pig iron alone.

Extensive iron-stone workings have been commenced by various parties in the neighbourhood; the produce being conveyed by railway, or shipped at Redcar. Some years ago, Mr. Brooks suggested the formation of a harbour at Redcar, not only for mercantile purposes, but as a refuge for ships of war and merchant vessels, in stormy weather. The projected harbour comprised an area of 450 acres, admirably situated, and sheltered by rocky promontories north and south, with a depth of twenty feet at low water and forty at high water.

PARISH OF NORTON.

NORTON parish is bounded by that of Stockton on the south and east, by Billingham on the north-east and north, by Grindon on the north-west, and by Redmarshall on the west. It includes the manor of Blakiston, but forms only one township or constabulary.

NORTON contains 4,614 acres. Its population in 1801, was 965; in 1811, 1,053; in 1821, 1,186; in 1831, in consequence of the employment of a number of labourers on railway works, it was 1,486; in 1841, 1,623; and in 1851, 1,725, of whom 810 were males and 915 females. In 1841, there were 374 inhabited houses, 12 uninhabited, and 4 building; and in 1851, 402 inhabited, 14 uninhabited, and 2 building. The annual value of property assessed to the county-rate in 1853 was £9,623 10s.

The receipts from the parish of Norton for the Stockton Union, during the year ended Lady-day, 1854, were, from poor-rates, £636 13s.; in aid of the rates, £26 5s.; total, £662 18s. There was paid, for in-maintenance, £30 13s.; out-relief, £406 14s.; salaries and rations of officers, &c., £50 7s.; other expenses, £44 5s.; total expenditure for the relief of the poor, £531 17s. Constables' expenses and costs before magistrates, 15s.; vaccination, £3 10s.; payments or registration fees to clergymen, £4 18s.; towards county and other rates, £163 18s.; registration, 11s.; for other purposes, £53 5s.; total expenditure, £756 14s.

The Clarence railway has an extent of 4 M. 6 F., and an area of 36 A. 3 R. 14 P. in this parish. Its contribution to the local rates in 1851 was £66 13s. 4d., and in 1852, £75; the gross amount collected in those years being £646 11s. 7d. and £715 14s. 5½d. There is a station near the village.

* An act for more effectually repairing and improving this road was passed May 23, 1832, for 31 years. See vol. i., p. 107.

† "POTATOE TOM."—Thomas Baker, a "farmer and Quaker preacher," lived at Holm-house, on the road between Norton and Portrack. The above epithet was bestowed upon him in consequence of his having, about the year 1736, introduced the potatoe into the county of Durham, by planting it in the favourable soil of Norton. Desirous of monopolizing the trade to himself and family, he and his

The pleasant and airy village of Norton is situated on the turnpike road* between Stockton and Sunderland, about 2 miles north from the former place. Norton bridge, on this road, was rebuilt in 1832. The principal street is wide, with rows of trees at the sides. At the north end is a spacious green, surrounded by houses. *Norton Grove, Grange Terrace, Cambridge Terrace, Olive Grove, Walker Place, and Victoria Place*, are rows of neat and respectable houses, principally on the road between Norton and Stockton. So valuable is the ground for building sites in this neighbourhood, that a piece of land near the village was recently sold to a Stockton merchant for £350 per acre.

Besides the Grammar School, noticed hereafter, there are in Norton two boarding schools for young ladies, and two day schools kept by mistresses. Sunday schools are connected with the church and the Primitive Methodist congregations. There is a post-office, a rural police-station, eight inns and public-houses, two breweries and maltings, and a spirit merchant. An extensive tannery has long been carried on; and there are several bricklayers, builders, joiners, shopkeepers, tailors, and other tradesmen. At the north end of the village, near the Clarence Railway, about 30 acres of land have recently been purchased, upon which a company intend erecting iron blast-furnaces. A number of market gardeners around the village supply it and the town of Stockton with their produce.† From the salubrity of

two sons, James and John, kept their baskets with the potatoes, when they first planted them, concealed under their great coats, which they wore on the occasion. Though totally illiterate, he contrived, by careful practical observation, to raise finer fruit and vegetables in his garden than could be found in any similar spot in the county. He frequently felt called upon to address the meetings of the Friends, which he did in homely, but expressive terms; telling them, on one occasion, he was afraid some of them were like the potatoes of that year, which under a fair outside concealed a rotten heart. Not being

the situation, Norton has long been a favourite place of residence with persons of independent means,* as well as with many of the professional gentlemen,† merchants, tradesmen, and officials of Stockton. A large *Wesleyan Methodist* chapel was erected in 1824. The *Society of Friends* had, for some years, a meeting-house in Norton, which is now let to the *Primitive Methodists*; but its burying ground is still used by its proprietors.

On December 19, 1851, the highway surveyors were summoned before the local magistrates for neglecting to repair the highways; but the case was referred to the quarter sessions of the county. A lengthened discussion followed; and the repairs are now applied to the highways, strictly so called; the private roads being maintained by the owners of property.

Norton House, a handsome mansion, is the property and residence of John Hogg,‡ Esq., A.M., late fellow of St. Peter's College, Cambridge, barrister-at-law of the Inner Temple, F.R.S., and M.R.S.L.,§ whose ancestors have long been resident in Norton.

John Hogg, Gent., of Norton, left, by Isabel his wife (who died April 19, 1762, aged 80), two sons, Thomas and John, and a daughter. The eldest son, Thomas Hogg, Esq., of Norton, and of the College in the city of Durham, married Ann, only child and heiress of

able to read, it is probable he never heard of Sir Walter Raleigh, to whom the nation is understood to be indebted for his favourite root, but the following anecdote bears some resemblance to that of Raleigh's velvet cloak, which he threw into the mire to make a passage for Queen Elizabeth:—"Long had Thomas Baker followed in vain Mary Jekyl, as a lover; she, being considerably older and much richer than himself, was afraid he courted her to obtain the mammon of this world, till walking together in Stockton street, in dirty weather, they came to a kennel, over which Mary was afraid to pass. Thomas, upon this, gallantly set his foot in the middle of it, which Mary stepping upon, got clearly over, and looking upon the courtly action as an unquestionable proof of real affection, soon after consented to marry him."

* JEREMIAH MOORE.—The romantic outline given by Hutchinson of the life of Jeremiah Moore is the only record of his eventful career. Taken, by means of his elder brother, into Turkish slavery; escaping from the hardships of that state; impressed into the navy, in which he was serving in the Mediterranean when his brother's death placed him in independence; he settled at Norton, and spent the remainder of his life in acts of goodness. Having no relations, he bequeathed to six gentlemen, who had befriended him in adversity, £1,500 each; and to his housekeeper, Mrs. Ann Kendal, his executrix and residuary legatee, £3,000 in trust for her son. All the legatees were enjoined to receive their legacies at his house in Norton, over a large bowl of punch, on the 1st of March next after his death; and they were required yearly to commemorate that day as long as they lived, it being the anniversary of his escape from slavery.

† ANTHONY WHITE, Esq., son of Robert White, Esq., of Norton, was born at that place, and became a graduate of Cambridge Uni-

John Jefferson, Esq., of Norton and Elton, whose ancestor was Sir John Jefferson, Knt., solicitor-general for Durham in 1663, seneschal of the see in 1674; created successively serjeant-at-law in 1683, recorder of Durham in 1686, a judge of the Common Pleas in Ireland in 1691, and one of the lord keepers of the great seal in Ireland in 1697. By his wife, Mr. Hogg had issue, John, his heir; Thomas, died an infant; Ann, died young; Jane, died aged 16; Dorothy, died young; Isabella, died unmarried; and Elizabeth, married to the late Lieutenant-colonel Grey, of Norton, deputy lieutenant, and justice of the peace.

John Hogg, Esq., of Norton House, barrister-at-law of Lincoln's Inn, and D.L. of the county of Durham, married, in 1791, Prudentia, eldest daughter of the Rev. Watkin Jones, rector of Darwen, Denbighshire,|| and died in 1823. He had issue—Thomas-Jefferson, barrister-at-law, of the Middle Temple, late one of the Municipal Corporation Commissioners, and revising barrister for the counties of Durham and Northumberland; John, now of Norton House, born March 21, 1800; William, late scholar of Clare Hall, Cambridge, died unmarried in 1821; Robert-Ewer, died unmarried in 1817; Sarah-Isabella, died an infant; Prudentia-Ann; and Elizabeth-Sarah.

versity, where he took an honourable degree. At London, he commenced practice as an assistant surgeon at the Westminster Hospital, with which institution he continued to be associated till his death. At an early period he obtained celebrity for the dexterity and success of his operations in difficult cases. His reputation procured him a place in the council of the Royal College of Surgeons, and he thrice succeeded to the presidential chair. To men engaged in scientific or literary pursuits, his knowledge and skill were freely extended; and he suggested several important improvements in surgical instruments. He died at his residence in Parliament Street, on the 9th of March, 1849, aged 70.

‡ The name is generally written as above; but it occurs, in old family writings and papers, as *Hoogg*, *Hogge*, *Hodg*, or *Hoodyg*.

§ Mr. Hogg is author of several papers published in the "Transactions of the Royal Society of Literature;" amongst which are, "A Memoir on Two Roman Inscriptions relative to the Conquest of Britain by the Emperor Claudius Cæsar;" "Supplemental Note" to do.; "Notice of recent Discoveries in Central Africa by Drs. Barth and Overweg, and of two supposed new Languages in that Country;" "Notices on a Papyrus Greck Manuscript;" &c.

|| Sarah, wife of Mr. Jones, was daughter of Robert Ewer, capt. 69th comp. Marines, by his wife, Prudentia Nourse, of London. Capt. Ewer sailed round the world with Anson, and suffered great distresses by being shipwrecked: he distinguished himself by his gallantry, April 5, 1758, on the coast of France, under Sir Edward, afterwards Lord Hawke, but was unfortunately lost in the *Ramilles*, February 15, 1780. Miss Jones was also niece of Dr. John Ewer, Bishop of Llandaff, and subsequently of Bangor, in 1768.

Arms—Quarterly: 1st arg., three boars' heads, coupé, sa., for Hogg; 2nd, az., a fret, arg., on a chief of the last, three leopards' faces, gu., for Jefferson; 3rd, or, on a mount, vert, a lion, rampant, az., for Jones; 4th, arg., a wolf, statant, sa., on a chief, az., three crosses formée, of the first, for Ewer.

Crest—A boar, statant, ppr., pierced in the side with an arrow, or, against an oak-tree, ppr., fruited, or.

Thomas-Robinson Grey, Esq., a magistrate for the county of Durham, resides at Norton. The family is traditionally descended from a younger branch of the noble house of Grey of Northumberland.* John and Robert Grey were successively resident in the city of Durham. John, son of the latter, was an alderman and mayor of that city in 1707, 1715, 1722, and 1735. He married, first, January 13, 1699, Rebecca, daughter and coheir of William Chipchase, Gent., of Norton, the last male representative of the family of that name, one of the most ancient stocks in the place. By this lady (who was buried January 14, 1716), he had issue five sons and two daughters. He married, secondly, August 5, 1718, Mary, daughter of George Bowes, Esq., of Bradley, and by her (who was buried December 1, 1721) he had issue two sons (one of whom, Bowes Grey, was many years under-sheriff of the county), and two daughters. Mr. Grey was buried at St. Nicholas' church, Durham, September 17, 1750, aged 80, and was succeeded by his fourth, but eldest surviving son,

John Grey, Gent., of Norton, baptized July 21, 1709, who married, December 23, 1727, Anne, daughter of Hugh Finch, Gent., of Billingham, and by her (who was buried September 17, 1787) had issue, William, who married Elizabeth, daughter of — Wright, Gent., of Bishopton, whose daughter, Elizabeth, became wife of the Rev. C. Anstey, vicar of Norton; Chipchase; John, married to Elizabeth, daughter of John Darnell, of Billingham; Elizabeth; and Ann, wife of John Ward, of Billingham, and mother of Ann, wife of William Sleigh, of Stockton. Mr. Grey died about 1760.

Chipchase Grey, Esq., second son of the above, born August 29, 1732, was some time a surgeon at Sunderland. He married, September 8, 1757, Anne, eldest daughter of Thomas Robinson, Esq., of that place; and by her (who died at Norton, March 10, 1787) had issue, John, died in infancy; William, a solicitor, of Gray's Inn, died unmarried December 24, 1801, aged 38;

* A pedigree, recorded in the Heralds' College, shews the descent, in an uninterrupted line, of the eldest branch of the Greys of Norton, through twenty-five generations, from William the Conqueror; Gundreda, fifth daughter of that monarch, having married William de

Thomas-Robinson; and two daughters who died in infancy. Mr. Grey died August 2, 1821.

Thomas-Robinson Grey, Esq., born July 1, 1767, only surviving son of Chipchase Grey, was a lieutenant-colonel in the army, a magistrate, a deputy lieutenant of the county, and thirteen years collector of the customs of the port of Stockton. He married, March 10, 1796, Elizabeth, daughter of Thomas Hogg, Esq., of Durham, and by her had issue, Thomas-Robinson, his successor, now of Norton, born May 25, 1801; William, born April 22, 1803, died in infancy; William-Robinson, who has assumed the name of Robinson, and has issue (see SILKSWORTH); John, merchant, of Liverpool; Elizabeth-Anne; Margaret; Harriet, died February, 1847; and Maria, married, July 18, to her second cousin, John-William Smith (see RYHOPE), and has issue.

William Grey, Esq., son of John, younger brother of Chipchase Grey, Esq., was born in 1778; married, July 2, 1807, Joanna, only child and heiress of William Scurfield, Esq., of Coatham-Mundeville and Crindon House (by Dorothea, his wife, second daughter of Thomas Bowker, Esq., of Deckham Hall, Gateshead), by whom he has issue, William-Scurfield Grey, Esq., A.M., of St. John's College, Cambridge, barrister-at-law, and in the commission of the peace for the county of Durham; George-John Grey, Esq., A.M., assumed the name of Scurfield (see FORD); John-William Grey, clerk, A.M., assumed the name of Smith (see RYHOPE); Charles, an ensign in the 1st West India regiment, died in June, 1842, unmarried; Henry-Anthony, merchant, of Liverpool; John-Reynolds, now of Calcutta; Robert-Septimus, died in infancy; Sarah-Dorothy, married to her cousin, William-Robinson Robinson (see above), and has issue; Joanna, and Elizabeth, died young.

Arms.—Gu., a lion rampant, within a bordure, engrailed, arg.

Crest.—A scaling-ladder, arg.

Motto.—De bon vouloir server le roy.

There are several other resident proprietors in the village of Norton.

Norton, in some of the old records *Normanton*, from its old possessors, the Normans, is a member of one of the bishop's great manors. According to Boldon Book, there were in Norton thirty villains, each holding two

Warren. Earl of Warren and Surrey, one of whose descendants, through the blood, in the interval, of many noble and illustrious families, was William Middleton, Esq., paternal ancestor of the Greys.

oxgangs of land under the same rents and services as those of Boldon, except cornage, which they did not pay, because they had no pasturage. There were twenty farmers, each holding two oxgangs, and paying half a mark. Each of them ploughed and harrowed half an acre of the lord's demesne, provided two men two days in reaping, and the like at hay-making, and two wains for one day or one wain for two days to lead corn; and all of them jointly tilled four portions in autumn with all their families, except the housewives. Adam of Normanton held a carucate for 10s., and provided thirty-two men for one day, or the same quantity of labour, with four wains; and his men and their families were to till four portions, but he and his household were to be clear. Adam, son of Gilbert de Herdwic, held thirty-six acres of the land of Norton, near Herdewyc, as tenant at will, under two marks rent. The mills had eight acres allotted to them, and the Mill-meadow, and paid twenty marks. The punder had four acres and the thraves of corn, like other punders, and paid fourscore hens and five hundred eggs. Twelve cottagers held tofts and crofts, and thirteen acres in Norton fields, paying 6s., and each giving fourteen days' work within the year, and all together tilling four portions of land in autumn. The North-meadows were in the bishop's hands. Norton paid 3s. for toll of ale. The whole vill provided two milch cows.

In Hatfield's Survey, the tenants are distinguished into tenants in drengage, free tenants, bond tenants, selfodes, cottagers, and tenants by exchequer rents. Sir Roger Fulthorpe, Knt., held Adam de Normanton's tenure in drengage, which, from an intermediate occupier, was now called Lucas-ford, comprising two messuages and a carucate of eight oxgangs, each containing fifteen acres. The whole of the services were commuted for 9s. 10d. rent at Michaelmas, and 10s. exchequer rent. Sir Roger held twenty-nine acres besides, once Master John of Norton's, called Trumperland, under 6s. 8d. rent. Robert Johnson and Robert Spurner were free tenants. There were twenty-four bond tenants, each holding two oxgangs, at the usual rents and services. Every two of them were privileged to erect a booth at St. Cuthbert's fair; and when required, they were, in every year, to build a house, 40 feet long and 15 wide. The *selfodes*, or self-holds, paid 3d. to the lord yearly. The punder paid fourscore hens at Christmas and five hundred eggs at Easter. There were eleven cottagers. The tenants held two acres and a rood called Punderland, and paid 2s. 7d. William Etyes and three others held the

common forge, 18d. John Mageson a dovecote, 6d. The tenants paid 66s. 8d. for the common bakehouse, 10s. for toll of ale, and 12s. in lieu of two milch cows. The Norton, Stockton, and Hartburn mills, were let with their lands, Milnecrock, Seggcrock, Crawcrock, and Longacre. The exchequer lands were those formerly held by bond tenants. The holders of them carried timber and millstones for Norton and Stockton mills, and ground their corn at a thirtieth part multure. Whenever the bishop repaired or rebuilt his manor-house at Stockton, they were to carry his timber for that purpose; and they were also to carry the bishop's wine from Tees water into his cellar at Stockton, by virtue of their oath, and by tenure of the manor. All these services were compounded for 15s. 9½d.

The records contain notices of a few scattered freeholds. The Fulthorps and their descendants long continued to hold lands in Norton. The principal part of the property in the parish is still held by lease, or by copy of court roll, under the see of Durham.

The *Long Fields*, the *Rushmires*, the *Crook*, the *Hardwick* farm and farm-house, a farm-house at the north end of Norton village, with two cottages adjoining, and a pew in the church, the property of John Peacock, Esq., were sold on his decease, in 1851; when the Hardwick farm, containing 118 A. 2 R. 22 P., was purchased by John Grey, Esq.; the Crook, containing 37 A. 2 R. 18 P., by John Fox, Esq.; and the farm-house, cottages, pew, and Rushmires and Long Field, containing 32 A. 0 R. 19 P., by W. Colpitts, Esq., on whose decease they became the property of his nephew, Christopher Colpitts, Esq.

The *White House* estate, containing about 186 acres, with the ornamental cottage called *Bath House*, were sold, some years ago, by the trustees of the Rev. C. Anstey, to Thomas Robinson Grey, Esq.

Norton water-mill, situated to the east of the village, on the road to Billingham, pays all parochial rates to Stockton.

Whilst the wapentake of Sadberge was in the crown, King Henry II. granted a weekly market to Norton *on the Lord's day*. The king makes known, by deed directed "to Thomas Archb. and to all viscounts and barons and all his faithful subjects, French and English, in Everwicscira [Durham was so designated in the days of Alfred] and Northumberland, that he had granted to Ralph, Bishop of Durham, to hold a market in Norton, on every Lord's day, requiring the peace to be kept with all those frequenting the market; and granting such customs as were in use in all his sundry markets

throughout England." To this charter, or grant, Robert, Bishop of Lincoln, Nigil de Albini, and Robert de Brus, were witnesses, at York.* The necessity for this market may be surmised from the extent of the parish, which then included Stockton, Hartburn, and Preston, the people from whence were under the necessity of passing sometimes through "rayny fludes," to the parish church on Sundays.

THE CHURCH.

NORTON church stands on the highest ground in the village towards the north. Its shape was originally cruciform, with a square central tower; but the south transept has been considerably shortened. The nave has regular side aisles, each formed by two cylindrical pillars, with capitals of light round mouldings, and pointed arches. Four circular arches support the tower. There are traces of pilasters and carving near the altar. The chancel formerly contained stalls for the prebendaries.

In 1823, the church underwent considerable repairs and restorations. The side walls of the western part were entirely taken down and rebuilt, so as to enclose a larger area; and the space thus gained, added to the erection of two galleries, allowed room for constructing twelve appropriate new pews, and nearly 350 sittings, which are to be free and unappropriated for ever for the use of the poor: the church is consequently calculated to accommodate 850 persons. The front of the south transept was rebuilt, with a handsome lancet window. The stone-work of the chancel was re-fronted, in conformity with the original. The eastern window, which consists of three lights under a low arch, was

copied, and one on a larger scale, of fine and massy proportions, inserted at the western end of the church. The north side of the chancel was also ornamented by two large Gothic windows, exactly corresponding with those on the south side. The expenses were defrayed by the Rev. C. Anstey, vicar, assisted by subscriptions from Bishop Barrington, the London Society for the Enlargement of Churches and Chapels, the Ven. Archdeacon Prosser, Lord Crewe's trustees, A. Anstey Calvert, Esq., and the Rev. — Marwood, of Busby Hall.

Two of the old bells of the church were dated 1607 and 1613, and the third was inscribed "*Venite exultemus Domino, 1664, R. D.*" The largest of these remains; but the next in size, being cracked, was sold for old metal, and the smallest was purchased by J. Shields Peacock, Esq., and presented to the Town Hall at Middlesborough: two new bells were made for the parish by Mears of London.

The south transept was anciently called "Pity Porch," from an image or altar to Our Lady of Pity. In the north transept, called "Blakiston Porch," are several monuments to the Davisons of Blakiston. A small gallery was erected in this porch in 1854, by the vicar and G. F. H. Russell, Esq. (now Viscount Boyne), for the Sunday-school children.

A recumbent effigy, which formerly lay in Blakiston porch, is now placed on the south side of the chancel, within the altar-rails. The figure is in armour, with a rich canopy of tabernacle work over the head, which is uncovered. The hands are elevated and the legs crossed, the feet resting on a lion in the act of destroying some animal. A small figure, in the attitude of reading, is placed near the feet. The sword is sheathed;

* "I do not think the following," says Mr. Longstaffe, "has been added to any of our county histories, though it forms a capital gloss on the grant by this king (Henry II.) to Bishop Flambard, of a market at Norton, on the Lord's Day, and is extremely curious in a literary point of view, to boot:—In Brompton's Chronicle, it is related that as Henry was passing through Wales, on his return from Ireland, in the spring of 1172, he stopped at Cardiff Castle, on a Sunday, to hear mass; after which, as he was mounting his horse to be off again, there was presented before him a somewhat singular apparition, a man with red hair and a round tonsure, a distinction that would seem to imply that there were still in Wales some priests of the olden church who held out against Romish innovations, and retained the ancient national crescent-shaped tonsure. He was lean and tall, attired in a white tunic, and barefoot. This individual began in the *Teutonic* tongue, 'GODE OLDE KINGE,' and delivered a command from Christ, as he said, and his mother, from John the Baptist, and from Peter, that he should suffer no traffic or servile works to be done throughout his dominions on the Sabbath-day, except only such as pertained to the use of food; which command, if he observed, whatever he might

undertake, he might easily accomplish. Although only the three first words are chronicled in what the writer calls *Teutonic* (i. e. Saxon or English), there can be no doubt that the rest, though recorded in Latin, was in the same, and it appears that the king understood English, though he might not be able to speak it, for he, speaking in *French*, desired his attendant soldier to ask the rustic if he had dreamed all this. The soldier (who must have spoken both languages) made the inquiry accordingly, in *English*, when the man replied to the king, *in the same language as before*, 'Whether I have dreamed it or no, mark this day; for, unless thou shalt do what I have told thee, and amend thy life, thou shalt within a year's time hear such news as thou shalt mourn to the day of thy death.' Then he vanished, and calamities thickened on the perverse king. His profane market at Norton waned and fell, and, like the heap at Oxenhale, the place of the market cross is marked by a large pool, called *Cross Dyke*, which, as *dyke* is applied to any thing formed by digging, may have been artificially caused. Some years ago, I remember its being perfectly dry in a hot summer, but was too young to observe whether any remains of the cross foundation existed."

and the shield bears the arms of Blakiston, Surtees, Bowes, Dalden, and two of Conyers. These could not have been borne by any of the Blakiston family before 1586, which is too late a date for the effigy. Tradition assigns the figure to Thomas Blakiston, who died in 1484; and it has been inferred that the arms were subsequently sculptured on the blank shield.

A handsome and powerful organ, with barrels for playing thirty of the best psalm tunes, is placed in a lofty gallery beneath one of the arches of the tower: it was the gift of the Rev. C. Anstey, who also presented a service of communion plate, and a fine painting of the recognition of our Saviour by the two disciples at Emmaus, formerly an altar-piece in a Benedictine convent on the continent. The Rev. C. J. Plumer, successor to Mr. Anstey, presented two silver plates for collecting the offerings at the communion. A new font, the gift of the present vicar, is placed at the west end of the church. The old one, though not now used, still remains in its place in the chancel. A window of stained glass was placed on the south side of the chancel, in 1853, by William Lloyd Wharton, Esq., of Dryburn Lodge, Durham, the lay rector.

The burying place of the Davisons of Beamish is near the altar-table. In other parts of the church are monuments to Capt. Gregory, R.N., who died February 18, 1774; Admiral Policarpus Taylor, died in 1781; William Christopher, Esq., died November 2, 1793;* Elizabeth, wife of the Rev. C. Anstey, &c. In the church-yard there is an altar-tomb to Thomas Briggs, said to have been a sufferer in the South Sea scheme,

* CAPTAINS CHRISTOPHER AND FOWLER.—Captain William Christopher, a native of Norton, and commander of one of the ships belonging to the Hudson's Bay Company, was sent out by the governors of that company, in 1761, to pursue such plans as might facilitate the discovery of a north-west passage. With this object, he sailed up Chesterfield's Inlet in the sloop *Churchill*; but, on the water turning brackish, he returned. In the following year, the investigation was repeated; when Captain Christopher discovered that the inlet terminated in a fresh water lake, 170 miles from the sea. He also examined Pistol Bay, which he sailed round in an open boat, without discovering any passage into a western sea.

When M. de la Perouse attacked the company's factories in 1783, two of their ships, loaded with oils, furs, &c., were respectively commanded by Captain Christopher and Captain Jonathan Fowler, a native of Stockton. To obtain possession of so valuable a prize, Perouse despatched a frigate after Christopher's ship, the *Seahorse*, the sails of which, after a chase of some duration, were furled as if coming to an anchor. The captain of the frigate, ignorant of the navigation, and fearing that by following too closely, he might endanger his ship, cast anchor in reality; when Christopher immediately made sail for sea, and, aided by nightfall, made his escape. Perouse hereupon burnt the factory, and made preparations for attacking the other ship in Nelson river. Fowler, however, sailed in the night, and, on being pursued, stood in so close to the land that the French

who kept a little shop in Norton under an assumed name, and died in 1731. There are also monuments to several of the vicars.

Under the Pope's command, Norton was made a collegiate church by Bishop Carilepho, for the maintenance and support of the secular canons whom he removed out of the cathedral church at Durham. The college consisted, after 1227, of eight prebendaries, whose incomes were estimated, in 1291, at £6 per annum; but the total value in 1534, 26 Henry VIII., was £4 6s. 8d. each, or £34 13s. 4d. in the whole. The stipends arose from part of the corn tithes of the parish; and the prebendaries were charged with the repairs of the chancel. In 1533, Lancelot Thwaites, Anthony Salvin, Nicholas Thornhill, John Tunstall, Nicholas Lentall, Rowland Swinburn, and Jerome Bernard, received pensions of £5 each. The tithes of the college are now in lay hands.

From a deed of bargain and sale, dated December 11, 16th James I., there appears to have been a hermitage at Norton, endowed with a messuage and land at Stockton, "appropriated to the finding of two candles of five shillings value in the chapel of Stockton," and of which Thomas Salvin was incumbent.

REGISTERS.—Book No. 1 contains entries of baptisms, burials, and marriages from 1574 to 1713, interrupted by No. 2, which contains baptisms and burials from 1700 to 1798, and marriages from 1700 to 1753. No. 3 contains baptisms and burials from 1799 to 1812; and Nos. 4 and 5, marriages from 1754 to 1812.†

gave up the chase. After retiring from the company's service with considerable fortune, the two captains settled with their families in Stockton. Captain Fowler died at that place, June 7, 1790, aged 57, and was interred at Egglecliffe; and Captain Christopher died at Newcastle, whither he had gone for medical advice, in 1793, aged 68, and was buried at Norton.

† The early entries in the register are in good Latin. There are numerous notices of the Blakistons of Blakiston, and of others of the name and family. Amongst other entries:—

"Anno D'ni 1608, y^e 17th of March, this yeare & daye, came Will'm Parckhouse, one of the household s'vants of Sr Wyll'm Blakiston, of Blakiston, knight, & did signifye to us from his s^d Mr-ye vicar, & church wardens of the p'rish of Norton, that his said Mr-wold from this day forward confyne himselfe to his maner house of Blakiston, situate and being w'thin the p'rish of Norton, according to the statute of confynment in that case p'vyded.—James Rand, vicar of Norton. Ralph Davison. Ralph Pattinson."

3 Jan. 1635, there appears a licence granted by Gabriel Clarke, D. D., archdeacon, &c., to allot the seats, and the parishioners are to be placed "in decent maner accordinge to their ranks, degrees, and qualities.

"In consequence of the above, Imp^s Mr. Davison of Blaixton, shall sitt in the seate next unto the chancell one the north side, where he

Norton is a vicarage in the deanery of Stockton; the Bishop of Durham, patron; the holders of the college tithes, imp. King's Books, £31 11s. 5½d.; Tenths, £3 3s. 1¾d.; Episc. proc., 17s.; Synodals, 11s.; Archid., 4s. Dedication to the Virgin.

VICARS.—Bartholomeus, 1234; Thomas Persona de Norton, circ. 1236 (witness to Bishop Poor's ordination of Stockton chapel); W. de Bromham, 1255; J. de Barnhaughe, 1282; N. de Derlington, 1283, p. res. Barnhaughe; R. de Dalton, 1310, p. m. Derlington; W. de Stafford, 1335, p. m. Dalton; J. de Wyghton, 1345, p. m. Stafford; R. de Habington, 1354, p. m. Wyghton; J. de Seton, 1361, p. res. Habington; H. Graspois, 1362, p. res. Seton; R. de Whiteby, 1365, p. res. Graspois; J. de Billeston, 1380, p. m. Whiteby; W. Lathom, 1394, p. m. Billeston; J. de Cokyn, 1407, p. m. Lathom (official to Bishop Skirlaw, 1400); R. Bromley (on whose complaint Cardinal Langley ordered the canons of Norton to repair the chancel), 1410, p. m. Cokyn; J. Huntteman, S.T.B. (dean of Lanchester, chancellor of Lincoln, and prebendary of Sutton in the Marsh), 1416, p. m. Bromley; J. Rande, 1427, p. m. Huntteman; R. Kellowe, 1430; T. Hoton, 1438; R. Bates, 1452; W. Appleby, A.M., occurs 1496; J. Claymond,* A.M., 1498; L. Collynson, C.L.B. (nephew to Archbishop Baynbrig, treasurer of York 1514, prebendary of Weighton 1509), p. res. Claymond; R. Hildyard, S.T.B., 1533; J. Rudd, S.T.P., 1539; B. Gilpin (rector of Houghton-le-Spring), 1554, p. depr. Rudd; R. Dalton, S.T.B. (prebendary of the 7th stall, of the family of Dalton of West Auckland), 1556, p. res. Gilpin; J. Rudd again, 1558, p. depr. Dalton; J. Rande, A.M., 1578 (prebendary of the 1st stall at Durham, and prebendary of Litchfield); A. Perne, A.M. (of Peter House, Cambridge, proctor 1615, chaplain to Bishop Neile), 1621, p. m. Rande; E. Gower, S.T.B. (resigned for Stanhope), 1640, p. m. Perne; P. Mallory, A.M. (a younger son of Sir — Mallory, of Studley, co. York, occurs for the last time March 20, 1644, ejected and went to the West Indies in Prince Rupert's fleet), 1640, p. res. Gower; R. Brough, an intruder, 1645-1659; A. Smallwood, 1661; T. Davison, A.M., 1663; T. Rudd, A.M., 1690, p. depr. Davison (he allowed his predecessor the income for life, and continued to act as his curate; also vicar of St. Oswald's); J. Forster, A.M., 1712, p. res. Rudd; W. Sisson, A.M., (Fellow of St. John's College, Cambridge, rector of Markshall, Essex, in 1723), 1746, p. m. Forster; W. Vaughan, A.M. (chaplain to Bishop

Egerton, resigned for Haughton-le-Skerne), 1773, p. m. Sisson; G. Johnson, A.M. (prebendary of Lincoln, and rector of Lofthouse, co. York), 17—, p. res. Vaughan; C. Anstey, A.M., 1786, p. m. Johnson; C. J. Plumer, 1828, p. m. Anstey; Hon. F. N. Clements, A.B., 1849, p. res. Plumer.

At the general array of the clergy on Gilesgate Moor, in 1400, the vicar of Norton furnished one lancer and two archers.

On the 15th December, 1625, John Harperley, of Stockton, having been convicted of incest, performed penance in Norton church and Stockton chapel. "Wh day hour and place he being recognized appeared and confessed, and was enjoined acknowledgment in penitential manner in the churches of Norton and Stockton wh he performed, & had also been ordered to perform the ilke penance at y^e market crosses of Durham and Darneton wh he commuted and paid £6 for y^e same, and therefore desired that he might be no further proceeded against—ordered to enter into recognizance in £40 and sureties £20 each, and to certify before 12 June next."

The vicarage-house, which was much improved by the Rev. C. Anstey, stands near the church on the south-east; it is surrounded by fine plantations, and ornamented with luxuriant gardens. The glebe consists of above 270 acres. The gross annual income of the living is stated at £379, subject to a permanent payment of £1. From the remainder, £80 a-year is paid to a curate. In 1840-41, Mr. Plumer made a claim for hay and small tithes, which the parishioners thought had been covered by modus. The facts were laid before the Tithe Commission in London, whose decision was in favour of the vicar. A commutation was made for £80 in lieu of all small tithes. There is a manor court within that of the bishop, held by the vicar, and probably derived from the collegiate establishment. One of these courts has been held since the induction of the present vicar.

usith to sitt, and for his servants and tenants to sitt in the north porch, wh is called by the name of Blaixton porch.

"As for men servants wh cannot read, we appoynt them for to sitt in the south porch, called by the name of Pettie porch; and as for wome' servants, for to be placed to kneele down in the middle ally, nere the font. Order signed, And. Pern, vicar. Marmad. Chapman, Richard Halliman, churchwardens."

"Marriage comes in on the 13th of January, and at Septuagesimo Sunday it is out again until Low Sunday, at wh time it comes in again, & goes not out till Rogation Sunday, thence it is unforbidden until Trinity Sunday, from thence it is forbidden till Advent Sunday, and comes not in again tili y^e 13 of January."

Several German officers and soldiers, who belonged to the Duke of Cumberland's army in 1745, were buried at Norton, and registered in the books.

"The heart and bowells of the right honourable James Earl of Weemys, bur. 22 March, 1756. The remains was buried with his ancestors at Weemys Castle in Scotland, the 8th day of April." He had resided in Norton from the time of the rebellion in 1745.

* DR. CLAYMOND.—John Claymond was born at Frampton, Lincolnshire, and educated at Oxford, where he was made Fellow of

Magdalen College in 1488. On entering into holy orders, he became famous for his learning, piety, and gravity, and was much esteemed by Bishop Fox, by whom, when Bishop of Winchester, Claymond was made *first* president of Corpus Christi College, then newly established, 1516. On resigning the living of Norton in 1518, he reserved to himself a yearly pension from it of 20 marks, to be paid by the abbot and convent of Selby, Yorkshire. He published "Notæ & Observationes in Plinii Naturalem Historiam," and left several works in MS. During the latter part of his life, he took the Eucharist every day, and died at a good old age, November 19, 1537. By his last will, he bequeathed £480 to the college, to purchase lands for the maintenance of six scholarships in Brazenose College, one of whom was to be elected from Norton or Stockton; one from Frampton, his birth-place; one from Oveston, Havant, or Mattisfont, in Hampshire; one from Benager, near Wells, or from Moncheton, near Taunton, in Somersetshire; one from Cleeve, in Gloucestershire; and one from the city or county of Oxford. These scholars were called Claymondines, and at present Clemmondines. By the practice of the college, and with the consent of its president, they are reduced to three; and the allowance to each is £2 per quarter.

CHARITIES.

School.—Certain lands in the parish, for the support of the school, have been held under the see of Durham, on leases for three lives, at least since the year 1650. The dwelling-house, garden, and school-room, which are freehold, are on the north side of the village green, and are occupied by the master rent-free. There are a bakehouse and oven in Norton, formerly let at £6 10s. rent, but now at £3 10s.; a close called Lady Kiln Garth, with the toft on which Lady Kiln formerly stood, in Portrack Lane, containing about 4 acres, and let (with other lands mentioned below) at £10 a year; an acre of arable land which the Lady Kiln occupied, the site unknown, but in respect of which the vicar formerly paid £2 10s., now £2; and the Hermitage Garth, containing 1½ rood, formerly let at 15s.; but now sold to Mr. W. Wilkinson, subject to a payment to that amount. In addition to the above, Lord Crewe, in 1720, granted two fields in Darlington Lane, containing about 5 acres, now let with the Lady Kiln Garth; about 2 acres of meadow land in “The Bottom,” let at a yearly rent of £5; and a cottage and garden, let at £6 6s. The total quantity of land is 12 A. 2 R. 33 P. The following is the rental table for May, 1855, from which are deducted the bishop’s annual out-rents, the renewal fines, and repairs:—

John Manners, for land	£13	0	0
Jonathan Jackson	10	10	0
Thomas Hall, cottage	6	0	0
Elizabeth Smith, cottage	2	0	0
John Fox, land	3	15	0
John Brown, bakehouse	3	10	0
Gross	£38	15	0

In respect of these emoluments, the master, Mr. Bell, is required to teach six boys of the parish, appointed by the vicar, without any charge. They are not admitted until they can read, write, and have a knowledge of the first four rules in arithmetic, when they are instructed in the classics. There are at present 55 other boys attending the school (seven of whom are boarders), who pay for their instruction. The present trustees are, John Hogg, Esq., Rev. C. J. Plumer, M.A., and — Cartwright, of Durham, recently deceased. On the death of the second trustee, the survivor appoints two as successors, with the approbation of the bishop.

Thompson’s Charity.—John Thompson, by deed, 1st Geo. I., gave certain lands in the parish, producing £6 3s. per annum, in trust for the poor and for uphold-

ing and maintaining the church at Norton. A field, near the village, containing about 4 acres, is now let for £14 a year, which has for many years been carried to the account of the church-rate; and two other closes, containing together 5 or 6 acres, are let for £9, which is carried to the account of the poor-rate.

Snowdon’s Charity.—John Snowdon, by will, date unknown, gave to the vicar and churchwardens of Norton £100 three per cent. reduced annuities, the interest to be divided amongst four decayed housekeepers belonging to the parish. The dividends are paid over to the vicar and churchwardens, who divide the amount amongst five or more poor widows, a preference being given to those of shoemakers.

BLAKISTON.

THE ancient manor of Blakiston occupies the north-western portion of the parish of Norton. It was granted in 1093, by Bishop Carilepho to the prior and monks of Durham, from whom *Blecheston* was taken by Bishop Flambard, and granted to his nephew, Richard (ancestor of the Fitz-Marmadukes). The monks complained; and the bishop, feeling compunction on his death-bed, was borne in his last moments into the cathedral, and made restitution by the ceremony of offering his gold ring on the high altar. The possession of the vill was confirmed to the monks by King Henry I., whose impatience is testified by the expression, “And if Richard make any claim, do ye right between them, that I be no more afflicted with the clamour of the monks.”

The estate was granted by the convent, under reserved rents and services, to the family of Park, one of whom is mentioned as of Blakiston in 1264. About 1320, Richard de Park founded a private chapel at Blakiston, giving, by the consent of the prior of Durham, for the souls of himself, his wife Amice, and their successors, to God and St. Mary, and the chapel of the Holy Trinity, and to John de Blakiston, chaplain, and to all his successors, certain lands, to celebrate matins and all canonical hours daily, with masses as directed. Richard, son of the above, in 1341, alienated certain property in the vill to Roger and Hugh de Blakiston, the first of whom is styled “Roger, the Cook.” In 1349, Roger de Blakiston and John Fitz-Roger, of Herdewyke, levied a fine against Richard del Park and Christiana his wife, deforceants, of six messuages, 200 acres of land, 12 of meadow, 200 of pasture, half a messuage, and a mill. Even so long after as the reign

of Edward IV., Edward Park, Esq., in vain endeavoured to recover the estate from the Blakistons, by suit in the court of the prior of Durham.

The family of Blakiston, thus secured in the possession of the ancient manor, continued to advance in wealth and importance. In 1483, an inquest on Thomas Blakiston, Esq., describes the manor as containing a hall, pantry, and buttery, six chambers, a kitchen, a stable, and other buildings, an orchard, 44 oxgangs, each of 15 acres, 60 acres of meadow, and 100 of pasture, worth annually altogether, £20.

Marmaduke, a younger son of Thomas Blakiston, of Blakiston, Esq., was attainted for his share in the rebellion of 1569. William Blakiston, who married Alice, daughter of William Claxton, Esq., of Wynyard, November 26, 1581, was knighted at Whitehall, July 23, 1603. Sir Thomas Blakiston, his son, who was created a baronet in 1615, sold the estate in the same year, after it had belonged to his ancestors for 300 years.*

Alexander Davison, merchant, of Newcastle, became the purchaser of Blakiston. He was charged with a horse for the service of Charles I., and was afterwards knighted; at the age of 80, he was slain, with his youngest son Joseph, during the gallant defence of

* Sir William, son of Sir Thomas, was a colonel in the service of Charles I. He refused to compound for his estates, and afterwards underwent a long imprisonment in Maxtoke Castle, Warwickshire.

Newcastle. Thomas Davison, Esq., his eldest son and successor, married Elizabeth, daughter of William Lambton, of Lambton, Esq., and compounded for his estates for £1,412. On the restoration, he was knighted, and made high sheriff of Durham by patent, July 30, 1661. He died in 1667. His grandson, Thomas Davison, of Blakiston, Esq., married, first, Anne, daughter of Sir John Bland, of Kippax, Yorkshire, and afterwards Theophila, daughter of Charles Turner, Esq., of Kirkleatham. Thomas Davison, Esq., his eldest son by his first marriage, married Martha, daughter of William Hoar, of Limehouse, by whom he had issue Thomas, born January 8, 1744-5, who took the additional name of Bland (since borne by his descendants), and resided at Kippax Park. The old hall at Blakiston, on which were sculptured the Blakiston arms, was taken down, and the materials sold at Stockton. The manor of Blakiston was sold, about 50 years ago, to William Russell, Esq., of Brancepeth Castle, and became, in right of the heirs of that family, the property of G. F. H. Russell, Esq., who is now, by the death of his father on the 30th of March, 1855, Viscount Boyne.

The deputation of the manor and other lands in Norton is granted to Thomas-Robinson Grey, Esq.

His estates, valued at £600 per annum, were returned to him at the Restoration. The title expired in him; and the other branches of the family have declined like the original stock.

PARISH OF ELTON.

THE little parish of Elton is bounded by the township of Hartburn in the parish of Stockton on the east, by the parishes of Norton and Redmarshall on the north, by Bishopton on the north-west, and by Long-Newton on the south-west and south. It forms but one township or constabulary.

ELTON contains an area of 1,419 acres. Its population, at the six decennial periods of enumeration, was 78, 76, 105, 103, 92, and 84. Of the latter number, who inhabited 22 houses, 38 were males, and 46 females. The value of property assessed for the county-rate in 1853 was £895.

The amount received in poor-rates, in the parish of Elton, during the year ended Lady-day, 1854, was £50 5s.; and receipts in aid of the rates, 17s. The expenditure for in-maintenance was £1 16s.; out-relief, £28 15s.; workhouse loan repaid, and interest thereon,

£1 12s.; salaries and rations of officers, £4; other expenses connected with relief, £1 13s.; total, £37 6s. Costs of law and equity proceedings, 14s.; constables' expenses and costs before magistrates, 5s.; vaccination, 11s.; payments on registration fees to clergymen, £1 13s.; towards county and other rates, £15 2s.; registration, 8s.; for other purposes, £3 18s.; total expenditure, £58 9s.

The village of Elton is situated on the road between Stockton and Darlington, about three miles from the former place. It contains but few private

residences;* there is a blacksmith's shop, and a beer shop. A parish constable resides in the village. From this little hamlet, four persons joined the rebellion of 1569, one of whom suffered death.

Elton Hall, the property and residence of John-Stapylton Sutton, Esq., is a handsome modern mansion, the plantations and grounds about which were designed and planted by George Sutton, Esq. Elton Hall estate also received great improvements from the taste of Lieut.-colonel Sleigh, of Stockton, Mr. Sutton's nephew; he built an elegant green-house, and occupied the mansion for a few years previous to his death. The Elton beck intersects the grounds. A stone, originally brought from Stockton Castle, and afterwards preserved in a farm-yard wall at Hartburn, is now inserted in a wall on the grounds at Elton. It represents two couchant lions, about three feet in length and one in breadth.

Elton, with Barmton and Skerningham, were given by Bishop Aldhune, as a marriage portion with his daughter Ecgrida, to Uhtred, Earl of Northumberland, who, tiring of her, sent her back to her father, and her possessions were restored to the church. She afterwards married Kilvert, a Yorkshire thane, who also sent her back; and at last she became a nun, and was buried in the cemetery at Durham.

William de Homez is mentioned as the proprietor of the manor of Elton in the time of Bishop Philip de Pictavia. It was afterwards held, for several descents, by the Gowers, from whom, in 1546, one moiety descended to Lawrence Tregoz or Thorowgood. The other moiety had become vested, before 1435, in the family of Bowes, and afterwards passed to Sir Cuthbert Collingwood, by marriage with Dorothy, daughter and coheir of Sir George Bowes, of Dalden. By Sir Cuthbert it was sold, in 1573, to Thomas

* "THE OLDEST WOMAN IN THE WORLD."—Mary Benton, whose maiden name was Lodge, was born, it has been stated, on the 12th of February, 1731, at Raby Moor House, while called Lodge's House, near Keverstone, but in the parish of Cockfield. Her father, Mr. Ralph Lodge, lived to the age of 105 years. In early life, she resided with her grandmother, who kept an inn at Piercebridge. Up to the period of her death, she had a vivid remembrance of the soldiers being quartered there during the rebellion in 1745, and the terror inspired in the neighbourhood at that period.

"Then she graced a village scene,
When the bold 'Pretender' came.
Can this being *then* have been?
Can she be the very same?"

She was then 'a growing girl,'
In King George the Second's day,
Who his banner did unfurl,
To drive the intruding Scot away.

Sergeantson, of Preston-le-Skerne, and John-Thomas and Christopher Jefferson, of Elton. The heiress of the family of Jefferson intermarried with Thomas Hogg, Esq., whose descendants, Thomas and John Hogg, Esqrs., of Norton, still hold a portion of the estate and a third of the advowson.

The first-named moiety of Elton became settled in the Erringtons. John Errington of Elton, Esq., was a colonel in the service of Charles I., and named a delinquent in the ordinance of parliament 1644. On the petition of his wife, Mrs. Mary Errington, a fifth part of his estates at Elton, Egglecliffe, and elsewhere, was allowed for the maintenance of herself and her family. He died in 1666; and John Errington, his son, who had also been a lieutenant-colonel in King Charles's army, sold his estate in Elton, in 1682, to Robert Shafto, Esq., recorder of Newcastle. It was sold some years ago, by John Shafto, of Whitworth, Esq., to Thomas Wade, of Fatfield, Esq., for £11,000, from whose trustees it was recently purchased by J. S. Sutton, Esq. This manor comprises 783 A. 2 R. 19 P., divided into four farms.

The property of the Suttons is also derived from the Jeffersons. Rachael, daughter of — Jefferson, Esq., married, in 1693, Thomas Sutton, Esq., of Stockton and Hartburn, and had, with three other children, who all died without issue, William Sutton, Esq., born in 1701. He married, in 1727, Mary, daughter of J. Watson, Esq., of Stockton, and had issue, George, his heir; John, of the Hon. East India Company's service, married to Mary, daughter of Edward Bunting, Esq., of Stockton; and Mary, married to Charles Bathurst Sleigh, Esq., of Arkindale, Yorkshire.

Mr. Sutton died April 4, 1769, and was succeeded by his son, George Sutton, Esq., born June 26, 1735.

And the soldiers quartered there
Praised her neat and modest mien.
Her rosy cheek and raven hair
In budding brightness then were seen."

Her husband's name was John Benton, a butcher, with whom she resided at Long-Newton; but being a "a graceless and a spenhrift," she separated herself from him shortly after their marriage. During her latter years, Mrs. Benton lived with her aged and only daughter at Elton. She was regarded with much interest in the neighbourhood; and her cottage was frequently the resort of visitors, whose bounty assisted in making her comfortable. Her form was bent; but her conversation was free and lively; her eye, though dimmed, was intelligent; she was able to dispense with the assistance of spectacles to the last. At length, "the old woman of Elton," as she was called, breathed her last, and was buried on the 7th of January, 1853. The inscription on the coffin plate stated her age to be 117; but, if the above date of her birth be correct, she must have been in her 122nd year.

He was a magistrate for the county of Durham, and married, in 1780, Grace, youngest daughter of William Horsfall, Esq., Storthes Hall, in the West Riding of Yorkshire; but dying without issue, February 4, 1817, at the advanced age of 82, he bequeathed his estates to his grand-nephew, George-William Hutchinson, who assumed, in consequence, the surname and arms of Sutton (see WHITTON). This gentleman married, April 21, 1824, Olivia, second daughter of Henry Stapylton, Esq., of Norton, senior male descendant of the ancient family of Stapylton of Slyton, and had issue two sons and three daughters. John-Stapylton Sutton, Esq., second son, born November 22, 1832, is the present possessor of Elton Hall. He married, April 26, 1855, Sarah-Jefferson, youngest daughter of John Charles Maynard, Esq., of Hauxley Hall, Northallerton.

Arms—Gu., a castle or, thereon a stork, ppr., for Sutton, quartering the ensigns of Sleigh and Bathurst.

Crest—A stork, ppr., holding in the dexter claw a rose, and charged on the neck with a cross-patee, gu.

Viewly Hill farm, containing 207 A. 0 R. 23 P., is the property of John Leaper, Esq., Hull.

THE CHURCH.

THE church is an humble edifice, capable of accommodating 100 persons, and consists of a nave, chancel, and south porch. On the western gable is a bell turret, containing two small bells, and surmounted by a cross; and a cross is also placed on the gable of the chancel. The roof is of slate. The church was nearly all rebuilt by the Rev. A. Wade in the third year of his incumbency. A circular arch divides the nave and chancel. A vestry is attached to the north side of the chancel. On the south side of the nave are three pointed windows, two on the same side of the chancel, and one on the north; in all of which the plain sashes, previously introduced, have been removed, and are replaced by diamond-cut glass. The east window contains representations of the Crucifixion and Resurrection in stained glass, erected to the memory of the late G. W. Sutton, Esq., by his widow. A recumbent effigy, which formerly lay beneath an arch in the north wall of the nave, is now placed within the altar rails. It represents a knight in armour, supposed to be one of the Gowers. The head, which wears a close cap, rests on a pillow; the face is uncovered, the hands are clasped on the breast, the legs crossed, with spurs on the heels, and the feet resting on a lion.

REGISTERS.—Books Nos. 1 and 2 contain entries of baptisms and burials from 1573 to 1812, and marriages

from 1573 to 1753; and No. 3, marriages from 1754 to 1812.

ADVOWSON.—From William de Homez, the advowson of Elton passed to the Gowers and Boweses, and afterwards to the Erringtons and Jeffersons; the former having two turns, and the latter one. The Erringtons' right of presentation passed, with their property to the Shaftos, and is now held by J. S. Sutton, Esq.; and the turn of the Jeffersons is supplied by T. and J. Hogg, Esqrs.

Elton rectory, a discharged living, is in the deanery of Stockton. King's Books, £7 6s. 5½d.; Tenths, 14s. 7¾d.; Episc. proc., 6s. 8d.; P'duob. Syn., 2s.; Archid. proc., 2s. Dedication

RECTORS.—W. de Ellewike, 1311; T. Trowell; J. de Brafferton, 1378, p. res. Trowell; W. de Percebrigg, 1403; R. Toppynge, 1435; p. m. Percebrigg; J. Bowes, cap., 1495; P. Balyt, 1519; J. Sayer, cap., 1536; T. Wright, 1567; R. Blaxton, 1571, p. depr. Wright; T. Bell, 1595; R. Colmore (second son of Clement Colmore, chancellor of the diocese of Durham; pres. by Bishop Neile by lapse), 1608; R. Thursby, A.M. (pres. by Bishop Neile by lapse), 1619, p. res. Colmore; W. Murray, A.B., 1621, p. res. Thursby; T. Markendale, 1649; H. Doughtie, A.M., 1668, p. m. Markendale; T. Mawman, 1709 (a Nonjuror, and deprived 1716; died at Stockton 1763), p. m. Doughtie; W. Russell, 1716, p. depr. Mawman; J. Rowntree, cl., 1758, p. m. Russell; T. Ewbank, A.M., 1804, p. m. Rowntree; A. Wade, A.B., 1840, p. m. Ewbank; J. Milner, 1855, p. m. Ward.

By a terrier, July 23, 1788, the glebe consists of the site of the rectory adjoining the church-yard, with a stable, barn, fold-yard, and nearly an acre of ground called the Ashes in the east, a small orchard or garden on the north, and a plot of ground planted with fruit-trees on the south; two fields on the south of the road leading from Darlington to Stockton, the one estimated at 11, the other at 10 acres, abutting on lands of George Sutton, Esq., west, on Coatham grounds south, and on the high road to Yarm east; and four fields, respectively of 18, 11, and 10 acres, on the north side of the same road from Darlington to Stockton, abutting on the grounds of George Sutton, Esq., on the west, north, and east.

About the year 1641, the rector entered into a composition for £22 10s. in lieu of tithes, which was acquiesced in by his successors until 1804, when the Rev. T. Ewbank filed a bill in the Court of Exchequer against the land-owners, to compel the payment of tithes in kind. The court directed an issue in Easter Term, 1813; and the cause was tried by a special jury at Durham assizes, and a verdict found for the rector. The defendants having moved for a new trial, the case

came on before the barons in Hilary Term, 1814, when the court, after hearing counsel on both sides, dismissed the application, and decreed payment of tithes in kind, with costs both in law and in equity.

The gross income of the living is stated at £180 per annum, upon which are charged permanent annual payments to the amount of £10, leaving a net sum of £170 a year.

PARISH OF LONG-NEWTON.

THIS parish is bounded by the township of Preston in the parish of Stockton on the east, by Elton and Bishopton on the north-east and north, by the chapelry of Sadberge on the west, by Middleton St. George on the south-west, and by Egglescliffe on the south and south-east. It forms only one township or constabulary, which includes Coatham-Conyers, or Coatham-Stob, and Goosepool, which is a part of West Hartburn.

THE parish of Long-Newton occupies an area of 4,544 acres. The population in 1801, was 295, and fluctuated, at the succeeding periods of enumeration, as follows:—253, 338, 313, 293, and 325. Of the latter number, 181 were males and 144 females; and there were, at the same date, 68 inhabited houses and 1 uninhabited. The value of property assessed for the county-rate in 1853 was £3,224 14s.

During the year ended Lady-day, 1854, the amount of poor-rates in the parish of Long Newton was £137 18s.; and receipts in aid of rates, £2 11s. Connected with relief, £8 4s. was paid for in-maintenance; £84 15s. for out-relief; £6 for workhouse loan and interest; £12 7s. for salaries and rations of officers, &c.; and £5 2s. for other expenses; total, £116 8s. Constables' expenses and costs before magistrates, 17s.; vaccination, 2s.; payments on registration fees to clergymen, 17s.; towards county or other rates, £55 5s.; registration, 6s.; for other purposes, £9 8s.; total expenditure, £183 3s.

The parish contains upwards of twenty farms. In passing through this parish, the Stockton and Darlington railway extends along 1 M. 3 F. 125 Y., and covers an area of 8 A. 0 R. 21 P. In 1851, when the gross

amount of local rates collected was £180, the railway contributed £24; and in the following year, it contributed £26 13s. towards an amount of £247 13s.

The village of Long-Newton extends, about half a mile in length, along the road between Stockton and Darlington, to within $4\frac{1}{2}$ miles of the former, and 6 miles of the latter town. The houses are irregularly built, and scattered along the sides of the road. The village contains a county police station, a school, attended by between 60 and 70 children, a public-house, a beer-shop, the shops of blacksmiths and cartwrights, and a few other tradesmen. The family mansion of the Vanes, which was a large brick house, was, after being some time let in tenements, taken down many years ago. The outer walls and entrance gate remain, and the ground is in grass and orchard.*

Long-Newton was anciently a member of the great lordship of Gainford, or was held under it by the Baliols. A convention occurs in 1231, between Bishop Poor and John de Baliol, by which the bishop grants that Baliol and his heirs shall hold the vill of Long-Newton, as their ancestors held, by homage, service, and money payments; Baliol, with John Fitz-Robert, Eustace de Baliol, Walter de Fountains, Henry de

* The following document refers to the sporting establishment kept at Long-Newton by Sir H. V. Tempest:—

"A REWARD OF ONE HUNDRED GUINEAS.—Longnewton, October 16, 1798. Whereas the RACING STABLES belonging to me at this place were broken open on the 10th instant, about twelve o'clock at night, or betwixt that and two o'clock on the following morning, and a mare called LADY SARAH most barbarously treated, and actually left for dead:—I do hereby offer a reward of ONE HUNDRED GUINEAS to any person or persons who shall discover the party or parties concerned in this inhuman transaction—the said reward to be paid on conviction of the offender or offenders.

"The mare was matched for five hundred guineas (play or pay) against a mare of Mr. Thomas Burdon's, at Stainton Vale, to be run the next Donecaster races.

"It appears that the staple of the door was forced out; and though several horses of considerable value, and deeply engaged, were in the stable through which any person must have passed to get to the loose place where Lady Sarah stood, no injury was done to any of them.

"It is evident from the marks about her head and neck, that the mare was attempted to be strangled with a cord; and there seems little doubt that the party or parties concerned thought her destroyed.

"If any person can give the smallest information that may lead to a discovery of the offender or offenders, they will be handsomely rewarded for their trouble, either by applying to me at Wynyard, or to Mr. Joseph Walker, of Longnewton.—H. T. VANE."

Baliol, and Nigel de Baliol, promising on their oath that they would labour to obtain of the king that the bishop may have the homage of Gainford, and of certain knights' fees in the wapentake of Sadberge, held of that barony. On receiving such homage, the bishop was to give up to Baliol all the ancient charters of the vill of Newton.

This convention was not adhered to. Certain of Baliol's men intruded into the church of Long-Newton, which they occupied by armed force. Bishop Kirkham excommunicated the offenders, and, after they had continued forty days impenitent, caused them to be seized by the secular arm. Hereupon, Eustace and Joceline de Baliol, Henry Fitz-Ralph, and many others, placed themselves, armed and provided with horse, in ambush in a wood which the bishop and his retinue were to pass, whom they seized, "and with swords and other weapons did irreverently insult and most enormously handle them." Four of the bishop's train were taken as prisoners to Barnard Castle; and the bishop having complained to the king, Baliol was ordered to release his prisoners, and make competent satisfaction to the bishop, "that," said the royal mandate, "we may hear no more of the matter; otherwise we shall be obliged to lay a differing hand to the business." (See page 6.)

After the forfeiture of the last John Baliol's lands, Long-Newton came into the possession of the Beauchamps, Earls of Warwick, under whom the Surtees family held a house and 100 acres of land at 13s. 4d. yearly. The families of Killinghall and Conyers afterwards held lands in this parish. On the attainder of Ralph Conyers in 1569, his estates here were forfeited to the crown, and were granted by Queen Elizabeth, in 1573, to Sir Roger Manners, Knt.

The first of the Vane family who settled at Long-Newton was George, fourth son of Sir Henry Vane the elder (see page 104). He was born at Shipburne, Kent, where he was baptized July 20, 1618. On November 22, 1640, he received the honour of knighthood. He married Elizabeth, daughter and heiress of Sir Lyonel Maddison, of Rogerley and Newcastle-upon-Tyne, by whom he had four sons and nine daughters. On his death in 1679, he was buried in

Long-Newton church, where there is a monument to his memory.

"His honour wonne i'th field lies here in dust
His honour got by grace shall never rust
The former fades, the latter shall faile never
For why, he was Sr George once, but St. George ever."

Sir George was succeeded by his second, but eldest surviving son, Lionel Vane, Esq., baptized July 25, 1646. He married Catherine, third daughter and at length co-heiress of Sir George Fletcher, of Hutton, Cumberland, by whom he had issue six sons and seven daughters. In the parliaments elected in 1698, 1700, and 1701, he represented the county of Durham; and died May, 1711.

George Vane, Esq., of Long-Newton, eldest son and heir of Lionel, was born September 18, 1685; married, on the 27th September, 1722, Anne, eldest daughter and co-heiress of Gilbert Machon, Esq., of the city of Durham, by whom he had issue four sons and four daughters; and died July 24, 1750.

Lionel Vane, Esq., second, but eldest surviving son of George, succeeded to the Long-Newton estate on the death of his father; and died unmarried, February 20, 1793.

Sir Henry Vane, LL.D.,* fourth son of the above George, and brother and heir of Lionel, was born February 26, 1728-9; rector of Long-Newton, 1760; married, March 3, 1768, Frances, daughter of John Tempest, and sister and at length sole heiress of John Tempest, Esq., of Wynyard and Old Durham; created a baronet by patent, dated July 17, 1782; and died June 7, 1794. His only daughter, Frances-Anne, born April 15, 1769, married Michael-Angelo Taylor, elected M.P. for the city of Durham in 1818, 1820, 1826, and 1830.

Sir Henry Vane, Bart., only son and heir of the above Sir Henry, was born January 25, 1771; and in 1794, pursuant to the will of his uncle, John Tempest, Esq., M.P., of Wynyard, he assumed the name and arms of Tempest. He married, at the Marchioness of Antrim's house, in Hanover Square, London, April 28, 1799, Anne, eldest daughter of Randall-William Macdonnell, Marquis and Earl of Antrim and Viscount

* "An old cartwright of Long-Newton," says Mr. Longstaffe, "who made divers articles for Dr. Vane, being unable to write, used to make his bills out in a system of hieroglyphics, describing the items by rude drawings. In one of these ingenious documents, there was a simple circle which puzzled the patrician most woefully; he recollected nothing of the sort being done for him, and in despair went to the old man to make enquiries. The latter, however, was

more accustomed to invent hieroglyphics *pro tem.* than to read them when accomplished, and had completely forgotten the signification of the mystery. 'Why,' said he, scratching his head, 'it's like a *cheese*; but, what, I niver sould a cheese to your worship! Cheese! cheese! Oh! I know what it is; it's a *grundstone*, and I've forgotten to put a pop int' middle on't.'"

Dunluce, in Ireland, K.B., in her own right Countess of Antrim, and Viscountess Dunluce. She married, secondly, by special license, May 14, 1817, Edmund Phelps, Esq., who assumed the surname of Macdonnell, and died May 30, 1852, aged 72. Her ladyship died June 30, 1834, and was succeeded in her titles by her sister.

Sir Henry Vane Tempest was elected M.P. for the city of Durham on the death of his uncle, and also at the election of 1796; but declined in 1800. In 1807, he was chosen to represent the county of Durham, which he continued to do till his death, August 1, 1813, when the family estates became the property of his only child, Lady Frances-Anne-Emily Vane Tempest, afterwards Marchioness of Londonderry (see WYNYARD).

On the 4th of February, 1851, the Inclosure Commissioners for England and Wales gave notice that the Most Honourable Charles William, Marquis of Londonderry, had made application for an advance of £10,000, under the provisions of the Private Money Drainage Act, 1849, for the drainage of Lands in Long-Newton, Redmarshall, Sedgfield, Elwick Hall, Grindon, Billingham, Kelloe, Dalton-le-Dale, Seaham, St. Oswald, Gilesgate, Houghton-le-Spring, and Washington. On the 2nd of April following, another notice was issued, that a further advance of £517 was required for the drainage of lands in Long-Newton and Elwick.

The *Brocks* estate, consisting of a house and 131 A. 1 R. 30 P. of freehold land, the property of Wm. Holt, deceased, was advertised to be sold Feb. 23, 1853, pursuant to a Chancery order, in a cause *Fowler v. Holt*.

THE CHURCH.

THIS edifice, which was nearly rebuilt in 1806, in the style locally known as the Barrington, consists of a nave and chancel, without transepts or tower, except a bell turret; the entrance to the church is from the west. The interior dimensions are—length of nave, 55 feet 4½ in.; chancel, 33 feet 4½ in.; width of chancel, 17 feet 9 in.; nave, 20 feet 9 in. Instead of the ancient circular arch, which formerly divided the nave and

* The funeral of the Marquis of Londonderry took place on Thursday, the 16th March, 1854. It had been the deceased nobleman's wish to be interred in the family burial-place of the Vanes, at Long-Newton; and, on the preceding Monday evening, his remains were removed from Holderness House, London, to the terminus of the Great Northern Railway, at King's Cross. The mourning coaches which followed the hearse were occupied by his sons, Lord Portarlington his son-in-law, and his nephews. The officers and men of the marquis's regiment (the 2nd Life Guards) having expressed a desire to pay the last tribute of respect to their colonel, by attending at the station as a guard of honour to receive his remains, the assent of the family was given; and the whole regiment, with the colonels

chancel, there are now three narrow pointed arches, supported by plain square pillars; but it is in contemplation to remove these, and replace them by a single arch of suitable proportions and character; when the present flat slated roof will be superseded by a raised one. A tower, the foundation for which is measured out, is about to be built by the Marchioness of Londonderry. The furniture of the chancel and the pulpit are very plain. A silver cup and plate for the communion service, has been presented by the present rector, and a small barrel organ by the marchioness. A circular baptismal font stands on the right of the entrance; and there is a stove in the chancel. There is accommodation in the church for 180 persons. The windows, which are arched, consisted for some time of plain sashes, but these have been removed; and each window is divided into two lights by a stone mullion. On the north side of the nave there are two of those double lights, on the south side three, and one on each side of the chancel, which contain figures, in stained glass, of the four evangelists. The east window is in three compartments: in the centre is a figure of the Saviour, and on each side are representations of the Nativity and the baptism by St. John. In the middle window on the south side of the nave, are two highly finished representations of St. Peter and St. Paul, introduced at the expense of the rector, the Rev. T. H. Dyke, in memory of Bishop Van Mildert. The whole of the stained glass is by Mr. Wailes, of Newcastle.

The church contains, besides the monument to Sir George Vane, above mentioned, memorials of Dame Elizabeth, his widow, who died October 25, 1684; George, his grandson; the Rev. Sir Henry Vane; Dame Frances Vane, his widow, died January 19, 1796; Sir Henry Vane Tempest; and Hyacinthe-Sophia-Henrietta-Charlotte Vane, infant daughter of the Marquis and Marchioness of Londonderry. The last person interred in the family vault, within the altar rails, was the late marquis.*

From the depositions taken in 1510, on the sup-

and officers at its head, marched from the Regent's Park barracks to the station, where the men were drawn up in double column on a part of the platform kept clear for their accommodation, where, on the arrival of the hearse, and during its continuance in the station, the band performed "The Dead March in Saul." At Wynyard, where the domestic chapel had been prepared for the purpose, the body was laid in state. On the morning of the funeral, the train was headed by nearly a hundred of the tenantry on horseback, riding two abreast. Then followed a carriage, containing an officer of the deceased marquis's household, bearing his coronet, &c., which was succeeded by the hearse, drawn by six beautiful black horses, richly caparisoned in fine black cloth and plumes. On each side of the hearse, the family

pression of the Northern Rebellion, it appears that Thomas Colling, churchwarden, received a commandment from one Captain Welton and Richard Harborne, in the queen's name, to set up the high altar and holy water stone in the church; that his daughter was sent to engage Cecily Merington, Katherine Somerset, Margerie Realff, and Isabell Mawer, to bring sand and clay for the purpose; and that John Nicholson and Adam Markham were employed by Colling to do the work. Mass was said by Harborne; and Welton and his company rent and made away with the church books. All those employed in the work afterwards expressed contrition, and prayed the queen's forgiveness.

The church-yard is planted with a grove and shrubbery, and is open as a lawn to the rectory. It has recently been extended to the south, at the expense of the present rector. In 1819, the matrix of a brass seal was found in the ground, inscribed, "SIGILLUM WILELMI DE BROC;" and on the inner circle, "G. I. R. E. NOMEN I' ABET."

REGISTERS.—Book No. 1 contains entries of baptisms from 1564 to 1655; burials and marriages from 1564 to 1653, interrupted by No. 2, containing baptisms and burials from 1649 to 1773, and marriages from 1655 to 1753. Nos. 3 and 4, marriages from 1754 to 1783. No. 5, baptisms and burials from 1774 to 1783. No. 6, baptisms, burials, and marriages, from 1783 to 1812.

Long-Newton rectory is in the deanery of Stockton; the Bishop of Durham, patron. King's Books, £20; Tenths, £2; Episc. proc., 2s.; Archid. proc., 2s. Dedication to St. Mary.

arms were emblazoned on white satin, with the motto, "*Mihenda corolla draconis.*" After the body followed the usual accompaniment of a soldier's funeral—his horse, led by a groom. In the first mourning coach were the chief mourners, Lord Castlereagh, Lord Seaham, and Lord Portarlington; in the next were the pall-bearers, his Grace the Duke of Cleveland, the Marquis Camden, Lord Hatherston, and General Brown; and in a third were a party of the officers of the 2nd Life Guards, who had come from London in order to pay this last tribute of respect to their colonel. In other coaches were the clergy, gentry, and agents connected with the deceased nobleman. At the station of the Leeds Northern Railway, the procession was met by the mayor, corporation, and clergy of Stockton, who conducted the cortege to the boundary of the borough, and then returned to the town. A short time previous to the arrival of the funeral at Long-Newton, the Marchioness of Londonderry, Lady Portarlington, the Marchioness of Blandford, Lady Adelaide Law, and Viscountess Seaham, who had come in private carriages, were admitted into the church by the chancel door. The funeral ceremony was conducted by the Rev. T. H. Dyke, rector, in the presence of a crowded and deeply impressed congregation. At Durham, Sunderland, Stockton, and Seaham Harbour, the funeral of the Lord-lieutenant of the county was observed by the closing of shops, tolling of bells, and other public manifestations.

RECTORS.—P. de Brandon, 1259; A. de Pickering, 1356; J. Attelee, 1360; W. de Corbrigg, 1369; T. de Thorp; T. Newham, 1410; J. Oculshagh, 1425; R. Wynkethly, 1428; J. Corby, 1433; R. Booth, LL.B. (archdeacon of Durham, nephew of Archbishop Booth), 1465; R. Leybourne, S.T.B. (rector of Sedgely, 1497; L. Hutchinson, (master of Univ. Coll. Oxon.), 1540; R. Dalton, S.T.P. (vicar of Billingham, preb. of the 7th stall), 1554; C. Rent, A.M., 1556; R. Hartburne, A.M., 1558; E. Bankes, A.M., 1562; W. Morton, A.M., (archdeacon of Durham, vicar of Newcastle, ob. 1620, bur. at St. Nicholas, Newcastle), 1588. p. m. Bankes; R. Tunstall, A.M., 1616, p. res. Morton; J. Oliver, A.M., 1662, p. m. Tunstall; T. Baker, S.T.B., 1687, p. m. Oliver; J. Finney, A.M. (preb. of the 3d stall), 1690, p. depr. Baker; Michael Fenwick, A.M., 1706, p. res. Finney for Ryton; Thomas Rudd, A.M.* 1712; Christopher Mansell, A.M., 1719, p. m. Rudd; James Douglas, A.M. (perp. curate of Witton-Gilbert, preb. of the 4th stall), 1742, p. m. Mansel; Sir Henry Vane, Bart., LL.D. (preb. of the 10th stall), 1760, p. res. Douglas for Stainton; Charles Plumtre, A.M., 1794, p. m. Vane; George Stanley Faber, B.D., Linc. Coll. Oxon, (see vol. i., page 410), 1811, p. res. Plumtre for Haughton-le-Skerne; Thomas Hart Dyke, A.M., April, 1832, p. res. Faber for Mastership of Sherburn Hospital.

The parsonage, with its appurtenances, were built by the Rev. J. Finney, rector. It is a good house, situated to the north of the church. The following terrier of the rectory was taken July, 1806:—

"The glebe-land consists of ten acres equally divided into two closes (out of one of which is a piece taken off and added to the garden), bounded on the west and north by the lands of David Burton Fowler, Esq., on the east by the lands of Isaac Sparkes, Esq., Sir Henry Vane Tempest, Bart., and David Burton Fowler, Esq.; a garden and ground round the parsonage or mansion-house (exclusively of the piece above mentioned) about an acre; the parsonage or mansion-house; a house for the curate, standing on the glebe next the town-street; a barn, a stable, and cow-house, and coal-house, and wash-house, &c., &c., all covered with tiles, and built of brick or stone. The parsonage or mansion-house is built partly of stone, partly of brick, the whole plastered on the outside with rough-cast; containing on the ground-floor, study, with closet, dining-parlour, kitchen, with

* THE REV. THOMAS RUDD was a native of Westmoreland, and became curate of Stockton on the 1st May, 1663, in which situation he appears to have exercised considerable influence on the dawning prosperity of the town. In consequence of the changes which occurred in the government, many of the clergy found great difficulty in taking repeated oaths of allegiance to successive monarchs; and amongst others, the Rev. T. Davison, vicar of Norton, and patron of Stockton, refused to swear allegiance to William and Mary, and was deprived; Mr. Rudd being appointed to the living, July 25, 1691. In gratitude to his predecessor, however, Mr. Rudd allowed Mr. Davison the use of the vicarage for life, with all the profits, he finding a curate, and Mr. Rudd only reserving to himself the income from the chapelry of Stockton. It is supposed that his representations were instrumental in separating the latter from the mother church, and in procuring the erection of that at Stockton. In 1761, he became vicar of St. Oswald's, Durham, and was instituted to the rectory of Long-Newton, July 19, 1712, after having ministered in Stockton 49 years and 3 months. His death, at the age of 79, took place on the 15th July, 1719. He was father of the Rev. Thomas Rudd, librarian of the Dean and Chapter's Library at Durham; and grandfather of William Rudd, Esq., of Durham, counsellor-at-law, and of the Rev. Edward Rudd, rector of Haughton-le-Skerne. A flat stone in the chancel of Long-Newton church is inscribed to his memory.

one small one, and passages; all except the study floored with stone, or plaster, or brick, and the walls plastered; the study, with closet, is boarded, and the walls papered. First story—dining-room, three bed-rooms, and two closets: floors boarded. Second story—four small bed-rooms, three closets, two servants' garrets: all boarded floors. Furniture of the church—A blue cloth cover for the pulpit, desk with cushion, blue cloth cover for the communion table, one large table-cloth and napkin, a small thin silver cup, two old pewter flaggons, one pewter plate, large Bible, three large Common Prayer Books, the book of homilies, and an octavo collection of the occasional services. The fences of the church-yard are kept in repair by the parish, excepting the west fence, which is repaired by David Burton Fowler, Esq. All manner of tithes is due to the rector in kind, except that the farms at West Hartburn pay among them one shilling and four pence per ann. only for tithes of hay. The rector receives seven shillings per ann. for seven oxgangs at Sadberge (an old terrier speaks of fourteen oxgangs). Also eight shillings per ann. from the rector of Haughton. In the church-yard are two large sycamore trees. Several others of different sorts, planted for ornament, and being of young growth, in the church-yard and ground about the house, and a few small ash-trees in the hedge-rows of the fields. Charles Plumtre, rector. William Dryden, churchwarden."

The Rev. J. Douglas augmented the living considerably by breaking through a composition under a suit in Chancery, against George Vane, Esq., and others, whereby it appeared that Bishop Cosin, the patron of the living and ordinary of the diocese, was not a party when the composition was made between the rector and parishioners.

A modus of 8s. a year is paid by the incumbent of Haughton-le-Skerne to the rector of Long-Newton; and a part of the chapelry of Sadberge contributes to the church-rate of this parish. The sum of 8d. is paid to the rector from Mr. Wilson's oxgang, 8d. from Mr. Robinson's, 1s. 6d. from Mr. Harris's, 6d. for Mr. Stokel's, and 5s. for Mr. Wilson's. At a meeting called by the Rev. T. H. Dyke, held December 9, 1836, the tithes of the parish were commuted. The gross annual income is now stated at £634, subject to annual payments amounting to £30.

CHARITIES.

Barker's Charity.—See vol. i., p. 467. The yearly sum of 20s., paid by the tenant of the lands charged in East Newbiggin, is divided equally between ten poor and aged persons of the parish, widows being preferred.

Carter's Charity.—The sum of £2 10s., left for the benefit of the poor by — Carter, is vested in the hands of the vicar for the time being, who pays 2s. 6d. yearly as interest, which is given away to one poor person on

Candlemas day, with the produce of the preceding charity.

COATHAM-CONYERS, or COATHAM-STOB.

THE first addition to the name of this estate is evidently derived from the family by whom it was held; the second, however, has not been accounted for. The old gable-ended mansion stands near a little brook, and is secluded amongst trees. Much of its antique panelling remains in the rooms. Human bones, discovered in the vicinity, are supposed to denote the site of the domestic chapel and cemetery. The estate contains 604 acres, 170 of which are rich old sward.

In the 14th century, Cotam was held of the Surteeses, by knight's service, by the family of Conyers of Sockburn, and afterwards became the property of a younger branch of the same house. Ralph Conyers, Esq., son of Robert Conyers, Esq., of Coatham and Long-Newton, forfeited his lands on engaging in the Northern Rebellion. Queen Elizabeth granted these possessions to Roger Manners, Esquire of the Body; those of Long-Newton to be held by common soccage, and those of Coatham by the fortieth part of a knight's fee and 13s. 4d. to the bailiff of Long-Newton. Coatham was afterwards granted to Sir John Ramsay, Knt., who disposed of it to Edward Croyley, Esq., of London. In 1684, it belonged to Sir Edward Bowyer, of Leighthorne, Sussex; in 1720, to Joseph Micklethwaite, Esq. (created Viscount Micklethwaite, of Ireland, in 1725); and, more recently, to the Dennisons, of Yorkshire. It is now the property of J. S. Sutton, Esq., of Elton, by whom it was purchased about a year ago.

GOOSEPOOL.

THIS name is applied to three farms attached to the parish of Long-Newton, to the rector of which they pay tithes, though they belong to the ancient vill of West Hartburn, and join with the parish of Middleton St. George in the payment of poor-rates. In the 16th century, a family named Paule were the proprietors, from whom it passed in 1620, for £1,200, to Robert Ellis, of Rudston, Yorkshire. His descendants sold it to Elizabeth Hall, of Haughton, widow; and, after belonging to the families of Sleigh and Hoar, it was sold in 1795, by William Hoar, Esq., and other parties interested, to the trustees of the monies produced by the sale of Cocken woods, to the uses limited under the will of Ralph Carr, Esq.

PARISH OF EGGLESCLIFFE.

THE parish of Egglecliffe is bounded by Long-Newton on the north-west, by Stockton on the north, by the Tees on the east and south, and by Middleton St. George on the west. It is divided into the townships of Egglecliffe, Aislaby, and Newsham.

EGGLESCLIFFE.

THE township of Egglecliffe comprises an area of 1,507 acres. Its population has increased, from 270 in 1801, at each succeeding enumeration, to 293, 332, 424, 443, and 493, of which latter number 231 were males and 252 females. There were, at that time, 106 inhabited houses and 4 uninhabited. The property assessed to the county-rate in 1853 was valued at £3,850.

The receipts for the Stockton Union, during the year ended Lady-day, 1854, were, from Egglecliffe township, £200 6s.; Aislaby, £110 12s.; and Newsham, £36 7s.; total for the parish, £347 5s. The expenditure was as follows:—

For in-maintenance: Egglecliffe, £5 16s.; Aislaby, £3 1s.; Newsham, 8s.	£ 8	s. 5
Out-relief: Egglecliffe, £109 7s.; Aislaby, £60 10s.; Newsham, £9 3s.	179	0
Workhouse loans repaid, &c.: Egglecliffe, £6 7s.; Aislaby, £4 19s.; Newsham, £2 11s.	13	17
Salaries and rations of officers, &c.: Egglecliffe, £12 3s.; Aislaby, £6 13s.; Newsham, 17s.	19	13
Other expenses: Egglecliffe, £5; Aislaby, £2 16s.; Newsham, 7s.	8	2
Total expenditure connected with relief	229	17
Costs of law proceedings; Egglecliffe, 14s.; Aislaby, 10s.	1	4
Constables' expenses before justices: Egglecliffe, 5s.; Aislaby, 6s.; Newsham, 10s.	1	1
Vaccination: Egglecliffe	0	11
Registration fees to clerymen: Egglecliffe, £1 13s.; Aislaby, 4s.; Newsham, 2s.	1	19
County and other rates: Egglecliffe, £64 12s.; Aislaby, £43 13s.; Newsham, £16 3s.	124	8
Registration: Egglecliffe, 5s.; Aislaby, 10s.; Newsham, 7s.	1	2
For other purposes: Egglecliffe, £7 18s.; Aislaby, £5 10s.; Newsham, £2 2s.	15	10
Total expenditure.....	£375	12

The Stockton and Darlington railway passes through this township, and covers an extent of 2 A. 3 F. 161 Y., and an area of 13 A. 1 R. 4 P. In 1851, when the local rates amounted to £242 8s. 7½d., the railway contributed £38 3s. 9d.; and in 1852, the contribution was £30 11s. towards £194 19s.

The Leeds Northern railway, now a branch of the North-eastern, covers an extent of 1 M. 2 F. 100 Y., and an area of 11 A. 2 R. 5 P., besides 14 A. 1 R. 35 P. occupied in the township. Its contribution to the local rates, in 1852, was £2 2s. 6d.

The village of Egglecliffe* stands on the steep and lofty northern bank of the Tees, and overlooks the curve in that river which nearly surrounds the low peninsula whereon the town of Yarm is situated. In an open space, in the centre of the village, there is the time-worn pedestal and mutilated shaft of an ancient cross, from which it has been inferred that a market was formerly held on the spot. Many of the dwellings are cottages, with small gardens in front. There are an inn and two public-houses in the village. A tannery, belonging to the Messrs. Kay, is situated near the bridge; where also is the Tees Paper-Mill, worked by steam-power, the property of Messrs. Bainbridge and Son. There are two wind corn-mills in the township.

The Rev. D. J. Stewart, government inspector of national schools, reports that on his visit to those of Egglecliffe, May 3, 1853, there were, at one, 61 boys and girls present at examination; 40 had left and 30 been admitted during the 12 months; and the average attendance was 76. His general observations were—

"Buildings fair; no class-room. Desks, two groups of four parallel desks, in a gallery. Furniture, clock. Books, fair; apparatus, three black-boards, three easels. Methods, discipline, and instruction, fair. Standard of classification: reading and arithmetic. Four classes for general work, under master, with certificate of merit, and one pupil teacher: two divisions for scripture lessons; another classification for arithmetic. The pupil teacher is not confined to any one class."

In another school, the reverend gentleman reports there were 34 children present at examination; 5 had left and 10 been admitted during the 12 months; and the average attendance was 40. General observations:—

"Buildings fair; no class-room. Desks fixed to wall. Books fair."

* From *eccles, eglis*, or *eghwoys*, a church or place of worship, (Latin *ecclesia*—French, *eglise*—Gaelic, *eaglais*), and the Anglo-Saxon *cliffe*, the cut off (*cleft*) or broken mountain, or rock.

In the latter end of 1853, the Committee of Council on Education granted an assistant master to Eggescliffe school.

A Sunday-school has been established in connexion with the church, the children of which are annually entertained at tea by the Rev. H. J. Maltby, who has also commenced a penny savings bank for them, by which they obtain 20 per cent. upon their savings.

The "Yarm depot" of the Stockton and Darlington railway, for coal and lime, is situated near the high road which passes towards the bridge; and is connected with the main line by a branch of about three-quarters of a mile in length.

That branch of the North-eastern railway which was constructed under the name of the Leeds Northern, enters the county of Durham at Eggescliffe by the Yarm viaduct. This handsome structure consists of 43 arches, each of about 40 feet span. The greatest height from the river to the level of the railroad is about 65 feet. From the viaduct, the view of the town of Yarm, and of the valley up and down the river Tees, with the Cleveland hills in the far south-east, is very beautiful. At the Eggescliffe junction, about a mile to the north, the railway crosses the Stockton and Darlington line on the level, where there is a joint station belonging to the two companies. The Leeds Northern was formally opened on the 15th of May, 1852.

Eggescliffe is generally supposed to be a place of considerable antiquity. Its ancient owners were the Aislakbys, lords of the adjoining vill, from whom it passed by marriage, about 1420, to the Astleys. The manor, consisting of the *Castleholmes*, a free fishery, and a tenement called *Holehouse*, was granted by charter, August, 4, 1554, by William Astley to James Garnett, of Blasterfield, Westmoreland.* John Garnett, great-grandson of James, baptized October 22, 1615, was a captain of horse in the regiment of Colonel

George Heron, in the service of Charles I.; and on February 28, 1644-5, all his lands, rent £55 10s., he being declared delinquent, were letten to Mr. William Garnett and Mr. John Taylerson. He afterwards compounded for his estate for £142. In 1669, Alice, his only child, died; and, in the following year, he sold his manor and retired to Darlington, where he died in 1674-5, bequeathing £50 to the poor of Eggescliffe. Dr. Thomas Wood, Bishop of Litchfield (see vol. i., p. 351), who had purchased from Garnett, in 1690 devised the estate to his nephew, Henry Webb, Esq., on condition of his taking the name of Wood. In 1726, Edward Elstob, Gent., granted his lands in Eggescliffe (which he had purchased for £1,800), subject to the charges in Bishop Wood's will, to Peter Consett, of Yarm, Gent., for £1,600, reserving a farm of £130 per annum.

Several small freeholds occur in Eggescliffe at various periods. The manor or lordship of Eggescliffe comprises a manor-house, with several houses, farms, and lands, containing altogether about 300 acres, and a salmon fishery on the Tees. The commutation for tithes amounts to £75 2s. per annum. It is the property of William Standish Standish, Esq.

A considerable estate belongs to Thomas-William Waldy, Esq., of Eggescliffe, and Castle-Leventon, Yorkshire, a magistrate for the North Riding of York and the county palatine, and one of the surviving sons of John Waldy, Esq., of Yarm, by Margaret, his wife, sole heiress of Richard Garmonsway, Esq., of Haughton-le-Skerne and Great Burdon. He succeeded, with his other co-heirs, to the estates of their father, January 5, 1832. The Waldys are a Kelso family, of whom John Waldy married Anne, youngest daughter of the Rev. Edward Walters, A.M., incumbent of Yarm. Their great-grandson, Thomas-William Waldy, above named, born July 31, 1801, married, first, Jane, only child of

* According to the following depositions, one of the Garnetts held the office of churchwarden:—

"The personal answer of Christofer Story, in causa correctionis.

"Christofer Storye, of Aisleyby, yeoman, aged about 26 years. He saith that he was in Eggescliff the day, yere, and hower articulate. He sayth that he, this examine, spoke to the neighbours that satt by hym after this sorte, 'I hard say that ther is a minister set up in York that got a 11 women with childe that lerned the catechisme;' and when Sr George, the curat, said, 'I wold wysh that ye meddled no more with me than I do with you.' And this deponent maid no more answer nor other waies. Per ms CHRISTOFER STORY.

"Robert Garnet, of Eggescliffe, husbandman, aged about 60 years. He saith that the day, moneth, and yeare articulate, the said Sr George Whetley, ther curat, heing in the pulpet in the said church of Eggescliff and movinge all men to send ther chyldren and servants to lerne the catechisme, the said Christofer at that worde spoke to the said

Sr George all the wordes articulate; and ther upon the said Sr Georg said to the aforesaid Story, 'yf ye be able to burthen me, I shall answer you;' but Story gave hym no answer, nor moo words spake to hym; saing (seeing) that, the said curat stemed no more, but taried still in the pulpet, and redd and went forward with his busynes, as he used to doo other hollydaics. Examined whether the said Christofer spoke thoise words on hight, or no, he saith that he thinks that ther was about 40 persons or moo that hard thois words. Marry, they that was below in the church, this examine saith that he belyveth that they hard not; saing that he spoke not thois wordes in any greiff (anger), but rather in boorde. He saith that he hym selfe is one of the church wardens of the said church, and personally then present; saith upon his ooth that ther was many that hard as abovesaid, but none moved them selves ther att, and that ther was none that made any laughter ther at. Marry, the said Christofer smyled when hr spok as abovesaid.—Signum † ROBERTI GARNETT."

Robert Scott, Esq., of Bootham, York, and had issue Jane-Elizabeth; he married, secondly, Ellen, daughter of Henry-Thomas Faber, Esq., justice of the peace, and has issue Edward-Garmonsway, born May 10, 1836; and Mary, married, August 29, 1827, the Rev. William-Smoult Temple, rector of Dinsdale.

Arms—Or, a bend, between three leopards' faces.

Crest—A dove and olive branch, all ppr., and out of a mural crown, a demi-lion, az., holding in his dexter paw a cross-crosslet, fitchee, or.

Motto—Fidelis.

The other proprietors in the township of Eggescliffe are, Thomas Meynell, Esq., of the Friarage, Yarm; Dr. Keenleyside, of Stockton; Mr. Robert Emmett, *Grange*; and Major Swinburne, owner of *White-lee Spring* farm.

THE CHURCH.

THE church stands near the brink of the declivity which slopes from the western extremity of the village to Yarm bridge. It consists of a nave, a chancel, a wide south transept, and a western tower. The latter is embattled at the top, with corner spires; and there is an embattled projection on the south, to the height of the belfry. The entrance to the church is by a small porch on the south. The transept above alluded to, called Pemberton's Porch, is separated from the nave by two pointed arches, supported by an octagonal pillar: its exterior end-walls are embattled, and it is lighted by two windows beneath pointed arches. A pointed arch separates the nave and chancel; and the pitched roof of the latter, though its side walls are lower, is carried up to the same height as the nave. The east window has five lights, and the other windows of the chancel three. The church will accommodate 200 persons. One of the bells in the tower, dedicated to St. Mark, bears the inscription, "† SANCTE MAR. CE. ORA. PRO. NOBIS." Between the words are representations of bell-ropes and bells. One of the bells was cracked and sold about 25 years ago: there are now two bells in the tower.

Under an arch in the south wall of Pemberton's Porch is a recumbent effigy of a knight in chain armour;

* He was a native of Phrygia, educated at Sienna, and was one of the Reformers, and a friend of Erasmus and Colet, with whom, and a few other foreigners, he was excused from paying a subsidy to the king, anno 1513. He left £10 to the repair of Eggescliffe church, and £20 to buy implements of husbandry for the poor parishioners.

† THE REV JOHN BREWSTER, A.M., was a minister of the Church of England 66 years, the last 28 of which he was incumbent of the above parish, having previously held, successively, the livings of Greatham, Stockton, Redmarshall, and Boldon. Numerous as his preferments were, they were conferred upon him solely from the high veneration

the right hand holds the sword hilt, and the other the scabbard; the shield is sculptured with the arms of Aslakby, and a sort of winged serpent is biting its lower point; the legs are crossed, and the feet resting on a lion. Another figure, nearly similar (the winged serpent being omitted, and two animals support feet) is placed upright against the exterior wall same porch, and is much worn and mutilated.

Mural monuments in the chancel record th of members of the Hall family, of Newsham, Mary, wife of Edward Trotter, Aislaby. A plate points out the burial place of the Rev. G. Harris, rector of Eggescliffe. In the church-yard amongst other tombs, are the burial places of the Holts, of Flass; of Rowland Webster, Esq., of Stockton; and of Captain Jonathan Fowler (see p. 209).

REGISTERS.—Books Nos. 1, 2, and 3, contain entries of baptisms and burials from 1539 to 1812, and marriages from 1539 to 1753; No. 4, marriages from 1754 to 1812.

Eggescliffe rectory is in the deanery of Stockton; the Bishop of Durham patron. King's Books, £2 17s. 1d.; Tenths, £2 17s. 8½d.; Episc. proc., 13s. 4d.; Synod, 3s.; Archd. proc., 3s. Dedication to St. John the Baptist.

RECTORS.—R. de Hengham, 1294; Mag. S. de Charrying, 1344; W. de Basyngham, 1350; H. de Westwick, 1367; J. Attee, 1375; J. de Battersford, 1379; H. Besewyk, 1390; W. Damyant, 1428; T. Bellingham, 1444; W. de Basyngham, 1454; W. Smithson, B.D., 1472; D'n's T. Hall, 1497; N. West, LL.D. (dean of Windsor, bishop of Ely 1515), 1499; J. Sixtine,* 1515; W. Bolleyne, 1519; C. Overs, cl., 1534; L. Thwaites, 1541; B. Baynes, A.M., 1555; W. Garnet, LL.B. (rector of Ryton), 1561; R. Bellamie, A.M. and M.D. (master of Sherburn Hospital, preb. of the 3d stall), 1577; E. Bankes (rector of Long-Newton), 1585; H. Naunton, A.M. (preb. of the 4th stall), 1588; R. Cheke, A.M., 1606; D. Birkhead, S.T.P. (preb. of the 6th, afterwards of the 10th stall), 1610; W. Shawe, S.T.B. (master of Sherburn), 1624, p. m. Birkhead; I. Basire, S.T.B. (see vol. i., p. 256), 1636, p. m. Shawe; J. Morton, S.T.B. (archdeacon of Northumberland and preb. of the 12th stall), 1676, p. m. Basire; P. Forster, 1711, p. res. Morton for Sedgfield; G. W. Harris, A.M., 1739, p. m. Forster; William Vaughan, A.M., 1778, p. m. Harris; George Sayer, A.M., 1782, p. res. Vaughan for Haughton-le-Skerne; John Brewster, A.M., † 1814, p. m. Sayer; Henry Joseph Maltby, A.M., † 1842, p. m. Brewster.

which his diocesan entertained for his truly christian character and zealous exertions. He was the author of a History of Stockton, and of several valuable treatises on religious subjects. He died at the rectory, Eggescliffe, November 28, 1842, at the age of 89 years.

‡ The appointment of the Rev. H. J. Maltby to the eighth stall of Durham cathedral, and the order in council of February 2, 1852, for regulating the incomes of the prebendaries, have been noticed in vol. i., pp. 140, 143. It was at a meeting, held January 22, 1852, that the arrangement of the incomes was resolved upon by the ecclesiastical commissioners; and their secretary communicated their resolution to

In the Registry at Durham there is the following terrior relative to this parish, without date, but supposed from the style to be of the time of Charles I.'s reign:—

“Certejn meadow-closes, 26 acres or thereabouts; one close of arable ground; one close of pasture, 54 acres; one close, called Parson's Moore, 60 acres or thereabouts; with the parsonage-house, barnes, and other houses. Item, the tythe-corne and hay of Eglescliffe towne, and all other tythes in kinde. Item, Aslabie tythe-corne and hay, and all other tythes in kinde. Item, the tythe of the fishinge of three boats, fishinges on Teese, accustomedly paying per ann. 6s. 8d. a-boate. Item, thirteen cottages, with 33 acres of grounde to them belonginge, accustomedly paying per ann. Item, the tythes of Mr. Garnett's mills, 11s.

“Cestomarie Tythes.—Mr. Christopher Hall, for Newsham, £4 9s. 2d. per ann. Trafford-hill, £4. The parson of Haughton, for Sadberge, £2. The parson of Middletone Rawe, 5s. Item, one close at Middleton-George, called Counflatt, 3s. 4d. Item, Fishgarth, £1 10s. Item, christnings, burials, mortuaries, marriages, offerings at Easter, churchings.” Signed, Will^m Warde, Francis Fox, Will^m Thompson, churchwardens.

The following statement is given in Archdeacon Clarke's visitation, March 12, 1633:—

“The chancel in good repaire. They have a very fine Bible of the old edition, given by Dr. Birkhead's mother. They have Jewell and Harding, and the two tomes of Homilies, but not chained in the church. Under the arch, and immediately above the monument of the knight, an excellent edition of King Charles I. Works, in folio, and a folio edition of Bishop Jewel's ‘Apology,’ are chained upon a reading desk, and are in good preservation. They want the king's arms betwixt the church and chancel, they want the book of Canons, and a poor man's box. The south porch, called Hindmer's Poreh [now Pemberton's Poreh], in great decay. The church-yard wall or dike in decay: to be made of brick, or pailed according to the Canon; it is totally decayed. The south window, which is dammed upp, to be opened. The clock in decay.”

On the 21st of August, 1644, a warrant was issued to John Husband, of Sunderland, Gent., “to demise, lett, collect, and gather the gleeb, tythes, rents, and averages within the parish of Egslife, late belonging to Dr. Basier, and to seize all the estates, chattells, &c., of the said Dr. Basier, for the use of the Com'onwealth; and wee require George Featherston, Gent., and Marke Hall, to be aiding and assisting therein.” On the 28th

the Bishop of Durham on the 24th, requesting at the same time, that until the scheme was confirmed by her majesty, his lordship would defer collating a new canon to the stall vacant by the death of Dr. Durell. The bishop, however, without any knowledge of the contemplated measure on the part of the commissioners, had, on the 23rd of January, collated to the vacant stall his son. On the 30th, in reply to a communication from the commissioners, asking his lordship to co-operate with them in giving effect to the scheme for limiting the income of the canons to £1,000, the bishop wrote that he could see no objection to such a measure; and Mr. Maltby afterwards, in a letter addressed to the commissioners, acceded to the arrangement. On the 6th February, the secretary wrote to the bishop, stating it might perhaps be worth his lordship's consideration whether, in order to ensure

February following, “The severall particulars belonging to the rectory, lett to divers persons for £64 1s. 6d., whereof £12 16s. is allowed for the maintenance of the wife and children of Dr. Basier, late rector thereof.”

The rectory-house is an ancient but extensive mansion, situated to the east of the church, and has received several repairs and modern additions from recent rectors. In the highest story is a recess hidden by a sliding panel, in which Dr. Basire was concealed from the Parliamentarians, who searched the house for him during the civil wars.

The gross income of the living is £1,120 per annum, subject to permanent payments amounting to £71, leaving £1,049 clear.

CHARITIES.

Hall's Charity.—William Hall, on the 16th February, 1660, gave £100 to purchase an annuity of £6, issuing out of four oxgangs of arable land in Yarm, and which was to be distributed equally, by trustees, every 10th of December, to five poor widows dwelling in the parish, and who should have become widows while they dwelt there; or, in default of widows, to so many fatherless children, born and inhabiting in the said parish, under the age of 13 years; and in default of widows and children, to poor aged men dwelling in Eglescliffe. The rent-charge was withheld in 1723 and 1724; but on the trustees filing a bill in Chancery, the owners of the lands submitted to pay it for ever. No trustees have been appointed since 1722; and, since 1752, the churchwardens have had the management of the charity, which is distributed to six poor widows.

YARM-BRIDGE.—The date of the erection of this bridge has been assigned to the year 1400. “Yarham-bridge of stone,” says Leland, “a three miles

the carrying out in strictly legal form the intentions of himself and his son, and to obviate all possible question as to the period from which the collation of the latter became valid, it should be effected by an entirely new instrument, bearing date subsequent to the certificate of value which the commissioners were prepared to give. The bishop, in reply, while professing the willingness of himself and his son to bind themselves down by any further security thought desirable to the observance of the regulation, objected to cancelling the instrument of collation as being unprecedented, and because it would involve the necessity of a fresh installation and reading in, on which it would be necessary to consult the dean and chapter. With this communication the correspondence ceased.

above Stoketon, made, as I hard, by Bishop Skirlaw." It consisted originally of five pointed arches; and there is a tradition that the north arch was cut, and formed into a draw-bridge, during the civil wars, when Eggescliffe, with Stockton, was garrisoned by the royalists. The parish register, February 1, 1643, records "a soldier slain here at y^e Yarum skirmish." The north arch has, since that time, been rebuilt in a semicircular form, and of more capacious width, to allow the water to pass in times of flood. In 1805, an elegant iron bridge, of one arch 180 feet in span, cast by Messrs. Walkers and Co., of Masborough, near Rotherham, was erected at this place; and it was on the point of being opened, when, owing to some defect in the abutments, it fell, about midnight, on the 12th of January, 1806. It is stated to have cost £8,000, and the weight of iron contained in it was 250 tons. After the fall of this structure, the stone bridge was considerably widened and strengthened at the joint expense of the counties of Durham and Northumberland.

EARLY NOOK.

THIS hamlet is situated about three-quarters of a mile north from Eggescliffe, where the Yarm branch of the Stockton and Darlington railway commences. A vitriol factory, the property of the Eggescliffe Chemical Company, was commenced at this place in 1831; and the erection of dwellings for the workmen, and a public house near the railway station, speedily followed. The property of Mr. Thomas Weatherall, deceased, of this place, containing about 230 acres, with a cottage and blacksmith's shop, was sold, pursuant to an order in Chancery, in a cause, Raisbeck and others v. Holt and others, on the 12th of August, 1835, and now belongs to Thomas-William Waldy, Esq.

AISLABY, OR AISLAKBY.

THE township of Aislaby, to the west of Eggescliffe, contains 2,260 acres, divided into nine farms. The population, at the several returns, was 116, 148, 166, 143, 128, and 141, of which latter number 71 were males and 70 females; and there were, at that date, 27 inhabited houses and 1 uninhabited. The property assessed to the county-rate was valued, in 1853, at £2,610 13s. 4d.

Aislaby is a scattered village, one mile west-north-west from Yarm, and 5 south-west-by-south from Stockton. It contains a public house and a blacksmith's

shop. One of Mother Shipton's prophecies says, "When Eggescliffe sinks and Yarm swims, Aislaby will be the market town."

At what time a family assumed the local name, does not appear. William de Aislakby and Agnes his wife, in 1313, presented the chantry of St. Thomas the Martyr, founded within the manor, to Thomas de Manneby, chaplain. Walter, third son of William, son of John de Aislakby, died in 1410, leaving an only daughter, Agnes, his heir, who became the wife of Hugh de Asteley. After belonging to various members of the Astley family, the estate was sold, July 10, 1557, by William Astley, to Robert Hindmers, Clerk. Four of the people of Aislaby, one of whom was afterwards executed, followed the earls in the insurrection of 1569.

In 1595, Aislaby was purchased of the female descendants of Hindmers, by Michael Pemberton, Esq., whose grandson, also named Michael,* baptized 1615, was major in the service of King Charles I., and had two brothers, John and Henry, captains. He married Alice, daughter of Christopher Place, Esq., of Dinsdale, who, after his death, became the wife of Captain John Garnett, of Eggescliffe. Michael Pemberton, son of Michael just named, was baptized 1644, and married Ann, daughter of George Metcalf, of Thornborough, Yorkshire. His son, John, who married Mary, daughter and heiress of Christopher Place, of Darlington, alienated the estate, about 1720, to Robert Raikes, Esq., of Northallerton; and Robert Raikes Fulthorpe, Esq., sold the reputed manor of Aislaby to Rowland Webster, Esq., of Stockton, from whose descendant it was purchased by the first Earl of Eldon, and is the property of his representatives.

A younger branch of the Aislabys held property, which has long been much subdivided, passing through various possessors. The present proprietors in Aislaby, besides the Earl of Eldon, are, the Rev. W. S. Temple; Thomas Meynell, Esq., of Yarm; Robert Kay, Esq., of York; and the representatives of — Marshall, Esq. *Belle-Mount*, late the property of Mr. William Holt, now belongs to the representatives of the Earl of Eldon.

Fishgarth, a piece of meadow ground on the banks of the Tees, evidently takes its name from a dam or wear for taking salmon, some traces of which are still visible. On the 1st of September, 33 Car. II., a mob

* The Pembertons, as well as their predecessors, the Aislabys, were partial to the name of Michael. One of the latter family, resident at Bowes, having only daughters, and fearing that no son would ever arrive, called one of them *Michal*. The ancient surname of Aislaby still lingers on the banks of the Tees.

of persons assembled at Piercebridge, summoned in the name of William Bowes, Esq., of Streatlam Castle, and proceeded, with guns, pistols, and other offensive weapons, towards the dam at Fishgarth, then belonging to Sir Henry Marwood, Knt., and Timothy Maleverer, Esq. At Neasham, they were met by Mr. Henry Chaytor, of Croft, and a Mr. Killinghall, who called for ale, drank Squire Bowes's health, and gave 6s. to the rioters for the same purpose; "the drum beating, and they shouting and whooping, *A Bowes! A Bowes!*" On arriving at the dam, they pulled and broke down as much of it as they could with saws and axes, and were only prevented by the height of the water from demolishing the whole. They likewise "discharged severall guns and pistols at the Fishgarth, and also threatened to burne the dwelling-house of one Christopher King, erected there." Having done all the mischief in their power, they dispersed; but, though the affair was brought before the sheriff and magistrates, the result does not appear. The offence to Mr. Bowes was, that the dam prevented the fish from passing up the river.

TRAFFORD HILL, or 'TREFFORD HILL, occupies a commanding situation on the southern verge of the township. Thomas Graa held the manor in 1336, by the service of a pair of white gloves on St. Mary Magdalen's day. In the next century, it was in the possession of the Tempests, with one of the heiresses of which, named Dionysia, it passed by marriage to William Mallory. The Wentworths afterwards held it; and John Witham, Esq., of Cliffe, was the owner of the estate in 1640. In 1832, it belonged to Robert Campian, Esq., of Whitby, by whom it was sold, in 1840.

NEWSHAM.

THIS township, 3 miles west of Yarm, covers an area of 1,054 acres, divided into four farms, and containing, in 1851, 9 inhabited houses. In 1853, the property was assessed for the county-rate at £965. The population, at the respective enumerations, was 34, 35, 44, 58, 57, and 67; of the latter number, 38 were males and 29 females.

There was formerly a chapel at Newsham, dedicated to St. James. The Aislakbys were anciently possessors of the manor; and it afterwards became the seat of the Halls, descended from the Halls of Gretford, Lincolnshire. The fourth possessor of the name, Christopher Hall, Esq., was charged with a horse and furniture for the service of Charles I., and compounded for his estate for £460. Lodowick Hall, Gent., his son and heir, was some time of Great Chilton (for which estate he also compounded for £419 11s. 5d.), and was a justice of peace for the county. With Christopher his son, he sold Newsham to Robert Blakiston, Gent., of Old Elvet, whose great grandson, the Rev. Robert Blakiston, held lands in Newsham in 1738. The Coatsworth family also had possessions in Newsham. The estate of William Skinner Marshall, Esq., was advertised to be disposed of, by auction, in September, 1855. It comprised *Newsham Hall* farm, containing a house, cottage, buildings, and 427 A. 3 R. 2 P., valued at £560 annual rent; *Newsham Grange* farm, of 111 A. 1 R. 33 P., and a house, valued at £170 per annum; *White House* farm, of 165 A. 1 R. 13 P., with house, cottages, &c., valued at £170 per annum; and a cottage, garden, and orchard, valued at £6 per annum.

PARISH OF MIDDLETON ST. GEORGE.

THE parish of Middleton St. George is bounded by Egglescliffe on the east, by Long-Newton on the north-east, by Haughton-le-Skerne on the north, by Dinsdale on the west, and by the Tees on the south, extending to within 2½ miles west of Yarm, and 4½ miles east-by-south from Darlington.

THIS parish, which contains an extent of 2,050 acres, comprises but one township; the only assemblages of houses being the village of Middleton-One-Row and the hamlet called Oak Tree. The population, in 1801, was 215; in 1811, 202; in 1821, 209; in 1831, 299; in 1841, in consequence of Middleton-One-Row being much resorted to as a watering place, the number had

increased to 433; but, in 1851, the census having been taken prior to the arrival of the summer visitors, there was an apparent decrease of population to 332, of whom 167 were males and 165 females. There were, at the same date, 68 inhabited houses and 5 uninhabited. The annual value of property assessed to the county-rate in 1853 was £3,157 5s. 6d.

The Stockton and Darlington railway covers an area of 16 acres in this parish, and has an extent of 2 M. 1 F. 55 Y. In 1851, the railway contributed £53 2s. 6d. to the local rates, and £37 3s. 9d. in 1852; the gross amounts collected in those years being £208 4s. 7½d. and £135 14s. 8½d.

Low-Middleton Hall stands in a sheltered situation near the Tees. A handsome cross, said to have been brought from Neasham Abbey, is placed in the garden.

When the wapentake of Sadberge was granted by Richard I. to Bishop Pudsey, the son of Godfrey Baard owed the service of two parts of a knight's fee for Middleton and Hertburn. The Surteeses had acquired lands from the Baards in the time of Bishop Beaumont. Rowland Bart, in 1320, died seised of half the manor, which he held by homage, fealty, suit at the court of Sadberge once in three weeks, and 2s. 3d.; leaving his son Ralph heir. Half a messuage and 30 acres were held by Robert de Cambe in 1337. The manor shortly afterwards became the property of John de Killynghall, a justice itinerant under Cardinal Langley in 1413; it was held of the bishop by 9½d.; and four messuages and eight oxgangs in Over-Middleton were held of Thomas Surtees, Chivaler, by the same proprietor. The property passed from Francis Killinghall, representative of the direct line of the family, in 1569; but a younger branch, descended from John Killinghall, Esq., who died in 1574, held a third of the manor for some time afterwards, and acquired the main portion in 1606, by purchase from Richard Madox. John Killinghall,* Esq., of Middleton St. George, great-grandson of John above-named, was a captain in the army of Charles I., and compounded for his estate for £440. He married Margaret, one of the daughters of William Lambton, Esq., of Great Stainton, and died January, 1651. His grandson, William Killinghall, Esq., died unmarried in January, 1702-3; and the estate passed to Robert, successor to the second son of Captain Killinghall, who married, first, Jane, daughter of George Allan, Esq., of Darlington; and second, Sarah, widow of John Maynard, Esq., of Yarm. His sister, Elizabeth, married William Pemberton, of Darlington, merchant; and their daughter, Elizabeth, married James Allan, Esq., of Darlington and Blackwell.

Robert Killinghall, Esq., of Middleton St. George,

* Middleton George, 1611. Spiritual Court Proceedings against Wm. Kyllnyngall, Esq., who "entertayneth in his house as kitchen wench a woman that hath had two basterds at a birth (as if that made the matter worse); it is not pretended he is suspected with her; but

died February 13, 1758, and was succeeded by his son by his first wife, John Killinghall, baptized February 27, 1726-7, who died without issue June 20, 1762. He devised Middleton St. George to his kinsman, William Pemberton, descendant of William Pemberton and Elizabeth Killinghall. William Pemberton, his son and successor, died without issue, March 11, 1801, when the representation in blood of Pemberton and Killinghall devolved on the Allans. This last William Pemberton devised the Killinghall estates to his maternal aunts, of the family of Cocks, of Plymouth, to the prejudice of his cousin and heir-at-law, George Allan, Esq., M.P., who, with a view to invalidate the will, had a trial at law at the Durham assizes in 1806, when a verdict passed in favour of the parties claiming under the will, and the Cocks family have since remained in enjoyment of the estate.

The *Middleton Cottage* estate, to the east of the property of H. A. W. Cocks, Esq., is trust property, held under the will of the Rev. William Berman, dated 1700; the last trustee having been appointed in 1819. The estate comprises 43 A. 2 R. 3 P., and contain a small house or cottage ornee, which stands on a gentle eminence, sloping to the Tees. The tithes of this property, and of 2 A. 0 R. 19 P. in Middleton-One-Row, are commuted for a money payment of £2 12s. 9d. to the rector, and an equal sum to H. A. W. Cocks, Esq. There is also an annual rent of 4½d. payable to the Bishop of Durham at Martinmas.

THE CHURCH.

THE church stands on elevated ground, to the south-east of Middleton-One-Row. It is a small plain structure, consisting of nave and chancel. When the neighbouring spa at Dinsdale began to attract an influx of visitors, the north wall of the nave was carried out several feet, so as to admit of an additional range of pews. The chancel was rebuilt at the same time, and the whole church new roofed with Westmoreland slate. It will accommodate 150 persons. A subscription was raised in 1854 for the purchase of an organ of the value of £30.

William Killinghall, in 1521, by will, charged his estates "for the sustentacon of an honest preste which I will shall syng for the sowles of me, myn auncesters and

he owes 8s. 4d. sessement, and licks the churchwarden with his staffe when he calls for it." Mr. K. answered that "he acted out of charitie, and struck the churchwarden lightlie with a small gold-headed cane which he useth to walk with ordinarily."

heires in the pariche church of Midilton George by the space of seven yeres next after my death perceyving yerly for his salary vij markes."

REGISTERS.—Book No. 1 (parchment) contains entries of baptisms and burials from 1650 to 1754, and marriages from 1650 to 1753; No. 2, baptisms and burials from 1755 to 1812; and No. 3, marriages from 1754 to 1812.

The church or parsonage of Middleton St. George was stated, in 1312, to be divided into two portions; the one free from all ecclesiastical burthens, then hedl by William of London, chaplain, on the presentation of Ralph Bart; and the other charged with all the burthen of the vicarage, to which John de Cambe had presented his son, John Cambe, priest. This partition was confirmed by Bishop Kellaw. The institutions to the *sinecure* and portionary rectory (valued in the King's Books at £4; Tenths, 8s; Episc. proc., 4s. 6d.; Synod, 2s.), were as follow:—

W. de London, 1350; R. Bolton,; R. Kelynghall, 1434, p. m. Bolton; C. Conyers,; R. Redemayne, LL.B. (son of William Redemayne, Esq., chancellor of the diocese of York), January 27, 1570, p. m. Conyers; J. Cradock, A.B., 1625, p. m. Redemayne.

The entire advowson has since been attached, by purchase or otherwise, to that part of the manor belonging to the Killinghalls, and is now vested in its possessor.

Middleton St. George rectory is a discharged living in the deanery of Stockton, paying no first fruits or tenths. King's Books, £3 13s. 1½d.; Tenths, 7s. 3¼d.; Episc. proc., 4s. 6d; Archid. proc., 2s. Patron, Henry A. W. Cocks, Esq. Dedication to St. George.

RECTORS.—J. de Cambe, 1312; A. de Shutlington, 1359; W. de Meryngton, 1365; W. Sadler, 1466; J. Todd, 1501; D'n's W. Rippon; J. Orpyn, 1531; M. Myers (vicar of Bishop-Middleham), 1598; W. Casse, 1613,* p. m. Myers; W. Harrison, 1636; M. Wetherall (rector of Dinsdale), 1677; R. Scruton (rector of Dinsdale), 1690, p. m. Wetherall; W. Raine, 1693; J. Lambton, 1705, p. m. Raiue; W. Noble, A.M. (rector of Dinsdale), 1722; John Whaley, A.M., 1746; William Addison, A.B. (rector of Dinsdale), p. m. Whaley; William Addison Fountain, A.B., 1798, p. res. Addison; Henry Graves, A.M., (perpetual curate of High Worsall, near Yarm,) 1838.

The following terrier of the rectory, dated August 23, 1792, mentions the division of tithes, &c. :—

"Imprimis, two inclosures, containing about fourteen acres of meadow and arable land near Oaktree, with a barn upon it built with bricks and covered with tiles. Item, a moiety of the church-yard, containing about an acre. Item, a moiety, or full half, of all tithes

within the said parish in their proper kinds, except a modus of £4 13s. 4d. in lieu of the tithes arising from two farms belonging to William Pemberton, Esq., called Low Middleton and Oaktree-house farms; and a moiety of a modus of 16s. in lieu of the hay and small tithes of Foster-house, or West Hartburn farm; and a moiety of a modus of 22s. in lieu of all tithes arising upon Gingerbread farm, belonging to Hall Wharton, Esq.; and a moiety of a modus of 20s. in lieu of all tithes arising from Whitehouse farm, the property of Mr. William Wrightson. These moduses are all payable at Michaelmas; the church-yard fence is repaired by the tenants of the parish. John Whaley, rector; William Addison, trustee to William Pemberton, Esq.; George Chambers, Thomas Richardson, churchwardens."

At present, H. A. W. Cocks, Esq., has a moiety of the great tithes, and the incumbent the remainder. In the report of 1835, the gross annual income was stated at £100, subject to permanent payments, amounting to £9. The rector of Middleton St. George pays an annual pension or out-rent of 5s. to the rector of Eggescliffe. The rectory-house, with its appendages, is stated to have been entirely ruinous in the time of the Rev. Richard Scruton, rector. The Rev. W. A. Fountain built a handsome mansion on his private estate.

CHARITIES.

School.—A school-house was built by subscription about the year 1768; and, after the completion of the building, there was a balance of £75, which was placed in the hands of the Rev. William Addison, who gave a memorandum, May 12, 1777, promising to pay the same, with interest at four per cent., to the trustees of the school. The sum of £3 is paid annually as interest to the schoolmaster. The ground on which the school is built, nine yards square, is held by trustees on lease for 894 years from May 12, 1703. The master resides in the school-house, which, with the school-room, was almost entirely rebuilt in 1828, at a cost of nearly £100, undertaken by the then master, who was promised, but never received, some donations by way of reimbursement. The school is attended by about 30 children, all of whom pay for their instruction.

Donor unknown.—Two yearly sums of 8s. each were formerly paid for the benefit of the poor of this parish; the one by Christopher Richardson, and the other by Elijah Cocks, Esq., proprietors of the lands supposed to have been charged with such payments. Some years before the visit of the Commissioners for inquiring con-

* 20s. to buy a cloke, 3 bushels of ry, and besides the said Francis Foster being a good friend unto him." The cloke appears to have covered the defaults of the donor.

* William Killinghill, who held a moiety of the rectory, wished Mr. Casse to join him in suing Francis Forster, of Darlington, for their joint tithes due from West Hartburn. The rector refused, because by his daughter he had received at Darlington from Forster

cerning Charities, the above gentlemen refused payment, and in 1829, produced their purchase-deeds, which contained no notice of any charge for charitable purposes.

MIDDLETON-ONE-ROW.

MIDDLETON-ONE-ROW, or Over-Middleton, 5 miles east-south-east from Darlington, consists principally of one long row of good houses, built near the sloping verge of the bank of the Tees, fronting the south. The discovery of the medicinal spring at Dinsdale (see vol. i., p. 508), attracted visitors to the locality, and produced considerable improvement in the village, by the erection of an inn on an extensive scale, and private dwellings suitable for the accommodation of respectable parties. Several of the houses are fitted up with projecting windows, and other suitable decorations. That indispensable requisite to a watering place, a circulating library, has been established for many years; and several shopkeepers and tradesmen carry on business. In summer, the place is further enlivened by temporary bazaars, for the sale of useful and fancy articles. The view from the row is very beautiful, comprising the picturesque windings of the river, fringed to the water's edge on one side by the woods of Dinsdale, on the hill above which the asylum of Dr. Mackintosh forms a conspicuous object, and bordered on the other by the fertile fields and pastures of Yorkshire, surrounded on the south and south-east by the Cleveland hills. From the western extremity of the row, a pleasant footpath, with rustic seats placed at convenient distances, winds down to the little rivulet which divides the parishes of Middleton and Dinsdale, and, after crossing its bridge, leads to the spa. Car-

* According to an entry in the Allan Archives, this Marmaduke, on one occasion, over-reached the rector of Dinsdale. Some lands in Middleton-one-Rawe had been granted by the Surteeses to his uncle John, incumbent of that parish, for life and 20 years following; but after the lease had expired, the clergyman wished to consider it as part of the glebe. In 20 Eliz., John, the only son of Marmaduke, had a trial with the then rector about it; and John Hudson, of Morton, grassman, aged 54, deposed that he was, when "but a boy of a dozen or xiii years of age, present at the buriall of John Sewerties [the former rector], and then had a penny given him" [the funeral dole]; that Marmaduke borrowing 10s. of Rowland Clerk [a succeeding incumbent] upon his signett, the latter, within or about a month after, requested to have his money; when Marmaduke told him "that it was but a small thing that he the said Marmaduke had of him, and that therefore he thought that the said Rowland would not have bene so haistie with him. 'For,' quoth the said Marmaduke, 'if I would I could take the two oxgangs of land which thou occupiest here in this towne from the, which is a hundreth times better

riages frequently ply between the village and the Middleton station of the Stockton and Darlington railway.

Over-Middleton was held of the see by the family of Surtees, by fealty and 4s. 6d. rent. On the division of the family estates in 1552 (see vol. i., p. 506), this manor was allotted to Marmaduke Surtees.*

In 1569, one of the inhabitants of "Midletun Rawe" joined the Rising, and was afterwards executed; whilst of three, from other parts of the parish, one also suffered death. Thomas Surtees, Esq., grandson of Marmaduke, in 1598 sold the manor to Anthony Felton, Gent., who conveyed it, in 1608, to Arthur Aldborough, Esq.; and he, in 1612, granted to Christopher and Alan Ayscough. James Ayscough, Esq., of Middleton-One-Row, is named amongst those who refused to compound with the parliament for their estates. Some parcels of the estate had, however, been previously alienated, and were held by different families. Property, belonging to the Wrens of Billy Hall, passed, by purchase, in 1595, to Roger Wilson, vicar of Kelloe; and of more recent date to Thomas Wrightson, Esq., &c.

WEST HARTBURN.

THE name of *Goosepool* is now locally applied to the whole of West Hartburn, though it properly belongs only to that part of the vill which is within the parish of Long-Newton. The village is situated near the north-eastern verge of the parish of Middleton, and contains a public-house, and a station on the Stockton and Darlington railway. According to tradition, there was a chapel and burying-ground in Goosepool; but there is no record of such a foundation. West Hartburn has generally been held by the proprietors of other parts of the parish. The Forsters, in 1628, purchased an estate

than the money thou lent me.' 'Nay then,' quoth the said Rowland, 'that I think you cannot do.' 'Yes,' quoth the said Marmaduke, 'that I can. But be thou good to me, and I will be good to thee.' 'Why, sir,' quoth the said Rowland, 'any thing I have you shall comaunde.' 'And well then,' quoth the said Marmaduke, 'come hither to me againe such a day, and I will show the good specialtie that the two oxgangs is myne to do with what I list.' And so for that time the said Rowland departed." On their meeting, the perplexed parson found that Surtees had right, and had to compound for £4 10s. and the 10s. he had lent, for a life interest. He paid by instalments; and Archer, another witness, saw him come to Marmaduke at Darlington, and say, "Sir, now I have paide you all my money according to our agreement, and therefore I pray you now let me have assurance made for my life, that I be not any more troubled." 'Marrie parson,' quoth the said Marmaduke, 'that I will with good will. And come go with me to Mr. Hailes.' And so they went together to Mr. Hailes to have assurance made."

PARISH OF REDMARSHALL.

from the Wrens, which has since acquired the name of *Forster House*. It was afterwards the property of the Rev. W. A. Fountain. *Gingerbread House* belongs to the Whartons.

OAK TREE is a hamlet so called from the sign of a public-house, 5½ miles east from Darlington. Mr. Thomas Ellis, the principal proprietor, has a large brewery and malting in the place.

POUNTEYS BRIDGE.—This structure, the *Pons Teys*, stood about 300 yards below the site of the sulphur well at Dinsdale. The date of its erection is unknown; but it may fairly be attributed to the Saxon, if not the Roman era, and was probably the first arch erected across the Tees, being named soon after the Conquest as being of old foundation. Defences were erected near it on each side of the river; and it is supposed to have been long the principal entrance into the county from the south. A house of hospitality for travellers, a water-mill, and a chapel dedicated to St. John, were, in course of time, erected on or near the bridge. The chapel was endowed by the Surteeses and others; and there was also, in the immediate vicinity, a hermitage, in which William Byndelawes, of Burton in Lonsdale,

was placed by Prior Wessyngton in 1426. Less peaceful neighbours seem to have afterwards infested the road; as Bishop Cosin, on transmitting some gold into Yorkshire, cautions the bearers by telling them that “Mr. Hilton’s sonne, who brought your letters hither, tells us that he was in great danger to be robbed about Darnton and Neesum by thieves and highwaymen that lay upon the street there, to set upon passengers who they thought carried any money with them; and he named Barwick for one, a famous thiefe, with others in his company, besides one Middleton, and one Coperthwaite, who layed at Neesum for their pray, and that he was putt to ride full speed for four miles together, to escape them in their pursuit of him.” These dangers, combined with the opening of Croft Bridge, which afforded a more open road from the south, led to the desertion of the old High-street, and the consequent neglect of Pounteys Bridge. At what time this structure was destroyed does not appear; but vast quantities of squared stones, cramped with iron, have been removed at various times, and particularly when the neighbouring bath was built. It is said that when the water is low, the remains of foundations may still be seen. The adjacent ford is called County Ford.

PARISH OF REDMARSHALL.

THIS parish is bounded by Elton on the south, by Norton on the east, by Grindon and Sedgefield on the north, and by Stainton-le-Street and Bishopton on the west. It includes the constaberies of Redmarshall, Carleton, and Stillington, the latter of which is included in the Sedgefield Union.

REDMARSHALL.

THE township of Redmarshall includes an area of 956 acres, divided into five farms, and containing a public house. Its population, at the periods of enumeration, was 60, 76, 75, 56, 48, and 76, of which latter number 39 were males and 37 females, occupying 12 houses; and there was also one uninhabited house. The annual value of property assessed for the county-rate, in 1853, was £670.

The townships of Redmarshall and Carleton are in Stockton Union, and that of Stillington in Sedgefield Union. The receipts from Redmarshall in the year ended Lady-day, 1854, were £16 16s., and from Carleton, £106 15s. The expenditure of those townships was as follow:—

	£	s.
In-maintenance: Redmarshall, 2s.; Carleton, £3 15s...	3	17
Out-relief: Redmarshall, £7 1s.; Carleton, £35 13s....	42	14
Workhouse loans repaid, &c.: Redmarshall, 8s.; Carleton, £3 7s.	3	15
Salaries and rations of officers, &c.: Redmarshall, 3s.; Carleton, £8 3s.	8	6
Other expenses: Redmarshall, 1s.; Carleton, £14 8s...	14	9
Total expenditure connected with relief.....	73	1
Constables' expenses before justices; Redmarshall, 13s.; Carleton, 16s.	1	9
Vaccination: Carleton.....	0	10
Registration fees to clergymen: Redmarshall, 1s.; Carleton, 12s.	0	13
County-rates, &c.: Redmarshall, £9 8s.; Carleton, £24 13s.	34	1
Registrations: Redmarshall, 5s.; Carleton, 5s.	0	10
Other payments: Redmarshall, £1 9s.; Carleton, £10 10s.	11	19
Total expenditure.....	£122	3

The township of Redmarshall contains one public house. James Pallister, Esq., of Little Burdon, at his own expense erected schools for boys and girls, with suitable residences for a master and mistress. They are called Pallister's Schools, and are supported by £10 per annum granted by Mr. Pallister, various other subscriptions, and the payments of the children.

Though the manor of Redmarshall* was held from an early date by the see of Durham, yet, in an ancient charter to Finchale Priory, the name of Emma, Lady of Redmarshall, occurs. Bishop Beck gave the manor to his brother, John Beck, Baron of Eresby in Lincolnshire, who sold it to Thomas Moulton, from whom it passed to Sir Henry Lisle, Knt., lord of the manor of Wynyard. By deed, bearing date 1306, Sir Henry gave Redmarshall to Catherine his niece, wife of Allan de Langton, burgess of Berwick and Newcastle, and to the heirs of the body of the said Catherine for ever. In 1569, five persons from Redmarshall joined the rebellion, one of whom was afterwards executed.

This manor continued vested in the lords of Wynyard till 1596, when William Claxton, Esq., died without issue. One-third of it afterwards passed successively through the families of Merley of Wemyngton, Lancashire; Buckle, of Whitton; Place, of Dinsdale; Bromley, of Nesbit; and Spearman. In 1750, the trustees under the will of Gilbert Spearman conveyed it and a third of Claxton's Porch to John Tempest, Esq., of Wynyard, for £3,540, from whom it descended to the Marchioness of Londonderry. Another third of the manor was carried, by the marriage of the daughter of William Claxton with Sir William Blakiston, of Blakiston, into the latter family, who sold it to Nicholas Forwood, of Bishopton, from whom it passed, in 1612, to John Cooke, draper, of Newcastle. The other third part of the manor, which belonged to the Jennisons by a marriage with the youngest coheirss of Wynyard, was sold in 1613 to Anthony Buckle, yeoman. Several persons have, from time to time, held parcels of land in Redmarshall. The principal proprietors, besides the Marchioness of Londonderry, are, Morton John Davison, Esq., of Beamish, Mr. James Pallister, and Mr. George Hutchinson. *Redmarshall* farm contains 266 A. 3 R. 12 P., land-tax, £3 6s. 3½d.; and *Ox Eye* farm 216 A. 1 R. 22 P., the land-tax £3 2s. 6½d.

* Surtees derives the etymology of Redmarshall from "*The Hill of the Red Mere*," or *Red Mere's Hill*; because it could be seen from a considerable distance, rising over a level district of loam and red clay, where the floods of winter would formerly collect and rest on the tenacious soil in a broad discoloured pool or mere.

THE CHURCH.

By some it has been thought, from the size of the tower of this church, that it was originally intended as a place of defence; but, as the tower is only of the usual proportions, there seems nothing in this respect to corroborate the opinion. The body of the church now consists of nave, south porch, south transept called Claxton's Porch, and chancel. In the north wall of the chancel, which is divided from the nave by a Norman arch lined with plaster, there is an arched recess, of the transitional period, apparently for a monument to some benefactor of the church; and in the south wall is a sedilia of three compartments, of the perpendicular date. Claxton's Porch opens from the nave under a pointed arch, supported by corbels, and contains a large window which lights the whole nave. On a broad altar tomb in this porch, are two recumbent figures, male and female, of very elegant work in alabaster, but much defaced by time and neglect. The male figure is in armour, with gloved hands elevated, but without shield or sword; this latter perhaps broken off. The head of the female rests on a padded cushion; the arms are broken; the waist is clad in a short tunic; and flowing drapery envelopes the feet. These figures represent Thomas Langton, of Wynyard, who died in 1417, and his wife Sibill, of Layton, stated in Glover's Pedigree of the Lords of Wynyard, to lie "in the porche of the parish church of Redmershill, under a tombe of alabastre, having both their portraictures engraven very sumptuously."

The lead roof of the church was removed, and the lights altered, in 1806; but considerable traces of antiquity were retained. From this date, the edifice continued without further alteration, until 1845-6, when the present rector, the Rev. T. Austin, A.M., effected extensive improvements and restorations. The unsightly sash windows were at once removed, and appropriate ones of stone introduced. The east window is of geometrical character, of three trefoil headed lights, grouped under a pointed segmental arch. The south window of the transept, known as Claxton's Porch, is of perpendicular character, of four cinquefoil headed lights, under a four-centered arch. The side windows of the chancel and nave are of three lights, of geometrical design. The tower arch is Norman, as well as the outer door-way of the south porch; this door-way, previous to its removal to the south, formed the northern entrance to the church. At the time of these alterations, a vestry was added on the south side, contiguous to Claxton's Porch. A new font

cover was also introduced, being in character with the existing interior wood work. The pews are of oak, with plain poppy heads, of similar character and date with those of Brancepeth, Sedgfield, Gateshead, &c. The church will accommodate about 160 hearers.

The whole of the alterations were effected at the expense of the rector, from designs furnished by his son, T. Austin, Esq., architect, Newcastle, who also provided designs and plans for the new rectory.

REGISTERS.—Book No 1 (parchment) contains entries of baptisms from 1564 to 1745, burials from 1559 to 1752, and marriages from 1568 to 1749, deficient, and interrupted by No. 2, which contains baptisms from 1737 to 1762, burials from 1745 to 1762, and marriages from 1737 to 1767; also by No. 3 (parchment), containing baptisms and burials from 1760 to 1812. No. 4 contains marriages from 1754 to 1812.

Redmarshall rectory is in the deanery of Stockton; the Bishop of Durham, patron. King's Books, £17 18s. 1½d.; Tenths, £1 15s. 9¾d.; Episc. proc., 10s.; Synod., 2s.; Archid., 2s. Dedication to St. Cuthbert.

RECTORS.—Petrus occurs 1258; T. Aerizi (or Eversi), 1366; R. de Redemershill; N. Hulne (master of Greatham 1427, preb. of Darlington), 1415; A. Morland, 1461; W. Mawdesly; J. Flint (prior of Pontefract), 1502; W. Preston, S.T.P., 1530; P. Wilbefosse, B.D. (vicar of Northall, co. Middlesex), June 20, 1533, p. m. Preston; J. Redemayne, A.M., August 17, 1533, p. m. Wilbefosse; W. Carter, S.T.P., August 18, 1544, p. res. Redemayne; S. Binks, January 20, 1546, p. res. Carter; R. Richardson, November 17, 1588, p. m. Binks; M. Blakiston, A.M. (archdeacon of Cleveland, preb. of the 7th stall), occurs September 4, 1585; J. Calfhill, A.M. (preb. of the 5th stall), 1599, p. res. Blakiston; W. Neile, A.M. (preb. of Sutton-in-the-Marsh and treasurer of Lincoln), January 14, 1619, p. m. Calfhill; J. Rand, A.M., October 5, 1620, p. res. Neile; J. Kidd, an intruder,

* THE REV. GEORGE STEPHENSON, son of the Rev. George Stephenson, vicar of Long-Penton, Northumberland, and curate of All Saints, Newcastle, was born in that town April 16, 1759; he was placed in early life at the Newcastle Grammar School, and matriculated, March 26, 1776, as a commoner of Lincoln College, Oxford. In 1783, he was elected Fellow of Magdalen College. On completing his studies, he was ordained to the curacy of Long-Newton, under the Rev. Sir Henry Vane, and was afterwards successively curate of St. John's chapel, Sunderland, and of Bishopwearmouth church; which latter appointment he held for a period of 45 years, under the rectorship of Egerton, Paley, Gray, and Wellesley. The estimation in which he was held by Paley is attested by that celebrated author having, in his will, appointed Mr. Stephenson to be editor and distributor of his parochial sermons. This brought him under the notice of Bishop Barrington, who, in 1809, presented him to the vicarage of Kelloe, and, in 1814, to that of Redmarshall. He had, many years before, been presented, by the President and Fellows of Magdalen College, to the rectory of Saltfleeby, Lincolnshire. In such high estimation was Mr. Stephenson held by the parishioners of Bishopwearmouth, that they presented him, in 1827, with a piece of plate, value £100. On the erection of St. Thomas's church, in that parish, he became its first

depr. 1660; J. Robson, A.B., September 2, 1661, p. m. Rand; J. Jackson, March 13, 1665, p. m. Robson; E. Morecroft, A.M., November 23, 1668; W. Dunn, A.M., 1694, p. m. Morecroft; W. Johnson, LL.B., May 14, 1737, p. m. Dunn; J. Skelly, June 24, 1760, p. m. Johnson; Thomas Holmes Tidy, A.B., 1767, p. res. Skelly; J. Brewster, A.M., 1805, p. m. Tidy; George Stanley Faber, B.D., Linc. Coll. Oxon., 1809, p. res. Brewster for Boldon; Henry George Liddell, A.M., Braz. Nose Coll., 1811, p. res. Faber for Long-Newton; George Stephenson, A.M., Magd. Coll. Oxon.,* 1814, p. res. Liddell for Boldon; Hon. J. P. Eden, 1843, p. m. Stephenson; Thomas Austin, A.M., 1844, p. res. Eden for Stockton.

The rector of Redmarshall furnished a lancer and an archer to the array of the clergy on Gilesgate Moor in 1400. In 1462, Adam Morland, rector, had a pardon for inclosing and embattling his rectory-house.†

The old parsonage, which adjoined the church-yard, was, in 1845, taken down and a new rectory built a few yards further north. The building is of brick, of Elizabethan character, with stone dressings. The entrance to the front door has a pointed arch, with an inscription above, bearing the date of the building. The arms of Lord Crewe, which were above the entrance-door of the old building, are placed on the south gable; and above is a sun-dial, bearing date 1712. The building cost about £1,000, which was defrayed by the rector, with the exception of the grant allowed from Queen Anne's Bounty. The garden attached to the rectory is laid out with considerable taste.

A small bronze figure, finely cut and of excellent workmanship, was found amongst the foundations of the old building, and is in the possession of the rector.

The glebe consists of 6 A. 2 R. 19 P. The rector is generally entitled to all tithes: the gross income is stated at £365 per annum, subject to permanent payments amounting to £24, leaving £341 clear; but this

incumbent; and he died at the parsonage-house there, on the 27th December, 1843, in his 85th year. He was, at that period, one of the oldest magistrates in the county, and the senior clergyman of the diocese, having been in orders upwards of 60 years. His remains were attended to the family vault in Sunderland church-yard by the clergy, mayor, magistrates, and principal inhabitants of the town.

† "The practice of embattling parsonage-houses of the higher class," says Surtees, "was, for an obvious reason, not uncommon in the north. In a list of Northumbrian fortresses taken during the minority of Henry VI., the tower of Whitton, belonging to the rector of Rothbury, and six other fortified parsonages, are enumerated amongst the *Fortalicia*, or lowest order of castlets. All these were, probably, mere towers added, as at Houghton, to the main building; or sometimes, as at Rothbury, placed a little distant, for the advantage of situation, and calculated merely to preserve a few valuables from a sudden surprise of the Borderers. The church towers were used for the same defensive purposes, and some reliques of old armour are still frequently preserved in the northern churches." As an illustration of the uses to which church towers were sometimes put, see MERRINGTON, EASINGTON, and HOUGHTON-LE-SPRING.

is considerably above the average receipts during the last few years.

CHARITIES.

Church Rents.—The churchwardens received 2s. 6d. from the Rev. Edward Davison, for his estate at Stillington; 3s. 4d. from Morton John Davison, Esq., for his estate at Redmarshall, and 2s. for his estate at Carleton; 2s. from — Ellis, Esq., for his estate at Carleton; total, 9s. 10d. The origin of these payments, which were applicable to the repairs of the church, is unknown; and of late years nothing has been received for this purpose.

Morpeth's Charity.—Christopher Morpeth, by will, January 10, 1640, gave to the poor of the parish a rent-charge of £3, payable out of his lands in Bishopton Field, called the Hyets; £1 10s. to the poor of Stillington, and the remainder to those of Redmarshall and Carleton, in equal portions at Easter and Christmas; also 20s. yearly out of the same estate, 10s. to Stillington, and 10s. to Redmarshall and Carleton, to be given every New-year's day, being the day on which his daughter Elizabeth was buried. These sums are distributed by the overseers amongst the poor of the respective townships in sums varying from 3s. to 10s.

CARLETON.

THE extent of this township is 1,453 acres, containing 36 inhabited houses. The population, at the successive periods of enumeration, was 99, 105, 140, 183, 157, and 186; 102 of the latter number being males and 84 females. The annual value of property assessed for the county-rate, in 1853, was £1,491.

The Clarence railway occupies an area in this township of 12 A. 2 R. 36 P., and extends over 1 M. 3 F. 90 Y. In 1851, it contributed £40 7s. 11d. to the local rates; the gross amount collected being £118 8s. 11d.; and in the following year, the contribution from the railway was £21 17s. 6d. towards an amount of £92 16s. 5d.

The village of Carleton is situated about 4 miles north-west from Stockton, and contains a dame school, with the shops of two smiths, a cartwright, &c. From an inscription on a pewter flagon, containing about a gallon, in possession of the late Sir Cuthbert Sharp, it is probable that rural sports, similar to those of other places, were formerly celebrated here. The inscription, within a wreath, is as follows:—"The free gift of

the Inhabitants of Carleton, in the county of Durham. Winne it and weare it. Anno Domini 1672."

Amongst the places detained from the see by the men of Northumberland was Carlentune, which Henry I. ordered to be restored in 1109. By Boldon Book, there were 23 farmers holding 46 oxgangs; each farmer paying 2s. 10d., performing certain services, and furnishing 2 hens and 20 eggs. Gerbrode, Helias, Walter the miller, Suminia the widow, and William the son of Orm, held portions of land; and 20 skeys of corn, *Jarrum* measure, were rendered for the mill.

Under Hatfield's Survey, some of the services were commuted into money payments. The drengage land was held by William the son of John de Redmershill and Simon de Carera. Thomas son of John Gower, Hugh de Laton de Thorp, and Thomas de Cramblyngton, were free tenants. William Umfray, John of Nescham, and 18 others, held 31 messuages and 56 oxgangs, and, besides other rents and services, were bound to lead timber and mill-stones for Carleton mill; also to assist in leading timber for the repair of the manor-house at Stockton, and in roofing Stockton mill, when required. An instance of the gradual manner in which manumission was beginning to be obtained, occurs in the case of Thomas Godfrey, who, though a *nief* of the lord, resided at Seaton-Carew, paying 5s. a year.

The drengage lands were held, subject to suitable service, until the reign of Elizabeth. Meanwhile, the names of various proprietors occur. The Richardsons and Davisons have held lands in Carleton from a remote period; and the estate of the latter family is vested in the Rev. Edward Davison, of Durham. *Seaton Hills*, *Holmes Land*, and *Carleton Farm*, belonged to the late G. Hutchinson, Esq., of Stockton. The greater part of the township, however, is copyhold, under the see of Durham. Carleton farm, of 156 A. 1 R. 7 P., with some other property in the village, is subject to an annual copyhold rent of £1 12s. 8d.

STILLINGTON.

THIS township is detached from the rest of the parish by a junction of Bishopton and Grindon, and is included in the Sedgfield Poor-law Union. Its extent is 1,104 acres; and the annual value of property assessed for the county-rate in 1853 was £1,042. The number of inhabitants, at the decennial returns, has varied as follows:—69, 42, 49, 96, 67, and 70, the latter amount consisting of an equal number of males and females. In 1851, there were 11 inhabited houses and 2 uninhabited.

PARISH OF BISHOPTON.

233

The Clarence railway, which extends along $1\frac{1}{2}$ mile, and covers 22 acres in this township, contributed 11s. 10d., in each of the years 1851 and 1852, towards the local rates, the gross amount of which in 1851 was £17 8s. 4d., and in 1852, £29 13s. 5d.

The hamlet and township of Stillington is situated about 2 miles to the north-west of Redmarshall. From an early date, lands in this township have been held of Merton College, Oxford. William de la Pole, in 1367, held five acres of the Master by the service of a rose, which was also rendered for the same, in the 10th of Bishop Langley, by Michael, Earl of Suffolk. Stillington furnished five followers to the Northern Rebellion, one of whom was executed for the offence.

Mr. Christopher Morpeth, of Stillington, was charged with a horse and furniture for the service of Charles I., but released. On September 6, 1644, warrant was issued to sequester the estates of Mr. Richard Hartburne, papist and delinquent, let at £14 10s.; also of Richard Morpeth, letten at £48. On the 6th of February following, Captain Hartburne's lands were let, "allowing to the widow her proportion," to John Husband, Gent.

The college lands are leased by the Rev. Edward Davison. The Jennisons of Elswick and other families have held lands in this township; but a considerable portion is under the see of Durham.

PARISH OF BISHOPTON.

THE parish of Bishopton is bounded by Long-Newton and Elton on the south-east, by Redmarshall on the east, by the same parish and Grindon on the north, by Great Stainton on the north-west, by Aycliffe on the west, and by Haughton-le-Skerne (including the chapelry of Sadberge) on the south-west and south. It includes three townships, viz., 1, Bishopton; 2, East and West Newbiggin; and, 3, Little Stainton. The parish is annexed to Sedgfield Union.

BISHOPTON.

THIS township contains an area of 2,002 acres. Its population, in 1801, was 349; in 1811, 312; in 1821, 365; in 1831, 423; in 1841, 362; and in 1851, 365, of whom 175 were males and 190 females. The increase in 1831 was occasioned by the number of labourers employed in the formation of the Clarence railway. There were, in 1851, 84 inhabited houses and 4 uninhabited. The annual value of property was estimated for the county-rate, in 1853, at £1,923 17s.

Bishopton is a pleasant village situated on an eminence, about 6 miles west-north-west from Stockton, and consists of two open rows of good houses. It contains five public houses, with two blacksmiths, a joiner, a post office receiving-house, and a number of tradesmen and shopkeepers. Bishopton parish feast is held on St. Peter's day; and an old cross near the church has probably been the centre of the ancient merry-makings at that anniversary. There is a small Methodist chapel in the village. In 1813, a spacious school-room was built by subscription, to which Bishop Barrington contributed £20; the trustees of Lord Crewe's charities, £30; M. J. Davison, Esq., and family, £30; the Rev. John Bright, £25; J. G. Lambton, Esq., (afterwards Earl of

Durham,) £10; the Rev. C. Anstey, vicar of Norton, £10; the Rev. Ralph Tatham, vicar of Bishopton, £5; and Mr. Thomas Sowerby, £5. A convenient dwelling for the master was erected, shortly afterwards, contiguous to the school. The usual attendance is from 50 to 60 children. A few voluntary subscriptions are collected in the neighbourhood for the school, which also received a portion of £20 given annually by the late master of Sherburn Hospital in support of Bishopton, Grindon, Sockburn, Kelloc, and Ebchester schools; but there has been no regular endowment. The Charity Commissioners of England and Wales now propose, however, in their amended scheme for the management of the hospital, that £200 a year shall be appropriated from its funds, towards the support and benefit of those schools. A girls' school, attended by between 30 and 40 scholars, is supported by subscription and the quarterly payments of the children.

The most remarkable object at Bishopton, and which is, indeed, one of the most singular antiquities in the county, is the *Castle Hill*, a fortification consisting of an artificial conical mount with a truncated summit, and surrounded by a double trench. It is constructed of common clay and such stones as might be picked up in the surrounding country, and both its sides and summit

are covered with verdure. Its height is $43\frac{1}{2}$ feet, and the flat top is an ellipsis of 50 feet by 30. The inner ditch is carried close around the base; but the outer one, though near it on the north and south, extends to a considerable distance east and west. The Bishopton Beck flows by on the south, and was probably used for inundating the trenches. Tradition ascribes this rude fort to Roger de Conyers; but, though he may have entrenched and used it, some antiquaries are inclined to give it a higher antiquity, and to suppose it a Roman, Saxon, or Danish remain. The coincidence between the Conyers and Lambton legends, associated with the conical hills connected with each family, is curious and significant. (See vol. i., p. 510).

The first recorded event in the history of Bishopton is connected with the Castle Hill. It was here that the courageous and faithful Roger de Conyers fortified his house, after he had braved the enmity of the usurper Comyn (see vol. i., p. 35); and here he successfully resisted the numerous army sent against him. Here, also, the mild William de St. Barbara found an asylum when the rest of the county was in the hands of his unscrupulous rival; and, in the house of Conyers, he received the homage of such of his vassals as returned to their duty.

A circumstance illustrative of the servile condition of the children of the soil at that period, is recorded in a charter, by which Roger de Conyers conveyed to the prior of Durham the three sons of Eylolf de Biscopton, with all their succession, in exchange for a horse and six marks of silver, which he had received from the treasury of St. Cuthbert at his greatest need.

Little of consequence occurred to disturb the tranquillity of Bishopton until the breaking out of the Northern Rebellion in 1569. On the 17th November, Sir George Bowes writes, "They [the rebels] have constrained, by force, sundry to follow them; as the people of Bishopton, tenants of John Conyers, my son-in-law, being ready to come forward to serve the queen's majesty under him here, they not only forced them to go with them, but compelled the rest of the town, armed and unarmed, to go to Darneton." It is recorded that sixteen persons from "Byshopton," eight from "Little Staynton," and one from "Newbyggynge," joined the insurgents; and the executions which followed the failure of the enterprise were four at Bishopton, two at Little Stainton, and, that an example might not be wanting in each township, the single representative which Newbiggin had furnished in the outbreak also suffered death.

Bishopton remained in possession of the Conyers family until 1613, in which and the two following years, Sir George Conyers, Knt., of Sockburn, and George Conyers, Esq., his son and heir, alienated the whole of their manors of Bishopton, Stainton, and Newbiggin, in various parcels, to their tenants.

The "Bishopton Estate" contains 98 A. 1 R. 16 P. of freehold, and 20 A. 0 R. 4 P. of leasehold. The latter is held by lease, dated May 25, 1614, granted by Sir George Conyers, Knt., to Cuthbert Beckfield, and John and Richard his sons, for the term of 2,000 years, at the yearly rent of 26s. 8d., payable to the lord or lady of the manor of Bishopton; acquittance, 6d. The northern portion of the freehold land is called *Stillington Brigg Close*, and was purchased, July 16, 1685, by Robert Eden, Gent., of Bishopton; it includes an acre, supposed to be inclosed and held by lease from Leonard Jackson to Christopher Morpeth, for 1,999 years, at a rent of three barleycorns, by indenture dated August 18, 4th Charles I., and assigned to Robert Eden. The land-tax on the whole was £2 10s. 5d., but is now redeemed. The fields in the northern portion pay £2 to the poor of Stillington, £1 to the poor of Redmarshall, and £1 to the poor of Carleton.

Amongst those in Bishopton who purchased from Conyers, the names of Forwood, Elstob, Humfray, Buckle (owner of the mill and mill-dam), Jackson, &c., appear. Of a loyal family named Todd, the following interesting episode is furnished in the Sequestrators' Books:—

"Information of John Middleton, constable, concerning the delinquency of Lancelot Todd.—His son Christopher Todd in the army against the King (!) and Parliament and the father and son lived all together; had 7 kine, 9 sheep, 12 acres of pease, and 5 of oats. John Middleton was present when oulde Todd said, 'My son Cursty shall go and fighte for the King, and who knows but he may come back a captain in spite of the Crop-ears;' and that Middleton was present also when a blacke horse, which he thinks belonged to oulde Todd, was brought out of the stable for Chr^t Todd to ride away upon; and after drinking he rode away about two of the clock in the morning by moonlight, and that oulde Todd went often to Coll. Conyers, at Layton, a noted papist and delinquent. Oulde Todd's lands worth £30 a-yeare."

Immediately follows an order to "sequester the goods of Lancelot Todd, papist, £26 1s. 2d." The property of Todd, which included the Castle Hill, was afterwards sold to Timothy Davison, Esq., and now belongs to his descendant, John Eden, Esq., of Beamish. *Woogrey*, an estate of 142 A. 1 R. 38 P., with three closes of land in the township, late the property of Thomas Hutchinson, Esq., of Stockton, deceased, have become, by purchase, the property of

William Trotter, Esq., of Bishop Auckland. The other proprietors in the township are, George Head, Esq., *West House*; Mrs. Croft and others. John Page Sowerby, Esq., of Stokesley, holds a lease of the corn tithes of the parish from Sherburn Hospital, at an annual rent of £470 10s. *Bishopton Mill*, worked by water and steam, the property of the late Mr. John Willis, was offered for sale by auction, January 10, 1852, but remains in the hands of trustees.

THE CHURCH.

ROGER CONYERS, with the consent of Robert, his son and heir, granted Bishopton and Sockburn churches to Sherburn Hospital, soon after its foundation; and Bishop Pudsey confirmed the gift, but reserved to himself the power of ordaining proper vicars thereto. The original structure was of Norman foundation, and consisted of a nave and chancel, which were repaired and modernized, and the lead exchanged for slate, in the early part of the present century. In 1846-7, the church was rebuilt and enlarged, and now consists of nave, north aisle, chancel, vestry at the east end of the north aisle, and a tower on the west; under the tower is the main entrance to the church. The chancel is separated from the nave by a pointed arch. There are four geometrical windows in the south aisle, and four in the north, and a west window of three lights, carrying three plain circles under a pointed arch; in the chancel there are two lancets, one on the south and one on the north side. The east window is a triple lancet, filled with stained glass, the centre portion representing the Lamb bearing the banner, presented by Miss Anderson, of Bishopton. In the tower is an organ and a pew for the singers. The organ was built by Messrs. Hoggett and Sons, of Darlington; and by permission of the vicar, Mr. Cooper, master of the village school, in 1851 set on foot a subscription for its enlargement, amongst the contributions to which was six guineas from the Bishop of Durham: by this means two octaves of keys and nearly one hundred pipes were added to the instrument. The church is fitted up with 300 sittings, 200 appropriated and 100 free. There is a sun dial on the south side of the chancel, and the cemetery is well protected by a substantial stone wall. The whole of the expense of the improvements and rebuilding of the church was defrayed by the vicar, the Rev. T. B. Holgate. The restorations were conducted under the superintendence of Messrs. Sharpe and Paley, of Lancashire.

REGISTERS.—Book No. 1 (parchment) contains registers of baptisms, burials, and marriages, from 1653 to 1752; and Nos. 2 to 4, baptisms and burials from 1753 to 1812, and banns of marriages from 1754 to 1812.

Bishopton, otherwise Bishopston vicarage, is a discharged living; the Master and Brethren of Sherburn Hospital, propr. and patrons. King's Books, £4 5s. 10d.; Tenths, 8s. 7d.; Episc. proc., 7s.; Arch. Syn. and prox., 11s.; Archid. proc., 4s. Dedication to St. Peter.

VICARS.—A. de Yersey, 1290; R. de Mersk, 1291; D'n's Thomas occurs 1317; Radulphus; W. de Newhouse, 1382; J. de Skyrwith, 1391; J. Bawdon, 1400; J. Sawyer, 1409; J. Semer, 1501; W. Alandson, 1558; T. Wall, 1560; G. Widdowes, 1579; D. Miles, 1625; J. Buckley, A.M., 1661; R. Croft, 1662; W. Thirkheld, A.M., 1681; J. Tate, 1686; M. Athelston, 1687; R. Conder, 1722; R. Newhouse, 1727; S. Hudson, A.M., 1740; Richard Tinkler, 1762; Ralph Tatham, A.B., 1776; Robert Walker Bamford (chaplain of Sherburn Hospital), 1825, p. m. Tatham; Thomas Burton Holgate, A.B., 1838, p. m. Bamford.

The glebe consists of about 70 acres. The Hospital of Sherburn is entitled to the tithe of wool and lamb. In 1835, the gross annual income of the living was returned at £179, subject to permanent payments amounting to £14. The income at present is £170, towards which the late Master of Sherburn Hospital contributed a voluntary payment of £30 per annum. On his death, the management of the hospital fell into the hands of the Charity Commissioners of England and Wales, who, in an amended scheme, published May 10, 1855, proposed to endow the vicarage of Bishopton with a permanent augmentation of £70 per annum.

CHARITIES.

Barker's Charity.—The yearly sum of £1, left by Thomas Barker (see vol. i., p. 467), is paid by a tenant of the Marchioness of Londonderry at East Newbiggin, and distributed at the church, amongst the poor of the parish, by the churchwardens on Candlemas-day.

Thompson's Charity.—Robert Thompson, by will, January 31, 1715, charged his property in the township of Bishopton with £5, left to the poor by his uncle, William Robson, deceased. In respect of this sum, the owner of Bell's Field pays 5s. a year, which is distributed with the preceding charity.

Donors unknown.—The churchwardens receive 5s. annually from the owner of some houses in Bishopton, and 13s. 4d. from the owners of certain land in Little

Stainton. The latter sum is distributed with the above charities, and the 5s. in penny and twopenny loaves at the same time.

EAST AND WEST NEWBIGGIN.

THIS township, 6 miles west from Stockton, contains five farms, on which are seven inhabited houses. The property was assessed for the county-rate, in 1853, at £538 5s. The successive population returns give the number of inhabitants at 42, 34, 26, 35, 37, and 37; of which latter number 24 were males and 13 females.

The purchasers from the Conyers in East Newbiggin were, Richard Cusson, Giles Widdowes (vicar of Bishopton), Thomas Morrie, and John Widdowes. The present proprietors in the township are, the Marchioness of Londonderry; the representatives of the late Earl of Eldon; William Lambton, Esq.; Mr. Bryan Watson, *West Newbiggin*; Watson Alcock, Esq.; and Mr. Tinkler, of Stockton.

LITTLE STAINTON.

THIS township and hamlet occupy the most westerly part of the parish, and are 7 miles west-by-north from

* In 1798, one of those tragedies occurred at Little Stainton which sometimes disturb the quietude of the most rural districts. Mary Nicholson, a servant with Mr. John Atkinson, farmer, was an orphan, and considered of very weak intellect. It was reported that her master had taken great liberties, and behaved very cruelly to her; and she at length procured some arsenic at Darlington, which she mixed with flour intended for a pudding for her master. On his coming home, he declined eating; and the poisoned flour was made into bread for the following morning's breakfast, of which the whole family, except the servant, partook. In consequence, the family were taken ill, and a medical man was hastily sent for, who succeeded in recovering all but the aged mother of the farmer, who, after lingering for several weeks in great pain, expired. The family had no doubt of the girl's guilt, but merely discharged her from their service, telling her that if she never came near Little Stainton again, they would take no proceedings. The wretched creature, having no person to relieve her on being turned out of doors, wandered about the country for several days and nights, and was only sheltered and fed

Stockton, and a mile south from Stainton-le-Street. The township is divided into four farms,* containing, altogether, 1,083 acres. The number of inhabitants, at the successive returns, was 59, 62, 62, 54, 74, and 82; 42 of the latter being males and 40 females. In 1853, the property was valued for the county-rate at £797 5s.

Forwood, Elstob, Welfoot, Johnson, Newton, and Marchell, were the purchasers in this township from the Conyers. In 1644, the sequestrators let "to Lancelot Lambe, of Bishopton, all the tythes of corn and graine in Little Stainton, and East and West Newbiggin, late belonging to Coll. Thomas Davison: the rent xxxs. monthly." Various changes of proprietorship have occurred in the township. Lord Chancellor Eldon acquired lands, to which has since been added property late belonging to the Rev. Henry Askew, of Greystock, Cumberland, and Mr. James Leybourne Chambers; the whole being now held by the representatives of the late Earl of Eldon. A messuage, garth, garden, and farm, the property of the late Mr. John Briggs, were sold by his widow, in 1853, to William Trotter, Esq., of Bishop Auckland, who has also acquired property late belonging to the Rev. John Bright, of Sciffington, Shropshire.

on one occasion by Mr. Ord, farmer, of Newfield, near Darlington. At length, she returned to her previous home, and told the Atkinsons that she could not rest day or night, and that they might send her to gaol, or treat her as they pleased. Accordingly, she was sent to Durham, and tried at the assizes following. She stood in court alone, without a friend, without a soul to speak in her behalf, and was found guilty, but her case referred to the twelve judges. At the July assizes of the following year (1799), she was sentenced to die. On the 22nd, an immense crowd of spectators assembled to witness her end on Framwellgate Moor. After being launched from the cart, and remaining suspended for some little time, when still conscious, the rope broke and she fell to the ground. Upwards of an hour elapsed before another was procured. "In the interim," says the *Newcastle Chronicle* of the day, "she recovered her faculties, and conversed with her unhappy relatives till a rope was brought, when she was launched into eternity amidst the shrieks and distressful cries of the surrounding spectators."

STOCKTON WARD.

THE NORTH-EAST DIVISION.

PARISH OF HART.

Hart parish of Hart is bounded by the sea on the east, on the north and north-west by Monk-Hesledon parish, on the south-west by Elwick Hall, and on the south by Stranton. It comprises the following townships, viz., 1, Hart; 2, Throston; 3, Dalton-Piercy; 4, Elwick; 5, Thorp-Bulmer; and, 6, Nesbit. The two latter, which form the most northerly part of the parish, are in Easington Ward; and Nesbit, which in 1841 was returned in the population census with Monk-Hesledon, is attached to Easington Union. The parochial chapelry of Hartlepool was held by the vicars of Hart; but, in 1807, it became a perpetual curacy.

HART.

THE township of Hart includes 2,589 acres, of which 223 are water. Its population, at the six periods of return, was 219, 228, 231, 243, 276, and 297; 154 of the latter being males and 143 females. There were, in 1851, 49 inhabited houses, 2 uninhabited, and 2 building. The annual value of property assessed to the county-rate in 1853, was £3,476 10s.

The following is the account of that part of the parish of Hart connected with Stockton Union, for the year ended Lady-day, 1854:—

RECEIPTS.

Poor-rates: Hart, £130 17s.; Throston, £72 4s.; Dalton-Piercy, £38 1s.; Elwick, £67 14s.; Thorp-Bulmer, £41 11s.	£. s.
	350 7
In aid of poor-rate, &c.: Hart, £5 3s.; Throston, 6s.; Dalton-Piercy, £3 10s.; Elwick, £1 4s.	10 3
Total receipts.....	£360 10

EXPENDITURE.

In-maintenance: Hart, £24; Throston, 12s.; Dalton-Piercy, £1 7s.; Elwick, £2 13s.	28 12
Out-relief: Hart, £55; Throston, £4 5s.; Dalton-Piercy, £15 14s.; Elwick, £41 7s.; Thorp-Bulmer, £6 10s.	122 16
Carried forward.....	£151 8

Brought forward	£151 8
Workhouse loans repaid: Hart, £4 12s.; Throston, 19s.; Dalton-Piercy, £2; Elwick, £2 16s.; Thorp-Bulmer, 13s.	11 0
Salaries and rations of officers: Hart, £6 10s.; Throston, £1 7s.; Dalton-Piercy, £3; Elwick, £5 17s.	16 14
Other expenses: Hart, £2 14s.; Throston, 11s.; Dalton-Piercy, £1 5s.; Elwick, £2 8s.	6 13
Total expenses connected with relief	186 0
Costs of law proceedings: Hart.....	9 7
Constables' expenses before justices: Hart, 12s.; Throston, 12s.; Dalton-Piercy, 10s.; Elwick, 11s.; Thorp-Bulmer, £1 1s.	3 6
Vaccination: Hart, 19s.; Dalton-Piercy, 10s.; Elwick, £1 16s.	3 5
Registration fees to clergymen: Hart, 18s.; Throston, £1 9s.; Dalton-Piercy, 4s.; Elwick, 12s.; Thorp-Bulmer, 2s.	3 5
County-rate, &c.: Hart, £58; Throston, £62 3s.; Dalton-Piercy, £12 14s.; Elwick, £20 12s.; Thorp-Bulmer, £23 17s.	177 6
Registration: Hart, 15s.; Throston, 4s.; Dalton-Piercy, 10s.; Thorp-Bulmer, £1 4s.	2 13
For other purposes; Hart, £7 13s.; Throston, £4; Dalton-Piercy, £5; Elwick, £7 6s.; Thorp-Bulmer, £1 15s.	25 14
Total expenditure.....	£410 16

The Hartlepool railway, which passes over an extent of 1 M. 6 F. 103 Y. in this township, and covers 45 acres,

contributed £60 to the local rates in 1851, and £30 in 1852; the gross amounts collected in those years being £173 16s. 6d. and £86 17s. 9d.

HISTORY.

THE name of Hartness was applied to the whole district between the mouth of the Tees and a little to the north of the modern limit of Stockton Ward, and is supposed to signify the headland (Scandinavian, *ness*) or promontory of stags. In the Chronicle of Lindisfarne, however, as quoted in Lambard's Dictionary, "Heortness" is mentioned as "a town in the north partes, Ecgred, Bishop of the Holy Isle (from 830 to 845) builded and gave to the see for ever." This passage evidently applies to the town of Hartlepool.

Hart and Hartness, with other rich manors and wide domains, were held, before the Norman Conquest, by Fulk de Panell. To avenge the slaughter of Robert Comyn and his followers at Durham, the Conquerer entered Heortnesse, which he wasted with fire and sword, as well as other parts between York and Durham; "when grew so great famine that these northerns were forced to eat the flesh of men." Robert de Brus, a noble knight of Normandy, who had come over with the king, was rewarded by his royal master with Hartness, as well as with Skelton, Yarm, Danby, and other possessions in Yorkshire, and Annandale in Scotland.

It was probably a second Robert de Brus, son of the first, who married Agnes de Panell, daughter of Fulk. He founded the priory of Guisborough in 1129, and gave thereto the churches of Hart and Stranton, with their dependent chapels. He was joined with Barnard Baliol in offering terms of peace to the Scottish king David, and afterwards shared in the victory over that monarch on Cowton Moor in 1138. He died in 1141, and was buried in his abbey of Guisborough.

Adam, eldest son of Robert, succeeded to the estates in Yorkshire. A younger son, Robert, had been presented by his father with the lordship of Annandale; but, fighting in the cause of his liege lord, the king of Scotland, he was taken prisoner by his father, and transferred by him to the English king, who graciously delivered the young captive back to his parent. It is related that having complained that his valley at Annan produced no wheaten bread, his father added to his former possessions the more fertile district of Hart and Hartness, for which, in 1171, he paid 100s. into the chequer as scutage, on the marriage of the king's

daughter. He gave to the monastery of Guisborough six oxgangs of land in Stranton and one in Hart, with the chapel of St. Hilda at Hartlepool. He died in 1171, and was succeeded by a son of his own name. William, son of the latter, who died in 1191, had a son named Robert, who married Isabel, daughter of David, Earl of Huntingdon, and grandchild of Henry Prince of Scotland, and thus acquired for his posterity their claim to the crown of that kingdom. On his death in 1245, he was succeeded by his son, the sixth Robert de Brus, who adhered to the cause of Henry III. in the barons' wars: he was captured at Lewes, but restored by the victory of Evesham. In 1291, he was brought into competition with Baliol for the disputed succession of the Scottish throne; but resigned his pretensions, and died in 1295.

Amongst the chivalry who devoted their youth to the holy wars, was Robert, son of the last named Robert de Brus. After his return from Palestine with Prince Edward, when he is described as having been "an illustrious knight, and a most beautiful young man," he was hunting, with a large party, in the woods near the castle of Turnbery, the seat of Martha, the young Countess of Carrick (whose father, Earl Neil, had fallen in the crusades), when he was met by the lady herself. She was so enamoured at first sight, that, according to Fordun, she gave him the salutations and embraces "usual in courts," and entreated him to partake of her diversions. "When he betrayed a reluctance to her proposal, she forcibly drew his reins back with her own hands, and led the knight, against his will," to her castle, where she kept him in gentle durance for "fifteen days and more." They were shortly afterwards married; and King Alexander, provoked at the clandestine union, seized the lands of Carrick, but soon restored them, and Brus thus became Earl of Carrick. He acknowledged the title of Baliol in 1293, and remained all his life in the allegiance of England. He had summons to parliament in the 23rd, 24th, and 25th Edward I., and attended that monarch in his invasion of Scotland. His death took place, in his government of Carlisle, in 1304.

In 1306, the ninth Robert de Brus, after many vacillations, asserted his claim to the crown of Scotland; on which he was immediately declared a traitor and a rebel by King Edward; and his manor of Hart, the borough of Hartrepol, and all his other property in the bishopric of Durham, were granted to Robert Lord Clifford and his heirs for ever, saving the rights of the church of St. Cuthbert.

Five years previous, the king had granted the custody of the temporalities of the see of Durham, seized in the absence of Bishop Beck, to Clifford, who had served his royal master with fidelity during the Scottish wars. He was slain at the battle of Bannockburn, and was succeeded by his son, Roger, then a minor. Bishop Kellawe, in right of the see, committed the manors of Hert and Hertness to the custody of William de Elmeden. Roger Clifford joined the rebellion of Thomas Earl of Lancaster against Edward II., and was taken prisoner at Boroughbridge in 1321, and soon after beheaded at York. His forfeited estates were granted to John Earl of Richmond, shortly after surprised and taken prisoner at Byland Abbey by King Robert Bruce, and who subsequently died in France.

In 1327, Robert, brother and heir of Roger de Clifford, was restored to his estates; and, about the same time, Bishop Beaumont established his claim before parliament to all the forfeitures in the palatinate which had occurred in the reign of Edward I. Clifford died in 1344, seised of the manors of Hert and Hertness, held of the see by the service of two knights' fees. Robert, his son, being only 13 years of age, Bishop Bury committed the estates to the care of his escheator, William de Mordon. Robert de Clifford afterwards served at the battle of Cressy; and on his death about 1362, he was succeeded by his brother, Roger Lord Clifford, who died in the 13th year of Richard II., seised of the manors of Hert and Hartilpole, with the towns of Elwick, Stranton, and Brerton. Thomas Lord Clifford, his son, who died two years afterwards, was succeeded by John Lord Clifford, then an infant, afterwards slain at the siege of Meaux in France, in the 9th of Henry V. Thomas Lord Clifford, his son, lost his life in the battle of St. Alban's, fighting for Henry VI.; and, faithful and zealous for the house of Laucaster, John, his successor, made so great a slaughter with his own hands, at the battle of Wakefield, that he was thenceforth styled "The Butcher." He was slain at the battle of Towton, on Palm-Sunday, March 29, in the first year of Edward IV., leaving two sons; the eldest, Henry, only seven years of age.

The victorious Yorkists eagerly endeavoured to find the children of the fallen warrior; but his widowed

lady had her youngest son conveyed to the Netherlands (where he soon after died), and concealed the eldest at Lonsborough, in Yorkshire, with a shepherd who had married an attendant on his nurse. Though brought up as the son of the shepherd, the youth patiently submitted to the deprivations and humiliations of his life, occasionally cheered, as they were, by the stolen visits of his mother. The marriage of that lady with Sir Lancelot Threlkeld did not interfere with her maternal care; for when, about the eighth year of Edward IV., her father, Earl Vesci, died, and rumours were spread about the court that the young Lord Clifford was still alive, she, with the assistance of her husband, had the shepherd, with his wife and family, conveyed to the mountains of Cumberland, near the Scottish Border, where she was enabled to continue her hazardous visits to her son. In this obscure condition he continued till the beginning of Henry VII.'s reign, when he was nearly 30 years of age, and so meanly bred as to be unable to read. He was, however, restored by King Henry to his lands and honours, and learned to write his name. He took up his principal residence at Barden Tower, in the vicinity of Bolton Priory, "to the end," says Dugdale, "he might have opportunity to converse with some of the canons of the house (as it is said) who were well versed in astronomy; unto which study having a singular affection (perhaps in regard of his solitary shepherd's life, which gave him time for contemplation) he fitted himself with diverse instruments for use therein." He held a command at Flodden Field, and died in 1523.

Henry Lord Clifford, son of "the shepherd lord," was one of those who, in the parliament of 22nd Henry VIII., subscribed the letter to Pope Clement VII., importuning him to ratify King Henry's divorce from Queen Catherine. He was created Earl of Cumberland and Knight of the Garter, appointed Lord President of the North, and several times Lord Warden of the Marches. His death took place April 22, 1542; when he was succeeded by his son, Henry Lord Clifford, second Earl of Cumberland.* George, the third earl, was 12 years of age at the death of his father, and was educated at Cambridge under John Whitgift, afterwards Archbishop of Canterbury. He was a brave warrior, a distinguished voyager, and an

* In Whitaker's Craven it is related that, about 1547, Clifford "fell into a languishing sickness, and was reduced to such an extreme state of weakness, that his physicians thought him dead. His body was already stripped, laid out upon a table, and covered with a herse-cloth of black velvet, when some of his attendants, by whom he was

greatly beloved, perceived symptoms of returning life. He was once more put to bed, and, by the help of warm clothes without, and cordials within, gradually recovered. But, for a month or more, his only sustenance was milk sucked from a woman's breast, which restored him completely to health, and he became a strong man."

accomplished courtier.* In 1536, he was one of the peers who sat in judgment upon Mary Queen of Scots at Fotheringhay. "His first voyage," says Dugdale, "was to Sluys in — an. 1587, to assist Sir Roger Williams against the Duke of Parma. His second in an. 1588, when the Spanish navy threatened an invasion here, wherein he did great service. His third to the isles of Terceira and Azores, where he took the fort of Fyals, and received a dangerous wound. His fourth to the coasts of Spain; and his last to S. John de Portarico, where he won the town, with great honor, and returned safe into England about the beginning of October, an. 1598." He was made a Knight of the Garter in 1592; but his "building of ships, hors-racing, tilting, and the like expensive exercises," involved him in necessities, which compelled him, in 1586, to sell a great portion of his estates; and, amongst others, the manors of Harte, Hartnesse, Hartlepool, Thurston, Over Thurston, Nether Thurston, and Nelston, were purchased by John Lord Lumley, of Lumley Castle, for £5,350.

After remaining in possession of the Lumley family till 1770, the above estates were sold by Richard, fourth Earl of Scarborough, for £72,000, to Sir George

* His new-year's gift to Queen Elizabeth, in 1600, was "one petty-cote of white sarcenet, embrothered all over with Venyce silver plate, and some carnae'on silke, like Columbine's." His countess presented "one paire of braceletts of golde, conteyning eight peeces like knottes, and eight rounde peeces, garnished with small sparks of ruybes, pearle and half pearle."

† SIR GEORGE POCOCK.—This distinguished naval commander was son of the Rev. Thomas Pocock, chaplain to Greenwich Hospital. He was born March 16, 1706, and entered the navy in the twelfth year of his age. Having honourably passed through the subordinate ranks of his profession, he was promoted to the rank of post captain in 1738, and joined Rear-admiral Haddock's squadron in the Mediterranean, where he made several rich captures. In 1745, he convoyed four of the East India Company's ships out; and on his return, was ordered to the West Indies, where, on the death of Commodore Legge, September 19, 1747, he succeeded to the chief command on the Barbadoes station. In 1754, in the *Cumberland*, of 66 guns, he joined Rear-admiral Watson's squadron in the East Indies, which reduced the fort of the famous pirate Angria. He was made rear-admiral of the white on February 4, 1755; and on the 4th of June, in the following year, rear-admiral of the red. He assisted at the recovery of Calcutta from the Nabob Surajah Doulah, and afterwards served at the reduction of Chandernagore. Admiral Watson died at Calcutta, August 16, 1757, and Admiral Pocock succeeded to the chief command in the East Indies, where he fought two severe battles with the French fleet under Count D'Ache, who was compelled, on both occasions to escape by flight, and take shelter in Pondicherry road. Here it was not thought prudent by the British commander to attack both the ships and the fort at one time; and he accordingly lay in the offing, keeping his line of battle formed. The French squadron, consisting of eleven sail of the line and two frigates, at length sailed out; but instead of engaging, M. D'Ache made the signal for his ships to

Pocock, K.B.,† from whose descendant, George Pocock, Esq., of Holwood House, Kent, and Twickenham, Middlesex, they were purchased, about 1830, by William-Harry, then Marquis, and afterwards Duke of Cleveland.

By the will of this nobleman, dated June 15, 1836, he bequeathed his Hardwick, Hartlepool, and Hart estates to the use of Henry Lord Brougham and Vaux, Thomas Metcalfe, and Gerard Bliss Wharton, upon trust for Frederick-Acclom Milbank, second son of the testator's daughter, Lady Augusta-Henrietta Milbank (see page 108), and his heirs male; failing which, for Henry-John Milbank, third son of his said daughter, or for Augustus-Sussex Milbank, her fourth son, or for her younger sons in succession, and their respective heirs; failing which for Mark-William-Vane Milbank, her eldest son and his heirs. In default of such issue, the trust was to be for the second and succeeding sons of the testator's daughter, Lady Laura Meyrick, and their issue; failing which, for her eldest son, Augustus-William-Henry Meyrick, and his issue; failing which, for the sons of his other daughter, Lady Arabella Arden, and their issue, in the same order; failing which, for the testator's own right heirs for ever.

make sail to the southward, by which they increased their distance from the British fleet from about a random shot at daylight, to near four leagues to windward. As it was the opinion of the rear-admiral and captains that the condition of the squadron was not such as to warrant following them, Admiral Pocock proceeded to Madras. In the following year, he returned to England, leaving the command to Rear-admiral Stevens. In 1761, he was honoured with the Order of the Bath; and the East India Company placed his statue in marble in their hall. Having been promoted to be admiral of the blue, he sailed in the *Namur*, of 90 guns, to the West Indies, where he took the command in chief of the fleet engaged in the memorable expedition against the Havannah, the capital of Cuba. This fleet consisted of 26 ships of the line, 15 frigates, and a considerable number of sloop of war and bombs, amounting altogether to more than 50 vessels of war, which arrived off the Havannah on June 6, 1762. The land forces under the command of the Earl of Albemarle, brother to Admiral Keppel, amounting to upwards of 10,000 men, were landed on the next day; and the joint operations of the army and navy were conducted with such vigour and unanimity that the Morofort was taken by storm, after a siege of 29 days, during which time the enemy lost above 1,000 men. About a fortnight afterwards, the governor desired to capitulate for the town, which was granted. The private property of the inhabitants was secured by the treaty; but the conquerors found a booty computed at near three millions sterling, in silver and valuable merchandise, belonging to the king of Spain, besides an immense quantity of arms, artillery, and military stores. On his return home, Sir George Pocock received the thanks of both houses of parliament, of the city of London, and other public bodies, for his distinguished services, but never accepted of any subsequent command, and, in the year 1766, totally retired to private life. He died at his house in Curzon Street, May Fair, April 3, 1792, at the advanced age of 87; and his remains were interred in the family vault at Twickenham.

On the death of the Duke of Cleveland, January 29, 1842, an act of parliament was obtained (5 and 6 Vict., c. 22) to enable the trustees of his will to grant mining, building, and other leases of the trust estates, and to sell or exchange parts of them. The mining leases were not to exceed 41 years as regarded quarries of stone, coal mines, and seams of coal, or 60 years as regarded iron, ironstone, and coal accompanying them. Building leases were not to exceed 99 years; and the trustees were empowered to appropriate any part of the lands so leased for markets, crescents, open spaces, squares, roads, streets, &c. Power was also given to sell "Hartwick estate in the parish of Monk Heselton," "Hutton Henry estate, also in the parish of Monk Heselton," and "Hurworth estate in the parish of Kelloe," or to exchange these for other freeholds.

A second act, 9 and 10 Vict., c. 30, 1846, gave further powers to the trustees, and enabled them, for the advantage of Frederick-Acclom Milbank and other persons beneficially interested, to grant building leases for 200 years, instead of 99. Power was given to sell or exchange the Dalton-Piercy estate, stated to contain 145 A. 7 R.; also the whole of the corn tithes or half of the hay tithes of Hurworth estate, and to convey the "Slakes and land dry at low-water mark." The deceased Duke of Cleveland having entered into an agreement with the Hartlepool Dock Company to be at half the expense of excavating and deepening about 30 acres of the Slake, the trustees were empowered to raise, by mortgage on the trust estates, a sum not exceeding £4,000 for that purpose. The act provided that, after paying interest, one-twentieth of the money so raised should be annually discharged.

An act, 12 and 13 Vict., c. 16, 1849, "to enable the trustees of the will of the late Duke of Cleveland to raise certain monies on the trust estates in the county of Durham by the said will devised, and for the management of the said estates," recited that, since the passing of the previous act, "the said Frederick-Acclom Milbank had had an eldest son, William-Harry-Vane Milbank, then of the age of six months;" and that, as the proposed excavation would be a work of a permanent nature, and more likely to be beneficial at a distant time to the future proprietors of the estates than to the said Frederick-Acclom Milbank, then about 29 years of age, the provision for paying off the money proposed to be borrowed in 20 years should be repealed. It was also provided that the trustees might raise the sum of £1,129 4s. 5d. by mortgage, to meet the expense of carrying out an agreement entered into with the Hartlepool Gas and

Water Company; and they were empowered to alter or rescind the agreement with the Hartlepool Dock Company for excavating the tidal lands called the Slake. The Court of Chancery was to allow, tax, and settle all costs and expenses incurred by the trustees in the exercise of their functions.

By indenture, December 22, 1849, the trustees, with Frederick-Acclom Milbank, granted to John Sutton, Esq., the lands and hereditaments therein described for the term of 500 years, subject to the proviso for cessor of the term on payment of the sum of £1,869 4s. 3d., being the amount of costs, charges, and expenses which the trustees were authorized to raise. By indenture, March 23, 1853, Henry-William Woodhouse was constituted a trustee in the place of Thomas Metcalfe, who, by reason of unsoundness of mind, had become unable to act. Another indenture, June 13, 1853, states that Matthew Ford, Gent., of Lincoln's Inn Fields, had been appointed by the Lords Justices sitting for the Lord Chancellor to join and concur with the necessary parties in conveying the lands; and he, in pursuance of the order in Chancery, with the consent of Lord Brougham, conveyed to Christopher White, Gent., of Lincoln's Inn, the manors, &c., to hold to the use of the trustees.

After the passing of the last-mentioned act of parliament, a suit in Chancery was instituted between the trustees and Elizabeth Duchess Dowager of Cleveland, Lord Harry-George Vane, Frederick-Acclom Milbank, and William-Harry-Vane Milbank, for the purpose of ascertaining whether the agreement between the late duke and the Hartlepool Dock and Railway Company could be enforced; when the Master found that there was no contract capable of being enforced against the company.

An act, 16 and 17 Vict., c. 29, received the royal assent August 20, 1853, for extending the powers of the trustees, and enabling them to raise money on the trust estates. The preamble recites, amongst other circumstances, that, since the passing of the previous act, Frederick-Acclom Milbank had had another son, Powell-Charles-John Milbank, then about twelve months old. The act provides that clauses as to short-workings may be inserted in mining leases, which may thus be assimilated to the general custom of the county. Lands may be leased for villa sites, for terms not exceeding 200 years, provided each site shall not exceed 10 acres, and that the villas or dwelling houses be of a superior class. Covenants to insure in certain cases may be dispensed with. The trustees may reserve and accept rights, and may exchange any part of the estates for

straightening boundaries, &c. Power is given to effect an exchange, not exceeding 5 acres, with William Grey, Esq., of Crimdon House, according to an arrangement entered into during the life-time of the late duke, on the formation of the Hartlepool railway. The trustees may sell any part of the estates for public purposes, reserving a ground-rent; and if any fine be paid, it is to be treated as money arising under power of sale. They may, with the sanction of the Court of Chancery, excavate the Slake, and for that purpose raise money by mortgage of the estates, which shall not exceed £4,000. A new embankment having been erected on the west side of the Slake, as required by the Admiralty, and a common sewer made to drain the adjoining building ground, at a cost of £945 10s. 3d., by Frederick-Acclom Milbank, the trustees were empowered to raise that sum by mortgage. They were also empowered to raise, by the same means, any sum not exceeding £10,000 for the purpose of constructing or erecting "any railway stations, reservoirs, water-works, docks, graving docks, slip-ways, ship-building yards, and other works generally connected with ship-building and dock purposes, and for erecting ballast cranes and machines for raising ballast out of vessels, and constructing railways and tram-roads, for the removal of ballast from vessels and depositing the same on the said estates, or for conveying goods and merchandise to or from ships, or to or from manufactories, and for the purpose of levelling or contracting with any other person or persons or bodies corporate for the levelling of sand-hills on the said estates, so as to convert the same and any other portion of the said estates into land for building and other beneficial purposes, and for the purpose of making sewers, roads, streets, or ways, and all necessary works belonging thereto, and for the purpose of purchasing the pipes and other materials laid down and used by the said Hartlepool Dock and Railway Company for conveying the water from Dyke House Springs on the said estates to the works of the said company at Hartlepool aforesaid, and also for all such other works or matters connected with the said estates which the said Court of Chancery may from time to time think beneficial." All monies raised under this power are to be extinguished in 20 years, commencing at the end of 10 years after the money shall be raised. The remaining provisions of the act relate to the arrangement of costs;

* Mr. Ellerker was a well-known race-horse breeder; and several of his stud—Saxony, Cleveland, Cardinal York, &c., have competed successfully on some of the principal race-courses in England. Mr. Ellerker was succeeded in his pursuits by Mr. Robert Stephenson;

settlement of disputes by arbitration; leases of easements, privileges, waterleaves, or wayleaves through or over lands, &c., adjoining the estates; settlement of accounts; priority of incumbrances; trustees' accountability, &c. The short title of the act is, "Duke of Cleveland's Harte Estate Act, 1853."

The village of Hart is situated 11 miles north-by-east from Stockton, and 4 miles west from Hartlepool. It occupies the brow of a considerable eminence, which commands a fine view of the town of Hartlepool, with its ancient church towering above the docks and shipping, the modern town of West Hartlepool, the village of Stranton, and a long extent of sea coast to the north and south. On the south-west side of the church-yard is the Manor-house, formerly the residence of the Ellerkers, and now of the family of the late Mr. Robert Stephenson.* Included in some farm-offices, a little further to the west, are the well-preserved remains of an ancient building, supposed to be monastic, and in which tradition asserts that the celebrated Robert Bruce was born. In the village are a public-house (though formerly there were three), a brewery, a mill, two blacksmiths, two cartwrights, and a few workmen. A school was built in 1828, at the west end of the village, by the late Duke of Cleveland; it is capable of accommodating about forty scholars, and at present about twenty attend. It is without endowment, being supported by the subscriptions of the children.—The parish feast is held on the Sunday and Monday before Old St. Magdalen's day.

From Hart, seventeen persons joined the rebellion of 1569, of whom four were executed. In 1587, the plague raged with great virulence in the village and neighbourhood; no fewer than "89 corsers" were buried, one of which was "a young woman unknown, who died in the street."

An attempt was made to procure coals near Hart in 1735, when the depth of the boring through a bed of hard limestone was 55 fathoms, 1 yard, 1 foot, 4 inches; after which, a succession of open limestone, with soft marly partings and water, put a stop to all further proceedings. In 1808, the attempt was renewed about 200 yards from the place previously tried: at the depth of 29 fathoms, beneath an uninterrupted bed of hard limestone, there was a considerable quantity of water,

and Virago, Voltaire, and the winner of the Derby in 1850—Voltigeur, are well known in the sporting world. Mr. Stephenson died in 1852, and his valuable stud was sold at the following Doncaster meeting.

succeeded by 50 fathoms of limestone; beneath this the workmen came to a quicksand, through which the bore-rods penetrated 4 yards without any signs of its termination, and the work was abandoned.

THE CHURCH.

HART church, which is the mother church to St. Hilda, Hartlepool, is supposed to have been of Norman architecture, although but little of the original now remains. The tower itself is Norman; but the upper portion has been removed and a modern termination given to it. In the body of the church, large modern pointed arched windows have been introduced instead of the original small windows, and a flat plastered roof given to the chancel when it was rebuilt in 1806. The edifice, which stands at the north of the village, consists of nave with side aisles and chancel. There is an old bas-relief of St. George and the Dragon on the outer south wall of the chancel, which, from exposure, is much decayed. Within the entrance porch, which is on the south, are six grotesque heads, considerably mutilated. The south aisle is formed by three small octagonal pillars, supporting four obtusely pointed arches, with two south windows and one to the east. A short thick column, supporting two circular arches, above which are eleven grotesque heads, divides the nave from the north aisle. The roof of the nave is of fir, and those of the aisles oak. A large circular arch divides the nave from the chancel: the latter has three windows; one at the east end and one on each side. On the south side of the chancel is a mural tablet to the Ellerker family, and a similar monument in the south aisle to the family of the Scurfields. The pews were repaired in 1827, and the church will accommodate 250 persons. On the north side of the chancel a handsome organ has recently been introduced.

The baptismal font is a curious sculpture, formed of the limestone common in the neighbourhood. The base, the shaft, and the basin, are all octagonal. The base is sculptured with alternate cherubs' heads and quatrefoils. On the sides of the shafts are niches, in which are figures of saints, with their appropriate symbols. Around the bottom of the basin are foliage and cherubs. On four of its compartments are the winged

* Alison Lawe, of Hart, who appears to have practised as a "wise woman," was buried on the fifth of August, 1558. Janet Bainbridge and Janet Allenson, of Stockton, "resorted to Alison Lawe for help of y^e sick;" and in the following year, "they did ask counsell at witches." At Norton, she is declared to have "been a sorceror, and is now suspected of the same." Having been cited to appear in court, as "a notorious sorceror and inchanter," she was sentenced to

stand in the market-place at Durham, "with a papir on her head," on the following Sunday in the church at Hart, and on the Sunday succeeding in the church at Norton.

lion of St. Mark, the eagle, and emblems of the other evangelists; figures of the apostles or saints occupy other three compartments; and the eighth contains a representation of the resurrection, with the cup, the scourge, and the spear. Billings remarks that this font, "though richly sculptured, has nothing to recommend it as a work of art;" it has, however, frequently been the subject of the artist's pencil.

The church-yard* is well drained and walled round, and is partially planted with shrubs. Bruce's grant of the churches of Hart and Stranton to Guisborough priory (1129) was confirmed by several of his descendants and by successive bishops. Bishop Beck, in 1288, in consequence of the burthens with which William de Middlesburgh, prior, and the convent of Guisborough, were oppressed, from their great expenditure in charities, &c., granted to them the vicarage of Hart, with the customary obventions and appurtenances, during the life of the said William, which they might convert to their use and relief, so that the vicarage were duly served by two virtuous and discreet canons, who were to practise hospitality to the poor as far as they were able. In 1308, the same prelate (then patriarch of Jerusalem), as a mark of his especial favour, in consequence of the religious devotion, the continual observance of hospitality, &c., of the prior and convent of Guisborough, granted them the indulgence that in the church of Hart and chapel of Hartlepool, where the cure of souls had previously been exercised by a secular vicar, divine service should, after that time, be perpetually performed by a canon of Guisborough, &c. In the valuation or taxation of ecclesiastical benefices which was made in the reign of Edward I., in consequence of a grant of the ninth part of their value by Pope Nicholas for the aid of that monarch in his expedition to the Holy Land, the vicarage of Hart was valued at £40; equivalent to nearly £500 in the money of the present day.

REGISTERS.—Books Nos. 1 and 2 (parchment) contain entries of baptisms from 1577 to 1812, burials from 1577 to 1676, and marriages from 1577 to 1753; No. 3, burials from 1677 to 1812; and No. 4, marriages from 1754 to 1812.†

VICARS.—J. de Wirkesall; J. de Cotum, 1358, p. res. Wirkesall; J. Hall; J. Easingwald, 1418; R. Sornebie, 1501; W. Wilson; R. Todde, LL.B., 1537, p. m. Wilson; W. Hardyn, el., 1554, p. res. Todde; J. Robson, el., 1584, p. m. Hardyn; Gabriel Price, 1598; J. Leake, A.M., 1613; E. Young, el., 1626, p. m. Leake;.....Bowey, an intruder, ejected for non-conformity; E. Smathwaite, A.B., 1661; S. Woodfield occurs 1689; R. Werge, A.M., occurs 1723; J. Morland, el., A.M., 1735, p. res. Werge; Benjamin Pye, B.C.L., 1770, p. m. Morland; Richard Ridley, A.M., 1808, p. m. Pye; Edward Moises, A.M., (morning lecturer of All Saints, Newcastle, and master of the Royal Grammar School at that place) 1811, p. res. Ridley; William Gorst Harrison, A.M., 1845, p. m. Moises.

The vicar of Hart furnished one lancer and three archers to the general array of the clergy in 1400.

The vicarage-house is at the west of the village, and was enlarged and improved a few years ago. The glebe consists of about 72 acres; and the vicar is entitled to the tithes of certain farms, called "the three Thorps." Several of the vicars have made occasional claims on the tithes of Hartlepool; but, in consideration of the poverty of that benefice, they did not persevere further than the assertion of their undisputed right. The annual income is stated at £247, subject to a permanent payment of £25, leaving £222 clear.

CHARITIES.

Charities of Bromley and others.—Robert Bromley, by deed, November 24, 1668, gave to the poor of the lordship of Hart the sum of £20, the interest to be applied towards putting out apprentices. The principal, with other money given to the poor by a person named Barker, is supposed to have been laid out by Edward Ellerker, steward of the estate, in building three cottages on land now belonging to F. A. Milbank, Esq. Another sum of £35, the gift of some person unknown, was, in 1786, vested in Mr. Ellerker, and produced £1 15s. a year. One of the cottages was fitted up as a school by the late Duke of Cleveland; another was inhabited by a pauper placed there by the overseers; and the third let by them to a blacksmith at 20s. a year. Nothing appears ever to have been given

buried."—"1652. John Pasmore departed this life one Sunday, and was buried on black Monday, 29th of March. There was a star appeared in the south-east; y^e sun eclipsed."

There are several entries respecting members of the families of Lawson and Howard, both of Thorp-Bulmer.

to the poor, or applied in putting out apprentices, in respect of this charity. The cottage used as a school-room is now occupied by the master of the new school, rent free, and the other two by the blacksmith, who pays to F. A. Milbank, Esq., 20s. per annum for his shop and 25s. for the cottage behind.

See township of DALTON-PIERCY.

THROSTON.

THE township of Throston adjoins that of Hart on the south, and contains 1,575 acres, of which 104 are subject to tidal overflow. The population returns, at the periods of enumeration, give the numbers at 58, 48, 71, 70, 101, and 240; of which latter number 187 were males and 53 females. For the accommodation of this population, there were, in 1851, 18 inhabited houses, and 4 more were being built. The property was assessed to the county-rate, in 1853, at £3,756. The township contains 7 farms.

The Hartlepool branch of the York, Newcastle, and Berwick railway, extending over a mile, and covering an area of ten acres in this township, contributed £20 towards the local rates in 1851, and £15 in 1852; the total amounts collected in those years being £125 19s. 1d. and £71 0s. 8d.

The hamlet of Throston is 2½ miles west-by-south from Hartlepool, and 11 north-north-east from Stockton. The township has always been a part of the Hart estate, and passed with it through its successive proprietors.

ELWICK.

THE township of Elwick forms the south-western portion of the parish of Hart. It covers an area of 1,500 acres; and contained, in 1851, 55 inhabited houses, 3 uninhabited, and 2 building. In 1853, the annual value of property assessed for the county-rate was £1,229, 13s. The decennial returns of population are 170, 179, 213, 232, 238, and 250, the latter number consisting of an equal proportion of males and females.

The village of Elwick stands on the side of a hill, separated by a deep dene from the adjoining parish and church of Elwick Hall, and is 9 miles north-by-east from Stockton. It contains a mill, a tile manufactory, two public-houses, a dame's school, and the usual village tradesmen. An annual feast, at which the most popular rustic sports are kept up, is held on the Sunday and Monday after Old St. Magdalen's day.

Ailewic, in Hertenes, was given by the second Robert de Brus, in marriage with his daughter Agatha, wife of Ralph, son of Ribald, of Middleham. Their great-grandson left three co-heiresses, the eldest of whom married Robert Neville, in whose posterity the manor of Elwick remained till the rebellion of 1569. That outbreak was joined by five of its inhabitants, of whom one was executed. After the attainder, a number of small freeholds were formed. The principal proprietors at present are the representatives of the late J. Martindale, Esq., and of Mr. Shafto, solicitor, Durham. Mr. Robert Darling holds property in the township. The owner of *Dovecot farm* resides in London.

DALTON-PIERCY.

THE township of Dalton-Piercy is the most southern portion of Hart, and is joined by the parish of Elwick Hall on the west, and by Brearton, in the parish of Stranton, on the south. Its extent is 987 acres; and the property was assessed for the county-rate, in 1853, at £760 12s. The population was returned successively at 70, 68, 75, 79, 78, and 91, of whom 43 were males and 48 females. The number of houses, in both 1841 and 1851, was 16 inhabited and 1 uninhabited.

The hamlet called *Red Lions* derives its name from two public houses on the Sunderland and Stockton road; it is 8 miles north-by-east from the latter place.

Dalton was sold, in 1370, by Henry Lord Percy to Sir John Neville, of Raby, and was forfeited in 1569 by the last Earl of Westmoreland. Since that time, it has been much divided; the Chiltons being the principal proprietors. Frederick-Acclom Milbank, Esq., and the representatives of the late Mr. J. Jobson, hold property in the township; and *Dalton-Piercy* and *Three Gates* farms belong to Queen's College, Oxford.

The sum of £20, given to the poor of Dalton-Piercy by some person unknown, was, in 1786, vested in Mr. Chilton. It is now, say the Commissioners for inquiring concerning Charities, "in the hands of Robert Colman, of Hart-on-Hill; and there is a memorandum in the township-books, signed by Mr. Colman, acknowledging that he had £20 in his hands, which he received from Mr. Chilton. It is understood that the yearly sum of 20s. is distributed by Mr. Colman amongst poor persons in the township, according to his own discretion. It seems, however, desirable that this small sum should be disposed of in a more public manner." On the decease of Mr. Colman, since the Commissioners' enquiry, the property of Hart-on-Hill was sold to Mr. Stafford, Seaham.

THORP-BULMER.

THORP-BULMER, in Easington Ward, but in the parish of Hart, comprises 903 acres, of which 77 are tidal water. It is 5 miles north-west from Hartlepool, and 12 north-by-east from Stockton, and contains three inhabited houses, on the same number of farms; the value of property assessed for the county-rate in 1853 being £1,108 5s. 4d. The number of inhabitants, as returned by each census, was 24, 34, 24, 23, 21, and 31; the latter number consisting of 13 males and 18 females.

The Hartlepool railway extends over 6 furlongs, and covers an area of 23 A. 3 R. in this township. It contributed £16 5s. to the local rates in 1851; the gross amount collected being £27 9s. 8d.; and in the following year, to a gross amount of £41 11s. 1½d., the railway contributed £24 7s. 6d.

The township derives its addition from its early proprietors, the Bulmers, who held it from a remote period till the attainder of Sir John Bulmer, Knt., of Wilton Castle, Cleveland, 28th Henry VIII.; and the estate having consequently fallen to the see, Bishop Tunstall bestowed it on his nephew, Bryan Tunstall. John Lord Lumley and Catherine his wife appear in a pardon for alienation of Thorp-Bulmer estate in 1607. It afterwards became the property of the Lawsons, and was divided amongst their heirs, the Middletons and Wycliffes. That portion belonging to the Middletons descended through the Salvins and other intermediate proprietors to the Maires of Hardwick; and in 1765, John Maire of Lartington conveyed his property in Thorp-Bulmer to Elizabeth Hopper, widow, of Crook Hall, for £3,050.

The Thorp-Bulmer estate, containing 231 A. 0 R. 8 P., was advertised for sale, August 11, 1795. Its rent was then £120 per annum, and was valued at £180; the tenant paid for land-tax, £7 16s. 6½d.; church and poor assessments, about £6 15s.; and tithes, about £20. In a field to the south, belonging to Sir George Pocock, about half an acre had been given off Hart lordship, to entitle Thorp-Bulmer to a court held at Hart yearly. The principal proprietors at present are, W. Grey, Esq., Norton; and the representatives of the late John Davison, Bishop-Wearmouth.

NESBIT.

THE little township of Nesbit comprises one farm of 326 acres, with two houses, inhabited, at the successive returns of population, by 5, 5, 9, 10, 12, and 11 persons;

the latter consisting of 5 males and 6 females. The annual value of property was estimated, in 1853, at £174 3s. 4d.

In 1350, Hugh de Tesedale died seised of lands in Nesbyt held of the Nevilles and Bulmers. Amongst succeeding proprietors may be named Richard Aske and William Wilbafosse, Richard Radcliffe, the Wel-

burys, the Butteries, and the Bromleys of Hart. From the latter family it passed by marriage, in 1695, to John Spearman, Esq., of Hetton-le-Hole. In 1723, the Spearmans sold Nesbit and several estates in Sheraton, for £6,900, to Anthony Wilkinson, Esq., of Crossgate, Durham, to whose descendants they still belong. Nesbit pays a prescript rent of 20s. for great tithes.

PAROCHIAL CHAPELRY OF HARTLEPOOL.

THE chapelry, town, and royal borough of Hartlepool occupies a rocky peninsula, rising gradually from a narrow sandy isthmus. On the north-east, east, and south, its cliffs are washed by the German Ocean; on the south-west and west, it is bounded by the large inlet forming its harbour; and on the north-west, the isthmus above mentioned connects it with the parish of Hart, of which it forms a portion.

THIS chapelry contains an area of 990 acres, of which 150 are under tidal water. In 1801, the population was 993; in 1811, 1,047; in 1821, 1,249; in 1831, 1,330; in 1841, 5,256; and in 1851, 9,503, of whom 4,800 were males and 4,703 females. The increase at the two latter periods was ascribed partly to the presence of a considerable number of labourers employed in the new docks, and partly to the increasing trade of the port. On the night of March 30, 1851, 220 persons on board sea-going vessels were included in the enumeration. A workhouse belonging to the Stockton Union contained 38 persons in 1841, and 42 in 1851. In 1841, there were 841 inhabited houses, 25 uninhabited, and 53 building; and in 1851, 1,466 inhabited, 28 uninhabited, and 29 building. The value of property assessed to the county-rate in 1853 was £18,670 6s. 8d. The municipal borough of Hartlepool is co-extensive with the chapelry.

In 1851, the York, Newcastle, and Berwick railway (now the North-Eastern company's), covering 2 acres, and passing over 1 f. 180 y. in Hartlepool, contributed £5 12s. towards the local rates, and £6 11s. 3d. in 1852. The gross amounts collected in those years were £1,072 15s. 6d. and £1,329 13s. 10d.

HISTORY.

THE venerable Bede relates that "Hicu (otherwise St. Bega), the first female who took the veil in Northumberland, founded the monastery of Hereteu (about 640), and soon after, retiring to Kaelcacaester (Tadcaster), was succeeded by Hilda, as abbess of Hereteu." Hilda

was the daughter of Hereric, grandson of King Edwin. She was early devoted to a religious life, and first founded a small monastery on the north of the Wear, but removed to Hereteu, where she governed the monastery with exemplary piety and regularity, and was visited by Bishop Aidan and other devout men. Her pious example at home, and the fame of her virtues abroad, contributed much to the advancement of Christianity; and, from her active benevolence, she received the name of "mother." So venerated was her character, that she has been ever since considered the patron saint of Hartlepool.

"Oswy, king of Northumberland," continues Bede, "had vowed to devote his daughter to the service of God if he was victorious over Penda, king of Mercia, and after his victory on the river Vinnaed, performed his vow by placing Ælfede, an infant of scarcely twelve months, in the convent of Hereteu, under the Abbess Hilda, who after two years (in 658) removed with Ælfede to Streaneshalch (Whitby), where she had obtained a grant of ten hides of land (from Oswy), and there founded an abbey." Hilda died at her new abode in 674. Neither history nor tradition has preserved any traces of the monastery of Hereteu, until the year 800, when it is recorded that the Danes destroyed Timmouth and Hartness. In 865, the nuns of St. Hilda, who had fled for refuge from Hartlepool to Tynemouth, were "translated by martyrdom to heaven." For ages, the very site of their convent was matter of conjecture; until a discovery of recent date, noticed hereafter, decided the question.

On July 13, 1174, Hugh, Count of Bar, nephew to

Bishop Pudsey, landed at Hartlepool with a body of Flemings, consisting of 40 knights and 500 foot soldiers, to assist William the Lion in his invasion of England; but on learning that the Scottish monarch was a prisoner at Alnwick, the infantry were immediately sent back to their own country. This is the first historical mention of Hartlepool by name;* but the fact of its being chosen for the landing of an armament proves it to have been previously a port of some consequence.

After the purchase of the wapentake of Sadberge by Pudsey in 1189, the Bishops of Durham claimed that Hartlepool should be held of them as chief lords of the see. William Brus succeeded his father, the fourth Robert, in 1191, and obtained a grant from the crown of a weekly market to be held at Hartlepool every Wednesday. In 1200, King John, by charter, created the town a borough, the men of which "shall be free burgesses, and have the same laws and privileges as our burgesses of Newcastle-upon-Tyne." In 1216, he confirmed to Robert, son of William Brus, the market granted to his father, and added the privilege of holding an annual fair on the feast of St. Lawrence and two days following.†

The claims of the bishops to wrecks of the sea, and other perquisites, were early distasteful to the lords of Hartlepool. During the minority of the fifth Robert de Brus, and whilst he was under the guardianship of Peter de Brus, of Skelton, the latter caused certain "mean men" of Hartlepool to seize a vessel that was cast on shore, for which they were fined 50s. by the justices at Sadberge. Peter then caused a burgess of the town, Gerard de Seton, known to be friendly to the bishop (Poor), to be seized and imprisoned at Skelton. Excommunication was, in consequence, solemnly hurled against all concerned, and Seton was allowed to return home. A fine of £20 against Brus was only remitted after three days' intercession with the bishop, at Darlington, by William Earl of Albemarle and John Earl of Lincoln. The justices of Sadberge ordered a memorial to be made out of the first wreck which fell to the bishop after this transaction; and accordingly a wooden cross was soon after erected in a place called Blake-lawe, between Hartlepool and Sadberge: it was formed

out of the mast of a wrecked vessel; and from the yard was made a candlestick, appropriated to the use of the church of Sadberge. The cross was standing in 1313.

The sixth Robert de Brus "buildded the haven and wall about the town of Hartlepole, with ten towers on eche syde of the haven, and a chayne to be drawne between them near the haven, which haven would hold a C sayle." In 1293, an inquest was held before the king's justices itinerant, to ascertain the privileges and liberties as well of the bishop as his tenants within the palatinate. "Robert de Brus hath at Hartlepool, within the liberty of the said bishop, market and fair, and assize of bread and ale, and all which to fair and market belong; and free port of the sea, and *keelage*, of every vessel with a boat 8d., and 4d. of every vessel without a boat, and *prisage* of fish.

Hartlepool was granted to the Cliffords with the other forfeited possessions of Bruce. In 1312, Sir James Douglas, at the head of a Scottish force, penetrated to Hartlepool, carrying off much spoil, and many prisoners of both sexes; and, two years afterwards, the Scots again ravaged all the country on the banks of the Tees, cruelly plundering and destroying the villages. The inhabitants of Hartlepool got on board their ships, with such goods as they could remove, and put out to sea till the danger was over.

The situation of Hartlepool, during the Scottish wars, rendered it a place of much importance; and its inhabitants were frequently entrusted with, or undertook, a share in the maritime transactions of the nation. Some were employed in the conveyance of provisions and stores, and others fitted out their vessels for actual war.‡ When, in 1346, the English fleet lay before Calais, the whole armament consisted of 738 ships, carrying 14,956 men, or an average of about 20 each. Those furnished by Hartlepool, however, were five in number, with 145 men, or 29 to each vessel. In 1354, the king ordered the admiral of the north fleet to "provide three vessels from the port of Tync or Hertelpool," to convey Bishop Hatfield to parliament.

Grants of tolls for the support of the walls and haven, repairing the pavement, and building the pier, were made by successive bishops; but armaments being no

amiable man would have rejoiced had he lived to see his prediction falsified and his comparison disproved.

‡ It does not appear that friends were always distinguished from foes. In 1379, the king directed a writ to Bishop Hatfield, on the complaint of William and John Canynges, merchants of Bristol, ordering John Hesilden, sen., Andrew Brountoft, &c., to appear in the courts of Westminster, for having seized and carried into Hartlepool a ship of Canynges', sailing towards Calais and Flanders.

* From Hart, with the Norman addition *le pol*, the pool, or mere. The British *poll* has the same meaning.

† "Hartlepool," says Surtees, "was now in that delightful state of existence which is allowed once, and once only, to all bodies, as well human as corporate, bourgeoning with the fresh vigour of young life, regardless of the distant hours of slow decay, which as surely await, if exempt from sudden ruin, every institution of human policy, as they do every form of mortal mould." This talented historian and

longer needed, and the shipping of the north gradually engaging in the coal trade of the Tyne, the port of Hartlepool began to decline; its importance ceasing with the Edwards. Its re-edification was thus urged on Cardinal Wolsey, in 1523, by Frankleyn, Chancellor of Durham:—"And after your liberties be enactyd and confermyd, your grace may straight waye, by writt of restitution, entre possession in Hartlepoole, whiche, with membris, is worth two hundrethe markes a yere standyng rents, besydes casualities. The recovering and fortifying of that haven town shuld be a gret profett and strenkithe to all ye Bishopricke, refuge to our Englishe shippes, and myghte do manie displeurs to the king's enemies, for wh^h purpose it is thought to stand best of any haven towne in Englande: the p'misses would [should] be remembered at this p'sent P'liament, or ells yo^r grace shal lose manie com'odities and profetts."

In 1535, an act of parliament was passed declaring Herthill Pole and Barney Castle, which the bishop *supposed* to be within his jurisdiction, to be parcel of the county of York, and not of Northumberland, as the men of Hertilpole "said and cleymed." The rights of the bishop were, however, restored by an act of parliament in the first year of Queen Mary.

On May 23, 1560, the Duke of Norfolk wrote to the Privy Council that "ther was certen Englishmen, that, about three weeks or a month past, were taken prisoners at Dunbar, which, upon their worde, returned hether for three or four dayes, who declared that the French had a *platt* of Hertelpole, where they minded to set men a land, and to fortify the place; which being done, they hooped to make York the bownes of England. This came out by an Italian, who is the fortifyer at Dunbar."

On the breaking out of the rebellion in 1569, Hartlepool was considered, both by the queen and by Cecil, as a likely place for the insurgents to receive succour from the Duke of Alva. Cecil fears it will "brede some longer trouble;" and again, 3rd Nov., "I would gladly hear more from you of Hertilpole." It was taken possession of by Christopher Neville, on the part of the earls; and, in a letter from Gregore Peacocke and John Fysokc, to the Earl of Sussex, dated 18th Dec., at "Scardeburch," they state, that "immediatly after our coming from York, we did pass from Scardburgh with one bark, with Sir Henry Percy, and did land him at Tynmouth, upon Friday next after; and, as we did pass by Hartilpole, we shot at them, and they at us; and, seeing the number, as we did

suppose, of two hundred men.—On the 17th Dec., being of Hartlepole, we took a coble and three men, which was on fishing; they declared that there was two hundred soldiers there, being footmen, and one Stafford and . . . being captaius of the said men, and that Mr. Nevill doth sometimes come and go thither with one hundred horsemen; and, as for shipping, there is none there, nor was not a great while, but four five-men cobles and sixteen small cobles. Desiring to know your lordship's pleasure what we shall do with the men of Hartillpull, for they are very poore, and hath almost *no clothes to their backs.*"

On the 11th December, Lords Sussex, Hunsdon, and Sir R. Saddler write to the council:—"The place (Hartlepole), with tyme and longe worke, may be made of such force as by good soldiers it might be kepte; but as it is, and possessed by such as have it, we think verily it cannot be kept three daies against us.—The haven will not receive any great shipp at full sea, and at lowe water all vessels lye upon dry ground; so as hardley can it serve for forein power.—We be sory that negligence was used by such as shuld have entered into it.—We had nether ordinance nor shott to putt into it; and that many parts of the walls were broken downe. We think that such as shold have entered into it, could neither have kept it from the rebels, nor from any forein force."

Sir H. Gates took possession of the town after the departure of the rebels. In a letter from Lord Sussex and Sir R. Saddler, to Cecil, dated 27th Dec., from Hexham, they say, "We understand, from Sir H. Gates and others that have taken the view of Hartlepole, that it is very ruynouse, and the walls downe in many places, and not gardable without a great force; and, in respecte wherof, we conceive it to be a superfluous charge to continue there."

Lord Sussex went to view it, 17th Jan., 1569-70; and Sir R. Saddler adds a P.S. to his letter of the 18th of Jan., dated Hartlepool:—"My Lord Lieutenant cam hether yestr night, purposely to view this town. He is so carefull of his charge, and so desirous to see and know all things mete for his knowledge, that though he had caused sundry platts to be made of it, yet, because it hath been noted a matier of such moment, he cold not be satisfied till he had sene it, and now we are returning to Duresme." The opinion of Lord Sussex does not appear; but it was most likely unfavourable to the reparation of the walls, as they were afterwards neglected.

In 1587, the plague raged with great violence at

Hartlepool; and the deaths amounted to nearly double the usual number.

John Lord Lumley, who had purchased Hartness from the Cliffords in 1586, procured from Queen Elizabeth, in 1593, the charter enjoyed till recently by the burgesses of Hartlepool. He claimed to hold the lordship directly of the crown, and that Hartness was parcel of Northumberland; and had divers disputes on these subjects with Bishop Mathew. On the question being submitted to the arbitration of John Savill, serjeant-at-law, and Robert Cooper, of the Inner Temple, they awarded "that they did take the said manors, with their members, to be within the precincts of the liberties royal of the Bishop of Durham, between the said rivers of Tyne and Tees; and that the said Lord Lumley should contribute to all assessments and common charges of the liberty royal, after the rate of 100 marks inheritance by year. And that all process and precepts whereby perpetual arrests should be made, or executions of judgments should be done within the manors aforesaid, should be first directed to the bailiff of the said manor for the time being; and in default of due execution of any such process, that the sheriff or other officer of the said liberty enter and execute such process," &c. The parties consented to the award; and thus this long-litigated question was set at rest.

For the discussions which took place relative to Hartlepool sending members to parliament, see p. 12.; and for the levy for ship-money, see p. 194.

During the civil war, Hartlepool was at first occupied by the royalists; Baron Hilton, with his regiment, being stationed there in 1642. On the second incursion of the Scots in 1644, the Earl of Callender took Hartlepool and Stockton for the parliament; and, in the following year, Lieutenant-colonel Douglas was governor of the first-named place. In 1647, it was delivered up to the parliament, who resolved, soon after, "that the new works of Hartlepool be slighted, and the town disgarrisoned." It was, however, occupied by the parliamentary forces, who, in 1648, joined with those at Newcastle, Holy Island, and Berwick, in the petition to Lord Fairfax, representing the king as the cause of all the miseries suffered by the country, and declaring "that all other endeavours are to little purpose, while the grand delinquent is untouched, as being not an acceptable sacrifice to the justice of God, to offer him ought else while the Agag is spared!" In the following year, Captain Webb, governor, was sworn a free burgess of the town.

The prowess of the Hartlepool garrison is recorded in the following passages of Whitlock's Memorials:—

In December, 1649, "Pirates lay lurking up and down in those seas, and did great mischief. That one of them went into the river Tees, and took out of a vessel, as she lay on ground, 200 firkins of butter, and went on shore, and took divers gentlemen; but being pursued by a party of foot from Hartlepool, they left the gentlemen behind, and got to their ship."

In February, 1650, "An Irish frigate boarded a Newcastle ship near Hartlepool, which the governor seeing, caused some of his guns to be so planted, that they shot the Irish frigate through and through, and caused her to hasten away, and leave her prize behind, which came in safe to Hartlepool."

Hartlepool was again thrown into a state of alarm in 1677, when the Dutch fleet hovered on the English coast, and even burned the shipping in the Medway. The trained bands were called out, to protect the entrances to the Tees and Wear. Mr. Thomas Davison, in a letter to the bishop, dated July 19, says, "My Lord—Upon Teweday night (that night of thunder and lightning) a post (at his swiftest rate) came to me from the maior of Hartlepoole: the messenger to all the towns he passed through boded much more amazement than the night itself, and of whose news that terrible night seem'd but a bare forerunner; *for his word to all was, FEAREFUL DOEINGS AT HARTLEPOOLE.* The maior in his letter tells me of an expresse he had just then from Whitby, to be sent to our frigates before Tynewmouth. The contents of it were, that two Hollands men-of-war had the evening before attempted the taking two ships out of Whitby road, but were beaten off by some guns from a platform there; but that which most moved him, as he said, was a Hollands man-of-war who that verie evening was come within shot of Hartlepoole, and had just then sent his long-boate within Teesmouth, as farr as the inner buoy, as they conceived, to plum the harbour, and upon his returne, they fear'd a resolution of that and several other ships for landing." On repairing to Hartlepool, Mr. Davison found the Dutchman preparing to depart; and Captain Belasys, who had kept his men on guard all night, dismissed them in the morning.

From that period, few public events occurred to diversify the decline of Hartlepool. The loyalty of its inhabitants, during the alarm of the invasion by the French, manifested itself in the embodiment of a corps of volunteers, under the command of Charles Spearman, Esq., as lieutenant-colonel.

Reduced at length to the standard of a fishing village and place of summer resort, and with little communication with the inland part of the county in consequence of its nearly insulated position, this ancient town seemed gradually dwindling into insignificance; when the appliances of modern science, and the energetic spirit of the present century, rendered its capabilities for improvement available. The landing of the late Rowland Burdon, Esq., from the London steamer, with the intelligence that the Hartlepool Dock and Railway Bill had passed both houses of parliament on the 24th May, 1832, was an epoch in the history of the town of higher importance than any thing which had occurred in ancient times. A spontaneous and enthusiastic procession of the inhabitants bore that patriotic gentleman in triumph from the then ruinous pier to the Town Hall, where he detailed, in his usual modest style, the difficulties which had been surmounted in procuring the desired enactments. Since that time, the history of the town will be comprised in an enumeration of the improvements which have been successively effected, and of those which have extended themselves into the adjoining parishes.

THE TOWN.

It has already been stated that the town of Hartlepool stands upon a peninsula, and is consequently nearly surrounded by water. The connecting isthmus is so narrow, low, and sandy, that Hutchinson conjectured the tide at high water had once flowed over it. Excavations made more recently, however, would seem to show that this peninsula, like some other parts of the coast, now submerged, was once covered with forests which were the haunt of the *hart*, and from which the district has taken its name. The peninsula itself forms the south-eastern projection of the bed of magnesian limestone extending along the coast from this place to Tynemouth, and which here dips at a considerable angle towards the north-west.

The older part of the town occupies the south side of the peninsula, and consists of a principal street called *High* or *Southgate Street* (anciently *St. Mary's Street*), a back street called *Middlegate Street*, running parallel with it, and several cross streets, called *Pudding Street*, *St. Mary's Street*, &c., all having an ascent towards St. Hilda's church and the Town Moor. Southgate Street contains several good houses and shops; and on the south side stands the *Town House*, a stone building erected in 1750, on the site of a previous hall. The

court-room is about 50 feet long by $22\frac{1}{2}$ broad, and is 15 feet high. The market cross formerly stood in front of this edifice, and consisted of a square flight of steps, terminated by a rude pillar of stone. Being found inconvenient, it was removed; and a colonnade, abutting from the Town House, was erected for the market people; but this was also taken down above 20 years ago.

From the south side of Southgate Street connecting avenues lead to that part of the town walls forming the boundary of the old harbour. These walls form a pleasant terrace, occupied by dwelling houses, which command a fine view across the harbour to the new docks, &c., at West Hartlepool, with the sea-coast beyond, and the distant Cleveland hills.

Around the inner harbour, now converted into the Victoria Dock, several winding streets have been erected. The oldest of these, called *Northgate Street*, terminates at the *North Gate*, at the western extremity of the town, and the site of the ancient fortifications in that direction.

"On the authority of local tradition," says Sir C. Sharp, "it is reported that in *former* days the fishermen lived without the walls, in the 'Farwell Field,' and that the town, properly so called, was inhabited by the garrison, and the upper classes of society." The boundary wall of the township formerly inclosed Farwell Field, without which is *Hart Warren*.

A wider curve sweeps from the Farwell Field to the head of Middlegate Street, and, under the name of *Fisher Row*, terminates near the north-west corner of St. Hilda's church. A piece of ground at the back of Middlegate Street, called the *Stripes*, is now partially built upon.

The *Poor's Lands* (see *Smith's Charity*) extend around the last-mentioned road up to the north side of St. Hilda's church, and separate the town from the *Common Fields* and *Town Moor*. Another portion of the Poor's Lands is situated between the south side of the church and the cliffs. When the formation of the harbour, docks, and railway was in progress, the rapid influx of population rendered an extension of the town necessary; and these grounds appeared most available for the purpose. Accordingly, on a petition for an amended scheme being made to the Lord Chancellor, by James M'Dowell and William Manners, two of the inhabitants of the town, dated December 5, 1845, an extension of powers was obtained for the trustees of the charity. In the report of Sir Griffin Wilson, the Master, dated May 6, 1846, and confirmed by the

Vice-chancellor, Knight Bruce, on the 29th following, it is recommended that in the Chare Head Field, containing 3 A. 0 R. 5 P., there should be a front street, or terrace, a centre street, 40 feet wide, and a cross street, 30 feet wide, the whole containing 14 houses paying an annual ground rent of £2 2s. each, 38 houses paying £2 each, and 34 houses paying £1 1s. each; in Johnny's Close, or the Stripes, containing 2 R. 23 P., a street 30 feet broad, containing 19 houses at £1 10s. ground rent each, and 5 houses at £2 2s. each; in Field Gate Close, containing 2 A. 1 R. 9 P., a street 50 feet broad, with a square in the centre, containing 48 houses at £2 ground rent, and six back sites at £1 each; in Friarage Close, 6 A. 0 R. 16 P., six streets, a circus or double crescent, the whole comprising 96 houses, 10 villas, a centre shrubbery, &c., producing an annual ground rent of £280 per annum; in New Close, containing 4 A. 1 R., four streets 40 feet wide, crossing each other, with 102 houses, at ground rents varying from £1 10s. to £2 each; and in Broad Close, containing 2 A. 2 R., contiguous to the Docks, 85 houses or tenements, at ground rents of £1 1s. each, except 17 fronting east, with gardens, at ground rents of £2 per site.

Notwithstanding the urgent demand for houses, a period of four years elapsed before any person ventured capital for building on the above-named closes; for, as the trustees of the charity had no control over the legal title to the estate, it was feared that the lessees might be holding under a doubtful tenure. In 1850, however, the Baptist congregation took a piece of ground by a simple agreement with the trustees; the Primitive Methodists followed; and several other persons have since built upon the trust property.

The *Town Moor* environs the town on the east and north, and extends to the verge of the cliffs. This promontory commands a magnificent sea view, with an extent of coast from Whitby on the south to Suter Point

* A large portion of the "Elephant Rock," after weathering the storms of past centuries, and being frequently an object of interest to the artist, was, after a storm, broken away by the high surf on the 22nd October, 1841. The rock obtained the name of Elephant Rock, from its rude resemblance to the figure of an elephant, when seen from the opposite walk upon the Moor. It is thought by many as a somewhat singular coincidence, that two elephants should have been brought into the town, in the menagerie of Mr. Wombwell, within a few hours before the fall of their huge rocky effigy on the neighbouring shore; and that this was probably the very first occasion in which an elephant had ever been seen in Hartlepool.

† At this place, an unfortunate girl was thrown over the cliff by her inhuman lover, as noticed in the parish register: "Mary Farding, a stranger, who, by a coroner's inquest, was found to be murdered by

on the north. Detached masses of rock, surrounded by the sea at high tide, have probably been separated from the main land by the incessant action of the waves. Some of these natural columns are 40 feet high, and have been worn by the sea into grotesque and fanciful arches.* The gulf which separates the principal mass from the shore is called the *Maiden's Bower*, and tradition says it derived its name from being the haunt of a mermaid.†

A battery stood, during the war with France, at the eastern extremity of the Moor, near the site of which the light-house was built in 1847. Further north is a subterraneous passage, hitherto unexplored, known by the appellation of the *Gun Cove*, probably from a battery having been placed on the cliff above. The *Fairy Coves*, near the north-eastern termination of the town wall towards the sea, are small cells hewn in the rock, 12 feet above the shore, and 5 feet in diameter; probably intended as places of concealment in times of danger.

The entire length of the roads in the township is 5,064 yards; but the dedicated roads only are under the jurisdiction and management of the surveyors, two in number, who are elected annually from the body of ratepayers in open vestry. The length of roads that fall under the surveyors' management is only 2,214 yards, and about 60 yards of public footpaths. The highway rates are generally from 2d. to 3d. in the pound per annum. The condition of these thoroughfares has been much complained of, both as to the form of the surface and want of means for a proper discharge of water.

TOWN WALLS.—These fortifications, erected by Robert de Brus, surrounded the town on all sides, except where the height of the cliffs rendered such defences unnecessary. Vestiges of breastworks are still visible on the Town Moor towards the sea. To the

William Stephenson, merchant in Northallerton, by whom she was pregnant, was buried June 7, 1727." Under this date, a charge of 1s. 10d. stands in the churchwarden's accounts, "for making Mary Farthing's grave." The perpetrator of the crime was afterwards executed at Durham; and the subject was commemorated in a local ballad, of which the following are stanzas:—

"With sighs and with groans, with tears and with moans,
She utter'd such plaints as would soften flint stones.
Oh! where shall I hide my shame, then—she cried,
Kind sir, take some pity, and for me provide.

"I promised her fair, that I would take care
Of her and her infant, and all things prepare
At Hartlepool town, where she would be down:
Poor soul, she believed me—as ever she'd done."

north-east the walls extended along the edge of the bank, which becomes gradually lower towards the isthmus connecting Hartlepool with the main land; but this portion of the defences is nearly obliterated. Fragments of walls, towers, and bastions remained across the isthmus until the formation of the railway and dock rendered their removal necessary. Here stood the North Gate, the principal entrance into the town, at a distance of about 300 yards from the sea. This gate had been apparently strengthened with a ditch, and probably a draw-bridge. Its arch, about 13 feet high, was ribbed, and, besides double gates, had its portcullis: the width of the passage was $11\frac{1}{4}$ feet, and of the whole gateway tower 34 feet; the projection being 16 inches beyond the face of the wall. The superincumbent tower was entered on each side from the parapet of the wall. This gateway was long abandoned as a thoroughfare; the road being conducted to the west between it and the inner harbour. In 1836, notwithstanding an attempt made to save it by the late Mr. Vollum, this fragment of antiquity was taken down by order of the surveyors of highways. Without this part of the fortifications, in the Farwell Field, there were, until late years, remains of ditches and slight breastworks, thrown up during the occupation of the town by the Scots, and supposed to have been supported by cannon.

The inner harbour or haven, which formed a nearly semicircular bay on the west side of the town, was crossed by the town wall from the North Gate to the extreme point of land opposite, and was thus enclosed from the outer harbour. The wall was here above 8 feet thick, faced on each side with dressed stones, and having a parapet guarded by a breast wall and embrasure. There was a water-gate, $24\frac{3}{4}$ feet wide and 10 high, to allow small vessels to pass without removing the boom chains of the grand entrance, which was 36 feet wide, and defended by massive round flanking towers. Square bastions were placed at intervals on the walls, the southern extremity of which was terminated by a half-moon. The formation of the Victoria Dock rendered the removal of this part of the fortifications necessary.

At the half-moon above mentioned the wall forms an angle towards the east. At a distance of 166 feet there is a square bastion, 8 feet 7 inches in front; and 309 feet further there is a large projection in the wall, most probably modern, 49 feet long, with a sallyport; at a distance of 355 feet, a round bastion, 13 feet in front; and 287 feet beyond it is the Water Gate, which only communicates with the land at low water, and from which an avenue leads to Southgate Street. The arch-

way of the gate is pointed, about 8 feet in width, and defended on each side by angular turrets, with the points projecting. This part of the town wall is about 18 feet high, and from 6 to 9 in thickness. Its appearance is more modern than might be supposed, in consequence of the repairs which have been necessary to protect it from the encroachments of the sea.

From the Water Gate the wall proceeds to a point of the rock fronting the sea, and near the pier. The whole of these defences are constructed of the magnesian limestone hewn from the cliffs.

ST. HILDA'S CHURCH.

THE church of St. Hilda stands on elevated ground, and from its projection towards the sea, forms a conspicuous object on the coast. This noble structure is supposed to occupy the site of a previous church, the doorway of the southern porch being of the late Norman or transition period, and consequently more ancient than the present edifice, which is early English. The church consists of nave with aisles, a few feet of the previous chancel and its aisles, and a very massive and lofty western tower.

The most striking and peculiar features of the tower are the enormously massive buttresses by which it is supported. Those on the west project above 26 feet, and they are respectively 3 feet 9 inches and 3 feet 2 inches thick. Each of them is pierced with a fine recessed early trefoil-headed doorway. From the extraordinary form of these buttresses, says Billings, "we might fancy the original design had for its object a cross church, consisting of nave, transepts, choir, and chancel, and that, this intention being altered, the buttresses were placed against the tower to compensate for the loss of support which the complete members would have given it; but on a closer inspection of the masonry, we discover portions of the walls, windows, and (upon the buttress sides) the coping stones of the roofs of three small chapels, attached to the west, north, and south of the tower, and all of the early English period when the church was first built. The southern chapel, indeed, still exists.

"A survey of the interior of the tower satisfies us of the necessity of large buttresses, for they sustain the lateral pressure of a lofty and heavy stone-ribbed groining, which is undoubtedly the best constructed specimen of the kind in the county. This vaulting, with the clustered columns from which it springs, once formed a fine addition to the interior of the church, from which it is now separated by a ponderous wall of later date."

The buttresses on the south side of the tower are lower than those on the west and north; but from pinnacles at their extremities, flying buttresses extend to the walls; one of which, having previously fallen, was restored in 1838. The tower is ornamented by two tiers of pointed arches; in the upper tier there are four arches on each side, with a row of corbels above. An embattled parapet of a later date, with a crocketed pinnacle at each corner, surmounts the whole. In the tower are three bells, all of which are cracked. The principal entrance to the church, now closed up, was on the west side of the tower.

The southern doorway of the church, already alluded to, is a beautiful specimen of the architecture of its time, with its characteristic chevron moulding. It is remarkable that one of the pieces of stone, against the left capital, is left uncarved. This fine doorway was long protected by a plain porch of humble character; but a more appropriate covering has been erected at the cost of Mrs. Vollum, widow of the late William Vollum, Esq., of Hartlepool. The foundation stone of this ornament to the church was laid by the benefactress on the 16th of April, 1852.

The walls of the aisles and clerestory are supported externally by buttresses. Between each of those of the clerestory are three pointed arches, of which the centre ones are windows. Some of the capitals are of very fine character. The form of the early English ridged roof is marked upon the tower wall.

The interior of the nave and aisles is well proportioned, being 85 feet long and 44 feet wide within the walls; the centre is 21 feet wide. Each of the aisles is formed by five pillars, supporting pointed arches. The pillars are alternately square and octagonal, surrounded by cylindrical pilasters; and there are circular bands or cushions enclosing the whole both of the bases and capitals. The arches of the south aisle have the appearance of being inaccurately drawn, or deformed by extraordinary pressure; but besides the fact that there is no lateral thrust to cause this obliquity, the joints of the superincumbent masonry are perfect and regular.

The chancel arch is lofty and of graceful proportions, springing from clustered pillars ornamented with foliated capitals. One of the columns on each side terminates in a graceful chaplet, short of the capital of the rest of the columns. The chancel, probably from its being the Bruce mausoleum, was a most remarkable building, of nearly equal length with the nave, and having its columns, arches, and aisles of the same dimensions as that part of the church, and apparently more highly

decorated. In 1719, it was almost entirely unroofed; and a brief was granted by George I. to collect the sum of £1,732 for repairing this and other dilapidated portions of the church, then so much decayed as to be in danger of falling down. On September 22, 1721, it was agreed that the church and chancel should be continued at their full length and breadth; that the roof should be flattened to four or six feet pitch; and that the north wall, if advisable, should be taken down and rebuilt; "but in fear of ye cash arising from ye brief may not answer ye expectation, ye said wall shall be referred until ye last;"—"and as for ye chancel, yt is referred until ye Earle of Scarborough's consent is got in writing." On May 22, 1724, Bishop Talbot granted his permission for the necessary repairs; but the chancel, then 23½ yards long, was all taken down except one compartment, in which the beautiful capitals of the side arches have been fortunately preserved. That on the south side is used as a vestry, and that on the north is enclosed. The arches opening from the aisles of the nave are perfect, but have been filled up with masonry.

In the minute of 1721, it is directed "yt ye said church shall be new flagged, pued, and whitened, and in respect to ye glory of ye antiquity of sd church, what repairs ye windows may want, they shall be wrought after ye same model as they now are." The whitening here mentioned was removed from the chancel arch and some of the columns of the nave in 1838; and other parts of the walls and columns underwent the same cleansing process in 1851, so that the magnesian limestone, of which the church is built, is restored to view in all the beauty of its warm buff colour. The windows, however, without regard to "the glory of the antiquity," are filled with modern framed sashes. In October, 1838, an organ was placed in the church.

In 1600, the number of "pues or stalls," was 33, including the stalls of the "vicarr and clark," and the "stall or pne for the maior and brethren." The present pews and the gallery at the west end of the nave were erected when the church was repaired in 1724. Only 60 of the sittings in the church are free.

Two stone effigies, restored from the church-yard, are placed in the north aisle. They are defaced and mutilated; but the most perfect represents a person in a gown, holding in one hand a glove, and in the other a scroll; an angel supports a pillow on which the head rests, and the feet rest on a couchant dog. The other figure is that of a female, with the hands joined together on the breast, in an attitude of prayer. Surtees conjectures the figures to represent a mayor of Hartlepool

and his dame. In the floor beneath the tower is a small monumental slab, bearing an early incised cross. Beneath the chancel arch, a large slab is inlaid with a brass, bearing the effigy of a woman in a high-crowned hat, ruff, long waist and stomacher, close gown with long sleeves and flowered petticoats, and "CASTA FIDES VICTRIX" on a scroll issuing from her mouth; the stone bears the following inscription:—

"Here vnder this stone lyeth buried the bodie of the vertuous gentellwoman Jane Bell who dep'ted this lyfe the vi daye of Ianuarie 1593, being the dowghter of Laverance Thornell of Darlington gent. and late wyfe to Parsavel Bell nowe maire of this towen of Hartin-pooell marchant

Whos vertues if thou wilt beholde
Peruse this tabel hanging bye
Which will the same to the unfolde
By her good lyfe learne thou to die
Ætatis suæ 40."

The font, which stands under the western gallery, is an elegant bason of Yorkshire marble, "the gift of George Bowes, Esq., 1728." The communion-plate consists of a large pewter flagon, a silver chalice, and a silver paten; the latter "the gift of Mr. Calib Readshaw, of Richmond, January 13, 1726."

The church-yard, which surrounds the church, contains about 8,534 square yards, including 100 yards which has been appropriated. No interments take place in the church; those in the cemetery average about 180 per annum. The most remarkable monument is that of the Bruce, which formerly occupied the place of honour in the centre of the chancel, but, on the curtailment of that part of the church in 1724, was left outside; "an example of ingratitude to founders, and a reproach to those by whom it was thus dishonoured." The tomb is covered by a slab of black Frosterley marble, 9 feet long by 6 broad, without inscription; the panels on the supporting sides are charged with the Bruce's badge, a lion rampant, without variation or addition, evincing that this "giant tomb" contained the remains of one of the family who lived before the

arms of Annandale were assumed. Several stone coffins have been found in various parts of the church-yard. In digging a grave (March, 1790), a stone coffin was discovered, containing the remains of a man, apparently quite entire. He had been interred in his clothes, and, according to monastic custom, with his boots on; but on being exposed to the air, the whole went to dust, except the soles of the boots. The foundations of ancient walls have been found parallel with those of the nave, and extending westward of the tower about 20 feet.

The dependent chapel of St. Hilda at Hartlepool, though not named in Brus's grant of the churches of Hert and Stranton to Guisborough, is mentioned in the confirmation charters of Bishop Pudsey in 1195, of the fifth Robert de Brus, of Bishop Kirkham in 1259, of Bishop Stichell in 1273, and of Bishop Kellaw in 1311. It was also included in the grants of Bishop Beck in 1288 and 1308, by which divine service was to be performed by a canon of Guisborough. The monks of this convent paid to the bishop, as superior lord, a rent called "land-mail," and a composition in lieu of suit of court, in respect of their property in Hartlepool.* In the taxation of 1291, the chapelry of Hartlepool was valued at £23 13s. 4d., which evinces a considerable amount of commercial prosperity in the place, as such a sum may be taken as worth about £300 at the present time.

"That which is the glory, and ought to be the pride of Hartlepool," says Mr. W. S. Gibson, "is this fine church of St. Hilda—the noble legacy transmitted by ancient piety to the dwellers in that haven town, the hallowed monument of its former greatness. Reared in a distant age, it witnessed the rise of Hartlepool, and saw its prosperity and its proud mural defences spring as it were from the ocean wave, under the renowned and powerful family who inhabited the neighbouring lordship, and the politic and fostering care of the mitred sovereigns of the palatinate. It saw

* From ancient documents published in the *Collectanea Topographica et Geneologica*, vol. v., p. 223, et seq., it appears that the nunnery of St. Mary's and St. Andrew's at Marrick, in the North Riding of Yorkshire, was territorially connected with Hartlepool. Some of the circumstances have been enumerated by a talented antiquary:—"Robert de Brus gave in free alms to the nuns of Marrick a toft in Hertepol. The charter is without date, but is witnessed by William de Brus and Bernard de Brus. William de Brus, the donor's son, confirmed his gift. William Seer, of Hartlepool, granted, with the assent of his lord, Robert de Brus, a yearly sum of two marks from the land of Simon de Waynfeth upon the Ness, and of Roger de Newton, Peter Marrays, and Agnes de Witeby, in St. Mary's Street. John the Mason, of Hartlepool, is the second subscribing witness.

Robert de Brus, who is described as lord of Annandale, confirms this donation; and to this grant John de Carrou, lord of Seton, is a witness. Another tenement in the Ness was demised to Robert Fitz-William de Seton, formerly burghess of Hartlepool, he rendering annually for lights in honour of the blessed Mary the Virgin, in the church of St. Hilda, six pence in silver, and to the nuns of Marrick ten shillings. The charter is witnessed by Andrew de Bruntoft, then mayor, and William de Farnley, bailiff of Hartlepool, and is dated on Wednesday next after the feast of St. Matthew, 1316. A charter in 1376, between Matilda Melsonby, prioress, and William Midlam of Hartlepool and Alice his wife, relating to a house in Hartlepool, is witnessed by John de Seton, mayor, Robert Goldsmith and Walter Backster, bailiffs of the town."

Hartlepool the harbour of warlike armaments, and the emporium of commerce; and, as 'long rolling years' swept on, it saw the ancient prosperity of Hartlepool depart with the fendal age, and her bulwarks yield partly to the ocean, but chiefly to the long siege of time. At length it saw the day, when, at the bidding of the spoiler, its serving-priests—the canon-brothers of Guisborough, went forth to return no more. But there St. Hilda's church remains in all the majestic features of medieval art. Generations have passed away beneath its venerable shadow, and Hartlepool, from a fishing town, has become an important borough with a noble harbour and capacious docks, their quays laden with merchandise and resounding to the labours of busy industry; yet, while all has changed around, the church of St. Hilda retains its ancient features, and looks down upon the returning prosperity of Hartlepool, inviting her people as of old to return to Him of whose bounty all things come."

CHANTRIES.—There were at least three chantries in Hartlepool church. Bishop Skirlaw, April 3, in the 8th year of his pontificate, granted license to the mayor and commonalty of the town of Hartlepool to found anew, to the honour of St. Helen, a chantry of one chaplain, to pray for the good estate of the bishop whilst alive, of Maude (daughter of Beauchamp, Earl of Warwick), wife of Roger de Clifford, and of the said mayor and commonalty, and for the rest of their souls after death; with license to settle on Robert Rosson, chaplain, keeper of the said chantry, and his successors, three messuages which Geoffrey de Eltham and Isabel his wife hold for life, and seven messuages, 40½ acres and 10 roods of arable land, one acre of meadow, 10 tofts and crofts, and 14s. annual rent, with the appurtenances in Hartlepool and Neleston, held of the same Maude Clifford. Richard Brigge, the last incumbent, had a pension of £4 allowed at the Dissolution, which he received in 1553.

St. Mary's chantry was founded at the same time with the former, by similar license, to consist of two chaplains, to pray for the same personages. The endowment was one messuage, which Isabel de Shildon, wife of John Goldsmith the elder, held for life; one messuage, held by Thomas del Kyrke, 30 messuages, 27 tofts and crofts, 2½ roods of land, and 84s. 6d. rent, held of Maude Clifford. Thomas del Kyrke and Thomas de Thornton were the chaplains on the foundation. The mayor, &c., had also license to give seven messuages in Hartlepool, held of Maude Clifford, to Walter Backster and William

Howe, keepers of the fabric of the church, for the purpose of supporting a light at the altar of the Blessed Virgin Mary, and for sustaining the choir of the church. St. Mary's chantry was valued at the Dissolution at £7 13s. 4d.; and John Holmes, the last chaplain, received a pension of £5 per annum. The property belonging to this chantry was situated at the Heugh, in Micklegate, Butcher Chare, Long Close, Nunnery Close, &c.

The chantry of St. Nicholas was founded at the same time, and by the same parties as St. Helen's and St. Mary's. The endowment consisted of eight messuages in Hartlepool, held of Maude Clifford; and John Abel was chaplain on the foundation.

REGISTERS.—Book No. 1 contains entries of baptisms, burials, and marriages from 1566* to 1712 (defective); No. 2, baptisms and burials from 1713 to 1773, and marriages from 1713 to 1753; Nos. 3, 4, and 5, baptisms and burials from 1774 to 1812; and No. 6, marriages from 1754 to 1812.

Hartlepool is a perpetual curacy; the vicar of Hart, patron; F. A. Milbank, Esq., imp. Dedication to St. Hilda.

CURATES.—J. Wilkinson occurs 1609; — Boyd occurs 1643; P. Donkinge, 1669; — Saunders occurs 1685; T. Shewell, 1689; P. Raper occurs 1690; S. Woodfield occurs 1712; W. Burn occurs 1714; J. Wilkinson occurs 1719; I. Johnson occurs 1731; H. Petrie occurs 1745; J. Thomas occurs 1754; W. Adey occurs 1759; G. Scollough occurs 1761; H. Crookbain occurs 1767; William Harrison, 1770; Benjamin Lumley, A.M., 1797; I. H. Dickenson, A.M., 1806; N. J. Hollingsworth, A.M., 1807; William Wilson, cl., 1812; Robert Taylor, cl., 1834, p. m. Wilson.

The parsonage-house is situated in Middlegate Street; but, being unfit for residence, is let out; and the incumbent resides in a house near the church, belonging to the Duke of Cleveland. A grant of £300 was made from the Maltby Fund, in 1853, towards the erection of a new parsonage.

In 1723, Lord Crewe's trustees endowed the living with £10 per annum. In 1724, the Governors of Queen Anne's Bounty gave £200, and the vicar of Hart and others contributed a similar amount, which sums were expended, in 1727, in the purchase of a portion of the Island farm at Bishop-Middleham, the other parts of which belong to the parishes of Castle Eden and Pittington. In 1812, £800 was given from

* The book is dated 1591; but a memorandum states that "all ye christenyngs, weddings, and buryalls, conteyned in the former paper register booke of ye said chapple (commencing 1566) are trulie thence transcribed and engrossed into this present register booke, as by mutuall co'ference thereof may and dothe more fully appeare."

the parliamentary grants; and in 1814, an additional augmentation of £1,000 was made, consisting of £200 from Bishop Barrington, £200 from Lord Crewe's trustees, and £600 from Queen Anne's Bounty. These sums were laid out, in 1818, on lands at Long-Newton, then let for £100 per annum, but now producing only £35 clear. In 1835, the gross income was returned at £169, subject to permanent payments amounting to £6. At present, the sources of revenue are as follow:—Bishop-Middleham farm, £40; Long-Newton do., £35; surplice fees, £70; Lord Crewe's trustees, £10; tithes commutation (see page 244), £15; Easter offerings, £10; total, £180.

The district for confirmation at Hartlepool includes, St. Hilda's, Holy Trinity, Hart, Stranton, Monk-Hesledon, Castle Eden, and Wingate Grange.

CONVENT OF ST. HILDA.

THE scanty information derivable from history, relative to the monastery founded by Hieu, and afterwards the residence of St. Hilda, has been given at page 246. In some of the earliest records of the corporation, an enclosure eastward of the church, on which the priory had been erected, is called Nunnery Close; and fragments of Saxon remains have been occasionally discovered. In laying the foundations for a house in a field called Cross Close, in June, 1833, several small inscribed sepulchral stones were found, which have been pronounced veritable relics of St. Hilda's convent. They were at the depth of $3\frac{1}{2}$ feet from the surface, resting on the limestone rock; and each supported the skull of a human skeleton. They extended in a north and south direction, close to each other, and in regular order. On some of the stones are crosses in relief, with the Greek alpha and omega on each side of the upper division. Two of them are inscribed, in mixed Runic and Saxon characters, with names which have been rendered by Mr. Kemble, the learned Anglo-Saxon antiquary, *Hildithrith* and *Hildigith*, or, according to another authority, *Hildeth the virtuous*, and *Hilme the meek*. They measure respectively 9 inches by 6, and $11\frac{1}{2}$ inches by $11\frac{1}{2}$, and are about 3 inches thick. Fragments of two circular flat stones, with a figured pattern and Latin words inscribed on them, were also found: the word *Requiescat* is distinctly legible upon one of them. The words *Ora* and *Pro* occupy the upper compartments of another of the square stones; a name rendered *Vertorht* and a word which is illegible being on the

lower portion. The skeletons were male and female; "the former," says a late writer, "apparently of a tall race, and with a peculiar thickness of the fore part of the skull, which, in an age of hard knocks and keen fighting, must have been an enviable perfection." The probability, however, appears to be that this was the cemetery of a peaceful community, and that it was attached to the primitive convent of St. Hilda; though the fact of some of the skulls being found detached from other bones has given rise to an opinion that their deaths were violent. On the 15th of October, 1838, another stone, $10\frac{3}{4}$ inches by 9, and $2\frac{1}{2}$ inches thick, was discovered. It bears a similar cross, and the alpha and omega as on the other stones, with a proper name rendered *Gerchtsye* by one authority, but which is more probably *Berchtha*. Several skulls and bones were found at the same time. The bodies had been placed in two rows, north and south; and the burial-place had not apparently exceeded 15 or 20 yards in length.

In April, 1851, in excavating a portion of a field belonging to Smith's Charity, the skulls and bones of about 150 human beings were discovered in a space not exceeding 25 feet square. They were huddled together in all positions, and were supposed to be the remains of men slain in conflict at some remote period. Some of them were the bones of persons of not less than 6 feet 3 or 4 inches high.

ST. HELEN'S CHAPEL.

THIS chapel was situated in the Farwell Field, near the Freeman's or St. Helen's Well, where hewn stones have been occasionally found. In October, 1845, its foundations were accidentally discovered, consisting of a chancel of about 14 feet in length by 20 broad, with a transept 35 feet long at the west end. No part of the walls exceeds 3 feet in height; "but," says Billings, "an attentive examination of the architectural fragments proves them to be of the early English period, after the year 1200, and certainly of later foundation than the fine church" of St. Hilda. A stone coffin, containing the skeleton of a person 5 feet 10 inches high, was discovered near the chapel.

William de Brus gave the chapel of St. Helen "that is on the warren here," for the support of a light at the great altar of Guisborough. Robert Palmer de Hartypool, by the consent of Emma his wife, and Martin Fuller, of the same place, gave their lands; and Alice, daughter of the latter, released her dower in her lands,

all which grants were confirmed by Robert de Brus. Ralph de Whitwell bequeathed a messuage and its appurtenances to be sold, for the stipend of a chaplain in St. Helen's chapel, as long as the money should last. Whitwell being illegitimate, Bishop Beaumont seized the messuage as an escheat; but it was restored by Bishop Bury, on discovering that the executors had been in possession forty-one weeks before the death of the testator.

THE FRIARY.

At a little distance from St. Hilda's church, in a north-east direction, stands a house known as the Friary. The Franciscan monastery of Grey Friars was founded by one of the Bruce family before 1258, when it is mentioned as under the wardenship of the Grey Friars of Newcastle. Walter de Newton, John Oggill, Robert Wycliff, Master of Keyper Hospital, and John Trollop of Thornley occur as benefactors. At the Dissolution, the establishment consisted of a keeper, Richard Thrilkeld, and eighteen brothers, and the clear yearly value of their possessions was £4 5s. 8d., which the payment of the brethren's pensions reduced to 4s. 8d. The stock, bells, plate, &c., were of small value. In 37 Henry VIII., the monastery was granted to John

D'Oyley and John Scudamore; and its site was held in 1605 by Ralph Conyers, Esq., of Layton. It was purchased of the Porrett family, in 1634, by the trustees of Smith's charity. The building called the Friary is an old gabled house, with mullioned windows, and has evidently been built on the site of the monastery since the Dissolution. There is an excellent well of hewn stone, 43 feet deep and 6 feet square. The Friary and land surrounding it belong to Smith's charity estate, and are under the guardianship of the corporation, subject to a fee-farm rent of £2 10s. 9d., which was purchased many years ago from the Duke of Leeds by the late G. W. Meadley, Esq., of Bishopwearmouth, and by him devised to the Rev. James Tate, of Richmond. The house was for many years occupied as a workhouse for the town, and is still used as an occasional vagrant ward. It contains a few beds for patients, in case of sudden illness in the town. The poor law guardians of Stockton Union pay a rent to the local trustees of the charity; but a new scheme will enable the latter body to let the ground to greater advantage. The Friary house is recommended by the Attorney-general to be used as an hospital for the town; a sum of money having to be appropriated out of the funds of the charity towards the maintenance of such hospital.

DISTRICT CHAPELRY OF THE HOLY TRINITY.

THE boundary line of the district chapelry of the Holy Trinity, Hartlepool, commences from a bound-stone placed by the sea shore, close by the Town Moor, and proceeds westerly therefrom in a straight line, passing on the south side of Moor House as far as the "Stripes," along the same, crossing Northgate and down Sunny Side to the south-eastern corner of Victoria Dock, then skirting the south-western side of that dock, until it reaches the boundary line of the parish of Stranton, then proceeds along such boundary line until it leaves the same at the southernmost point of the last field of Low Warren Farm, and from thence proceeding westerly to the south-western corner thereof, and from thence following the boundary of such farm until it reaches the sea shore, where another bound-stone is placed, and from such bound-stone proceeds south-easterly along the sea shore to the point where the first mentioned bound-stone is placed, and where the boundary commenced. The district was formed by order in council, February 7, 1853, and gazetted on the following day.

THE rapid increase of population in Hartlepool, consequent on the formation of docks and increased trade, having rendered additional church accommodation necessary, a committee was appointed in 1848 to devise and carry out means for the erection of a new place of

worship. Liberal subscriptions were obtained; and the foundation stone was laid by J. P. Denton, Esq., mayor of Hartlepool, on the 22nd August, 1850. The architect selected was John Middleton, Esq., of Darlington, whose estimate was £2,500. The contract for the building,

however, was somewhat less, being £2,350, towards which £1,800 had been raised in March, 1851; the following are the principal contributors:—

The Lord Bishop of Durham	£100	E. Turnbull, Esq., Hartlepool	£20
The Church Commissioners	- 250	Lord Ravensworth	- - 10
Church Building Society	- 200	James Farrer, Esq., M.P.	- 10
Durham Diocesan Society	- 120	H. Stapylton, Esq.	- - 10
Governors of Barrington Soc.	100	H. Metcalfe, Esq.	- - 10
Mrs. Sedgwick, Hartlepool	- 100	T. B. Walker, Esq.	- - 10
Rev. G. T. Fox, Durham	- 150	Rev. J. C. Plumer	- - 10
Proceeds of a bazaar	- - 181	James Wood, Esq.	- - 10
The Duke of Cleveland	- 50	J. Middleton, Esq.	- - 10
Rev. J. A. Park, Elwick Hall	20	Mrs. Redfearn	- - 10
R. Burdon, Esq., Castle Eden	20	J. Procter, Esq.	- - 10
Mrs. Burdon	- - - 20	S. Horner, Esq.	- - 10
J. P. Denton, Esq., Hartlepool	25	Rev. W. G. Harrison	- - 10

The ground for the church, and a site for a parsonage house were given by the trustees of the late Duke of Cleveland. The church was opened on the 16th of April, 1852, and consecrated by the Bishop of Durham on the 25th of May following. It consists of nave with side aisles, north and south porch, and chancel. The nave and aisles are 84 feet long, and altogether 50 feet wide. Each of the entrance porches has a deeply moulded doorway under a pointed arch, which supports a lofty pediment, surmounted by a cross. The chancel is 36 by 22 feet, with vestry* and organ-chamber on the north side. The exterior walls are supported by buttresses; and the original plan included a western tower 110 feet high, the erection of which is, for the

* The vestry was broken into, on the 16th of August, 1853, and the communion-plate stolen, which had been presented by the Rev. R. Taylor, incumbent of St. Hilda's. The plate was antique, and consisted of a salver and chalice. It is remarkable that this communion service was, some years ago, sacriliciously removed in a similar manner from the vestry of St. Hilda's, and recovered after a con-

present, postponed. The windows are in the decorated style, and contain rich and varied tracery. The roofs are open and of bold and simple design. That part of the chancel within the altar-rails is paved with encaustic tiles; the church is warmed by hot water, and lighted with gas. The pulpit is of Caen stone; and the Ven. Archdeacon Thorp presented the font. The organ is by Mr. C. Hoggett, of Hartlepool, and was opened November 5, 1854. The stalls of the chancel are carved in panels; but the whole of the seats in the nave and aisles are open. There are nearly 800 sittings, of which 500 are declared free and unappropriated for ever.

The living is in the patronage of the vicar of Hart; and the Rev. Lewis Paige, A.M., formerly assistant curate at St. Hilda's, is the incumbent. The only income at present arises from seat rents, which average about £70 per annum; and it is to be hoped that the application now before the Ecclesiastical Commissioners, respecting a permanent endowment for this extensive district, will be acceded to.

In 1853, a grant of £400 was made from the Maltby Fund towards the erection of a parsonage. The Duke of Cleveland subscribed £25; Lord Harry Vane, M.P., James Farrer, Esq., M.P., and William Clayton Clayton, Esq., of Harrow, each £10; and several smaller subscriptions have been received. The parsonage is now in course of erection.

considerable period, whilst the church was undergoing repairs. It appears the plate was found concealed under the organ, where it is supposed the thief had hid it on being disturbed, and that he never had afterwards an opportunity of removing his booty. It is to be hoped that some fortuitous circumstance may lead to a second recovery of this valuable communion service.

CHAPELS.

ROMAN CATHOLIC.—The influx of Irish workmen and others connected with the improvements in Hartlepool, whose religious wants were at first attended to by the Rev. T. A. Slater, of Hutton House, were accommodated, in 1834, in a small chapel in Henry Street, erected for their use by John Wells "at the request of

* An exemplification of the influence possessed by the reverend gentleman over his flock occurred in March, 1846, when, on a quarrel between two of the congregation, which they were about to submit to legal arbitrament, he induced the offending party to accompany the town crier through the streets, who in the presence of an amused and wondering multitude, made the following proclama-

Mary his wife." The Rev. William Knight, who still officiates as minister, was appointed to the pastoral charge of the congregation, which had increased from about 20 in 1824 to 1,500 in 1851.* The necessity of enlarged accommodation being obvious, the foundation stone of St. Mary's church was laid at the head of Middlegate Street, on the 2nd July, 1850, accompanied with all the rites and ceremonies of the

tion:—"I, B. W., having defamed the characters both of J. L. and his wife, by calling them improper names, such as —, &c.: I do hereby declare my sincere sorrow for having made use of such expressions, and make this public apology to him and to his wife; and in consequence of this, he has kindly consented to stay all legal proceedings against me."

Romish faith. A procession was marshalled at the old chapel, consisting of the school children, with their superintendents; the female members of the congregation, amongst whom was the dowager Lady Stourton, with a part of her family; the male members of the church, followed by the guild in their costume; the Roman Catholic bishop of the district, preceded by a large cross, and with his train borne on each side by a priest in canonicals; thirteen clergymen of the district; and the architect, J. A. Hansom, Esq., of Preston (inventor of the carriage bearing his name), with his assistants. During the procession and ceremony, appropriate music was chaunted.

So much expedition was used in the erection, that the church was completed and dedicated on the 28th of August, 1851. This ceremony was conducted with much pomp in the presence of Cardinal Wiseman; Dr. Hogarth, Bishop of Hexham; Dr. Briggs, Bishop of Beverley; Dr. Brown, Bishop of Shrewsbury; Dr. Morris, Bishop of Troy; and a large number of priests from various places in the neighbourhood.

The exterior of the church, which consists of tower, nave, with clerestory, side aisles, and apsidal chancel, is plain and without side buttresses. It is 121 feet in length, and 43 in width. Contrary to the usual arrangement, the tower and entrance are on the east, and the chancel occupies the west end of the church. The tower is square, supported by corner buttresses, and surmounted by an octagonal spire. It contains a peal of eight musical bells, partly purchased by subscription, but principally at the cost of Mr. John Lawrenson, of Hartlepool. The ceremony of "blessing the bells" was performed by the Bishop of Hexham, and a sermon was preached on the occasion.

A peculiarity of the interior is the floor having an inclined plane, with a descent of 2 feet 6 inches from the western doorway to the altar-rails. The stations of the Passion, fourteen in number, are in quatrefoil panels on the walls. Above the entrance from the vestry is a figure of the Virgin Mary, saluted by an angel on each side, with the words (on scrolls), "*Ave Regina Cælorum*," and a coiled serpent beneath her feet. This sculpture is after one in the parish church of Lanchester. The altar, font, and pulpit are of stone. The roof of the chancel is richly decorated in the Byzantine style; and the apse contains five windows of stained glass, representing the Immaculate Conception, the Presentation, the Incarnation, the Nativity, and the Assumption; the gifts, respectively, of Mrs. Hopper, Mrs. W. Witham, the Right Rev. William Hogarth, the Rev. T.

A. Slater, and Joseph A. Hansom, Esq. At the west end of the north aisle, above the altar of the Blessed Virgin, is a mortuary window given by Lord and Lady Stourton. The window at the east end of the aisle, the gift of the Rev. Thomas Witham, of Lartington, and Henry Silvertop, Esq., of Minsteracres, contains figures of St. Thomas Aquinas and St. Henry. Mr. F. Burnett gave the window at the east end of the south aisle; and that at the west end, containing appropriate representations of the good Samaritan and Tobias burying the dead, was given by the members of the guild or sick club of Hartlepool. The side windows are the gifts of various individuals; the subjects being either the patron saints of the respective donors, or something appropriate to the place.

Beneath the chancel is a crypt, or small mortuary chapel, lighted by three stained glass windows, representing St. Joseph, St. Catherine, and St. Winifred. It has a stone altar, and encaustic tile flooring. This neat little chapel was fitted up at the expense of the dowager Lady Stourton.

UNITED PRESBYTERIAN CHAPEL.—The building erected by the United Presbyterians faces Darlington Street. It has two heights of windows in front; one window on each side of the doorway and three above; the roof terminating with a pediment. The building is without pretensions, but neat and well proportioned. The chapel was erected in 1839, and opened for divine service on the 1st of Jan., 1840; it is capable of accommodating 500 hearers. The ground on which the chapel was built was purchased of the late Duke of Cleveland, who granted the site on moderate terms.

A few members of United Presbyterians came to reside in Hartlepool about the year 1833, and they assembled in a large room taken for the purpose. In 1838, a congregation was formed; and under the auspices of the presbytery of Newcastle, steps were taken for the erection of the present commodious place of worship. There is a Sunday-school attached to the chapel, the attendance at which ranges from 70 to 80 children; there is also a well-selected library connected with it.

BAPTIST CHAPEL.—This recently-erected chapel is situated at the north-east corner of Chare Head Field, on a portion of the Smith's Charity estate. The foundation stone of the building was laid May 19, 1851, and the edifice opened for divine service in the following year. The front elevation of the chapel is somewhat ornamental; the door-way is in the centre,

with a window at each side and three windows above, having rusticated dressings; the angles terminate with pilasters and the roof finishes with a pediment. The building cost about £600, and will accommodate 500 persons, including the gallery at the east end, capable of seating about 130. A Sunday-school is attached to the chapel, and is attended by about 60 children.

The Baptists first assembled in Hartlepool in 1845, when the congregation consisted of only seven members. The congregation not being yet sufficiently numerous to defray the requisite expenditure, an annual grant is received from the fund of the Baptist Home Mission.

INDEPENDENT CHAPEL.—The chapel of the Independents or Congregationalists is situated in Darlington Place. It was erected in 1844, at a cost of upwards of £1,000, exclusive of the price paid for the ground. The front elevation is well proportioned and somewhat imposing; the doorway is in the centre, with a window on each side and three windows above. The solids of the front are relieved by four pilasters, with an entablature and pediment as a finish to the roof. The chapel will accommodate upwards of 500 persons, including 50 free seats. There is a Sunday-school belonging to the chapel, attended by about 200 children. There is also a good library for the use of the school and congregation.

The Independents first assembled at Hartlepool, in 1840, in a room rented for the purpose. The room soon becoming too small for the increasing numbers of the congregation, it was resolved to build a suitable chapel, and ground was purchased for the present edifice in 1843.

WESLEYAN METHODIST CHAPEL.—The first visit of the Rev. John Wesley to Hartlepool was on the 5th July, 1757, when he says, "I preached in the main street, to near all the town; and they behaved with seriousness." This enthusiastic promoter of Christianity preached in the town on several occasions afterwards; his last visit appears to have been on the 14th of June, 1790, when he preached in the evening to as many as the Town Hall would contain; and on the following day to a large congregation in the open air. Successive places of worship were occupied by his followers; the first being a room in the yard of Mr. R. Taylor, Sunnside; the second was the house which stands across the main street, leading to the dock, occupied by Mr. Soutter, cooper; the third was a chapel on the town wall, built about 60 years ago, which was occupied until 1839, when the present chapel was built in Northgate,

on a piece of ground sold to the society at a reduced price by the Duke of Cleveland, who also gave the stones used for the base, corners, and windows of the building. It will seat about 750 persons, including about 150 free sittings for the poor. Hartlepool is a part of the Stockton circuit, at which place the regular preachers resided till 1841, when a resident minister was appointed for Hartlepool. The Sunday-school of the chapel is well attended, and possesses a library for the children.

PRIMITIVE METHODISTS.—The Primitive Methodist chapel stands opposite to the new Roman Catholic chapel, and is erected on ground purchased from the trustees of Smith's charity. The foundation stone was laid in 1851. Attached to the chapel is a minister's house and school-room. The situation and size of the building gives it a commanding appearance. The front elevation consists of a centre projection, with a well proportioned Doric doorway and a window on each side, and three circular-headed windows above, terminating with a pediment. The impost of the windows continue on to the flanks, in which there is a window corresponding with those in the centre compartment; each of the angles terminates with a pilaster. The Sunday-school is attended by upwards of 150 children.

Primitive Methodism was first introduced into Hartlepool in 1822; and about three years afterwards, a granary was taken and fitted up as a chapel. In 1830, a chapel was built in the Croft, which was afterwards enlarged and improved by the erection of galleries; but the congregation continuing to increase, steps were taken for the erection of the present large and commodious building.

WESLEYAN REFORMERS' CHAPEL.—The Wesleyan Reformers for some time occupied the Town Hall as a temporary meeting-house. In 1851, they erected a chapel in Chare-head Field, capable of accommodating 300 persons.

WESLEYAN ASSOCIATION CHAPEL.—After holding their meetings in a room in Darlington Street, the members of the Wesleyan Association built a chapel in Mount Pleasant, capable of containing about 400 persons, on a part of Smith's charity estate, near the Primitive Methodists' chapel. It was opened April 11, 1852.

THE BETHEL.—There is preaching every Sunday afternoon, by ministers of various denominations, in a

large room in Minerva Place, fronting the Victoria Dock. This place is attended by sailors and their families; and the expenses are defrayed by voluntary contributions.

CHARITIES.*

Smith's Charity.—Henry Smith, or Smyth,† in 1626-7, bequeathed all his property to trustees for the purchase of estates of the annual value of 100 marks for every £1,000 laid out in the several towns of England; the rents to be appropriated for the relief of aged poor and infirm people, married persons having more children born in lawful wedlock than their labours should be able to maintain, poor orphans, such poor people as should keep themselves and families to labour, and should put forth their children apprentices at the age of 15; and that such course should be taken as that a stock should be provided and always in readiness to set such of the said persons to work as should be able to labour and take pains, and not to or for the relief of any persons who should be given to excessive drinking, whoremongers, common swearers, pilferers, or otherwise notoriously scandalous, or to any persons that should have been incorrigible, or disobedient to those whose servants they should have been, or to any vagrant persons, or such as should have no constant dwelling, or should receive any inmate or inmates to dwell in the house with them, or should not have inhabited in that parish for the space of five years next before such distribution should be made, or being able should refuse to work, labour, and take pains; and he further directed that the rents assigned for the relief of the poor should be disposed of in apparel of one colour, with a badge or mark denoting the same to be the gift

* From the collections relating to Greatham Hospital, printed at the private press of George Allan, Esq., it appears that on January 25, 1563, Thomas Sparke, master of that establishment, being "crased and seke in bodie, yet God be prased of good and perlytt remembrance," by his last will bequeathed, *inter alia*, "to the poore of Hartlepolle vis. viii*d*."

† "DOG SMITH."—Mr. Smith was an alderman of London; and as he lived in Silver Street, in that city, among the working silversmiths, it has been supposed that he belonged to that profession. An inscription in Great Bookham church, Surrey, calls him citizen and salter, London; but this does not prove him to have been a salter by trade. He was once married; but his wife died many years before him, without issue. His own death took place January 30, 1627-8, at his house in Silver Street: he was buried in the chancel of Wandsworth church, where his effigy is represented in an alderman's gown, kneeling at a desk in an attitude of devotion, and holding a skull between his hands. Underneath is a tablet with a long inscrip-

tion, stating that he had given, while he lived, £1,000 to each of the towns of Croydon, Kingston, Guildford, Earningham, and Dorking; and had bequeathed a like sum to the town of Richmond, and £500 to Wandsworth, where he was born, for the relief and setting the poor to work in the same towns. He also bequeathed £1,000 "to buy land for perpetuity, to redeme poor captives and prisoners from the Turkish tyrannie. And not here stinting his charitie and bounty, did also give and bequeath the most part of his estate, to a great value, for the purchasing lands of inheritance for ever, for the relief of the poor, and setting them a worke; a pattern worthy the imitation of those whom God hath blessed with the abundance of the goods of this life to follow him herein." It is stated that the reason Mitcham is omitted in the list of places in Surrey favoured with his bequests was, "that he was whipped in that town as a vagrant, by which it appears that his parents were but of low and mean condition." He is said to have been extremely covetous, and to have obtained the name of Dog Smith because he kept no house, but dined at friends' tables, and then desired a bit for his dog.

of the said Henry Smith, or else in bread, and flesh or fish, on each Sabbath day, publicly in the parish churches of each parish.

It was probably through the influence of Richard Viscount Lumley, lord of the manor of Hart, and one of the trustees of Mr. Smith, that Hartlepool was selected for this charity. On January 10, 1634, the trustees purchased from Robert and William Porrett, &c., a capital messuage (probably the Friary) in Hartlepool, and divers other messuages, lands, and tenements, with their appurtenances, in that place, producing £30 per annum. Trustees were appointed from time to time; and the estate was for many years under the management of the corporation. In 1828, the rents, which were carried to the general account of the overseers of the poor, and disposed of with the money collected with the poor's rate, amounted to £119 10s. This disposal of the funds was a manifest departure from the intention of the donor; and in 1832, the corporation of Hartlepool, having applied to the Court of Chancery, obtained a scheme, appointing the mayor, recorder, and aldermen trustees; and directing that, after the payment of necessary charges—

"In distributing the funds of the said charity under this scheme, the said corporation shall in all cases give a preference to the most deserving and industrious persons, and such as have never received parochial relief, or have been the longest without having received such relief; and that in no case shall any part of the said charity funds be given to any who at the time shall be in the receipt of parochial relief, or who shall have been such receipts, and shall for the purpose of enabling them to receive the benefit of the said colourably, or for a short time only have ceased to receive such parochial relief."

The charity is directed to be applied—

"In payment of premiums on apprenticing poor children of inhabitants of the township of Hartlepool, or in providing clothes for such children, on their being apprenticed to some trade or calling, or partly in payment of premiums and partly in providing clothes, so that the

tion, stating that he had given, while he lived, £1,000 to each of the towns of Croydon, Kingston, Guildford, Earningham, and Dorking; and had bequeathed a like sum to the town of Richmond, and £500 to Wandsworth, where he was born, for the relief and setting the poor to work in the same towns. He also bequeathed £1,000 "to buy land for perpetuity, to redeme poor captives and prisoners from the Turkish tyrannie. And not here stinting his charitie and bounty, did also give and bequeath the most part of his estate, to a great value, for the purchasing lands of inheritance for ever, for the relief of the poor, and setting them a worke; a pattern worthy the imitation of those whom God hath blessed with the abundance of the goods of this life to follow him herein." It is stated that the reason Mitcham is omitted in the list of places in Surrey favoured with his bequests was, "that he was whipped in that town as a vagrant, by which it appears that his parents were but of low and mean condition." He is said to have been extremely covetous, and to have obtained the name of Dog Smith because he kept no house, but dined at friends' tables, and then desired a bit for his dog.

number of such poor children to be apprenticed or clothed, in any one year, shall not exceed three, and so as the premium to be paid with, or clothes provided for, any child shall not exceed the sum of ten pounds; and the residue of such rents and profits in purchasing good warm woollen coats and cloaks and other articles of wearing apparel, or bedding or fuel, to be distributed to such of the most deserving aged or infirm inhabitants of the said township, at such times and in such manner as to the said corporation shall seem proper. But, nevertheless, the corporation shall be at liberty, in cases of emergency and where it shall appear that small pecuniary assistance would be usefully bestowed, to make donations in money at their discretion, such donations not at any time to exceed twenty shillings to any one family."

In consequence of the temporary extinction of the corporation in 1834, the above arrangement did not take effect. In 1835, James M'Dowell and William Manners, two of the inhabitants of the borough, petitioned the Lord Chancellor for an amended scheme, which was approved, and provides that a general meeting of the rate-payers of the town shall be held on the first Monday after the 29th of November in every year, at which twelve substantial householders of the town, together with the minister, churchwardens, and overseers of the poor of the parish for the time being, are to be elected and appointed trustees, for the ensuing year, of the charity estates, with full power to let and manage the same, and to receive the revenues thereof, applying them as directed by the previous scheme.

The enhanced value of the trust estates, in consequence of the demand for building sites in the town, has been already alluded to (see page 250). In 1851, the rental was about £300. At that time, the meetings for the appointment of trustees were well attended; but a Chancery suit having been instituted against that body for alleged mismanagement, the candidates for the office became fewer. In February, 1853, a decree was made, by which the costs of the petitioners, Grey and Laurenson, were transferred to the court of the Master of the Rolls: it declared also that there was no immediate danger from incursions of the sea, and that the trustees were clear of personal liability, having acted for the best; the contracts entered into with the site-holders, being to some extent confirmed. At the meeting in November following, the amount of rents received during the year was stated at £245 5s. 1d.; and after payment of heavy law costs, &c., there was a balance of £285 11s. 5d. in the bank. On the 25th of January, 1854, T. W. Carbon, Esq., on the part of the Attorney-general, attended, in the Town Hall, to receive suggestions for a new scheme for the management of the charity; and such amended scheme is daily expected.

Sir William Blackett's Charity.—By will, March

9, 1680, Sir William Blackett bequeathed, amongst other charities, the yearly sum of £2 to the poor of Hartlepool, to be paid on the 1st of December, "in the house at the bridge-end in Newcastle." This sum has been improperly carried to the overseers' account.

Henry Hilton's Charity.—Hartlepool was one of the places nominated in the miscalculated bequest of Henry Hilton, Esq., February 26, 1640-1, to receive £24 per annum for its poor. This annuity, reduced in 1663 to £16, expired in 1739.

Crooks's School.—John Crooks, by will, September 1, 1742, charged his estates at Stranton with £15 per annum for teaching 24 boys of Hartlepool reading, writing, and arithmetic, and £5 yearly to buy their books, stationery, shoes, and stockings. One of his heirs, John Leighton, taking advantage of the statute of mortmain, seized his share of the estate; but Ann Crooks, a daughter and co-heiress of John, by deed of gift, November 21, 1759, conveyed her moiety of the estates to seven trustees, to apply three-fourths of the rents in teaching as many poor boys as the same should be sufficient for, and the remaining fourth for books, &c. New trustees of the charity have been appointed from time to time. The property in Stranton contains 22 acres, the income from which is at present about £44 per annum. A school-house was built on a piece of ground leased of the corporation for 40 years from September 20, 1790, at 2s. per annum; and this lease was renewed for a similar term on October 24, 1849. The number of children educated is 20; but no clothing or books have ever been provided, as directed by the founders. The master has other scholars, who pay for their instruction.

Prissick's Schools.—Elizabeth Prissick (widow of Henry Prissick), who died December 30, 1826, left her property for the sole benefit of John Wells during his life-time, on condition of his making some provision for the education of the poor. He accordingly erected and endowed two school-rooms, which were placed under trustees; and a deed to that effect was enrolled in the High Court of Chancery, October 7, 1835. The income is derived from the ground-rents of leasehold property in South Terrace, and amounts to £200 a year. About 150 boys attend one of the schools, and 100 girls the other, all of whom are educated free, according to the tenets of the Church of England, on the national system. Since the death of Mr. Wells, an infant school has been commenced by the trustees in premises in Cleveland Place, belonging to the Duke of Cleveland, who gives the rent to the ragged school of the town.

The infant school is attended by about 120 boys and girls, who are admissible at the age of four years, each of whom pays a penny a week.

SUPPORT OF THE POOR.

It appears that, "in the *better* days of the corporation," the mayor supported the poor without a rate, the rent of the lands being sufficient for that purpose. In 1694, the charge for maintaining the poor, and other incidental expenses, amounted to £17 16s. Notwithstanding the appropriation of the proceeds of Smith's charity (see below) to the general relief of the poor, the amount of rates, in the early part of the present century, had become considerable. In 1815, the sum raised was £310 1s. 5½d.; but in 1829, it had declined to £199 7s. On the passing of the poor law act of 1834, Hartlepool was incorporated in Stockton Union.

During the year ended Lady-day, 1854, the amount collected for poor-rates in the township was £1,145 10s., and the receipts in aid of rates were £12 4s.; total, £1,157 14s. The expenditure for in-maintenance was £73 15s.; out-relief, £414 3s.; workhouse loans repaid, &c., £30 16s.; salaries and rations of officers, £59; other expenses immediately connected with relief, £52 5s.; total, £629 19s. The costs of law proceedings were £25 3s.; constables' expenses before justices, 19s.; vaccination fees, £17 15s.; registration fees to clergymen, £36 13s.; county and borough rates and police, £425 18s.; parliamentary and municipal registration, £6 7s.; for other purposes, £104 17s.; total expenditure, £1,247 11s.

THE CORPORATION.

HARTLEPOOL is the only royal borough in the county of Durham. Its first charter, as already seen, was granted by King John; and Bishop Poor, in 1230, granted a similar charter. The king appears to have had the first appointment of bailiffs, which was afterwards held by the bishops. The following is a list of mayors elected between 1317 to 1583, several of whom were re-elected from time to time during that period:—

Andreas Bruntoft, 1315, 1317; Joh's Goldsmith; Will' filius Gilberti; Nich. de Bruntoft; Nich. Lamberd; Joh's de Nesbet; Helyas de Brancepath; Joh'es Ward; Andreas fil' Rogeri; Will' de Bruntoft; Joh's de Seton; Benedictus fil' Will'i; Ada Dowson; Joh'es Nesbyt; Joh'es de Whittrout; Rogerus Hood; Ric. Bruntoft; Rob. Howden; Ric'us Vavasonr; Rob. Pert; Ric. Lasynby; Joh. Browne; Richarde Hatone, 1583.

* REV. WILLIAM ROMAINE.—This celebrated divine, second son of William Romaine, mayor, was born at Hartlepool, September 25, 1714. The first seven years of his education was received at Houghton-le-Spring; he was then sent to Oxford, where he resided prin-

On February 3, 1593, "at the humble suit, request, and petition of Sir John Lumley, Lord Lumley," Queen Elizabeth was pleased to grant a charter of incorporation to the borough of Hartlepool, the principal clauses of which state that the burgesses shall be, and continue for ever, a body corporate and politic, and that they shall have a common seal; that the mayor, to be chosen out of the burgesses, shall continue in office one year; that twelve of the best approved and most discreet burgesses shall be called capital burgesses and common council, who shall assist the mayor in dispensing justice and governing the borough; that there shall be a market on Tuesday in every week, and a yearly fair beginning on the vigil of St. Lawrence, to continue fifteen days; and that the mayor and burgesses shall have the same privileges as those of Newcastle-upon-Tyne. In gratitude to Lord Lumley, the mayor and chief burgesses, June 8, of the same year, "granted to him and his heirs one moiety of all the fines, amerciaments, issues, sums of money to be taken for all punishments, corrections, bloodsheds, and affrays, of all fines taken for making burgesses or free merchants, of all fines arising upon any ordinances, customs, or constitutions within the said borough; and also that Lord Lumley and his heirs shall have keelage, viz., 8d. for every vessel arriving with a boat, laden or unladen, within the port, and for every vessel without a boat, 4d.; and also for stallage of every shop and booth, upon every of the market days, ¼d.; and for passage of every horse in every market day, ½d.; and for every shop and booth in the time of the fairs, ½d.; and for passage of every horse at any fair, ½d." The following are the names of the gentlemen who held the office of mayor between that time and 1834:—

Edmund Bell, 1593; Pereival Bell; Robert Porrett, 1600; James Eture; Wm. Wright; Wm. Porrett; Wm. Wilkinson; Thos. Wright; Thos. Nicholson; Robt. Ridlington; John Throekmorton; Roger Wright; Richard Graec; Nicholas Joyee; John Wells; Christopher Fulthorp; John Walker, 1650; Richard Langley; John Marshall; Roger Dobson; Joseph Speeding; Robt. Powell; Robt. Merriman; John Miller; Wm. Bellasis; Anthony Dodsworthy; John Claxton; Samuel Smathwaite; Robt. Routledge; Henry Barnes; Richard Moore; John Fulthorp; Wm. Tempest; Joshua Smith; Edmond Bell; Joshua Smith; William Gibson; George Heath; John Merriman; John Crooks; William Gibson; Anthony Wood; Thos. Snowden; James Hirdman; John Tempest; Robt. Wright; John Spearman; John Thompson; John Wilson; Thos. Davison; James Nicholson; Sir John Clavering, Bart.; Anthony Smith; John Eden; John Hedworth; George Heath; Robt. Hutchinson; Sir John Eden; Wm. Romaine;* Cuthbert

cipally, until he took his degree of M.A., October 15, 1737. He became a frequent preacher before the University, and was noted for his zeal in behalf of what were deemed the orthodox doctrines. As a clergyman of the church of England, he adhered to the most rigid

interpretation of the thirty-nine articles. From some dissatisfaction, however, or want of success in his ministry, he appears, previous to his removal to London, to have formed an intention of leaving England for France. He was prevented from executing this design, by what he piously deemed a providential interposition. He had actually made the necessary preparations, and was going to the water-side, in order to secure his passage, when he was met by a gentleman, a total stranger to him, who asked if his name was Romaine. He answered that it was. The gentleman had formerly been acquainted with his father, and, observing a strong resemblance, was induced to make the inquiry. After some introductory conversation, he told him that the lectureship for the united parishes of St. George's, Botolph Lane, and St. Botolph, Billingsgate, were then vacant; and that, having some interest in those parishes, he would exert it in his behalf, if he would become a candidate for the lectureship. Mr. Romaine consented, provided he should not be obliged to canvass in person. He was chosen lecturer of St. Botolph's in 1748, and, the year following, lecturer of St. Dunstan's in the west, where he continued to preach to crowded congregations almost to the time of his death. He was for some time morning preacher at St. George's, Hanover Square, and professor of astronomy at Gresham College. He was frequently solicited to plead the cause of charity for various institutions, which he at all times did with great earnestness and eloquence, and few preachers ever produced more money on such occasions. His useful labours at length terminated, July 26, 1795, at the advanced age of 81. Besides his work on "The Divine Legation of Moses," and several single sermons, he published "Twelve Sermons upon Solomon's Song," "The Life of Faith," "The Walk of Faith," "The Triumph of Faith," "An Essay on Psalmody," &c. In money matters, Mr. Romaine evinced a great share of independent spirit; as an illustration, he refused large offers from the booksellers for the use of his name to religious compilations, and on one occasion no less than £500, when his annual income did not amount to half the sum. Mr. Romaine married, in 1755, Miss Price, who survived him about six years, and by whom he had a daughter and two sons.

Robert Romaine, father of William Romaine, mayor of Hartlepool, was among the French Protestants who took refuge in England upon the revocation of the edict of Nantes. He settled at Hartlepool, and on August 27, 1683, was admitted a burgess. In 1741, there was an advance in the price of wheat from 6s. to 15s. per boll; on which occasion the people rose, and a formidable mob appeared in the town. Mr. Wm. Romaine went out to meet them, asked them their wishes, and was answered that they wanted corn cheaper. The riotous proceedings were put an immediate stop to, first, by promising to sell all the corn he had at 5s. a bushel, and then by performing his promise, for he sold to all that came at the price, whilst the other merchants refused to do so.

* SIR CUTHBERT SHARP.—This distinguished local antiquary was the son of Mr. Cuthbert Sharp, shipowner, by Susannah, sister of

The small amount of revenue arising from the tolls and harbour dues, and the expenses necessarily attached to the office of mayor,† rendered it necessary to choose that officer from amongst the opulent, but non-resident

Brass Crosby, Esq., the patriotic lord mayor of London (see page 174). He was born at Sunderland, and received his early education at the school of Dr. Burney, Greenwich. At about the age of eighteen, he accepted a commission in a regiment of fencible cavalry, a force at that time introduced and supported by government; and he served in Ireland during the rebellion, until these cavalry forces were disbanded. Mr. Sharp now retired from military life, and proceeded to pursue his studies in Edinburgh, accompanied by a brother officer, the late Daniel Ellis. Soon after leaving Edinburgh, when the preliminaries of peace had been signed with France, he eagerly embraced an opportunity afforded him, of being one of the first to visit Paris, and he remained there during the short interval of the peace of Amiens. On the sudden resumption of the war, he was one of the victims of Napoleon's ungenerous policy of retaining English visitors as prisoners of war; but, having formed an intimate acquaintance with the *grand juge* Regnier, he was by that dignitary's influence exempted from the fate of the other unfortunate *detenus*, who were ordered to Verdun. He was, however, kept in France as a prisoner on parole for some years, during which he acquired a fluency in speaking the language, and an intimate acquaintance with French manners and literature. At last, through Regnier's influence he procured a permission to visit Holland, and from thence he returned to England. He now settled at Hartlepool, devoting himself in retirement to literary pursuits, in intimacy with the late John Ingram and Robert Surtees, of Mainsforth whose kindred tastes encouraged him in the study of the local antiquities and history of the north. Having been elected a burgess of Hartlepool, his turn to serve the office of mayor arrived in the year 1816, during which he received the honour of knighthood on presenting an address to his royal highness the Prince Regent. During the period of his mayoralty, he published his History of Hartlepool; he afterwards devoted himself to local genealogy, and contributed to Mr. Surtees' History of Durham many of the genealogies which appear in that work. In 1823, Sir Cuthbert was appointed to the collectorship of the customs at the port of Sunderland, the duties of which office he continued to perform until 1845, when he was promoted to the collectorship of Newcastle; this appointment he held until the time of his death, which occurred at Newcastle, August, 17, 1849. He published, besides his History of Hartlepool, a Life of Ambrose Barnes, the Bishoprick Garland, the Jolly Huntsman's Garland, Memorials of the Rebellion of 1569, &c. "Sir Cuthbert Sharp," says Mr. Fenwick, in the 57th Report of the Literary and Philosophical Society, "was distinguished for fine taste, and great ability as an antiquary; and his important history of the Northumberland and Neville Rebellion, forms a lasting monument to his memory."

† Amongst the expenses was an annuity of £24, incurred in a contest with G. Pocock, Esq., lord of the manor, relative to the boundaries of the corporation. This was submitted to the arbitration of James Losh, Esq., of Newcastle, whose decision was given January 26, 1802.

gentry of the county. The consequence of this was, that latterly petty sessions were seldom held, and offenders were sometimes removed as far as Stockton for examination. The election of William Hazlewood, Esq., M.D., to the office of mayor, in 1834, was questioned in the Court of Queen's Bench, the number of aldermen having been reduced too low to perform any legal act; and he, being unable to substantiate his title, disclaimed the office, whereon judgment of ouster was given by the court. "And now," says a recent historian, "commenced a period of disorganization and misrule unequalled in any town in the kingdom of similar pretensions—no resident magistrate—no control—no police—the township constables incompetent and inefficient, and literally objects of ridicule. The whole town lay at the mercy of the lawless labourers employed in excavating the docks. The corporate property unowned and uncared for—the freemen's pastures appropriated by persons from the adjoining townships, for the use of their cattle—and the very soil, in many instances, taken and inclosed by the owners of the adjoining property."

At a public meeting of the freemen and other inhabitants, held January 16, 1839, a committee was appointed, who consulted Sir William Follett on the state of the corporation. His opinion was that the corporation was not actually extinct; but he advised the existing freemen to petition for a new charter. This was accordingly done, and a charter obtained, September 24, 1841, by which William Vollum, Esq., was appointed mayor: the first capital burgesses or common councilmen named were, Henry-John Spearman and William John Vollum, Esqrs.; Johnson Worthy, builder; John Winstanley, grocer; Cuthbert Sharp, ship-owner; Thomas Rowell, bank agent; George Sheraton, grocer; William Manners, ironmonger; Stephen Horner, chemist; Christopher Davison, coal fitter; Joseph Mellanby, bank agent; and Thomas Belk, attorney-at-law.

The new corporation, though fettered with a debt of £1,200, without revenue, and surrounded by difficulties and obstructions, were enabled to commence proceedings in various cases of encroachment and appropriation. The most important of these was a case in which a surveyor of highways had persisted in using a piece of ground inclosed by the corporation, and which was decided in favour of that body at the summer assizes at Durham in 1845. A committee of the council drew up and presented a report, dated July 28, 1847, on the subject of the freemen's property, in which it was recommended that each freeman and freeman's widow

should receive an annuity of £12 10s. in consideration of foregoing their respective rights to depasture a horse and cow on the Moor and Farwell Field. An act of parliament was afterwards procured on this subject and that of the harbour dues.

The mayors under the charter of 1841 were—

William Vollum, 1841; William-John Vollum, 1842; Thomas Rowell, 1843; Christopher Davison, 1844; William Manners, 1845; Thomas Rowell, 1846; William-John Vollum, 1847; George Green, 1848; William-John Vollum (accidentally drowned in the Victoria Dock, January 11) and Edward Turnbull, 1849; John Punshon Denton, 1850; Christopher Davison, 1851.

It had been the wish of the parties who obtained the charter that the provisions of the Municipal Act should be incorporated in it; but this desire was over-ruled at the time by the opinion of Sir William Follett. In 1850, however, a committee was appointed by the inhabitants of the town to obtain a charter containing those provisions, so as to secure to the rate-payers the privileges of popular representation. The existing aldermen joined the movement; and, the preliminary inquiries and routine having been observed, a charter was obtained, December 5, 1850, in which it is declared, "that the council of the said borough shall consist of a mayor, four aldermen, and twelve councillors, to be respectively elected at such times and places, and in such and the like manner, as the mayor, aldermen, and councillors for the boroughs named in the schedules to the said Act for the Regulation of Municipal Corporations in England and Wales, except that the first mayor, aldermen, and councillors, and the first auditors and assessors for the said borough shall be respectively elected at such times and in such manner as hereinafter mentioned." The title and qualifications of the burgesses are to be the same as those in the second section of Schedules B in the Municipal Act. Edward Turnbull, Gent., or, failing him, Peter Barker, Gent., was to draw out the first burgess list, which was to be placed on the door of the Town Hall during the eight days next before the 26th December, 1850, and revised by James Brotherton, Esq., or Henry Manisty, Esq.; the election of mayor was to take place on January 14, 1851; and that of auditors and assessors on March following; Christopher Davison or John Punshon Denton acting as returning officer. On the first of these occasions, 27 candidates went to the poll. The first members of the newly elected council, which met on January 27, 1851, were Stephen Robinson, Esq., civil engineer, mayor; William Gordon, John Punshon Denton, and John Winstanley, aldermen; Robert

Winstanley, John Mowbray, Edward Turnbull, William Hall, William Merryweather, Luke Blumer, Cuthbert Emerson, George John Brown, Robert Hunter, Thomas Robson, John Todd, and Thomas Serowther, councillors; and Thomas Belk, town clerk. Since that time, the mayors, elected in November of each year, have been, Stephen Robinson 1851; Peter Barker, 1852 and 1853; and Thomas Robson, 1854.

This council, in addition to their ordinary duties, are a Local Board, for carrying out the provisions of the Public Health Act, 1848. (See SANITARY CONDITION.) The queen has also granted a separate commission of the peace to the borough. J. P. Denton, Esq., of Hartlepool; Robert William Dixon, Esq., of Seaton Carew; the Rev. James Allan Park, of Elwick Hall, and the mayor of Hartlepool for the time being, officiate as magistrates at petty sessions. There is a rural police station in Bond Street.

The act of Parliament, applied for in 1850, received the royal assent May 20, 1851. It provides that a "Pastures Committee," consisting of seven freemen, shall be annually appointed, to have the superintendence and management of the affairs of the freemen, and the regulation, occupation, and stocking of the pastures. Section 24 provides "that any annual sum or sums which shall be ascertained to be the value of the freemen's interest in the pastures and Town Moor, and which shall be agreed to be paid to them by the corporation for the purchase and extinguishment of their rights of pasturage and other rights in such lands, shall be paid by the corporation to the treasurer, for the benefit and on account of the freemen; and such annual sum or sums shall be a charge upon the said land in the hands of the corporation, and shall be payable out of the rents and annual proceeds thereof, or out of any monies to be produced by any sale or other disposition thereof, in preference to any other payments whatsoever." On such arrangements being made with the freemen, and published in the "London Gazette," and some newspaper in Hartlepool or the county of Durham, "the pastures and the Town Moor, or such parts thereof respectively as shall from time to time be the subject of the arrangement—shall be discharged from the rights of pasturage and other rights of the freemen in such lands," and shall be deemed part of the general property of the corporation, and be held by them for the benefit of the borough. Previous to such arrangements being completed, the lands are to be let from year to year by the pastures committee; after which, they may be disposed of by sale, lease, or otherwise. The money received, after the

payment of necessary charges, is to be called "The Freemen's Fund," which, on the 1st of April in every year, "shall be divisible into equal shares between the persons who, during such year, are the freemen, and shall be paid to them, or their respective executors, administrators, or assigns, by half-yearly payments, on such days as the pasture committee shall from time to time appoint; and in default of such appointment, the first half-yearly payment thereof shall be made on the 5th day of April in such year, and the second half-yearly payment thereof shall be made on the 5th day of October in the same year." The corporation are empowered to work limestone on the Town Moor, but must fill up the excavations made; and they may provide pleasure grounds or places of public resort or recreation. They may also, with the consent of a majority of the burgesses in public meeting, set apart a portion of not more than three acres for building purposes. Money paid to the credit of the corporation may be applied for preserving the pastures and Town Moor from the inroads of the sea.

The act recites that, up to 1833, the corporation were entitled to a toll of 1s. 4d. from every decked vessel using the port of Hartlepool; and that by the act 1 Vict., c. 78, the commissioners under it were entitled to receive the said toll, with a toll of 8d. on every ship using the port through stress of weather, or for other purposes than loading or unloading, which tolls had been applied in repairing the town walls, so as to protect the town from the encroachments of the sea. It is therefore provided that, the powers of the commissioners having ceased on the town receiving a charter, the corporation shall collect those tolls, and apply them to the repair of the walls, and the maintenance and protection of the Heugh and headland of Hartlepool from the inroads of the sea; the works for the latter purpose to be subject to the approval of the Admiralty. Certain clauses of "The Harbours, Docks, and Piers Clauses Act, 1847," and "The Railways Clauses Consolidation Act, 1845," are incorporated with this act.

The franchise of Hartlepool has been obtained by gift, composition, patrimony, or servitude. Besides the right of stint for a horse and cow on the Town Moor, the burgesses are exempt from the payment of tolls to the mayor.

The corporation possesses two ancient official seals, made of brass. On the oldest, which was probably made on the incorporation of the town by King John in 1200, St. Hilda is represented on the reverse standing in the centre of a canopy, surmounted by a church.

On each side, under a smaller canopy, a priest is celebrating mass. A crescent is on one side of St. Hilda, and a star on the other; with a bird descending on each side. The legend is, "SUBVENIAT FAMVLIS NOBILIS HILDA SVIS." The obverse of the seal exhibits a hart at bay in a pool of water, and this rebus is surrounded by the legend "SIGILLVM COMMVNITATIS DE HERTERPOL." The other seal is smaller, and represents St. Hilda, supported by two bishops, standing on a prostrate hart; the inscription, "SIGILLVM OFFICII MAJORIS DE HERTILPOL."

Courts leet and *baron* were held twice a year by the recorder, who was steward of the borough, or by his deputy. The grand jury presented all offences contrary to good order and the statutes of the corporation; and the court leet took cognizance of debts under the amount of 40s. Since the borough has been governed under the provisions of the Municipal Reform Act, the office of recorder has not been continued.

Hartlepool County Court for the recovery of small debts is held monthly. M. Child, Esq., is assistant clerk; and Mr. Richard Merryweather, deputy bailiff. The following are the townships, with their distances in miles, which are included in its circuit:—Hartlepool; Brierton, 4; Claxton, 4; Dalton-Piercy, 4; Castle-Eden, 9; Elwick, 6; Elwick Hall, 6; Greatham, 5; Hart, 4; Monk-Hesledon, 6; Seaton-Carew, 3; Shotton, 12; Stranton, 3; Thorp-Bulmer, 3; and Throston, 3.

Hartlepool, though not a polling place for members of parliament for the Southern Division of the county of Durham, is the centre of a revising barrister's district, which comprises all the townships above enumerated except Castle-Eden, Monk-Hesledon, Shotton, and Thorp-Bulmer.

When the subject of a new Reform Act was agitated in parliament in 1854, the following resolution was unanimously adopted in the town council:—"That, viewing the increased population and wealth of this borough, the corporation think it expedient that it be more directly represented than by the county members; and in order to promote this object, it refers the matter to the Trade and Commerce Committee, to be considered in all its bearings."* The committee, however, did not think themselves justified, under the circumstances, in taking any steps in the matter.

* When Hartlepool was recommended, in 1620, by a committee of the House of Commons, to have burgesses representing it in parliament, the reason assigned was, "because it is a walled town." Sir Talbot Bowes objected on account of the poverty of the place, and another member because it was "much given to Popery."

MARKETS, FAIRS, INTERNAL TRADE, &c.

QUEEN ELIZABETH's charter fixes the weekly market on Tuesday; but, by prescription it has long been held on Saturday, and this practice is confirmed by the charters of 1841 and 1851. Notwithstanding the increase of the population, Hartlepool is not as yet provided with a covered market, the corporate funds having been hitherto inadequate to meet the expense of such an erection. It has been supposed that a building, with rooms suitable for holding public meetings, &c., might be undertaken by a joint stock company; and such a convenience would certainly benefit the town, not only by concentrating the various branches of business transacted, but by inducing a greater attendance of sellers and a better supply of the necessaries of life.

It was long felt to be a serious inconvenience to the agriculturists of the Hartlepool district, that no facilities for the disposal of their produce were provided in their own immediate neighbourhood. A toll of five pecks per last operated as a virtual prohibition to the admission of corn for sale into Hartlepool; and when, in 1841, this charge was reduced to half a peck per last, it was still sufficient to prevent a snpply. In 1851, during the mayoralty of Stephen Robinson, Esq., the subject was brought before the new municipal council, who resolved to abolish the impost altogether; and as a greater inducement to farmers, premiums were promised to those who should bring in the greatest quantity of wheat and oats during the ensuing year. The announcement was well responded to; and on opening the market, Saturday, September 20, 1851, 300 quarters of wheat and 100 quarters of oats were offered for sale, which were all bought up. The event was celebrated by a peal of bells from the Roman Catholic church, and a public dinner. At the following anniversary, a premium of £10 was presented to the representatives of the late Mr. Robert Stephenson, of Hart, for the largest quantity of wheat, 2,024 bushels; £5 to Mr. Richard Procter, of Hart Moor, for the second quantity, 1,390 bushels; £5 to Mr. John Grey, of Hartlepool, for the largest quantity of oats, 546 bushels; and £2 10s. to Mr. F. Williamson, of Cliff House, for the second quantity. During the year, above 20,000 bushels of wheat and 6,000 bushels of oats were delivered in the market. Premiums were afterwards offered to the most extensive purchasers; latterly, however, the market has not been so well supported.

By the charter of 1841, confirmed by that of 1851, the mayor and burgesses were empowered to hold "one

fair yearly and every year for ever, beginning on the vigil of St. Lawrence, and from thence to continue fifteen days, together with a court of *pie poudre* there to be holden in the time of the fair—with tollage, stallage, picage, fines, amerciements, and all other profits, commodities, and benefits whatsoever arising, happening, and occurring;” provided that such fairs were not prejudicial to the fairs next adjoining. Fairs* have also been held on May 14, August 21, October 9, and November 27.

There are in Hartlepool four wine and spirit merchants, four ale and porter merchants, twenty inns and public houses, thirty beer-houses, four eating-houses, three brewers and maltsters, and two temperance hotels. The usual trades connected with sea-ports are carried on; and there are two iron-foundries and three chain-makers. The works of the “Hartlepool Iron Company,” built in 1839, give employment to about 300 men and boys. There are six booksellers and stationers, three of whom are also printers; and two circulating libraries for books and one for music.

Carriers convey goods daily by railway to and from Stockton and Sunderland. The post-office is in St. Mary’s Street, and there are two arrivals and three dispatches of letters every day: the establishment was formerly a branch of that at Stockton.

BANKS.—For facilitating the reviving trade of Hartlepool, a branch of Sir W. Chaytor’s bank was opened in 1833, which, in 1836, became a branch of the Newcastle, Shields, and Sunderland Union Joint Stock bank, but was closed in December, 1846, on that establishment suspending payment. Messrs. Backhouse and Co., of Darlington, opened a branch bank in Hartlepool in 1838; and, in the following year, a branch of “The National Provincial Bank of England” was commenced: both of these establishments are still carried on.

* **BILLY PURVIS.**—This popular local character died in his 70th year, on the 16th December, 1853, at Hartlepool, where his remains were interred. William Purvis was a native of Scotland; he was born on the 13th January, 1784, at Auchindinny, near Roslin, of humble parentage. In 1786, the family came to Newcastle and settled in the Close. Having been at school for some time with Mr. Sessford, he was apprenticed to Mr. John Chapman, joiner, Bigg Market, Newcastle. Here his peculiar genius exhibited itself before his shop-mates, in his ability to stand on one leg on the tight-rope, and other feats of dexterity. In course of time, he procured the appointment of drummer in the Newcastle theatre, for which he was fitted by previous practice in the Newcastle Volunteers; was promoted to the office of “call boy;” appeared on the stage occasionally in benefits to dance the Sailor’s Hornpipe; and at length rose to the post of assistant carpenter. He afterwards, in amateur companies, occasionally

The Savings Bank was established in November, 1844, the business of which is transacted in the Town Hall. Its progress has not kept pace with the population of the town and vicinity, as compared with the savings banks of other places; the amount deposited at the close of 1850 being only £2,357.

SUPPLY OF WATER.

THE only supply of water within the town was formerly from two public pumps and 92 private pumps and wells. One of the public pumps, called the Town’s Pump, is about 30 feet deep, and the water usually stands in it to the height of 2 feet: it was frequently locked up on Saturdays; and its water was often unfit for use in the months of August, September, and October. The other, the Dandy Pump, is about 18 feet deep, and in which the water stands to the height of 6 feet: the water is utterly unfit for household purposes, but is held in high estimation by the fishermen for preparing *bait*. That obtained from private wells is generally too impure for beverage. Water of a better quality was brought into the town in casks from Stranton, and sold at the rate of one farthing per gallon.

In 1846, a company was formed, and obtained an act of parliament for supplying the town with water and gas. It was intended to obtain the water from a spring or brook called Hartburn; but a difficulty occurred in effecting a settlement with the proprietor of the land, F. A. Milbank, Esq., for the use of the stream, and which was also found to be so irregular in supply as to be often nearly dry in summer. Another act was therefore obtained (passed June 26, 1849), enabling the company to procure water from a spring, the property of the West Hartlepool Dock Company, and which issues from a limestone quarry near Mill House. From this source the water is pumped by steam power into two reservoirs on the high land above the quarry, which

took the leading characters in the most popular tragedies; but his popularity was established by his performances at fairs, races, feasts, hoppings, and other similar places of public amusement. As dancing-master, conjuror, piper, play-actor, showman, &c., he has been before the public in the north of England for half a century, nor unfrequently exhibiting at the mansions of the gentry, in the neighbourhood—Gosforth, Wolsington, Hebburn, and Howick; and no man in his day possessed a larger share of popularity. On one occasion, during the Whitsuntide holidays, when the South Shields magistrates gave him license to erect his theatre “if he would not annoy the residents in the market place with his din,” he assured them, with his ready wit, that “the only noise that was made was caused by the audience applauding him—which they could not help.” Mr. Purvis was always ready to give a “benefit;” he gained the good will of all who knew him, and few have been more respectable in their station.

are at sufficient elevation to command the entire district. From these reservoirs, therefore, the water flows by its own gravity through the mains, and is distributed in the ordinary way. The larger main, from the reservoir to the gas works at Hartlepool, is about 3,240 yards in length, and 9 inches inner diameter. Other mains, varying from 6 to 2 inches, serve the town generally; the principal artery being that which leads up Northgate Street and the market-place, and passing over a summit near St. Hilda's church, terminates for the present near the Hough light-house, on the easternmost headland of the Hartlepool peninsula. The works are estimated to supply 275,000 gallons per day; but the yield of the spring in the driest seasons has always been upwards of 700,000 gallons daily. The proportion of solid constituents in the quarry water is 43·836; whilst in that of the Town Pump it is 123·136, and in that of the Dandy Pump, 311·529.

The cost of obtaining the act of 1846 amounted to about £2,500, and that of 1849, £2,801 7s. 5d.; being a total of £5,301 7s. 5d. for parliamentary expenses. The latter bill was obtained by the aid of a preliminary inquiry by two surveying officers, under the authority of the Commissioners of Her Majesty's Woods and Forests and the Lords of the Admiralty. The capital of the company is in 5,800 shares of £5 each. By the act, the company have power to supply Middleton, Stranton, Hart, and Seaton-Carew with water.

SUPPLY OF GAS.

THE gas works belonging to Mr. J. A. West, erected in 1836, were purchased by the Gas and Water Company under the powers of the act of 1846. The capital is in 3,600 shares, at £2 10s. each. There are two gasometers; one capable of containing 11,000, and the other 26,000 cubic feet of gas. The total quantity of gas consumed is upwards of 5,000,000 cubic feet per annum. The length of the main pipes, which vary from 9 to $\frac{1}{2}$ inch bore, is about 9,000 yards. The price charged to the majority of private consumers is 6s. 8d. per 1,000 cubic feet; but the Dock Company pay only 4s. 6d. The public lamps, of which there are 133, are charged at the rate of 4s. 6d. per 1,000 cubic feet. In 1855, the company procured a new act for the purposes of increasing their capital, &c., and by some of its clauses the charges have been partially reduced. The shareholders have been receiving a dividend upon their capital at the rate of 8 per cent.

EDUCATIONAL, RELIGIOUS, AND OTHER PUBLIC INSTITUTIONS.

HARTLEPOOL LITERARY, SCIENTIFIC, AND MECHANICAL INSTITUTION.—This establishment, commenced in 1833, was suspended in 1836; and though re-established in 1840, it was again closed in 1843. Having been once more revived, the name was changed, in February, 1844, to that of the "Hartlepool Mechanics' Institute." The town was canvassed for subscriptions in 1845; and in March, 1847, the institution was re-organized under its original title. Amongst other efforts to render it popular, a news-room was commenced in 1848; and in the following year, a house was taken for the institution in the Stripes. Donations from the Duke of Cleveland and others have occasionally been received; and the system of engaging lecturers, though not at first appreciated either by the members or the public,* has been persevered in, with prospects of success. A piece of ground, in an eligible situation for an appropriate building, has been presented by F. A. Milbank, Esq.; and as soon as the necessary funds can be provided, the erection will be proceeded with. The annual subscriptions are, for members who have the use of library and news-room, 12s.; ordinary members, who have the use of one of these only, 8s.; minors and apprentices, 4s.

SUNDAY SCHOOLS.—The first Sunday school in Hartlepool was established by the Rev. B. Lumley, curate of St. Hilda's, and is well attended. The children of the Prissick Schools are required, by the rules of that endowment, to attend the church Sunday-schools. Similar educational establishments have been attached to the various Dissenting places of worship opened in the town.

RAGGED SCHOOL.—This school was established in February, 1848, and is supported by subscription. The number on the books is about 100, and the average attendance of boys and girls about 70, a part of whom pay a few pence for instruction: it is, however, the intention of the managers to make the school free as soon as the funds will allow of such an arrangement. In 1853, a mistress was engaged, to teach the girls needlework, &c.

OTHER SCHOOLS.—There are in Hartlepool two boarding seminaries for young ladies. The endowed schools

* One lecturer was so much disappointed with the attendance he received, that he observed the next time he came to Hartlepool, it should be with a "a monkey and trumpet."

already noticed (see CHARITIES) are Crooks's school, in Middlegate Street; and Prissick's schools, a large square brick building, with arched sash windows, in Prissick Street. The Roman Catholics have a school at the corner of Prissick Street, in a stone building formerly occupied as their chapel; and there are also fourteen private day schools in the town, in some of which the usual branches of an English, classical, and nautical education are taught.

AUXILIARY BIBLE SOCIETY.—This institution, which was commenced as a branch of that at Stockton in 1823, was, in 1851, constituted a distinct auxiliary. A number of Bibles and Testaments are annually distributed, and the sums subscribed in the district for its support, are remitted to the parent society, London.

AUXILIARY SOCIETY FOR THE PROPAGATION OF THE GOSPEL AMONGST THE JEWS.—This institution, commenced in 1847, is managed by a committee of ladies, and supported by different bodies of Protestants.

INDIGENT SICK SOCIETY.—This society was established in November, 1847, and is supported by subscription. It is conducted by a president, a secretary, a treasurer, and a committee of ladies, part of whom are visitors.

THE TOWN MISSION, for Hartlepool, Middleton, and Stranton, was established in 1848; a resident agent visited the sick, aged, and dying, distributed tracts, and addressed public meetings. The institution is supported by subscriptions; but the amount collected of late being insufficient, the resident agent has been withdrawn.

BENEFIT SOCIETIES.—The *St. Hilda Lodge of Odd Fellows* was commenced October 28, 1839; and the *Briton's Pride Lodge* was opened in March, 1855. The number of members belonging to these two lodges is upwards of 500. The *St. Hilda Court of the Ancient Order of Foresters*, established in November, 1839, consists of above 200 members; and the *Loyal Sincerity Lodge of the Ancient Order of Modern Druids*, instituted in November, 1848, has about 150 members. The *St. Helen's Masonic Lodge* was constituted September 11, 1846. The *Catholic Guild* is a society formed by members of that religion.

BUILDING SOCIETIES.—The first building society in Hartlepool was commenced in 1836; and other two of these useful undertakings have since been formed.

PUBLIC BATHS.

THIS desirable acquisition to a town has recently been erected in Hartlepool. The building is situated at the south-east end of the Town Moor, commanding an extensive land and sea view, with every facility for recreation and exercise. This establishment was opened to the public in 1850, and contains warm, vapour, shower, and plunge baths, a large waiting-room, and within the building spacious accommodation for lodgers. The edifice is in the manor-house style of architecture; it has a neat and well proportioned porch, mullioned windows, the roofs terminating with gables. The whole of the outline is extremely effective and picturesque; and it is only to be regretted that the details are not a little more correct, though, upon the whole, the building is very creditable to the local architect, Mr. William Watt.

CEMETERY.

AMONGST other precautionary measures which emanated from the board of health in 1853, was the formation of a cemetery. A meeting of the rate-payers was held on the subject on the 31st of October in that year, at which it was decided that a burial-ground should be provided in accordance with the act of parliament passed in the previous session; that one part of it should be consecrated for the interment of members of the Church of England, and the other part appropriated to Dissenters, with a chapel for each; and that a committee of ministers and members of various religious bodies should be appointed to carry out the measure. A committee having been formed, an eligible site was selected, about half a mile north of the town, between the railway and the sea-beach. The ground consists of six acres, and is of a dry and sandy soil. The cemetery is inclosed within a brick wall, seven feet high. The front towards the railway is of ornamental brick-work, finishing in the centre with gate pillars and palisading. On the south side of the entrance, a chapel is in course of erection for those desirous of using the consecrated ground, with a vestry and waiting room, the edifice terminating with an elegant clock-tower; and on the north side, a chapel for the use of Dissenters, with superintendent's house and requisite offices attached. The entire buildings are of ornamental brick-work, after the Norman style of architecture; the ground is intended to be tastefully laid out; and from its varied surface and the characteristic style of the

buildings, the cemetery will have an attractive and picturesque effect. The whole has been executed from designs and under the direction of John Dobson, Esq., architect, Newcastle. The estimated cost is about £3,000.

SANITARY CONDITION.

A PETITION having been presented to the General Board of Health, signed by 112 rate-payers of the town, William Ranger, Esq., superintending inspector, opened an inquiry in the Town Hall, November 7, 1849, for the purpose of hearing evidence and receiving statements relative to the sanitary condition of Hartlepool. He also visited and inspected the seats of epidemic, endemic, and other contagious diseases.* In these investigations, he received assistance from the Rev. Robert Taylor, incumbent of St. Hilda's; J. P. Denton, mayor; George Green, M.D.; P. M. Edger, union surgeon; George Wilkinson, surgeon; Thomas Belk, town clerk; John Mackenzie, collector of customs; Edward Turnbull, solicitor to the gas and water company; Richard Wilson, churchwarden; William Gordon, builder; William Merryweather, builder; the Rev. William Knight, Roman Catholic priest; the Rev. James Douglas, Presbyterian minister; John Todd, builder; Edward Spence, relieving officer; John Proctor, stationer; John Lawrenson, secretary to the gas and water company; John Grey, surveyor of roads; and Henry Taylor, coal exporter.

During the 12½ years ended September, 1849, the number of births was 3,242, and of deaths 1,949, shewing an increase of 1,293, or, upon an average, 103·44 births per annum in excess of the deaths. Assuming the average population of the last seven years returned at 7,500, the deaths, which were 1,359, would be in the proportion of nearly 26 to 1,000. The principal or generally prevailing disease was stated to be typhus of a mild type, prevailing to such an extent as to be endemic in spring and autumn. With regard to the most frequent haunts of disease, G. Green, Esq., M.D., stated—

“That many of the buildings were so vicious in their construction as to render it, in his opinion, quite impossible to put the town upon a

* “The attack of the cholera at Hartlepool, in 1832,” says a late writer, “was one of the most severe, in reference to the population, in the kingdom; out of a population of 1,400, there were 57 deaths. It was supposed, by the medical men, to have been much aggravated by the absurd practice of keeping the dead for several days after death, which had prevailed in the town for a long period. The abominations of rotten fish and general filth, together with a dietary among the lower orders strongly predisposing them to such complaints, no

sound sanitary basis; the rooms, in numerous instances, being literally nothing more than closets; the houses arranged without either yards or privies; cellars, without light or ventilation, converted into dwellings. Numbers of houses are situate in blind alleys with covered entrances; the streets narrow, and in several cases mere *culs-de-sac*; though there is every facility for making the town one of the healthiest in the kingdom.”

The construction of some of the houses and streets, recently erected to the east, was found to be very objectionable. The town was also very deficient in sewerage; the few sewers laid down by the surveyors of highways, at the instance of the inhabitants, not being constructed so as to form part of a system, or placed so as to drain the basement floors of the houses by which they passed. The inspector, in pointing out the remedial measures which he considered necessary, stated his opinion that the amount of capital necessary for public sewerage would be about £2,800. He concluded by recommending the application of the Public Health Act of 1848; and the duties of a Local Board of Health are now performed by the corporation. The office is in King Street.

Difficulties were at first encountered from the claims of the freemen to the passages called “chares;” but arrangements were at length effected with the pastures committee, so that those places might become highways for the public. The accumulated nuisances of years had to be removed, by means of carts; the expense of doing which, it was calculated, would be covered by the sale of the refuse. Several of the streets were ordered to be paved, flagged, drained and channelled; and a plan of the town, with sections, for levels, drainage, &c., was prepared. The attention of the board was called to the old fire-engine of the town, which was much out of repair; and new hose and pipes, together with a fire-escape, were procured.

When Asiatic cholera made its appearance in this county in 1853, preventive measures were adopted by the board, in connection with the poor-law guardians; and only four cases occurred in the town. A subscription was raised, with which rooms in the Friary were provided with furniture, attendants engaged, and every possible arrangement made to prevent, if possible, the dreaded visitation.

doubt, contributed largely to the severity of the attack. In 1849, with a population bordering on 9,000, there were 161 deaths, of which 127 were of the malignant type. It is worthy of remark, that, in *four streets, blockaded up with buildings at one end*, 61 deaths occurred: viz., Chapman Street, 21; Tweddle Street, 16; Wells' Street, 15; and North Wells' Street, 9. These cases, all in the severest form of cholera, are nearly one-half of the whole mortality; and they average six times as many as the rest of the streets of the town.

HARBOUR, PIERS, DOCKS, &c

THE importance which the harbour of Hartlepool enjoyed in ancient times has been already alluded to. The mayor, burgesses, and commonalty of the town, having, in 1473, determined on erecting a pier to defend the harbour, and protect the south front of the town walls from the encroachments of the sea, Bishop Booth, by his letters addressed to all abbots, priors, archdeacons, and their officials, deans, commissaries, rectors, vicars, parish priests, and other ecclesiastics; to all sheriffs, mayors, bailiffs, constables, ministers, and other faithful subjects of the king and the see, entreated them to contribute to a work of such importance by their charitable donations, &c. Similar letters were granted by some of the succeeding bishops.

In the first year of Elizabeth, a commission was issued to inquire into the number of creeks belonging to the port of Newcastle, where they were situated, the state of their trade, customs, &c. The five dependent creeks were Blith, Sunderland, Hartlypool, Stockton, and Whitbye. Hartlypool and Whitbye were described as being most frequented for traffic, and were meet to be continued for the same; but the first-named port was much decayed, and the pier needed repairs. The "customers" of Newcastle had deputies at both places, who had taken entries inward and outward since the ten years previous to the first of Elizabeth. It is added that "the other of the creeks are little frequented or haunted with traffic of merchants or merchandise."

The desultory manner in which repairs were made in the pier was ill calculated for its preservation. When reparations were necessary, the mayor issued his orders to the inhabitants, who brought what loose stones they could find. In 1588 and 1665, unsuccessful attempts were made to procure parliamentary aid. A statute of the corporation, in 1599, expresses "that whatsoever inhabitante of this town fyndethe nott a suffycyent able man in his or their wathe, or to the *peare*, when and as often as they shall be commanded thereunto by the constables, or peare masters, shall pay for every time soc doeing xii*d*."

In 1719, a small duty was laid on exported grain, the proceeds of which were intended for the reparation of the pier; and donations towards the same object were obtained from several of the mayors of Hartlepool and other gentry of the county. At length, the dilapidations of the pier seemed to threaten the destruc-

tion of the town itself; and a subscription was commenced October 17, 1810, towards which George Pocock, Esq., subscribed £500; the Sunderland ship-owners, £378 11s. 5*d*.; the Trinity House, London, £210; Bishop Barrington, the Earl of Darlington, Lord Viscount Barnard, Sir H. V. Tempest, Bart., Sir Ralph Milbank, Bart., J. G. Lambton, Esq. (afterwards Earl of Durham), the Hon. W. Powlett, and the Darlington Insurance Association, besides other subscriptions, amounting altogether to £2,577 11s. 5*d*. On April 15, 1812, the first stone of the new work was laid, amidst great rejoicings, by Carr Ibbetson, Esq.; but the subscriptions received not being equal to the estimated expense (£3,500), the committee at length obtained an act of parliament for improving the pier and port of Hartlepool, April 15, 1813, enacting that every ship entering the harbour should pay a duty of 2*d*. per ton; every boat or coble belonging to the port, 5s. a year; and every house rated to the poor at £5 or more per annum, a sum not exceeding 1-40th part of the rental. Still, however, the funds raised from these sources were found inadequate. During the six years ending 1831, the revenue from shipping was £200 0s. 11*d*.; from house duty, £53 5s. 7*d*.; from cobbles, £112; from herring boats and pleasure yachts, £35 2s. 6*d*.; total, £400 9s. In 1832, no dues were collected upon houses, cobbles, or herring boats; the amended act having repealed those tolls; but £34 7s. 9*d*. was collected on shipping. These sums were barely sufficient for trifling repairs to the town walls; and the pier was only re-edified at the extremity, and connected with the land by the ruins of the old pier, forming a mole of about 154 yards long.

In this state the pier remained for several years; and the harbour was equally neglected. This immense slake or bason, when entirely flooded at high water, contained about 200 acres; but no part was deeper at high water than 8 or 9 feet; and at low water, carriages, horses, and even foot passengers might cross the channel at its mouth with perfect safety. The inner harbour, or haven, inclosed between the old walls and the town, contained a surface of nearly 12 acres. The depth of water in it varied from 3 to 4 feet at high tide; and it was used by the fishermen as a dock, wherein they laid up their cobbles in winter. An attempt was made, at one time, to inclose and convert it to the purposes of agriculture; but this plan was indicted as a nuisance, as the sweep of the *back-water* contained by this haven was of the highest importance in scouring the port. The verdict of the jury before

whom the cause was tried restored it, in 1813, to its original condition.

Mr. R. Dodd, engineer, in a report addressed to the corporation in 1795, proposed, by the erection of an inner pier, a light-house, &c., at a cost of £21,537 4s. 8d., to render the harbour capable of containing 230 such vessels as are usually employed in the merchant service. The difficulty, however, lay in the distance of Hartlepool from the collieries, the produce of which found a convenient outlet from the Tyne and Wear. In 1823, a scheme was agitated for shipping the coal from some of the Hetton Company's collieries at Hartlepool; but this design was abandoned. At length, the opening of the Stockton and Darlington and the Clarence railways on one side, and the formation of Seaham harbour on the other, brought the capabilities of Hartlepool into prominence. A scheme was projected for opening out its port, and making a railway to it. The capital proposed to be raised for the undertaking was £200,000, in shares of £100 each. An act "for making and maintaining wet docks in the port of Hartlepool, and a railway from the said docks into the township of Moorsley, with certain branches therefrom, all in the county of Durham," and another "for amending and rendering more effectual an act of King George the Third (1813), for improving the pier and port of Hartlepool, in the county of Durham," were passed on the 24th of May, and received the royal assent on the 1st of June, 1832. At a meeting of the committee of the dock company, held July 9, Mr. Edward Steel was appointed principal engineer, and Mr. J. T. W. Bell sub-engineer, for the railway; and Mr. James Milne, of Edinburgh, engineer for the docks.

The first work commenced was the formation of a coffer-dam, to exclude the sea; after which the excavation of the inner harbour or haven was commenced. At a small depth below the surface, a bed of soft peat, with trees, roots, and other vegetable remains, were found, on which, instead of timber piling, a bed of large stones was laid down. The deposit in the harbour varied from 12 to 15 feet in thickness; and several relics, such as anchors, mooring-stones, the keel of a vessel, &c., were found about 12 feet below the then surface of the slake. On the east side of the haven, next to the town, the limestone was found to be so open that the sea rushed through it; and it was consequently found advisable to curtail the extension of the dock in that direction. In 1833, in consequence of a difference of opinion respecting the formation of the dock walls, Mr. Milne resigned his office, and was succeeded, on

the recommendation of Sir John Rennie, by Mr. James Brown, previously resident engineer at Holyhead.

Like many other enterprises of a similar nature, the improvement of the harbour and formation of the docks were found to require a more rapid advance of capital than had been anticipated. In 1835, a sum of £30,000 was obtained, after considerable difficulty, from the Exchequer Bill Loan Commissioners, for which private security, of undoubted value, was required and given. Before the railway was completed, and whilst the channel into the harbour was in progress, the dock was opened on July 9, 1835, when coals were shipped from Thornley colliery, in the "Britannia," belonging to Mr. Cuthbert Sharp, of Hartlepool. In a few weeks afterwards, the outer channel was so much improved by sluicing, that loaded ships of 350 tons were enabled to go to sea from the docks.

Meanwhile the Pier and Port Commissioners were struggling with the difficulties of their trust; and they were under the necessity of borrowing £8,000 from the Dock Company, which the Loan Commissioners required to have repaid before the advance above-mentioned should be made. In order to facilitate the completion of the docks, the two coal companies which first shipped their produce from Hartlepool advanced the money. The first attempt to deepen the channel was by means of a dredger. More effectually to scour the harbour, a pier or jetty on the Stranton side became necessary; and, to avoid the expense of a more elaborate work, this was done in 1835, by sinking old keels, and filling them with material from the dredger, covered afterwards with loose rubble stones, and further strengthened by the natural accumulation of sand and shingle. This structure has answered its intended purpose as well as could have been anticipated. As it was of great importance to deepen the channel, the sluices were prematurely set to work; and the consequence was that the masonry of the "aprons," which had not had time to "set," was torn up, and further delay and expense incurred. In 1836, the commissioners erected a light upon the pier, at a cost of about £200. It became apparent, however, that their income was too limited for the works required; and, in 1837, they applied for, and obtained another act of parliament, by which their dues were increased from $\frac{1}{2}$ d. to 1d. per ton on all vessels loading or discharging cargoes, and half dues on refuge vessels; their powers to raise money being also increased from £8,000 to £16,000. This act defined the boundaries between the Commissioners' and the Dock Company's works to be an "imaginary line

drawn across from the town's wall of Hartlepool to the opposite shore, in the direction of the south edge of the existing coffer-dam."

An agreement was entered into, in 1838, between the Dock Company and the Stockton and Hartlepool Railway Company, by which the traffic on that line was to be extended to the docks for shipment. This rendered additional works, to the value of £13,000 or £14,000, necessary. The unsatisfactory result of the agreement, however, hastened the formation of the West Harbour, described hereafter.

Captain Slater, R.N., in a report on the improvement of Hartlepool harbour, May 20, 1840, in describing the sluices, says—

"There are 18 apertures of 19 feet area, for the discharge of the waters of the Slake; that these apertures, being under average pressure of 10 feet, are capable of sending forth about 9,000 tons of water per minute; and it being assumed that there is a mean depth of 3 feet at spring tides over the whole area of the Slake (viz., 118 acres), there will be at such periods 571,120 cubic yards, or 428,340 tons available for sluicing purposes."

In 1844, J. M. Rendel, Esq., C.E., in the course of a report on the West Harbour and Dock, states—

That the Hartlepool Dock and Railway Company "have formed a commodious dock of 20 acres, and also a tide harbour of 20 acres within the public harbour; and as a means of keeping their tide harbour open, as also the channel from it to sea through the public harbour, they likewise have the power of penning up the tide in what was originally a part of the public harbour called the Slake, so as to run it off as a scour during low water. Their railway was originally limited to the accommodation of an unexplored coal-field lying to the north-west of Hartlepool; but the success which attended their speculations has carried its extension to long-established and more distant collieries.

"The Stockton and Hartlepool Railway was projected in 1836; the company was formed in 1839; and the line was opened in 1841. Its object is to connect the several railways communicating with the river Tees with the port of Hartlepool, so as to give the numerous and important collieries in the Auckland district the option of shipping their coal in the port of Hartlepool, as being more accessible than the Tees. It was a part of the original plan of this company to form a dock at Hartlepool, and it appears they have never ceased their efforts to effect their original intention. They, however, on the opening of the railway, entered into a temporary arrangement with the Hartlepool Dock Company for the shipment of the coal sent down their line, and which it was considered would amount to upwards of 400,000 tons a year. But the result has been, that during the three years which the railway has been opened, the quantity has not averaged one-tenth of the original calculation, or 400,000 tons a year; and the railway has, in consequence, proved an unprofitable speculation.

"This unfavourable result is attributed by the Stockton and Hartlepool Company to impediments to their trade imposed by the Hartlepool Dock Company, with the view of driving it to their own line of railway, now extending into the Auckland district, as they say in the spirit of rivalry. On the other hand, the Hartlepool Dock and Railway company state that the price charged by them for the shipment of the coal brought down the Stockton and Hartlepool is as low

as the work can be done for, that they make no distinction in favour of the traders in their own railway, and that the disappointment experienced by the Stockton and Hartlepool Railway Company is solely attributable to errors in their original calculations as to the trade which their line would command."

J. Murray, Esq., C.E., in a report, March 2, 1844, speaks favourably of the system of sluicing which had been followed by the commissioners. The Tidal Harbour Commissioners, in their second report (1846), say, "Hartlepool owes its rapid rise chiefly to its southern outlet, the want of which is so much felt at Sunderland. This fortunate position has been in some measure seconded by the Dock and Railway Company, who have now a floating dock of 20 acres, where they can load 5,000 tons of coal a day; while the entrance is allowed to be one of the most easily accessible of any of the tidal harbours along the coast. The success of this port has induced the formation of a Hartlepool West Harbour Dock, about half a mile to the westward, the works of which are in an advanced state. But as it is hardly to be expected that two rival companies in the same port should agree upon any general plan for improvement, some independent control, free from local bias, seems to be absolutely essential. Complaints are made of ballast and stone being thrown over the cliff and washed into the harbour; that the bight of the bay is filling up with mud and silt, caused by sluicing out of the Slake; and the fishermen with one voice declare their fishing ground has been thereby destroyed."

At the time of the projection of the Hartlepool railway, the following collieries, with their respective distances from the port, were laid down on the engineer's plan:—Moorsley pit, 14 miles; Elemore pits, 13½ do.; Little Town pit, 12¾ do.; South Hetton (winning), 12½ do.; Haswell (winning), 11¼ do.; and Thornley Borehole, 10½ do. Some of these were afterwards connected with other lines; and, on the opening of the docks in 1835, the Thornley and South Hetton coals were the only kinds shipped there. In 1839, coals were brought from Kelloe, Garmondsway, Wingate Grange, and Crow Trees; in 1840, from West Hetton and Cassop; in 1841, from Bowburn and Heugh Hall; in 1842, from Castle Eden and Shotton; in 1843, from Trimdon and South Wingate; in 1846, from Trimdon Grange and Willington; in 1847, from West Cornforth; in 1848, from West Belmont; and in 1850, from Whitwell. Occasional shipments from other collieries have since been made, but no permanent connection formed. There are sixteen coal-fitting offices in Hartlepool.

In October, 1846, the York, Newcastle, and Berwick Railway Company took possession of the Hartlepool

Docks and Railway, in virtue of an agreement for a lease. The act for this purpose was not obtained till 1848; the lease is for 31 years from the 1st of July in that year, at 8 per cent. on the capital and debt of the Dock Company, and 3 per cent. on that of the Hartlepool Junction railway. At the expiration of the time, the two companies are to amalgamate on equal terms.

The railway approaches the docks, by way of the isthmus, from the north-west, and passing directly forward along a substantial range of staiths, divides the company's part of the harbour into the tide basin on the south-west and the Victoria dock (opened December 7, 1840) on the north-east, each containing about 20 acres. In these docks there are 17 coal drops, capable of shipping more than 40 chaldrons of coal each (of 53 cwt.) hourly; and, taking the time of working at 10 hours per day, and 300 working days in the year, there is, consequently, convenience for shipping 2,020,000 chaldrons of coals annually. There are also three ballast cranes, worked by steam, capable of discharging 150 tons per hour, or 450,000 tons per annum. The tidal harbour and Victoria Dock are connected by a passage, 45 feet wide, across which there is a swivel bridge, opened by machinery when ships are passing.

At the north-western extremity of the tidal harbour are the sluices, by which the water flowing into the western Slake is retained for cleaning the harbour. Before the construction of the Docks, there was a road called *Blackstones* across the Slake, from the east side of the water nearly in a direction towards Middleton House; but this road was passable only from half-ebb to half-flood tide. When the company constructed their embankment between the tide harbour and the Slake, they made it sufficiently broad to carry a public road, which gives access to the town at every state of the tide. The lock is 40 feet wide, across which a turning bridge is placed. To ship the traffic from the Stockton and Hartlepool railway, it was necessary to erect a bridge across the lock of sufficient strength to bear heavy engines or loaded trains of waggons, and also capable of being opened and closed as circumstances might require. For this purpose, a draw bridge was constructed, which, being necessarily level, is supported, when down, by braces. The area of the Slake, or scouring reservoir, which is embanked on the north and west, is 173 acres.

The expense of this extensive dock accommodation has been given, in round numbers, at £520,000 from the Dock and Railway Company, including the cost of

16 miles of railway; and £95,000 for the Hartlepool Junction railway, making a total of £615,000.

The outer, or commissioners' harbour, contains 25 acres, and extends from the north-western extremity of the town to the pier. The pier runs partly across in nearly a westerly direction; whilst, on the opposite side, the harbour is protected by the jetty of keels, stones, and shingles previously described. The limits within which vessels are liable to the port tolls comprise the bay or bight between an imaginary point about half a mile east of the headland of Hartlepool on the north, and the Long Scar Buoy on the south. In entering the harbour, the pier light bears north-by-west. The depth of water on the bar in spring tides is 19 feet.

Between 1832 and 1835, when the docks were opened, the revenue received by the commissioners was trifling. The following table exhibits the number of ships, with their tonnage, which have entered the port of Hartlepool since 1835, and the amount of annual revenue derived to the pier and port:—

Years.	Ships to load.	Ships for Refuge.	Tons to load.	Tons for Refuge.	Dues received.
1835 ..	141 ..	26 ..	81,731 ..	2,367 ..	£71 1 6
1836 ..	1,078 ..	205 ..	120,516 ..	25,956 ..	305 8 0

					£39,440 0 4½

On July 21, 1845, an act passed "for amending the acts relative to the improving of the pier and port of Hartlepool, in the county of Durham;" its object being to remodel the appointment of commissioners.

In 1851, an act of parliament was obtained, conferring additional powers on the commissioners, which had become necessary to meet the increased trade of the port; and also for rendering the constitution of that body more popular. The latter object is thus defined:—

"That from and after the passing of this act, the commissioners for carrying this act into execution shall, subject, as hereinafter provided, be sixteen in number, and shall consist of the six commissioners, the East Dock commissioners, the West Dock commissioners, the Ship-owners' commissioners, the collector of the Customs at Hartlepool for the time being, *ex officio*; and the mayor of Hartlepool for the time being, *ex officio*; and such 'commissioners shall be called 'The Hartlepool Pier and Port Commissioners.' and may and shall exercise the several powers by this act conferred on the commissioners; and subject to the provisions of this act, the commissioners shall have power to purchase and hold lands and to improve the port, and shall be conservators of the port.

"That John Punshon Denton, George Moor, William Scurfield Grey, Christopher Davison, William Gray, and Thomas Richardson, as the six commissioners; Rowland Burdon, Thomas Robinson Grey, and Thomas Wood, as the East Dock commissioners; Ralph Ward Jackson, Robinson Watson, Thomas Wilde Powell, as the West Dock commissioners; the collector of customs at Hartlepool, the mayor of Hartlepool, and the two persons who shall be the first ship-owners' commissioners, shall be the first commissioners for carrying the act into execution.

"That in order to determine the rotation by which the six commissioners shall go out of office, Be it enacted, That the said John Punshon Denton and Christopher Davison shall go out of office on the fourth Wednesday in the month of January, 1853: the said George Moore and William Gray, on the fourth Wednesday in the month of January, 1855; and the said William Scurfield Grey and Thomas Richardson on the fourth Wednesday in the month of January, 1857: and on the fourth Wednesday in the month of January in every subsequent second year, the two of the six commissioners who shall have been longest in office shall go out of office; and in each instance the places of the retiring commissioners shall be supplied by the election by the remaining body of the commissioners at the next meeting of the commissioners, of two persons to be commissioners in the place of the two commissioners who shall go out of office.

"That the said Rowland Burdon, Thomas Robinson Grey, Thomas Wood, Ralph Ward Jackson, Robinson Watson, and Thomas Wilde Powell, shall go out of office on the third Wednesday in the month of January, in the year 1853, and the two persons who shall be the first Shipowners' commissioners shall go out of office on the third Wednesday in the month of January, 1852; and the persons who shall be elected in their respective stead, or in the stead of their respective successors, as hereinafter provided, shall go out of office on the third Wednesday in the month of January in every succeeding year respectively.

"That in the stead of the three persons hereinafter named as East Dock commissioners, and of their successors, the Hartlepool Dock and Railway Company, or the company for the time being in the actual possession of the undertaking of that company, shall, and they are hereby empowered to elect and nominate annually three persons, and no more, to be East Dock commissioners, and such three persons shall be directors of, or shareholders in, the same companies, or one of them: Provided always, that the company for the time being in the actual possession of the undertaking of the Hartlepool Dock and Railway shall, during the continuance of such possession, have and exercise solely such last-mentioned right and power of election and nomination, and all other rights and powers by this act conferred upon the said last-named company.

"That in the stead of the three persons hereinbefore named as West Dock commissioners, and of their successors, the Hartlepool West Harbour and Dock Company shall, and they are hereby empowered to, elect and nominate annually three persons, and no more, to be West Dock commissioners; and such three persons shall be directors of, or shareholders in, the same company."

The principal works which the commissioners are by this act empowered to execute are, a breakwater or pier from the Heugh in a south-eastward direction, so as to shelter a considerable part of the north side of the bay; and the protection of the Heugh itself from the encroachments of the sea. Towards the latter object, the funds derived from a ferry across the harbour are to be applied, as well as the corporation toll of 1s. 4d. from each vessel.

The ferry of the commissioners, though referred to in the act of 1837, and sanctioned by that of 1851, was not established till January, 1854, when they erected landing places and commenced conveying passengers. Previous to that time, this had been performed by decayed or infirm fishermen or pilots, and was formerly considered "the step from fishing to the workhouse." As the population of the district extended, however, and the intercourse between the opposite sides of the harbour was consequently more general, the employment became more lucrative, and the number of persons engaged was proportionately increased. In one week, shortly after the establishment of the commissioners' ferry, 3,000 passengers were taken across by it, whilst the fishermen's boats conveyed 17,000. The commissioners, supposing they had an exclusive right of ferry, and finding that the competition of the fishermen involved an amount of not less than £1,600 a year, filed a bill in Chancery, to prevent them plying. The fishermen appealed to a clause in the act, which provided that nothing therein should be deemed or construed to interfere with the rights and privileges enjoyed by the fishermen, or injure or destroy any of the rights and privileges which they had heretofore possessed or enjoyed. The Vice-chancellor directed an issue to try the validity of this right in a court of common law; and the case was heard at Durham assizes, March 3, 1855, when a verdict was found for the fishermen. The subject was, of course, referred back to the Chancellor; but, whilst the Harbour of Refuge Bill was passing through parliament, the Committee of the House of Commons introduced a clause to the effect that the commissioners shall have no exclusive right of ferry.

The most important work yet attempted by the commissioners is the great northern breakwater or pier, designed to elongate the Heugh, or headland projecting to the east of the town. This pier is being chiefly constructed of artificial stone, composed of Portland cement and broken stones; the latter being supplied in abundance from the reef on which the new structure is

itself being projected. These materials are thrown together into a wooden frame, mixed with the cement and water, and in a few minutes become as hard as stone. When the frames are removed, these large blocks will resist the action of water, and are of an imperishable nature. They are placed closely together in the heart of the pier, and filled up in the interstices with pointing made of the cement, so as to form the consistency of a rock. The artificial blocks are manufactured under the superintendence of S. Robinson, Esq., the engineer, and have been brought to a high state of perfection, as regards facility of production, economy in the manufacture, and durability. The lower courses of the pier have now been carried out to a distance of 650 feet from the Heugh, and to a depth above the extreme low water level. A change in the direction of the pier will take place at a point about 100 feet further seaward than has yet been attained; and when finished, the Hartlepool Heugh Pier will be one of the largest solid blocks of marine masonry in England, though only about one-fourth of the extension proposed by the Pier and Port Bill will then have been attained.

Parliamentary notices were given, in the session of 1855, for the formation of a "great float and railway," by converting the Slake into a dock, extending a branch railway to it, enlarging the tidal harbour, and making other improvements; but the measure was withdrawn.

It is understood to be the intention of government to erect a fort on the Heugh, for the protection of the town and port.

LIGHT-HOUSE.—In 1845, the Trinity House, of London, in consequence of a memorial on the subject, proposed to erect a coast light-house at Hartlepool, for the support of which a halfpenny per ton was to be charged on all vessels trading to the port. As this impost was calculated to produce about £2,250 a year, the commissioners of the port, to avert such a tax upon its trade, undertook the project themselves, and consulted Sir John Macneil as to the proper situation of the light. That gentleman, after considering the relative merits of a light at the extremity of a seaward extension of the present pier, on the rocks beyond the Heugh or headland, and on the top of the Heugh itself, decided on the latter situation. The designs were furnished by Stephen Robinson, Esq.; the foundation stone was laid August 12, 1846; and the light first exhibited October 1, 1847. The tower is a

circular shaft, the diameter of which tapers from 24 feet at the base to 16 feet under the projecting balcony. The height from the ground to the top of the gallery is 48 feet, with 10 feet more to the centre of the light, which is 84 feet above high water mark. It is a stationary white light, exhibited from sunset to sunrise; and there is a red tide-light, 61½ feet above high water. In the day, the time for entering the harbour is indicated by a large red ball, hoisted to the top of a mast above the lantern. The lights are produced from coal gas, and are directed by a dioptric lens (the only one used for such a purpose in this part of the country) in a plane nearly parallel to the horizon. The entire cost of the erection was £3,200. For the security of the light-house, it was found necessary to defend the face of the cliff on which it stands with masonry set in cement, which caused an expenditure of £2,100. The light-keepers' cottages cost £450, making an entire outlay of £5,750. The annual charge for gas, attendance, interest on capital, &c., amounts to about £435 15s. This is a gratuitous light; the halfpenny toll proposed to be levied by the Trinity House having been prevented by the promptitude of the port commissioners.

The bill for constituting Hartlepool a harbour of refuge, introduced into parliament in the session of 1855, will be noticed in the account of WEST HARTLEPOOL, which is in the parish of Stranton.

CUSTOMS PORT.

THE customs port of Hartlepool extends from the north side of Castle Eden dene, the limit of the customs port of Sunderland, to the south side of the town of Seaton, being the limit of the customs port of Stockton-on-Tees.

That an establishment for the collection of revenue was placed at Hartlepool as early as the reign of Edward II., is proved by ancient records. Like Sunderland and Stockton, it was originally a member of the port of Newcastle-upon-Tyne. On the decline of its trade, the superior officers of the customs were removed, October 16, 1680, to Stockton; and further reductions were successively made, until at length only one person was retained, with the rank of principal coast-officer. The opening of the harbour and docks introduced a gradual restoration of trade and privileges; and in 1844, the Commissioners of Customs created Hartlepool a separate port of the sixth class. The bonding privileges of the port have been progressively

enlarged, and now include, for home or exportation, all such goods as may be legally imported, together with East India goods removed coastwise. The warehousing of tobacco is also allowed, if removed coastwise for ships' stores.

The custom-house is situated at the west end of Southgate Street, and is ill adapted for the increased commerce of the port. The West Dock Company, in 1853, offered a building for the purpose; but the corporation of Hartlepool and the proprietors of the docks were averse to the removal of the business.

The parties who are empowered to levy dues within this port are—the Municipal Corporation of Hartlepool; the Hartlepool Pier and Port Commissioners; the Trinity House of Newcastle; the Trustees of Bridlington Harbour; the Ramsgate Harbour Trustees; the Warden and Assistants of Dover; and the Russia Company. Respecting the latter, see page 192.

THE MUNICIPAL CORPORATION levy *Harbour Dues* on every decked vessel which shall enter between the piers of the harbour of Hartlepool (as existing in 1851) the sum of 1s. 4d.; and for every vessel entering the harbour otherwise than for the purpose of loading or unloading, or driven within the same through dangers of the seas, stress of weather, or pressure of the enemy, any sum not exceeding half the aforesaid sum. Gross amount levied in 1852, £358 10s.

This was formerly an ancient harbour due claimed by the corporation by prescription, but which had fallen into disuse. It was afterwards revived, and by the act 14 Vict., c. 16, sec. 48, is given to the corporation. By sec. 50 of that act, it is enacted, "That from and after the passing of this act, the corporation shall be liable to, and shall uphold, repair, and maintain the town walls of Hartlepool, and the other works connected therewith necessary to be maintained for the protection of the town from the encroachments of the sea; and the tolls are to be applied to that purpose, and any surplus is to be applied to the maintenance and protection of the Heugh and headland of Hartlepool from the inroads of the sea." The act does not in terms provide for the application of the surplus, if any, beyond this latter purpose; and it would therefore seem that it would go to the borough fund; but there never has been any surplus.—The sum of £800 is secured on these revenues.

THE PIER AND PORT COMMISSIONERS levy *Tonnage Tolls* on every vessel (except as next hereinafter men-

tioned) entering into or using the port, and every or any part or parts thereof, the sum of 1d. per ton burthen; and for every vessel taking refuge in the harbour, and not loading or unloading, $\frac{1}{2}$ d. per ton burthen. (See 14 and 15 Vict., cap. cxvii., s. 52.)—The gross amount of this due in 1852 was £5,094 5s. 4d.

These tolls form the fund for executing the Hartlepool Pier and Port Act (14 and 15 Vict.), the purposes of which are generally for the improvement of the harbour. For limits of jurisdiction of commissioners, see sec. 6 of act.

The sum of £14,500 is charged on these dues, at interest varying from four to five per cent. There is no other security. The other revenues of the commissioners, in 1852, amounted to £15 10s. 9d.

THE CORPORATION OF NEWCASTLE levy a *Primage Due* of 2d. per ton on all goods imported into the ancient port of Newcastle, of which Hartlepool is a member. The gross amount of this due levied in Hartlepool, in 1852, was £45 13s. 6 $\frac{1}{2}$ d.

The following is a summary of the gross amounts of the dues (so far as they can be ascertained) levied on ships, or on goods carried in ships, within the customs port of Hartlepool, in 1852:—

	£.	s.	d.
Municipal corporation.....	358	10	0
Pier and Port Commissioners.....	5,094	5	4
Trinity House of Newcastle.....	45	13	6 $\frac{1}{2}$
Bridlington Harbour Commissioners.....	576	19	5
Warden and Assistants of Dover Harbour.....	203	4	2 $\frac{3}{4}$
Ramsgate Harbour Trustees.....	315	14	5 $\frac{1}{4}$
Russia Company.....	1	5	10
	£6,595	12	9 $\frac{1}{2}$

The Hartlepool Dock and Railway Company are proprietors of the inner harbour and docks at Hartlepool, and the West Hartlepool Harbour and Railway Company of the West Hartlepool harbour and docks. Each of these companies is a trading company, and is entitled to levy dues only from those vessels using its property.

COAST GUARD.—The coast guard station is in Croft Street, near the pier. The establishment consists of a lieutenant of the royal navy, two chief boatmen, four commissioned, and six non-commissioned boatmen. There are detachments at Greatham Creek and Seaton-Carew on the south, and at Black Halls on the north, from which place the central establishment was removed in 1837. The practice of smuggling, said to have been

formerly very prevalent, and for which the position of the town afforded great facilities, is now nearly, if not altogether, suppressed.*

COMMERCE.

THE import trade of Hartlepool was anciently extensive. By the statute of the 5th of Elizabeth, this town, with Newcastle and Berwick, were permitted to ship sheep-skins, wools, &c., for foreign parts; a trade which that act prohibited to other ports. The exportation of corn was afterwards an important branch of commerce at this place; and lead, butter, salted fish, and other provisions were also shipped; the principal import being coals.

The extension of the coal trade to Hartlepool has induced a corresponding revival of miscellaneous commerce. In the year ending January 5, 1851, the number of ships cleared coastwise from the old harbour and West Hartlepool with cargoes was 6,576, measuring 835,657 tons; and oversea, 1,612 ships, measuring 238,526 tons. Of the latter ships, 935 belonged to foreign countries; and 683 came to load from other places on the coast, where they had discharged their cargoes. It is anticipated that a direct import trade will be promoted through the medium of the Leeds railway, which affords a communication between the West Docks and the manufacturing districts of the country.

The following table shews the amount of the export trade of the port of Hartlepool, and the shipping employed in it, during the year 1854:—

	British Ships.	Foreign Ships.	Tons of Coal.	Tons of Cinders.	Value of other Exports.
January	7	74	13,215	762	£9,947
February	17	94	19,679	949	8,025
March	108	94	43,079	2,801	25,171
April	117	128	45,129	3,777	15,233
May	85	236	53,640	4,085	9,561
June	80	214	46,219	2,811	15,426
July	78	159	36,987	3,300	17,478
August	49	170	32,184	1,773	16,241
September	48	125	30,264	1,887	14,626
October	34	114	25,534	2,398	34,498
November	32	98	23,090	1,659	50,379
December	18	50	12,280	1,029	59,914
	073	1,556	381,800	27,231	£276,999

* A large seizure of goods was lodged in the custom-house, Nov. 16, 1777; and during the following night, the building took fire, and was burnt down. On one occasion, in 1822, the revenue made a seizure of 123 half ankers of Geneva, 6 casks of tobacco, and 5 casks of snuff.

† It is interesting to compare the above with the exports in 1725, which were—12,107 quarters of oats and wheat; 85 quarters of peas,

The nature and value of the exports, from January to July inclusive, will be seen from the following:—

3,380 cwt. iron bars.....	£2,257	843 cwt. horse hides.....	£480
106 cwt. bolt iron.....	66	2,162 raw cow hides.....	1,388
23 cwt. hoop iron.....	16	18 tanned hides.....	28
170 tons pig iron.....	650	13,400 lb. cow hides.....	700
62 cwt. iron chains.....	28	1,310 cwt. salted hides.....	2,580
5 cwt. sheet iron.....	4	449 foreign hides.....	1,050
35 tons iron wheel bars.....	550	684 calf skins.....	280
66 cwt. iron anchors.....	58	7 cwt. reindeer hides.....	120
Anchor and chain cable....	16	2 cwt. reindeer meat.....	15
4,467 cwt. iron sundries... 2,002		7 cwt. cured fish.....	6
14 cwt. yellow metal bolts..	80	56 barrels animal oil.....	320
54 cwt. manufactured steel	396	10 tons fireclay.....	8
4 anvils.....	14	145,000 fire-bricks.....	440
3 cwt. old copper.....	30	19 grindstones.....	20
37 tons of mahogany.....	390	318 dozen glass bottles....	29
39 logs cedar wood.....	50	25,900 pieces earthenware..	181
86 casks tar.....	86	8,306 lb. borax.....	230
4,816 lb. sheep's wool.....	480	1 ton ingrobolane berries....	10
69 pieces woollen cloth....	435	100 cwt. cement.....	60
58,124 lb. linen yarn.....	3,047	150 cwt. soda.....	95
20,539 cwt. raw cotton.....	32,462	20 cwt. bleaching powder..	14
1,082,806 lbs. cotton twist..	42,221	8 cwt. elephants' teeth....	300
9,632 lb. waste cotton.....	3,000	5 cwt. buffalo horn tips....	106
22,050 yards printed cotton	370	30,435 lb. tea.....	3,153
27,619 lb. brown paper....	518		

£100,841

The exports from August to December, the monthly values of which are given above, were as follow:—

Bar iron, £58.	Soda, 4 tons.
Pig iron, 144 tons.	Grindstones, 45.
Sheet iron, 1 cwt.	Flint glass, 12 cwt.
Iron tire bars, 78 tons.	Clay, 5 tons.
Wrought iron, 83 tons.	Bricks, 130,274.
Wire rope, 2 rolls.	Cocoa nut matting, £16.
Steel files, 130 cwt.	Sheep's wool, 1,172 cwt. 3 qr. 22 lb.
Steel, 35 cwt.	Woollen, 2,651 pieces.
Do., £22.	Cotton yarn, 1,634 cwt. 3 qrs. 8 lb.
Lead shot, 10 bags and 1 cwt.	Raw cotton, 17,358 cwt.
Lead colour, 3 cwt.	Cotton twist, 1,519,006 lb.
Indigo extract, 17 cwt.	Linen yarn, 1,916 cwt. 1 qr. 8 lb.
Venetian red, 5 cwt.	Linen, 5,000 yards.
Argols, 20 cwt.	Worsted yarn, 833 cwt.
Mahogany, 10 tons.	Mohair yarn, 3,600 lb.
Deals, 7 load, 25 feet.	Cow hides, 6,804
Borax, 30,546 lb.	Salted hides, 2,796, and 313 cwt.
Potashes, 243 cwt.	Brown paper, 15,550 lb.
Palm oil, 1,148 cwt.	Books, 1½ cwt.
Castor oil, 153 cwt.	Herrings, 12 casks.
Vitriol, 6 cwt.	Tea, 186,660 lb.†
Divi divi, 1 ton.	

Consignments were to Akyab, Bremen, Carlshamn, Carlserona, Dieppe, Elsinore, Fredericksværk, Hamburg, Jersey, Nantes, Porsground, Ribe, and Stettin.

beans, and barley; 35 quarters of malt; 159 pigs of lead; 112 firkins of butter; 68 ankers of ale; 3 casks of pork; 32½ tons of dried fish; 306 lings; 239 hams; 3 barrels of mustard seed; and 3 boxes of books. There were 37 vessels cleared from the port, 36 of which were bound for London. The imports in the same year were 8 tons of salt and 17 6 chaldrons of coals.

The shipments of coals and coke, coastwise, during the specified months, were as follow:—

	Ships.	Tons of Coal.	Tons of Coke.
August, 1854	627	118,348	234
September	563	107,802	182
October	477	97,450	671
November	533	113,749	152
December	469	107,634	506
January, 1855	435	101,007	41
February	326	56,519	50

France, the Netherlands, Hanover, Mecklenburg, the Hanse Towns, Prussia, Russia, Sweden, Norway, Spain, Brazil, Sicily, Denmark, and Portugal, are represented at Hartlepool by consuls.

SHIPPING, &c.

WITH the decline of the trade of the port, and the filling up of its harbour, there was a corresponding diminution in its shipping; in 1832, there were only two small vessels belonging to the port, which were generally employed in carrying flour to Sunderland, Shields, &c. In 1835, there were three sloops registered; but in 1839, there were 90 vessels, averaging about 245 tons each, and representing a capital of £208,800. This increase had been effected, in a great measure, by the establishment of several shipping companies, of which the following statement has been given:—

	Capital.	Established.	Dissolved.
The Original Shipping Company,	£50,054	— 1835	— 1843
The General	16,074	— 1835	— 1844
The Union	46,770	— 1838	— 1845
The Commercial	50,171	— 1838	— 1851
The Phoenix	16,075	— 1843	— 1846
Total capital	£179,144		

That the breaking up of the above companies was not occasioned by a diminution in the value of shipping, may be inferred from the prices realized at the sale of the vessels belonging to the Commercial Shipping Company, April 16, 1851. They were sold without repairs, as they had come from sea. The "Percival Forster," 190 tons n.m., built in 1838, sold for £840; the "William Chapman," 207 tons, 1839, £785; the "James Freeman," 248 tons, 1840, £1,060; the "Thomas Rowell," 290 tons, 1838, £1,140; the "Horatio," 296 tons, 1838, £1,100; the "Sunbeam," 215 tons, 1838, £950; the "Martindale," 233 tons, 1838, £925; the "Robert Burrell," 233 tons, 1839, £1,140; the "Wearmouth," 242 tons, 1838, £1,180; the "Sceptre," 229 tons, 1849, £1,700; the "Com-

mercial," 335 tons, 1840; £1,000; the "Antæus," 325 tons, 1845, £1,600; total, £13,428.

On the 31st December, 1851, the amount of the tonnage of the port was 22,904. The number of ships, at the next anniversary, was 118; the tonnage being 23,852. At the close of 1854, there were registered, in the port of Hartlepool, 173 sailing vessels, measuring, in the aggregate, 35,993 tons. Of these, 17 were under 100 tons burthen, 55 between 100 and 200 tons, 84 between 200 and 300 tons, 14 between 300 and 400 tons, and 3 above 400 tons. There were also three steam tugs; one of 19, one of 22, and one of 270 tons burthen.

There are three marine insurance offices; the Mutual Marine, the North Star, and the Mutual Marine Freight. There are in Hartlepool about twenty ship and insurance brokers.

Ship-building was commenced at Hartlepool in 1837; and a considerable number of workmen are now employed in the various building-yards.

PILOTS.—Previous to the recent great increase of local shipping, there were twenty-four pilots in Hartlepool, twelve of whose *branches* extended to the Tees. There are now fifty-six, besides five at Seaton-Carew and seven at Redcar, who are privileged for the old harbour of Hartlepool. Formerly, a difference was made in the charges for piloting British and foreign ships into the harbour; but the general charge is now 1s. 3d. per foot in summer, and 1s. 6d. per foot in winter. The charge for steam-boats is 1s. per keel.

LIFE-BOATS.—A life-boat was established in Hartlepool, many years ago, with the admirable appointments and arrangements of which Captain Manby, in 1813, expressed his gratification. At that time, a 5½-inch mortar, with barbed shot, according to that gentleman's plan, were attached to the establishment. There are now two life-boats, one of which is suspended by crane-davits from the pier, and the other is kept in a boat-house near the shore, about 2 miles north from the town. Carte's rocket apparatus is also kept in readiness. The boats are in charge of a captain, and are kept in efficient order. The rockets and apparatus are under the care of the chief officer of the coast-guard and the haven-master to the port commissioners. The efforts of both branches of the service have been exceedingly valuable in many of those occasions of distress and shipwreck, which, on this part of the coast, so frequently occur. The boats were under the management

of the Tees Bay Life-boat Society till 1847, when they were transferred to a local committee. Originally they were supported by subscriptions and an annual sermon in the parish church; but now by what is called a "voluntary contribution," payable by vessels clearing at the custom-house.

The seamen of the port of Hartlepool, with their own funds and the aid of the National Life-boat (late Shipwreck) Institution and a few benevolent individuals, in 1854 provided themselves with a good life-boat. Its services were first rendered in saving the crew of the brig "Prospect," of Aberdeen, during a gale of wind in October of that year. This was bravely accomplished; but the ship having, in the mean time, drifted amongst broken water, with a little boy clinging to the wreck who appeared to be afraid to relinquish his hold, another attempt was made with the life-boat, and the boy was ultimately taken off the wreck by force. The life-boat, on this her first essay, proved, in the hands of her skilful crew, to be one of superior qualities. A reward of £9 2s. was voted by the National Life-boat Institution to the seamen who manned the boat.

FISHERIES.—For many years, the grand staple of Hartlepool consisted of fish, of which many tons were salted yearly for home consumption and exportation; whilst large quantities of fresh fish were supplied to the principal towns of Durham and the North Riding of Yorkshire. Many of the young watermen, however, who would formerly have been brought up as fishermen, are now trained as pilots; and this, with other circumstances arising from recent changes in the town and port, have prevented that extension of the fisheries which might have been anticipated. At present, there are about 20 cibles employed in the "white fishing," the produce of which is said to be worth about £3,500 per annum. In the herring fishery, which lasts about nine weeks, an average of about 150 men and 50 cibles are employed; the annual value of the produce has been computed at £3,375. In so precarious a pursuit as fishing, however, these sums may be frequently either much above or below the actual value.

INHABITANTS.

From the detached situation of Hartlepool, the inhabitants naturally followed, from father to son, similar occupations, and retained the manners and customs of the past whilst changes were taking place in towns lying in a more direct line with the metropolis. Most

of the time-honoured customs, however, were similar to those prevailing in the north of England generally; but the great extension of the place within the last few years, and the influx of a new population, have tended to destroy the more primitive habits of the people. The solemnities practised every where at Easter, are, however, still preserved; and, on the approach of Christmas, carols are sung by children; *yule clogs* blaze on the eve of the nativity; the Christmas box and New Year's gift are not forgotten, though morris-dancers but rarely exhibit their feats. The custom, though not peculiar to Hartlepool, still exists of presenting a child on its first visit to a relation or neighbour, with three things—salt, bread, and an egg. *Mell* suppers are occasionally held in the neighbourhood at harvest home; but these festivities are now seldom enlivened by the pranks of *guysers*. Until of late years, at the funeral of a young unmarried female, a garland was carried before the corpse, and afterwards suspended in the church. A belief in *wafs* still lingers amongst many of the more imaginative of the lower orders, and few are supposed to die before their neighbours have seen their *wafs* glide softly by. Indeed, some have seen their own—

"I hear a voice you cannot hear,
Which says I must not stay;
I see a hand you cannot see,
Which beckons me away."

Lucy and Colin.

And under the conviction that death is thereby predicted, like many prophecies which help to bring about their own fulfilment, the party so warned seldom recovers from the impression produced by the appearance of such an apparition. The *stot plough* ceases to be paraded through the town on the first Monday after twelfth day; and the practice no longer prevails on Easter Monday for the men to take off the women's shoes or buckles, and on the following day for the women to retaliate in like manner.

Many years previous to the revival of the port, "a small number of country families," says Mr. Proctor, in his history of the town, "long accustomed to the town, made it the place of a few weeks' sojourn in the summer season, when it assumed a sort of spasmodic gaiety, especially about two o'clock of the day, when the 'table d'hote' at the King's Head invited all the lodgers in the town to dinner, who chose that least troublesome mode of providing their mid-day repast. Great was the flutter in the streets for the space of ten minutes before the appointed hour, as it seemed to be the occasion selected

by the 'dowagers and spinsters' to show off all their array of smart head-gear—in the shape of turbans, caps 'brave with ribbons,' and the like articles of female mystery. Not unfrequently might be seen the amiable curate of that day, in charge of one of those well-appointed dames, sailing down the high street to the dinner, to which, most probably, he had received an invitation; a thing of not rare occurrence, for his social qualities, in the setting of razors and playing a rubber at whist, rendered him an acquisition to both the sexes."

The same writer continues, "The lower class of the females at Hartlepool, at the time in question, were remarked by all strangers to be a very fine class of women. Their practice, when shrimping or seeking bait, of converting their scanty petticoats into short inexpressibles that came about half-way down the thigh, whilst all below was '*in puris naturalibus*,' with the red kerchief on the head, instead of a cap, rendered them very picturesque objects alongside the boats and cobbles, and nets and creels, with which the harbour was generally strewed. It was remarked, that as soon as the 'navvies' came, the costume 'a la Bloomer' disappeared—the red kerchief gave place to the smart cap—with an occasional wreath of artificial flowers in it; shoes and stockings, white on Sundays, became the correct thing, and, in fact, the whole aspect of the inhabitants, as well as the face of the landscape, became changed; and, as far as the inhabitants are concerned, so much for the worse, in the opinion of every true lover of the unsophisticated native."

There is no theatre at Hartlepool; and the amuse-

* Richard Cosin, LL.D., according to Fuller, "was born at Hartly Poole; and some observe a providence that he who afterwards was to prove the grand champion of episcopacy, should (amongst all the counties of England) be born in this bishoprick. His father was a person of quality, a captain of a company in Musselbrough Field, whence his valour returned with victory and wealth; when crossing the river Tweed (O the uncertainty of all earthly happiness!) was drowned therein, to the great losse of his son Richard; and greater, because he was not sensible thereof, as left an infant in the cradle." His mother afterwards married a Mr. Meddow, a Yorkshire gentleman, by whom he was put to school at Skipton in Craven; and, *before he was twelve years old*, he was admitted in Trinity College, Cambridge, where he was made a Scholar and a Fellow as soon as, by his age, degree, and the statutes, it was possible. He was a general scholar, geometrician, musician, physician, and divine; but chiefly celebrated

ments of the inhabitants are consequently derived from the performances of itinerant companies or individuals. Hartlepool races, after being discontinued for six years, were revived on the 2nd of September, 1841, but have not since been regularly held. Regattas, and other occasional aquatic sports, are appropriate to the locality. A "bachelors' ball" sometimes enlivens the monotony of social life; and, as in other places, the study and practice of music are beginning to acquire that estimation and popularity to which the science is entitled.

A town which has undergone so many changes as Hartlepool has done, affords a curious theme for reflection on the characters of its successive inhabitants. In the dim mists of the past, the religious sisterhood of St. Hilda fade from the view to give place to the grim warriors who were contemporaneous with the Bruce. These are succeeded by the bold seamen of the North Sea, who bore the chivalry of their native land to the wars of Scotland and France, or who fought their country's battles on their own element; whilst, at home, the religion and learning of the time were preserved by the canons of Guisborough, whose example must have induced a taste for literature which endured long after their departure.* The hardy, industrious, honest, and simple population of the last century are now being superseded by the acute man of business, the ingenious mechanic, and, once more, the hardy navigator. It is to be hoped that the people of Hartlepool, now fully alive to the advantages of their situation, may long continue to enjoy the fruits of their enterprise, talent, and perseverance.

as a canon lawyer. Archbishop Whitgift preferred him to the chancellorship of Worcester, and afterwards made him Dean of the Arches; "wherein he carried himself without giving (though many took) offence at him." It was laid to his charge, that he gave many blank licences, thus giving occasion to unlawful marriages, and "robbing many a parent of his dear child thereby." His biographer, however, states, that "there was but one, which a fugitive servant stole from the register to make his private profit thereby." During the sickness of which Dr. Cosin died, he suffered little pain, though very corpulent; and his last words were, "Farewell my surviving friends, remember your mortality and eternal life." He gave £40 to the building of a chamber in Trinity College, and £15 per annum for the maintenance of two scholarships therein; but died so poor that he did not leave above £50 a year to his heir.—*Fuller's Worthies.*

PARISH OF STRANTON.

THE parish of Stranton originally consisted of the townships of Stranton (including Tunstall), Brearton, and Seaton-Carew (including Owton). It was bounded on the north and west by the parish of Hart, on the south-west by Elwick Hall, on the south by Greatham, and on the east by the sea. In 1841, Seaton-Carew was constituted a distinct chapelry; and that of West Hartlepool, situated in the north-east part of the township of Stranton, was formed in 1852.

STRANTON.

THE township of Stranton (which includes West Hartlepool and Middleton), with its tidal water, comprises an area of 3,695 acres. In 1801, it contained 325 inhabitants; in 1811, the whole parish (including Stranton, Brearton, and Seaton-Carew) had a population of 659; in 1821, that of the township was 371; in 1831, 381; in 1841, 1,491; and in 1851, 4,008, of whom 2,288 were males and 1,720 females. The increase at the two latter periods was caused by the large number of labourers, with their families, employed at the Hartlepool and West Docks, and to the increase of the coal trade. In 1831, there were 101 inhabited houses; in 1841, 274 inhabited, 12 uninhabited, and 6 building; and in 1851, 637 inhabited, 13 uninhabited, and 56 building. Since that time, the number of houses has increased at the rate of 150 per annum. About six years ago, the number of rate-payers was about 400; in 1855, there were about 1,400. The annual value of property assessed to the county-rate, in 1828-9 was, for the whole parish, £4,562; in 1853, it was, for the township alone, £17,579.

In the year ended Lady-day, 1854, the amount collected in poor-rates for Stockton Union, in the township of Stranton, was £430 6s.; in aid of rates, £5 15s.; total, £436 1s. In Brearton, the poor-rate amounted to £46 10s.; in aid of do., 8s.; making a total income

of £482 19s. The expenditure during the same period was as follows:—

In-maintenance:—Stranton, £17 9s.; Brearton, £15 14s...	£33 3
Out-relief:—Stranton, £150 4s.; Brearton, £20 2s.....	170 6
Loans repaid:—Stranton, £8 10s.; Brearton, £2 12s. . .	11 2
Salaries and rations of officers:—Stranton, £13 7s.;	
Brearton, £1 17s.....	15 4
Other expenses:—Stranton, £7 6s.; Brearton, 15s.....	8 1
Total expenses connected with relief	237 16
Constables' expenses before justices:—Stranton, £2 5s.;	
Brearton, 18s.....	3 3
Vaccination fees:—Stranton,.....	2 12
Registration fees to clergymen:—Stranton, £17 16s.;	
Brearton, 2s.....	17 18
County-rates, &c.:—Stranton, £275 3s.; Brearton, £7 16s.	282 19
Parliamentary registration, &c.:—Stranton, £2 19s.;	
Brearton, 10s.....	3 9
For other purposes:—Stranton, £52 1s.; Brearton, £3 15s.	55 16
	£603 13

The Stockton and Hartlepool branch of the North-eastern railway extends along 1 mile and covers 20 acres in this township. It contributed £7 6s. 6d. to the local rates in each of the years 1851 and 1852; the gross amounts raised in those years being respectively £434 17s. 7½d. and £456 0s. 9d.

Stranton (obviously the *town* on the *strand*) is pleasantly situated about a quarter of a mile from the sea, to which the ground slopes gradually.* It contains three corn-mills,† four public houses, and a few tradesmen.

to the milne at the least. And this examinant further sayth that he hard the said Johnson confesse and say that he had committed adultery with the said Jane Slaiter, and that he wold never refuse hir as longe as the breth was in him; and that she shoulde never come in the lawe so longe as he had one grote to spende. And this examinant tolde him that the neighbours wold put hir out of the parishe, and Johnson answered that he wold place hir. And she beinge so put out of the parishe, was placed by him in his owne howse and hir goods, and kept hir ther till she was cited; and since she resortethe to him, as is aforesaid. And the said Johnson said to this examinate that he had rather that any man shoulde gape his owne wyf then kisse Jane Slaiter mouth. †

“John Cassen, of Stranton, yeoman, aged about 52 years:—He

* A mass of red stone, of 10 or 12 tons weight, was discovered in 1829, in a bed of clay beneath the sand of the beach. It was beautifully veined; and the lower part was of a consistence between stone and clay. When worked up into mantle-pieces, candlesticks, and other ornaments, and polished, its brilliancy was nearly equal to that of marble.

† The following are the depositions in proceedings against Edward Johnson (miller), in causa correctionis. 1 Feb. 1676:—

“Thomas Colson, of Stranton, aged about 54 years. He saith that this examine knoweth, as all his neighbours doe, that the said Johnson is generally suspected to lyve in whoredome with the said Jennet Slaiter; and that he haith kept hir and doethe kepe hir still, as his leman; for that she cometh every weeke once or twice to him

The newly-erected town of West Hartlepool now adjoins the village on the east, and is incorporated with it for the poor-rates. Stranton is also included in the West Hartlepool Improvement Act, and is lighted with gas; but the water is not yet laid in, there being a good supply in the village. An annual feast is held at this village, commencing on the Sunday after Old Martinmas-day. A school-house was built by subscription in 1777, but did not receive any endowment. (See CHARITIES.) Limestone was formerly quarried and burnt in great abundance; but, previous to the commencement of the West Docks, this business had declined.

There was but one person who joined the Northern Rebellion in 1569 from "Straynton," and he suffered death.

Stranton was formerly part of the ancient Hartness; and the manor was held under Bruce and Clifford by the Lumleys. John Lord Lumley, 4th Eliz., alienated the manor of Stranton, Seaton-Carew, and Newburn-Rawe to Sir Thomas Gresham, Knt., from whose widow they passed to her son by a former marriage, Sir William Read, Knt. The Wilsons of Hartlepool, the Gibsons, and the Whartons of Old Park, afterwards held property belonging to this manor; the great tithes of the whole parish belonging to the Whartons. Another manor in Stranton belonged to the Fitz-Marmadukes of Hordon, and their descendants, the Lumleys and Gascoignes. It passed from the latter in 1607, to Anthony Dodsworth, Gent., and from his descendants, in 1683, to Richard and William Reed, of Hart, yeomen. In 1715, Dorothy, widow of Richard Reed, intermarried with Edward Surtees, Esq., of Mainsforth, in which family the property descended to the late Robert Surtees, Esq.

After the Dissolution, the lands in Stranton which had been granted to Guisborough Abbey by Robert Bruce, remained vested in the crown till July 31, 1609, when King James I. granted them to George Salter, Gent., and John Williams, of London, draper, by whom they were granted, June 23, 1615, to Robert Gibson, Nicholas Dodshon, and John Dodshon, yeomen, of Stranton. The Reeds afterwards held the property for several years. The principal proprietors at present are F. A. Milbank, Esq.; Ralph Walker, Esq., of *Middletton Grange*; William Robson, Esq., of *Catcote*; W. L. Wharton, Esq.; W. Barras, Esq.; and Wilbraham Egerton, Esq.

THE CHURCH.

THIS church probably occupies the site of that given by Robert de Brus to Guisborough Abbey, and the grant of which was confirmed by Bishops Pudsey and Kellaw. The style of architecture in all its parts is nearly similar. The tower is lofty, rising from pointed arches, with a triple window in its western front. The entrance is by a south porch. Each of the side aisles is formed by a single octagonal pillar, supporting blunt-pointed arches; and a lofty pointed arch separates the nave from the chancel. In the north aisle, a porch, originally entered by an arch, was afterwards closed up, but is now thrown into the body of the church. Another porch, on the north side of the chancel, which was the family burial-place of the Fulthorpes of Tunstall, and afterwards converted into a vestry, has also been reopened: it is formed by two elliptic arches, supported by an octagonal pillar. About 100 additional sittings have thus been obtained; and the arches are very effective. The white-washing and plastering on the pillars have been removed, and various improvements and restorations made, by the present vicar. The old wooden pulpit has been replaced by a beautiful one of Caen stone; and an organ has also been erected in a recess on the south side of the chancel: it cost about £70, and was paid for by a subscription headed by the vicar. The windows of the church are the only enriched parts, and are all either of the late decorated or perpendicular period. The church will accommodate about 500 persons. The nave is 51 feet long, and, with its side aisles, 48 feet wide: the chancel is 33 feet long by 15 wide.

In the floor of the north porch are two large marble slabs, one of which is plain, and on the brass of the other was formerly a representation of a person in long robes. The mural monument of James Belassis, Esq., of Owton (who died in 1640), in the north aisle, represented him in the act of rising from the tomb, and throwing off a winding sheet: being in a decayed state, it has been removed. Other tablets record the deaths of Reed Surtees, Esq. and the Rev. John Gagnier, vicar.

A neat vestry has recently been erected on the north side of the chancel, in architectural harmony with the other portions of the church.

saihte that he harde the said Johnson saye that he had committed whoredom with Janet Slater; and, further, said if there were a hundred the harnessed men set betwixt him and hir, with drawn swords in ther hands, that he wold run throughe them all to hir; and that, if ther were a hundred devels of hell betwixt him and hir, with fleshe

eroks in ther hands, that he wold run throughe them all to hir; ther being present John Jackson. Saying further that he was present with the vicar of Stranton when he rebuked him for suehe his evell demeanour: Johnson answered that he hoped that he that was an evill man wold never amend.—JOHN CASSON."

REGISTERS.—Books Nos. 1 and 2 contain entries of baptisms from 1580 to 1812, defective from 1587 to 1589, 1648 to 1680, and 1768 to 1793; No. 3, burials from 1583 to 1812, defective from 1612 to 1660 and 1768 to 1792; No. 4, marriages from 1580 to 1812, defective from 1647 to 1680. No entries 1686 to 1688, and 1691.

Stranton vicarage, the prior of Guisborough patron till the Dissolution; afterwards, — Dodsworth, Esq.; now, Sir Matthew White Ridley, Bart. King's Books, £17 16s. 0½d.; Tenths, £1 15s. 7¼d.; Episc. proc., 6s.; Archid., 3s. 8d.; Synod., 4s. Dedication to All Saints.

VICARS.—Richard de Topcliff occurs 1312; Walter de Gisburn, ob. 1343; Thomas Scot, 1349; John de Wolviston, 1361; Richard Oliver, 1379, p. m. Wolviston; Thomas Stare, 1396, p. m. Oliver; John Burie, 1424, p. res. Stare; John Chestre, 1434, p. m. Burie; Richard Driffild, 1437, p. res. Chestre; Thomas Savage, 1481; Joseph Moreby, 1501; George Corney, 1509, p. m. Moreby; D'nus Richard Slater, 1510; John Semer, cl., 1539; James Lakenbie, preb., 1561, p. m. Semer; Richard Rawling, 1575, p. m. Lakenbie; Philip Hatherley, 1578, p. m. Rawling; William Massie, 1581, p. m. Hatherley; Ralph Turner, 1588, p. m. Massie; Thomas Matthewson, 1590, p. res. Turner; Henry Bell, 1602, p. m. Matthewson; John Allen, 1607; John Smith, 1661; William Smith, A.B., 1671; Stephen Tennant, A.M., 1671, p. res. Smith; James Noble, 1710, p. m. Tennant; Richard Condor, 1727, p. m. Noble; Matthew Robinson, A.M., 1738, p. m. Condor; John Gagnier, A.M., 1745, p. res. Robinson; Joseph Birkett, A.M. 1796, p. m. Gagnier; Rowland Webster, A.M., 1833, p. m. Birkett; Henry R. Ridley, 1851, p. res. Webster for Kelloe.

The vicar of Stranton provided one lancer and two archers to the array of the clergy in 1400.

The glebe consists of the vicarage-house and garden, at the south-west corner of the village. The vicar is generally entitled to the tithe of hay, and to all small tithes. The gross annual income of the living was stated, in 1835, at £325, subject to permanent payments amounting to £45, leaving £280 clear. The tithes were commuted in 1841; those of Stranton for £220, those of Brearton for £25, and those of Seaton-Carew for £100, making a total of £345, besides the sums received as surplice fees.

CHARITIES.

Fulthorpe's Charity.—The Rev. Christopher Fulthorpe, by will, June 30, 1707, devised to trustees all his property in Tunstall, Mordeston, Stranton, Throston, Hart, Hartlepool, and elsewhere in the county of Durham, that they, after paying certain legacies and annuities out of his estate at Catcote, should with the residue build a school-house in such place as he should

direct, the master of which, who should be a deacon or qualified as such, was to receive £20 yearly for teaching 15 children in Stranton and Hart parishes gratis. The further sum of £8 per annum was to be laid out in buying coats, shoes, and hats for four scholars, and 40s. for Common Prayer Books, Whole Duties of Man, and Bibles, for such as should need them, and had made the greatest improvement. He also directed that if his three grand-daughters, Mary, Elizabeth, and Margaret Ellis, should die without issue, all the residue of the rents and profits of his estates should be applied in the purchase of lands for the augmentation of vicarages and parsonages in the county of Durham first, and afterwards in Yorkshire or elsewhere. No school was for many years established according to the directions of this will; though two of the proprietors of Catcote admitted that £400 and £200 had been returned from their respective purchase monies, on account of the claim that might possibly be made upon them in respect of this charity. At length, in 1841, a school-house was erected, by the proprietor of Catcote, at the north end of the village. It is called Fulthorpe's School, and is managed by five trustees, of whom the vicar of Stranton for the time being is the acting trustee. The proprietor of Catcote, W. Robson, Esq., gives £30 annually; and the school is attended by above 80 children.

TUNSTALL.

THIS estate, which adjoins Stranton on the west, was the ancient seat of the younger branch of the Fulthorpes. After the attainder of Sir Roger, Richard II., in 1399, restored it, with other possessions, to Sir William Fulthorpe, to hold during the life of his father. It afterwards passed by marriage to the families of Radclyffe, Booth, and Strangways, but was again acquired, by marriage and purchase, by the elder line of Fulthorpe. In 1707, it passed to the grand-daughters of the Rev. C. Fulthorpe, one of whom married Robert Raikes, Esq., of Northallerton, whose son sold the estates. James Robinson, Esq., the purchaser of a part, sold Tunstall to Mrs. Barras; and it is now held by Mr. William Barras. Catcote, which was sold at the same time to Mr. Henry Robson, is at present the property of William Robson, Esq.

BREARTON,

Or *Brierton*, a township to the south-west of Stranton, comprises 748 acres, divided into three farms, and con-

taining four inhabited houses. The number of inhabitants, in 1801, was 22; in 1811 the population was included with the rest of the parish; and at the four succeeding enumerations, it was 21, 22, 27, and 33; 18 of the latter being males and 15 females. The property was valued for the county-rate in 1853 at £465. The hamlet of Brearton is 8 miles east-north-east from Stockton.

This manor anciently belonged to the Greystocks; one of whom, Sir William Greystock, in 1344, settled this estate, with Nesham and Coniscliffe, on himself

and the heirs of his own body, with remainder over, failing such issue, to Robert, son of Ralph Neville, of Raby, on condition of his assuming the arms and name of Greystock. Brearton, however, continued in his own descendants till the reign of Henry VII., when it passed by marriage to Thomas Lord Dacre, of Gilsland, and afterwards to the Howards. In the reign of Charles II., Sir William Blackett, Bart., held this manor: it was afterwards the property of the family of Turner, and subsequently of Kirkleatham Hospital, to which it still belongs.

PAROCHIAL CHAPELRY OF WEST HARTLEPOOL.

THE recently formed parochial chapelry of Christ Church has assigned to it all that part of the parish of Stranton comprised within the following boundaries, that is to say: firstly, all that part which is bounded on the south by the highway leading from the sea shore to the village and the parish church of Stranton, and extending westwards as far as the point or corner at which the said highway turns southward towards the said parish church. Secondly, that part of the said parish commencing from the said last-mentioned point or corner of the said highway, and extending along the highway leading from the said parish church of Stranton to the point or corner of the highway leading towards Throston, and as far westwards thereon as the eastern boundary of the field of Ralph Walker, adjoining certain houses and property belonging to William Hutehinson on the west side of the ground belonging to Ralph Ward Jackson, and Robinson Watson, merchant, and Thomas Wilde Powell, gentleman, and intended for a public cemetery. Thirdly, that part of the said parish commencing from the western extremity of the said ground intended as the public cemetery (and including the same ground), and extending from the said point or corner of the said highway leading to Throston aforesaid as far as the northern extremity of the said parish of Stranton, and along the entire northern and eastern boundary of the said parish of Stranton; and which said district intended to be hereby assigned, shall be under the immediate care of the minister who may be duly licensed to serve such church, as regards the visitation of the sick and other pastoral duties, and the publication of banns of marriage, and the solemnization and performance of marriages, baptisms, and churchings in the said church.

WEST HARTLEPOOL.

THE town of West Hartlepool has risen into existence solely in consequence of the formation of the West Docks. Up to the year 1845, the entire site was a barren shore and land, on which stood a solitary farmhouse. The ground becoming the property of the Dock Company, the plan and arrangements of the buildings are more systematic than is usually the case with places so hastily constructed. The parts more recently built, in particular, are judiciously laid out; the main streets running at right angles from east to west and from north to south. The principal are *Church Street*, *Whitby Street*, *Scarborough Street*, *Victoria Terrace*, and *Albert Terrace*; and other large thoroughfares are

in the course of formation. The houses are generally of brick, and well built; and the shops are neat and commodious. The adoption of one uniform system of drainage will, it is hoped, supersede the necessity of future expensive changes. The Dock-offices, situated at the north end of Victoria Terrace, are about to be taken down; and more extensive and suitable buildings will be erected for the purpose where the present Tower Buildings stand.

The district called *California*, to the north-west, forms an exception to the other parts of the town; the houses, mostly occupied by workmen, being crowded together, and generally deficient in those conveniences and sanitary arrangements which are now considered essential to health and comfort.

Upwards of 100 acres of land are about to be added to the town, as building sites for villas, &c. These tracts are situated to the south and west, and belong respectively to the West Hartlepool Dock Company, Mr. Richardson, Mr. Turnbull, and Mr. Carter. The town is supplied with water and gas by the Hartlepool company.

POLICE STATION.—A proposal was made in 1853, by the West Hartlepool Dock Company, to contribute £100, a free site, and stone sufficient for building a police station in the township of Stranton, with lock-up cells, and accommodation for their own and the county police, on condition that the magistrates should contribute a sum of equal value, viz., £150; the estimated cost of such a building being £300. The station was to become the property of the county; the police of the company, under this arrangement, were to be consolidated with the county force, as provided for by the Constabulary Act. The proposal being accepted by the magistrates, a station was erected on the east side of West Hartlepool, and is used by the county police, and for the accommodation of the force engaged at the docks.

TOWN IMPROVEMENT ACT.—In 1853, Ralph Ward Jackson, Esq., applied, on behalf of the town, for an improvement act; and, at a public meeting of the inhabitants, a committee was appointed to consider the eligibility of such an object. The project having met with general approval, an act was obtained, and received the royal assent June 2, 1854. It is intitled, "An Act for paving, lighting, watching, draining, cleansing, regulating, and otherwise improving the town of West Hartlepool, and part of the township of Stranton, in the county of Durham, for providing a cemetery, and for other purposes." The persons named in it as the first commissioners are, Ralph Ward Jackson, the Rev. Henry Richard Ridley, Thomas Casebourne, Ralph Walker, Christopher Salmon, William Lisle, John Richardson, John Taylor, William Ramsay, Jacob Allison, William Waldon, and Cuthbert Emerson. One-third of the number are to retire on the 25th of March in every year, and their successors to be elected by rate-payers of £10 and upwards. They are empowered to divide the limits of the town into "The Town District" and "The Rural District," and to set up boundary stones. They may purchase lands for opening new streets, regulate their width, and enforce flagging and draining. They are also empowered to construct sewers, to convert sewerage into manure, to supply water, to

establish baths and wash-houses, to provide slaughter-houses, and to construct a cemetery. They may impose highway and borough-rates, levy tolls, and may borrow £13,250 towards paying the expenses of the act, building a town-hall, market-house, and other public buildings; and £13,000 for the other purposes of the act. A sinking fund is to be set apart, of not less than one-thirtieth part, in one year, of the money borrowed.

SLAUGHTER-HOUSES.—At a meeting of the town improvement commissioners, held in November, 1854, it was resolved to purchase, for £500, an acre of ground belonging to the Dock Company, on the east of a projected cemetery, for slaughter-houses; the purchase-money to remain at interest at five per cent. per annum for five years, with the option to the commissioners of paying it off at any time within that period. About eighteen slaughter-houses have been erected on this ground, with a fold-yard attached to each; and there is also a residence for an attendant. The buildings form an enclosure to the ground, which is of an oblong form. The maximum charges for using the slaughter-houses, according to a schedule annexed to the Improvement Act, are, for every bull, ox, cow, steer, heifer, or other beast, 1s.; for every calf, 6d.; for every sheep or lamb, 4d.; and for every hog or pig, 6d. The act provides that notice shall be given, by printed handbills, when slaughter-houses are provided; after which notice, persons slaughtering elsewhere in the town are liable to a penalty not exceeding £5 for each offence. The justices may decide whether there be a sufficient number of slaughter-houses. The officers of the commissioners have power to seize bad meat; and any butcher, provision dealer, or other person exposing for sale unwholesome meat, fish, or other provisions, is liable to a penalty not exceeding £5, and forfeiture of the articles exposed.

THE CHURCH.

CHRIST CHURCH, West Hartlepool, is situated on a piece of ground, of about an acre in extent, enclosed by a dwarf wall and iron palisading, and laid out with walks and grass sward. This ground, with the stone and lime for the erection of the church (which is the magnesian limestone from the neighbouring quarries), were given by the West Hartlepool Dock and Railway Company. The building is in the early English style of architecture, and consists of a square western tower, nave with side aisles, transept and polygonal apse or

chancel. The roof is covered with Peak's ferro-metallic tiles, divided into lozenge compartments by diagonal courses of a darker colour crossing each other. At the intersection of the nave and transept roofs, there is an octagonal lantern, containing eight quatrefoil windows for ventilation, and above which is a spire and ornamental iron finial.

The tower, beneath which is the principal entrance of the church, is 100 feet high, with a stair turret at the south-east angle, and contains a peal of six bells, by Taylor and Son, of Loughborough: they cost nearly £400, towards which the Bishop of Durham contributed £100. The tower is surmounted by a spire and vane, 25 feet high, which forms a conspicuous object from the sea.

The extreme length of the interior is 125 feet, the width of the nave 28 feet, the length of the transept 89 feet, and its width 23 feet. At the west end of the nave is a stone gallery, for the choir and organ; the latter built by James Langley, Esq., of Greatham. The interior of the roof is open, and stained in imitation of old oak: the height from the floor to the ridge is 38 feet. The south transept, appropriated to sailors, is called the Mariners' Porch, and bears on its gable a sculpture of an anchor. The chancel is approached by three steps. There is a spacious vestry, with an entrance-porch, at the north-east corner of the church. The sittings, which are all open, are of deal, stained in imitation of oak, and contain accommodation for 1,000 persons, 300 of which are free. The doors, pulpit, reading-desk, altar-rail, table, and chairs, are of oak. The font, which is elevated on three steps in the south-west angle of the church, is of stone, with a carved oak cover. The windows are filled with plain and coloured glass in geometrical forms, with painted borders. In each of the transept gables there is a circular window, in twelve compartments; the centre of that to the north containing a sitting figure of the Saviour. Three compartments of the east window are filled with stained glass, containing figures of Christ, St. Peter, and St. Paul.

The church is built from designs by Mr. E. B. Lamb, architect, London. Tenders were advertised for the erection on March 4, 1852; and the church was completed and consecrated by the Bishop of Durham on the 20th of April. 1854.

The district was assigned to Christ Church, by the Bishop of Durham, in compliance with a petition presented to him, and in accordance with the provisions of the act of parliament for such purposes. The district com-

prises the populous suburb called California, and Middleton, which includes a large portion of the old docks. As a preliminary, the sum of £1,000 was invested, being a foundation for an endowment, in the hands of the following trustees:—Ralph Ward Jackson, Esq.; Charles Swainston, Esq., Cooper Hill, Preston; the Rev. G. T. Fox, Durham; the Rev. H. W. M'Grath, rector of Kersall, Manchester; and the Rev. John Lawson, vicar of Seaton-Carew. The interest from this sum, with the pew-rents and surplice-fees, constitute the only sources of income. Application was made to the ecclesiastical commissioners for a permanent grant; but, though the district contains upwards of 7,000 inhabitants, besides the floating population in the shipping, the application was not complied with. The living is in the patronage of the above five trustees; and the Rev. John Hart Burges, A.B., is the first incumbent.

A parsonage house is now being erected on ground given by the Dock Company, adjoining the church on the south-east. The cost is estimated at £1,200, towards which a grant of £400 was made in 1854 from the Maltby Fund. The style of architecture will correspond, in some degree, with that of the church.

CHAPELS.

CONGREGATIONAL CHAPEL.—This chapel, which is in course of erection, is situated a little to the south of Christ Church, in Tower Street. The style of the building is Gothic, of the early decorated period, from designs by Mr. Thomas Oliver, architect, and consists of nave, east and west transept, gallery, and square tower with an octagonal spire, terminating with splayes at the base, to fit the form of the tower; its height, measuring from the foundation, is 110 feet. The edifice is of brick; the window-dressings, cappings, buttresses, and tower, will be covered with Portland cement. The pews are of stained fir; the roof is open, supported by metal columns and arches, and the building is calculated to accommodate 700 hearers. The vestry, school-room, class-rooms, &c., are arranged under the chapel. The entire cost will be upwards of £2,000; but a portion of the gallery and school-room only will be finished at the present time. Towards the cost of erection, the English Congregational Chapel Building Society gave £250; the proceeds of a bazaar in the town, on behalf of the building fund, produced £170; John Richardson, Esq., of Stranton, gave the site, value £220; and subscriptions of various amounts have been contributed by the congregation and their

friends. The chapel is expected to be opened for divine service in January, 1856. The Rev. J. H. Hughes, formerly a missionary in the West Indies, is the minister.

The few Congregationalists, or Independents, who were in West Hartlepool, first opened a room in 1854, as a place of meeting; since that time, the numbers so rapidly increased, that the necessity of a larger place of worship occasioned measures to be adopted for the erection of the present building.

WESLEYAN METHODIST CHAPEL.—This chapel, situated opposite to the church, is a large plain brick building. It was opened on Whit-Monday, 1855.

THE PRIMITIVE METHODIST CHAPEL is a brick building in Dock Street, built by subscription, and will hold about 300 persons. Previous to its erection, the congregation met in a school-room.

WESLEYAN REFORMERS' CHAPEL.—This place of worship is situated in Lynn Street, and will accommodate above 600 persons. It contains a gallery; and there is a large school-room on the ground floor. The congregation formerly assembled in the Wesleyan chapel at Middleton; but, on differences arising in the Methodist body, they commenced a subscription for building the present chapel in 1850; and it was opened, June 8, 1851, by preachers who had been expelled from the Wesleys.

CEMETERY.

In accordance with the provisions of the town improvement act, the commissioners, in November, 1854, agreed to purchase a field, containing 11 acres, at £200 per acre, from the Dock Company; the payment to be made on the same conditions as that for the site of the slaughter-houses. The ground is described in a schedule annexed to the act as "a certain field, or piece or parcel of land, in the township of Stranton, now in the possession of Ralph Ward Jackson, Thomas Wilde Powell, and Robinson Watson, and which said field is bounded on the south side thereof by a highway leading from Stranton to Throston and Hart, in the county of Durham, and on the east side or end by a highway leading from Stranton aforesaid to Hartlepool, and the eastern end of which said field is situate about 330 yards to the west of a certain water reservoir belonging to the Hartlepool Gas and Water Company."

The act provides that every part of the cemetery shall be enclosed with walls or other sufficient fences,

of at least 7 feet high; but as it may not be deemed expedient at once to appropriate the whole of the land, the commissioners may set apart and enclose a sufficient portion for burial purposes, and let the remainder for any term not exceeding three years. At present, the part inclosed is surrounded with wooden paling, which is erected at the rate of 5s. per yard. Part of the land is to be consecrated for the burial of persons according to the rites of the Church of England; and the remainder is for the interment of Dissenters. Near the centre of the ground two chapels have been erected; one appropriated to the consecrated, and the other to the unconsecrated portion of the cemetery. They are of stone, and in the Gothic style of architecture. A lodge, with an entrance-gate on each side, is built in a style harmonizing with the chapels, and is surmounted by a bell turret. Between £200 and £300 have been expended in forming the cemetery, the allotted part of which is nearly ready for consecration.

The commissioners are empowered to charge for interments (which are not to be allowed in the chapels, or within 15 feet of their outer walls), "such sums of money as they shall from time to time think reasonable," to be the same in the consecrated and unconsecrated parts, and not to exceed, for any corpse interred in a vault, catacomb, or brick grave, the sum of £4; and for every other corpse, the sum of £1 10s. The incumbent of Christ Church is the chaplain appointed by the act, and is entitled to receive from the commissioners a fee of 7s. 6d. for the funeral of every person who, at the time of his death, is rated at more than £5 for the relief of the poor; and 2s. 6d. each for the funeral of poor persons. The commissioners are empowered to provide premises for the reception of the dead previous to interment; and they may order the removal of all corpses from lodging-houses, dwelling-houses, cellars, out-houses, or other buildings, from which injurious effects may be apprehended, to the premises provided, there to be decently and carefully kept previous to interment. No interments are to take place in any other part of the ecclesiastical district of Christ Church than the legal cemetery.

THE ATHENÆUM, &c.

THIS beautiful building stands in a prominent part of the new town. The principal front is adorned with pilasters and a well proportioned entablature, the roof terminating with an elegant blocked cornice. It is in the Italian style, and of an appropriate classic character.

The frontage in Lynn Street is seventy-four feet, and that in Charles Street is fifty-one feet. The foundation-stone of the building was laid August 25, 1851; and it was formally opened on the 7th of September, 1852. The cost was about £1,100, exclusive of the site and stone materials, which were furnished by the dock company, and cartage and labour provided by the neighbouring farmers. Towards the building fund, Ralph Ward Jackson, Esq., contributed £100, and his example was immediately followed by subscriptions from various parties in the town and district. The building was erected from designs by Mr. H. B. Robson. The interior comprises a school-room, laboratory, and store-room on the basement floor; a news-room, library, two class-rooms, and two rooms for a housekeeper, on the ground floor; and on the upper floor a lecture-room, 70 feet by 30, with coved ceiling, a gallery, and ventilating arrangements. On the latter floor there is also a retiring-room, with offices connected. The large room is used for assemblies; and there are apartments occupied by the board of commissioners.

A *Mechanics' Institute* was established in West Hartlepool in 1836, under the patronage of the Rev. R. Webster, then vicar of Stranton, and R. W. Jackson, Esq. Since the completion of the Athenæum, the library and museum of the Institute have been placed in that building; and classes for French, German, &c., have been established, tea-parties held, and lectures delivered, in connection with it. At the anniversary meeting of the society, January 30, 1855, the number of members and the income were stated as follows:—3 honorary members, £2 2s. each, £6 6s.; 105 first class, or Institute and news-room members, 16s. each, £84; 86 second class, news-room alone, 8s. each, £34 8s.; 7 third class, ladies, 6s. each, £2 2s.; and 12 fourth class, under 18 years of age, 4s. each, £2 8s.; being a total of 210 members, and a revenue of £129 4s.

NATIONAL SCHOOL.—In 1854, a subscription was set on foot for the erection of schools, in connection with Christ Church, for the instruction of 800 boys, girls, and infants. Another object proposed is the establishment of an evening class for seamen and sea apprentices. The Dock Company presented the site on the south-west of the church, and offered to furnish stone from their quarries; in addition to which it is estimated that £2,400 will be required. Towards this sum, C. S. Swainston, Esq., of Preston, contributed £50; W. B. Swainston, Esq., £20; Messrs. Klengdon and Co., of Hamburg, £20; Trinity House, Newcastle, £20;

William Hutchinson, Esq., £10; Rev. G. T. Fox, £10 10s.; and there were several smaller subscriptions.

OTHER SCHOOLS.—There is a boarding-school for young ladies at West House; and in the town there are four day-schools for boys (one of which is held in the Athenæum), and four for girls.

INTERNAL TRADE.

THE usual professions and trades of a seaport town flourish in West Hartlepool. Besides engineers, builders, house-carpenters, &c., there are eight ship-building yards, including one recently established by Mr. Pile, previously an eminent builder of clipper vessels at Sunderland. His premises, which are leased from the Dock Company, adjoin the Jackson Dock on the north-west, and include a dry dock, measuring 320 feet long, 72 feet broad at top, 32 feet broad at bottom, with an entrance 60 feet wide, being the largest on the east coast. The ship-yard contains every description of machinery necessary for building and repairing all kinds of iron and wood ships and steamers. The iron foundries of Mr. W. Taylor and Bastow Brothers are in Hope Street. There is a canvas manufactory in Tennant Street, and several block and mast makers near the docks. The town contains a printing-office, a variety of shops, three breweries, four ale and porter merchants, ten inns and public-houses, twenty-two beer-shops, two eating-houses, and a corn-mill. Further details relative to the trade of the port will be given in the account of the docks and harbour of refuge.

WEST DOCKS.

THOUGH the coal trade of the southern and south-western portions of the county of Durham was directed to the Tees by the Stockton and Hartlepool and the Clarence railways, yet the intricate navigation of that river was soon felt to be an inconvenience; and, in 1838, a branch from the Clarence railway, in the township of Billingham, was projected, for the purpose of enabling those coals to be shipped at a new dock, to be formed in land purchased for the purpose, adjoining to the Slake at Hartlepool. A company was accordingly proposed, with a capital of £150,000, in 3,000 shares at £50 each. It was estimated that 160,000 chaldrons, or 400,000 tons of coal would be annually vended by this railway, producing a revenue of £19,166 13s. 4d. Fish, it was calculated, would produce £1,000; pas-

sengers, £5,200; and merchandise, £1,500; whilst the expenses were calculated at £6,500, leaving a supposed profit of £20,366 13s. 4d. Though threatened with opposition by parties shipping coal at the old Hartlepool docks, an act was obtained in 1839, for the formation of "The Stockton and Hartlepool Railway."* It was completed in 1841, and is nearly 8 miles in length.

To avoid further competition, the old dock company entered into an agreement for three years, with the new railway company, to ship the coals and other traffic of the latter in their docks. The unsatisfactory termination of this agreement has been alluded to in page 274; and measures were taken in earnest for the construction of the new dock and harbour in the situation originally proposed. Application was made to parliament, in the session of 1844, for an act for the purpose, which encountered a severe opposition from the old dock company, the Pier and Port Commissioners of Hartlepool, and others, backed by the opinion of Mr. Murray, C.E. The approval of the Admiralty was, however, obtained; and petitions, numerously signed, were presented to parliament in favour of the new enterprise, from the shipping interests of the ports of Newcastle-upon-Tyne, North Shields, South Shields, Blyth, Sunderland, Scarborough, Whitby, Yarmouth, Lynn, Ipswich, and Hartlepool; also from the fishermen of the latter place, and from the owners of collieries in the southern and western districts of the county, desiring to ship in the West Dock, and representing an annual production of upwards of 500,000 tons. Not the least important petition, on this occasion, was from eight captains of vessels, who, in attempting to make the old harbour in a severe gale from the east-north-east, on the 26th of February, 1844 (while the bill was before parliament), were wrecked under distressing circumstances, on the very site proposed for the new harbour, and the whole of whom, according to the evidence of one of the captains, could have saved their ships if that harbour had then been formed. Through the energetic

exertions of the friends of the bill, it was at length passed, and received the royal assent on the 23rd May, 1844. The promoters were thus incorporated as "The Hartlepool West Harbour and Dock Company;" and hence the establishment of "The West Harbour and Docks."

The works of the West Harbour and the inner dock were commenced in the spring of 1845. The harbour, formed by stone piers projecting from the land, contained an area of 13 acres; and the dock, excavated in the neighbouring meadows, contained 8 acres.† They were opened, amidst great public rejoicings, on the 1st of June, 1847; when the "Prince" barque, of Jersey, and the "Benbow" schooner, of London, entered from the sea; and so excellent were the shipping accommodations, that both vessels were laden with coals in two hours, and proceeded to sea the same tide on which they entered.

The importance of the harbour of West Hartlepool was evinced by the fact that during the first seven months after its opening, ending December, 1847, 460 ships entered, and 54,202 tons of coal and coke were shipped. The entries and shipments in the following specified years were—

In 1848,	1,242 ships,	169,021 tons.
„ 1849,	2,753 „	388,954 „
„ 1850,	3,882 „	589,990 „
„ 1851,	3,782 „	574,742 „

In 1851, the directors of the Dock Company and of the Stockton and Hartlepool Railway Company agreed that, by uniting the two undertakings and their properties together, upon fair and reasonable terms, the true interests of the proprietors in both would be best and permanently secured—their joint traffic conducted with more freedom and efficiency—greater vigour and economy in the united concerns practised—and all disputes as to rates, dues, provisions, and management for mutual traffic prevented. The amalgamation of the companies ensued; and the united income for the first year, ended June 30, 1853, was £102,412 17s. 8d.

* The original directors were, Henry Vansittart, Esq., Kirkcatham, Yorkshire; William Thomas Salvin, Esq., Croxdale; Gerard Salvin, Esq., Mill Crook, Yorkshire; Captain Robert Moses Dinsdale, Newsham Park, Yorkshire; Captain George Edward Watts, R.N., Langton Grange; Robert Hugginson, Esq., Romalldkirk, Yorkshire; Charles Barnett, Esq., Cockerton; Stephen Walton, Esq., Norton; Richard Dickson, Esq., Stockton; Thomas Allison Tennant, Esq., do.; John Stagg, Esq., do.; Mr. Cuthbert Wigham, do.; Mr. Robinson Watson, do.; and Mr. Andrew Sanders, do.—Bankers: The Stockton and Durham County Banking Company.—Solicitors: Messrs Jackson and Skinner, Stockton, and Messrs. Bell and Steward, 39, Lincoln's Inn Fields, London.—Engineers: Messrs. George Leather and Son, Leeds.

† In consequence of the clay, or marl, forming the bed of the channel into the harbour, being exceedingly hard at a certain depth, the ordinary dredging machine was found to have little or no effect, owing to its want of stability. Mr. T. Casebourne, the engineer of the company, therefore constructed a raft or float, with apparatus by which holes were made in the clay, 4 inches in diameter, and of the required depth, for receiving a cartridge containing three or four pounds of powder, to which one of Bickford's fusees was attached. The hole was then carefully tamped, and on the raft being floated away, the fusee was lighted. The cost of the apparatus complete was about £100. A paper on the subject was read at a meeting of the Institution of Civil Engineers, on April 9, 1851.

The total amount of the working expenses was £45,391 13s. 1d., leaving a balance of £57,020 4s. 7d., out of which a dividend of four per cent. was declared, and £581 carried to the next year's account. At that period, the united companies and that of the Clarence line had expended about £1,200,000, and possessed powers by their various bills to raise about £300,000 more, in case of need.

Additional harbour and dock accommodation having become necessary, new piers were constructed, enclosing an area of 44 acres. Another dock, called the "Jackson Dock," containing 14 acres, was also formed, and opened on the 1st of June (the anniversary of the first dock), 1852. The lock entrance to it is 60 feet wide, with a graving dock connected. Accommodation was thus provided, in the harbour and docks, for 500 vessels. New drops and staiths were provided; and every conceivable arrangement was made for facilitating the business of the place. Ships drawing 18 feet water were sent to sea with coal cargoes for the East and West Indies, the Mediterranean, Baltic, Hanseatic, French, and other ports. The value of West Hartlepool, as a harbour of refuge, was demonstrated on several occasions soon after its being opened.

The coals shipped at these docks are West Hartlepool Wallsend, Heugh Hill do., Tennant's do., West Hetton do., South Kelloe do., West Kelloe do., Dennison's Bentley's do., Tees do., Coundon do., Backhouse's do., Hunwick do., Byer's Green do., Newfield do., Sepping's do., Willington do., Bowdon Close, do., Brancepeth do., and Whitworth do. There are six coal-fitting offices in the town.

During the formation of the second dock, the Leeds Northern railway was constructed, connecting West Hartlepool with the manufacturing districts of Leeds, Halifax, Huddersfield, Wakefield, Bradford, Manchester, Liverpool, Preston, and other parts of Lancashire. This undertaking, opened June 1, 1852, constituted West Hartlepool the medium for the import of merchandise for the interior, with a corresponding facility of obtaining outward freights. The formation of the Darlington and Barnard Castle railway, now in progress, will also tend to increase the traffic and revenue of the port.

At a special meeting of the West Hartlepool Harbour and Railway Company, May 17, 1853, it was resolved to construct a third dock, of from 8 to 10 acres, chiefly for foreign vessels. The works were speedily commenced; and the "Commercial Dock" is now nearly completed. In connection with it will be a ship-yard

and graving dock of still larger dimensions than the one at present in use; also a large timber pond, import timber yard, saw mills, &c., to meet a want which becomes daily more apparent, as it is now found necessary to pile the immense quantities of timber imported upon the quays and other places, or to float it in the docks amongst the shipping.

Extensive and admirable warehouses have been erected along the greater part of two sides of the docks. A line of railway is laid through the centre of the whole, so that by the aid of turn-tables and other appliances, a cargo may be transferred from shipboard to the Stockton and Hartlepool line, or from thence to the warehouses and docks, with ease and facility. A commodious railway station is immediately adjoining, and an electric telegraph communicates with London and other towns. On July 4, 1855, the docks, warehouses, &c., were inspected by George Hudson, Esq., M.P., N. Plews, Esq., and other gentlemen connected with the Sunderland Docks.

During the half-year ended December 31, 1853, the Dock and Railway Company's receipts on revenue account amounted to £57,103. In the corresponding period of the following year, the amount was £67,108, being an increase of £10,905. The working expenses during the last-named half-year amounted to £31,907, the taxation to £676, and the interest on debentures and loans to £13,731. After satisfying all preferential claims, a dividend of four per cent. per annum was declared upon the consolidated stock of the company, with a surplus of £1,680 to be carried to the reserve fund. The capital account shewed that of the sum authorized, viz., £1,994,666, there had been raised and expended £1,563,205, leaving still to be raised £431,461.

Since 1852, in which year the second dock was opened, the following shews the number of ships entered, and the quantity of coal and coke shipped:—

In 1852,	4,336 ships,	687,370 tons.
„ 1853,	4,469 „	680,536 „
„ 1854,	4,826 „	696,079 „

A considerable portion of the exports from the port of Hartlepool, tables of which are given in page 279, were shipped at the West Docks. The vessels entering inwards with cargoes from foreign ports, during the year ending June, 1853, were 74; and 892 cleared outwards with cargoes. In the following year, 240 ships entered, and 1,041 cleared outwards. During the year 1848, the first year after the opening of the docks, the value of goods exported, exclusive of coal and coke, was

£541 4s. 6d.; in 1850, it was £1,795 1s. 10d.; and in 1854, £2,261 18s. 5d.*

Steam ships, of large tonnage, run between West Hartlepool and London, and also to and from Hamburgh and other ports on the continent. A shipping company was commenced soon after the opening of the harbour, but was dissolved in 1852. West Hartlepool has been made a bonding port; and the propriety of erecting a custom-house has been under the consideration of the authorities. "The West Hartlepool Mutual Marine Insurance Association" was formed in February, 1855, and, in a few weeks, received tonnage for insurance to the amount of £25,000.

The port charges are as follow:—Dock dues, vessels loading or discharging a cargo, 1½d. per register ton; ditto not loading or discharging, ¾d.; Ballast discharging, 1s. 3d. per ton. Dues of commissioners, vessels loading or discharging a cargo, 1d. per register ton; ditto not loading or discharging, ½d. Steam-boats, 1s. per keel. Pilotage, 1s. 3d. per foot in summer; 1s. 6d. in winter. The tonnage rates are graduated, according to the length of the voyage, from 2d. per ton from ports in the United Kingdom to 1s. 6d. from the West Indies, east coast of South America, Greenland or Davis' Straits, or any place eastward of the Cape of Good Hope, or westward of Cape Horn.

LIFE-BOAT.—The West Hartlepool life-boat, established in 1847, is maintained by the Dock Company, in accordance with the provisions of their act of parliament. The boat has frequently rendered efficient assistance on occasions of shipwreck or danger. The life-boat is kept in a suitable shed, a little to the south of the town.

PILOTS.—The pilots are under the jurisdiction of the Trinity House at Newcastle: their number at present is thirty-four.

MIDDLETON

ADJOINS the original tidal harbour of Hartlepool on the south-west.† It received its appellation from a

* The compiler of Brown's Export List for December, 1854, observes that he "cannot refrain from congratulating his friends in West Hartlepool in particular, on the proud position which that new-born community has occupied in the export department of the past year. The development which it has exhibited has been not only wonderful, but, as far as the compiler can learn, has been created by no accidental or factitious circumstances. It has been the *bona fide* homage which fortune generally pays to industry, the honourable return which happily is still often made to that enterprise of which foresight is the assisting herald, and prudence the protecting pilot. That it may go on

gentleman named Middleton, who purchased the property and settled upon it about the year 1766. When the improvements in the harbour were commenced, this was the first part of the parish of Stranton which participated in the prosperity of Hartlepool, by the formation of ship-building yards, landing-places, and other necessary adjuncts. At a short distance from the ferry are the iron-works of Messrs. Richardson and Co., and the Hartlepool Bottle Company's works. Near these are several rows of houses and shops. A national school was erected in 1840: it is a large brick building, with some ornamental display on the south. A Wesleyan Methodist chapel, erected in 1835, has recently been purchased by the Dock Company; and the congregation assemble in the new chapel at West Hartlepool. There is a wind-mill, three public houses, and a beer-shop in the village. A foot-path, whilst the dock gates are closed, leads from Middleton to West Hartlepool.

HARBOUR OF REFUGE.

WHEN the act of parliament was obtained, under the powers of which the old harbour of Hartlepool was restored to more than its ancient importance, few persons could have been so sanguine as to foresee a necessity for those extensive artificial basins, in close proximity with it, which have been scooped out of the solid land, and are still being expanded to meet the increasing commerce which well-directed enterprise has brought to their wharves. A still more magnificent work, however, is now about to be commenced, by which a large extent of the sea itself will be inclosed and appropriated to the port of Hartlepool.

The shelter afforded to the shipping in stormy weather by the harbour of West Hartlepool, and the peculiar adaptation of that part of the coast to the purpose, naturally suggested the idea of transforming the bay of Hartlepool into a harbour of refuge. Scientific men, amongst whom were Mr. Rendel, unanimously pronounced in favour of the project; and it was observed that "whatever can be shewn as eligible or promising

and prosper is the sincere wish, the compiler believes, not only of himself, but of those elder communities also, which, although they may look with astonishment at the success of a younger neighbour, can yet behold it without the slightest admixture of either envy, begrudgement, or dismay."

† Some years ago, a large quantity of human bones were discovered at this place, whilst draining a morass. They were supposed to be the remains of the Scottish soldiers who fell during the siege of Hartlepool in 1644.

in any other site, is shewn a hundredfold more clearly in this."

Accordingly, on the 4th of November, 1854, through the exertions of Ralph Ward Jackson, Esq., and his friends, notice was given of a bill to be introduced into parliament in the ensuing session, by the commissioners of the port of Hartlepool, supported by the two dock companies, "for the improvement of the port of Hartlepool—protection of Hartlepool Heugh or headland and bay—formation of Harbour of Refuge—establishment of Ferries, powers to levy additional or other tolls, rates, and duties, and to raise further monies—amendment or repeal of acts—and for other purposes." By this bill, the limits of the port are preserved from the south side of Seaton-Carew to the Black Hall rocks; the limits of the harbour are defined by a line touching close on the outer boundaries of the town of Hartlepool and West Hartlepool; and within the latter a "town district" is defined for the purposes of this bill. The commissioners' act of 1852 is to be repealed; but several general provisions are proposed for the protection of rights secured under it. "The Hartlepool Port and Harbour Commissioners," as reconstituted, are to be twenty-two in number, viz., the six commissioners under the act of 1852, three East Dock commissioners, three West Dock commissioners, two ship-owners' commissioners, six town commissioners, and two *ex officio* commissioners, to wit, the collector of the customs and the mayor of Hartlepool. At any time when the aggregate tonnage of the port shall exceed 49,000, the number of ship-owners' commissioners is to be three. The important works to be executed are thus described:—

"Powers to make, construct, and maintain an outer Harbour in the Bay of Hartlepool, and for that purpose to make, construct, and maintain a southern pier or breakwater, commencing upon and from the shore or high water banks of the sea, at or near a certain building called Carr Cottage, in the township of Seaton-Carew and parish of Stranton, in the county of Durham, and extending from such point, in an easterly and northerly direction, over, along, upon, or near to a certain reef of rocks called 'Long Scar,' and the shore and bed of the sea, and terminating in the German Ocean, at a distance or extent of about 2,900 yards from the first-mentioned point. Also powers to make, maintain, vary, extend, or enlarge a northern pier or breakwater, commencing from or near the cliffs called 'the Heugh,' in the township and borough of Hartlepool, in the county of Durham, at or near a pier now in course of construction under the said act, and extending from such point in a south-easterly direction, and terminating in the German Ocean, at a distance of about 400 yards from the head or seaward termination of the said southern pier; and to make or construct a sea wall or harrier, or sea walls or barriers, with all requisite and proper works and conveniences connected therewith, for the protection of the headland of Hartlepool and the cliffs near or adjoining thereto from the inroads of the sea; such sea wall or walls, barrier or barriers, to commence from a point on or near the sea

shore, at or near to a place called or known as the 'Far Kiln,' in the township of Throston and parish of Hart, and thence along, opposite, or near to the course of the cliffs or sea-shore, up to, and terminating at, or near the point on the sea shore, from which the said northern pier is hereinbefore described as commencing."

The area to be enclosed by the piers will be nearly 1,000 acres, in which the commissioners are empowered to sluice, dredge, deepen, and improve the anchorage ground. There will be a depth of 30 feet at the entrance at low water spring tide; and thus the harbour will be accessible at all times and states of tides. The estimated cost is £800,000. Extensive powers were required in the bill for removing seashore rocks, making ferry-landings, and employing ferry-boats, steam-tugs, and dredgers. During the progress of the bill through committee, however, it was decided that no exclusive right of ferry shall be conferred on the commissioners.

The revenue by which it was proposed to construct and maintain the harbour works were, 1st, By certain tolls, or tonnage duties on all ships, at rates specified; 2nd, By rates or tolls on all goods, animals, and minerals; 3rd, By a "rate in aid," to be called the "Owners' Rate," the maximum of which was fixed at 1s. in the pound, to be levied on all property within the "town district" which is rateable for the relief of the poor, and according to its yearly rateable liability to that purpose; but rateable property within the districts of the docks companies, was to contribute at three times this amount; 4th, By a rate to be called the "Occupiers' or Tenants' Rate," at a maximum of 6d. in the pound on property rated to the relief of the poor at £10 and upwards; and, 5th, By an extension of liability to the "Owners' Rate" to every lessee of four years' standing. The above maxima were afterwards reduced to 8d. for the owners', and 3d. for the tenants' rate.

The rating clauses of the bill excited some opposition, particularly amongst the inhabitants of Hartlepool. In reply, it was urged that the encroachments of the sea on the Heugh would, in a few years, render a heavier rate necessary for its preservation; and as such preservation was essential to the safety of the town itself, common prudence warranted a participation in the projected measure, which included so desirable an object.

In other ports an alarm was raised under the idea that a "passing toll" on shipping would be imposed. In deprecating the latter idea, the promoters of the bill added that it was not intended to impose any toll whatever on coal or merchandise, but only, as usual in such cases, tonnage rates on vessels entering within,

and therefore profiting by the works of the commissioners.

In urging the claims of the port of Hartlepool, to such an extension as that contemplated, the commerce of the two sets of docks was shewn to have increased in a ratio beyond that of other ports. In 20 years, from 1833 to 1853, the difference in the quantity of coal exported to foreign ports alone was as follows:—

	1833.	1853.
From Newcastle and Shields,	233,709 tons	1,353,905 tons.
From Sunderland and Seaham,	176,487 „	542,227 „
From Stockton and Hartlepool,	3,700 „	532,625 „
	<u>413,896</u>	<u>1,428,757</u>

During the year 1854, 10,117 vessels entered the two sets of docks, and nearly 1,700,000 tons of coal were shipped. In the same period, the merchandise goods from Yorkshire, Lancashire, &c., were exported in large quantities, by way of Hartlepool, to Hamburgh and other foreign ports. The increase in this respect is shewn by the following comparison of the respective values of the specified months:—

	1853-4.	1854-5.	Increase.
October.....	£3,904	£34,498	£30,594
November.....	10,100	50,379	40,279
December.....	9,842	59,914	50,072
January.....	9,947	32,466	22,519
February.....	8,025	32,587	24,562
March.....	25,171	83,103	57,932
April.....	15,233	133,979	118,746
	<u>£82,222</u>	<u>£426,926</u>	<u>£344,704</u>

Average per month in the first-named seven months.. £11,746 0 0
Do. in the seven corresponding months..... £60,989 8 6
Being an average increase per month of £49,243 8 6

The utility of a harbour of refuge on the north-east coast of England may be considered as indisputable. Between Flamborough Head and the Frith of Forth, ships in distress must either run for some one of the coal ports, or risk being drifted ashore. The bay of Hartlepool, to which the Heugh presents a point on one side for

the projection of a pier, and the Long Scar rocks a good foundation for an opposite one, may thus be easily secured and protected in all weathers. The eligibility of the site is evinced by the fact, that, during a series of stormy weather in February, 1855, a greater number of colliers sailed from Hartlepool than from any other port in the north of England; the numbers being, from Hartlepool, 226; Newcastle, 224; Sunderland, 194; Seaham, 55; Blyth, 12; and the Tees, 11. In the same month, and whilst the harbour of refuge bill was before parliament, Mr. Calver, C.E., a strenuous opponent of the measure, and who was engaged in a surveying cruise on board one of her majesty's cutters, himself sought refuge in the West Dock from the violence of a north-easterly gale, which had continued to blow without intermission during the greatest part of a week.

In the months of August, September, October, November, and December, 1854, and January, 1855, the following ships, with coal and coke, left the ports between the Tees and Blyth:—

For British ports	15,435 ships,	with 3,035,698 tons.
For foreign countries	5,251 „	„ 1,113,942 „

Thus, 20,686 ships, with 4,149,640 tons, left ports within 35 miles of each other, in the space of six months, all of which ships navigated the German Ocean almost within sight of Hartlepool bay; but not one of them, if caught in the north-easterly, easterly, or south-easterly gales, so frequent on the coast, had any place to run to for shelter and protection available at all times and states of tide.

During the progress of the bill through the House of Commons, several modifications were made in such of its provisions as were considered to affect property and trade prejudicially. It was read a third time on the 6th of June, 1855, passed the House of Lords on July 3rd following, and duly received the royal assent.

PAROCHIAL CHAPELRY OF SEATON-CAREW.

THE chapelry of Seaton-Carew, formed by order in council, October 21, 1841, and licensed by the Bishop of Durham under the act of 6 and 7 William IV., comprises the whole township of Seaton-Carew, and is bounded on the north by the townships of Brearton and Stranton, on the east by the German Ocean, on the south by the river Tees, and on the west by the parish of Greatham.

THE township of Seaton-Carew, with its sea and river coast, comprises an area of 4,885 acres. Its population, in 1801, was 263; in 1811, it was included in the return with the rest of the mother parish of Stranton; and at the four following enumerations, it was 312, 333, 588, and 723; of which latter number 320 were males and 403 females. The number of houses increased from 116 inhabited, 16 uninhabited, and 1 building, in 1841, to 152 inhabited and 19 uninhabited in 1851. The property was assessed to the county-rate, in 1853, at £4,804 10s.

The receipts from the poor-rate, in the year ended Lady-day, 1854, amounted to £153 10s., and in aid of rates, 10s. The expenditure for in-maintenance was £9 1s.; out-relief, £26 10s.; workhouse loans repaid and interest, £1 7s.; salaries and rations of officers, &c., £2 7s.; other expenses connected with relief, £17 12s.; total, £56 17s. Constables' expenses before justices, £1 17s.; vaccination, £1 3s.; registration fees to clergymen, £1 3s.; county and other rates, £79 14s.; registration, 7s.; other payments, £16 15s.; total expenditure, £157 16s.

The Stockton and Hartlepool branch of the North-eastern railway passes over an extent of 1 M. 7 F. 205 Y. in this township, and covers an area of 22 A. 1 R. 11 P. In 1851, it contributed £4 9s. 6d., and in 1852 £5 4s. 5d. to the local rates; the gross amounts collected in those years being £103 6s. 1d. and £122 3s. 11d. The station is about half a mile from the village.

Seaton-Carew is situated on the sea shore, 3 miles south from Hartlepool, and 9½ north-east-by-north from Stockton. The oldest part of it consists of three sides of a square, inclosing a green; the fourth side being open towards the sea, which has probably undermined and carried away the east row. In some parts, there is a narrow footpath between the houses and the edge of the cliff; and in others the tide flows up to the very foundations. To the south of the square, a row of

houses faces the east, separated from the beach by a carriage road, at the extremity of which a spacious hotel, with an extensive range of offices and other buildings, was erected by George Pearson, Esq., whilst proprietor of the estate.

This village has long been held in high estimation as a fashionable bathing-place, for which it is admirably adapted. It contains several good and well-furnished lodging houses; and possesses the usual adjuncts of bath-houses, bathing machines, a circulating library, and various shops and tradespeople. *Seaton Hotel* is capable of accommodating assemblies and other meetings; and there are also three public houses. A salmon fishery is carried on at this place.

A tide-waiter, two boatmen, and a pilot, belonging to the Stockton custom-house establishment, were formerly placed here. A detachment of the Hartlepool coast-guard are now stationed at Seaton-Carew.

A good turnpike road connects Seaton-Carew with West Hartlepool, and is kept in repair by the inhabitants of the respective townships. The sandy beach is firm and level to West Hartlepool on the north, and to Seaton Snook on the south of Seaton-Carew; an extent of upwards of 4 miles, commanding a beautiful view of the ocean, with the town, port, and shipping of Hartlepool on one hand, and the entrance to the Tees, the Cleveland hills, and the receding coast of Yorkshire on the other. The point of Seaton Snook projects southward into the wide estuary of the Tees, which, says Brewster, "forms by far the wildest scenery in this neighbourhood, and is in every way well adapted both for the occasional resort, and for the haunts of birds, during the season of incubation." The romantic and solitary character of the scenery is, however, now much modified by the proximity of the iron manufactories at the mouth of the Tees. Fears were entertained, by some of the inhabitants of Seaton-Carew, that the formation of the harbour of refuge at Hartlepool might endanger their village, by throwing

the whole force of the tide upon its coast; and they required a guarantee from the promoters of that project, during the passage of their bill through parliament.

THE CHURCH.

THERE are no traces of the ancient chapel, dedicated to St. Thomas a' Becket, and given by Brus with the mother church to Guisborough. Raould, the prior, in 1200, granted to Walter Carrow, for 60 acres of land, three tofts, and pasture for 100 ewes and their lambs, the privilege of a chantry within Seaton chapel. In 1312, Prior Geoffry determined that the vicar of Stranton was bound to provide for the maintenance of Seaton chapel.

The present church, consisting of nave, chancel, and western tower, was erected through the exertions of the late Mrs. Lawson, of Boroughbridge Hall, Yorkshire, who contributed £2,400 towards its endowment. The original cost of its erection was £819 19s. 5d. It was consecrated September 29, 1831, as an additional church for the parish of Stranton. The chancel was added in 1842, and, with a gallery, afforded about 250 additional sittings. The church will now accommodate 506 persons, and, during the bathing season, is completely filled. The expense of the enlargement was £871 15s. 2d. This sum included the cost of a clock, and a beautiful east window, filled with stained glass, presented by the Rev. J. Lawson, the present incumbent, who also presented an organ, value £50. In 1848, this instrument was enlarged as a finger organ, at a cost of £82 8s., raised by subscription. The nave is lighted by four windows on each side; and all the windows of the chancel are filled with stained glass. A vestry adjoins the chancel on the north. The western tower is square, surmounted by corner pinnacles: it contains the principal entrance to the church, the exterior walls of which are covered with ivy. The burial ground was consecrated July 26, 1842, by the bishop of the diocese.

The Rev. James Lawson, son of the founder and patroness, was the first incumbent, and was succeeded, in 1833, by the Rev. Arthur Guinness. The Rev. John Lawson, the present incumbent, was appointed in 1835. In the parliamentary returns of that year, the gross income of the living is stated at £60, subject to permanent payments amounting to £8. By order in council, April 17, 1845, the ecclesiastical commissioners were empowered to make an annual grant of £45, so as to bring the net income to £97. A more recent statement gives the permanent endowment at

£63 1s.; the glebe, £44; pew-rents, £14 14s.; fees, £4; total, £125 15s. On the expiration of the 21 years after the consecration, the church-rates, which had been payable during that period to the mother church of Stranton, became applicable to the church at Seaton-Carew; and the gross income of the living is now about £150 per annum.

In 1830, the *Wesleyan Methodists* erected a small chapel in the south row of the village; and there is also a meeting-house belonging to the *Society of Friends*.

A day-school, endowed with £5 per annum by Lord Crew's trustees, for some time existed at Seaton, but was indifferently attended. There is now a national school for boys and another for girls. At the first of these, on the visit of the Rev. D. J. Stewart, government inspector, June 28, 1853, 45 boys were present at examination; 7 had left and 11 joined during the preceding twelvemonth; and the average attendance had been 36. The general observations of the inspector were—

“Buildings, one fair-sized room with a curtain to separate the boys from the girls; stone floor in the greater part of the room; no classroom. One group of three parallel desks. Furniture, stove, clock, book-closet. Play-ground, small yard. Books, very fair supply; apparatus, three black boards, three easels. Standard of classification: reading, spelling, and arithmetic. Four classes for all subjects, under master, with certificate of merit, and one pupil-teacher; one division for scripture and object lessons; three groups for arithmetic. The pupil-teacher is confined to the same class entirely.

In the girls' schools, 45 were present at examination; 10 had left and 28 had joined during the preceding twelve months; and the average attendance was 33. General observations:—

“Buildings same as boys'. Desks, one group of three parallel. Play-ground, small yard. Standard of classification: reading and arithmetic. Four classes for all subjects, under mistress, with certificate of merit; one division for scripture, geography, and grammar lessons.”

Styr, son of Ulphus, gave lands in Seaton to the see of Durham, in the time of Bishop Aldhunc. In 1180, Peter Carow is said, in the king's charter to Bishop Pudsey, to hold his lordship of Seaton of the crown, by the service of one knight's fee; which service he and his heirs are awarded from thenceforth to render to the see of Durham, as others the bishop's tenants between Tyne and Tees. In 1337, John de Carrow died seised of this manor, which he held *in capite* of the bishop, by homage and fealty, and the service of the fourth part of a knight's fee, and doing suit at the wapentake of Sadberge, with a yearly rent of 13s. 4d. payable at the

bishop's exchequer, in Durham, at the feast of St. John Baptist, value £20. He left issue—1. John, son and heir, who died without issue. 2. Sir Thomas Carrowe, Knt., who married Alice, daughter and heiress of Thomas de Scaton, and had issue John Carrowe, married to Isabel, widow of Sir Robert Umfreville, Knt. 3. Avice, who, by her first husband, Simon Langton, lord of Wynyard, had issue William Langton, whose only daughter, Sybill, became wife to Sir Roger Conyers. 4. Joan, married to Richard Hayton, and had issue John Hayton. 5. Alice, married to John de Whitworth, whose daughter, Joan, became wife of John Hoton. 6. Isabel, married to William Porter, of Scaton, and had issue William Porter.

In 1363, John of Seaton-Carrowe, having through ignorance seized a royal fish, cast on his lands there, and being called to account for the same, by his charter or deed acknowledged the trespass, and the bishop's right thereto, and compounded accordingly for 100 marks damages.

John Hoton and Joan his wife conveyed to Ralph Earl of Westmoreland, who enfeoffed Sir John Lumley. By the inquisition taken the 15th year of Bishop Langley, after the death of Sir John, it appears that he held the fourth part of the manor by purchase from the Earl of Westmoreland, another fourth, which was the estate of his father, Sir Ralph Lumley (Isabel Porter's share), and a moiety of a third part held in dower by Isabel Umfreville; and that he had, besides, six messuages, four salt-pits (one of which was called *Make-Beggar*), seven oxgangs of land, and ten aeres of meadow, which he also purchased of the earl, rendering to him yearly £19 5s. 4d. It is supposed that parts of the estate were given as portions to the heiresses of Lumley; as, in 1562, John Trollop, of Thornley, maternally descended from the Lumleys, granted his manor of Seaton to Bertram Anderson, merchant, of Newcastle. In 1620, it belonged to Sir William Read, Knt., of Osterley, Middlesex; Sir Henry Anderson, Knt., of Elemore; and Robert Johnson, yeoman, of Greatham. The portion of the latter had been recently purchased from the lords of Wynyard, descendants of Avice, wife of Simon Langton. A cause, instituted by information against Johnson, was heard in the bishop's court in 1621, touching a royal fish cast ashore at Seaton; when a

decree was made, declaring that the fish belonged to the bishop in right of his prerogative.

In 1766, there were a number of claimants as tenants in common, having right to the manor, as appears by a suit instituted in the court of chancery at Durham, respecting a wreck within the manor, the merits of which were never discussed. In 1792, a portion of the manor and a considerable estate in Seaton were purchased from the assignees of Robert Preston, of Stockton, by George Pearson, Esq., of Durham, whose daughter and heiress intermarried with George Wilkinson, Esq., of Harperley, who sold the property to the first Earl of Eldon.

Considerable property in Seaton-Carew was held by Robert Henry MacDonald, Esq., M.D., of Durham, and a freeman and burgher of Renfrew. He was the last male heir of this family, and dying without issue, July 31, 1838, his estates passed by devise to his kinsmen, James Henry Dixon, and his brother, Robert William, of Seaton-Carew.* The latter is in the commission of the peace for the county of Durham; and the former married Margaret, daughter of Anthony Taylor, Esq., of Airton, Yorkshire, and has surviving issue Samuel Taylor and Ianthe.

OWTON.

THIS ancient manor is situated to the south-west of Seaton. It was forfeited by Robert Lambert in 1569, and granted in 1574 by Queen Elizabeth to Edmund Gresham and Percival Gunston. Richard Brookman, the next possessor, granted it in fee to Richard Belassis, Esq., whose successors, Sir William and Sir Richard Belassis, of Ludworth and Owton, were successively high sheriffs of the county. Richard Belassis, Esq., of Gray's Inn, in 1693 released all right in Owton to the trustees of Gerard Salvin, Esq., of Croxdale, by whose descendant this estate was alienated, some years ago, to Mr. George Fletcher. It is now in the possession of Ralph Watson, Esq., of Middleton House, West Hartlepool.

* The family of Dixon, large landed proprietors, were located at Beeston, Yorkshire, and are descended in the female line from the ancient family of De Beiston of Beeston, where it appears they resided in 1207, in which year Adam de Beeston was witness to a charter granted to the town of Leeds by King John.

Sea. Ward Jackson

PARISH OF GREATHAM.

THE parish of Greatham is bounded on the north-east and north by the chapelry of Seaton-Carew and the parish Stranton, on the west and south-west by the parish of Elwick Hall and the chapelry of Wolviston, on the south by Billingham, and on the east by the sea-marsh in the estuary of the Tees. It includes the constabularies or townships of Greatham and Claxton.

GREATHAM.

THE township of Greatham, with its water liberties, contains 3,310 acres. Its population, at the six decennial periods of return, was 442, 407, 446, 519, 635, and 651; 311 of the latter number being males and 340 females. There were, at the same time, 142 inhabited houses, 6 uninhabited, and 2 building. The property was assessed to the county-rate, in 1853, at £3,623 5s.

The account of Greatham parish with Stockton Union, for the year ended Lady-day, 1854, was as follows:—

Receipts from poor-rates:—Greatham, £73 8s.; Claxton, £10 11s.	£83 19
In aid of rates:—Greatham, £21 14s.; Claxton, 2s.	21 16
Total receipts	£105 15
Expenditure for in-maintenance:—Greatham, £1 9s.; Claxton, 5s.	1 14
Out-relief:—Greatham, £56 13s.; Claxton, £1 12s.	58 5
Work-house loans repaid:—Greatham, £4 10s.; Claxton, 12s.	5 2
Salaries and rations of officers:—Greatham, £3 3s.; Claxton, 10s.	3 13
Other expenses:—Greatham, £1 6s.; Claxton, 4s.	1 10
Total connected with relief	70 4
Constables' expenses before justices:—Greatham, £1 11s.; Claxton, 12s.	2 3
Vaccination:—Greatham	1 11
Registration fees to clergymen:—Greatham, £1 16s.; Claxton, 1s.	1 17
County-rates, &c.:—Greatham, £60 8s.; Claxton, £14 1s.	74 9
Parliamentary registration, &c.:—Greatham, 10s.; Claxton, 10s.	1 0
Other purposes:—Greatham, £11 13s.; Claxton, £2 1s.	13 14
	£164 18

The Stockton and Hartlepool branch of the North-eastern railway extends 1 M. 7 F. 267 y., and covers

* RALPH WARD JACKSON, ESQ.—It is to the enterprising spirit of Ralph Ward Jackson, Esq., of Greatham Hall, that the port and town of West Hartlepool owe their origin; and the second dock was consequently designated by his name. When he originally projected a harbour at that place, the magnitude of the undertaking induced several persons to doubt its ultimate success; but the talent, energy, and perseverance of Mr. Jackson surmounted all difficulties, and excited the emulation of many who eventually became coadjutors in his

18 A. 1 R. 30 P. in this township. In 1851 and 1852, when the amounts collected for the local rates were respectively £142 2s. and £143 18s. 10½d., the railway contributed £5 in each year.

The village of Greatham, about half a mile from the railway station, 6¼ miles north-east-by-north from Stockton, and 2½ north-west from the estuary of the Tees, occupies the ridge of a hill on the north side of the Greatham Beck. It contains a corn-mill, seven public houses, and several shops. In 1831, Bishop Barrington erected a school-house in the centre of the village, a neat stone building, with the usual inscription in front; the intelligent master, Mr. Elliott, an able contributor to the mathematical periodicals of the day, has about 50 children under his charge. There are also two day-schools. *Grove House*, the handsome residence of James Langley, Esq., stands a little to the east; and *Greatham Hall* is the residence of Ralph Ward Jackson, Esq.* Several of the inhabitants find employment on the cockle-beds and in shrimping at the mouth of the Tees. Though the ancient salt-works in this vicinity have long been ruined, some of the farms still pay a *salt-rent* to Greatham Hospital. "*Greatham Midsummer*" is an annual feast, at which races and other rural sports are continued on for two days.

This manor belonged to the celebrated Simon de Montfort, Earl of Leicester, who was slain at the battle of Evesham, August 5, 1264, when his son, Peter de Montfort, was taken prisoner. The estate being consequently forfeited, it was granted by the king to Thomas de Clare; but the gift was revoked, in consequence of the claim urged by Bishop Stichill, who founded upon it the Hospital of Greatham. One person was executed

gigantic project. On every subject connected with the docks or the rising town around them, Mr. Jackson's zeal has been conspicuous; and his efforts have been directed with equal ability and success to the extension of the trade of the port, and the comfort and welfare of the inhabitants of the town. In token of their respect and gratitude, the merchants, ship-owners, tradesmen, and others residing in West Hartlepool presented Mr. Jackson, in February, 1851, with a splendid testimonial, the work of Messrs. Hunt and Roskell, jewellers, gold-

at Greatham for joining the Rising of the North. In 1650, the common fields of the township were divided. The present freeholders are the Langley family.

THE CHURCH.

THE ancient church of Greatham was taken down in 1792, and the present edifice erected, principally with the old materials, and the proceeds of the lead from the roof, &c., which realized £315 15s. 6d. It consists of nave, chancel, side aisles, and western tower. The only portions of the original building remaining are the pillars of the aisles, of which there are three on each side, supporting pointed arches. An elliptic arch separates the nave and chancel. There are three windows in each of the aisles, one on each side of the chancel, and a large east

smiths, and silversmiths to the queen, and designed by Mr. Alfred Brown.

This elaborate work of art, which was exhibited at the great national display in Hyde Park, has been thus described:—Elevated on a column decorated with bullrush and lotus leaves, is the bust of Mr. Jackson, around which are the figures of Commerce, Science, and Industry. Industry, with the distaff in her hand, and the bee-hive by her side, supports it on the right; while Science, her foot resting on the globe, is decorating the bust with a wreath of laurel, and Commerce, the cornucopia by her side, and the caduceus in her hand, is pointing to a view taken from the sea of Hartlepool West Harbour and Docks. Reclining on the base are the figures of Neptune and Æolus, the representatives of the elements, wind and water. Between are groups of shipping implements; and on the pedestal below are panels containing the inscriptions, arms, cypher, and crest of Mr. Jackson, and the various mouldings are formed of cables and oak leaves. The whole is placed beneath a revolving glass shade, upon a stand, richly carved with dolphins on the feet, and emblematical devices on the sides. This testimonial cost between 400 and 500 guineas; but, as a work of art, is considered of greater value.

A full-length portrait of Mr. Jackson, painted by Frederick Grant, Esq., R.A., is about being presented to the town of West Hartlepool by his friends and admirers. This work of art has cost upwards of three hundred guineas, and will be placed in the Athenæum, bearing the following complimentary inscription:—"Ralph Ward Jackson, Esq., founder of West Hartlepool."

In honour of Mr. Jackson, the last ship launched by Mr. John Pile at Sunderland, previous to his removal to Hartlepool, was christened the "Port Jackson." It may be here stated that Captain Cook, the great circumnavigator, in order to perpetuate his gratitude and friendship for Sir George Jackson, Bart., one of his earliest benefactors, gave the name of "Port Jackson" to the noble harbour he discovered near Botany Bay, in New South Wales, on the 6th May, 1770.

Mr. Ralph Ward Jackson is connected with the ancient and important family of the Ducketts. In the reign of Henry III., we find Richard Duckett, archdeacon of Bedford, a learned and distinguished judge. Andrew, son of Sir Richard Duckett, was the first president of Queen's College, Cambridge; and to his influence this college principally owes its origin. Sir Lionel Duckett, Lord Mayor of London in 1573, was partner with Sir Thomas Gresham, who built the Royal Exchange, and was the founder of Gresham Hospital. John Duckett, a colonel on the royalist side, had many adventures, and, on one occasion, escaped the fury of the Roundheads by being conveyed through the parliamentary army in a hearse. Thomas Duckett was

window, all modern. The seats in the chancel are appropriated to the Master and Brethren of Greatham Hospital; and at the west end of the church are places for the inmates of Parkhurst's Hospital. Above these is a handsome gallery, supported by cast metal pillars. The church contains accommodation for 250 persons. It is now undergoing repairs and additions, by which about 60 more sittings will be obtained. Handsome windows, harmonizing with the building, will be inserted in the east and other parts of the church. The contract has been taken for the sum of £500, which will be raised by subscription, aided by grants from the Church Building and other societies.

The church contains several memorials of the Bradley family,† and of those of the Rev. J. Horseman and

the parliamentary representative of Calne from 1754 to 1765, for which borough the family sat for upwards of a century. Grace, grand-daughter of George Duckett, married, first, Robert Neale, Esq.; and, secondly, Sir George Jackson.

Sir John Jackson, of Hickleton, received the honour of knighthood in 1619; he left two sons, Bradwardine and George. Bradwardine died without issue; and the grandson of George married Hannah, daughter of William Ward, Esq., of Guisborough, by whom he had issue—1, William, who died unmarried; 2, Edward, drowned at sea; 3, George (the friend of Captain Cook), who was created a baronet in 1791, and assumed, by sign manual, under the will of Thomas Duckett, the name and arms of Duckett: he was secretary to the Admiralty and judge-advocate to the fleet; 4, Ralph, of Normanby Hall, Cleveland, Yorkshire. Ralph married Mary, daughter of Richard Lewin, Esq., of Eltham, Kent, and died in 1789. His son, William Ward Jackson, died February 2, 1842, leaving George Edwin Ward (who died in February, 1854), the Rev. William Ward (the present possessor of the family seat and estate), Ralph Ward (now of Greatham Hall), and other sons and daughters. Ralph Ward Jackson married, in 1829, Susanna, second daughter of Charles Swainson, Esq., of Cooper Hill, Lancashire, and has issue one son, William Charles Ward.

† RALPH BRADLEY, Esq., was born at Greatham, September 2, 1717. He was called to the bar by the society of Gray's Inn, but soon after settled at Stockton, and confined himself almost exclusively to the practice of conveyancing; from his reputation in which, and his retired habits, he increased his small paternal estate to £40,000. After deducting certain legacies, he devised the bulk of this property to George Brown and Rowland Webster, Esqrs., and the Rev. John Brewster, all of Stockton, in trust, to apply the yearly sum of £500 for twenty years, commencing three years after his decease: and after the said twenty years, the yearly sum of £1,000 until January 6, 1860; which, together with such sums as he might have in the funds at the time of his death, was to be applied to the purchase of such books as "promote the interests of virtue and religion, and the happiness of mankind." Mr. Bradley died December 28, 1788, when, according to the directions in his will, an amicable suit in Chancery was instituted; and, by a decree of Lord Chancellor Thurlow, the charitable intention was set aside in favour of the next of kin, by which the fortune devolved on Joseph Yeal, of Greatham; his two sisters, viz., Margaret Parkins, of the same place, widow, and Sarah Yeal, of London; and Mary, wife of John Sutton, Esq., of Stockton, and daughter of Edmond Bunting, Esq., of the same place, his first cousin.

the Rev. J. Brewster, vicars of Greatham. The Langleys have a burial-place in the church-yard.

REGISTERS.—The general registers contain entries from 1566 to 1812, imperfect from 1717 to 1721.*

Greatham vicarage is a discharged living, in the deanery of Stockton; the Master of Greatham Hospital, patron. Episc. proc., 4s.; Syn., 11s.; Archid., 2s. Dedication to St. John the Baptist.

VICARS.—Maurice occurs 1278; R. de Toppeelyve, 1308; A. de Bedale, 1312; T. Bolton, 1424; J. Lanyers, 1430; W. Spencer, 1432; W. Watson, 1501; R. Ratcliffe, cap.; J. Mutho, 1533; J. Emson, February 30, 1535; G. Wynter, 1558; R. Sparke, 1580; W. Wodd, 1581; J. Wood, A.B., 1627; E. Smathwaite, 1649; J. Muke, 1653; P. Drummond, A.M., 1662; J. Kearsley, 1678; R. Redhead, 1722; J. Horseman, 1739, p.m. Redhead; J. Brewster, A.M., 1790, p.m. Horseman; John Brewster, A.M. (vicar of Langhton, Lincolnshire), 1818, p. res. Brewster.

The vicarage is a neat building, to the south-east of the church, with a garden and orchard of half an acre. The glebe consists of 19 acres in Greatham township, which have a right of four *gates* on the marsh. The vicar has also the undivided moiety of 50 acres (of which the vicar of Dalton-le-Dale has the other moiety) in the township of Seaton-Carew, and the moiety of a farm-house and stables in the village of Seaton, and of ten *stints* on Seaton Marsh. The Master of the Hospital holds the whole of the great tithes of Greatham; but the vicar has tithe of hay and all small tithes in the township of Claxton, and all small tithes, but not hay tithe, in the township of Greatham, except from the Hospital lands, which are totally exempt. The gross income of the living was stated, in 1835, at £186 per annum, subject to permanent payments amounting to £7, leaving £179 clear.

GREATHAM HOSPITAL.

GREATHAM HOSPITAL is situated on the west side of the village. The old buildings had, in the course of time, become very ruinous; but, during the mastership of John-William Egerton, Earl of Bridgewater, the Hospital and chapel were entirely rebuilt, and the farm

* "1661. Collected upon a breefe for y^e releefe of Protestants of y^e dukdom of Luthmania, obtained by John de Kransby, deputy of the Protestant churches in these places, one shilling threepence. Collected on y^e fast days, for y^e plague, Sept. and Oct. 1665, 1s. 8d. Collected in y^e church of Greatham for y^e use of those that suffered by y^e dreadful fire of London, the sume of five shillings four pence, on the fast day, being Wednesday y^e 10th of October, 1666. For John Osborne, Russia merchant, for his insupportable losses at sea, 3s. 2d., Sept. 30, 1666. For y^e use of Moorish Long and his sister,

buildings, &c., repaired and improved, at the cost of several thousand pounds. The foundation stone of the Hospital was laid September 15, 1803; and it was finished in the following year. It is a square stone building: in the south front is a porch beneath three pointed arches, which are surmounted by a tower and cupola, with a clock, and a commemorative inscription. A large hall occupies the centre of the building; and the rooms of the thirteen brethren are arranged around three of its sides. The windows are square, divided by stone mullions, under labels. A grass plot, surrounded by a plantation, is laid out before the Hospital; and the whole is neatly arranged, and kept in excellent order. The master's house is a handsome building, with a pleasant garden, and commands a fine view of the richly inclosed country to the south, and of the Cleveland hills.

The chapel of the Hospital is situated in the master's garden, and was erected in the place of a previous building in 1788.†

A slab in the floor is bordered by a brass, bearing an inscription, partly in the Saxon character, denoting the burial-place of William de Middleton, master in 1312; and a brass fixed in the wall, near the altar, contains an inscription in Old English, requesting the prayers of the faithful for Nicholas Hulme, John Kelynge, and William Estfeld, masters of the Hospital.

Greatham Hospital was founded by Bishop Stichell, on his acquiring the forfeited manor of Peter de Montfort. The charter bears date on the Morrow of the Epiphany, 1272; and the foundation is dedicated to God, St. Mary, and St. Cuthbert, for the health of the soul of the founder, of the souls of all kings of England, of the prelates of York and Durham, the monks of Durham, the parishioners of St. Cuthbert, and the souls of all the faithful departed. The manor and advowson of Greatham were granted to the masters and brethren serving God there, for the support of the same poor men, and the needy who should resort thither, in free and perpetual alms; and the said master and brethren were exempted from all toll, custom, geld, or stallage, fair or market, bridge-toll, castle-ward, sheriff or coroner's rents, suits of court, bailiwick, or wapentake, who suffered in Ireland by pyrats, 1s. 4d., Mar. 10, 1667. 1663, Oct. 25, for William Sandwell, who suffered shipwreck, 1s. 10d.

† In taking down the wall of the old transept, a stone coffin was discovered beneath the wooden effigy of an ecclesiastic. It contained a skeleton, with a chalice lying on the left side, as though it had fallen from the hands, which had been clasped upon the breast. The only other remaining substance within the coffin was a portion of the shoes or sandals.

&c., within the county; with exemption from processes, except before the bishop, or the justices itinerant.

By the ordinances made by the bishop, January 23, 1272, it was provided—

That there should be one master and priest, and five other priests, and two clerks of honest conversation and competent learning, ministering at all times, and 40 poor persons, the more needy of the manors of the Bishop of Durham, to be maintained of the goods of the said Hospital.

That the said masters, priests, and clerks, should perform such religious exercises as therein mentioned.

That they should eat at one table,* and be in one house, should be obedient to the master, and should receive from him a certain quantity of money *una cum mensa honorabili*.

That the master should provide the clerks according to the expenses of their station.

That, when the master should die, or be removed for misconduct by the bishop or his successors, the said bishop or his successors, or, if the see should be vacant, the prior of Durham, should appoint another fit person.

That the other priests and clerks should be appointed and removable for cause by the master.

That no person should be appointed master, but a priest of knowledge and prudence, who should personally attend to the affairs of the place, unless it should behove him to be absent on the business of the house.

That the poor, to the number above mentioned, should have competent lodging, and should be provided by the master according to the ability of the place, and should be appointed and removable for cause by the master.

That if the goods of the house should be of further sufficiency, the number of the poor should be increased accordingly; but, if they should decrease, the number should be diminished, as it should appear fit to the master.

That the Bishop of Durham, or his deputy, should visit the hospital twice a year, or oftener, and audit the master's accounts.

A power was reserved to the bishop and his successors to correct and modify these statutes, and to order what should seem useful. The first master, appointed January 23, 1272, was Andrew de Stanley, who was followed by—

T. de Levesham, occurring November 22, 1301; W. de Middleton, 1312; W. de Westle occurs July 17, 1351; T. de Bridekirk occurs November 18, 1358; W. de Westle, pbr., August 17, 1361; H. de Snayth, November 10, 1361; J. de Sleaford, 1363, p. res. Snayth; H. de Snayth occurs again 1363, p. res. Sleaford; W. de Denby, 1366, p. res. Snayth; J. de Henle, August 28, 1372, p. res. Denby; T. de Weston, June 17, 1396 (archdeacon of Durham, and prebendary of York and Howden); J. de Tibbay, 1508, p. m. Weston; R. Steel, 1414; J. Huntman, S.T.B., 1415, p. res. Steel; N. Hulme, 1427, p. m. Huntman; J. Soulby, 1433, p. res. Hulme; R. Tatman, S.T.P., March 22, 1439, p. m. Soulby; J. Lathom, cl., April 20, 1441; W. le Scroop, 1450; J. Kellynge, cl., 1463, p. m.

* The sort of substance provided for the poor brethren may be gathered from two grants of *corrodies* which occur in Hatfield's Rolls. In 1352, William Douant releases his corrody, viz., every day a loaf of second bread, half a pitcher of second ale, a rackful of hay, a peck of oats, a candle, and a peck of coals in winter, and litter for one horse, and a chamber, and a gown of the suit of the serving men of the hos-

scroop; W. de Estfield; E. Strangwish, August 26, 1500, p. m. Estfield; H. Gascoine occurs 1532; T. Sparke (suffragan bishop of Berwick, and prebendary in the 3rd stall of Durham cathedral), September 6, 1541, p. m. Gascoine; J. Kingesmeyll, A.M., March 1, 1571, p. m. Sparke; J. Barnes, pres. by Queen Eliz. November 6, 1585.

Bishop Beck confirmed the endowment, and gave the church at Greatham to the master and brethren, adding one chaplain and one clerk to the establishment. Edward III. and Edward IV. also confirmed the charter; and the latter granted to the master and brethren a weekly market and a fair twice a year. Bishop Tunstall issued letters of citation to visit in 1532; but no proceedings occur. This, being a lay foundation (valued at £97 6s. 3½d. annually), did not come within the statutes of 27 and 31 Henry VIII.; though it appears that the king's visitors at the Dissolution carried off some "superstitious ornaments" of the chapel. Bishop Hutton visited in 1590.

By letters patent, dated July 20, 1610, King James I. refounded the hospital, which was thenceforth to consist of a master and thirteen poor unmarried men of advanced age, and to be called "*The Hospital of God in Greatham, in the County Palatine of Durham.*" Under this charter, the master must either be a Master of Arts or Bachelor of Laws; and he and the brethren are constituted a body corporate and politic, with common seal, and power to receive or purchase lands. The Bishop of Durham is the patron, and has the appointment of the master: but the brethren are nominated by the master. The bishop is also empowered to repeal ancient statutes and make new ones. The manor and advowson of the church, with their rights and privileges, are secured; with power for the master and brethren to grant leases for 21 years, or three lives, at the best rents reasonably to be had.

During the civil wars, the hospital suffered severely. Dr. Clarke, a steady loyalist, was, in 1644, ejected from the mastership by the House of Commons; and the place was bestowed upon Dr. Rand, "a constant friend to the cause," but who was in his turn displaced, to make room for Dr. Simon Askew. The following masters occur under King James's charter:—

H. Dethicke, appointed Master by the charter; F. Moorcroft, A.M.; W. Neile, cl., November 13, 1619, p. res. Moorcroft; J. Cousin, S.T.B., June 22, 1624, p. m. Neile; G. Clarke, A.M., July 24, 1624, p. res. Cosin; S. Rand, M.D., an intruder, occurs, 1644; S. Askew,

pital. In 1353, William de Wastle, master, and the brethren of Greatham, grant to Robert Mengot a corrody for life, of seven white loaves and seven pitchers of the best ale weekly, and every day such a commons as is served to one chaplain in hall, and 10s. for his gown; and if the same pensioner abide in the hospital, three quarters of sea coal and three pounds of candles, and a decent chamber.

PARISH OF GREATHAM.

303

an intruder, 1653; T. Potter, S.T.P., May 19, 1662; Sir G. Gerard, Bart., A.M., May 27, 1663, p. res. Potter; J. Parkhurst, LL.B., October 30, 1676; D. Parkhurst, LL.B., June 2, 1711, p. res. Parkhurst; N. Halhead, Gent., August 14, 1764, p. m. Parkhurst; J. W. Egerton, Esq., (afterwards Earl of Bridgewater, see vol. i., p. 255, and vol. ii., p. 122) 1785, p. m. Halhead; Hon. Augustus Barrington, D.C.L., 1823, p. m. Egerton.

Every brother receives from the master, on his appointment, a deed, granting him an annuity of 28s., with daily meat, drink, and fire, during his life, sickness or infirmities notwithstanding, so that the grantee performs and maintains all the statutes and ordinances ordained or to be ordained according to the foundation of the hospital; and there are certain rules to which the brethren, on their appointment to the hospital, subscribe, thereby engaging to attend the service of the church and chapel when not prevented by illness, and to conduct themselves with decency and propriety.

Previous to 1819, there were only dwellings for six in-brethren, the remaining seven being out-brethren; but in that year, the Earl of Bridgewater, master, at his own expense, added apartments for the latter. The emoluments of the brethren consist of a yearly pension of £8, a cloak every alternate year, their diet according to a table settled in 1819, and a sufficient quantity of coal for consumption in their own rooms. The diet is provided by the tenant of the hospital farm: the meat is dressed in the farm-house adjoining to the hospital, brought up into the common hall, and there divided by one of the brothers, each taking this duty in rotation, into thirteen portions; and the brethren take their respective portions to their own apartments. On certain saints' days and holidays there are additional allowances. The chaplain or his deputy is always ready to attend to any complaints that may be made as to the quantity or quality of the provisions, and frequently examines them himself without being so called upon. In the accounts, the diet of the brethren is charged as amounting to £286 a year; and credit is given to the tenant of the Hospital farm to that amount. The same tenant also provides the stipulated quantity of coal, viz., 20 two-horse loads annually, delivered at the hospital, at the fixed price of £7.

The Rev. John Brewster, vicar of Greatham, is the present chaplain of the hospital, whose duty is to read prayers every morning in the chapel of the hospital. His salary, which, up to 1851, was £42 per annum, is now £60; and £40 a year is paid to the steward who collects the rents, makes the disbursements, and keeps the accounts. The residue of the proceeds of the hospital estates, after deducting the above payments, and

the charges of repairs, insurance, and other incidental expenses, is paid to the account of the master. The general rule adopted with regard to the renewal of leases is to take from a year and a half to a year and three quarters net annual value for 21 years, on the expiration of seven; and two years net rent, a little more or less, for putting in a new life. The following summary was given by the commissioners for inquiring concerning charities:—

REVENUE.	£.	s.	d.
Demesne lands:—Hospital and West Field farms, 352 A. 1 R. 9 P., £540 per annum; East Field farm, 227 A. 0 R. 1 P., £150; North Closes farm, 75 A. 3 R. 13 P., £72.	762	0	0
Annual rents and payments in lieu of duties and services reserved on leases of lands and tenements, for three lives and 21 years.	84	2	8¼
Corn-tithes, and payments for tithe of grass land, in Greatham, on an average of three years, ending Michaelmas, 1835.	131	3	9
Fines on renewal of leases, on an average of 12 years, ending Lady-day, 1836.	508	18	10
	<u>£1,486</u>	<u>5</u>	<u>3¾</u>

EXPENDITURE.	£.	s.	d.
Diet for the brethren, per annum.	286	0	0
Wine for the sacrament administered in the chapel.	0	15	0
Coals.	7	0	0
Payments in money of £8 per annum to each of the 13 brothers.	104	0	0
Clothing, each a cloak once in two years (average).	8	15	0
Chaplain's salary.	42	0	0
Bailiff's salary.	1	6	8
Annual salaries for winding up clock and attending to the ventilation of the hospital.	2	6	0
Nurse's salary.	4	7	0
Incidental expenses in the hospital, brushes, &c. . .	3	0	0
Annual repairs at the hospital, chapel, master's house, and farm buildings; average in six years.	70	10	0
Insurance.	4	7	0
Land-tax.	16	13	4
Steward's salary, £40, and incidental expenses relating to the demesne, £10.	50	0	0
	<u>£601</u>	<u>0</u>	<u>0</u>
Leaving a net revenue to the master of.	£885	5	3¾

This sum, however, is understood to be somewhat above the general average revenue, the renewals having been more frequent than usual during the twelve years included in the above table.

In 1851, a bill was filed in Chancery for the better management of this hospital; and a scheme for that purpose, consisting of 44 clauses, has recently been proposed by the Attorney-general. By it, the charity is to be under the management of twelve trustees, whose qualifications, meetings, and order of business

are specified. A clerk is to be appointed, at a stipend of £25 per annum; and a receiver, who is to have any sum not exceeding £5 per cent. on the amount of rents collected; but should the offices be combined, the total amount received by him shall not exceed £5 per cent per annum. The trustees shall let or demise the charity property, except the hospital buildings, at the best annual rent that can be obtained, either from year to year, or for 21 years, without fine or premium. From and after the time when the Hon. Augustus Barrington shall cease to be master of the hospital, the master shall be a clergyman of the Church of England in priest's orders, who shall be called "The Chaplain Warden of the Hospital," and be appointed by the Bishop of Durham for the time being. His annual stipend is to be £300, which sum is also to be paid to the Hon. Augustus Barrington during the time he continues master. If the present chaplain should die before the master, the trustees may appoint a chaplain, with a salary of £100 until the death of the said master; but if the present chaplain survive the master, he is to be the first chaplain warden. The duties of this office are to read prayers daily in the chapel, and perform two full services on every Sunday, with one on Christmas-day, Good Friday, and every day of public fast and thanksgiving. The trustees are to have the patronage of the vicarage of Greatham, to which they are to be at liberty to appoint the chaplain warden; in which case, the stipend as chaplain warden is to be only £200 a year. As vacancies occur in the number of inmates of the hospital, the trustees may appoint poor women to be sisters, as part of that number. The parties elected are to be poor and needy persons, of the age of 50 years at least, and who have not been in receipt of parochial relief within twelve months next preceding the time of election; a preference to be given to those who have resided three years and upwards on any of the manors belonging to the sec. The money stipend of the inmates is to be continued as at present, as well as the method of supplying them with food; but the trustees are to have power to make a different arrangement with respect to the latter. A porter and matron are to be appointed, at salaries not exceeding £50 a year each; and a sum not exceeding £20 a year may be expended for medical attendance. Out of the surplus income, a sum not exceeding £50 a year may be applied for the benefit of the schools for children of the poor in the parish of Greatham. For making such additions or improvements as may be thought necessary in the hospital buildings, the trustees are empowered to borrow not exceeding

£1,000; after the repayment of which, the surplus is to be invested in the purchase of bank 3 per cent. consolidated annuities. When, by the falling in of the existing leases of the charity property or otherwise, the income shall be increased to a sum which, in the opinion of the Attorney-general, shall make it desirable that a further scheme should be settled for the administration of the charity, application shall be made by him to the Court of Chancery for that purpose. The above scheme is undergoing some modifications, the particulars of which will be given in a future page.

The seal now used by the master and brethren of Greatham Hospital represents an ecclesiastic under a canopy, supporting with both hands the keel of a ship (which crosses and covers his breast) like that in the old nobles: at the stem and stern of the vessel are two shields of arms, a plain cross on the right, and on the left France and England quarterly; above, in the canopy, are the arms of Edward the Confessor. Underneath the figure is inscribed, "STEPH'S PAYN." The legend of the seal is, "SIGILLUM OFFICII ELEMOSINARII REGIS HENRICI ANGLIE." As Stephen Payn, dean of Exeter, was almoner to King Henry V., it is supposed that Greatham had been resigned, with other similar foundations, into the hands of that monarch, to deprecate his intention of seizing the revenues of the church.

PARKHURST'S ALMSHOUSE.

DORMER PARKHURST, L.L.B., master of Greatham Hospital, in 1761, began to erect alms-houses for six poor widows or spinsters, a little to the north of Greatham Hospital. They were completed in the following year, and are neat separate apartments, with a small garden-plot to each. By indenture, dated October 12, 1762, and enrolled in the Court of Chancery on the 23rd November following, he conveyed to Ralph Bradley, John Swainston, William Moor, James Hett, Joseph Dunn, Ralph Atkinson, and John Jordison, in trust, eight closes, known by the names of Brown's-brig-hill, Bridge-acre, Elizabeth Calvert's Bigger-haugh, and Elizabeth Calvert's Lesser-haugh, containing together by estimation 27 acres, situate in the township of Stockton, out of the rents of which £4 16s. a year was to be paid to each of the inmates of the said alms-houses, by equal payments on the first day of every month; also to each of them the further yearly sums of 4s. at Christmas, 2s. at Easter, and 2s. at Whitsuntide; on the 1st of October yearly, a gown ready made, to be all of the

same colour and decent; and a sufficient quantity of coals and fuel. In case of sickness, a proper nurse was to be provided and paid for her trouble. After the decease of the founder, the master of Greatham Hospital is to appoint the poor women, who are to be widows or unmarried, of the age of 50 years or upwards, legally settled in the township of Greatham, or failing such, in the places nearest to it. They are to keep their persons and houses clean, be peaceable in their conduct, and attend divine service in the parish church on Sundays, and the chapel of the hospital on other days. In case of misbehaviour or their marrying, they may be deprived of their apartments and income by the master. Should there be a surplus income, £6 is directed to be applied in binding apprentices, and the remainder equally divided amongst the six alms-people. By the indenture, directions are given for supplying the places of defunct trustees. Mr. Parkhurst covenanted to pay off a mortgage on the premises for 1,000 years, which had been given as a security for £1,300.

At the date of the foundation, the property was let for £30 a year. It is at present let to three tenants, at rents amounting to £97. Out of this sum, each of the six sisters receives £1 every month, 4s. at Christmas, 2s. at Easter, and 2s. at Whitsuntide, amounting in the year to £74 8s. They also receive £1 5s. each in lieu of coals and a stuff gown, every Christmas. If any of them are ill, or unable to take care of themselves, one or more nurses are engaged to attend them, with an allowance of about 2s. a week each. Besides the cost of repairs, 11s. 6d. is paid annually for insurance, and 3s. 7d. for a quit rent. In 1828, there was a balance in hand of £119; and it was then notified by the trustees that there were funds in hand for putting out apprentices; but as Rand's charity was thought to be sufficient for that purpose, the allowance to the alms-people for coals was increased from £7 10s. to £12. In 1834, however, it was found necessary to reduce it again to £7 10s., in consequence of the ruinous condition of the farm-buildings and alms-houses, the necessary repairs of which have cost great sums for several years; but the charity property is now in good repair, and there is a fair balance in the hands of the treasurer to meet any emergency as to future repairs, or for providing nurses in case of sickness.

The following gentlemen are at present the trustees:—James Langley, Esq., Grove House, Greatham (who also kindly acts as treasurer to the charity); Rev. J. Brewster, vicar; Rev. R. Webster, vicar of Kelloe; Mr. Henry Lamb; and Mr. R. Atkinson, Greatham.

OTHER CHARITIES.

Rand's Charity.—Samuel Rand, M.D. (Master of Greatham Hospital during the Commonwealth), by indenture, October 12, 1669, gave £100 to Thomas Peers, to be disposed of to the poor of Greatham according to the discretion of the minister and churchwardens for the time being. In respect of this sum, £6 per annum is received from the tenant of Sir William Pennyman, owner of lands in Thornton, Yorkshire, and has been disposed of, time out of mind, for the benefit of children placed out apprentices or going into service. The premium paid with each apprentice is £3. In June, 1828, there was a balance in hand of £23 9s. 6d., which in 1854 was diminished to a mere trifle.

Barker's Charity.—Francis Barker, June 24, 1754, paid £10 to Ralph Bradley for the use of the poor of Greatham. In 1800, this money was laid out in repairing two houses belonging to the parish; and 10s. is distributed yearly at Candlemas, by the overseers, equally amongst all the poor widows of the parish.

"Poor's Cottage."—A piece of land, containing about 4 acres, is supposed to have been left by Thomas Barker, uncle of the above Francis Barker, and is held by the parish officers under a lease of three lives, renewed occasionally, by the Master and Brethren of Greatham Hospital, at 7s. annual rent. It is let for £11 10s., of which 6s. is disposed of in bread, given to the poor of the parish at Candlemas; and the residue, after deducting the Hospital rent, is distributed at Whitsuntide and St. Thomas's day, in sums varying from 3s. to 6s.

Carr's Charity.—Matthew Carr, by will, January 28, 1818, bequeathed £100 to the minister and churchwardens, in trust, to be placed out on good securities, and the interest to be given to the poor at Christmas. In October, 1819, £90 (legacy duty having been deducted) was laid out in the purchase of £100 four per cents., which, in July, 1824, was sold out for £100 15s. 6d. This was placed in the savings bank at Stockton, and produces £3 per annum interest, which is divided equally amongst all the poor widows in the township at Christmas.

"Widow's Dolc."—There is a monthly distribution of 4 lb. of dough, ready for baking, given at Greatham Hospital to 26 poor persons or families. It commences every year in November, and continues to the commencement of the wheat harvest, when the distribution ceases.

CLAXTON.

THE township of Claxton is situated to the west of Greatham, and contains 866 acres, divided into six farms. At the periods of enumeration, the number of inhabitants was 42, 46, 38, 32, 52, and 49; 28 of the latter being males and 21 females. There were, at the same period, 8 inhabited houses, and 1 uninhabited. The property was assessed to the county-rate, in 1853, at £842.

The Claxton family, of Norman extraction, were originally named Heriz. Leo de Claxton had a grant from Thomas prior of Durham of a toft for the founda-

tion of a free chapel, with a quit-claim of two oxgangs of land which his grandfather had assigned for the same purpose. In 1484, on the death of Sir Robert Claxton without male issue, this manor fell to the share of his eldest daughter, Margaret, wife of Sir William Elmedon, whose grand-daughter married Sir William Bulmer, from whose descendants the estate passed, in 1632, to the Johnsons of Greatham and Seaton. It has since belonged to various proprietors, and the principal portion is now in the hands of the trustees of the late Thomas Jobson, Esq. Other portions are held by Messrs. Robert Chilton and William Robinson, both of Billingham.

PARISH OF BILLINGHAM.

THE parish of Billingham is bounded by Greatham on the north, by a portion of Elwick Hall and Grindon on the north-west and west, by Norton on the south-west, by the same parish and the river Tees on the south, and by the estuary of the Tees on the east. Besides the chapelry of Wolviston, it contains the townships or constaberies of Billingham (which includes Belassis), Newton Bewley, and Cowpen-Bewley.

BILLINGHAM.

THE township of Billingham, with its liberties in the Tees, includes an area of 3,139 acres. The population, in 1801, was 335; in 1811, 341; in 1821, 395; in 1831, 401; in 1841, 782; and in 1851, 723, of whom 348 were males and 375 females. There were, at the latter date, 150 inhabited houses and 38 uninhabited. The annual value of property assessed to the county-rate in 1853, was £4,284 5s.

During the year ended Lady-day, 1854, the account of Billingham parish with Stockton Union was as follows:

	£.	s.
Receipts from poor-rates:—Billingham, £237 13s.;		
Cowpen-Bewley, £56 4s.; Newton-Bewley, £51 9s.	345	6
In aid of poor-rates:—Billingham, £3 17s.; Cowpen-Bewley, £10 13s.; Newton-Bewley, £1 4s.	15	14
	£361	0
Expenditure for in-maintenance:—Billingham, £23 9s.;

For all other purposes:—Billingham, £27 3s.;				
Cowpen-Bewley, £3 11s.; Newton-Bewley, £5 6s.	-	-	36	0
			£412	19

The Clarence railway, which passes through this township, covers an area of 44 A. 0 R. 11 P. and an extent of 3 M. 5 P. 120 Y. It contributed £35 1s. 4d. to the local rates in each of the years 1851 and 1852; the gross amount collected in 1851 being £272 9s. 7½d., and in 1852, £272 19s. 4d. The Stockton and Hartlepool (now a branch of the North-eastern) railway covers 8 A. and extends 7 P. 59 Y.: it contributed £8 in each of the above years. Billingham railway station is about a quarter of a mile from the village, from which the railways' diverge towards Port Clarence and West Hartlepool.

The village of Billingham is situated about 2½ miles north-by-east from Stockton, on the turnpike road from

thence to Sunderland. The site is elevated, and commands an extensive view to the south, over the river Tees, which is distant about 2 miles. There are in the village a brewery, a malting, a large skinnery, five public houses, and a few tradesmen. A national school for boys and girls was erected in 1852; it was visited, July 21, 1853, by the Rev. D. J. Stewart, inspector, whose general observations are—

“Buildings, a fair-sized room; one class-room, two porches. Four groups of parallel desks. Furniture, clock, book-closets. Books, a fair supply. Playground, very small yards at each end of the school-buildings. Apparatus, one black-board, one easel. Organization, four classes under an untrained master.”

There are two dames' schools for children in the village. A Sunday school is connected with the church.

The inhabitants are supplied with water from a public well; and there are several private springs, the water of which varies in quality.*

Some early Saxon named *Billing*, who here took up his *ham*, or home, is supposed to have conferred the title on Billingham. In 795, a civil war broke out in the kingdom of Northumberland; and the insurgents assassinated Ethelred, the king, at Corbridge. Wada, their chief, was attacked near Billingham, about 800, by Arduf, successor of Ethelred, who, after a sanguinary contest, defeated the rebels. The battle is supposed to have been fought on the low grounds between Billingham and Norton, where a skull and several bones, and a plain silver ornament, were dug up in 1804.

Egfrid, Bishop of Lindisfarne, gave Billingham in Hartnesse to the church of Durham; and Eanred, son of King Arduf, and father of Ethelred II., built the town and founded the church, about the year 860. During the contests for the crown of Northumberland, King Ælla spoiled the churches of Cliff, Wicliffe,

* Brewster describes a “Teutonic well” at Billingham, as tending to prove the Saxon origin of the place:—“This simple well consists of a huge lever, from the upper end of which a common bucket is suspended by a chain, and which is supported on a prop, or *fulcrum*. The bucket is counterpoised by a large piece of sheet lead fastened on the lower end, and is *in equilibrio* when it is filled with water. The fulcrum is the rough and unformed trunk of an ash tree, and the lever is a long branch of the same wood. Its dimensions are as follows:—Height of the fulcrum from the ground, 8 feet 4 inches; length of the lower arm of the lever, 6 feet; of the upper, 9 feet; length of the chain, about 12 feet. The mouth of the well is circular, its diameter $2\frac{1}{2}$ feet, over which is erected a rectangular wooden frame, 2 feet 8 inches in height, and open at the top. The surface of the water below that of the earth is not more than two feet.” The writer compares this well with those of Denmark, Sweden, Lapland, &c., and with a drawing of a Teutonic well published in Clarke's Travels.

† The venerable historian does not mention the precise tract on

Billingham, and Craike. In the time of Bishop Cutheard, 900-915, Reingwald, a pagan king, landed a considerable force on the coast of Northumberland; and after having made a sudden attack upon Yorkshire, where several of the principal inhabitants were expelled or murdered, two of his generals, Scula and Onlafbal, took possession of the territories and towns of St. Cuthbert. Scula laid waste the whole country from Jodene (Castle-Eden) to Billingham, and inflicted the most grievous and intolerable tributes on the miserable inhabitants; “from whence to this day,” says Simeon, “the men of Yorkshire, whensoever they are enforced to pay a royal tribute, endeavour, in relief of their own taxation, to lay their burthen on that part of St. Cuthbert's patrimony which Scula possessed. But, blessed be holy St. Cuthbert! hitherto they have laboured in vain.”†

King William I. restored Billingham to the church of Durham; and Bishop Philip gave it, with all its rights, to the convent. In the records, there are several licenses and other documents connected with the letting of the lands. A freehold was acquired by a family who assumed the local name, and who were descended from “John de Cowhird,” husband of Bishop Kellaw's sister. This family afterwards settled at Crook Hall, and released to the convent in 1498.

The Catholic earls appear to have had many partizans in this parish in 1569. No fewer than 22 from Billingham, 10 from Cowpen, 10 from Newton and Bewley Grange, and 19 from Wolviston, joined in the insurrection; after the suppression of which, 5 of the Billingham men, 2 from Cowpen, 3 from Newton, and 4 from Wolviston, suffered death. Peter Finch, of the latter place, labourer, aged 40 years, swore, and affixed his mark to the deposition, “that he, this examinee, was not at burninge of any bookes, nor hard not masse.”

which Onlafbal, the coadjutor of Scula, exercised his rapacity; but he is represented as being much the most hardened of the two. So audacious did he become that he sacrilegiously seized the lands of the bishopric, and treated with contempt the warnings and exhortations of Bishop Cutheard, who is represented as having been more desirous to save a sinner than to recover his possessions. The hardy pagan had no faith in the miraculous powers of the patron saint of the district. “Why do you threaten me,” said he, “with your dead enemy? By all the power of my gods, I swear that I will be a fearful enemy both to this dead man and all of you.” Thus saying, he was about to enter the church to plunder the holy shrines; but the power of the outraged saint was now awfully exerted:—the feet of the blasphemers were suddenly transfixed to the threshold, where, after suffering extreme torture, he expired, acknowledging, with his last breath, the might and sanctity of St. Cuthbert. Scula and his host, terrified by this judgment, fled to their ships, and left the possessions of the church free for evermore.

Thomas Watson, of Billingham, yeoman, aged 50 years, deposed—

“That, being at Hartlepoill amongst other rebels in one William Tompson house, he sawe Hartborn articulate in his bedd, and his brother with hym, that helpt the said Hartborn to doo masse; but in any other place he never spacke to or with the said Hartborn but in the church ther, byddinge him good morrow afore a great multitude, saing that he never moved or required the said Hartborn to come to Billingham church, wher this examinate is clark, nor enformed Stafford’s men that the balyff of Billingham had ther bookes, nor required the baliffe to delyver the said bookes to be bornt; but he saith that the hyc alter stone ys buried in the quier ther, and one read cope is also remaining in the said church undefaced. Per me, THOMAS WATSON.”

Sir Henry Anderson, Knt., and a family named Chapman (one of whom issued a Billingham token in 1666), possessed freeholds in the parish in the 17th century. The Parliamentary Sequestrators, in 1644, dealt with no lenient hand towards the property of the church and its tenants. The tithes of Wolviston were let for £48 per annum; those of Cowpen for £28; and those of Billingham for £62. The estate of Capt. Gascoine Eden was sequestered; and portions of it, with those of others, were let to new tenants. Bewley Grange, previously let for £130, was now relet for £100; and the rent of Saltholme was fixed at £150. “Upon request of Miss Ann James, daughter of Mr. William James, one of the prebends of the church of Durham, allowed to her one 5th part of the rent of Bewley Grainge for present reliefe and maintenance of herself and sister.”

A division of common fields was made in 16—, by commissioners appointed by owners and occupiers in Billingham. Nearly the whole of the lands in the parish are held by leases for 21 years, under the dean and chapter of Durham.

THE CHURCH.

BILLINGHAM church probably occupies the site of that founded by Eanred. The tower, 48 yards high, and considerably broader from the base towards the centre, whence it begins to contract upwards, certainly belongs to the Anglo-Norman, if not to the Saxon period of architecture: it has all those features of towers which are usually ascribed to the latter period, very much resembling the tower of St. Benedict’s church, Lincoln. The top inclines considerably eastward. Several curiously carved stones, of great antiquity, appear in the exterior masonry. The tower undoubtedly belongs to a much anterior period of architecture to any portion of the present church, which is only *attached* to it.

In the interior of the church, the nave is separated from the south aisle by four cylindrical columns, supported and surmounted by square cushions, at each of the angles of which a light cylindrical pilaster is attached to the main pillar. The arches supported by those pillars are pointed, with zigzag mouldings. An equal number of pillars, rectangular in form (through the most easterly of which there is a perforation), form the north aisle, and support plain pointed arches. The south aisle, whose arches are moulded with the dog-tooth, is considered some 30 years later than the north aisle. At the east end of the north aisle is—

“ A little Gothic niche
Of ancient workmanship, that once had held
The sculptured image of some patron saint.”

A pointed arch separates the nave from the chancel, beneath which is a screen of trellis-work. The interior arches, with their supporting pillars, are early English, of about the year 1260. The chancel was of the same date; but, having shrunk, it was taken down and rebuilt in 1846. At the time of the restorations, the plastering of the roof of the nave, which had only been put up some few years previous, was removed, which brought out to view a fine antique oaken roofing. The arches and pillars were chiselled over, and now appear in all their original freshness. The chancel is of high pitch, covered with slate; the roof of the nave and aisles is of lead. When the alterations were effected, several additional sittings were obtained, and the edifice will accommodate about 500 worshippers. No portion of the expense of these alterations was paid by the parish, nor, indeed, are church-rates ever imposed; the church lands (noticed hereafter) producing a sufficient income for the purpose of maintaining the fabric, and defraying all other expenses connected with the church.

On the south side of the chancel are four plain windows, and three on the north, in the early English style. The east window is in three compartments, and is filled with rich stained glass of superior quality. In the south aisle are three plain square windows, with modern sashes. A new window has been placed in the north aisle; and it is intended that the others shall be made uniform with it.

The principal entrance to the church is from the south; that on the north, opposite to it, having been walled up when the chancel was built. The threshold is formed of an ancient tomb-stone, inscribed with Saxon characters, now nearly obliterated, and which is

supposed to be a fragment of the original church of Eanred. A new vestry was erected, at the time of the late restorations, on the north side of the chancel. The font is a good specimen of early English, and is surmounted by a beautiful Elizabethan spire of carved wood-work.

An organ, at the west end of the nave, was purchased by subscription, amounting to about £130; it was opened on the 9th March, 1854, in the presence of a crowded and respectable congregation, including several of the principals and students from the University of Durham, when full church service was performed by the members of the Durham University Choral Society, assisted by some of the cathedral choir of Durham.

The church-plate consists of a paten, given in 1712 by Mrs. Margery Davison (relict of John Eden, Gent., and wife of Thomas Davison), and two large silver flagons; one, "*Given to ye parish of Billingham A.D. 1758, by Tho. Chapman, D.D., prebendary of Durham;*" the other is inscribed, "*Donum Ricardi Dongworth, Vicarii de Billingham, 1761.*"

REGISTERS.—Books Nos. 1* and 2 contain registers from 1570 to 1781, interrupted by No. 3, which con-

* On the first page is the following:—"Books belonging to the church. Imprimus, a great Bible and Paraphrases. It. iij Communion Books. It. Jewell and hardinge. It. book of functions. It. a book of homilies. It. Nicholas Heminge book. It. a book of wilfull rebels.

"Clothes belonging to ye church.—Imp'ms, a surplice-cloth for the currat. It. j for ye clerk; a lininge tableclothe; a carpet-cloth for ye table; a part of a old vestment for ye pulpit; a old coverlitt for weddinges; a harden bagg for ye surplice clothe; a new pulpit cloth and quisson; a new booke of canons and constitutions; a book of articles, &c.; 2 painted trenchers, given by ye vicar for ye com'union bread; 3 peuter potts."

"1687. Spent when our vicar, and some with him, went the perambulation, 7s. 6d. For a quart of sacke to give Mr. Deane an accomodation, 2s."

"For ringing of a day of thanksgiving for the qucen being conceived with child, 2s. 6d."

"1688. To the ringers for powder and drinke when the worthy bishops were set at liberty, 5s. To the ringers upon K. James's birth-day." Immediately after: "To the ringers upon the day of thanksgiving for the Prince of Orange, 5s. Upon the coronation-day, 1s. 6d."

† George Cliff, prebendary, aged 57, in his deposition taken after the suppression of the Northern Rebellion, April 11, 1570, says, "that he was in the cathedral church in the morning, at such as was then done, on St. Andrew's day (30th Nov.); and he was there on the Saturday next after (3rd December), at the even song, in his habit, and also on Sunday after. On the 30th Nov., one Robert Pierson, priest, sung mass at the high altar, at which mass he was present, in the quire, and heard him; he did not sing at it, nor look at the elevation, and sat still in his stall; and bowed not, nor knocked, nor

tains entries of baptisms from 1759 to 1812, and burials from 1781 to 1812. No. 4 contains marriages from 1754 to 1812.

Billingham vicarage; the dean and chapter of Durham, patrons. King's Books, £11 3s. 1½d.; Tenth, £1 2s. 3¾d.; Episc. proc., 6s. 8½d.; Synod, 5s. 4d. Dedication to St. Cuthbert.

VICARS.—R. Hagat, 1180; Galfridus, 1220; R. de Jarrow, 1240; J. Tyn, 1276; Richard, 1280; A. de Slykeburn, 1296; Robert, 1319; W. de Offington, 1329; Richard, 1337; J. Fraunceys, 1349; N. de Catton, 1365; J. de Lynehouse, 1381; J. de Coken, 1391; J. Killum, 1396; J. Byry, 1403; T. Stare, 1424; J. Neecham, 1438; Sir R. —, 1456; Sir R. Brerely, 1480; T. Dobson, 1494; T. Bentley, 1526; R. Hyndmer, 1558; R. Dalton, S.T.P., 1544 (prebendary of the 7th stall, depr. for recusancy); G. Cliff, S.T.B., † 1560 (prebendary of the 12th stall, and sometime rector of Elwick and of Brancepath); J. Macbrey, 1565, p. depr. Cliff; G. Cliff, S.T.B., 1584, p.m. Macbrey; T. Hokes, 1596; W. kneeled, nor used any open fact, nor reverend gesture. On the 3rd Dec., he was at even song in Latin; on the said Sunday, the pulpit standing by the clock, and he sitting in the gilson stall behind the Lady Boulton altar, and by reason that the press of people was very great, he heard his voice, but understood not one sentence of that which was said by the preacher. When the people knelt down to take absolution, he thought that the preacher had been bidding prayers. He received no holy bread nor holy water, nor used no other rite or ceremony; for he was either reading of his Testament, or holding talk with one or other. That he was neither willing nor earnest to follow or hear the said service, nor to receive the Pope's absolution, whereof he knew not; and as for hooks or ornaments, he knew not where they had them."—Cliff had successively Billingham, Elwick, and Brancepeth, the latter by the gift of Lady Adeline Neville, in 1571. He died in 1595.

In 1575, John Davison was sentenced to excommunication for calling John Martyn, curate of Billingham, "a vacabound, a wag-wallet, and syde-tailed knave."

‡ LIBRARY OF THE REV. THOS. ERDON.—On January 31, 1833, the sale of the library of the above gentlemen, comprising nearly 4,000 volumes, in theology, classics, history, architecture, French, Italian, German, Spanish, Oriental and general literature, was commenced in the Public Sale and Exhibition Rooms, Durham, by Mr. J. W. Elliot. The sale excited considerable interest amongst biblioplists. The books, most of which were elegantly bound, generally brought good prices. Walton's Polyglott Bible, 8 volumes, folio, brought £16. A copy of the Encyclopaedia Britannica, in 21 vols. and 3 vols. of plates, full bound in Russia, £20.; Pinkerton's Voyages and Travels, 17 vols. full bound in Russia, £5 12s. 6d.; Lodge's Portraits, 12 vols. in 6, calf, marbled edges, £5; Lewis's Topographical Dictionary of England and Wales, Atlas 2 vols., and Map of England in 4 portions, in all 13 vols., £4 6s.;

The grant of the church to the convent by Bishop de Pictavia was on condition that "there shall be a perpetual vicar, on the presentation of the prior and convent;" and the original endowment includes "the manor which Walter de Offingham and his predecessors had occupied, and the oblations, mortuaries, and small tithes whatsoever of the whole parish, as well from bond as free, excepting the tithe of hay, and the tithe of the live-stock belonging to the prior and convent." At the general array of the clergy on Gilesgate Moor in 1400, the vicar of Billingham furnished one lancer and two archers.

Billingham Terrier, June 18, 1629.—"A mansion-house, the church-yard, a garden, stackgarth, and three rood or thereabouts of arable land, in every of the three cornfields of Billingham, with two little lands in Volveston-field; two little dales in the meadows, the one in a place called Frogonel, contg half an acre; the other in the Milne Meadow, contg another half acre, or a little more; with a horse or cow gate, whether the vicar shall make choice of, at May-day, when they stint. Also a sheep-gait one year, and two the second year, and three the third year, as the fallows goe in the townfields of Billingham. Farther, there is belonging to the said vicarage a piece of ground, called the tenth part of Pecker's, lying in the north field. There are also belonging to the said vicarage the lesser tyths of Billingham, as lamb, wool, hay, calf, pig, goose, and hen; together with a little portion due for the milkens. The like in all respects in Volveston, Cowpon, and Newton, saving that in Cowpon and Newton he hath only a little portion of money for his tyth hens. Also he hath tythe of hempe and lyne when they have anie, and in Cowpon a little portion of tyth salte when they make anie. There is also

Lightfoot's Works, edited by Pitman, £3 3s.; Townsend's Old and New Testament, £1 10s.; Stephen's Thesaurus (Valpy's edition), 10 vols., folio, £5 2s. 6d.; Watt's Bibliotheca Britannica, £4 2s.; Calmet's Dictionary of the Bible, 4 vols., folio, and 1 vol. of plates and maps, £2 2s.; Patrick, Lowth, Arnold, Whitby, and Lowman's Commentary on the Holy Scriptures, edited by Pitman, 6 vols., folio, £3 5s. Scott's Bible, £2 6s.; Mant and D'Oyley's Bible, 3 vols., £2 2s.; Facciolat's Lexicon Totius Latinitatis, folio, £1 13s.; Passow's Greek Lexicon, £1 7s.; Richardson's English, Persian, and Arabic Dictionary, edited by Wilkins, 2 vols., folio, £2 17s. De Sacy's *Christomathie Arabe*, 3 vols., £1 10s.; Johnson's Persian, Arabic, and English Dictionary, 2 vols., folio, £3 6s.; Knight's Old England, 2 vols., £1 10s.; Ryal's Portraits of Eminent Conservative Statesmen, £1 4s.; Jerdan's National Portrait Gallery, 5 vols., £2 14s.; Hodgson's History of Northumberland, 6 vols., 4to., £7 12s. 6d.; the Thousand and One Nights (Lane's edition), £2 2s.; Burnett's History of the Reformation, 6 vols. £1 1s.; Marsh's Michaelis, 4 vols., £1 1s.; Elliott's *Horæ Apocalyptice*, 4 vols., £1 11s.; Kitto's Pictorial History of Palestine and the Jews, £1 4s.; Scott's Border Antiquities, 2 vols., £2 3s.; Knight's Pictorial Shakespeare, £4 15s.; Chalmers's British Poets, from Chaucer to Cowper, £6; Lord Bacon's Works, £1 16s.; Locke's Works, £1 12s.; Hale's Analysis of Chronology, £1 13s., British Essayists, £2 4s. Afterwards, as a contrast to some of the above prices, Schrevellii Lexicon, and Pearce's Longinus, 2 vols., were knocked down for one penny! Bellorii Admiranda, £1 16s.; Piranesi, a volume of miscellaneous engravings, £2 10s.; Piranesi Vasi e Canabardei, £4; Loggie di Rafaele nel Vaticano, £2 12s., and Le Triomphe de l'Empereur Maximilien I., with many curious woodcuts, by Hans Bargimair and Albert Durer, £5 5s., were bought for the University

belg to the said vicarage the tithe of calf, lamb, wool, pig, goose, and hens at Saltholme (saving only of those goods wh are Mr. Dean's own proper goods), for wh the vicar has only four pasture-gaytes in the best pasture, and the like is due from Bewley Grainge (saving of the prebend's own proper goods). He receiveth also yearly from Bellasys, in lieu of the tyth thereof, 26s. 8d.; but if any of his farmers by removal of goods do make *inchace* and *outchace*, thereby to defraud, then absolutely the whole year they can have no priviledge at all. There are belg to the vicarage all surplice fees, &c. There is also a farm, with the appurtenances, holden by lease of the dean and chapter, wh having been very antiently possessed by the vicar, wee hope will hereafter be continued, which we much desire."

The vicarage-house, with gardens adjoining, stands on an elevated situation on the north side of the church, overlooking the adjacent valley, and commanding a most extensive view of the surrounding country, with the Richmond and Stanhope hills in the distance. In 1855, the old parts of the building were repaired, and new dining and drawing rooms, entrance hall, and three rooms above, were added to the west. The additions are built of white freestone, from near Bishop Auckland. These improvements, together with new offices, stables, and gateway, were effected at a cost of upwards of £1,000, towards which £300 was contributed from the Maltby Fund, and £100 by the dean and chapter of Durham, patrons of the living. The gross annual income is stated at £274, subject to permanent payments amounting to £30.*

Library. Morghen's Views of Pæstum, £2 2s.; and Hogarth's Works, Heath's Plates, Explanations of Nichols, £6 6s., &c., &c.

* REV. JOHN WALLIS.—This eminent botanist, learned antiquary, and amiable man, was for some years curate of Billingham. He is stated to have been born at Ireby, Cumberland, in 1714; he took his degree of A.M., in 1740, at Queen's College, Oxford, where he acquired some reputation as a sound scholar. At the age of 23, whilst residing on a curacy at Portsmouth, he married; and the matrimonial happiness of himself and his amiable wife became proverbial wherever they resided. Having removed to the north, he published, in 1745, "Reflections on a Candle, in an irregular Ode," printed by John Goodes, Newcastle-upon-Tyne, to which was prefixed an advertisement, announcing that he had opened an academy at Wallsend. In 1748, he published, also at Newcastle, in 2 vols. 8vo, "The occasional Miscellany, in Prose and Verse, consisting of a Variety of Letters, written originally to a young Gentleman designed for Holy Orders, with specimens of Sacred Poetry and Sermons." Having become curate of Simonburn, Northumberland, he had an opportunity of indulging his taste for botany; and the antiquities of the district attracting much of his attention, he published, in the year 1769, his history of the county of Northumberland, in 2 vols. 4to. The first volume contains an account of plants, fossils, &c., and evinces the author's proficiency in natural history; the contents of the second vol., though limited in plan, and on various subjects, are of considerable merit. The reputation which this work procured for him did not, however, improve his fortunes; for, in consequence of a dispute with his rector, Dr. Scott, he was compelled to resign his curacy, on which he had resided happily for many years, and to take refuge, with his wife, in

CHARITIES.

Poor's Land.—Robert Eden, Esq., of Windlestone, by will, December 26, 1662, left £10 to the poor of the parish of Billingham; Mary Davison, of Billingham, October 14, 1670, 40s.; Ralph Lawrence, of Cowpen-Bewley, June 12, 1673, £10; John Eden, Gent., of Billingham, May 2, 1680, £10; and Eleanor Steer, of Wolviston, December 22, 1682, £20. Feb. 10, 1686, Mr. Francis Buck “did give unto the poor in Billingham 10s. every year during the natural life of his sister, Mrs. Margery Eden, relict of Mr. John Eden.” The poor money was afterwards laid out in the purchase of a cottage, a kiln-house, and a close. There are in the township two houses, and a field of four acres, the rents of which have for nearly a century and a half been distributed to the poor. The fields are let by the church-wardens for £12 a year, one of the houses at £2, and the other to the overseers, who put in a poor person as occupant, and pay £2 15s. rent. Of the amount, the township of Billingham receives £8 1s. 6d.; Cowpen, £2 0s. 2d.; Newton, £2 13s. 2d.; and Wolviston, £4 0s. 2d. These several shares are distributed to the poor by the officers of each township, in sums varying from 2s. 6d. to 5s.

Church Lands.—There are certain lands in the parish now let to several tenants at rents amounting to £53 a year, the proceeds of which have been applied to the support of the church at least from the year 1676. The amount, except £1 mentioned below, is carried to the church-wardens' account.

Chapman's Charity.—Ann Chapman, by will, supposed to be dated November 9, 1725, bequeathed £20 to the poor of the township of Billingham, the interest to be distributed at Christmas, Easter, and Pentecost, mostly to poor widows. The principal is considered as secured upon the church-lands, £1 from the rent of which is divided at Christmas and Easter amongst four or five poor widows.

Gardner's Charity.—By will, October 22, 1790, Alice Gardner bequeathed to the vicar and churchwar-

dens of Billingham £20, to be invested in the three per cents, and the dividends to be distributed, on the 1st of January annually, amongst poor widows of the township not receiving parochial relief. In respect of this charity, there is a sum of £40 14s. 3d. three per cent. consols, standing in the names of the Rev. William Baverstock, Philip Moore, Robert Chilton, and Thomas Carlisle. The dividends, amounting to about £1 14s. 4d., were received by Messrs Sykes, Snaith, & Co., of Stockton, and transmitted to the vicar for distribution till 1825, when that house failed, since which time no dividends have been received.

BELLASIS.

Bellasis is a hamlet in the township of Billingham, $3\frac{1}{2}$ miles north-east from Stockton, consisting of a few houses. The ancient manor house of the Lambtons and Edens is now occupied as a farm house. The walls are of great thickness; and traces of a moat still remain around it.

The Bellasis family were seated here from about the time of the Conquest. The exchange effected by one of its members with the prior and convent of Durham has been detailed in the account of HENKNOLL, vol. i., p. 544. This transaction is supposed to have taken place before 1272; and in a charter dated 1380, what appear to have been the last fragments of the property of John de Bellasis in Wolviston, are conveyed to the prior and convent. A younger branch of the Lambtons of Great Stainton held the lease of Bellasis for several generations. Marmaduke Lambton, of Bellasis, styled in Glover's Visitation, 1575, “Blynde Lambton,” died without issue, leaving three sisters his coheiresses, one of whom, Elizabeth, married John Eden, of Durham; Alice became the wife of Robert Claxton, of Old Park; and Frances, of Skelton, of Armeswell. The Edens eventually acquired, by purchase and descent, the whole lease of Bellasis, which was sold by Sir John Eden, Bart.

His disposition was so mild, however, and his sense of duty so proper, that he acquiesced without a murmur or a sigh in his humble fortune; and in token of his gratitude to Bishop Barrington, he was, just at the close of his life, engaged in packing up an ancient statue of Apollo, found at Carvoran, a Roman station on the great Wall, as a present to the Hon. Daines Barrington, brother to the bishop. Having removed to the village of Norton, he died there, July 23, 1793, aged 79. His widow survived him only a short time. The Rev. Richard Wallis, vicar of Carham, was his brother; and the Rev. Richard Wallis, rector of Seaham and perpetual curate of South Shields, was his nephew.

the house of a friendly clergyman with whom he had been acquainted at college. In 1775, he became curate, *pro tempore*, at Haughton-le-Skerne, and immediately after removed to the curacy of Billingham, where he continued till increasing infirmities obliged him to resign at Midsummer, 1792. Thus, notwithstanding his abilities and learning, he never obtained a higher position in the church than a curacy of £30 per annum. Mr. Pennant and Mr. George Allan endeavoured ineffectually to assist him with Bishop Egerton; but Bishop Barrington allowed him an annual pension from the time he resigned his curacy; and, by the death of a relative, he came into possession of the rents of a very small estate during the two last years of his life

PORT CLARENCE.

THE shipping places of the Clarence railway (see vol. i., p. 113) are situated near the south-eastern point of Cargo Fleet Reach, and opposite to Middlesborough. At Port Clarence, Messrs. Losh, Bell, and Co. have taken ten acres of land, upon lease from the Clarence Railway Company, and erected three blast furnaces and extensive iron works. The works of Messrs. Losh, Bell, and Co. will extend the town of Middlesborough on the north side of the river, so that ere long there will be a North and South Middlesborough on the Tees, as there are at the Tyne a North and South Shields.

HAVERTON HILL.—At this place, near the curve of the river Tees between Billingham and Cargo Fleet Reaches, a glass-house was erected about 20 years ago; and there is an iron-foundry of considerable extent, carried on by Mr. S. Robinson.

COWPEN-BEWLEY.

THIS township forms the south-eastern portion of the parish, and, with its tidal shore on the Tees, occupies an area of 4,594 acres. Its population was successively

returned, at the periods of enumeration, at 128, 120, 132, 137, 196, and 217; the latter number consisting of 118 males and 99 females. In 1851, there were 42 inhabited houses, 6 uninhabited, and 1 building; and the property was assessed to the county-rate, in 1853, at £2,412 15s.

The Stockton and Hartlepool branch of the North-eastern-Railway has an extent of 1 M. 5 F. 66 Y. and an area of 10 A. 3 R. 5 P. in this township. In 1851, the railway contributed £4 2s. 6d., and, in 1852, £6 3s. 9d. towards the local rates; the gross amounts collected in the township in those years being £66 3s. 6d. and £94 1s. 9d.

The village of Cowpen-Bewley stands on the road between Billingham and Greatham: it is 5 miles north-east-by-north from Stockton, and contains a school, a public house, and a few tradesmen. The lands in the township are held by lease under the dean and chapter of Durham. *Saltholme*, one of the largest farms in the county, is let for £1,800 per annum. The salt marshes extend along the north side of the Tees mouth. Several extensive earthen mounds, now covered with herbage, mark the sites of the old salt works once carried on at these marshes.

PAROCHIAL CHAPELRY OF WOLVISTON.

THE chapelry of Wolviston comprehends the two townships of Wolviston and Newton-Bewley, and is bounded on the south-east by the townships of Billingham and Cowpen-Bewley, on the north-east by the parish of Greatham, on the north by that of Elwick Hall, and on the north-west by the parish of Grindon.

WOLVISTON.

WOLVISTON contains an area of 2,396 acres. In 1801, the population was 411; in 1811, 390; in 1821, 541; in 1831, 582; in 1841, 588; and in 1851, 750, of whom 393 were males, and 357 females. There were at the latter date, 143 inhabited houses and 14 uninhabited. The annual value of property assessed to the county-rate, in 1853, was £2,188 13s.

During the year ended Lady-day, 1854, the sum received for poor-rates in Wolviston was £88 6s., and in aid of rates, £1 3s. The expenditure for in-maintenance was £3 10s.; for out-relief, £44 15s.; workhouse loans repaid and interest thereon, £5 19s.; salaries and rations of officers, &c., £5 13s.; other expenses, £2 7s.; total outlay connected with relief, £62 4s. Constables' ex-

penses before justices, 17s.; vaccination fees, £2 2s.; registration fees to clergymen, £2 10s.; county and other rates, £36 15s.; registration, 8s.; for other purposes, £6; total expenditure, £110 16s.

The village of Wolviston is pleasantly situated on the Stockton and Sunderland turnpike road, about 5 miles north-by-east from the former place, and 2 north from Billingham. The soil is dry, the situation airy, and the prospect extensive. Wolviston contains a rural police station, six public houses, a corn-mill, and a number of shopkeepers, tradesmen, and mechanics.

A good public school-room, capable of containing 100 scholars, and a house for the master's residence, were erected in 1832, by grants from the Bishop of Durham, the dean and chapter, the trustees of Bishop Barrington, and other sources, at a cost of £175.

Twenty scholars are taught free, each for three years, towards whose education the dean and chapter contribute £10 annually.

There is a small chapel belonging to the Wesleyan Methodists, with a house for the minister, and a school. An alms house was erected by the Marchioness of Londonderry in 1838; it is a handsome brick building, capable of accommodating six poor women, chiefly widows, who are appointed by the marchioness.

An annual village festival is kept on the first Sunday after Lammass-day; and on the following day, a horticultural exhibition is held in the school-room. Races and shews of various kinds follow; and in the evening, balls take place at the public houses.

Rose Villa, with its beautiful lawn, green-house, and vineries, is situated close by the village on the south, and commands a splendid view of Cleveland, with its vast manufactories of iron, and of the Tees bay, Redcar, &c. It was formerly the property of the late Thomas Appleby, Esq., and now belongs to John Skinner, Esq. It is at present occupied by Augustus Friedrichsen and Wright Clunie, Esqrs.

It has been plausibly conjectured that the prior and convent acquired lands in Wolviston with those of the mother church at Billingham. Various proprietors, from time to time, either sold or exchanged their lands, until nearly the whole became vested in the church. Amongst others was Ricardi Ingeniater (Richard the snarer or gamekeeper), who, with Thomas his heir, exchanged their lands in Wolviston for parcels in Pittington. His seal, a wolf passant, is obviously appropriate to his profession, and favours the traditional derivation of the word Wolviston. Surtees, however, imagines that the place was the *tun*, or seat of Wulf or Wulfhere, a Saxon settler.

THE CHAPEL.

THE chapelry of Wolviston was severed from the parish of Billingham, formerly the mother church, in 1577. The chapel stands near the centre of the village; but its position has been encroached upon by the erection of several small cottages, which face and nearly surround it on two sides, without any intervening fence, and are chiefly inhabited by labourers and their families. At what period it was originally erected is not clearly known; but it would appear to be of rather ancient date, from the fact of the building having fallen into ruins about 1620, and lain in that state nearly 100 years. It was at last rebuilt in 1716, as appears from the following detailed account, given in an old church-

warden's book, of "the Disbursements *legally* incurred for *regain*ing the Chappell of Wolveston for the Benefit of the Town, after it had been *detained* from them for some years by the Vicars of Billingham," who had surreptitiously taken possession of the same when it lay in ruins, "which amounted to £4 14s. 3d.; whilst the Disbursements in particular for rebuilding the said Chappell after it was *regain*ed by the joint costs of the Townships of Wolveston and Newton Bewley equally by ffarmrights, and amounting to eighteen in Wolveston and nine in Newton, were £99 10s. 1d."

The chapel consisted, until the year 1830, of a nave and chancel. In that year, a square tower, surmounted by corner pinnacles, was erected on the south side of the nave. The entrance to the chapel is by a doorway in the tower, which, being partially open to the interior, contains a gallery, and above is a loft in which are two bells. The original entrance, which was on the west, was built up, and the porch converted into a vestry; a convenience which the chapel did not before possess. By these improvements, 190 additional sittings were obtained; and in consideration of a grant from the Society for promoting the Enlargement and Building of Churches and Chapels, 130 of that number were declared free. There were previously 130 appropriated seats, so that the chapel will accommodate 320 hearers. An east window is surmounted by a circular arch; but the whole interior is dimly lighted. An organ, purchased by subscription, was opened December 24, 1854.

The chapel appears to have been dedicated to St. Mary Magdalen, and not to St. Peter, as stated by Hutchinson. The village festival was formerly held on the Monday after St. Mary Magdalen's day; and the dedication is distinctly mentioned in the following quaint, but not unpoetical lines, inscribed in the churchwarden's book above quoted, "Upon viewing the Charges Rebuilding St. Magdalen's Chappell at Wolveston in 1716":—

"Let weeping Magdalen cease her tear,
And with a smile clear up her eye;
This little chappell standing here,
Made sacred to her memory:

"Neglected late in rubbish lay,
O'ergrown with moss, and mouldering dust;
Is now rebuilt sprightly and gay,
Like a young Phœnix from her nest.

"Devotion's warmth did see inspire
With holy zeal each generous heart,
That all concern'd, with glad desire,
Pursu'd the work, and did impart

“ Each one their share with such good will,
And with intentions large as free,
Still to give more, and more untill
They brought it to what now you see,

“ Neither too gaudy, nor too great,
But decent as the house of prayer,
Designed to be clean and neat,
As hearts should be that cometh there.

“ And if Posterity list to know
To what amount the cost did come,
This book to after times will shew
Each severall, and the totall sune.

“ And now since finished, let us pray,
That God will bless, and own't again,
And that his Gracious Presenee may
Dwell there alway. Soe be't, Amen.”

REGISTERS.—Books Nos. 1 and 2 contain entries of baptisms from 1759 to 1812, and marriages by license to 1780. Since that period, none have been solemnized here, though on what account is not known. All marriages and funerals take place at Billingham, 2 miles distant from Wolviston. Nos. 3 and 4 carry on a continuation of the baptismal registers. There are two churchwardens' account books, one of which dates from 1663.

Wolviston chapel of ease is not in charge nor certified; the dean and chapter of Durham, patrons.

CURATES.—John Manwell, 1577; John Wilton, 1578; John Wordington, 1585; John Manwell oec. 1598; James Kinge oec. 1631; Richard Redhead, 1717; Richard Lightfoot, 1725; John Aspinwall, 1762; George Barron Jackson, A.M., 1805, p. m. Aspinwall; Anthony Garthorne, 1810, p. m. Jackson; Lancelot Christopher Clarke, A.B., 1823, p. m. Garthorne.

The emoluments of the living are entirely derived from 122 acres of land belonging to it, besides a yearly payment of 9s. per farm from each of the 26 farms within the chapelry, and 12s. 6d. from the Wolviston Mill and two dales of meadow attached thereto: it is payable half-yearly at Lady-day and Michaelmas. About the year 1764, Wolviston received £200 augmentation by lot, £200 from Queen Anne's Bounty, £100 from Lord Crewe's trustees, £50 from the dean and chapter, £30 from the Bishop of Durham, and £20 parochial collection; total, £600, which was vested in the purchase of lands at Chester-le-Street. In 1810, the sum of £1,000 was obtained from similar sources, £300 of which was applied towards purchasing a parsonage-house; the remaining £700 being vested

in the purchase of lands at Easington, in addition to a small farm belonging to it; thus raising the gross annual income to £99, subject to a permanent payment of £2. The dean and chapter afterwards granted 80 acres of land near Billingham, annual value, £125 8s.; fee-simple, £3,762; but this is stated, in an order in council, April 27, 1842, to be “subject to a lease, which will expire in May, 1849;” and the ecclesiastical commissioners add that “whereas the tithes of the parish of Billingham are now vested in us, and the proceeds thereof exceed the last mentioned annual value (£126), it appears to us, after due consideration of the wants and circumstances of the said parish, to be expedient that a temporary annual grant should be made to the said perpetual curacy of Wolviston, of equal amount to the prospective augmentation aforesaid.” In 1849, a farm of 61 A. 2 R. at Billingham Grange, was annexed to the living by the dean and chapter, and lets for £100 per annum, raising the net value of the living to £183. In the commissioners' first report, June 24, 1845, an augmentation of £126 per annum is announced, and the net income of the living is stated to be £256.

The parsonage house having become unfit for residence, £220 was granted, on the recommendation of the Bishop of Durham, from the Maltby Fund, in 1850, towards its restoration and enlargement, at a cost exceeding £300. It is situated in a pleasant healthy part of the village, and is now a commodious and comfortable residence. The village green, in front, has been enclosed, drained, and considerably improved.

The great tithes of the chapelry are commuted for £337 16s., which is paid to the ecclesiastical commissioners. The small tithes, amounting to £50 per annum, are received by the vicar of Billingham.

NEWTON-BEWLEY.

THE township of Newton-Bewley, or Beaulieu, adjoins that of Wolviston on the north-east: it contains 1,562 acres, divided into seven farms. The successive returns of population state the numbers at 88, 84, 86, 92, 87, and 121; of the latter number, 49 were males and 72 females; and there were, at that period, 22 inhabited houses and 1 uninhabited. The property was valued for the county-rate, in 1853, at £1,393 3s.

The village of Newton-Bewley* is situated 6 miles

* CAPTAINS MIDDLETON AND MOOR.—Newton-Bewley is supposed to have been the birth-place of Christopher Middleton, about the beginning of the last century. He was bred to the sea, and served generally,

if not altogether, on board one of the vessels of the Hudson's Bay Company, engaged in the fur trade. His experience in those seas recommended him to Mr. Arthur Dobbs, a gentleman of science and

north-by-east from Stockton, and contains several cottages with neat gardens in front, a public house, and a corn-mill. The manor-house (of which no vestige now exists) and demesnes in this township were assigned to

fortune, who induced the Lords of the Admiralty to appropriate a ship of the navy to the purposes of discovery, and to give the command of her to Captain Middleton. The Furnace bomb, and the Discovery pink, were accordingly put under his orders; the latter being commanded by Mr. William Moor, a native of Billingham. They sailed in 1741, and wintered in Churchill river, where they remained till the 1st July in the following year. The attention of Middleton was attracted by a river called the Wager, 6 or 8 miles broad; but as the tide of flood always set in from the eastward, or into the mouth of the river, no opening could be expected through it. At another opening, 15 miles in width, they came to a headland, to which, conceiving it to be the north-east point of America, Middleton gave the name of Cape Hope; but finding that the land beyond it merely extended to the west of north, he gave it the name of Repulse Bay. Having ascended a high mountain, he obtained a full view of a strait, 18 or 20 leagues in length, and 7 in breadth, extending south-east towards Cape Comfort, and on the eastern coast of Southampton Island. It appeared to him that the strong tide which came through this strait was merely that which entered by Hudson's Straits, brought by another channel. The strait was completely frozen from side to side; and, on calling a council, "it was agreed to make the best of their way out of this dangerous strait."

The account which Middleton gave of these proceedings, on his return, was either disbelieved or misunderstood. Anonymous letters (afterwards discovered to have been written by the surgeon and captain's clerk) stated that the frozen strait was all a chimera, as was every thing that Middleton had written concerning that part of the voyage. Mr. Dobbs intemperately declared him a traitor, bribed by the company to stifle the discovery; an accusation which Middleton indignantly denied, and much acrimonious language was used on both sides. The Lords of the Admiralty also were not satisfied with his explanations; and an unfavourable impression generally prevailed against him. He retired from public service; and having married his servant, he had a large family, and is said to have died poor. His latter years were spent at Norton, where he died, and was buried on the 15th of February, 1770.

the twelfth stall in Durham cathedral. The endowments and estates of this canonry became vested in the ecclesiastical commissioners in 1853. (See vol. i., page 445.)

The honesty and integrity of Middleton have been amply vindicated since his death. By later navigators, and especially by Parry, all the features of the coast which he explored were found to have been most accurately described by him; and though his conclusions with regard to the origin of the tide in the Welcome River, and the impossibility of penetrating further, are proved to have been hastily made, they were supported by very strong presumption. Captain Lyon, in his private journal, says, on this subject, "Thus our examination of this much doubted place terminated; and the veracity of poor Middleton, as far as regards the bay at least (Repulse Bay) was now at length established, and in looking down the strait we had passed, he was fully justified in calling it a frozen strait."

The failure of Middleton did not, at the time, shake the general opinion respecting the possibility of a north-west passage to the Pacific Ocean. A considerable reward being offered for the discovery, a new expedition, under the direction of private persons, with Mr. Dobbs' assistance, was fitted out for the purpose; and Captain Moor, who had been Middleton's associate, was appointed to the command. He was accompanied by Mr. Henry Ellie, whom the committee of management had engaged to write a narrative of the voyage. Moor commanded the Dobbs galley, of 180 tons; and the California, of 140 tons, was commanded by Captain Francis Smith. The vessels sailed on the 20th of May, 1746, and made land on the west side of the Welcome, August 21. During the winter they moored in a creek about two miles above York fort, the governor of which does not appear to have promoted their designs. In the following summer, they examined Wager Strait, and another opening to the northward, probably Middleton's frozen strait; but although appearances were encouraging, a difference of opinion prevailed amongst the commanders and officers; and, on the 7th of August, it was decided by a council, on account of "the advanced season of the year," to bear up for England. They arrived in Yarmouth roads, on the 14th of October, 1747, after an absence of one year, four months, and seventeen days. Captain Moor soon after retired from the service, and settled at Greatham, where, in 1757, he married Mary, sister of Ralph Bradley, Esq., of Stockton. He died in 1763.

PARISH OF ELWICK HALL.

THE parish of Elwick Hall (sometimes locally called *West Parish*, from its situation in respect to the village of Elwick, in the parish of Hart) is bounded by Hart and Greatham on the east, by the chapelry of Wolviston and by Grindon on the south, by Sedgefield (from which it is divided by the Emeldon Beck) on the west, and by Monk-Hesledon and Hart on the north. It forms but one constabulary; but includes the manors, granges, or farmholds of Amerston, Newton Hansard, Bruntoft, Close, Stotfold, and Poplar Row.

ELWICK HALL contains 4,321 acres, and was assessed for the county-rate in 1853 at £2,411 15s. Its population, at the successive periods of return, was 129, 129, 176, 169, 165, and 187, of whom 102 were males and 85 females. At the same time, there were 32 inhabited houses and 11 uninhabited.

The receipts from poor-rate, during the year ended Lady-day, 1854, were £89 6s.; in aid of rates, £1 18s.; total £91 4s. The expenditure for in-maintenance was £11 12s.; for out-relief, £45 7s.; for workhouse loans repaid, &c., £5 7s.; for salaries and rations of officers, &c., £9 3s.; for other expenses connected with relief,

£11; total, £82 9s. Costs of law proceedings, £1 12s.; constables' expenses before justices, 10s.; vaccination fees, 4s.; payments on registration fees to clergymen, 12s.; for county and other rates, £40 4s.; registration, 10s.; other payments, £9 2s.; total expenditure, £135 3s.

There is no village in the parish of Elwick Hall. "In this parish," says Hutchinson, "there is neither town or village, cottage house for the poor, surgeon or apothecary, midwife, blacksmith, joiner, house-carpenter, mason, bricklayer, cart or wheelwright, weaver, butcher, shoemaker, tailor, or barber, schoolmaster or schoolmistress, ale-house, or public bakehouse, grocer or chandler's shop, or a corn-mill." With the exception of a public-house near Embleton, a school, two cottages, a blacksmith's and a joiner's shop, this description of the parish, written about 80 years ago, still applies. The school is situated a short distance from the church: it was built by subscription in 1852, on glebe land, and is supported principally by the rector and the contributions of the children; the attendance averages about 40. To the north-west of the church is a little mount called *Beacon Hill*, admirably adapted for the purpose implied by its name.

THE CHURCH.

ELWICK church is situated about 9 miles north-by-east from Stockton, and 2 east from Embleton, in the parish of Sedgfield. It stands on the brink of a deep dene, through which runs a small brook, dividing the parish of Elwick Hall from the village and township of Elwick, in the parish of Hart. The approach from the village, which, in Hutchinson's time, was by a "multitude of steps," is now a steep road and footpath. The church was repaired, and the lead of the roof exchanged for slate, in 1813; and the windows, except the two on the south side of the chancel, were renewed about twelve years ago. The tower is a low square structure, on the south side of the church, and contains the principal entrance. In the south wall of the chancel is an antique sculpture, apparently representing the Crucifixion. Each of the side aisles is formed by three cylindrical columns, supporting pointed arches; and the entrance from the nave to the chancel is beneath a low semicircular arch. There is a vault within the Communion rails. Above the table is a metal tablet representing the Last Supper. Two of the stalls in the chancel are carved with poppy heads. The east window, under a pointed arch, is in three

compartments, including a portion of stained glass; and there are two similar windows on the south side of the chancel. The nave is lighted by a large window under a semicircular arch on the west, a square modern window in the south aisle, one at the east end under a pointed arch, and two pointed windows on the north. There is a small gallery at the west end; and the church is calculated to accommodate 149 persons. The entire roof of the edifice is flat and plastered. The font is an octagonal basin of beautifully spotted marble. In the chancel is a mural tablet to the memory of Dr. Parker, rector of the parish. Elwick is also the family burial-place of the late Sir James Allan Park, one of the judges of the court of Common Pleas.

Walter de Cumba, April, 15, 1327, gave by charter to Robert Garnet of Ellewyk, and Anastasia his wife, all his land in Bruntoft, charged with the payment of six marks annually to the church, for which the rector for the time being was to provide a chaplain, to sing, for ever, for Walter and all his benefactors.

The church-yard is terraced to the edge of the ravine on the north, and commands an extensive view to the south and east.

REGISTERS.—Books Nos. 1 and 2 contain entries of baptisms and burials from 1592 to 1797, and marriages from 1592 to 1752; and No. 2, baptisms and burials from 1798 to 1812, and marriages from 1754 to 1811.*

Elwick rectory; the Bishop of Durham, patron. King's Books, £20 18s. 1½d.; Tenths, £2 1s. 9¼d.; Episc. proc., 13s.; Archid. proc. 4s.; Synod., 11s. Dedication to St. Peter.

RECTORS.—Stephanus r'r eccl. de Elwick occurs 1200; W. de Gypwico; R. de Bernardcastel, 1352; W. de Harram, 1353; J. del Beck, 1359; J. de Castro Bernardi, 1361; H. de Westwik, 1362; J. Atelee, 1367; W. de Trafford, 1368; J. de Battisford, 1373; J. Bowring, 1376; T. Wyhot, 1378; J. Gyll, 1400; W. de Wynlaton, 1414, p. m. Gyll; R. Heighington, 1501; T. Atkynson, 1546; G. Clyffe, S.T.B., 1562; H. Ewbank, A.M., 1598; G. Clark, A.M., 1620; J. Cosin, S.T.B., 1624; J. Bowey, an intruder, ejected 1660; D. Bollen, A.M., 1660; D. Granville, 1664; G. Brereton, A.M., 1667, p. res. Granville; H. Beaumont, A.M., 1672, p. res. Brereton; J. Bowes, S.T.P., 1701, p. m. Beaumont; W. Eden, 1715, p. res. Bowes; R. Parker, D.D. 1741, p. m. Eden; W. Vaughan, A.M., 1776, p. m. Parker; George Sayer, 1777, p. res. Vaughan; George Watson, A.M., 1783, p. res. Sayer; Richard Richardson, D.D., 1791, p. m. Watson; James Allan Park, A.M. December, 12, 1828, p. res. Richardson for Brancepeth. (See vol. i., pp. 415 and 425.)

* An entry states that "maryinge by justices, election of registers by the parishioners, and the use of ruling elders, first came into fashion in the times of rebellion, under that monster of nature and bludy tyrant, Oliver Cromwell."

It was the intention of Bishop Beaumont to present this rectory to the convent; but this was prevented by his death. One lancer and two archers were furnished by the rector of Elwick at the array of the clergy in 1400.

Elwick Hall, the rectory house, is a handsome mansion, standing on the north bank of the dene, opposite to the church. It is well sheltered by rising plantations. The glebe consists of two farms, containing together 345 acres; and the rector is generally entitled to tithes of all decimations from the other thirteen farms in the parish. The gross annual income is stated as £544 per annum, subject to £2 for permanent payments.

AMERSTON.—Aymundestun, the vill of the Saxon Aymund, adjoins the Embleton dene. It was granted to Kepyre Hospital by Gilbert Hansard, and, at the Dissolution, passed through the Cockburnes to the Heaths (see vol. i., p. 377). John Heath, in 1600, sold it to Henry Dethicke, Master of Greatham Hospital, whose son sold it to the Ashmalls. Amerston Hall, the mansion of the latter family, who resided here for several generations, still remains. The trustees of the Rev. Ferdinando Ashmall, the last of the family (see vol. i., p. 410), sold the estate, in 1762, during his life, to Humphrey Robinson, for £1,330. It is now the property of Mr. John Robinson.

NEWTON-HANSARD.—This manor derives its addition from the Hansards of Walworth. In the time of Bishop Hatfield, it was held by William Dacre, lord of Gilsland, and passed from his heirs, through Katherine de Qwhitfield, to John Neville, lord of Raby. After the attainder, it was granted, in 1575, by Queen Elizabeth, to Thomas Calverley and Henry Anderson, Esqrs. In the 17th century, it was purchased of the Calverley family by the Smiths of Burn Hall, who sold it to the Thellusons. It is now the property of the Marchioness of Londonderry.

STOTFOLD was held, in the 14th century, of the bishop in *capite*, by the family of Kilkenny, rendering 6d., called *wodesilver*. It afterwards became, by purchase, the property of the Nevilles, who sold it, before the attainder, to William Selby, of Newcastle. The Carrs and Milbanks purchased from the Selbys. *High Stotfold* was purchased from the executors of Ralph Carr, Esq., of Cocken, by Ralph John Fenwick, Esq., M.D., who sold it to Jonathan Backhouse, Esq., of Darlington. *Middle Stotfold* was sold by the Milbanks to the Shepperdsons. *Low Stotfold* was sold, April 3, 1818, by John Hall, Esq., of Weston Colvill, Cambridgeshire, to Watson Alcock, Esq., surgeon, of Stockton; who erected a house on one of the farms, which is known by the name of *Gunner's Vale*.

BRUNTOFT, the *toft* upon or near the *burn*, early gave name to a resident family, and was afterwards purchased by the Claxtons. With Claxton (see p. 306) it passed by marriage to the Bulmers, who, in 1605, sold it to John Featherstonhalgh, Esq., of Stanhope. On July 20, 1652, Ralph Featherstonhalgh, Gent, of North Auckland, conveyed Bruntoft to William Pennyman, Esq., of Gray's Inn, who sold it to Gerard Salvin, Esq., of Croxdale. *Bruntoft*, the *Toft*, and *Low Bruntoft* now belong to the Marchioness of Londonderry.

THE CLOSE is the name of a farm on the south of Embleton dene, which anciently belonged to the Nevilles, and was forfeited at the attainder. In 1607, it was conveyed by the grantees of the crown, for £1,200, to Sir George Freville, Knt., to hold in common soccage of the manor of East Greenwich, under £13 6s. 8d. crown rent. Nicholas Freville, nephew and devisee of Sir George, sold the estate to Gerard Salvin, Esq., of Croxdale, for £2,640: it is now the property of the Marchioness of Londonderry; and *Plaintree Hill*, near Amerston Hall, is the property of the representatives of the late Mr. James Jobson.

PARISH OF GRINDON.

THE parish of Grindon is bounded on the north-east by Elwick Hall, by the chapelry of Wolviston and the parish of Norton on the east, by Redmarshall and Bishopton on the south and south-west, and by Sedgefield on the west and north. It is divided into the townships or constableries of Grindon and Whitton.

GRINDON.

THERE is no village bearing the name of Grindon; but the township contains the village of Thorp-Thewles, and the manors of Fulthorp and Wynyard. Its area is 3,446 acres. In 1801, the population was 325; in 1811, 230; in 1821, 255; in 1831, during the formation of the Clarence railway, 309; in 1841, 285; and in 1851, 267, of whom 141 were males and 124 females. At the latter date, there were 61 inhabited houses and 7 uninhabited. The annual value of property assessed to the county-rate, in 1853, was £2,055 14s. 8d.

The receipts from this parish, for the Stockton Union, in the year ended Lady-day, 1854, were, for the township of Grindon, £133 8s.; and for Whitton, £32 16s.; total, £166 4s. The expenditure was as follows:—

In-maintenance :—Grindon, £6; Whitton, 12s.....	£6 12
Out-relief :—Grindon, £74 19s.; Whitton, £13 6s.	88 5
Workhouse loans repaid :—Grindon, £5; Whitton, 16s.	5 16
Salaries and rations of officers :—Grindon, £11 13s.; Whitton, £1 7s.	13 0
Other expenses connected with relief :—Grindon, £4 16s.; Whitton, 11s.	5 7
	£119 0
Constables' expenses before justices :—Grindon, 6s.; Whitton, 12s.....	0 18
Vaccination :—Grindon, 5s.; Whitton, 1s.	0 9
Registration fees to clergymen :—Grindon, 13s.; Whitton, 2s.....	0 15
County-rates, &c. :—Grindon, £34 18s.; Whitton, £14 14s.	49 12
Parliamentary regist.; &c. :—Grindon, 7s.; Whitton, 8s.	0 15
For all other purposes :—Grindon, £8 13s.; Whitton, £2 14s.	11 7
	£182 16

CHURCHES.

THE old church of Grindon, a plain structure, consisting of nave and chancel, stands in a field a little to the east of the road between Durham and Stockton. The porch on the south side is called Fulthorp's Porch, and

* In the Act Books of the Spiritual Court of Durham, February, 1632, is a "sentence against Elinor Greene, for scandalous abuse of her minister, James Wallace, viz., by uttering these, and other

on the floor are some sculptured slabs. The edifice had accommodation for 120 hearers; but owing to the dilapidated state into which the fabric was falling, and its inconvenient situation for the increasing population in other portions of the district, a new church was erected and consecrated at Thorp-Thewles in 1848, since which period the old church has ceased to be used as a place of worship; but the church-yard continues to be reserved as a place of interment for parties possessing a family burying ground.

The new church is of plain early English, consisting of nave and chancel, with sittings for 175 hearers, 120 of which are free. Attached is a cemetery, consisting of an acre of ground, of fine dry soil, enclosed within a substantial wall. The cost of the building was about £900, towards which the Marquis and Marchioness of Londonderry were liberal contributors; the bishop of the diocese presented £50; the Diocesan Society, £50; the Incorporated Society of London, £40, &c.; the late William Russell, Esq., of Brancepeth, presenting the ground. The church, which is dedicated to the Holy Trinity, was erected at Thorp under the sanction of the bishop and incumbent, and with the consent of other parties interested.

REGISTERS.—Books Nos. 1 and 2 contain entries of baptisms from 1566 to 1812, burials from 1565 to 1812, and marriages from 1565 to 1578. No. 3 contains marriages from 1759 to 1812.

Grindon vicarage is a discharged living in the deanery of Stockton; the Master of Sherburn Hospital, patron. Crewe's augmentation, £10. King's Books, £4 11s. 5½d.; Episc. proc., 2s. 6d.; Archid. proc., 2s. Dedication to St. Thomas a Becket.

VICARS.—Gamellus, 1194; W. Baty; R. de Auckland, 1358; W. Boteler, 1379; H. Flinton, 1390; J. de Hexham, 1402; J. Drawelesse, 1421; T. Wall; R. Hochonson, 1560; G. Gibson, 1579; F. Greene, 1599; J. Wallace, A.M.,* 1618; R. Bower, A.M., 1653; W. Alder,

words: 'Thou a minister?—Thou a devill! Out rogue! Out theefe! Out whoare!' the last word used from habit. Sentence "to acknowledge her fault publicly in time of divine service, and to pay costs."

A. M., 1668; W. Thompson, 1678; T. Nicholson, 1699; C. Haggarth, 1707, p. res. Nicholson; R. Pigot, A. M., 1723, p. m. Haggarth; J. Nicholson, 1748, p. res. Pigot; T. Rotheram, A. M., 1760, p. m. Nicholson; J. Middleton, 1769; W. Terrot, A. M., p. m. Middleton; W. W. Ewbank, A. B., May, 1832, p. m. Terrot; W. Cassidi, A. B., 1840, p. res. Ewbank.

The vicarage-house was formerly used as a farm house; but, during the incumbency of the Rev. W. W. Ewbank, considerable improvements were made in the building. The Master of Sherburn has the great tithes, and tithes of wool and lamb. The vicar is generally entitled to hay tithe, and all other small tithes throughout the parish, excepting that no tithe for hay is paid for Whitton, nor for Spittle-meadow, in Thorp. The glebe consists of two closes, one in front of the parsonage, and the other adjoining it on the west, comprising, together with the church-yard, about 14 acres; and of a farm at Mordon-moor-house, in the parish of Sedgely, purchased with Queen Anne's Bounty, containing about 65 acres. The vicar also receives £10 annually under the provisions of Lord Crewe's will. The gross income was stated in 1835 at £142, subject to £11 for permanent payments. The late Master of Sherburn Hospital allowed £60 a year to the incumbent, which it is now proposed to increase to £100 (see page 235). The living is now worth £200 per annum.

CHARITIES.

Fleetham's Charity.—George Fleetham, by a codicil to his will, June 14, 1816, gave £80 to the vicar of Grindon, in trust, to be invested in government or real securities; the dividends to be applied in schooling, clothing, putting out apprentices, or otherwise for the support and benefit of four poor children of the township, under the age of 14 years. After deducting the legacy duty of £8, the balance was paid to the Rev. William Terrott, then vicar, who purchased therewith £88 6s. 7d. three per cent. consols. The dividend, £2 12s. 10d., is paid to the master of the school at Thorp-Thewles, who, in consideration, instructs three poor children of the township, appointed by the resident clergyman.

Lost Charities.—In consideration of £60, left to the poor of Grindon by some person unknown, £3 per annum was formerly paid by a person who rented lands from the Rev. Mr. Davison. These lands having been sold, nothing has been paid for about £50 years, nor is there now any evidence to support a claim.

The sum of £20, given by some person unknown, to

the poor of Whitton, vested in 1786 with Henry Hutchinson, and producing 16s. per annum, was lost by the failure of the bank of Hutchinson and Co., in Stockton, in 1825; no proof of the debt having been made under the commission of bankruptcy.

THORP-THEWLES.

THE village of Thorp-Thewles is situated on the turnpike road between Durham and Stockton, 16 miles from the former, and 5 from the latter place. It contains a flour-mill, a public house, and a few tradesmen. An old brick mansion at the east side of the village, supposed to have been the residence of the Kendals, and more recently occupied as an inn, has been for many years let in tenements, and going to decay. In 1824, the Marchioness of Londonderry built a room for a day and Sunday-school on the north side of the village, to which she contributes annually; £10 is also subscribed by Lord Boyne, £5 by Lord Crewe's trustees, &c. About 50 children are usually taught; and, previous to the erection of the new church, lectures were delivered in it by the curate of the parish on Sunday afternoons. The late Marquis of Londonderry subscribed two guineas per annum to a benefit society; and the marchioness provided clothing for many of the poor children of the parish; but both these charities are now discontinued.

Thorp early gave name to a resident family. Matilda, daughter of Godefrid de Thorp, and Roger de Stotfaldia, her husband, about 1200, granted part of their lands in the town fields to Stephen de Elwick, who, by charter, granted and gave to God, the blessed Mary, St. John the Baptist, St. Goderich, and to Ralph the prior and the monks of Finchale, all his lands in Thorp in perpetual alms, for the support of hospitality, and the maintenance of three poor persons daily, rendering yearly to John de Ketton and his heirs a pound of cumin, and making foreign service. John de Ketton, Nigel de Rungeton, John son of Galfrid de Thorp, Robert de Minsterton, Walter de Shotton, his daughter Cecilia de Thorpthewles, John Ward of Thorpthewles, and Robert son of William, lord of Thorpthewles, all granted lands and houses, about the same period, to the priory of Finchale. Afterwards, the Hiltons, Blakistons, and Bulmers, appear as proprietors in Thorp. In the 6th year of Bishop Pilkington, a license was granted for Francis Constable, Esq., whose family had acquired "Bulmer's Lands" in Thorp-Thewles, to alienate to John Swinburne, Esq., of

Chopwell. William Kendall, of Thorp-Thewles, occurs in 1575; and his successors continued to hold possessions for several descents. The Claxtons, Blakistons, and Davisons, proprietors of Wynyard and Blakiston, also held property in this manor. In 1623, Robert Tweddell died seised of a third of the manor of Thorp and the water-mill; and the property descended in the posterity of his brother, Francis Tweddell, of Hesledon.*

FULTHORP.

THE earliest record of Fulthorp is in 1337, when Roger of that name held half the manor by the twelfth part of a knight's service. Sir Roger Fulthorp, a judge of the Common Pleas and chief justice of the palatinate under Bishop Hatfield, was attainted, with other "false judges," as a traitor; and his sentence was commuted to banishment to Ireland. Amongst the estates granted to his son by Richard II. was Thorp-Thewles, probably Fulthorp, as that manor was held by the family till a late period, though they took up their residence at Tunstall, in the parish of Stranton. Fulthorp became by purchase, in 1596, the property of Thomas Blakiston, who, in 1616, granted it to Arthur and Humphrey Robinson, who sold it to the Davisons of Blakiston, with which latter estate it passed to William Russell, Esq., of Brancepeth Castle.

* Of this family, in later times seated at Threeewood and Unthank, Northumberland, was John Tweddell, Esq., an enterprising and accomplished scholar, who was born at Threeewood on June 1, 1769. His early education was entrusted to the Rev. Matthew Raine, of Hartforth school, near Richmond; and his proficiency at Trinity College, Cambridge, procured him unprecedented honours. His "Prolusiones Juveniles," published in 1793, furnish unequivocal testimony to the extent and versatility of his talents, and were warmly eulogized in a letter from Professor Heyne, of Goettingen, to Dr. Burgess, the learned Bishop of St. David's. In 1792, Mr. Tweddell entered himself a student of the Middle Temple; but feeling a predilection for political economy, and a wish to employ his talents in diplomacy, he determined to travel, and employ a few years in acquiring a knowledge of the manners and feeling of such foreign powers as were then accessible to Englishmen. Accompanied by Mr. Webb, a gentleman of fortune, he embarked for Hamburg, September 24, 1795, whence he proceeded to Berlin and Vienna, at all which places his talents procured him an honourable reception. His determination to traverse Switzerland on foot frightened his companion; and he carried out his scheme alone. In this excursion, he acquired the friendship of Lavater, the venerable Necker, and his accomplished daughter, Madame de Stael. After spending some time with Count Rumford, he passed into the Ukraine, and, in 1797, proceeded to Moscow, where he witnessed the coronation of the emperor, experienced the kindness of Sir Charles (afterwards Lord) Whitworth,

WYNYARD PARK.

WYNYARD PARK, the extensive seat of the Marchioness of Londonderry, is situated two miles from the village of Thorp-Thewles. The park contains an area of about 2,500 acres, in which are formed several artificial lakes. The ground, commanding a distant view of the Cleveland hills, presents an undulating surface, pleasingly varied with wood and water.

The enclosures, which are divided by a neat tasteful wire fence, from 6 to 7 feet in height, are stocked with several hundred head of deer; and the preserves contain a very large variety of game, principally pheasants.

Near to the main avenue, and on the highest point of ground, stands an obelisk, 120 feet in height, forming an agreeable object in the surrounding landscape; it was erected to commemorate a visit in 1827 from the Duke of Wellington, the old commander and companion in arms of the late Marquis of Londonderry.† On one of the entablatures is inscribed:—

"WELLINGTON THE FRIEND OF LONDONDERRY."

Nearly in the centre of the home park stands the mansion. It is delightfully situated on the margin of a large artificial lake, which is spanned by a light and elegant chain bridge, after the model of the Menai bridge; and its sloping banks are covered with a great variety of evergreens.

The mansion, a modern building, erected by the late

and was introduced to Stanislaus, the last king of Poland. He next visited Sweden and Finland, passed through Russia to the Crimea, and from thence to Constantinople. Having proceeded to Greece, he obtained the liberation of the French traveller, Fauvel, in a manner highly honourable to his character. After visiting Platæa, Thebes, Livadea, Charonea, Thermopylæ, and Lavissa, and taking an excursion to Mount Athos, he returned to Athens, where, from excessive fatigue, he was attacked by spasms in the chest and a fever, which terminated his life on the 25th July, 1799, in the arms of M. Fauvel. His remains were deposited in the Theseum, with a beautiful Greek inscription by the Rev. Robert Walpole, A.M., of Carrow Abbey, near Norwich. With a handsome and well-formed person—polished, affable, and prepossessing manners—a chastened and ingenious wit—and a large acquaintance with men and books, Mr. Tweddell was universally admired in life and lamented in death. In 1815, the Rev. Robert Tweddell published a very interesting volume, entitled, "Remains of the late John Tweddell," with a republication of his "Prolusiones Juveniles;" but his valuable journals, drawings, and papers, which were forwarded to the British embassy at Constantinople, have never been recovered.

† It is somewhat remarkable, that the last stone of the monument had hardly been fixed in its place, and the finishing-touch given to the work, before the melancholy tidings of the duke's death reached the ears of the workmen, and changed, as it were, the pillar of triumph into a cenotaph of grief.

marquis, under the direction of the architect, Mr. Wyatt, is in the Grecian style of architecture.

The principal entrance, on the north front, is beneath a massive Corinthian portico, constructed of large blocks of stone, and considered the finest in the north of England. Passing through the front hall, the visitor enters the statue gallery; a magnificent apartment, 120 feet in length, 80 feet wide, and 60 feet high. This gallery, which forms the centre of the building, is octagonal, and is surmounted by a dome, with a lantern of beautiful stained glass in the centre. Around the walls are forty-eight jasper columns, having each a base of statuary marble, black and gold marble sur-bases, and plynths of Egyptian green. The doors from the gallery are supported on either side by pillars of Sienna marble. The works of art in the gallery include the Laocoon, the Apollo Belvidere, and many others of great beauty. To the south of the gallery, and forming the south front of the mansion, are the reception rooms, a magnificent suite, 300 feet in length, which, whilst opening into each other by folding doors, afford an uninterrupted and magnificent vista terminated by the conservatory. In this suite of rooms are the billiard-room, the library, the vestibule (which contains some fine Canaletti's and other paintings), the drawing-room (the walls of which are panelled with large mirrors, and the ceiling elaborately gilt), and the great ball-room, which adjoins the conservatory.

The conservatory is stocked with numerous orange and lemon trees, and a great variety of choice exotics, and rare and costly flowers. The building is 27 feet high, 77 feet in length, and about 60 feet in width.

On the north side of the mansion are the breakfast-room and the great dining-room; the latter contains portraits, chiefly by Sir Thomas Lawrence, of several members of the family; among others is that of the late marquis on horseback, in the uniform of the 10th Hussars, as in his celebrated charge at Benevento, in which he overthrew a very superior force of the enemy's cavalry. There is also a portrait of the Marchioness of Londonderry, leading by the hand Lord Seaham when a boy; one of Sir Henry Vane Tempest, her ladyship's father; also one of the late Lord Castlereagh in his coronation robes. The dining-room is 60 feet long by 30 feet in width.

Within the mansion, at the north-west angle, is the chapel, which is fitted up with rich and solid Spanish mahogany, of a beautiful grain, and of chaste and neat design. Around the walls are Corinthian columns of white marble. The stained glass windows were

executed by Mr. Wailes, of Newcastle. The ceiling, with its deep cornices, are massively gilt.

The chapel, as well as the statue gallery, and the north entrance hall, are flagged with polished marble. The floors of the reception rooms are of polished oak, inlaid with satin-wood and rosewood borders. The doors are of the finest Spanish mahogany, and the furniture and ceilings of the principal rooms are elaborately gilt.

Adjoining the mansion to the north-west, the memorial room, a spacious apartment, is in course of erection, wherein will be deposited the papers and writings of the late marquis, together with his various orders, and the numerous objects of interest which he had acquired during his eventful career. The apartment is 40 feet 9 inches in length, 26 feet wide, and 21 feet high. Twenty marble pilasters of the Corinthian order extend from the floor to the ceiling. Niches, with plate glass doors, are placed between the pilasters for the reception of the trophies, &c., belonging to the late marquis. Above the niches are panels in the wall, intended to contain groups of figures in bas-relief; the interior walls are plastered with Parian cement, and the cornice, beams, and ceiling painted and richly gilded. The work is executed by Messrs. W. and C. Burnup, of Newcastle, from designs by the Hon. Thomas Liddell, of Ravensworth Castle, whose taste and ability in decorative art are justly admired.

From the mansion, a broad terraced walk conducts to the gardens, which cover many acres of ground. The front or flower garden is flanked in its whole length with an extensive range of glass houses, containing pines, grapes, figs, peaches, and many other fruits, and rare and curious exotics and flowers.

A broad gravel walk or drive, arched over with trellised wire, and clustered with roses, jessamines, and other flowers, leads from the gardens to the orchard, and to the dairy—a pretty rustic building.

To the south of the gardens, and sloping down towards the lake, are the extensive pleasure-grounds, which are intersected with numerous gravel drives, and contain an aviary and a pretty Grecian temple. The park also contains grass rides several miles in extent.

The soil, which is a strong loam, has lately been completely drained, and by a judicious following up with artificial and other manures, is improving greatly both in quality and appearance.

The site of the mansion of Wynyard was formerly occupied by a hall of the same name, the residence of

the late Sir Henry Vane Tempest, father of the present Marchioness of Londonderry, and which had long been the seat of that distinguished family. Soon after the noble marquis became united to the family, the former hall was razed to the ground, and a magnificent mansion erected on the same site, from a beautiful Grecian design by P. W. Wyatt, Esq. The building was commenced in 1822, and when nearly completed, from some accidental cause, the magnificent edifice was almost entirely burnt to the ground, on the night of the 19th Feb., 1841.* The damage from this calamity was estimated at about £150,000. The building of the present mansion was soon afterwards commenced; the style and arrangements adopted being the same as those of the building which had been so unfortunately destroyed

Sir Hugh Capel, Knt., held Wynyard in the reign of King Edward I. He had five daughters and co-heiresses; viz., Cicely, married to Richard Daldene; Laderancia, married to Peter Wykes; Orfranca, Elizabeth, and Amyce. After his decease, Joan, his widow, married John, the son of Peter Deuthorp, who had the wardship of two of the daughters, and procured to himself divers lands in the manor of Wynyard, which he gave to Sir Henry Lisle, Knt., by deed dated 1283. Peter Wykes, above-named, sold his wife's part

* An immense quantity of valuable furniture was destroyed by the fire, and several exquisite works of art, amongst which were portraits of Queen Anne, George III., and Queen Charlotte, and, with only one or two exceptions, the whole of the Tempest family pictures. In the conservatory a number of large camelias, and twenty-five large orange trees in full growth, formerly the property of the Empress Josephine, together with a number of other rare and choice exotics, perished. The plate, books, and a number of valuable pictures were saved; and two fixed superb mantle-pieces, valued at £1,000 each, received but little injury. The fire appears to have first broke out in the chapel; the flames were observed at about 11 o'clock at night, and continued their progress until 7 o'clock next morning. An inscription on a brass plate inserted in the base of one of the columns at the front entrance, which is still retained, gives the date of commencing the building and other particulars, as follows:—"This mansion was erected by Charles William Vane, third Marquis of Londonderry, and the first Earl Vane of the United Kingdom of Great Britain and Ireland, G.C.B., G.C.H., K.S.G., &c., &c.; and by Anne Frances Vane, Marchioness of Londonderry and Countess Vane, who was sole heiress to all the collieries in the county of Durham belonging to the Vane and Tempest families, inheriting the same from her father, Sir Henry Vane Tempest, Bart., who married Anne, Countess of Antrim. The building was commenced in December, Anno Domini, 1822. The whole of the stone of this fabric was brought 26 miles from the quarry on the family estate at Penshaw colliery. Philip W. Wyatt, Esq., architect."

An inscription on another brass plate nearly adjoining the above, records the date of the fire, the re-building of the mansion, &c.

of the manor to Sir John Lisle, Knt., who gave the same to Allan Langton and Catherine his wife, daughter of Sir John. In 1316, Roger Fulthorp and Alice his wife gave to Alan, son of Henry Langton, and Margaret his wife, the fourth part of the manor of Wynyard which they had of Philip de Cullye. Henry and William Langton, July 18, 1344, obtained a grant of free-warren in their manors of Wynyard and Redmarshall. Simon Langton, fifth son of Henry, and heir to his brothers, married Avice, daughter of John Carrow, of Seaton-Carrow, and coheiress of her nephew. Thomas Langton, their son, was chamberlain and chief officer with Henry Percy, Earl of Northumberland and Lord of Cockermouth, 1417, "and he did augment the manor-house of Wynyard, with new edifices and buildings, as appereth by indentures made betwixt him and the artificers, dated in Anno 2^{do} of King Henry the Fifth." See the notice of the monument of this Thomas Langton and Sibill his wife at Redmarshall, p. 230. On his death, his estates passed to his niece, Sibill, who married Sir Roger Conyers, Knt., and whose granddaughter, Sibilla, married Ralph Claxton, in her right of Wynyard. William Claxton, Esq., their grandson, born about 1525, was a skilful herald and antiquary, and author of various collections relative to Durham.† Wynyard is described, not long after his decease, in 1600, as "so fruitfull of soyle, and pleasant

† WILLIAM CLAXTON.—The literary, geneological, and topographical treasures collected by this venerable gentleman, who seems to have had some design of illustrating the antiquities of his native county, were liberally supplied to his friend Stowe, as well as to Camden, with whom he corresponded. In 1575, he hospitably entertained the Herald Glover, during the Visitation (see vol. i., p. 172); and his pedigree is the fullest in the collection. In a letter to Stowe, written in 1582, Mr. Claxton requests the return "of that symple peece of worke which you have of myne concerning the Busshoprick," and adds that he has "so delt in his behalfe" that he has procured such "worthy and auncient recordes and monuments as are much fitter for his purpose." "A trew and perfect note of Busshop Pilkington" is promised in another of his letters. In 1584, he writes to Master Stowe, from Winyerd, as follows:—

"Jesvs.—Good Master Stowe: I receyved your courtouse letter by Roberte Layton the caryer, by which I understand yt yow have receyved my booke, letter, and token, accordyng to my directyons. I am glad to hear of y^r good proceeding in those two notable workes yow have in hand, and I wysh my abylytie were of credytt to doe yow any good therein. You know my mynd towards yow. I hope it needs no further explanation. I am always bould to mayke yow partaker of such antyquities and notes as I have any way compast in my opynyon to doe you good, which you may perceyve by thes notes under-written, leaving them, being but rude, and of my nowne inquisition, to y^r better consyderation, and more learned dysposition thereof. I pray you, good Mr. Stowe, to see the great boke I sent you by Layton safely packed;" and, after some further expressions of kindness, concludes, "I have also sent you an English crowne by Robert Lay-

of situation, soe beautified and adorned with woods and groves, as noe landes in that parte of the countrie be comparable to them." His estates passed to his daughters, Alice and Anne, wives of Sir William Blakiston and William Jennison, Esq., and his granddaughter, Cassandra Lambert, afterwards wife of Francis Morley, Esq.

By successive purchases, the estate became united in the Davisons, of Blakiston. Ralph Davison, Esq., of Wynyard, compounded for his estate for £400; and Samuel Davison, Esq., of the same place, compounded for £320. Wynyard afterwards passed to Alexander, brother of John Davison, Esq., of Blakiston; and his son sold it to Thomas Rudd, Esq., counsellor-at-law, Durham, from whom it was purchased by John Tempest, Esq., of Old Durham and Sherburn, descended from the Tempests of Holmside and of the Isle. He represented the city of Durham in 1742 and the three succeeding parliaments; he died in May, 1766. John Tempest, Esq., his son, was elected M.P. for the city in 1768, 1774, 1780, 1784, and 1790. On the death of his only son, John-Wharton Tempest, he devised to his nephew, Sir Henry Vane,* Bart., and died August 12, 1794. (See p. 217.)

Sir Henry Vane Tempest died August 1, 1813; and on the 17th, a motion was made in the Court of Chancery, *ex parte* his daughter, Lady Vane Tempest, born January 16, 1800, that a manager might be appointed to superintend the collieries belonging to her; on which the Lord Chancellor observed that he was well acquainted with the collieries in question, and was thoroughly convinced that to interpose a single week's delay in carrying them on might cause their

ton, for a remembrance, wishing yow to assure yourself so long as I lyve yow shall not want a friend."

Mr. Claxton thus spent a long, virtuous, and probably happy life in the acquisition of his valued treasures, and in corresponding with the most learned antiquaries of the time. He was, besides, a commissioner of array, and an active and loyal magistrate. "It is pleasing," as remarked by a kindred spirit, "to observe that his antiquarian pursuits, and his attention to letters, at a period when some gentlemen were unable, and others were ashamed, to write their own names, did not render him less attentive to the proper duties of his station."

* "Thus benevolent gentleman," says Longstaffe, "had for upwards of forty years employed William Garthwaite, of Wolviston, as carpenter at the hall, and afterwards as porter at the lodge. Two or three days before he died, he asked the old man if he could do any thing to make him more comfortable; but he expressed himself to be quite content as he was. The squire died; Madame Tempest, his widow, requested nothing except the miniatures of her husband and son, and left Wynyard for Little Grove near London. Henry Vane, of Long-Newton, was the heir to his uncle; but his long absence on the continent, his precarious health, and the total want of intelligence, rendered his existence extremely doubtful. One day, his valet acci-

ruin. He therefore granted the order: and Arthur Mowbray, Esq., became manager and receiver of the proceeds from the collieries. That gentleman afterwards became bankrupt; and the Court of Chancery made an order that all unsatisfied claims should be proved before the master on or before July 30, 1816.

Lady Frances-Anne-Emily Vane Tempest was married, April 3, 1819, by special license, to Charles-William Stewart, Baron Stewart, of Mount Stewart and of Ballilawn, Donegal, Ireland. The immense possessions to which the lady was heiress, together with the fact of her being a ward in Chancery, attracted, at the time, a considerable degree of public interest, which had been enhanced by a judgment pronounced by the Lord Chancellor, in the case "*Taylor v. the Countess of Antrim*," wherein his lordship stated his opinion, "that considering the imprudent line of conduct adopted by Lady Antrim, her ladyship should be interdicted in any further communication with her daughter, pending the inquiry into the case." He also observed that whether the match between Lord Stewart and Lady Tempest might be considered by the court hereafter to be eligible need not be considered now. To express his own opinion honestly, he did not see that it would be a match so ineligible; and he had not discovered any proof of an alleged collusion on the part of Lord Stewart.

By royal license, dated May 6, 1819, Lord Stewart and his wife were authorised to take and use the surname of Vane only, and to subscribe the same before all titles of honour.

The family of his lordship claims a common ancestor with the Earls of Galloway, viz., Sir William Stewart,

dentally took up an English newspaper, and saw an advertisement requesting the immediate return of his master; and they both arrived at Wynyard with all possible expedition. At the entrance to the grounds, they reined in their horses, and were gently riding through, when, to their infinite surprise, a loud voice exclaimed 'Come back!' On looking round, a tall elderly man approached from the lodge demanding where Harry had got authority to ride through without *his* leave; a smile pervaded the baronet's features, which exasperated the old porter still more, and he fiercely cried, 'Thou's somebody's dirty lick-plate, or thou never would come here in such an impudent manner!' After amusing himself a little longer, the *lick-plate* threw off his disguise, and told the porter plainly who he was, for the porter had completely forgotten the young heir's features. The astonishment was now on the other side; but Sir Harry Vane Tempest (to give him his latter title) told him good-naturedly to get his hat and stick and accompany him to the hall, talking over the events of his absence on the way. A visit to the lodge, to present the faithful creature with a guinea for a new wig, soon followed; and in his infirmity he was pensioned with his son and daughter at Darlington, and eventually was placed, through Sir Harry's influence, at Kirkleatham Hospital, where he died in 1818, aged 88."

of Garlies, from whose second son, Sir Thomas Stewart, of Minto, descended John Stewart, Esq., of Ballilawn Castle (the first of the family that settled in Ireland), who received a grant of land from James I., in the county of Donegal, and was succeeded at his decease by his eldest son, Charles Stewart, Esq., whose great-grandson, Alexander Stewart, Esq., of Mount Stewart, county Down, M.P. for the city of Londonderry, married, June 30, 1737, Mary, only surviving daughter of Alderman John Cowan, of Londonderry (by his aunt, Anne Stewart), and sister and heiress of Sir Robert Cowan, Knt., governor of Bombay. He was succeeded at his decease, in 1781, by his eldest son,

The Right Hon. Robert Stewart, of Ballilawn Castle, county Donegal, and of Mount Stewart, county Down, M.P. for the latter county, who was elevated to the peerage of Ireland, November 18, 1789, as Baron Stewart. His lordship was created Viscount Castlereagh, October 6, 1795; Earl of Londonderry, August 10, 1796; and Marquis of Londonderry, January 22, 1816. He married, first, in 1766, Sarah-Frances, second daughter of Francis, Marquis of Hertford, by whom he had Robert, Viscount Castlereagh, his successor; and secondly, in 1775, Frances, eldest daughter of Charles (Pratt), first Earl Camden, by whom (who died January 18, 1833) he had (with other issue, deceased) Charles-William and seven daughters.* He died April 8, 1821, and was succeeded by the son of the first marriage.

Robert, second marquis, born July 18, 1769, filled several high ministerial offices as Viscount Castlereagh. His lordship married, in 1794, Emily-Anne, youngest daughter and co-heiress of John (Hobart), second Earl of Buckinghamshire, but had no issue. The marquis died at his seat at North Cray, Kent, August 12, 1822 (at which period he was secretary of state for foreign affairs), and was succeeded by his half-brother, Lord Stewart.

Charles-William Vane Stewart, Marquis of Londonderry, K.G., Earl of Londonderry, Viscount Castlereagh, and Baron Stewart, in the peerage of Ireland; Earl Vane, Viscount Seaham, of Seaham, county Durham, and Baron Stewart, of Stewart's Court, in the peerage of the United Kingdom, was

born May 18, 1778; elevated to the peerage as Baron Stewart, July 1, 1814; succeeded to the Irish honours, as third marquis, on the decease of his brother, August 12, 1822; and was created, May 28, 1833, Viscount Seaham and Earl Vane, with remainder to his lordship's male issue by his second marriage. The marquis married, first, August 5, 1804, Catherine, youngest daughter of John, third Earl of Darnley, and by her ladyship (who died in 1812) had a son, Frederick-William-Robert, Viscount Castlereagh, lord-lieutenant of the county of Down, M.P., and now Marquis of Londonderry; born July 7, 1805; married, April 30, 1846, Viscountess Powerscourt, relict of Richard, sixth viscount, and daughter of the Earl of Roden.

The second wife of Lord Stewart, as has been seen, was the Lady Frances-Anne-Emily Vane Tempest. The responsibilities devolved upon his lordship by the management of the property of his bride, consisting of extensive estates and some of the most important coal mines in the county of Durham, opened a new field for the exercise of energies which the cessation of war had thrown into temporary inaction. His lordship applied himself with a vigorous activity, which formed one of his characteristics, to the development of the vast resources of the estates; and in this sphere of exertion exhibited a degree of enterprise and sound judgment, the fruits of which will be permanently enjoyed by his successors. Among the great works of improvement which Lord Londonderry planned and carried out to completion, was the construction of Seaham Harbour, an undertaking almost unprecedented as an instance of private enterprise, and justly accounted at the time amongst the wonders of engineering achievements. (See SEAHAM HARBOUR.)

His lordship became lord-lieutenant of the county of Durham in 1842, on the death of the Duke of Cleveland. He was also *custos rotularum* of the counties Londonderry and Down, in Ireland.

An act was procured, August 31, 1848, to amend a settlement made by the Most Hon. the Marquis and Marchioness of Londonderry, and the Hon. Viscount Seaham, and for other purposes therein mentioned. On the death of this distinguished and gallant noble-

* 1. Frances-Anne, married, in 1799, to Lord Charles Fitzroy, and died in 1810. 2. Caroline, married to Thomas Wood, Esq., of Gwernevet, county Brecon, M.P. and colonel of the East Middlesex militia. 3. Georgiana, married to George Canning, Esq., afterwards Lord Garvagh, and died in 1804. 4. Selina, married, in 1814, to David Kerr, Esq., of Portavo, county Down. 5. Matilda, married,

in 1815, to Edward-Michael Ward, Esq., who is deceased; she died in 1842. 6. Emily-Jane, married, first, in 1814, to John James, Esq., who died in 1818; and secondly, in 1821, to Viscount Hardinge, G.C.B., general commanding-in-chief. 7. Octavia, married, in 1813, to Edward, second Lord Ellenborough, and died in 1819.

man, his will was proved at Doctors' Commons. It consists of a few lines, giving all his estates, real and personal, to his marchioness, absolutely and at her entire disposal, appointing her also sole executrix. The will bears an unattested endorsement in his lordship's own hand-writing, recapitulating its contents in terms of most affectionate endearment. The personal estate in the province of Canterbury was sworn under £45,000, which, when added to that within the province of York, which is under £250,000, and in Ireland under £40,000, makes an aggregate of

* THE MARQUIS OF LONDONDERRY.—This nobleman was born May 18, 1778, in Mary Street, Dublin. At the age of fourteen, he received a commission as ensign in the 108th foot, was appointed to a company in 1794, and joined the expedition under the Earl of Moira. Captain Stewart was appointed assistant quartermaster-general to that division of the forces which landed at Isle Dieu, under General Doyle; and after the return of the British army, he was attached to Colonel Charles Crawford's mission to the Austrian armies in 1795-6-7. At the battle of Donauwert he was wounded by a musket ball. On his return home, he was appointed aid-de-camp to his uncle, Earl Camden, then lord-lieutenant of Ireland; and, during the Irish rebellion, Lieutenant-colonel Stewart served with the 5th dragoons. He was afterwards appointed to the lieutenant-colonelcy of the 18th light dragoons.

In 1799, he accompanied Sir Ralph Abercrombie's expedition to Holland. During this campaign he was again wounded; a ball struck the glass he was looking through, which it broke; but the tube turned the force of the ball, or the accident might otherwise have proved fatal. On the 25th September, 1803, he was appointed aid-de-camp to his Majesty, with the rank of colonel; and soon afterwards he occupied for a time the situation of Under Secretary of State in the war department. From this appointment he retired to assume the command of a brigade of hussars, under Sir John Moore, in Portugal, where he was to act with the rank of brigadier-general. On the advance of the army into Spain, he covered the march of Sir John Hope's division; and he was in the cavalry actions of Sahagun and Benevente during the retreat of Sir John Moore's army. His conduct was frequently the subject of praise by Sir John Moore; and on one occasion that general remarked—"Our cavalry is very superior in quality to any the French have; and the right spirit has been infused into them by the example and instruction of their two leaders, Lord Paget and Brigadier-general Stewart."

On arriving at Corunna, January 13, 1809, Sir John Moore determined to send home Brigadier-general Stewart, in order to report upon the progress of events. Sir John remarks, "that Brigadier-general Stewart is a man in whose honour I have the most perfect reliance; he is incapable of stating anything but the truth." At the same time, General Stewart had been seized with a severe ophthalmia, which made it impossible at the time for him to serve. Not many months elapsed, however, before he returned to the Peninsula as adjutant-general to the army under Sir Arthur Wellesley, a post which he continued to hold until May, 1813. During the pursuit of Marshal Soult's army across the Douro, he led two squadrons of the 16th and 20th dragoons, which charged the enemy most gallantly; and on many other occasions his name was honourably mentioned, particularly in the affair at El Bodon. For these services, and for his exertions at Talavera, he received the thanks of the House of Commons, February 5, 1810.

It was not, however, only on the field of battle, where he ever

personal property left by the deceased amounting to £335,000, exclusive of all the vast settled estates and collieries of the Vane and Londonderry families in England and Ireland, in the former of which he succeeded by Lady Londonderry, and in the latter by the present marquis.

The Marquis of Londonderry* has left issue by his second wife—

1. George-Henry-Robert-Charles, born at Vienna, April 26, 1821; there baptized at the hotel of the British Embassy, 4th June following, and afterwards

displayed the qualities of a fearless and accomplished soldier, that the Marquis of Londonderry earned honourable distinction. He was from time to time engaged in important missions to the camps of our allies. One instance may be recorded in which his personal courage and resolution rendered essential service to the common cause. He was specially charged with the supervision of Bernadotte, the Swedish king, who had armed his troops by help of subsidies from England, and was at the time wavering in his allegiance. No intercession less energetic than that of Sir Charles Stewart would have been effective to retain him in the path of duty. The secret history of the time exists to show what kind of remonstrances the English envoy found it necessary to employ at so critical a moment as that which preceded the great battle of Leipsic.

During the whole of his active services on the continent, he was a member of the House of Commons, to which he was returned for the county of Londonderry in the first parliament after the union, in 1801.

Sir Charles Stewart was appointed envoy extraordinary and minister plenipotentiary to the court of Berlin, April 7, 1813; and in November of the same year, he was removed from the lieutenant-colonelcy of the Enniskillen dragoons, which he had held from 1799, to the command of the 25th light dragoons. He had become a major-general July 25, 1810, and was promoted to lieutenant-general June 4, 1814. In the latter year, he was appointed ambassador to Austria; and, together with his brother Lord Castlereagh, the Earl of Clancarty, and Earl Cathcart, he was constituted one of the plenipotentiaries on the part of Great Britain to the congress of Vienna; the Duke of Wellington being subsequently added as first plenipotentiary on the 18th January, 1815.

Lord Stewart was nominated to the command of the 10th hussars, February 3, 1820. When holding that appointment, he fought a duel with Mr. Battier, a cornet in the regiment; and in 1840, in consequence of a speech which he had made in the House of Lords, he was challenged by Mr. Henry Grattan, M.P. for Meath county, and again obeyed the call of honour.

On the 12th Aug., 1822, on the melancholy death of his half-brother Robert, the second Marquis of Londonderry, then premier, Lord Stewart succeeded to the dignities conferred on their father in the peerage of Ireland.

In 1837, he attained the rank of general in the army; and in June, 1843, on the death of Earl Cathcart, he was removed to the command of the 2nd Life Guards.

The noble marquis died at Holderness House, Park Lane, on the 1st March, 1854, aged 76. His remains were interred at Long-Newton, the ceremonies attending which have already been given—see p. 217.

As a soldier, Lord Londonderry is admitted to have been as fearless as ever drew sword, and as undaunted in battle. In politics, his lordship was always attached to the Tory party. He had formed relations of intimacy with the present Emperor of the French when an exile in this country, and effectually exerted himself to mitigate

created Viscount Seaham; elected M.P. for the Northern Division of the county of Durham in 1847 and 1852; and succeeded his father as Earl Vane. He married, August 3, 1846, Mary-Cornelia, only daughter and heiress of the late Sir J. Edwards, Bart., and has issue a son, born July 17, 1852, and a daughter named Frances-Cornelia-Harriet-Emily.

2. Adolphus-Frederick-Charles-William, born July 2, 1825; elected M.P. for the city of Durham in 1852, but which election was declared void; succeeded his brother, Viscount Seaham, in the representation of the Northern Division of the county of Durham, which he resigned in 1854, on joining his regiment, the 3rd or fusilier guards, which was at the seat of war in the Crimea.

3. Ernest M'Donnell, born February 29, 1836.

4. Frances-Anne-Emily, born April 15, 1822; married, July 12, 1843, to the Marquis of Blandford, eldest son of the Duke of Marlborough.

5. Alexandrina-Octavia-Maria, married September 2, 1847, to the Earl of Portarlington.

6. Adelaide-Emilina-Caroline, married February 11,

the rigours of Louis Napoleon's imprisonment in the fortress of Ham. In return, he solicited and obtained, from Louis Napoleon, the release of Abd-el-Kader, when the following correspondence took place between the marquis and the oriental chief:—

"Thanks to the only true God.

"His Excellency, Lord Marquis of Londonderry, the Irish general—peace be with you! Know that the commandant, Boissonet, has communicated to me your letter. You are, indeed, a man of a good heart, and it was you who kindly visited me at Amboise, and it is quite one of the impossibilities that we should forget your visit and your bounty. For a sheriff [meaning a noble] is one who 'never forgets the good done, and does not recollect the evil.'

"The Emperor Napoleon has set me free: may God prolong his life in the empire and increase him in victory. I shall remain obliged to him to the end of my life, and my children after me will inherit my gratitude to him.

"I cannot visit you in your country, because my departure is at hand; and my mother is old and infirm, and I cannot leave her.

"May God increase your good, and be gracious to you: and peace be with you.

"This is from your friend, ABD-EL-KADER, Mohammed il Deen.

"Dated the 8th, last day of Safer."

The Emir, on his arrival at Broussa, again addressed the marquis thus:—

"Thanks be to the only God! and to his lordship, the magnificent, the very distinguished, the man of heart, the key of happy releases, before whom misfortune vanishes, Monsieur the General Vane Londonderry. Health to you and to your spouse—one not less amiable than illustrious. We have arrived at Broussa, in health and happiness. It is impossible we can ever forget you; and your friendship is so much the more precious to us in proportion as you are a man of honour, doing good to all men: because, likewise, you have loved us and have treated us with compassion; and, thirdly, because you are allied by an ancient friendship to our well-beloved and our benefactor, his Majesty the Emperor Napoleon III. We thank you

1852, to Frederick-Henry Law, A.B., of Corpus Christi College, Cambridge.

Arms.—Quarterly: 1st and 4th, az., three sinister gauntlets, or; in chief, a trefoil, slipped, of the last, for VANE: 2nd and 3rd, or, a hand, comonly, arg. and az., between two lions, rampant, gu., for STEWART.

Crests.—Of VANE: a dexter gauntlet, erect, holding a sword, ppr., pommel and hilt, or. Of STEWART: a dragon, statant, or.

Supporters of the Family—Dexter, a Moor, wreathed about the temples, arg. and az., holding in his exterior hand a shield, of the last, garnished, or, charged with the sun in splendour, gold; sinister, a lion.

Supporters borne by the late Marquis—Two hussars of the 10th regiment; the dexter mounted upon a grey horse, and the sinister upon a bay horse, with their swords drawn, and accoutred, all ppr.

Motto.—Metuenda corolla draconis. (The dragon's crest is to be feared.)

Seats—Mount Stewart, Downshire; Garron Tower, Glenam, county Antrim; Wynyard House and Seaham Hall, Durham.

WHITTON.

THIS township occupies the southern portion of the parish, comprising an area of 742 acres, divided into five farms. The hamlet, containing a public house, is 5

always. Receive the sincere expression of our acknowledgments. May we not be lost to your recollection! Write to us. The greeting of

ABD-EL-KADER, BEN-MAHRI-EDDIN.

"29th February, 1853."

To the above, Lord Londonderry replied as follows:—

"Most illustrious, heroic, and noble chieftain,—It is impossible for me to express the sentiments which I experience in receiving from you a testimony of a friendship so flattering, and of an acknowledgment so honourable to me, such as your autographic letter announces. I am rejoiced that your health is good, and that you are now happy after so many sufferings and misfortunes occasioned by injustice. And if I have by my efforts in the slightest degree contributed towards your restoration to liberty, I exult in my good fortune. My wife is sensible of your kind remembrance, and we recall with lively interest your cordial reception of us in the Chateau d'Amboise. It will not be easily obliterated from our remembrance. You call me 'a man of heart,' I am proud of that title. You call me 'a man of honour,' and add that you set value on my friendship. These words and this character, pronounced by the Emir Abd-el-Kader, will spread throughout my own country, throughout France, and throughout Europe, and will constitute my passport as having served the cause at once of justice and humanity. And they will never be consigned to indifference, or to oblivion. If, unhappily, we should but seldom meet in this world, at least this 'man of heart and of honour' will always remain devoted to the good cause, and to the Emir Abd-el-Kader.

VANE LONDONDERRY,

"General in her Britannic Majesty's Army."

The Marquis of Londonderry occasionally appeared as an author. He published, in 1805, "Suggestions for the Improvement of the Force of the British Empire;" and, in 1828, "A Narrative of the Peninsular War, 1808-13," in which he was understood to have had the assistance of the Rev. Mr. Gleig, afterwards chaplain to the forces. More recently he gave to the world, the important correspondence of his brother, Robert Marquis of Londonderry, K.G.

miles north-west-by-west from Stockton. The population of the township, which has 11 inhabited houses and a large flour-mill, was stated at the periods of return, at 38, 45, 59, 75, 52, and 50, 23 of whom were males and 27 females. The annual value of property assessed to the county-rate, in 1853, was £886.

The Clarence railway extends along $1\frac{1}{2}$ miles, and covers 12 acres in this township, towards the local rates of which it contributed £10 in 1851, and £7 10s. in 1852; the gross amounts collected in those years being £44 6s. and £33 4s. 6d.

From an early period, lands in Whitton have belonged to Sherburn Hospital. The Chipehases, Watsons, and Shawes appear as freeholders at various periods. The Davisons of Durham have more recently held lands. *Whitton House* is the property and residence of the Hutchinsons.

This family is supposed to derive from Uitonensis, who came over from Castle Cronenburg with Harold Harfager, and settled at or near Bishop-Middleham, then a fortified place. Thomas Hutchinson, grandson of Richard, fourth son of Thomas Hutchinson of Cornforth,* baptized April 20, 1661, purchased the estate of Whitton. He married, June 18, 1705, Sarah, daughter and co-heiress of Henry Law, Esq., of Billingham, and was succeeded by his son, Henry Hutchinson, Esq., of Whitton and Bishton, born in 1706, who married, in 1728, Mary, daughter of George Scurfield, Esq., of Crimdon House, and had issue, George, his heir; Thomas, of Bishton; Henry, of Stockton and Kirk-

* Robert, eldest son, born October 20, 1579, married, January 3, 1606, Agnes Morland, and had (with a younger son, Peter, who married, in 1653, Mary Johnson Kells) a son and successor, John Hutchinson, of Middleham, born in 1612, who married, September 11, 1638, Elizabeth, daughter of the Rev. Thomas Bedford, A.B. and had a son, Thomas Hutchinson, who married, April 15, 1673, Elizabeth Lynn, and was succeeded by his son, Thomas Hutchinson, of Cornforth, born in 1674, who married Ann Haswell, and had issue, 1, Elizabeth, born in 1699, married, in 1719, to Bryan Roper, Esq., of Trimdon, and had

leavington; and John, of Penrith, whose grandson assumed the name of Sutton (see ELTON, p. 214), and whose eldest daughter, Mary, became the wife of William Wordsworth, the poet.

George Hutchinson, Esq., of Whitton and Stockton, banker, married Catherine, daughter of Francis Forster, Esq., of Burton, by Frances, his wife, daughter of Charles Bathurst, Esq., of Skatterskelf, M.P. for Richmond, and grand-daughter of Joseph Forster, Esq., of Burdon, fourth in descent from Florence Forster, a younger son of the Edderstone family, and had issue George, his heir; Henry, born May 13, 1778; and Frances-Mary, married, July 15, 1800, to Charles Swain, Esq., son of Samuel Swain, of Sewardstone, Essex. Mr. Hutchinson died February 24, 1804, aged 74.

George Hutchinson, Esq., of Whitton House, son of the above, was born September 20, 1768; married, May 16, 1793, Charlotte Barbara, daughter and coheirress of Thomas Dawson, Esq., of Tanfield, and has issue George-Thomas, born March 15, 1794; married in 1826, Elizabeth, only daughter of Captain John Mercer, of the East India service; Charles-Francis, born July 22, 1796; Charlotte, died young; and Catherine-Mary, married to Jose-Luis Fernandes, grandson and representative of the late Marquis of Tavora. Mr Hutchinson is a deputy lieutenant for the palatinate.

Arms—Per pale, gu. and az. semye of cross-crosslets, and a lion rampant, or.

Crest—out of a ducal coronet, a cockatrice, az.

Motto—Nihil humani alienum.

Seat—Whitton House, Durham.

a son, Robert Roper, LL.D., chancellor of the diocese of York, who married, in 1754, Lady Harriet Hay, daughter of George, 7th Earl of Kinnoul, but died without issue; 2, Thomas, born in 1702, married, in 1727, Jane Surtees; 3, William, born in 1705, married, in 1728, Hannah Doubleday, of Butterby, and dying in 1777, left a son, Wm. Hutchinson, the historian of Durham (see vol. i., p. 10), born Dec. 31, 1732; married, Sept. 30, 1758, Miss Elizabeth Marshall, descended from Sir Thomas de Ogle; and dying April 7, 1814, left issue Robert Marshall, born 1764, Elizabeth, Winifred, Hannah, Frances, and Mary.

PARISH OF STANTON-LE-STREET.

THE parish of Stainton-le-Street is bounded by Haughton-le-Skerne and Bishopton on the south, by the latter parish and Redmarshall on the east, by Sedgfield on the north, and by Aycliffe on the west. It is divided into the townships of Great Stainton and Elstob.

GREAT STANTON.

THE area of this township is 1,214, acres, divided into four farms.* The population, according to the successive returns, was 104, 107, 126, 154, 105, and 117; of whom 64 were males and 53 females, inhabiting 24 houses. The annual value of property assessed to the county-rates, in 1853, was £972 3s.

The village of Great Stainton, now a mere hamlet, is pleasantly situated in a fine country, sloping to the south about 5 miles south-by-west from Sedgfield. It derives its addition (le-Street) from its position on the Roman road from Pounteys Bridge to Old Durham; and its prefix seems to imply its comparative extent with other places of the same name. There are several traces of foundations in the adjacent fields; and a place still called *Cross Hill*, a little to the north-east, has been supposed, though without any evidence, to have been the site of a cross. The village contains a public house, and a few rural tradesmen. *Stainton Grange*, to the south-west, has long been unoccupied and fallen to decay.

Thomas de la Haye held lands and a messuage in

* The following superstition is still prevalent amongst the people of this district:—"Darlington market has been unlucky to the farmers of Hawsley (near Great Stainton). One of them (named Boazman) had promised the daughter of Sarah Close, of Aycliffe, marriage; but, like many other people, failed to perform his intentions. The old lady (who had a suspected cat, and in passing whose door, school-lads, some sixty years ago, always ejaculated, 'FOUR FINGERS AND A THUMB, WITCH! I DEFY THEE!') accompanying the conjuration by the action of placing the thumb on the middle of the palm, and the four fingers upon it) had her revenge. The faithless swain soon began to lose all his flocks and herds, either by murrain or witchcraft; their bodies were thrown into a ditch near Newton Ketton, and were pointed out to my informant by his father years after; and so frightful was the visitation, that he is known to have come in tears to say that he had not one horse left to take away the dead bodies out of the fold-yard. For some time, even the cattle given or sold very cheap to him by his pitying neighbours, died also; but at last he began to prosper. In returning from market, one Monday evening, 'half seas over,' he fell from his horse, and was suffocated in a dirty pool of water near *Patie's Nook*. About forty years afterwards, the witch-bound farmer's nephew met his death on a similar journey from market, in the same

Stainton of John Baliol, by one penny rent at Easter fealty, and suit of court once in three weeks at Gainford. The same rent was paid for half the manor by Richard Lambton, Esq., who was slain, fighting on behalf of the house of Lancaster, at Towton, on Palm Sunday, 1461. His descendant, William Lambton, Esq., of Great Stainton, who died in 1612, left two daughters, viz., Anne, who married Nicholas Chaytor, Esq., of Butterby, and was the mother of Sir William Chaytor, Bart., of Croft; and Margaret, who married John Killinghall, Esq., of Middleton St. George. Their portion of Stainton appears to have passed through the Ogles of Durham to the Middletons; and William Middleton, in 1759, conveyed to John Tempest, Esq., of Sherburn, ancestor of the Marchioness of Londonderry. Other property in the township was held by the Rickabys.

THE CHURCH

STANDS on an elevation to the west of the village. It is a small neat edifice, without tower or side-aisles, capable of accommodating 103 persons. The east

state of intoxication, at the same place, and in exactly the same manner. The two succeeding occupiers of Hawsley also suffered violent deaths; the first by jumping from a train near Stillington when tipsy, the second by a corve of coals running over a staith, and crushing him when standing beneath."—*Longstaff*.

Patie's Nook, at the end of Cat-kill Lonin (so called from its having formerly held the reputation of being a rendezvous for cats, or witches, to hold their annual diabolical consultations,) where four roads meet near Stainton, is a place of ghastly renown. *Patie's* beer-house was a place of no very good association in any way. One market day, at Darlington, two farmers, Pringle and Race, fell out sadly, and Pringle threatened, "Before the sun rise to-morrow, I will be revenged of you." Race passed through Haughton, Pringle after him, and that was the last time he was seen alive. Two butchers intended to halt at *Patie's Nook* at midnight; but looking in first, they saw two men by a glimmering light; one supported a dead man's body bleeding from ear to ear, the other holding a basin to catch his blood. The butchers fled in terror. It was conjectured that Pringle and *Patie* burnt poor Race's body in an oven, but no evidence was procured; the murderers escaped, and the vile den, or beer-house of the olden time, has wholly passed away.

window consists of three lights under an obtusely-pointed arch; there are two arched windows on the south side of the chancel: those of the nave are common sashes. The font is an octagonal basin of freestone; the communion table is plain and unadorned. Texts of scripture, in plain black frames, are arranged on the walls. The burial-places of the Seurfields of Elstob, and the Nicholsons, are in the chancel.

REGISTERS.—Books Nos. 1 and 2 (parchment) contain entries of baptisms and burials from 1561 to 1800, and marriages from 1561 to 1752; No. 3, marriages from 1755 to 1799; and No. 4, baptisms, burials, and marriages, from 1797 to 1812.

Stanton, alias Staynton in Strata, rectory; the prior of St. Mary's, York, patron till the Dissolution; since, the crown. King's Books, £12 13s. 4d.; Tenths, £1 5s. 4d.; Episc. proc., 8s.; Archid. proc., 2s. Dedication to All Saints.

RECTORS.—William, presb. de Stanton, 1120; R. de Appleby; T. de Lincoln, 1369; T. de Lindesay, 1370; J. Cotenore, 1416; R. Marshall, 1433; R. Medow, 1448; D'n's J. Manfield, 1446; D'n's R. Chamber, 1497; W. Wytham, 1524; D'n's J. Metcalfe, 1530; R. Marshall, 1538; S. Robson, 1582; T. Ingmethorp, 1594, p. res. Robson; H. Doughty, 1638, p. m. Ingmethorp; T. Carr; J. Illiard, 1658; W. Pell, A.M., 1660; T. Pearson, 1662, p. depr. Pell for nonconformity; J. Platts, A.M., 1681; T. Nicholson, A.M., 1706, p. m. Platts; J. Emerson, A.M., 1749; H. Vane, I.L.D., April 21, 1754; J. Douglas, S.T.P., p. res. Vane; G. Maclellan, A.M.; H. Philpotts, A.M., p. m. Maclellan; T. Baker, A.M., p. res. Philpotts; W. Addison, August 18, 1811, p. res. Baker; D. M. Peacock, A.M., 1812, p. res. Addison; Thomas L. Trotter, A.M., 1841, p. m. Peacock.

The church and rectory formed part of the monastery of St. Mary at York, and were included in the confirmatory charter of King Henry II. Since the Dissolution, the advowson has remained in the crown. Queen Henrietta Maria had a grant of £17 6s. 8d. fee-farm rent out of this rectory. The parsonage, which was rebuilt by the Rev. J. Emmerson, is a handsome mansion, with a garden and shrubbery, and commands an extensive prospect, bounded by the Cleveland hills on the south, and reaching to the sea on the east. The glebe, including the site of the house, &c., contains 47 A. 3 R. 6 P. The rector is entitled to all tithes. The gross income is stated at £340, and the permanent payments at £61, leaving £279 clear.

CHARITIES.

School.—The Rev. Thomas Nicholson, rector of Great Stanton, by will, January 26, 1745, bequeathed £100, and his interest in certain leasehold property in

Northallerton, to trustees, who were to sell it, and apply the proceeds and legacy to the salary of a schoolmaster, who should teach the poor children of Great Stanton reading, writing, and arithmetic, with the Church Catechism, and the expositions thereof by Dr. Nicholson, Dr. Kenn, Dr. Wake, Bishop Beveridge, a little book called the Art of Catechising, and Lewis's Catechism. The master was to be appointed or removed by the owners of the testator's estates in Yorkshire; and the bequest was to be on condition that the freeholders of Stanton provided a school-house at their own expense. The devised property was sold for £84, which, with the £100, produces an interest of £7 7s. annually. In 1771, the trustees of Lord Crewe's charities gave £60 to the use of Stanton school; and £40 of this sum was laid out, in 1774, in the purchase of a rent-charge of £1 10s. out of a tenement and close in the parish of Stanhope. A further donation of £100 was made in 1779; on which, Anthony Hubbock and Isabella his wife gave £60, on condition that four poor children from Little Stanton, in the parish of Bishopton, should be nominated to the school by the owners of the house then held by the donors. These two sums, with the £20 remaining from the first grant, were laid out, in 1780, in the purchase of £290 10s. 2d. stock, the dividend from which, £8 14s. 6d., is paid to the schoolmaster. The school is now conducted on the national system. At the visit of the government inspector, in July, 1853, there were 22 boys and girls present at examination; 7 had left and 8 had been admitted during the preceding twelve months; and the average attendance was 21. General observations:—

“Buildings, a small room, brick floor; no class-room. Two desks fixed to wall. Furniture, clock. Playground, the village green. Books fair; apparatus, one black-board, one easel.”

Barker's Charity.—Mary Barker, in 1719, gave £5, vested in the overseers, to the poor of Great Stanton. In respect of this sum, 5s. is distributed annually at Easter amongst five poor widows.

ELSTOB.

ELSTOB is a township to the north of Great Stanton, comprising 733 acres, divided into four farms, and containing 6 inhabited houses. In 1801, the population was 37; in 1811, 29; in 1821, 28; in 1831, during the construction of the Clarence railway, 94; in 1841, that undertaking having been completed, 27; and in 1851, 38, of whom 21 were males and 17 females. The annual

value of the property assessed to the county-rate, in 1853, was £476.

In this township, the Clarence railway has an extent of 6 F. 119 Y., and an area of 7 A. 0 R. 3 P. In 1851, it contributed £3 9s. towards £36 5s 3d., the amount of local rates; and in 1852, the gross amount being £30 12s. 6d., the railway contributed £2 17s. 6d.

The Greys of Northumberland were anciently proprietors of Elstob, which was forfeited to the see on the execution of Sir Thomas Grey, at Southampton, in 1417. The estate, about the close of the following century,

passed through the Spencelys and Wrens of Henkroll to William Scurfield, Gent., whose posterity held it for several descents. It was afterwards mortgaged to various parties, and eventually united by purchase in William Spearman, who, in 1723, conveyed to William Challoner, clerk. In 1771, Robert Challoner and Nathaniel Green (a mortgagee) joined in conveying their lands in Elstob to John Tempest, Esq., of Wynyard, for £4,500; and from the descendants of the latter it passed to the first Earl of Eldon, Lord Chancellor of England.

PARISH OF SEDGEFIELD.

THE extensive parish of Sedgefield, forming the north-western extremity of Stockton Ward, as at present constituted, is bounded on the north-west and west by Bishop-Middleham in Durham Ward, and Aycliffe in Darlington Ward, on the south by Stainton-le-Street and Redmarshall, on the south-east by Grindon, on the east by Elwick Hall, and on the north by Trimdon and Kelloe. The parish is divided into seven townships:— 1, Sedgefield, including Hardwick, Sands, and Layton; 2, Bradbury and the Isle; 3, Morden; 4, Foxton and Shotton; 5, Butterwick, including Old Acres; 6, Embleton, including Swainston and the Mortons; and, 7, Fishburn.

SEDGEFIELD.

THIS township contains 5,171 acres. In 1801, its population was 1,184; in 1811, 1,307; in 1821, 1,268; in 1831, 1,429; in 1841, 1,345; and in 1851, 1,362, of whom 650 were males and 712 females. In 1841, there were 23 persons in the Sedgefield Union workhouse, and 22 in 1851. At the latter period, the township contained 295 inhabited houses and 14 uninhabited. The annual value of property assessed to the county-rate, in 1853, was £6,055 10s.

The poor-rate return of the parish of Sedgefield, for the year ended Lady-day, 1855, was as follows:—

RECEIPTS.		£.	s.
Poor-rates.—Sedgefield, 540 <i>l.</i> 11s.; Bradbury, 137 <i>l.</i> 17s.; Morden, 96 <i>l.</i> 11s.; Foxton and Shotton, 31 <i>l.</i> 12s.; Butterwick, 50 <i>l.</i> 12s.; Embleton, 63 <i>l.</i> 6s.; Fishburn, 130 <i>l.</i> 14s.		1,051	3

	<u>£1,089</u>	7

HISTORY.—About the year 900, Bishop Cutheard, successor of Eardulf, with the church's money redeemed the vill of Sedgefield, with its members, which

had been previously held by Aculf, Ethelbryth, and Frythlake.

Boldon Book records that there were twenty villains in this manor, who held their lands and performed their services like those of Boldon. There were also twenty farmers, each of whom held two oxgangs, and paid 5s., besides contributing, with their households, a prescribed number of days' service in hay and corn harvest. John, the reeve, had two oxgangs; the smith, one oxgang, for which he made the tenants' carts, finding his own coals; the carpenter, twelve acres for making and mending carts and implements of husbandry; and the punder, twelve acres, paying 40 hens and 400 eggs. Five cottagers held five tofts, paid 5s., and tilled four portions. The villains paid 3s. for toll of ale, and 20s. for cornage; and the whole vill joined to provide one milch cow. The manor-mill paid six marks, and Fishburn mill-dam 2s.; William of Aldacres, 16s.; Ufred of Butterwick, half a mark; and William held Herdewyck, and paid 10s.

Bishop Kellaw, in 1312, granted a weekly market, to be held on Friday, with a yearly fair for five days, commencing on the Eve of St. Edmund the Archbishop. John de Whytechurch, rector, made complaint to Bishop Bury, that the Friday market was neglected, and that the chapmen and others exposed their merchandise and transacted their business in the church porch on Sundays; on which the bishop issued a confirmation of Kellaw's grant.

Amongst the free tenants named in Hatfield's Survey were Roger de Fulthorp and John Herdwyck, who held the estate of Herdwyck; also John Henley, rector, Thomas del Hall, Thomas Gray, and the owners of Butterwick and Oldakres, which latter estates had recently been brought into cultivation. Malmen are named, whose services were the same as those of the farmers in Boldon Book. The villains, if required, were to build, once in the year, a house, of specified length and breadth; on which service, each was to be released from 44 of his averpennies. William Kellaw, the punder, besides the hens and eggs, paid 6s. The tenants paid 6s. in lieu of a milch cow, 20s. for cornage, 31s. 8d. for scatpennies, and 26s. 8d. for averpennies; and the bonds redeemed their woodlades for 20s. Portions were held by exchequer rents. The Brok moor is mentioned, for which the tenants paid 16s. 8d., before 40s.; and a fulling-mill near Cornforth, which used to pay 33s. 4d., was untenanted.

On the breaking out of the Northern Rebellion in 1569, nineteen persons joined it from Sedgefield, seven

from Fishburn, four from Shotton, and one from Morden. The proceedings in Sedgefield on that occasion are described in the depositions taken after the suppression of the insurrection. Cuthbert Gubion, labourer, aged 72; Thomas Richerdson, do., aged 60; Robert Walker, do., aged 50; and Christopher Hartburn, do., aged 40, were employed in building the altar in the church, which the queen's soldiers afterwards cast down. John Newton, parish clerk, husbandman, aged 58, saith—

“That he, this examine, was present in the church of Sedgefield when the workmen and laborers, byfor examined, had ther work redye, and was lyffting up the aulter stone; and in ther so doing, sodainly thei cauld of this examine for his helpe, sainge, ‘Ye passe not of the maiming of us.’ Whereupon, this deponent came to them, evon them, and helpt to gyve the said workmen and laborers a lyfft at the said aulter stone, at the laying on of the same; saing the soilgiers afterware cast ytt down, which was hyd with rubbish and layd low in the presene of this examine, Rowland Hixson, and Walkerson, and by Robert Walker, and that ther was to the number of 80 persons that drewe the said stone with ropes out of Gibson Garth; but this examine knoweth nor can name any one of them. Also he, this examine, came to masse, which one Richard Hartburn said, the vij. of December, in the church of Sedgefield, and kneild and used reverence therto: he used no beads, nother toke hollywater nor holly bread. And as for the hollywater stone it came out of Potter Garth to the church; and this examine dyd se the setting up of the same, and was caried out of the church and church yard by Roland Hixson and one other whom he knoweth not; sainge that this examine brought water in a skeil to be maid in holly water, and the said Hixson broughte bread also then for holly breade. He hard also Richard Hartburn sermon in the said church, sainge the doctrine of England was nowght, and that this Realm was cutt off from all other Nacions; but whither he gave any open absolucion to the people or nott, this examine cannott depose. And as for the bokes, he heryng that bokes was bornt at dyvers places, this examine delyver all the books to the said Roland Hixson the churchwarden, but the Byble and 2^e Salters; but when the Books was first bornt, after what soort they were bornt, or by whom, he cannott depose; for this examine was then in his bedd. Mary, at the latter borninge of the books this examine was at burninge of the 2^e Salters, and bornt one old boke of his own to save the Bible, which thereby is yet, the said Byble, sayed.”

In the personal answer of Roland Hixson, husbandman, aged 50 years, he stated that he was compelled by Lancelot Bulman, Brian Headlham, and Richard Fleitham, to assist in setting up the high altar and holy water stone. As for the books, he said that Fleitham came to his house, before daylight, and commanded him, in the queen's name and the earls', to deliver the church books to him and Bulman, as they would not leave the town till they had them to burn.

“And thereupon this examine rose out of his bedd, and caried the said books to the crosse, to the number of fyve bookes, which this deponent brought to the crosse in the toune gayt, wher they were burnt by this examine and dyvers others; amongst which was Cuthbert Gibson, which help to cutt the said books; other fett fyer

and whynes and straw, amongst which was Agnes Sklaiter, Isabell Fidler, Florence Lookson, widow Whyte, and other. Examined whither this deponent, when the bokes was in burninge, sayd, 'Se wher the Homilies feith to the devill;' which words he, this examine, denieth. Mary, he saith, that when one old booke of the clark's was in burninge, this deponent said aloud, 'Se wher the byble bornes;' which words he spoke to the intent that the byble should not be cauld for, which is yet sa[fe] therebye."

Several other depositions, to the same effect, have been preserved. After the suppression of the outbreak, five executions took place at Sedgfield, two at Fishburn, one at Foxton, and one at Morden.

On July 25, 1636, a division of waste and common lands in the township was made, with the consent of the bishop. The bishop's waste, about $2\frac{1}{2}$ acres, was given to the rector, who also received, as compensation and allotment, nearly 158 acres more. The other principal claimants were, Sir Ralph Conyers, Knt., of Layton; Nicholas Frevile, Esq., of Hardwick; Henry Blakiston, Gent., of Sedgfield (son of Marmaduke Blakiston, then late rector); Robert Jonson, John Harrison, John Johnson, Thomas Smith, Leonard Middleton, Rowland Hixon, Richard Bradley, Thomas Wright, John Younge, Humphrey Mason, Roger Cowlinge, Robert Bellerbie, Richard Key, John Walker, Robert Hindmers, Olliver Scott, Ralph Watkin, Peter Hodshon, Robert Brown, Gyles Botcherbie, Alice Buckle and William Elstob, and Florence Butler, widow, and George Butler, Gent., of Fishburn.

A large proportion of the lands in the township is still held by lease, or by copy of court roll, under the see of Durham. The various freeholds have passed through the families of Lambton, Conyers, Ord, Wright, and others.

THE TOWN.—The town of Sedgfield is situated on the turnpike road between Durham and Stockton, and is 11 miles from the former and 10 from the latter place. It is distant, by road, 14 miles from Hartlepool, 24 from Sunderland, 31 from South Shields, 25 from Gateshead, 12 from Bishop Auckland, 26 from Barnard Castle, 14 from Darlington, and 248 from London. The town stands on a fine gradual swell of dry gravelly soil, and is consequently airy, pleasant, and healthy. In the centre is a large area, on which a market was held every Friday, and cattle fairs on the first Fridays in April and October. The markets are now, however, but nominal; the wants of the town being met by casual supplies of agricultural produce from the immediate district. A fair for the sale of swine is held on the first Friday of every month.

Several good houses surround the square on the south, west, and north sides, the east side being occupied by the church, rectory, &c., and the endowed school (see CHARITIES). The latter is a substantial structure, faced with freestone, erected on the site of a previous building in 1826; the cost being defrayed by subscription, towards which Lord Barrington, then rector, contributed £100; the Barrington School Fund, £200; the fund for establishing schools in Durham, under act of parliament passed in 1822, £100; Lord Crewe's trustees, £150; the executors of Bishop Barrington, £300; William Russell, Esq., £50; Miss Orde, £5; Mr. Salvin, £5; and Richard Wright, Esq., £10. In 1852, the trustees of the Barrington School at Bishop Auckland granted £15 towards the repairs of the school.

A good inn and posting-house stands at the north-east entrance into the town, and five inns and taverns in other quarters. There is a large brewery and malting. Several cartwrights, joiners, smiths, shoemakers, tailors, shopkeepers, and tradesmen, required for an agricultural population, carry on business, and are supported by the inhabitants of the town and surrounding district. Hauxley water corn-mill is about a mile from the town; and a railway station on the Clarence line is distant about $1\frac{1}{2}$ mile.

According to ancient custom, the parish-clerk is obliged to furnish a foot-ball on Shrove Tuesday, which he throws out into the market-place, where it is contested for by the mechanics against the agriculturists of the town and neighbourhood; the day's sport generally concluding by the victors and the vanquished drinking "potations pottle deep" in commemoration of their exploits.

THE CHURCH.

THIS edifice stands probably upon the site of the church of which Ulchild was rector in 1085, and in which Andrew de Stanley, first Master of Greatham Hospital, was buried. The present structure is cruciform, and is one of the most handsome churches in the district. The western tower is 60 feet high, embattled, and supported by corner buttresses, from the tops of which spring lofty hexagonal turrets, surmounted by conical spires.* It contains five bells, and has a good clock on the west front. The Rev. Theophilus

* In May, 1854, a temporary observatory, 30 feet high, was erected on the top of the steeple, by Mr. Cahill, who was employed by the Board of Ordnance in making a trigonometrical survey of the district.

Pickering, rector, intended to furnish an additional bell, which was cast, and brought to Sedgefield, about the time of his death; but having impoverished himself by charitable gifts, he scarcely left effects for his funeral, and the bell was returned to the manufacturer.

The ancient custom of ringing the curfew is still continued in this rural parish. In the summer months, it is rung at nine o'clock in the evening, and in winter at eight; and after a pause, the day of the month is indicated by a corresponding number of strokes of the bell. In the morning, the bell is rung in summer at five, and in the winter at six o'clock.

The entrance to the church is by a plain porch on the south. The length of the nave and side aisles is 70 feet, and their width $48\frac{1}{2}$ feet. The aisles are formed by rows of three pillars, each of which consists of four cylinders joined, standing on a square plinth, with surrounding bands at mid-height, and surmounted by capitals curiously sculptured with foliage, flowers, birds, and human figures. The arches are pointed, springing from corbels of human heads, and ornamented with zigzag and filleted mouldings. The pillars are the earliest specimens of their style in the county, and, with their bands, resemble those in the circular part of the Temple church, London, finished before 1200. Each aisle is lighted by two arched windows; and there are three clerestory windows on each side of the nave.

The transept is 89 feet long. The south end, or south transept, formerly the chantry of St. Thomas, is lighted by a large window on the south and two on the sides, under pointed arches. The north transept, also built for a chantry in 1379, is lighted in the same manner, and was long used as a burial-place for the Hotons and Frevilles. It is now fitted up with a gallery, containing the Hardwick seats; the space under which is used as a vestry.

Beneath the lofty arch which separates the nave from the chancel is a rich screen of tabernacle work, in old oak, with three canopied stalls on each side, divided by light pillars, and surmounted by crocketed spires. The chancel is apparently of the same date as the north transept, and is 53 feet 8 inches in length, and 20 feet

5 inches in width. The space within the rails is large and commodious. There are three pointed windows on each side; and the east window is divided into five compartments, surmounted by elegant tracery. In the centre, the arms of Bishop Barrington are emblazoned in stained glass; on the north side, those of Lord Viscount Barrington, the late rector; and on the south side, those of the Rev. T. L. Strong, the present rector, at whose expense the window was renewed, and other restorations made in the chancel. This part of the church is pannelled with oak, about 8 feet high, and stilled with seven seats on each side, which, with the screen, are of the Elizabethan era.

Under the belfry is a good organ, the gift of Dr. Pickering, dated 1708. The font, supposed to have been presented by the same donor, is a large octagonal basin of black marble, sculptured with the arms of Pickering, Elstob of Foxton, Hoton of Hardwick, Thornton, Butler of Old Acres, Lambton of Hardwick, Wright of Sedgefield, and another. One of the most remarkable and primitive features in the church was the old money-box, consisting of the hollowed stump of a tree, fixed in the pavement, but which is now taken away.*

The church contains monuments to several of its rectors, and to members of the principal neighbouring families. In the pavement of the north aisle was, until recently, a large stone, with two inlaid figures of brass, representing skeletons in shrouds, each about half a yard long. That on the left had the shroud wrapped around the lower part of the waist; but in that on the right, it was thrown quite open. These mementoes have been removed.

In 1848 and 1849, considerable repairs and alterations were made. The roof of the chancel, which had previously been ceiled, was renewed, and is now of high pitch and open. The cost was defrayed by subscriptions amounting to between £200 and £300, to which the bishop, the rector, and some of the Barrington family contributed. The roofs of the nave and aisles are also open, and constructed of stained wood.

The floor of the church is paved with diamond-

* There is preserved at Durham, in the Court of Chancery, an oblong chest of oak, containing upon the inside of its lid, in colours still distinct, the arms of England and Neville, together with the shield of Bishop Bury, and a coat unknown. There are also spirited representations of two wiverns, a lion rampant, and a centaur holding a round shield and spear. The whole affords a valuable specimen of the colouring and emblazoning of its period. It appears from an Ancient Roll of the year, that in 1521 the Receiver General of the

See gave to the churchwardens of Sedgefield a shilling, to be laid out upon the fabric of their church, in exchange for a chest 'for the safe keeping of the bishop's money during the time of the audit.' John de Whitechurch, rector of Sedgefield, was the sole executor of the will of Bury, from whom he had received his various preferments. Was the chest here purchased that which is above described; and had it been originally placed in the church of Sedgefield by Whitechurch, in memory of his patron?—*Raine's Auckland Castle*, p. 36.

shaped tiles ; and covered with wood beneath the seats. The pews are all open ; and there is accommodation for 600 persons.

The communion table, it appears, was unlawfully removed by the churchwardens in 1567. The articles set forth by the bishop's notary public, Thomas K[ing], against Jo. H., Jo. B., Robt. D., and S. W., T. M., and every of them, are, 1. That the bishop is ordinary of the see ; and that R[obert] S[wift] is his vicar. 2. That the bishop has power, by act of parliament to set or place the table of the holy communion in the chancel or the body of every church, and to appoint where morning and evening prayer may be most conveniently said or sung. 3. That in 1562, the bishop appointed that the Lord's table should stand in the body of the church, and also that Common Prayer should be there said and done in all places within the diocese. 4. That, in the present year 1567, the said R. S., ordinary, being personally present in the church of Sedgefield, did appoint the Communion Table and certain forms or desks to be placed in the body of the church, in such order and comeliness as seemed unto him most convenient for the ministration of sacraments and saying of Common Prayer. 5. That on the 7th November inst., the said Jo. H., Jo. B., &c., "not haveinge God before their eyes, nor the preheminance of the jurisdiction Episcopall, did into the

churche aforesaid enter, and, after dyverse contemptuous wordes then and there by them spoken, being also counselled to the contrarye, did forceableye, contemptuouslie, and rashlie take up and remove the said table, forms, or desks." 6. That the said Jo. H. "verie contemptuouslie and rebelliouslie in the said churche, before dyvers honest persones, once, twyse, or oftener, said openlye that he would remove the said table and formes, which the said Ordinarye had placed, addinge further that he was a hinderer and no furtherer of God's service." 7. That "whosoever dothe usurpe, invaid, or contempe the jurisdiction Episcopall of any Bushop, or his Ordinarye, is by the lawe (ipso facto) excommunicated, and so ought to be declared and reputed amongst all Christian men." The parties were sentenced accordingly.*

It was agreed at a vestry meeting, held December 6, 1750, to erect a gallery in the church, and to make a skylight in the roof, above the said gallery ; but this resolution was afterwards opposed and set aside by John Burdon, Esq., of Hardwick, on the ground of its interfering with his property and seats in the said church.

At a meeting held in the vestry, July 8, 1811, it was resolved that the purchaser of the pew bounded on the north by the south aisle, on the east by the east aisle, on the south by the rector's pew for the time being, on

* The following depositions, taken in 1568, in a charge brought by George Cuthbert against Brian Headlam, have been published by the Surtees Society :—

"Lancelot Butiman, of Sedgefield, husbandman, aged 54 years.—He, this examine, was by at the Evening Praier when the church wardens of Sedgefield cam to hym and demandyd 12d. of the said Bryan, because he hadd his capp on in servie tyme, and he, the said Bryan, refused to pay the 12d. and maid his skewe that he had an evill head.—He remembreth that the said Bryan receyved at Easter last, and about the feaste of Candlemas, when the parishe was comandyd.—He hard not Brian Hedlam threaten the said Th. Watkin, or any of the church wardens, but he said that, yf the law wold serve hym, he wold seke remedye by lawe against the said Watkyn.—The curat answered thus, 'Thou saist lyke a knave.'

"Thomas Watkin, of the same, husbandman, aged 54 years.—He and the said Bryan married 2 susters. He saith that he kept his cap on upon one Sunday at the Morning Praier, wherfore this examine and Robert Laiton demandyd 12d. of hym. And one other tyme, at the Evening Praier, and the third tyme, he misused the curat, and spoke to hym at such tyme as the said curat was examine or speaking to a penitent. And ther upon this examine and his felowes demandyd 3s. of the said Bryan, according to their presentment, which refused to pay yt unless he were compelled by order of lawe.—He saith that this last yere he receyved twice, and byfor that yere neither he or any parishioner then receyved but once.—He saith that about Christemas last past the said Brian said to this examine, 'I promes you, yf the lawe will serve me, I shall make you spend 40s.' Examined of the cause wherfor, he saith, because he this examine

presented the said Bryan to the judg, Mr Swyft, in the consistory of Durham—the presentment is trewe and all the contents therein.

"Robert Smith, of Foxton, husbandman, aged 50 years.—He saith that he was in the church of Sedgefeld, in the tyme of servie, when the said Bryan dyd disquiet Mr Horsfall ther curat with speaking to hym at that tyme, viz. the said curat thought the 2 penitents satt to ly up in the church, and spoke to them, and special to one of them, to sett lower, and at last she so dyd, and ther stood a yong man neir hir whom the said curat asked whether that she was his wench or no, and the young man gave no answer, but Brian said then to him, the said curat, 'She may be youres, yf ye will ;' and one other tyme this examine dyd se the said Bryan have on his cap at the tyme of the Morning Praier, and further," &c.

Extract from the libel against Brian Hedlam of Sedgefield :—"That you, Brian Hedlam, being in the parish church of Segfeld, the 17 day of November last, 1568, at the Morning Praier, at the saing of the generall confession and repeting of the Lorde's praier, beleffe, and ten commandments, letane, and other suffragies ; at which time, by the Quene's lawes, every Christen man and woman ought orderly and reverently to put of his cap and knele upon his knees, and use other reverent behaviour, you, Brian Hedlam, not having God before your eies, but stirred up with devilish contempt and irreverence, did, the day and time aforesaid, sit with his cap on his head, and being therof lawfully admonished, refused contemptuouslie to reforme these defaultes, or to pay 12d. to the churchwardens for the poore man's boxe then demanded, and disturbed the church with talking."

In the following year, Headlam appears to have engaged actfvely in the proceedings of the insurgents. See page 331.

the west by pews formerly belonging to Robert Mason, should be indemnified from all charges and costs in taking possession of the same.—The said pew was sold to Richard Wright, Esq., for the sum of £16, on the day above mentioned.

The fabric is maintained in repair by a church-rate, which usually amounts to three-halfpence in the pound. In 1848, to meet the heavy charges consequent upon the alterations and improvements, the rate was twopence-halfpenny in the pound; in 1849, twopence; in 1850, three-halfpence, the latter amount continuing to be imposed. The rate of three-halfpence, by the returns in 1854, amounted to £78 10s. 3d., the different townships in the parish bearing the following proportions:—

Sedgefield	£30	6	3
Butterwick	4	8	8
Fishburn	6	19	9
Embleton	6	18	11½
Foxton	3	16	0
Morden	10	7	1
Bradbury	15	13	6½
	£78	10	3

St. Catherine's chantry, in the north transept, was founded by John de Henly, parson of Sedgefield, by charter from Bishop Hatfield, dated September 16, 1379; it was endowed with lands of £10 per annum, for

* AFFRAY IN SEDGEFIELD CHURCH-YARD.—Proceedings against John Johnson and others, for laying violent hands upon John Martin (probably the same person mentioned p. 309) curate of Sedgefield, in the church-yard:—

"21 Oct. 1575. The personal answer of John Johnson, of Sedgefield, yoman, alias husbandman, aged about 35 years.—He saith that, in the moneth of Maii or June articulate, being yett in the present yere 1575, he, this examine, haith nott at any tyme maliciously by wordes quarrelld, chidd, or railed to or upon the said John Martyn, clerke, the minister articulate; saing, further, that he, this examine, never spoke nor said the worde in this article libellat, 'Hawg villain! have I nowe catched the? I shall nowe be evon with the.' Mary, this deponent remembreth that, about the 19th of June articulate, this examine and Robert Walker and John Clerk, bein all thre with many moo in the church yarde of Sedgfeild, upon a sonday after the evyning praier, John Martyn, articulate, being then also in the church yard of Sedgfeild, which had newly then maid a fray upon or with Robert Crampton, or ells the said Robert with the said Martyn, for that they 2 had fought together, by the reporte of the said Walker and Clerke, which had then after sent for this deponent, being the constable; and at his this examine's comminge into the said church yarde, he, this deponent, went and commandyd the said John Martyn to fynde suertie for the Quene's majesties peac; which Martyn wold fynd no suertie by any persuasion or gentle mocion that this examine culd then use or make to the said Martyn, but misused this deponent, beinge the Quene's majesties constable and officer, by unseming words, saing to this examine, 'Yt is thy knavery and thy practis of this fray bytwixt Crampton and me,' the forsaid John Martyn; and saing ther also, 'The Quene haith knaves to hir officers, and thou ar one of them, being the worst,' saing to and mening upon this depo-

two chaplains to celebrate divine service at the altar. In 1392, Bishop Skirlaw granted license to John de Henlie, clerk, William de Langchester, vicar of St. Oswald's, and William de Hill, chaplain, to give to John de Bishopton, chaplain, custos of St. Catherine's chantry, lands, houses, and rents in Butterwick, Ald-acres, and Hoton; and William Hoton of Hardwick, under a charter from Bishop Langley, June 6, 1435, assigned six messuages, two cottages, and 170 acres in Sedgefield, to Thomas Hoton, chaplain, and his successors for ever. At the Dissolution, the chantry was valued at £11 8s. 8d. per annum. John Franks, the last chaplain, had a pension, which he received in 1553.

St. Thomas's chantry was in the south porch: its foundation is unknown; but at the Dissolution, its value was £5 6s. A pension of £4 was paid to Richard Turner, the last chantry priest, in 1553. In October, 1764, as some workmen were repairing the floor of the south transept, they found a large stone image, "curiously cut," near six feet long, and lying at full length, with an arch over it, but without any inscription.

The guild or chantry of St. Mary occurs in the records. Robert Kerr, chaplain of St. Catherine's, bequeathed £10 to it; and Bishop Fox granted an indulgence for the repair of its chapel and altar in 1500.

The church-yard* is planted with lofty trees, and con-

nent; and ther upon this examinat toke and caried the said Martyn to the stokes.

"He did not violently, maliciously, or injuriously lay his hands of the said John Martyn, but accordinge to his offic, for the preservance of the Quene's majestie peac, nor dyd maliciously thruste, beit, or use the said Martyn: saing that this examinat, havinge holde of the said Martyn gowne, and beinge without the church yarde, and the said Martyn in the church yard, or upon the stile thereof, this examine pulling the said John Martyn by the said gown, and he the said Martyn hynging backe, and not willinge to goo with this examine, therupon only the said John Martyn's gown was rent, and no otherwaies; saing further that this deponent then after lodd the said John perforce to the stoks, being in the backhouse of Sedgfeild.—† JOHN JOHNSON."

John Clerk and Robert Walker, churchwardens, deposed to sending for Johnson, the constable, to the refusal of Martin to find sureties, and to his gown being torn in the scullie to get him over the stile; and Clerk added, that he and his fellow Walker "toke the said John Martyn by the leggs, and so earied him to Parlement house, alias the bakehouse, wher the stokes were. And ther the said John Martyn was sett in the stoks by John Johnson, who lyfted up the said stoks then, and also put in the said John Martyn his leg in the said stoks. And this examine laid the said St John Martyn gown under hym, wher he the said Martyn contynewed by the spaic of one halff houer."

Thomas Wheatley, a witness on the part of Martin, deposed that Crampton made a fray with him, when the constable was sent for, who called Martin "knave," and said he should go to the stocks; when the said Johnson, Walker, and Clerk, "togged the said Martyn violently against his will by the head and shulder, more lyke a beast than a man, and eared hym to the stoks, tearing then also his gowne."

tains a number of tomb-stones. Two marble tablets on the exterior wall at the east end of the chancel indicate the family burial-place of the Spearmans, of Old Acres. There was formerly a foot-path through the ground; but it was resolved by the rector and four-and-twenty, at a meeting held in the vestry April 1, 1823, that the churchwardens should be empowered to lock up the church-yard gates, excepting only during divine service, and that application be made at the Durham Midsummer sessions for that purpose.

REGISTERS.—Books Nos. 1 to 4 contain entries of baptisms and burials from 1580 to 1812, and of marriages from 1580 to 1753; No. 5, marriages from 1754 to 1812; also, No. 6 (kept at Embleton), baptisms, burials, and marriages from 1650 to 1760.

Sedgefield rectory is in the deanery of Stockton; the Bishop of Durham, patron. King's Books, £73 18s. 1½d.; Tenths, £7 7s. 9¼d.; Episc. proc., £1 13s. 4d.; Synod., 11s.; Archid., 4s. Dedication to St. Edmund the Bishop.

RECTORS.—Uleheld, 1085; Petrus Clericus de Seggefild, 1168; W. de Quelmer, 1274; W. de Ewell, 1301; T. de Hessewell, 1313 (Master of Sherburn Hospital); J. de Whytechurch, 1339, p. m. Hessewell (archdeacon of Wilts); J. de Grey, 1359, p. m. Whytechurch; J. de Henley, 1361, p. m. Grey (treasurer of the bishop's household); T. Weston, 1380 (archdeacon of Durham 1393, prebend of Grindall in York ch. 1397, prebend of Hoveden, ob. 1408); J. Clifford, 1392 (treasurer of York ch. 1374); A. de Hopwood, 1408; J. Leyburne, 1424, p. m. Hopwood (prebend in Lincoln ch.); Dr. G. Radclyff, 1425, p. res. Leyburne; J. Heyworth, 1436, p. res. Radclyff

* BISHOP LOWTH.—This learned and eminent prelate was the second son of Wm. Lowth, an apothecary and citizen of London; his elder brother, William, being also a distinguished divine. Robert was born November 27, 1710, and at Winchester school gave the first specimen of his great abilities in a poem entitled, "The Genealogy of Christ, as it is represented on the east window of Winchester College Chapel." From Winchester he was elected to New College, Oxford, and took his degree of A.M. in 1737. As professor of poetry, to which office he was preferred in 1741, he struck out a new path, by giving a course of lectures on Hebrew poetry, which afterwards added much to his reputation. In 1749, he became acquainted with the Duke of Devonshire, in consequence of his attending his brothers, Lord George and Lord Frederick Cavendish, on their travels; and the duke was so well satisfied with Lowth's conduct, that he afterwards proved his steady friend and patron. In 1750, Bishop Hoadley conferred on Lowth the archdeaconry of Winchester, and in 1753, the rectory of East Woodhay, in Hampshire. In 1754, he received the degree of D.D., conferred by the university by diploma. In 1755, he went to Ireland as first chaplain to the Marquis of Hartington. In consequence of this appointment, he had the offer of the bishopric of Limerick; but this he exchanged with Dr. Leslie, prebendary of the eighth stall at Durham and rector of Sedgefield, which were accordingly given to him by Dr. Trevor, Bishop of Durham, who was not a little pleased to rank among his clergy a gentleman of such rare accomplishments.

(treasurer of Lichfield); William Eyworthe, 1436; J. Radclyffe, resigned for a pension of 50 marks; W. Estfeld, 1496, p. res. Radclyffe; R. Leyburn, 1499, p. m. Estfeld; R. Shorton, S.T.P., 1518; R. Layton, LL.D., 1535 (dean of York and visitor of the monasteries); J. Redmayn, S.T.P., 1544, p. m. Layton; A. Salvayn, S.T.P., 1558, p. m. Redmayn; A. Lofthouse, 1560, p. depr. Salvayn (pres. Queen Eliz., see vac.); R. Skynner, S.T.B., 1562, p. depr. Lofthouse; R. Swyft, LL.D., 1562, p. m. Skynner; M. Blakiston, A.M., 1599, p. m. Swyft; R. Blakiston, 1631, p. res. patris; J. Naylor, S.T.B., 1634, p. m. Blakiston; — Hunton, an intruder, ejected 1660; D. Grenville, A.M., 1667, p. m. Naylor (see vol. i., pp. 251, 253); J. Clayton, S.T.P., 1691, p. depr. Grenville; T. Pickering, S.T.P., 1705, p. m. Clayton (see vol. i., p. 255); J. Morton, S.T.P. 1711, p. m. Pickering; T. Rundle, LL.D., 1722, p. m. Morton (master of Sherburn House, and Bishop of Derry); J. Gamage, A.M., 1728, p. res. Rundle; J. Lesley, A.M., 1747, p. m. Gamage (Bishop of Limerick); R. Lowth, S.T.P., * 1755, p. res. Lesley (bishop of Oxford and of London); J. Ekins, S.T.P., 1777, p. res. Lowth; Geo. Viscount Barrington, A.M., 1791, p. m. Ekins (see vol. i., p. 258); Thomas Linwood Strong, A.M., May, 1829, p. m. Barrington.

The inhabitants of the parish received warning on August 20, 1644, to "forbeare payment of any tythes or rents to Joseph Naylor, Dr. of Divinitie, parson of the said parish;" and, two days afterwards, a warrant was issued to distrain his goods, and to keep them according to inventory for the use of the Commonwealth. On the 29th November, an order was issued to pay all rents, &c., due for tithes, to "John Vincent, preacher of God's word, who hath now the parsonage of Sedgefield conferred upon him by authy of parliament;" with the exception that Mrs. Dulcibella Naylor was to have a fifth of the income for the maintenance of herself and children.

In June, 1766, Dr. Lowth was promoted to the see of St. David's, and, about four months afterwards, translated to that of Oxford; succeeding, in 1777, Dr. Terrick in the see of London. Dr. Lowth published his lectures on Hebrew poetry in 1753, and in 1758, his *Life of William of Wykeham*, founder of Winchester and New Colleges. His greatest literary work was on the prophecies of Isaiah, which, says Skelton, "is the best book in the world, next to the Bible." He was involved in a controversy with Bishop Warburton; but this did not, to any important extent, interfere with his literary labours. When Archbishop Cornwallis died, the king made an offer of the archiepiscopal see to Dr. Lowth; but this dignity he declined. He was now advanced in life, tormented by a painful and lingering disorder, and had recently experienced some severe strokes of domestic calamity. He died November 3, 1787, aged 77, and was buried at Fulham.

Many of his poetical effusions and occasional discourses were published, and went through several editions. His discourse "On the Kingdom of God," preached at a visitation at Durham, was much admired for its liberality of sentiment. Dr. Lowth united, in an eminent degree, the qualities of the gentleman with those of the scholar; he conversed with elegance as he wrote with accuracy. His piety had no tincture of moroseness, his charity no leaven of ostentation; and whilst virtue and learning are revered among men, the memory of Lowth will be respected and admired.

The glebe is extensive, lying in the townships of Sedgefield, Bradbury, Embleton, and Fishburn. The rectory house is situated to the south of the church, and is enclosed from the town. Several of the latter rectors had made improvements and additions; but, on December 31, 1792, a fire broke out in one of the lodging rooms, which consumed the greatest part of the building before it was extinguished.* The present handsome mansion was erected by the late rector, Lord Barrington, assisted by the bishop and the Hon. Admiral Barrington. The kitchen, with its mullioned windows, and a portion of the outer castellated wall, are the only remnants of the old parsonage.

The rector is generally entitled to tithes throughout the parish, with the exception of some small moduses. In 1739, the Rev. J. Gamage, rector, filed a bill in Chancery against several land-owners in the township, in order to break through a composition entered into by Dr. Nayler, and compel payment of tithes in kind. The defendants filed a cross bill to establish the composition, which had been accepted by six preceding rectors, and also by Mr. Gamage himself for nine or ten years. In 1741, the Lord Chancellor decreed the payment of tithes in kind, with costs against the defendants; the bishop, ordinary of the diocese and patron of the living, not having been a party to Dr. Nayler's arrangement. In 1835, the gross income was £1,933, subject to permanent payments amounting to £131. From the balance, £1,802, £220 was paid to two curates, who, with the rector, alternately officiated in the chapel of ease at Embleton. The tithes were commuted a few years ago for about £1,500. The salaries of the curates are at present respectively £170 and £120.

CHAPELS.

ROMAN CATHOLIC CHAPEL.—A chapel has been occupied by the Roman Catholics in Sedgefield for some years. It is dedicated to St. Joseph, and was recently the scene of "a mission," extending over ten days, given by the Rev. R. Suffield, one of the fathers from the Diocesan Mission House, St. Ninian's, Wooler, Northumberland. Mr. Suffield was formerly priest of Sedgefield and Thornley; but there was no

* Previous to the burning down of the rectory house, the superstitious and credulous portion of the inhabitants of Sedgefield were alarmed by an apparition, denominated the *Pickled Parson*, which for many years was presumed to infest the neighbourhood of the rector's hall, "making night hideous." The supposed origin of the tale is attributed to the cunning of the rector's wife, whose husband having died

resident minister at the first-named place until the appointment of the present clergyman, the Rev. — Markland.

WESLEYAN METHODIST CHAPEL.—The Wesleyan Methodists have a chapel at the west end of the village, which they have occupied for the last 50 years. The building will contain about 250 hearers; during service, the average attendance is 150. A library has recently been established in connection with the chapel.

POOR LAW UNION.

The Sedgefield Union comprises the parish of Sedgefield; the parishes of Bishop-Middleham, Stainton-le-Street, and Bishopton; the chapelries of Ferryhill and Trimdon; the townships of Preston-le-Skerne and Woodham, in the parish of Aycliffe; and the township of Stillington, in the parish of Redmarshall. The Union contains 23 townships; its entire area is 43,953 acres; and the population, in 1851, was 8,501, of whom 4,383 were males and 4,118 females.

For the receipts and expenditure in the year ended Lady-day, 1851, see vol. i., p. 162. Since that period, they have been stated as follows:—

	RECEIPTS.		EXPENDITURE.	
	£.	s.	£.	s.
Up to Lady-day, 1852	-	-	2,830	1
„ 1853	-	-	2,602	4
„ 1854	-	-	2,550	3
„ 1855	-	-	3,020	12

The receipts and expenditure of the respective townships in the parish of Sedgefield, for the last-named year, have been given at page 330. The following shews the income and expenditure of the other portions of the Union:—

	RECEIPTS.	£.	s.
Poor-rates:—Parish of Bishop-Middleham, 150 <i>l.</i> 14 <i>s.</i> ; parish of Bishopton, 196 <i>l.</i> 19 <i>s.</i> ; parish of Stainton-le-Street, 85 <i>l.</i> 6 <i>s.</i> ; chapelry of Ferryhill, 456 <i>l.</i> 10 <i>s.</i> ; chapelry of Trimdon, 285 <i>l.</i> 13 <i>s.</i> ; part of parish of Aycliffe, 321 <i>l.</i> 11 <i>s.</i> ; part of parish of Redmarshall, 13 <i>l.</i> 18 <i>s.</i>	-	-	1,510
In aid of poor-rate:—Bishop-Middleham, 5 <i>l.</i> 7 <i>s.</i> ; Bishopton, 2 <i>l.</i> 8 <i>s.</i> ; Stainton-le-Street, 1 <i>l.</i> 12 <i>s.</i> ; Ferryhill, 8 <i>l.</i> 2 <i>s.</i> ; Trimdon, 28 <i>l.</i> 17 <i>s.</i> ; Aycliffe, 4 <i>l.</i> 3 <i>s.</i> ; Redmarshall, 3 <i>s.</i>	-	-	50
			£1,561
			3

about a week before the tithes (which are generally let off to farmers, and the rents paid on the 20th of December) became due, she concealed his death by salting his body in a private room. Her scheme succeeded; she received the emoluments of the living, and the next day made the decease of the rector public. Since the fire, the apparition has not been *seen*.

EXPENDITURE.		£.	s.
In-maintenance:—Bishop-Middleham, 18 <i>l.</i> 12 <i>s.</i> ; Bishopton, 3 <i>l.</i> 13 <i>s.</i> ; Stainton-le-Street, 1 <i>l.</i> 8 <i>s.</i> ; Ferryhill, 23 <i>l.</i> 8 <i>s.</i> ; Trimdon, 40 <i>l.</i> 12 <i>s.</i> ; Aycliffe, 23 <i>l.</i> 18 <i>s.</i>	- - - - -	111	11

		£1,941	7

The workhouse occupied by the Union is the same building as that used for the parish previous to the passing of the Poor Law Act, and for which a rent of £5 a year is paid to the churchwardens (see *Harrison's and Wren's Charities*). There is no paid assistant overseer.

CHARITIES.

School.—Sedgefield school is endowed with a close, containing 5 acres, on Beacon Hill, in the township of Sedgefield; from whom derived is not known. The property is let by the schoolmaster at £9 a year. In respect of £52, old school-money, laid out in the purchase of Howle Hope estate, hereafter mentioned, the master also receives £5 a year from its rents. In consideration of these sums, he instructs six poor children of the township, who, as well as the master himself, are appointed by the vestrymen. The trustees

of Wright's charity, noticed below, also pay £9 18*s.* to the school, for which they appoint six boys. From 40 to 50 other children generally attend, who pay for their own instruction.

Wright's Charity.—Richard Wright bequeathed, July 23, 1790, £300 to trustees, to be invested in the purchase of three per cent. consols, and the dividends applied in educating and clothing six poor boys between the ages of six and fourteen. The whole of the dividends, £12, had been paid for educating the boys up to the time of the Charity Commissioners Inquiry in 1829; when they recommended that the surplus, after paying the usual sum, 30*s.* each per annum, should be applied in clothing as far as it would go. The schoolmaster receives, as above-stated, £9 for teaching, and 18*s.* is allowed for books, &c.; but no clothing is procured. There is a small balance in hand.

Lowther's Charity.—John Lowther, by will, October 19, 1792, directed that £600 stock should be transferred to trustees, and the dividends applied in the education and clothing of such poor children as he or the trustees should appoint. Up to July, 1828, £4 16*s.* a year was paid to a schoolmistress for teaching eight girls, each of whom received clothes to the value of £1 5*s.* annually; but a surplus of £25 being at that time in hand, it was resolved that six additional children should be appointed until that surplus should be exhausted.

Bainbridge's Charity.—In respect of £50, less 10 per cent. legacy duty, bequeathed by John Drake Bainbridge, October 16, 1811, for the same purpose as the last-named charity, Lord Barrington for many years paid £2 5*s.* interest, which was, in ignorance of the testator's intention, given away with other charity money. It is now given to the girls' school above named.

Cooper's Alms-houses.—Thomas Cooper, surgeon, of Sedgefield, by will, March 6, 1702, demised to George Cuthbertson and John Mowbray, and their heirs, all his messuages and lands in the chapelry of Hamsterley, and at Hyndon in the parish of Cockfield, in trust, to pay, from the rents and profits, to each of five poor men and five poor women (being of the age of 50 years at the least, and living and remaining in the township of Sedgefield) the sum of £2 half-yearly, by equal portions; the said poor men and women to be nominated, after the decease of his wife, by the rector and 24 of the parish, who were also to provide each of the recipients with a coat of the value of 8*s.*, of a blue colour, with the letters T. C. upon the arms in yellow.

The testator also directed that, if he himself should not erect a suitable alms-house in his life-time, the sum of £100 should be given to the trustees for that purpose; that the cost of repairs should be deducted equally out of the several annuities given to the said poor people; and that they should not admit any person whatsoever to dwell with them, unless in case of sickness. He further directed, that if the requisite number of poor people could not, at any time, be found in Sedgefield, the deficiency should be made up from the township of Cornforth, in the parish of Bishop-Middleham.

The alms-houses, a range of low brick buildings, with the founder's arms in the centre, are situated to the north of the church. The owner of the Hamsterley estate pays £44 yearly; each of the alms-people receiving 40s. half-yearly, and 8s. in lieu of a cloak.

Wrightson's Charity.—In 1803, William Wrightson gave £5 yearly out of a field near Beacon, to be divided equally amongst the ten alms-people. The sum of 10s. each is distributed accordingly on St. Thomas's day.

Forster's Charity.—Thomas Forster (many years a domestic in the family of Dr. Lowth), by will, November 15, 1814, directed that £2,400 should be invested in the names of trustees, who were to apply so much of the dividends as they might think necessary in the purchase of suitable clothes for the inmates of Cooper's alms-houses, and divide the remainder equally amongst them. He further directed that £600 should be invested, the proceeds of which were to be applied in the purchase of good bread, to be distributed every Sunday amongst 20 poor persons of the township not receiving parochial relief. With the first legacy, £3,435 7s. 9d. three per cent. consols was purchased; the half-yearly dividend from which, £51 10s. 7d., is distributed equally by the rector and churchwardens amongst the alms-people. The other legacy was laid out in the purchase of £858 16s. 11d. three per cent. consols, the half-yearly dividend from which is £12 17s. 8d. Twenty sixpenny loaves were, until recently, given away every Sunday to the same number of poor persons; the small deficiency in the half-year's money being made up from Harrison's charity, hereafter mentioned; but the loaves are now reduced in size so as to meet the sum allowed.

Lady Freville's Charity.—This charity, a portion of which belongs to the parish of Bishop-Middleham, has been noticed in vol. i., p. 397.

Harrison's and Wren's Charities.—In 1663, Bryan Harrison gave £100, the interest of which was to be distributed to the poor of the town of Sedgefield every

Sunday. With £80 of this money, a house near East Well, and a piece of ground called White Bread Field, were purchased. In 1759, £30, given to the poor of the parish by Rebecca Wren, was laid out in building and repairing the premises, which, with a piece of ground, were let to the overseers at £5 a year, and are now used as the Union workhouse. The field was improved by draining in 1820, for which purpose £30 was lent by the overseers; and the rent was consequently advanced from £6 10s. to £13 a year. The above sums are laid out in bread, which is distributed weekly, beginning soon after Christmas, and continuing as long as the money lasts. The following is the "Small White Bread account" for 1848:—

	£.	s.	d.
Received 1 year's rent of White Bread Field, £14; which, with rent of Poor's House, and balance from last year	38	4	9½
Paid out-rent to the Bishop of Durham	0	3	4
“ John Hood and others, for bread, for 12 weeks, at £1 17s. 11d. per week	22	15	0
Balance due from churchwardens	15	6	5½
	£38	4	9½

Howle Hope Estate.—The Howle or Holloway's Hope copyhold estate, held of the manor of Bishop-Middleham, contains about 28 acres. The first moiety of it was purchased in 1705 for £100 2s. 6d.; and the remainder, about 1734, for £140. The following benefactions appear to have been applied towards those sums:—

1663.—From the gift of Bryan Harrison, being the balance after the purchase mentioned above	£20
1680.—Henry Airey, the interest to be given to the poor of the town of Sedgefield on Feb. 17 yearly	10
1684.—Robert Johnson, the interest to be given to the poor of Sedgefield on St. Thomas's day yearly	20
1685.—John Gibson, the interest to be given to the poor of the town yearly	3
1686.—Thomas Barker, the interest to be given to the poor of the parish on Candlemas-day	10
1739.—Aliee Vane, the interest to be given to the poor of the township of Sedgefield	5
Amount of School-stock, whereof £20 was given by Mrs. Freville	52
Bequest of Madam Mary Freville to the poor	20

Howle Hope, with a cottage and barn erected upon it, is let by auction, and produces about £40 a year. Out of this rent, £5 is paid to the schoolmaster on account of the school-stock included in the purchase, 13s. 3d. yearly for land-tax, &c. To the balance is added the produce of Bainbridge's and Jane Mason's charities, any surplus of Lady Freville's charity that may remain on St. Thomas's day, money

collected at the sacrament, and a voluntary donation by the rector; and the whole is distributed, on the 14th February yearly, amongst the poor of the parish. The following statement of the account is for February, 1847:—

RECEIPTS.	
Balance from Lady Freville's charity.....	£51 18 0
Received 1 year's rent of Howle Hope, from Robert Dakers	41 0 0
One year's rent due from Neiceless farm, to the poor of Sedgefield.....	1 0 0
	£93 18 0

PAYMENTS.	
Paid out-rent due to the Bishop of Durham, for Howle Hope	0 2 5

Balance due charity	17 7 6½
	£93 18 0

Jane Mason's Charity.—Jane Mason, in 1662, gave 20s. yearly to the poor of the parish, charged on a close called Shotton Newkes, by the proprietor of which it continued to be paid until about three years ago, when the estate fell into the hands of trustees, and the payment was discontinued.

Lamb's Charity.—John Lamb, of Manchester, by will, November 26, 1808, directed that on the death of Martha Furness, all his personal estates, with the exception of £100, should be settled for the support of five poor aged impotent men, and five poor aged impotent women, of the parish. This sum amounted to £484 7s. 3d., which it was intended to lay out in land. On the death of Martha Furness, however, the money was invested in government stock; and the interest is given as directed.

Soulsby's Charity.—William Soulsby, Esq. merchant, of Essex Street, Strand, London, bequeathed to the churchwardens and trustees for the time being of the old Grammar School, Sedgefield, the sum of £300, clear of legacy duty, to be invested in government stock; the interest arising therefrom to be paid to the master for the time being of the said school for ever, for the educa-

tion of two additional poor children (such children not to be under seven nor above ten years of age), to be instructed in the Latin classics until they attain the age of fourteen; the said children to be appointed by the vestry; and in case the trustees of the old Grammar School should neglect or refuse to fulfil their trusts, then it shall be lawful for the executors and trustees of the said Wm. Soulsby, or their heirs, to see to the proper application of the interest arising from the £300 of government stock, and to nominate and appoint such children, in accordance with the intention of the donor, as should receive the benefits of the said charity. Mr. Soulsby died April 10, 1832; his will was proved in the Prerogative Court, Canterbury, June 27, in the same year; and the £300 was invested in April, 1833, in government stock amounting to £340 18s 2d. in the names of the Rev. T. Linwood Strong, rector; Richard Wright, Esq., Sands; Benjamin Ord, Esq., and the Rev. Wm. Middleton, Sedgefield. The charity is administered agreeably to the intentions of the testator.

INSTITUTIONS, &c.

THE SEDGEFIELD INSTITUTE OF LITERATURE AND SCIENCE was commenced in December, 1849, and now consists of 70 members, possessing a library of 651 volumes. Donations of books have been occasionally made by Dr. Townsend of Durham, the Rev. T. L. Strong, rector, the Rev. T. J. Steele, of Sedgefield, and other friends of education. The subscriptions average about £20 per annum. There is a reading room, provided with newspapers, open daily from 10 A.M. to 10 P.M. Lectures are occasionally delivered gratuitously; and annual soirees are held. Rural fetes have been twice held, by permission, in the neighbouring pleasure grounds at Hardwick, at which visitors from Stockton, Hartlepool, &c., are admitted.

SCHOOLS.—There is a boarding-school in Sedgefield, for the education of a limited number of young ladies. Besides the free school (see pp. 332, 338), the rector supports a school for boys, and a school for girls is supported by Mrs. Strong, both of which are well attended.

COUNTY LUNATIC ASYLUM.—In 1854, a site for a lunatic asylum was examined, by order of the county magistrates, by Dr. Hill, of the asylum for the North Riding of Yorkshire, who reported favourably of its suitability. At a meeting of the magistrates, August 2,

1855, it was finally agreed that the building should be erected on the land selected, which is situated to the north-east of Sedgefield, between Fishburn and the Durham road.* It is estimated that the cost, including the ground, will be about £50,000.

GAS AND WATER.—A gas company has been projected, to be in shares of £5 each, forming a capital of £1,000. The number of shareholders is under 25, and therefore not liable to the provisions of the Registration Act. The town is supplied with water from various springs and a public pump.†

PLUGHING MATCHES, at which prizes are given, are occasionally held at Sedgefield, for the encouragement of agricultural labourers.

HARDWICK.

THE manor of Hardwick adjoins Sedgefield on the west, from which Hardwick Hall is distant about half a mile. The mansion is a spacious building, fronting the south, and overlooking the highly ornamented pleasure grounds which were formed during the proprietorship of John Burdon, Esq. Immediately in front is a fine sheet of water, covering 36 acres; the margin of which is fringed with reeds and rushes, the resort of numerous water-fowl from the neighbouring marshes. Grassy slopes and plantations of flowering shrubs and evergreens, thickened with forest trees behind, surround this magnificent lake, a view of the whole of which is commanded from a Gothic seat, elevated on a flight of steps, protected by a porch. At the west end of the lake is the Bath, a neat building of the Doric order, in the vestibule of which there is a bust of Diana. An alto-relievo sculpture, representing the head of Neptune, is in one of the dressing rooms; and the fire screen of another room is ornamented with a painting of Apollo and the Muses. On the verge of

* A double murder was committed at Cowley House, near Sedgefield, on the 10th November, 1828, by a man named Joseph Hutchinson, on his father and brother, who were joint occupiers of the farm. He rose from dinner without any provocation, and returned with a kitchen poker, with which he felled his victims to the ground, and afterwards beat their brains out with a hammer. He then coolly saddled a horse, and rode to Durham as though nothing had happened, but was taken on his return. At his trial, February 23, 1849, the grand jury threw out the bill for murder on the ground of insanity. Being arraigned on the coroner's warrant, and asked whether he was guilty or not, he replied, "I did it, but were they Christians or not?" He seemed perfectly collected, and indifferent to what was passing, telling the jury that he would bring "a speech box" for them. Me-

a smaller lake is a hermitage, containing busts of Newton, Bacon, Locke, Aurelius, Boyle, and Cicero. A large mirror, opposite the entrance, reflects an artificial cascade at the further end of the lake.

An elegant Grecian temple, in the Ionic order, stands on a circular eminence on the south side of the lake. It is square, surrounded by a colonnade of six pillars on each side, and surmounted by an octagonal dome. Busts of Homer, Virgil, Horace, Milton, Shakespeare, Ben Jonson, and Pope, are placed in niches around the walls. The walk along the colonnade commands an extensive prospect of the surrounding country. In the interior, above the entrance, is a bust of Minerva; and busts of Socrates, Plato, Demosthenes, Julius Cæsar, Titus, Marcus Brutus, and Antoninus Pius, are arranged on brackets around the room. There are medallions of the four seasons in the recesses between the windows, which, with the stucco work of the ceiling, were executed by Cartici; the floor is inlaid with marble mosaic. In triangular divisions at the four corners of the room is an inscription:—" *This Temple begun by John Burdon, Esq., in the year 1754, and finished in 1757.*" The inside of the cupola is adorned with paintings by the Bornese, father and son, representing Music, Painting, Sculpture, and Architecture, the four cardinal virtues, and Minerva surrounded by genii and warlike trophies.

A serpentine river, the extremities of which are hidden by the surrounding plantations, is crossed by a picturesque bridge. On a pedestal in the middle of the river, Neptune is represented in the act of throwing his trident, similar to the figure in the market-place at Durham. The road from the bridge leads to an artificial ruin, which consists of a small central apartment, above a pointed arch, and surmounted at one corner by a circular turret. Several curious sculptures from Guisborough Priory are built into the walls.

The Banqueting House, intended to have formed part of a sumptuous mansion, stands near the east

dial and other evidence proved the unsoundness of his mind; and he was taken back to prison, to be removed to an asylum.

† The fetching of water has always afforded an opportunity for gossip and scandal, an instance of which occurs in the case of "Janet Steilling con. Margaret Bulman," nearly three centuries ago:—

"Agnes Wheatley, wife of Robert Wheatley, of Segefield, aged 33 years.—As this examine was comyng forth with her skeill, she hard Bullman's wyffe call Styllinge 'noughtie pack;' who answered, 'What nowtynes know you by me? I am neither goosteler nor steg (gander) steiler, I would you knew ytt.' And then Bullman's wyffe said, 'What, noughty hoore, caull thou me goose steiler?' 'Nay mayry, I know thee for no such,' saith Stillinge wyffe, 'but I thank you for your good reporte; whills you and I talk farther.'"

end of the large lake, flanked by two lines of evergreens. Its exterior is Corinthian. The principal apartment is 50 feet long, $25\frac{1}{2}$ broad, and of the same height: it is splendidly fitted up, and adorned with gilding; the mantle-piece is formed by well contrasted specimens of beautifully coloured marbles. At each end of the room, is a semicircular recess, supported by Ionic columns, containing a bow window; the front windows overlook the lake. Busts of Flora, Sappho, Faustina, and Cornelia, are placed on brackets on one side of the room; and those of Virgil, Vitruvius, Palladio, and Inigo Jones, are opposite. In an oval in the centre of the ceiling is a painting of the Feast of the Gods, by Hayman; to the right, in a square, Thetis supplicating Jupiter for her son; and to the left, Venus delivering the cestus to Juno, both by Wall. Above the doors are Bacchanals, and Cupid and Psyche, by Hayman. Amidst all this gorgeous classical and mythological display, there is a well executed portrait of the founder, John Burdon, Esq., in the plain dress of an English gentleman, with his spaniel by his side.

The designs for the several buildings were made by Payne, and executed by Mr. Bell, of Durham. The grounds contain 150 acres, of which 46 acres are covered with water.

Parties holding the local name are mentioned both in Boldon Book and the Survey; and though other proprietors occur, the whole estate was eventually concentrated in the principal owner. John de Hardwick died in 1398, and left an only daughter, Agnes, who married Gilbert de Hoton. The estate afterwards came into the possession of William Hoton, mercer, of London, one of whose daughters was married to William Hansard, of Walworth, and the other to William Hebburne, who thus acquired Hardwick. Anthony Hebburne, Esq., great-grandson of William, joined the insurrection of 1569, and was included in the act of attainder. His lands in Hardwick were granted, by letters patent, in the 32nd year of Queen Elizabeth, to George Freville, a Staffordshire gentleman, who had served as clerk of the ordnance under the Earl of Sussex, and had thus been employed in quelling the rebellion. The estate was held under a reserved rent of £25 19s. 6d. In 1603, Freville was knighted by King James at York, on his first entry, and was keeper of Raby for the crown. Dying without issue, Hardwick passed to his nephew, who was charged with a horse and its furniture for the service of Charles I. His daughter Margaret married, first, Sir Thomas Lambton, (knighted by Cromwell)

son of Sir William Lambton, Knt.; and, secondly, Nicholas Conyers, Esq., of Biddick. Freville Lambton, son of Thomas and Margaret, married Ann Milward, of Uttoxeter, Staffordshire, who, on her death bed, desired her husband to marry her cousin, Thomasine Milward, which he accordingly did. The issue of this marriage was Thomas Lambton, whose six daughters and co-heiresses sold Hardwick, in 1748, to John Burdon, Esq., who conveyed it, in 1780, (reserving his life interest,) to William Russell, Esq. The estate is now the property of Viscount Boyne, of Brancepeth Castle; and the mansion is the residence of C. Bramwell, Esq., of Sunderland.

EAST AND WEST LAYTON.

THE manor of Layton is about two miles south-east from Sedgefield. A family named Layton intermarried with the Brackenburys, who held of the Mundevilles, by rendering a barbed arrow at entrance, or 40d. The property of the Laytons afterwards was divided between the Colvilles and Moresbys, and was re-united in Cuthbert Conyers, Esq., second son of Sir William Conyers of Sockburn, and high sheriff of the county. Ralph, his son, forfeited his life estate by engaging in the Northern Rebellion; but, through an entail, it passed to his nephew, Sir Ralph Conyers, whose son, Cuthbert, was colonel of a regiment of horse for Charles I., and fell in that service at Malpas in Cheshire, in August, 1644. The last of the family was John Conyers, a younger brother, who, having been educated abroad for the Catholic church, led a retired and melancholy life in an obscure lodging with one of his own tenants; and, dying unmarried and intestate in 1748, Layton became the property of Thomas Maire, Esq., of Lartington, and George Baker, Esq., of Elemore, descendants of the daughters of Sir Ralph Conyers. George Baker, Esq., having, in 1771, purchased Maire's moiety, sold Layton to William Russell, Esq., of Brancepeth, and it is now the property of Viscount Boyne.

SANDS HOUSE, for many years the property of the Ords, and latterly of Richard Wright, Esq., son of Ralph Ward, Esq., is now the property and residence of his relative, Mark Ord, Esq. It is situated about a mile west-south-west from Sedgefield, and is a spacious and elegant house, commanding an extensive and beautiful prospect of the surrounding country.

BRADBURY AND THE ISLE.

THE manors of Bradbury and the Isle form a township, which contains 2,043 acres. Its population, at the successive periods of return, was 106, 125, 132, 147, 167, and 171; 83 of the latter number being males and 88 females. In 1851, there were 31 inhabited houses. The value of property assessed for the county-rate, in 1853, was £2,731.

The York, Newcastle, and Berwick, now the North-eastern railway, has an extent of two miles, and an area of 26 A. 2 R. 23 P. in this township, and contributed £38 8s. 8½d. in 1851, and £42 5s. in 1852, to the local rates; the gross amounts collected in those years being £114 5s. 7d. and £125 4s. The Clarence railway, with an extent of 6 F. and an area of 7 A., contributed £11 in 1851 and £11 10s. in 1852.

BRADBURY.—The village of Bradbury is situated on the Skerne, 2½ miles west from Sedgefield. It consists of two or three farm houses, a public house, a blacksmith's shop, and a few cottages, in but indifferent condition. There was formerly a chapel of ease in the township, dedicated to Saint Nicholas; but it fell to decay, and its foundations were removed nearly a century ago.

Bradbury, with Mordon, Socceburg, and Grisehi, were given to Saint Cuthbert by Snaculf, the son of Cykell. It is conjectured that this manor anciently belonged to the knightly family which took its name from the adjoining Isle. In 1343, Bradbury and the Isle were parts of the estate of William de la Pole, who held of the bishop by suit of court and half a knight's fee. From the De la Poles, Earls of Suffolk, these estates had passed, before 1439, to Roger Thornton, merchant, of Newcastle, with whose daughter and heiress they passed in marriage to John Lord Lumley. Before 1569, Bradbury and the Isle had become the property of the Nevilles, and were included in the forfeitures of the Earl of Westmoreland. Bradbury was granted to Sir George Bowes apparently for a term of years, on the expiration of which, King James I., by letters patent, dated October 19, 1606, demised the manor of Bradbury, with that of Hilton (see p. 115), to Thomas Emerson, Esq., for 1,000 years, under the yearly rent of £550. It would appear that the Earl of Huntingdon had, in the interim, purchased Bowes's term. Surtees states that the grant was to Sir John Ramsay, Knt., the king's preserver from the Gowry conspiracy. The term, however, was purchased from

Emerson by Richard Manning; and King Charles I., in 1638, granted the inheritance to Edward Manning, brother of Richard, under the same reserved rent. On the purchase of Hilton by Henry Marley, the rent was apportioned, and £360 was charged upon Bradbury. In 1653, the Mannings sold this manor to John Farrer, Gent., of Durham. Arrears of rent having accrued, Cromwell, by his warrant under the privy seal, dated at Westminster, April 15, 1658, ratified the apportionment. In 1719, a moiety of the manor was purchased by Benjamin Ord, of Sedgefield; and the other moiety was afterwards sold by Farrer Wren, Esq., to Richard Wright, Esq., of the same place, who devised it to his grand-nephew, Richard Ord, Esq., of Sands, on condition of his assuming the name of Wright. The first-named moiety, with property formerly belonging to the Smiths and Addison's, were united by the late Richard Wright, Esq., and now belong to Mark Ord, Esq.

THE ISLE lies to the south of Bradbury, and, being completely insulated by the Skerne, the Rushyford Beck, and some smaller streams, is liable to inundations; but, since the formation of the railway, not to the same extent as formerly. The L'Isles and De Insulas occur in several ancient documents. The Isle was granted, with Bradbury, to Sir George Bowes; at which time a survey states it to consist of "a fayre hall, with boords, thyrstells, and fowrnes; and a fayre chymney, wyth one chaymer above covered with slayte. A fayre parlowre, well syled, and in good case of glassinge; and on yt a greate chaymer covered with slayte. A lobbye, from the say'd greate chaymer into a galerye covered with leade, being of xvii yeards of lengthe, and iij yeards and d. broode." Other chambers are mentioned, as well as a "goodley barn and stables for 24 or 30 horses, a leade that will salt iij oxen." The extent of the fields is not mentioned; but the park is of "100 days' mowing," and the "grene about the howse will beare calves."

The Islē was sold by Sir William, son of Sir George Bowes, to Sir Cuthbert Buckle, whose son sold it to Sir Thomas Tempest, Knt., attorney-general of Ireland. During the Commonwealth, he compounded for his estate for £134. His son, John Tempest, Esq., married Elizabeth, daughter and heiress of John Heath, Esq., of Kepyer and Old Durham; he was colonel of a regiment in the army of King Charles I. At the Restoration, he was nominated for a Knight of the intended Order of the Royal Oak, which was never established. His estate, as returned, was valued at

£1,000 per annum. He took a prominent part in the efforts made to procure parliamentary representation; and, though unsuccessful, he and William Davison, Esq., were met, on their return from London, with a popular welcome. Bishop Cosin, much annoyed at this, writes, "The newes that you write of Mr. *Jony* Tempest and his vain-glorious coming in triumph with one hundred and fifty horse before him into the country, lookes like a great insolence or somewhat that is worse." Mr. Tempest represented the county in the parliaments of 1675, and 1678-9, and died in July, 1697. The Isle continued in the possession of his posterity till it was sold by the Marchioness of Londonderry to Lord Chancellor Eldon. The ancient mansion-house, which has long been deserted by its owners, still remains, and is occupied as a farm-house; its projecting gables, and narrow windows with stone mullions, harmonizing with the dreariness of its situation.

MORDON.

THE township of Mordon contains 1,537 acres. Its population is stated in the successive returns at 101, 127, 124, 174, 161, and 163, of which latter number 82 were males and 81 females. There were, at the same time, 33 inhabited houses and 2 uninhabited. In 1853, the property was valued for the county-rate at £1,801.

The North-eastern railway passes over 1 F. and covers 1 A. 1 R. in this township. It contributed £2 10s. 5d. in 1851, and £2 19s. 7d. in 1852, towards the local rates; and the Clarence railway, which has an extent of 1 M. 5 F. 35 Y. and an area of 15 A., contributed, in those years, £23 13s. 4d. and £27 14s. The gross amounts collected were £74 14s. 6d. in 1851 and £101 10s. 8d. in 1852.

The village of Mordon is about two miles south-west from Sedgefield. It consists of two or three farm houses, a public house, and a few workmen's cottages. *Mordon Carrs* is an extensive level of many hundred acres, through which the Skerne and its numerous feeders slowly traverse through their devious windings, and frequently in winter overflow their low banks. At such times, the place is the resort of flocks of wild geese, ducks, &c. Though the Carrs have been some-

what improved since the formation of the railway, the line has been more than once injured or rendered impassable by these inundations, respecting which there is an old adage:—

"When Roseberry Topping wears a hat,
Mordon-Carrs will suffer for that."

Mordon was included in Snaculf's donation to the church. There appears to have been for some time a family of the local name. In 1334, William, son of Thomas de Shotton, died seised of two messuages and 60 acres of land in Mordon, held of the bishop in *capite*, by homage, fealty, and the fortieth part of a knight's fee, leaving Alicia, daughter of Roger de Grenden, his heir. John de Kellaw held three parts of the vill in 1348, which, in the following year, were held by John Harpyn, charged with the support of three chantry priests at the altar of St. Helen's of Kellawe. From the Harpyns, Mordon passed by marriage to the Lumleys, and afterwards to the Trollops of Thornley. The Martins, Harrisons, Reeds, Hixons,* Conyers, Hodgsons, and Wards, occur at various periods as holding property in Mordon. The daughter and heiress of John Ward, Gent., of Billingham, married William Sleigh, Esq., by whom her possessions were consequently held. Other portions were purchased of the Reeds by William Russell, Esq., and by Lord Barrington.

FOXTON AND SHOTTON.

THIS township consists of a hamlet with five farms called Foxtan, and two farms called Shotton, about 3 miles south from Sedgefield. The extent of the whole is 1,787 acres. The returns of population are 53, 62, 63, 73, 44, and 58, 35 of the latter being males and 23 females. The property was valued for the county-rate, in 1853, at £697 6s.

In 1851, the amount collected for local rates was £38 18s. 4½d., towards whsch the Clarence railway, covering an extent of 2 F. and an area of 4 A., contributed £3. In 1852, it contributed £4 towards an amount of £51 9s. 4½d.

Foxtan or Foxdene manor belonged to the Knights Templars, whose possessions, on the dissolution of their order, were transferred to the Knights Hospitallers of

* "Die Jovis, die Febr. anno 1630.—Will^m Hixon, of Mordon, a Papist recusant, for interrupting divine service in y^e cathedral church of Dnrham, by his profane & outrageous roaring & bellowing like a bull, near unto the queare door, whereby the service of God was interrupted, &c., & w^h was conceived to be done in contempt, he being

as aforesaid a Papist recusant: was sentenced to make an open submission at y^e markt crosse, in Durham, on a Satterdaie in his lynng apparell, & to pay costes of court. Presentibus Ricardo Hunt, S.T.P., Decan. John Cosin, John Robson," &c.

St. John. Under them, the families of Seton, Carrowe, Sayer, De la Pole, Fulthorp, and Elstobb, held various possessions. The latter family, probably deriving their name from the hamlet of Elstob, in the adjoining parish of Stainton, and who resided here from 1393 to 1726, at length acquired nearly the whole vill.* At the death of Roger Thornton in 1470, 115 acres and two oxgangs in Foxden were held by him of John Sayer and Thomas Seton. In the last century, the manor was the estate of Carlton Carr, Esq., of Haughton.

Shotton appears to have belonged generally to the same proprietors as Foxton. A part of it belonged to John Hebborne of Hardwick in 1507; and Anthony Hebborne, who was attainted in 1570, forfeited lands in Shotton of £11 annual value. These were granted by the crown to Sir William Bowes, who sold them to Sir George Freville, of Hardwick. In 1685, Shotton was the estate of Gerard Salvin, Esq., of Croxdale, whose descendant, William Thomas Salvin, Esq., sold it to William Russell, Esq.; and Foxton and Shotton now belong to Viscount Boyne, of Brancepeth Castle.

BUTTERWICK.

THIS township, including the manor of Old Aeres, contains an area of 1,495 acres, on which, in 1851, there were 10 inhabited houses. The population, at the six decennial periods of return, was 60, 49, 54, 38, 51, and 64; 31 of the latter number being males and 33 females. The property was assessed to the county-rate, in 1853, at £710. The hamlet of Butterwick, which contains a public house and three or four farm houses, is about 2 miles east-by-north from Sedgefield.

In the time of Bishop Pudsey, the drenge fed a dog

* WILLIAM AND ELIZABETH ELSTOB.—Ralph Elstob, merchant-adventurer, of Newcastle-upon-Tyne, of which town he was sheriff in 1686, was the second son of Charles Elstob, Esq., of Foxton. He died in April, 1688, leaving, by his wife, Jane, daughter of William Hall, merchant, of Newcastle, four sons and four daughters. William, eldest son, was removed from Eton to Catherine Hall, Cambridge, and from thence to Queen's College, Oxford, whence he was elected Fellow of University on the 23rd July, 1696. The study of Saxon literature was at that time popular in Queen's College, and, at the request of Dr. Hicke, Mr. Elstob translated the Saxon homily of *Lupus* into Latin. In 1709, he produced a Latin version of the Saxon homily of Saint Gregory; but his most considerable design was an edition of the Saxon laws, the publication of which, however, was prevented by his death. Through the influence of an uncle, who was a prebendary of Canterbury, he was presented, in 1702, by the dean and chapter of that church, to the united parishes of Saint Swithin and Saint Mary Botham, London. He died March 3, 1715. His sister, Elizabeth Elstob, is considered to have been "the first and last of her sex who was a Saxon scholar." She is said to have re-

ceived the rudiments of her very extraordinary education from her mother; and she was also the companion of her brother's studies at Oxford. With him she removed to London, and printed an English translation with her brother's homily in 1709. She also assisted him in an intended edition of Gregory's Pastoral. A few Saxon homilies, of which she had undertaken an edition, were printed in folio at Oxford. Chief Justice Parker defrayed the expense of the types for a Saxon Grammar, which she published in 1715. On the death of her brother, she was under the necessity of keeping a school for her subsistence at Evesham, until she obtained a pension of twenty guineas from Queen Caroline. The death of her benefactress, and consequent stoppage of her pension, again plunged her into difficulties, from which she was at length rescued by the Duchess Dowager of Portland, in whose family she became an inmate. Rowe Mores describes her in her old age, sitting in her chamber at Bulstrode, surrounded with books and dirt. The latter days of this extraordinary woman were rendered easy and comfortable by her patroness, at whose house she died on the 30th of May, 1756.

and horse, provided two greyhounds for the chase, and five cords of provender, attended the court, and served on embassies. Utredus de Butterwick paid half a mark; and the vill paid 32s. for cornage, and various rents in kind, with services by the villains. In Hatfield's Survey, the rent is stated at £6 13s. 4d., which was also paid by John de Heton in Bishop Bury's time. The manor afterwards passed in marriage to William Bellasis, of Henknoll; and it was acquired by purchase by Richard Baynbrigg, Esq., in 1462. In 1581, George Baynbrigg, Esq., grandson of Richard, granted the manor to Gerard Salvin, Esq., of Croxdale, in whose lineal descendant it is still vested.

A tenement, 15 acres of land, and 4 of meadow, which had belonged to the chantry of St. Catherine, in Sedgefield church, were granted by Queen Elizabeth, in 1591, to Edmund Downing and Roger Rant, to hold of the manor of East Greenwich in socage, and by 14s. 8d. rent. In 1612, the property was purchased by Ralph Butler, Gent., of Butterwick, and has since been united to the Old Aeres estate.

OLD ACRES is mentioned in Boldon Book as paying 16s. rent, which, in Hatfield's time, was reduced to 8s. 11d. In the 15th century, the manor had become the property of the Fulthorps, and passed by marriage to Richard Booth, and afterwards to John Swinburne, Esq., of Chetwell, who engaged in the Northern Rebellion. In 1574, it was granted to the trustees of Robert Bowes, Esq., of Aske, who sold it for £71 13s. 4d., to Gregory Butler, Gent., of Bishop Auckland. It remained in the Butler family till 1715, when it passed to Robert Spearman, Gent. In 1832, it was the seat of his daughter, Mrs Charlotte Swinburn, and is now in the possession of her representatives.

ceived the rudiments of her very extraordinary education from her mother; and she was also the companion of her brother's studies at Oxford. With him she removed to London, and printed an English translation with her brother's homily in 1709. She also assisted him in an intended edition of Gregory's Pastoral. A few Saxon homilies, of which she had undertaken an edition, were printed in folio at Oxford. Chief Justice Parker defrayed the expense of the types for a Saxon Grammar, which she published in 1715. On the death of her brother, she was under the necessity of keeping a school for her subsistence at Evesham, until she obtained a pension of twenty guineas from Queen Caroline. The death of her benefactress, and consequent stoppage of her pension, again plunged her into difficulties, from which she was at length rescued by the Duchess Dowager of Portland, in whose family she became an inmate. Rowe Mores describes her in her old age, sitting in her chamber at Bulstrode, surrounded with books and dirt. The latter days of this extraordinary woman were rendered easy and comfortable by her patroness, at whose house she died on the 30th of May, 1756.

EMBLETON.

THIS township, with Swainston and the Mortons, measures 3,356 acres, on which, in 1851, there were 20 inhabited houses. Its population, in 1801 and the five following enumerations, was 98, 105, 100, 105, 98, and 117; 64 of the latter number being males and 49 females. The property was assessed to the county-rate, in 1853, at £1,142.

Embleton, anciently *Elmdene*, from an elm-wood which formerly grew in the neighbouring dene, is a hamlet 4 miles east-by-south from Sedgefield. It contains a chapel of ease, capable of accommodating 60 persons, in which the curates of Sedgefield officiate on alternate Sundays. Some round arches in the north wall, now closed up, show that it has been formerly wider in that direction; and it is supposed that the chancel originally extended further to the east. It is the only remaining one of four chapelries once dependent on the church at Sedgefield.

This place anciently gave name to the family of Elmeden, in whom it continued until Elizabeth, daughter and heiress of William Elmeden, intermarried with William Bulmer. The Bulmers resided at Elmeden, and were styled of that place, till it was alienated piecemeal, in the 17th century, to the Eshes, Hicksons, and Surteeses. It afterwards passed, through William Wrightson, surgeon, of Sedgefield, to Mr. John Willis, of Stillington, in whose descendant it is still vested.

Lamb's Charity.—In 1728, William Lamb gave £5, the interest to be given to the poor of Embleton. This sum is placed in the hands of the rector of Sedgefield for the time being, by whom the interest is paid every four years to the overseer of Embleton, for distribution amongst the poor of that township.

SWAINSTON is a hamlet about 3 miles to the east of Sedgefield. The estate comprises three farms, *High*, *Middle*, and *Low Swainston*, near the latter of which are the vestiges of several houses, apparently the remains of a considerable village.

Swainston was the property of the Nevilles from the year 1370, and, after the attainder, was granted by Queen Elizabeth to Thomas Calverley and Henry Anderson. It was afterwards purchased for Sir Thomas Tempest, whose lands here, let for £140 per annum, were seized by the sequestrators, and let for £90. The property descended to the Marchioness of Londonderry.

On July 19, 1855, the Lands Improvement Company gave notice that application had been made by the

Most Hon. Frances-Anne Vane, Marchioness of Londonderry, for the power to charge on lands in Swainston, in Long Newton, in the Close, parish of Elwick Hall, and in Barmston, parish of Washington, a sum not exceeding £3,425 5s., under the provisions of "The Lands Improvement Company's Act, 1833," and of "The Lands Improvement Company's Amendment Act, 1855," to be applied to improvements, and to be repaid with interest by way of rent-charge or annuity, in the terms of the said act.

WEST MORTON.—After passing through the hands of various owners, West Morton became the property of the Claxtons, of Old Park, who held it till 1649, when it was purchased by Thomas Todd, merchant, of Newcastle. In the beginning of the 18th century, it was the property of Bertram Stote, of Jesmond; and, by successive purchases, it passed, before 1754, to John Nesham, Esq., whose descendant, in 1808, sold it to John Griffith, Esq., of Durham.

EAST MORTON belonged to the Elmedens and Bulmers, and, latterly, to the Maires of Lartington.

FISHBURN.

THIS township is the most northerly part of the parish of Sedgefield, and contains 2,082 acres. In 1801, the population was 154, and increased progressively at the subsequent enumerations to 171, 192, 212, 239, and 261, of whom 127 were males and 134 females. In 1851, there were 55 inhabited houses, and two uninhabited. The value of property assessed for the county-rate in 1853 was £1,325 4s.

The village of Fishburn stands on the side of a hill sloping to the south, about 2 miles north from Sedgefield. It is a neat and pleasant place, containing two public houses, a corn-mill, and the shops of a smith, a millwright, &c. There is a Wesleyan chapel in the village; and a school is endowed with £5 per annum by Lord Crewe's trustees. In November, 1852, £10 was granted from the same source towards rebuilding the school-room. One of the curates of Sedgefield reads the church service in the school-room every alternate Sunday afternoon; the rector also taking his turn.

From the family of Fishburn this manor passed to the Claxtons, and was divided amongst three of the daughters of Robert Claxton, who died in 1484. They married into the families of Elmeden, Conyers of Hordon, and Widdrington. The portion of the Elmedens

passed through the Bulmers, Ords, and Woodfields, to William Beckwith, Esq., of Thurocroft, Yorkshire, whose descendant, Colonel Beckwith, still holds property in the township. The Conyers' portion passed to the Layton branch of the family; it was seized in 1644 by the sequestrators, and subsequently alienated. Lands belonging to the Lumleys and Boweses became, in 1558, the property of Robert Ayton, whose sisters married, respectively, Robert Farrer and William Heighington. The descendants of the Farrers or Farrowes continued in lineal succession till 1759, when, on the death of Nicholas Farrowe, without issue, the estate descended to his nephew, Nicholas Chilton, Esq., whose descendant, Miss Chilton, of *Fishburn Hall*, died in 1839, and left several charitable bequests.* The property belonging to the Chiltons, is now held by Robert Hall Nayler, Esq., who occupies the mansion, and by Mr. John Giles. A tenement in the village, called *Charter House*, the property of the

Wilkinsons, is subject to an annual fee-farm rent of £2.

Airey's Charity.—Henry Airey, in 1680, gave £7 10s., the interest thereof to be given yearly to the poor of Fishburn on February 14. This money is in the hands of the representatives of the Chiltons, by whom 7s. 6d. is distributed annually as the interest.

Mason's Charity.—William Mason, in 1696, charged his lands in Fishburn with £1 4s. a year for the poor of that township, and 6d. each at Christmas, Easter, and Pentecost, to every poor widow. The sum of £1 4s. (all that has been paid for many years) is contributed in equal portions by John Chilton, John Richardson, and the tenant of Col. Beckwith, and is given by the overseer, on Feb. 14, to about ten poor persons.

Woodfield's Charity.—The sum of £20, given by John Woodfield, in 1744, to the poor of Fishburn, was lost many years ago, having been placed in the hands of William Arrowsmith, who became insolvent.

* John Bramwell and John Kipling, Esqrs., executors of Miss Chilton, paid £180 to the Durham Infirmary, the legacy duty of £20 having been first deducted from the sum of £200 which she had bequeathed. The British and Foreign Bible Society also received £200;

the Wesleyan Methodist Missionary Society, £350; the Church Missionary Society, £100; the Wesleyan Preachers' Auxiliary Fund, £100; and a sum of £200 stock, for the education of poor children belonging to the township of Fishburn.

It will thus be seen that the entire area of the ward is 92,143 acres. The annual value of property assessed to the county-rate in 1853 was £151,706 9s. 9d. In 1831, the population of the South-west Division was 11,664; and of the North-east Division, 7,470; or 19,134 in all. In 1841, as shewn in the above table, it was 27,039, being an increase of 7,905 during the ten years, or about 41.314 per cent. The number in 1851, 34,996, shews a further increase of 7,957, or 29.423 per cent; the increase during the preceding twenty years being at the rate of 32.9 per cent.

In the parliamentary returns of the population in 1851, certain parishes in Yorkshire are included in Stockton Union (see page 166). In that and Sedgefield Union there were, in 1851, 14,610 males above 20 years of age, of whom 4,935 were bachelors, 8,796 married, and 879 widowers. Of 14,086 females above that age, 3,208 were spinsters, 9,180 married, and 1,698 widows. There were 24,238 persons under 20 years of age, of whom 15,851 were born in the county of Durham, 168 in London, 6,047 in Yorkshire, 214 in Scotland, 324 in Ireland, 33 in foreign parts, 1 at sea, and the remainder in various parts of the British dominions; and of 28,696 persons above 20 years of age, 13,024 were born in the county of Durham, 373 in London, 9,052 in Yorkshire, 781 in Scotland, 1,344 in Ireland, 129 in foreign parts, 1 at sea, and the rest in different parts of England. There were 45 persons blind, 22 deaf and dumb, and 86 in the workhouses.

OCCUPATIONS.

THE following particulars relative to Stockton Ward are selected from the classified population tables, founded on the census of 1851:—

There were in the Ward, at that time, 17 males and

10 females, above 20 years of age, employed in post-offices; 8 males in the inland revenue; 66 in the customs; 5 in other government offices; 27 policemen; 22 Chelsea pensioners; 8 Greenwich do.; 36 clergymen; 14 Protestant ministers; 9 priests and other religious teachers; 1 physician; 31 surgeons; 33 druggists; 10 male and 4 female teachers of music; 60 schoolmasters; 117 schoolmistresses; 17 governesses; 10 other female teachers; 16 male do.; 136 male and 47 female innkeepers; 128 innkeepers' wives; 5 male and 94 female lodging-house keepers; 52 male and 725 female domestic servants; 1 coachman; 22 grooms; 131 housekeepers; 46 female cooks; 55 housemaids; 26 nurses; 19 do., not domestic servants; 18 male and 54 female inn servants; 2 midwives; 180 washerwomen; 30 male and 17 female hawkers; 145 railway engine drivers and stokers; 84 others engaged in railway traffic; 47 ship-owners; 1,502 seamen; 147 pilots; 301 others engaged in sea navigation; 33 male and 83 female house proprietors; 44 male and 42 female land proprietors; 689 male and 55 female farmers; 452 farmers' wives; 2 graziers; 247 farmers' sons, grandsons, brothers, nephews, &c.; 237 farmers' daughters, &c.; 12 farm bailiffs; 1,335 male and 102 female out-door farm servants; 318 male and 196 female in-door do.; 13 other males connected with agriculture; 98 fishermen; 10 maltsters; 62 brewers; 30 male and 15 female licensed victuallers, beer shop keepers; 22 victuallers' wives; 31 male and 1 female wine and spirit merchants; 580 coal miners; 22 coal merchants and dealers; 228 coal heavers, &c.; 464 railway labourers; 186 earthenware manufacturers; 533 iron manufacturers; 7 independent gentlemen; 29 independent gentlewomen; 57 male and 318 female annuitants; 35 male and 118 female paupers of no stated occupation; 2 male and 7 female lunatic do.; and 17 male and 8 female vagrants and others in barns, &c.

EASINGTON WARD.

Easington Ward is nearly oblong in form; one of its sides, which extends from the parish of Hart to the mouth of the Wear, being about 15 miles in length from south to north, and bounded by the German Ocean. The average width of the ward from east to west is from 7 to 8 miles. It is separated from Stockton Ward on the south by an imaginary line running west-north-west through the parish of Hart, and between the parishes of Sedgefield in Stockton Ward on the south, and Kelloe and the chapelry of Trimdon on the north. On the west, this Ward is bounded by Durham Ward, and is separated from Chester Ward on the north-west by the river Wear. The parish of Monkwearmouth, with part of its dependent townships on the north bank of the Wear, being attached to the municipal borough of Sunderland, are incorporated with Easington Ward.

The general appearance of the country in this ward is hilly, but without any remarkable elevations. The soil is not so fertile as that of Stockton Ward and the eastern portions of Darlington Ward. Except the Wear, on its verge, there are no streams of any magnitude to enliven the landscape; but in some of the numerous denes or chasms in the limestone rock, which wind deviously from the interior to the sea-shore, there

* "The best household coal," says Mr. Hall, "is worked principally in the county of Durham, south of the river Wear. A line from Seaham Harbour, by Easington, Shotton, Thornley, Ludworth, Sbincliffe, Cassop, Lord Londonderry's pit at Elvet, near Old Durham, and thence by the river Wear to Pensher, and then on to the sea south of the entrance of the Wear, will circumscribe the principal

are scenes which are not exceeded in beauty in any other part of the county.

But it is below the soil that the great wealth of this important ward is found. Nearly its entire extent is one immense bed of the best household coal;* and its surface is characterised by the numberless steam-engines and other apparatus by which the mines are drained, their produce exhumed, and their wealth conveyed for use or shipment. The southern boundary of the coal-field passes across the Ward from Hartlepool docks and railway through Monk-Hesleden, near Castle-Eden pit, and to the south of Hutton-Henry. Limestone is also extensively quarried and burnt in many places, and is another valuable natural production of the Ward. Public and private railways meet and intersect each other in various directions; and the district may be considered as one great mining and manufacturing laboratory.

Though containing a large population, Easington Ward possesses only one market-town—Sunderland. Villages, large enough for market-towns, however, form the central points of populous colliery districts; and the facilities of modern transit afford an easy communication with the markets of Durham, Sedgefield, Darlington, Stockton, and Hartlepool.

portion of the household district." Within these limits this writer estimates the coal-field at 9.5 miles by 7.5, or 71.25 square miles. The coal is bright and cubical; compact, so as to turn water under pressure; burning first to a black cinder, which in turn is consumed, leaving a small portion of ashes; specific gravity from 1.2 to 1.3. It also produces coke, but not always free from sulphur.

Crowded as this ward is with the works of modern science and progress, it cannot be expected to retain many monuments of antiquity; some of its ecclesiastical edifices, of course, excepted. Hylton Castle is the only architectural remain which can claim a highly remote origin; but there are several elegant modern mansions, the residences of influential families, which possess no common claims to admiration.

This ward formerly contained, in whole or in part, fifteen parishes and four extra-parochial places; but the parishes of Pittington, Saint Giles, Saint Mary-le-Bow,

Saint Mary-le-Less, and Saint Nicholas, the Castle Precincts, and the College, in the city of Durham, with the extra-parochial places Sherburn Hospital and Whitwell House, the township of Coxhoe, Quarrington, and Cassop, in Kelloe parish, and the townships of Moorsley and Moorhouse in Houghton-le-Spring parish, were severed from it under the powers of the act of 6 Geo. IV., c. 43, and annexed to Durham Ward. Easington Ward is arranged in two Divisions, the Southern and Northern, which respectively contain the following parishes and chapelries:—

SOUTH DIVISION.

Parish of Easington.
Parish of Castle-Eden.
Parish of Monk-Hesleden.

Parish of Kelloe (part of).
Chapelry of Thornley.

Chapelry of Wingate Grange.
Chapelry of Trimdon.

NORTH DIVISION.

Parish of Sunderland.
Parish of Bishopwearmouth.
Chapelry of St. Thomas.
Chapelry of Deptford.
Chapelry of Hylton.
Parish of Monkwearmouth.

Chapelry of All Saints.
Chapelry of Southwick.
Parish of Houghton-le-Spring
(part of).
Chapelry of Hetton-le-Hole.
Chapelry of Penshaw.

Chapelry of West Rainton.
Parish of Seaham.
Parish of Dalton-le-Dale.
Chapelry of Seaham Harbour.
Parish of Chester-le-Street
(part of).

The townships of Lambton and the Lumleys, in Chester-le-Street, will be treated of with that parish.

Under the powers of the act 15 and 16 Vict., c. 81, sec. 15 and 16, the townships of Sunderland, Bishopwearmouth, Bishopwearmouth Panns, Burdon, Dawson Field Houses, Ford, Fulwell, Monkwearmouth, Monkwearmouth Shore, Hylton, Ryhope, Seaham, Silksworth, Southwick, and Tunstall, have been formed into a subdivision for the purposes of the county-rate.

Easington Deanery is co-extensive with the Ward as it existed previous to the alterations above described, and includes the parishes parochial places, and townships annexed to Durham Ward on the west; whilst the parish of Monkwearmouth and its dependant chapelries, though annexed to Sunderland for parliamentary and municipal purposes, remain incorporated in Chester Deanery.

THE SOUTH DIVISION.

PARISH OF EASINGTON.

THIS parish, which gives name to the Deanery and Ward, forms the most northern portion of the South Division. It is bounded by the chapelry of Shadforth and the parish of Pittington, in Durham Ward, on the west, by Houghton-le-Spring on the north-west, by Dalton-le-Dale on the north, by the sea on the east, by Castle-Eden and Monk-Hesledon on the south-east and south, and by Thornley chapelry, in the parish of Kelloe, on the south-west. It is divided into four townships or constableries, viz., 1, Easington, including Thorpe and Horden; 2, Hawthorn; 3, Haswell and Pespool; and, 4, Shotton, with Little Eden, Flemingfield, and Edderacres.

EASINGTON.

THE township of Easington contains 5,217 acres, of which 227 acres are sea-coast. Its population, in 1801, was 487; in 1811, 542; in 1821, 593; in 1831, 693; in 1841, 812; and, in 1851, 916, of whom 475 were males and 441 females. There were, at the latter date, 156 inhabited houses, 3 uninhabited, and 5 building. The return of 1851 includes 26 persons in the Union work-house. The township contains about 30 farms. The property was assessed for the county-rate, in 1853, at £5,013.

Easington is a considerable village on the turnpike between Stockton and Sunderland, 17 miles north of the former, and 10 south of the latter place. Standing on elevated ground, which gradually slopes towards the sea, at about a mile distant, its church tower affords a useful landmark to sailors near the coast. In the village are a station of the county police force, a post-office (established May 24, 1842), four public houses, a steam corn-mill, a wind-mill at a short distance, and several shopkeepers and tradesmen, the greater proportion of whom are tailors and shoemakers, supported by the colliery population in the district.

The parish school, for boys and girls, is a commodious stone building near the church, well lighted and

ventilated. The national system of education is adopted, and about 120 is the average attendance. The school was erected in 1814, by subscription, the principal amount being contributed by Archdeacon Prosser, who also gave £1,000 for its future support. This amount is invested in the three per cents, and produces between £33 and £34 per annum; to this sum the trustees of Lord Crewe's charity give £10 annually, and the remaining expenses are made up by liberal contributions from the rector and the payments of the children, each of whom is charged twopence per week for education. There is one other school in the village, which is attended by between 20 and 30 children.

It is said that Dr. Gabriel Clarke gave, by will, dated May 8, 1662, £60 to buy a lease of £10 per annum for a schoolmaster at Easington; but no trace of this bequest is now to be found.

The Wesleyan Methodists have a chapel in Easington; but the Primitive Methodists' place of meeting has been discontinued.

A corps of yeomanry cavalry, consisting of two troops, was raised in Easington Ward towards the latter end of the last century, and placed under the command of Rowland Burdon, Esq., as major. They were presented with their colours on Sunday, September 24, 1798, by Mrs. Burdon.

Easington is first mentioned in a grant to Ealfrid, the son of Britulfine, by Bishop Cutheard. "Essington," says Lambarde, "a manor perteyninge of auncient tyme to the byshopryke of Durham; for when one Nicholas resigned in tyme of Henry III., he had this towne, Howden, and Stocton, appointed for his sustentation duringe his life."

This place is mentioned jointly with Thorpe in Boldon Book. There were 31 villains, who held their lands, and performed their services, like those of Boldon. Simon and Galfrid Cokesmaht were the only free tenants, each of whom held half a carucate of land and served on the bishop's embassies. The carpenter, smith, and punder, each held lands for their services; and the two villis rendered 30s. cornage, and provided two milch cows. The demesne was let out; but the pasture and sheep stock were in the hands of the bishop.

A messuage and a parcel of land in Easington were held *in capite* of Bishop Bury by John Fairey, by the service of "aiding the bishop's bailiff to drive goods distrained, attesting summonses, and superintending the carriage of a dole of wine annually." His descendants held possession for several generations, and are supposed to be the ancestors of the yeomanly family of Ferry, of Thorp.

The mischief inflicted on the coast by the Scots, during the reign of Edward II., may account for the numerous waste lands and reduced rents mentioned in Hatfield's Survey. Nine free tenants are named in that record, who performed the service of embassy. Upwards of 300 acres of demesne lands were leased at a gross rent of 18d. Twenty-nine bond tenants occupied thirty-two messuages, each holding two oxgangs of 15 acres; and, besides various small money rents at various feasts, they rendered eight bushels of lot oats at the feast of the Purification, two hens at the feast of the Nativity, ten eggs at the Passover, and 13d. at the feast of St. Michael in lieu of other work. They also paid 30s. for cornage, 40s. for castle-men, 12s. in lieu of a milch cow, and carried a tun of wine. The cottagers collected the hens, and carried them to the bishop's manors between Tyne and Tees. Sixteen of the cottages were empty and their lands in grass. Richard Colling and eight others held two tenements, two cottages, two tofts, a garden, and a curtilage, parcel of the Manor-place; and William Swalwells held a garden near *le Maysendieu*, and paid 12d. Nine acres of meadow and the pasture were held by Adam Glede and others at £4; and the same tenants paid for an

improvement called the *Rydding* 16s. 10d.; for the common forge, 4s.; and for the windmill, formerly £13 6s. 8d., then only £6 13s. 4d.

Six persons from Easington joined the rising in 1569, two of whom were afterwards executed.

The manorial property has always been vested in the see of Durham, under which a great proportion of the lands are still held by copy of court roll. Easington, Thorpe, Cassop, Shadforth, the Sherburns, and Shotton, do service at the halmote court. Fillymoor Close, worth £7 per annum, was anciently held by the rector, on condition of his defraying the expenses of the bishop's seneschal and his attendants. Between the years 1656 and 1665, the moors of the parish were enclosed, and divided amongst the freeholders, copyholders, and leaseholders. In a decree dated 22nd August, 1672, the first of the following divisions is recited:—1st award, Easington Moor, which appears to have been divided in 1656.—2nd award, Division of Little Thorp lands, 23rd March, 1659.—3rd award, 30th April, 1661, Easington Moor.—4th award, 23rd January, 1661, concerning the allotments of Forster and Paxton.—5th award, 23rd March, 1665, division of Easington Cow Close, and Easington al's Thorp Lee. The allotments are numerous.

Several closes and portions of leasehold ground have, from time to time, been bought and sold by various proprietors. The names which occur are, *West Closes*, *Farmer's Close*, *Crawlaw* or *Crawhall Closes*, *Coleman Close*, *Moor Close*, *Comet Hill*, the *Brighills*, *Scaldrish Hills*, *High* and *Low Pope's Chair*, *High Moor*, *Tibby Smith's Moor*, *Shepherd's Closes*, &c. The names of the farms are *Duncombe's Moor*, *Rise-bridge*, *Strawberry Hall*, *Milestone Moor*, *Hall Field*, *Holme Hill*, &c. *Cow Close*, containing 86½ acres, was sold in April, 1825, by order of the Court of Chancery, in the cause between Elizabeth Nicholson, widow, and others, plaintiffs, and Rowland Webster and others, defendants: it is subject to an annual rent of £2 6s. 3d., and payments of 3s. 6d. and 7s. 3d. to the bishop. *Beacon House* farm is freehold, situated on the south side of Hawthorn Dene: it derives its name from *Beacon Hill*, an eminence on which fires were formerly lighted to warn mariners from the dangerous coast.

Salter's Way.—The remains of an ancient road, under this appellation, passes through the parish of Easington, as well as along the greater part of the eastern coast of the county of Durham. It is known by the same or similar appellations near the coast in

several parts of the island. Cade supposed it to be Roman.

Hett Dyke.—The Hett basaltic dyke traverses the Durham coal field, in a west-south-west direction from the sea in the township of Easington. It passes between Shotton and Haswell collieries, and those of Thornley and Ludworth; passing Hett, it continues between Ferryhill and Sunderland Bridge, close by the north end of the village of Tudhoe, across the Wear, and a little to the north of Willington colliery, apparently running into the Butterknowle slip dyke. It may be traced considerably beyond the outcrop of the coal at Witton-le-Wear, and runs nearly parallel with it till it joins the Cockfield Fell basaltic dyke (see page 81). The Hutton seam of coal, on the south side of the Hett dyke, is much thinner and more expensive to work than the same seam on the north side, particularly in the eastern portion of the district. The dyke has been cut through in Shotton and Willington Collieries.

THE CHURCH.

It would appear that at Easington there was an edifice for the performance of religious worship, long before the overthrow of the Saxon dynasty. The tower of the present church, however, which is the most ancient part of the building, is of the Norman era; the nave and chancel walls are early English, of about 1270, and the side walls in the decorated style. The tower, about 60 feet high, is supported by a circular arch, concealed by a flat modern ceiling, and a strong exterior buttress on the south-west. The entrance to the church is on the south side of the tower, the original south door in the nave having been closed up. Several fragments of old armour are preserved in the tower, probably kept there when that part of the church was used for defensive purposes, "which," says Hutchinson, "perhaps belonged to such castle-men as the manor was bound to provide by the tenure, or to the proper parochial guard; for, as the steeples or towers of churches were to be kept in repair by the ancient laws of the church tenures, as the fortress of such parish, it is probable armour was provided for the men of such fortress." The nave is 57 feet long and 22 wide; and the aisles, which are of equal length with the nave, are 11 feet wide. The south aisle is formed by one round and two light octagonal pillars; two of the pillars of the north aisle are round, and one octagonal; and the arches supported by those pillars are lofty and elegant. The chancel is separated from the nave by a pointed

arch rising from corbels. An uninterrupted view of the entire edifice is now obtained, as the beautiful decorated screen, ornamented with foliage and open work in oak, has been removed. This screen, which is carefully preserved, is of about the year 1660, as are also the boldly carved bench-ends with which the body of the church is completely fitted.* A portion of those in the south aisle are called the *Pesspool Seats*; other stalls are the property of the owners of Horden and High Eden estates. A helmet, which was formerly kept in the chancel, is supposed to have belonged to one of the Conyers family, of Horden Hall, who died in 1644; this date being marked on the wooden plume.

The chancel, which was entirely rebuilt and restored, except the north wall, in 1853, is 41 feet long and 21 feet wide. The east window, of the decorated style, is chaste and beautiful; it consists of five lancets filled with stained glass, representing the Annunciation, Baptism, Crucifixion, Resurrection, and Christ appearing to the three Maries, by O'Connor, of London. There are three windows on the south side, and on the north one window, and an entrance to the vestry; these windows are also filled with stained glass. Within the altar-rails are two recumbent figures. The one at the south side is of freestone, found, during the recent repairs, under the foundation of the south wall of the nave, below the tablet to the Conyers family. It is a male figure, the hands placed upon the breast, legs crossed, with sword and shield, and on the latter are three popinjays; the figure is in good preservation, the lower part of the legs only being slightly mutilated. The figure on the north side lay previously under the *Pesspool Seats*; it is the effigy of a female, of Stanhope marble, in excellent preservation. The head rests on a cushion, the drapery extending to the feet; on the breast are sculptured three popinjays, two above and one below the cincture, and it is inferred that these effigies are memorials of the ancient owners of Horden. A neat marble tablet is erected on the north wall, to the memory of the youngest daughter of the present rector, the Rev. H. G. Liddell.

The roof of the nave is an open arch of stained oak; and the clerestory, which had been blocked up by the plastered ceiling, is now opened out. There are four windows on each side of the nave; those on the north

* "The general effect of the screen and bench-ends," says Billings, "is excellent; and if they are questionable in point of detail, the fault must be attributed to the prevailing taste of the time, and not to the architect who designed them—James Clement, of Durham, who died in 1690."

were inserted about four years ago by the rector, and those on the south side at the expense of the rector and the parishioners during the following year. A mural tablet of grey marble, in the south aisle, records the death of Francis Conyers of Hordon, in 1635, John in 1664, and Christopher in 16—; the epitaph not having been completed.

There is an organ near the entrance, purchased by subscription about two years ago; and large stoves are arranged to warm the church.

The chancel was rebuilt at the entire expense of the rector, and the restorations and repairs of the other portions of the edifice were defrayed partly by the parish and partly by the rector's family. In 1855, the interior of the church was thoroughly cleaned and painted, for which a church-rate of twopence in the pound was unanimously agreed to, the usual rate being one penny or three-halfpence.

The chantry of St. Mary, in Easington church, was of ancient date. Bishop Richard de Marisco and Bishop Farnham were amongst its benefactors; and Adam Neuman alienated to it, without license, a messuage and 21 acres in Little Eden, worth 10s. per annum. At the Dissolution, this chantry was valued at £4 11s. 4d. George Burnell, the last incumbent, had a pension of £4, which he received in 1553.

The chantry of our Ladie of Pittie was founded November 17, 1526, by the will of John Jackson, of Easington, "for one preeste to sing at the awlter of our Ladye in the church of Easington for the saules of the said John Jackson, Jenet his wife, his parents, Deane Henry Dalton, Mr. Thomas Hobbes, clerke, late Archdeacon of the Busshopricke of Duresme, and for the sowles of the Rev. Father in God Hughe Priour of Duresme, William Frankleyn, and John Bentley, after they be departed—and for all Christen sowles." Rules were imposed for the conduct of the chaplain, who was to be appointed by the prior of Durham for the time being; and the chantry was endowed with lands and messuages in Easington and an out-rent of 60s. It was valued at the Dissolution at £5.

REGISTERS.—Books Nos. 1 to 3 (parchment), contain entries of baptisms, burials, and marriages from 1571 to 1797; and No. 4, baptisms, burials, and marriages from 1798 to 1812.

In the vestry is preserved the Easington Declaration, a copy of the "Solemn League and Covenant," taken by the parishioners, Oct. 26, 1645, "according to an order directed by the Hon^{ble} the Standing Committee at Newcastle to the minister for the time being, Philip Nesbitt."

Easington rectory is valued in the King's Books at £100; tenths, £10; episc. proc., £2. The Bishop of Durham, patron. Dedication to St. Mary.

Bishop Richard de Marisco founded or endowed this church before 1222, and, in that year, granted to John de Romesey, rector, and his successors, the lands called *Renyngmolmer*, pasture for ten oxen in the demesne, and the service of the land of Suth-twysle. In 1256, Bishop Kirkham collated Robert de St. Agatha, archdeacon of Durham, to this rectory, and, by the same instrument, decreed the perpetual union of the rectory and archdeaconry. See, therefore, the list of archdeacons, vol. i., p. 98. It was probably as archdeacon, in which capacity he had the charge and conduct of the clerical levies, that, at the general array of the clergy in 1400, the rector of Easington is stated to be "*oneratur sufficienter*."

Archdeacon Roger Leyburn, in 1501, had license from Bishop Fox to enclose 40 acres of the glebe, lying near Le Hallefeld, with free passage to and from a pond upon the moor. During the civil wars, Dr. Gabriel Clarke, was expelled from the rectory as a Malignant; and Philip Nesbitt, a Scotchman, styled *Minister Verbi Dei*, intruded himself into the church. Nicholas Heath of Eden, Thomas Midford of Pespool, and Thomas Shadforth of Eppleton, gentlemen of estate in the neighbourhood, acted in all the committees of sequestration.

"The total rent of Easington parsonage, late belonging to Dr. Clarke, rector thereof, is £137 10s.; five farms and a halfe at Greatham, £—; in toto, £248 10s.; whereof allowed to Mrs Mildred Clarke, for maintenance of herself and her children, £49 14s.—Sept. 17, 1644."

Dr. Clarke survived the Restoration. For an account of his successor, Dr. Granville, see vol. i., p. 251. The Hon. and Rev. Robert Booth, the Rev. George Sayer, Dr. Dickins, Dr. Pye, Dr. Prosser, and the Rev. Charles Thorp, followed in succession. By the Durham Church Estate Bill, passed in 1832, the rectory of Easington was separated from the archdeaconry of Durham; and the Rev. Henry George Liddell, A.M., was appointed rector.

The rectory-house, which stands a little to the north of the church, shaded by a grove of sycamores, was built at the same time as the nave of the church; and large portions of the original structure are still discoverable in the present mansion, especially in the domestic offices. The house has been much improved by the present rector. A ruined oratory, with a large west window under a pointed arch, stands a little to the north. The glebe consists of between 500 and 600

acres of land; and the rector is generally entitled to great and small tithes throughout the parish, with the exception of a prescript rent of £7 10s. from the manor of Horden, £27 9s. 11d. from the township of Hawthorn, and £2 10s. from Edderacres. A prescript of £7 6s. 8d. from Little Eden, (which see) was purchased by Rowland Burdon, Esq., from Dr. Pye, when archdeacon, under the authority of an act of parliament which enabled the clergy to sell certain property, and with the proceeds to purchase their land-tax. The rector pays 5s. annually to the bishop for Pilmire Close, and £4 for the expense of a halmot-court dinner, held once a year, and for defraying the charge of the bishop's seneschal. He also pays £1 11s. to the guardians of the poor of Gateshead, for a stripe of laud within the precincts of the rectory; £2 3s. 4d. to Keyper School; and a fee-farm rent of £4, out of which the land-tax is deducted; and he receives £1 6s. 8d. cottage-rents, is entitled to the kelp on his sea-rocks, and annually holds a court for the manor of his rectory. The gross income was stated in 1835 at £1,437, subject to permanent payments amounting to £126, leaving £1,311, from which £127 was paid to a curate. A parochial meeting of land-owners and tithe-owners in the parish was held April 3, 1837, pursuant to the provisions of the act, 6 and 7 Vict., when a commutation of tithes was effected.

CHARITIES.

Charities of Wardell and another.—A close in Hawthorn, the rents of which were given to the poor, was sold, with the consent of the parishioners, about 70 years ago, for £100. In 1771, Richard Wardell gave £100 to the poor of the parish; and these two sums are secured, with interest at five per cent., on mortgage of the tolls of the turnpike road between Newcastle and Monkwearmouth (see vol. i., p. 100). The interest is distributed in the church on Candlemas day and Saint Thomas's day, amongst the poor, by the curate and the parish officers, in sums of about 2s. 6d. each. An account of the distribution is kept by the curate.

Sparke's Charity.—A rent-charge of 8s. per annum, given to the poor of the parish, and payable out of property in Hutton-Henry and Trimdon belonging to the representatives of Mr. Stott Donnison, has not been paid for above 40 years.

For other charities, see HAWTHORN, HASWELL, and SHOTTON.

POOR-LAW UNION.

EASINGTON UNION comprises the parishes of Easington, Castle-Eden, Monk-Hesledon, Dalton-le-Dale, and Seaham; the townships of Kelloe, Thornley, and Wingate, in the parish of Kelloe; the township of Nesbitt, in the parish of Hart; and the township of Burdon, in the parish of Bishopwearmouth. The township of Haswell sends three guardians to the board; the townships of Dawdon, Thornley, Wingate, and Monk-Hesledon, two each; and each of the other townships in the union, one. The ex-officio members of the board are, the Rev. H. G. Liddell, chairman; Rowland Burdon, Esq., of Castle Eden, senior vice-chairman; Rev. A. Bathune, of Seaham Harbour, junior vice-chairman; and R. Anderson, Esq., of Seaham Harbour.

The Union contains 38,943 acres, and, in 1851, a population of 21,795 inhabitants, of whom 11,466 are males, and 10,329 females. There were 5,604 males of 20 years and upwards, of whom 1,634 were bachelors, 3,687 married, and 283 widowers. Of 4,951 females, 801 were spinsters, 3,706 married, and 444 widows. There were 11,200 persons under 20 years of age, of whom 9,400 were born in the county of Durham, 47 in London, 273 in Yorkshire, 1,959 in Northumberland, 315 in Cumberland, 97 in Scotland, 147 in Ireland, 12 in foreign parts and colonies, and the remainder in various parts of the British dominions; and of 10,555 persons of twenty years and above, 6,288 were born in the county, 1,784 in Yorkshire, 3,999 in Northumberland, 742 in Cumberland, 313 in Scotland, 359 in Ireland, 39 in the colonies and foreign countries, 1 at sea, and the rest in other parts of England.

There were in the Union, at that time, 2 males and 3 females, above 20 years of age, employed in the post-office, 1 inland revenue officer, 15 in the customs, 12 police, 11 clergymen, 3 Protestant ministers, 2 priests or other religious teachers, 11 surgeons, 5 druggists, 22 schoolmasters, 17 schoolmistresses, 3 governesses, 4 other female and 7 male teachers, 30 male and 6 female innkeepers, 11 female lodging-house keepers, 16 male and 125 female general domestic servants, 2 coachmen, 2 grooms, 1 gardener, 33 housekeepers, 8 female cooks, 8 housemaids, 1 nurse, 2 male and 15 female inn-servants, 1 midwife, 3 male and 6 female house proprietors, 6 male and 6 female land proprietors, 7 pedlars, 22 railway engine drivers, 5 shipowners, 387 seamen, 42 pilots, 46 others connected with sea navigation, 185 male and 15 female farmers, 71 male and 60 female agricultural servants, 10 brewers, 11

male and 7 female licensed victuallers, 1 wine and spirit merchant, 2,742 male and 10 female coal miners, 3 male and 21 female annuitants, 7 male and 36 female paupers of no stated occupation, and 2 male vagrants. There were 12 persons blind, 5 deaf and dumb, 17 in the workhouse, and 2 in hospital.

The income and expenditure of the Union, in the year ended Lady-day, 1851, has been given in vol. i., page 162. The following are the receipts and expenditure since that time:—

	RECEIPTS.	EXPENDITURE.
Year ended Lady-day, 1852 . . .	£3,765 15	— £4,038 6
" " 1853 . . .	4,106 4	— 3,982 7
" " 1854 . . .	4,292 8	— 4,268 17
" " 1855 . . .	4,597 3	— 4,422 13*

The income and expenditure of the parish of Easington, in the year ended 1855, were as follow:—

INCOME.	£.	s.
Receipts from poor-rates:—Easington, 327 <i>l.</i> 13 <i>s.</i> ; Hawthorn, 74 <i>l.</i> 1 <i>s.</i> ; Haswell, 723 <i>l.</i> 15 <i>s.</i> ; Shotton, 468 <i>l.</i> . . .		1,593 9
In aid of poor-rates:—Easington, 5 <i>l.</i> 3 <i>s.</i> ; Hawthorn, 12 <i>l.</i> 8 <i>s.</i> ; Haswell, 11 <i>l.</i> 7 <i>s.</i> ; Shotton, 27 <i>l.</i> 13 <i>s.</i>		45 11
	£1,639	0

EXPENDITURE.	£.	s.
In-maintenance:—Easington, 15 <i>l.</i> 18 <i>s.</i> ; Hawthorn, 1 <i>l.</i> 17 <i>s.</i> ; Haswell, 69 <i>l.</i> 15 <i>s.</i> ; Shotton, 28 <i>l.</i> 6 <i>s.</i>	115	16
Out-relief:—Easington, 131 <i>l.</i> 14 <i>s.</i> ; Hawthorn, 21 <i>l.</i> ; Haswell, 356 <i>l.</i> ; Shotton, 183 <i>l.</i> 12 <i>s.</i>	692	6
Workhouse loans repaid, &c.:—Easington, 19 <i>l.</i> ; Hawthorn, 5 <i>l.</i> 4 <i>s.</i> ; Haswell, 38 <i>l.</i> 13 <i>s.</i> ; Shotton, 25 <i>l.</i> 1 <i>s.</i> . . .	87	18
Salaries and rations of officers:—Easington, 23 <i>l.</i> 16 <i>s.</i> ; Hawthorn, 6 <i>l.</i> 10 <i>s.</i> ; Haswell, 48 <i>l.</i> 9 <i>s.</i> ; Shotton, 31 <i>l.</i> 7 <i>s.</i>	110	5
Other expenses:—Easington, 20 <i>l.</i> 7 <i>s.</i> ; Hawthorn, 4 <i>l.</i> 17 <i>s.</i> ; Haswell, 36 <i>l.</i> 6 <i>s.</i> ; Shotton, 42 <i>l.</i> 2 <i>s.</i>	103	12
Total connected with relief	£1,109	14
Costs of law proceedings:—Shotton	6	13
Constable's expenses before justices:—Easington, 3 <i>l.</i> 8 <i>s.</i> ; Hawthorn, 1 <i>l.</i> ; Haswell, 1 <i>l.</i> 7 <i>s.</i> ; Shotton, 6 <i>l.</i> 2 <i>s.</i> . . .	11	17
Vaccination:—Easington, 1 <i>l.</i> 7 <i>s.</i> ; Haswell, 12 <i>l.</i> ; Shotton, 3 <i>l.</i> 16 <i>s.</i>	17	3
Registration fees to clergymen:—Easington, 2 <i>l.</i> 18 <i>s.</i> ; Hawthorn, 7 <i>s.</i> ; Haswell, 14 <i>l.</i> ; Shotton, 4 <i>l.</i> 10 <i>s.</i> . . .	21	15
County-rates, &c.:—Easington, 83 <i>l.</i> 11 <i>s.</i> ; Hawthorn, 21 <i>l.</i> 10 <i>s.</i> ; Haswell, 144 <i>l.</i> 16 <i>s.</i> ; Shotton, 74 <i>l.</i> 3 <i>s.</i>	324	0
Parliamentary registration:—Easington, 1 <i>l.</i> 5 <i>s.</i> ; Hawthorn, 1 <i>l.</i> 5 <i>s.</i> ; Haswell, 1 <i>l.</i> 17 <i>s.</i> ; Shotton, 1 <i>l.</i> 2 <i>s.</i>	5	9
For all other purposes:—Easington, 21 <i>l.</i> 14 <i>s.</i> ; Hawthorn, 4 <i>l.</i> 8 <i>s.</i> ; Haswell, 59 <i>l.</i> 14 <i>s.</i> ; Shotton, 33 <i>l.</i> 16 <i>s.</i>	119	12
	£1,616	3

* The medical officers' salaries amounted to £139. £62 10*s.*, repaid by her majesty's treasury on account of those salaries, is divided according to the averages, and placed opposite each township in the column in aid of poor-rates.

The workhouse is situated to the east of the village. The building is of stone, in the manor house style, and with the yard, out-buildings, and garden ground, occupies an area of about an acre and a half. There are four classifications in the establishment, containing 75 inmates. The cost of the building was about £2,500, and the amount was arranged to be paid by instalments in twenty years.

The dietary table for the able-bodied is as follows:—
Breakfast—every day, 6 oz. of bread, and 3 gills of boiled milk with oatmeal. *Dinner*—Sunday and Thursday, 5 oz. of cooked meat, and 12 oz. of potatoes; Monday and Friday, 4 oz. of bread and 3 gills of soup; Tuesday and Saturday, 14 oz. of suet pudding; Wednesday, 4 oz. of bread and 3 gills of rice milk. *Supper*—Sunday and Thursday, 6 oz. of bread and 3 gills of broth; Monday, Tuesday, Wednesday, Friday, and Saturday, 6 oz. of bread and 3 gills of boiled milk with oatmeal. The aged and infirm are, at the discretion of the guardians, to be allowed at breakfast and supper, in lieu of the allowances of milk with oatmeal and broth at those meals, above specified, 2 oz. of coffee, 1 oz. of tea, together with 4 oz. of butter and 4 oz. of sugar per week. Children under 9 years of age, to be dieted at discretion; above 9 and under 15, to be allowed the same quantities as women. Sick to be dieted as directed by the medical officer.

HORDEN.

HORDEN HALL, situate about a mile from Easington, and near the head of a dene which descends to the sea, is one of the few remaining specimens of old domestic architecture remaining in the county. It is now a small building, but has originally been of greater extent. Its exterior is somewhat plain, consisting of gables to the east and west, with a projecting porch to the south, having two heavy cylindrical pillars on each side. Above is a bay-window, divided into several lights by plain stone mullions. A shield of arms above the entrance appears to fix the date of the building about the time of Christopher Conyers, in the age of James I. or Elizabeth. The staircase is of oak, and the balustrade is roughly, but spiritedly carved with foliage and figures. The drawing-room is panelled, and ornamented with a carved oaken chimney-piece, bearing some grotesque busts and a profusion of tracery and foliage in relief. In the centre of two compartments are the arms of Claxton and Conyers. "Nothing," says Billings, "can exceed this decoration in the exe-

cution of its detail; and as a specimen of its style, it is not to be surpassed."

Bishop Flambard, after the accession of Henry I., granted Horden, Ravensworth, Blakiston, and Hetton to his nephew, Richard, from whose descendant, Marmaduke, the family assumed the name of Fitz-Marmaduke. John Fitz-Marmaduke was one of the barons who, in 1300, asserted their sovereign's authority in Scotland, in opposition to Pope Boniface. He died in 1311, whilst engaged in the wars in Scotland. Being at that time governor of St. John's Town, Perth, the flesh was boiled from his bones in a huge cauldron at that place, to the intent that when in peaceful times an opportunity should present itself, the bones might be brought home and buried in Durham cathedral, according to his will. In consequence of the frequency of such practices, a canon of the church had been promulgated on the subject; and Cardinal Berengarius, Bishop of Tusculum, imposed on the offenders in the present case the mild penance of attending their lord's obsequies at Durham, having first interposed the authority of the church to insure the quiet transportation of the relics. Meanwhile, a dispute had arisen between Richard, the son, and the executors of the deceased, relative to the funeral, which, though apparently settled before the bishop as ordinary, continued to be mooted with much angry feeling, and was eventually appealed to the court of York, when it was probably terminated by the untimely death of Richard Fitz-Marmaduke. "In the year 1318, there fell out in the bishoprick a most strange and detestable action;

* A translation of a letter, dated July 5, 1479, from William, the keeper of the Friary of Hartlepool, to Sir Robert Claxton and his lady, is given by Sir C. Sharp. It contains a grant of absolution; and on the back is written, "May our Lord J. H. S. Christ, who gave to his disciples the power of binding and loosing, himself absolve thee. And by the authority of the Apostles Peter and Paul, and by the virtue of this bull and papal indulgence, and by the whole power of the church, I absolve thee from all thy sins, confessed and unconfessed, and those which thou wouldest wish to confess if they should occur to thy memory. And I grant thee a plenary absolution and remission as far as the keys of the church extend in this part, so that thou mayest be absolved before the tribunal of our Lord Jesus Christ, and mayest have eternal life, and mayest live for ever."

† THE LAST OF THE CONYERS.—The Conyers family, "one of the most honourable houses in the north," have been mentioned under the respective heads of SOCKBURN, BISHOPTON, &c. Its last representative was Sir Thomas Conyers, whose misfortunes and poverty fortunately came to the knowledge of the historian Surtees. With his characteristic veneration for old families, that gentleman, in December, 1809, addressed an appeal, of mingled simplicity and feeling, to the editor of the Gentleman's Magazine, on behalf of the aged knight. After stating the antiquity, noble alliances, and large possessions of the

for as Richard Marmeduc, seneſchall to the Bishop of Durham, did ride to hold the county court, he was slain upon the old bridge of Durham, by his kinsman, Robert Neville. (See page 94.) The only reason assigned for this outrage is that in the following passage of Leland's Col., i., 547:—"James Duglas discomfitted the band of Englishmen at Berwicke (Bewick) wher Robert Neville was slayn, the which Neville had afore slayn Richard Fitz-Marmaduke, at the Old Bridge of Duresme, *for despite who might rule most.*"

Besides the manors of Horden, Ravensworth, Lamesley, Silksworth, Ulnaby, and Carlebury, which Richard Fitz-Marmaduke had inherited from his father, he also held the manor of Stranton, from his mother Isabel, sister of Robert Brus. The manors of Horden and Carleton were, after his death, settled on Thomas, Earl of Lancaster, who granted the former to Sir — Holland. Sir Thomas Holland, Knt., leased Horden to John Fitz-Adam de Menville and Agnes his wife, at £13 rent; and their descendants held it for four centuries. Isabella, daughter and sole heiress of William de Meneville was married first to William Laton, and afterwards to William Claxton, 12th Skirlaw. Sir Robert Claxton, Knt.,* who died 7th Bishop Dudley, left four co-heiresses, of whom the third daughter, Elizabeth, was married to Richard Conyers, and became possessed of Horden as her share of her father's estates. John Conyers, son and heir of Christopher, was created a baronet July 14, 1628. His son, Christopher, died in 1693, and was the last Conyers of Horden.† The four co-heiresses of Sir Baldwin

family, he adds, "that on the death of Sir George Conyers, who had squandered the little that was left, the barren title descended to his uncle, Thomas Conyers, who after a life perhaps of some imprudence, certainly of much hardship, after an unsuccessful attempt in a humble business, and a subsequent service of several years at sea, is now, in his seventy-second year, solitary and friendless, a pauper in the parish workhouse of Chester-le-Street. When I add, that if any credit be due to physiognomy, Sir Thomas has received from nature, in his fine manly figure and open expressive countenance, the native marks of a gentleman; and that he bears his lot with a degree of fortitude equally removed from misplaced pride, or querulous meanness; enough I hope will have been said to interest some benevolent minds in his favour. Accustomed to a life of hardship and labour, he wishes for neither affluence nor luxury; but his present humiliating situation he feels severely." To this letter Mr Surtees appended his name and address, adding, "I will willingly contribute £20 a year to this purpose. I have a few promises of annual guineas, which will raise this to £36. Of the present application, the object of it is ignorant; and it would be cruel to acquaint him with it, unless something be effected for his relief."

In consequence of this letter, Mr. Surtees became engaged in voluminous correspondence with persons making inquiries, and offering assistance. On February 26, 1810, before the subscriptions had been

Conyers, Bart., on November 23, 1767, conveyed Horden and lands in Preston-le-Skerne and Little Thorpe, to Rowland Burdon, Esq., for £20,000. The manor of Horden was advertised for sale by private contract in 1818, and by public auction on May 2, 1825. The estate was described as freehold and tithe-free (land-tax redeemed), and containing about 954 acres, of which about 50 were wood land, and above 300 old grass land; the whole being let in two farms, viz., *Horden Hall* and *West Horden*. The estate became the property of W. Seruton, Esq., Durham, and now belongs to Matthew Woodfield Esq.

LITTLE THORPE, or THORPE-NIGH-EASINGTON, is a hamlet about a mile south of Easington, and is included in the same manor. John Thorpe in 1385, and Robert Dalton in 1560, occur as proprietors under the sec. An estate in Little Thorpe, containing a farm-house and 100 acres, purchased in 1843, the greater part of which is held by lease under the Bishop of Durham, now belongs to Mr. Henry Longstaff.

HAWTHORN.

THE township of Hawthorn contains 1,552 acres, of which 86 acres are covered by tidal water. Its population, at the successive periods of return, was 114, 118, 140, 162, 177, and 183; 86 of the latter number being males and 97 females, and inhabiting 39 houses. The value of property assessed for the county-rate, in 1853, £1,291.

The village of Hawthorn is pleasantly situated upon

received, he hastened to the relief of the old baronet, accompanied by the Rev. Patrick George, then curate of Bishop-Middleham, who afterwards spoke with admiration of the delicate and kind manner in which he executed his commission. His own grey head uncovered, he accosted Sir Thomas at once with cordiality and respect, simply stating the purpose of his visit. The old man was at first much affected; but a dormant sense of pride seemed to be awakened, and he said, "I am no beggar, sir; I won't accept any such offers." Mr. Surtees gently soothed this temper, assuring him that the gentlemen by whom he was deputed were actuated by no motive that could be offensive to him, but only by feelings proper to their rank, and his own; and that, by acceding to their wishes, he could only evince his own sense of that propriety, and prove that he, in their situation, would have felt and acted as they now did. Thus his scruples were gradually overcome, and he consented to the proposed arrangement, with many expressions of gratitude to those who had so kindly interested themselves in his situation. He was removed from the workhouse on the 1st of March, though the proposed amount of subscription was not then filled, to a situation of ease and comfort, at the house of Mr. William Pybus, Chester-le-Street, where he was respectfully and kindly treated. He was not destined, however, long to enjoy the asylum so considerably prepared for him. His strength had been for

an eminence about half a mile north from Easington, and nearly at an equal distance from the sea. It contains a public house, a blacksmith's, and other small shops, and six farmsteads. In the township there is a corn-mill.

Hawthorn Dene is one of those deep ravines which descend to the eastern coast of the county of Durham. Near its embouchure, Admiral Milbank built a summer retreat, which he called *Sailor's Hall*, now partly in ruins, and belonging to Mr Mark Snowdon. When the estate was purchased by Major Anderson, of Newcastle, he erected an elegant Gothic mansion near the same site, designating it *Hawthorn Hive Cottage*, which now belongs to his representatives. It commands an imposing view of the wild and rocky coast, which here consists of rude cliffs, broken by the action of the sea into deep caverns; whilst the offing is also nearly filled with dangerous rocks and shoals, over which the waves break furiously during storms from the east and north-east. At a little distance there is a fine bay called *Hawthorn Hive*, or *Hythe*, formed by a natural rocky projection called the *Skaw*, and off which the light colliers of Sunderland frequently await the flow of the tide in fine weather. "The placidness of a summer's evening calm," says Hutchinson, "when the moon is reflected on the smooth bosom of the ocean, is highly pleasing to the contemplative eye; but when the storm lifts the distracted waves, with a horrid gloom confounds the elements, and mixes the spray even with the clouds; when the winds groan in the caverns, and the hoarse billows thunder along the beach; when the shrill cries of distress and wreck strike the ear from wretches with-

some time declining; and his constitution, naturally vigorous and robust, sunk under the increasing burthens of age and infirmity. He died on the 15th of March, without pain and without a sigh, after taking an affectionate farewell of his relatives and friends. Sir Thomas left three daughters married in humble situations. The sum of £100 5s. had been subscribed on his behalf, comprising £10 from Bishop Barrington; £5 from Sir Thomas Sheppard, Bart.; £5 from George Anderson, Esq., Newcastle (see HAWTHORN); £10 from Sir Thomas H. Liddell, Bart. (afterwards Lord Ravensworth); £10 from Sir H. V. Tempest, Bart.; £2 from William Radcliffe, Esq., Rouge-Croix; £2 from the Rev. John Ward, Mickleover near Derby; £1 1s. from James Hammett, Esq.; £2 2s. from E. A. and E. H.; £10 from Sir Henry Etherington, Bart.; £15 from Thomas Harrison, Esq., Stub House; £1 from Thomas Wilkinson, Esq., Oswald House; £2 2s. from Sir Joseph Andrews, Bart.; £5 from Sir Montagu Cholmley, Bart.; and £20 from Robert Surtees, Esq. From the amount, £15 was paid for clothes and linen; £5 4s. 10d. in discharge of debts; £8 for lodging, and a gratuity for trouble; £4 13s. 6d. medical attendance; and £19 19s. 6d. for funeral expenses. Some further charges left a balance of £47, which was employed in placing some of his grandchildren in decent occupations.

out succour; when the affrighted cattle bellowing leave the hills, and driving showers sweep the disconsolate landscape, little remains to make such a situation eligible.”*

In 1387, Bishop Fordham, in vindication of his legal right to all whales, sturgeons, porpoises, and thulepolls wrecked on the coast of Durham, directed Roger Fulthorpe, and others his justices, to enquire concerning a certain porpoise, worth 100s., lately wrecked at Hawthorn, and which Robert Brown, of that place, and other malefactors, had seized and carried away.

Hagathorne was granted by Bishop Flambard to William, the son of Ranulf; and Bishop Pudsey confirmed the donation to Thomas, son of William. The family afterwards assumed the name of Herrington. The Merleys, Lumleys, and other families held lands in Hawthorn at an early period; and subsequently the Menevilles, Claxtons, and Radelyffes, successively held the manor. The manorial rights now belong to Lord and Lady Deerhurst.

Three of the farms in this township, *West Butterlaw*, *Little Coop House*, and *Big Coop House*, belong to the representatives of the Countess of Coventry. The property of Major Anderson, including *Kinley Hill*, containing 188 acres; the mansion, pleasure grounds, garden, &c., containing 29 acres; the *Poor Close*, in the village, containing 5½ acres; and the *Blue House* (copyhold) farm, containing 45 acres, were purchased

* On the 5th of November, 1824, nearly fifty vessels perished almost immediately off the Hive, together with all their crews, except that belonging to the ship *Dido*, which was wrecked betwixt two rocks, about 30 yards from the shore. Here Major Anderson, who witnessed the distressing scene, had assembled all his servants in order to render every possible assistance to the unfortunate mariners, who, having lost their main-mast, fore-mast, and rudder, collected themselves upon the bowsprit, and made several fruitless attempts to throw a rope to the shore; fortunately, however, the major had an excellent Newfoundland dog, which, by encouragement, after several dangerous attempts, succeeded in catching hold of the rope, and brought it through the raging surges to the major and his servants; by it the crew, fourteen in number, escaped from the foaming gulph, which had threatened them with destruction. The crew, having been refreshed with every necessary comfort at the major's house, departed after gratefully thanking their preservers; and so affected were the feelings of the captain's wife, that, on the following day, she visited Hawthorn Hive Cottage, where she, with streaming eyes, expressed her gratitude, and falling upon her knees, kissed the dog which had been so essentially instrumental in saving her husband and his crew.

George Anderson, Esq., F.S.A., who had been major of the 34th regiment of foot, and was for some years a deputy-lieutenant and magistrate of the county of Northumberland, died at his house in Anderson Place, Newcastle, on the 6th September, 1831. He was a liberal benefactor to the public institutions of that town, and by will left the following bequests:—To the church of St. Andrew, £100 to

by Richard Pemberton, Esq., in 1836. *Peak House* farm, to the east of Hawthorn, and near Kinley Hill, is the property of Mr. Thomas Henderson. In the western portion of the township is *Butterlaw* farm, containing 66 A. 2 R. 17 P., formerly the property of Sir M. W. Ridley: it afterwards belonged successively to Mr. George Pearson and Mr. James Freeman, and is now the property of the Pembertons.† The coal under this farm still belongs to Sir M. W. Ridley, who possesses the usual powers for winning, working, and carrying it away. Other property in the township belongs to B. Ogden, Esq., of Sunderland, and to the South Hetton Coal Company.

Hawthorn School.—By an instrument, dated November 24, 1736, Robert Forster directed that £200 should be put at interest by the Durham meeting of the Society of Friends, and paid to a schoolmaster or mistress at Hawthorn, for teaching 24 poor children, to be appointed by Nicholas Dodshon and Warren Maude, their executors and assigns. In respect of this charity, the sum of £255 in the new four per cents now stands in the names of trustees, producing an annual dividend of £10 4s. A school and dwelling-house, with a small garden, were given by the above Robert Forster, and are kept in repair by the Society of Friends. The sum of £10 a year is paid to a schoolmistress, for which she teaches 14 children reading, writing, and accounts, and the girls needlework in

repair and ornament the tower, and a further bequest of £400 to erect a spire 100 feet high, if the tower should be found capable of bearing it, his wish being that it might be visible from Durham, and be an ornament to the town; to St. John's church, £200, to raise a spire 50 feet high on the tower thereof, with his arms engraved thereon; and to St. Nicholas' church, £500 for the purpose of obtaining a large bell to strike the hours upon; all of which bequests to be null and void if not complied with in the course of three years after his death. The steeples of St. Andrew's and St. John's were not sufficiently strong to bear the proposed accumulated weight; but the great bell was provided for the clock of St. Nicholas' church, and is still popularly called in Newcastle, in commemoration of the testator, "THE MAJOR."

† Mr. Freeman died in January, 1848. By his will, dated in 1847, he gave the residue of his property, real and personal, to trustees for sale and investment, and to stand possessed of the trust funds, "in trust for and to pay the same to all his cousins who should be living at his decease, in equal shares, their executors, administrators, and assigns, for their own use and benefit." This gave rise to a contest between the testator's first cousins on the one hand, and his first cousins once removed and his second cousins on the other; the first cousins contending that they alone were entitled to the benefit of the bequest. The case "*Stanger v. Nelson*," came on, July 11, 1855, before Vice-chancellor Sir J. Stewart, who held that the first cousins once removed and the second cousins living at the testator's decease were not excluded from participating in the bequest.

addition. The children are selected by the mistress, subject to the control of a visiting committee.

HASWELL.

THIS township comprises an area of 3,108 acres. The population, in 1801, was 93; in 1811, 114; in 1821, 115; in 1831, 263; in 1841, in consequence of the opening out of new coal mines, it had increased to 3,981; and in 1851, it was 4,356, of whom 2,326 were males and 2,030 females. At the latter date, there were 856 inhabited and 10 uninhabited houses. The property was estimated in 1853 at the annual value of £8,689 4s. 7s.

The Hartlepool railway has an extent of 2 miles and an area of 16 acres in this township. Its contribution to the local rates, in each of the years 1851 and 1852, was £300. The Durham and Sunderland line, with an extent of 1½ mile and an area of 10 acres, contributed £400 in each year; the gross amounts collected being £9,218 10s. 10d. in 1851, and £9,219 15s. 6d. in 1852.

HIGH HASWELL, about 3 miles west from Easington, contains three farm-houses and a few cottages. Low HASWELL is about a quarter of a mile to the north-west, and consists of a farm-house, the property of Baker Baker, Esq., of Elemore. HASWELL LANE is a considerable village, consisting of a long line of houses, shops, and public houses. Adjacent is the junction station of the Durham and Sunderland and Sunderland and Hartlepool railways.* The Wesleyan Methodists have a chapel in the village, which will hold about 200 hearers; there is a school attached, and both are well attended. The Primitive Methodists have also a chapel and school, of about the same size, and equally well supported. There is, besides, a village school, at which between 40 and 50 boys and girls are taught; it is maintained by the children's pence. The place is well supplied with water for domestic purposes.

HASWELL COLLIERY village consists of pitmen's houses only. At the colliery is a school for boys and another for girls, supported by the colliery owners, and the children's pence. The curate of Easington performs service in the boys' school every Sunday afternoon.

* "If the tourist, on his way to Hartlepool," says Dr. Granville, "departs direct from Sunderland, many are the modes and changes which he will witness in the manner of being forwarded to his destination. The manner altogether is a tedious, though an extremely cheap one; and as the levels of the ground vary, so do the means employed to travel over them. Thus, from the sea village of Ryhope, three miles from the first station out of Sunderland, the traveller will be dragged up an elevated plane, by stationary engines working an end-

Haswell Colliery.—The first attempt made to obtain coal by the Haswell Coal Company, Messrs. Clark, Taylors, Plummer, Lambs, Maude, Laws, and Bell, was in a part where the limestone is comparatively thin, being only about 36 fathoms; but beneath this was found about 20 fathoms of quicksand, abounding with feeders of water, the pressure from which impeded the operations of the sinkers, and could only be kept under by strong engine power. After an expenditure of about £60,000, it was found necessary to abandon the sinking; the only set-off to the outlay being the value of the materials removed. Another sinking was commenced in a field of coal received in exchange from the South Hetton Coal Company, for the same area of coal belonging to the Haswell Company near South Hetton pit. Two boreholes were abandoned; one having 16 fathoms, and the other 26 fathoms of quicksand; but another, near that last mentioned, in the field received in exchange, was found to be free from this obstruction. The five-quarter seam of coal, 3 feet 6 inches thick, is at the depth of 90 fathoms from the surface; 30 fathoms further is the main coal; 16 fathoms lower, the low main, 3 feet 7 inches thick; and 20 fathoms beneath it, the Hutton seam, 4 feet 4 inches (all good); being a total depth of 156 fathoms. The number of workmen employed under ground in this colliery, for the raising of 200,000 tons of coal yearly, is as follows:—

	Men.	Boys.
Staff (for safety) employed in superintendence, and in properly ventilating the mine and waste, in keeping roads, setting timber, removing obstructions, and doing all things necessary for the safety of the mine and the workmen	60	13
Bargainmen, or men employed on piece work in stone drifting, cutting through troubles, &c..	12	..
In transit of coal under ground	7	126
Employed in cutting coal	210	..
	289	139

The first shipment of coals from the colliery took place, July 2, 1835; and the first waggon of coals that passed over the Durham and Sunderland railway was on the 5th July, 1836, when a supply was sent to Hendon. The coals are now shipped at Sunderland,

less rope, and in that manner will he reach Haswell. Of these stationary engines there is one at every three miles; but even that number would not have been sufficient for the intended purpose, had not the ascending ground been rendered less steep, by excavations made through the soft oolitic rock to a considerable depth. At Haswell the moving power is again changed; and a single horse, put in front of the whole train, is found to be sufficient to draw the immense loads I have described along a single rail."

Seaham, and the Victoria Dock at Hartlepool. They are called in the market, Richmond Main, Haswell Wallsend, Plummer's Wallsend, and Easington Wallsend.

One of the most fatal cases of explosion on record in the north of England occurred in the "Little Pit," at this colliery, on the afternoon of Saturday, September 28, 1844. No fewer than 95 lives were lost, either by the explosion itself or by the "after damp." The event took place shortly after three o'clock, when "the back shift" (as it is called) were at work; and of the number then in the pit, only four persons, who were at the bottom of the shaft at the time, escaped, in consequence of the explosive current having been intercepted by some waggons laden with coals on a "rolley way." The four men were at the end of those waggons nearest to the shaft. The horse attached to the train was killed, and thrown completely over in the form of a summerset, falling on his back. The point where the explosion occurred was called the Meadows-Flat, about 1,400 yards from the shaft; and the misfortune was thought to have been occasioned either by the removal of a "jud" or pillar of coal, by which a quantity of gas had been suddenly extricated, or by a fall of stone from the roof, which injured the gauze of a Davy lamp. An inquest was held on the 29th September, and, by adjournment, on the 1st, 2nd, 9th, and 11th of October; and the verdict was to the effect that the deceased "were accidentally and by misfortune killed by an explosion of fire damp, at the Little Pit of Haswell colliery; and further, that there is no blame attributable to any one connected with the said pit."

An extensive colliery village at SOUTH HETTON, erected near a little cottage, well known by the name of *Snippey's Gate*, on *Salter Lane*, consists of several rows of houses, and the usual shopkeepers. A chapel of ease has been erected on high ground, by the side of the railway. It is of stone, in the Gothic style, with a bell turret above the entrance, a vestry, and a gallery in the interior; it will hold about 300 persons. There is also a school in the village.

South Hetton Colliery, belonging to Messrs. Forster, Walker, Burrell, Green, and Co., is on the northern verge of the township. The five-quarter seam is not at this pit under the limestone and lower red sandstone; but the main coal is of good quality and thickness, at 140 fathoms. The depth to the Hutton seam, is 180 fathoms, where it exists in great perfection, and produces best household coal. The sinking of this

colliery was commenced about the same time with that at Haswell, but with so much better success that the Hutton seam was reached before the first sinking at Haswell was abandoned. The coals are shipped at Sunderland, Seaham Harbour, and the Victoria Dock, Hartlepool, and are called in the market South Hetton Wallsend.

Hessewelle gave name to a local family at an early date. Talbot de Northallerton, in 1338, granted a rent-charge out of the lands at Great Haswell to John, son of Adam de Menville and Agnes his wife and their heirs. From the Menvilles the estate passed to the Claxtons (see HORDEN), and, with Pespool, Boysfield, and half the manor of Fishburn, was allotted to Felice, youngest daughter of Sir William Claxton, who became he wife of Sir Ralph Widdrington, Knt. In the reign of Queen Elizabeth, the manor of Great Haswell was held by Richard Bellasis, Esq.; and, before 1680, it was sold by William Bellasis, Esq., to John Duck, alderman of Durham (see vol i., p. 375). Lady Duck, in 1695, devised it to Thomas Nicholson, Esq., of West Rainton, who died in 1727, leaving three daughters and co-heiresses. Jane, the eldest, married Thomas Earl of Strathmore (see p. 54); Anne, the second, married the Hon. Patrick Lyon, brother to the earl; and Mary died a spinster. By deed of partition, Great Haswell was allotted, in 1759, to the Countess of Strathmore, whose grandson, John, tenth Earl of Strathmore, sold it to the late Sir George Shee, Bart., of Dunmore, in the county of Carlow. *South Fallowfield* and a farm at High Haswell are held by his representatives. *North Fallowfield, Haswell Moor* farm estate, and other property, formerly belonging to T. R. G. Braddyll, Esq., were purchased by Baker Baker, Esq., of Elemore, in 1850. Haswell colliery is situated nearly in the centre of the latter estate, which contains 275 A. 0 R. 12 P., and, with the exception of 43 A. 3 R. 48 P. of plantations, is leased to the colliery company.

Adamson's Charity.—In 1756, John Adamson, by deed, gave land to the poor of Haswell, then vested in the overseers, and producing 12s. per annum. No information can now be obtained respecting this charity, the payment of which has been discontinued for many years.

PESPOOL and BOISFIELD, now united, are supposed to be estates originally formed out of the large wastes belonging to the manors of Easington and Haswell, and

contain 630 acres of land in the southern portion of Haswell township. Pespool was early the estate of Edmund de Denum, who held it of the bishop *in capite*, by homage and fealty and 13s. 4d. rent. On his death without issue, his four sisters became his coheireses. By Hatfield's Survey, Lady Isabel de Claxton held the manor by 13s. 4d. rent, and a pair of spurs, at the feast of St. Cuthbert in September, and four acres *de nova vasto* under 6d. rent. In 1484, Pespool and Boisfield were included with Haswell in the share of Felice Widdrington above named. After having passed through the hands of several proprietors, the manor was purchased, in 1623, from Robert White and Elizabeth his wife, by Thomas Midford, merchant, of Newcastle, who resided on the estate. Both he and his son and successor, William, were zealous Parliamentarians; and, after the Restoration, the conduct of the younger Midford having involved him in difficulties, he mortgaged Pespool to Thomas Strode, Esq., barrister-at-law, of Parnham, in Dorsetshire. In 1697, it was purchased, for £3,550, by Mathias Partis, who conveyed it to Robert Lawson, of Newcastle, in 1700, from whom it passed, in 1706, to Robert Forster, merchant, of the same place. The heirs of the latter, in 1752, sold the manor and estate, for £3,640, to John Nesham, Esq., of Houghton-le-Spring, from whose grandson it passed, in 1808, to John Pemberton, Esq., of York, for £8,850. His widow, Mrs. Pemberton, of Sherburn, is the present proprietor.

SHOTTON.

THE township of Shotton, the most southerly portion of the parish of Easington, contains 3,853 acres, 173 of which are tidal water. The population was, at the successive returns, 250, 286, 264, 272, 603, and 1,607: of the latter number, 822 were males and 785 females. In 1841, there were 118 inhabited houses, and two building; and in 1851, 284 inhabited, 3 uninhabited, and 24 building. The property was valued for the county-rate, in 1853, at £4,450.

The Hartlepool branch of the North-eastern railway passess over 2 M. 2 F. 192 Y., and covers an area of 27 A. in this township. In 1851, it contributed £86 13s. 4d.

* Some parties in this district having been interrupted whilst engaged on the ordnance survey of the county, at present being made, a printed notice was conspicuously posted in the township of Shotton, addressed to owners and occupiers of land in the parish of Easington, stating that surveys of the several townships in the parish of Easington would commence on the 13th Aug., 1855; that each surveyor has a printed appointment, on which his name is written, authorising

to the local rates, and £65 in 1852; the gross amounts collected in those years being £453 4s. 3½d. and £343 12s. 1½d. In the year ended March, 1855, the payments of the railway were, for poor-rate, £93 15s.; highway rate, £20 16s. 8d.; church-rate (½d. in the pound), £2 3s. 4d.; total, £116 15s.

SHOTTON.—The old village of *Shotton* is about 2 miles south from Easington, and 12 from Sunderland. It contains two public houses, a blacksmith's shop,* four farm-houses, a school, and a few cottages.

School.—Edward Walton, of Wheatley Hill, in the township of Wingate, by will, dated 1768, bequeathed a house and garden in Shotton as a school-room and residence for a master; and endowed it with a share of £2,000 (see BISHOP-AUCKLAND, vol. i., p. 554) for teaching 20 poor children. William Dunn, of Easington, elerk, had, by will, December 8, 1760, given and bequeathed "to the township of Shotton, £40, to be paid to the churchwardens or overseers for the time being, the interest thereof to be applied to the education of the poor children of Shotton." This bequest produces £2 per annum, which, with £20 from Walton's charity, is paid to the schoolmaster, who has the use of the house and garden, and the payments from the children who are not under the endowment. The appointment of the free scholars is at the discretion of the master, subject to the same visiting committee as at Hawthorn. The committee repair the school premises from the charity fund.

Shotton Hall, to the east of the village, late the property and residence of the Rev. Ralph John Brandling, now belongs to the owners of Haswell colliery. It is a commodious and modern mansion; the ceiling, staircase, and balustrade of the interior being highly ornamented. Attached are some fine old woods, a fish pond, and extensive pleasure and garden grounds. It is at present the residence of Robert Calverley Bewicke, Esq.

NEW SHOTTON is the colliery village, consisting principally of workmen's houses, and containing the church. Shotton tilery is about a quarter of a mile from the colliery.

him to act on the survey, and which he is ordered to shew to persons asking the reason of his being on their lands; and should any surveyor refuse to shew his appointment or behave improperly, that he be reported to Lieut. O'Grady, Royal Engineer's offices, Newcastle-on-Tyne. And any person wilfully obstructing or hindering such person so appointed, is subject to a penalty of £10, but which may be mitigated to a sum not less than £2.

THE CHURCH.

In 1845, it was proposed to the ecclesiastical commissioners that the townships of Shotton and Haswell should be formed into an ecclesiastical district, under the Church Endowment Act. Subscriptions were commenced under the auspices of the Rev. H. G. Liddell, rector of Easington, to raise the necessary funds for the erection of a church and a parsonage. The sites for both were given by the owners of Haswell and Shotton collieries, who also presented a donation of £100. The Bishop of Durham gave, towards the church, £50; the rector of Easington, £200; the Diocesan Church Building Society, £100; Mrs. H. G. Liddell, £30; Rev. W. W. Liddell, £30; John Taylor, Esq., £20; Mrs. Burdon, £20; Lord Ravensworth, £10; B. Baker, Esq. £10; Mrs. Pemberton, £30; the Incorporated Church Building Society, £165; T. Forster, Esq., £10; Mrs. Pemberton, York, £10; Rev. H. G. Liddell, jun., £25; Miss A. Liddell, Miss C. Liddell, R. Burdon, Esq., Mrs. Richmond, Hon. Mrs. Thomas Liddell, Misses Burdon, Rev. J. A. Park, Miss Taylor, and Miss J. Taylor, Earsdon, £5 each. Towards the parsonage, the rector of Easington gave £100; Mrs. H. G. Liddell, £10; R. Burdon, Esq., £20; Mrs. Burdon and the Rev. W. W. Liddell, £5 each.

The foundation-stone of the church was laid, on the 11th September, 1852, by Mrs. H. G. Liddell; and the edifice was consecrated, July 11, 1854, by the Bishop of Moray and Ross, by virtue of a commission from the Bishop of Durham. It is dedicated to Saint Saviour, and is expected to be a distinct chapelry district; but no permanent endowment has yet been made, and it is at present a chapel of ease to the parish of Easington. The designs for the church, which is a neat and elegant structure, in the early English style of architecture, were by Mr. P. Hardwick, of London. It consists of nave, chancel, and north aisle, with a porch and vestry; the nave being 54 feet long by 25 broad, the chancel 25 by 20, and the aisle 54 by 11. The seats are arranged to give accommodation for 380 persons. The roof is open. At the east end, there is a fine window of mixed character; the altar is surrounded by an elegant iron railing; and the pathway around it is paved with black and red encaustic tiles.

* This may be deduced as an instance, amongst others, of the faith placed in a long and undisturbed possession of the royalty; the customary payments being made for renewals. The capital would not have been embarked, says Hugh Taylor, Esq., in his evidence before the Episcopal and Capitular Revenues Commissioners, May 17, 1849, "except in the confidence that at all events forty or sixty years would

The vestry is separated from the chancel by a screen; and the font is of excellent workmanship. A spacious burial-ground is attached to the edifice; but no parsonage-house is yet erected. Service is performed by one of the curates of Easington.

In Shotton, anciently *Ceatton* and *Scotton*, there were, according to Boldon Book, sixteen villains, holding, paying, and working like those of Boldon. Robert Chet, William Lorimer, and Saddoc, are the tenants named. The smith held an oxgang of 15 acres for his service. The whole vill paid 11s. for cornage, and provided one milch cow. Thomas, the punder, held 8 acres, and paid 40 hens, 300 eggs, and 4s. The demesne was farmed with a stock of three draughts and 200 sheep, and paid 24 chalders of corn, as many of oats, and 12 of barley; and four marks for the stock of sheep.

Edmund de Denum, in 1350, died seised of a mesuage and 24 acres in Shotton, which place is not mentioned in Hatfield's Survey. By decree, August 16, 1673, a division of common lands was made. Much of the property within the vill is held by copy of court-roll under the manor of Easington. About 1756, Elizabeth Thompson, whose ancestors had held lands in Shotton from the time of Queen Elizabeth, intermarried with Charles Brandling, Esq., of Gosforth, Northumberland; and *Shotton Hall* subsequently became the property and residence of their second son, the Rev. Ralph John Brandling.

Shotton Grange Colliery.—This pit was sunk by the Haswell Coal Company in 1841, on the south side of the Hett Dyke, for the purpose of working the five-quarter seam, and also in expectation of meeting with the Hutton seam in good workable condition, which had been sunk to in the Haswell pit, on the north side of the dyke. In 1849, the undertaking had cost nearly £120,000, from which neither profit nor interest had been derived.* The Hutton seam was found to be inferior in quality, and the five-quarter was therefore principally worked at first; after which the Beaumont or Harvey seam, below the Hutton, was sunk to. A drift was also made, at much labour and expense, through the Hett Dyke, which was found to be of great thickness and very hard. The good Hutton seam on

elapse before any change in those respects was made, it being no more than usual for lessees to have leases of the above duration where such a large amount of capital is embarked. The royalty won by Shotton colliery is almost exclusively leasehold, so that this kind of property is all that the company depend on for compensation."

the north side was thus reached, and a direct underground communication made between the Shotton and Haswell collieries, which will enable the coals of that seam to be brought to bank at the first-named pit, and transmitted thence to Hartlepool for shipment. The five-quarter seam, 3 feet 6 inches thick, is at the depth of 127 fathoms; the main, 4 feet thick, is 14 fathoms lower; the low main, 3 feet 7 inches, 20 fathoms; and the Hutton seam, 4 feet, 19 fathoms deeper; being 180 fathoms in all. The depth to the Harvey seam is 210 fathoms. The coals are called in the market, Shotton Wallsend and Shotton Unscreened.

FLEMINGFIELD is a tenement about 2 miles to the west of Shotton, granted by Bishop Stichell, out of the moors, to John de Flemyng of Newcastle, Isabel his wife, and their heirs, to be held by homage, service, and 66s. 8d. rent. The estate, after having reverted to the see, was held, under Bishop Hatfield, by Walter Hawyk, and was devised by Bishop Langley to Thomas Holden, Esq., for 90 years, under 20s. rent. The Conyers family held it during the latter part of the 17th century. Pursuant to a decree of the High Court of Chancery, made in a cause, "Hutchinson v. Hutchinson," Flemingfield was advertised for sale on June 8, 1848. It contains a farm-house and 194 A. 38 P. of meadow and arable land, and now belongs to Mr. Henry Bell, of Durham.

EDDERACRES, containing 376 acres, lies to the southwest of Easington. By Boldon Book, "Adan, the son of John, held *Etherdesaeres*, in exchange for land which his father held in Great Haleson. Afterwards he sold half the vill to Nigel, brother of John the Clerk, to be held of the bishop in chief; and he pays for that moiety half a mark: and Drogo of Midilham pays half a mark for the other moiety, which he holds in pledge for the said Adam." John del Halle de Elvet held the estate of the bishop *in capite*, by homage, fealty, and 13s. 4d. rent for all services; and on his death without issue, the husband of his sister, Alicie, assumed the local name. Edderaeres was afterwards parcel of the possessions of the chantry of St. John the Baptist, in the church of St. Oswald, Durham, founded in 1402 by Richard, Joan, and Gilbert de Elvet. After the Dissolution, the manor continued in the crown till the reign of James I., when it was granted by letters patent, with the rest of the possessions of the chantry, to Simon Wiseman and Richard Mare, to hold of the king's manor of East Greenwich, in free and common

soccage, under a yearly rent of £11 12s. 2d., payable at the Annunciation and the Feast of St. Michael. The Wilkinsons have for many years been proprietors of Edderacres, which now belongs to the representatives of the late T. S. Wilkinson, Esq.

LITTLE EDEN.—This manor is situated on the north bank of Eden Dene, the rivulet in which divides Castle Eden from the parish of Easington. Traces of foundations are visible in a field called Chappel Hill, in which was formerly an ancient tower, taken down by the late Rowland Burdon, Esq. Little Eden was an estate of the Hawicks, the last of whom, Walter Hawyk, on March 2, 1426, settled his estates on trustees, "for as mekil as he purposed to travail unto the kyng's service into the parties of Fraunce." His daughter, Joan, married Robert Rhodes; and on her death, the right of succession was vested in John Trollop, of Thornley. The *Heremitage* and the *Conygrate* are bequeathed in the will of John Trollop, Esq., January 3, 1569, to Leonard Trolloppe, he "paying yerly therefore to my heires xxx couple of conyes, without other rent, during the lyfe of the said Leonard." After the decline of the Trollop family, Little Eden became a possession of the Heaths, and was sold by George Heath, Esq., to Major-general John Lambton. In 1800, Ralph Lambton, Esq., conveyed Little Eden and *Beggarsbush* to Rowland Burdon, Esq. The latter estate, with *Cotsford Grange*, after belonging to the Heaths, was, in 1740, in the possession of Francis Brandling, merchant, and descended to the Ildertons, from whom it was conveyed to Major-general Lambton. Little Eden, Sigeworth, Eden Hall, Black Hill, and *Cotsford Grange*, containing together 774 acres, were leased on May 13, 1804, for 12 years, at the yearly rent of £550. *Cotsford* and John Burdon, Esqrs., and their two sisters, are now proprietors of *Cotsford Grange*. The western part of Little Eden, late the property of Mrs. Ibbetson, now belongs to Cuthbert Ellison, Esq., of Hebburn. *The Garden of Eden* is the name given to a cottage and orchard in the dene.

EDEN-DEYNE-HOUSE.—Nicholas Heath, Gent., of Eden, and Elizabeth his wife, and Archibald Waddell, Esq., and Elizabeth his wife, on June 1, 1655, to Thomas Delaval, Esq., of Hetton-le-Hole, the messuage called Deyne House, with a garden, orchard, and certain closes, having a right of road from the highway leading from Easington to Little Eden, and a similar exemption from tithes with that place. In 1675, the premises were

sold by Robert Delavale, Esq., and Rebecca his wife, for £850, to James Hall, of Monk-Hesleden, who, with Jacob Wilson, of Sunderland, conveyed them to Hannah Wilson, spinster, who intermarried with Fran-

cis Harrison, of Sunderland. Their descendants, in 1763, sold Eden-Dene House, or Dene House, to Rowland Burdon, Esq., and it now belongs to the proprietors of Cotsford Grange.

PARISH OF CASTLE-EDEN.

THE parish of Castle-Eden is bounded by Easington on the north, by the chapelry of Wingate (formed of portions of the parishes of Castle-Eden and Kelloe) on the west, and by Monk-Hesleden on the south and east. The parish forms but one township, which is co-extensive with the manor.

THIS parish and township comprise an area of 1,935 acres. Its population, at the successive periods of return, was 362, 257, 281, 260, 558, and 491; of which latter number 247 were males and 244 females. There were, in 1851, 96 inhabited houses and 13 uninhabited. The annual value of property assessed to the county-rate, in 1853, was £4,518.

In 1851, the Hartlepool branch of the North-eastern railway, which passes over 3 M. 7 F. 107 Y., and covers 42 A. 2 R. in this parish, contributed £100 15s. to the local rates, and £104 12s. 6d. in the following year; the gross amounts collected in those years being £257 15s. 8½d. and £253 18s. 2½d. The station near the village is 7 miles from Hartlepool, and 10½ from Ferryhill.

The receipts from the poor-rates, in the year ended Lady-day, 1855, amounted to £245 10s., and in aid of rates, £4 7s. The expenditure was, for in-maintenance, £16 9s.; out-relief, £91 19s.; workhouse loans repaid, &c., £15 19s.; salaries and rations of officers, £20; other expenses, £16 1s.; total expended in relief, £160 8s. Constables' expenses before justices, 15s.; vaccination, 19s.; registration fees to clergymen, £1; county-rate, £75 6s.; parliamentary registration, £1 9s.; all other purposes, £22 13s.; total expenditure, £262 10s.

CASTLE-EDEN consists of the more considerable village called the *Factory*, and the old village of Castle-Eden, lying about half a mile apart from each other. The *Factory*, so called from extensive cotton works having been erected at the place by the late Rowland Burdon, Esq., but which, for many years, have been discontinued, is situated on the turnpike road between Stockton and Sunderland, 15 miles north of the former place, 12 south

* In Castle-Eden House is preserved the cup of the last abbot of Bury, a capacious goblet of Dutch glass, handsomely mounted in silver, but without any inscription. A cover of silver has been added

of the latter, and 2½ from the sea. There is a large and commodious inn and posting house, called the Castle-Eden Inn, with brewery and malting attached, at which the petty sessions are held for the southern division of Easington Ward. A school for boys is supported, by Mr. Burdon and the payments of the children, the average attendance at which is about 40; and at a short distance, on the road side, is a neat stone building, erected as a school-house for girls, which is supported by Mrs. Burdon and the quarterly payments of those attending. There is a literary and reading society, which is well supported. A friendly, or benefit society, held at the Inn, was commenced in Castle-Eden, Aug. 10, 1793, and is said to be the first institution of the kind established in England. There is a post office in the village, a cabinet-maker's work-shop of considerable extent, and some other tradesmen. Horticultural exhibitions, steeple chases, &c., are held annually. A little to the north, and on the south side of the dene, are the erections of the *Castle-Eden New Winning*; but the colliery operations are suspended.

The old village of Castle-Eden lies a little off the main road, to the north. It consists of about 17 workmen's cottages, with flower gardens in front; at the north of the village is the church, near which is a pleasantly situated dwelling, occupied by the Misses Burdon.

Castle-Eden House,* or, as it is locally termed, *The Castle*, the property and residence of Rowland Burdon, Esq., is a spacious mansion, situated to the north-east of the church. The exterior of the building is plain; but the dimensions and arrangements of the interior are chaste and elegant, particularly the gallery and staircase, recently fitted up. The surrounding plantations and

in good taste, by its latter owners. After the Dissolution, the eup came into the hands of the Reeves of Suffolk, and by descent to the first Rowland Burdon, Esq., of Castle-Eden.

pleasure grounds are extensive, and the magnificent conservatory, erected about two years ago, is constructed after the most approved models. The whole of the estate has been much improved by its modern owners; and *Castle-Eden Dene*, in particular, by a judicious combination of art with its wild natural beauties, has been rendered one of the most romantic and pleasing spots in the north of England. Its previously inaccessible fastnesses have been opened out by a winding path of between three and four miles in extent, which commences near the house, and after a devious course, through woods, over rocks, and near waterfalls, terminates at the sea shore.

“A poet, and a poet only,” says Dr. Granville, “can do justice to the many varied beauties of this enchanted region. The brilliant tone and robust pencil of Stanfield might seize and portray some of its truly magnificent pictorial features, which appear, as it were, purposely arranged for the artist, in some of the happiest and incessantly varying combinations of rocks that seem split asunder by some geological catastrophe, and hanging woods, which, in many places, actually darken the face of the sun, and serve to perpetuate night.

“A winding and safe road, throughout the whole extent of this defile, serves admirably the purpose of displaying its endless beauties to the many hundred visitors who, during the summer, are admitted by the liberal proprietor to the enjoyments of this magnificent region, containing some of the finest scenery in Durham county. Seen from the upper part of the dene, not far from where a stream of water springs from the crevice of a rock, and, forming a natural cascade, falls into the Gunner’s Pool, the road can be traced to a considerable distance through the valley below. Snake-like and in broad coils it rushes down the deep sides towards the bottom of the dell, which is too much steeped in gloom to reveal its own secrets. Here and there the road is seen for a moment to right itself upon a level in the shape of a platform, or to wind round a steep bank covered with trees and brushwood; but it soon again takes a downward course, and proceeds to its destination.

“Caves, gloomy and unfathomable; masses of rock, detached and rolled down precipices—among which a stream of water frets and murmurs—and trees of every species that place themselves in the soil of Great Britain—such are some of the features that strike the attention

of the visitor, who in general prefers approaching the dene, and exploring it, from the lowest or sea-shore entrance. Gay vehicles, filled with such visitors, are seen almost constantly ascending from below; and many did I behold on that day, from a circular terrace that overlooks a hanging wood, and heard them trying their prolonged halloos, to provoke an echo which faintly answered to their calls. Gipsy parties are spread among the steep and grassy slopes, seeking for a spot where to display their picnic baskets. They gaze upwards at the azure of the sky, which they can only behold through the various clumps of trees that hang over them, forming a refreshing canopy to their repast.”

The town of Jodene or Yoden is mentioned by Simeon as having been the northern limit of Scula’s piratical oppressions (see page 307). “In those days,” it is added, “Ealfrid, the son of Britulfinc, flying from the pirates, came beyond the mountains towards the west imploring the mercy of St. Cuthbert and Cutheard the bishop that they should give him some lands. And Cutheard gave him these towns: Esington, Sileton, Thorep, Hovedon, Yoden, duas Ceaaton (Shotton), South-Yoden, Holom, Hoten, Tumlinton, Billingham with its appendages, Scrnfaton (Sheraton); and Bishop Cutheard, having completed fifteen years in the bishopric, dyed.”

During the life of Cutheard, Tilred (see vol. i., p. 23) redeemed South-Eden, and gave one half of it to the church of Durham, that he might become a monk in that monastery, and the other half to Norton that he might be made abbot there.

Robert de Brus, who became lord of Eden after the Conquest, granted the chapel to the monks of St. Cuthbert, with all tithes and parochial dues, upon condition that within four years the prior should build a chapel within the vill and procure it to be consecrated. This is supposed to be the origin of the parochial church of Eden; and that a castle or manorial residence supplied the addition to the name. Eustace de Eden having become indebted to Leo, the Jew of York, the monks of Durham advanced 17 marks to release him; and to discharge this debt, he gave half his land to St. Cuthbert, and 10s. out-rent from the moiety that he preserved. Seven donations of land in Eden were given to the church of Durham by William de Turp (Thorpe); in one of the grants of which the chapel of St. James is named.* Bishop de St. Barbara, about 1150, devised

* On the site of this chapel, about 100 yards north of the bridge between the mansion house and the church, a workman, in 1775, found a vase of thick greenish glass, resembling that of the beads and

snakestones attributed to the ancient British. The neck of the vase is narrow; and a number of short tubes, all closed at the ends, proceed from the body. The mouth was applied to a human skull, so

half of the tithes of Castle-Eden to Guisborough Priory ; and Ivo, son of Adam de Seton, bestowed the manorial right upon the same institution. Lands in the parish were rented of the church of Durham by the Claxtons. King Edward VI., by letters patent, March 27, 1553, in consideration of £1,343 3s. 4d., granted to Simon Welbery and Christopher Morland the lordship of Castle-Eden, late parcel of the monastery of Guisborough, with £20 issuing out of the rectory of Eden, 26s. issuing out of the lands of St. Cuthbert at Durham and the lands of John Claxton at "Eden in the parish of Hesledon," the messuage and appurtenances in Eden in the tenure of John Jackson, late belonging to the church of Durham, and four messuages in Wingate, together with the lands of Lanchester college, to be holden of the king in chief, as one fortieth part of a knight's fee. Castle-Eden, with all its rights, became the property of Anthony, eldest son of Simon Welbury. John Welbury, July 6, 1614, sold the manor to Sir Robert Carey, afterwards Earl of Monmouth. Before 1678, it had become the property of Sir William Bromley, K.B., of Baginter, Warwickshire, whose great-grandson, William Throckmorton Bromley, Esq., in 1758, sold it to Rowland Burdon, Esq., grandfather of the present proprietor.

This family are descended from Thomas Burdon, of Stockton, who was nine times mayor of that town between 1641 and 1655. He married Elizabeth,

near the surface as to leave the bottom of the vase exposed in the gutter of the hedge. The body had been deposited horizontally, and covered with loose stones; the head towards the east. The vase was full of earth, and when emptied seemed to retain a subtle aromatic smell. This mode of sepulture seems to be of an earlier date than the 12th century, when the chapel of St. James, named in William de Thorp's grant, was founded.

* ROWLAND BURDON, Esq.—Amongst the many philanthropic or patriotic individuals who have appeared in the county of Durham, none have attained a higher place in public estimation than Rowland Burdon. The town of Sunderland, in particular, found in him one of the most munificent of its patrons. He was one of the earliest examples of a merchant representing an English county, having been elected member of parliament for the county of Durham in 1790, when he at once directed his energies and talents to the furtherance of its prosperity. The turnpike road from Sunderland to Stockton was procured by his exertions; but the most magnificent production of his inventive genius and genuine patriotism is the cast iron bridge at Sunderland. In 1791, he brought the subject before parliament; and in the following year, with some difficulty, obtained an act for its erection. After having caused an experimental rib to be cast, and set up by Messrs. Walkers, of Rotherham, under the direction of Mr. Thomas Wilson, as clerk of the works, Mr. Burdon brought forward a proposal to the town of Sunderland and the county, for constructing a bridge, on his principles, over the Wear. This proposal was adopted, and the foundation-stone was laid, amidst great rejoicings, by Mr. Burdon,

daughter of John Swainston, and had, with several daughters, two sons, George and Henry. He died in 1657, and was succeeded by his eldest son, who married Elizabeth, daughter of William Hutchinson, Esq., of Trimdon, and dying in 1681, was succeeded by his only surviving son, the Rev. Rowland Burdon, some time of Sedgfield. He married Sarah, daughter of John Reeve, Esq., of Great Milton, Oxfordshire. On his death in 1750, he was succeeded by his only son, Rowland Burdon, Esq., baptized January 7, 1724, a merchant in Newcastle, and purchaser of Castle-Eden. He married, August 26, 1755, Elizabeth, daughter of George Smith, of Burn Hall, and dying October 25, 1786, left an only child, Rowland Burdon, Esq., of Castle-Eden, who married, first, on June 27, 1780, Margaret, daughter of Charles Brandling, Esq., of Gosforth, Northumberland, by whom (who died February 17, 1791) he had an only daughter, Elizabeth, born January 18, 1783, and died January 30, 1791. Mr Burdon married, secondly, in 1794, Cotsford, daughter and sole heiress of General Richard Mathews, and had issue four sons, Rowland, Richard, John, and Cotsford, and three daughters, Elizabeth-Anne, Frances, and Mary-Cotsford. He died September 17, 1838, in his 82nd year.* Rowland Burdon, Esq., his successor, is a magistrate of the county of Durham, and chairman of the quarter sessions.

Arms.—Az., three palmer's staves, inter sence of cross-crosslets, gu.

on the 24th September, 1793. He advanced £30,000 towards the completion of this grand undertaking; and on the opening of the bridge for general use, August 9, 1796, in the presence of his royal highness the Duke of Gloucester, Mr. Burdon was appointed, *pro tempore*, provincial grand master at a very splendid masonic ceremony and procession.

In 1796, Mr Burdon, was again elected M.P. for the county. On September 7, 1801, he addressed a letter to the freeholders of the county, announcing his intention not to offer himself again as a candidate; and Sir Henry Vane Tempest at once became a candidate for the vacant seat. Addresses to Mr. Burdon, however, were forwarded from South Shields, Sunderland, Durham, and Gateshead, requesting him to alter his resolution. Failing in this, a county meeting was held, at which he was proposed and seconded as a fit and proper person to represent the county; and Sir H. V. Tempest honourably withdrew from the contest. Mr. Burdon was consequently elected without opposition, July 26, 1802. In this election, the ordinary course of proceedings was completely reversed; the solicitations and exertions being all made by the electors, the object of their choice alone remaining at home, quiet in the bosom of his family, until thus honourably recalled to public life.

In 1806, Mr Burdon finally declined the representation of the county. At this period, the unfortunate failure of the bank of Surtees and Co. put a stop to the useful pursuits of this true patriot. His life interest in the Castle-Eden estate was advertised for public sale. It was described as the mansion-house, gardens, &c., containing 171 A.; certain houses and lauds in Castle-Eden, containing 1,580 A., let at

THE CHURCH.

THE ancient chapel of Saint James of Eden, founded by Robert Brus, and afterwards appropriated to the priory of Guisborough, has already been alluded to. The present church was erected in 1764, by Rowland Burdon, Esq., as recorded by the following inscription on a marble tablet in the vestry:—

“Anno Domini MDCCLXIV. This Sacred Fabric, which consuming Time had now reduced to ruinous Decay, was, with the addition of a Steeple, rebuilt from its old foundation, by Rowland Burdon, Esquire, at his own free charge: who thus most humbly dedicates to the service of ALMIGHTY GOD a portion of that wealth His blessing hath conferr'd; the Tenants bearing their part of the labour of leading the materials. T. Todd, Curate; W. Lane, Church Warden.”

£1,325 10s.; and 50 a. let to Webster, Wilson, and Co., for 21 years from November, 1799, at the yearly rent of £300. His share in the Newcastle Fire Office and Water Works, and a large pew in St. Nicholas' church, Newcastle, were included in the advertisement. To the honour of the gentry of the county, however, they interfered to prevent the alienation of Mr Burdon's family property. A committee were appointed to raise a subscription-loan of £15,050, for the purchase of his life and reversionary interests in Castle-Eden, upon security of that estate, with interest at 4 per cent.

“This measure,” it was observed in the prospectus, “which originated in motives of public gratitude for past services, the committee are fully aware, falls very short of being a proper acknowledgment for those disinterested exertions in Mr. Burdon's public as well as private life, from which the commercial and landed interests of the county of Durham have derived advantages of the most extensive importance.

“In order to anticipate any objection as to the insufficiency of the accommodation proposed, the committee think it necessary to state that Mr. Burdon has refused to accept of any other accommodation than that of a loan.”

The following sums were subscribed:—The Hon. and Rt. Rev. the Lord Bishop of Durham, £1,000; William Russell, Esq., £1,000; Joseph Bulmer, Esq., £1,000; George Robinson, Esq., £500; Thomas Nicholson, Esq., £500; William Ingham, Esq., £500; William Gieves, Esq., £500; the Rev. Robert Gray, D.D., £100; the Rev. George Stephenson, £100; Mrs. Bramwell, £100; Mr. Grimshaw, £100; Miss Sanderson, £100; Messrs. Richard and Marshall Stonehouse, £100; Mr. Ralph Hills, £200; Messrs. Cooke and Co., bankers, Sunderland, £500; the Rev. Dr. Priece, LL.D., £100; Messrs. Mowbray and Co., Durham, £500; John Graham Clarke, Esq., £200; William Darnell, Esq., £200; Robert Clarke, Esq., £500; Henry Stapylton, Esq., £100; the Rev. Mr. Anstey, £100; William Sleigh, Esq., £100; George Sutherland, Esq., £200, &c.

The estates were of the clear annual value of £1,600 or thereabouts. They were to be conveyed to trustees for 99 years, who were to pay the interest half-yearly; £800 at the end of the first and second years, £1,000 at the end of each year to the 13th; £1,200 at the end of the 14th; and £1,250 at the end of the 15th; the clear annual surplus of the rents and profits, after the above payments and expenses of the trust, were to be paid to Mr. Burdon, or in such other manner for the benefit of himself or his family as should be expedient.

Further security for the repayment of the principal was made, in case of the death of Mr. Burdon. The trustees were William Russell, Esq., of Brancepeth Castle; Joseph Bulmer, Esq., of South Shields; Thomas Nicholson, Esq., of Bishopwearmouth; William Maland, Esq., of Pall Mall, Westminster; and Anthony Murton, Esq., of South-

Two uniform aisles were added by the late Rowland Burdon, Esq.; and the church has, from time to time, received several other improvements. It is a very neat and commodious structure, containing sittings for 450 persons. The spire forms a pleasing object in the surrounding landscape. It contains a clock, the dial of which faces the west. The font, an oval basin of marble, with a Bible by Baskerville, two folio Prayer Books, a silver flagon, chalice, and paten for the altar, were all the gifts of the patrons. A mutilated effigy of a monastic, apparently in the Benedictine habit, lies in the church-yard, and is supposed to represent one of the ancient chaplains of Saint James. The ground is ornamented by rows of trees.

ampton. The securities were settled and approved of by Francis Hargrave, Esq., Q.C., and Robert Hopper Williamson, Esq.
